PART I INTRODUCTION

A Key to the Inventory	3
The Importance of the <i>Polis</i>	12
The Lifespan of the Hellenic <i>Polis</i>	16
The Inventory of <i>Poleis</i>	23
Meaning and Reference of the Word <i>Polis</i>	39
Meaning and Reference of the Words <i>Asty</i> and <i>Polisma</i>	47
The Concept of <i>Patris</i>	49
The Number of <i>Poleis</i>	53
Toponyms as Evidence for <i>Polis</i> Identity	55
Ethnics as Evidence for <i>Polis</i> Identity	58
Territory and Size of Territory	70
<i>Polis</i> versus <i>Chora</i> —The Settlement Pattern	74
Types of Constitution	80
A Typology of Dependent <i>Poleis</i>	87
Civic Subdivisions	95
<i>Proxenois</i> as Evidence for <i>Polis</i> Identity	98
<i>Theorodokoi</i> as Evidence for <i>Polis</i> Identity	103
Victors in Panhellenic Games as Evidence for <i>Polis</i> Identity	107
The Delian League	111
The Emergence of <i>Poleis</i> by <i>Synoikismos</i>	115
Destruction and Disappearance of <i>Poleis</i>	120
<i>Stasis</i> as an Essential Aspect of the <i>Polis</i>	124
The <i>Polis</i> as a Religious Organisation	130
City Walls as Evidence for <i>Polis</i> Identity	135
The <i>Polis</i> as an Urban Centre	138
Coins as Evidence for <i>Polis</i> Identity	144
Colonies and Indigenous Hellenised Communities	150

PART II INVENTORY OF *POLEIS*

Spain and France (including Corsica)	157
ADOLFO J. DOMÍNGUEZ	
Sikelia	172

PART III INDICES

1. Toponyms and City-Ethnics in Numerical Order	1253
2. Toponyms and City-Ethnics in Alphabetical Order	1264
3. Toponyms and City-Ethnics in Greek	1276
4. Non- <i>Polis</i> Settlements	1290
5. Polities Called <i>Polis</i>	1298
6. Polities Called <i>Asty</i> and <i>Polisma</i>	1307
7. Polities Called <i>Patris</i>	1308
8. Use of City-Ethnic	1310
9. Size of Territory	1319
10. <i>Poleis</i> in 400 versus <i>Poleis</i> no longer or not yet Existing in 400	1328
11. Constitution	1338
12. Decision-Making Institutions	1341
13. Civic Subdivisions	1343
14. <i>Proxenoi</i>	1345
15. <i>Theorodokoi</i>	1348
16. Panhellenic Victors	1350
17. Major Divinities	1352
18. Members of the Delian League	1356
19. <i>Stasis</i>	1361
20. Destruction and Disappearance of <i>Poleis</i>	1363
21. <i>Synoikismos</i>	1365
22. Grid-Planned <i>Poleis</i>	1367
23. City Walls	1368
24. Political Architecture	1376
25. Temples, Theatres, Stoas, Gymnasia, Stadia, Hippodromes	1378
26. Coins	1382
27. Colonisation and Hellenisation	1390

PART 1

Introduction

MOGENS HERMAN HANSEN

The chapters on the concept of *patris* and on victors in panhellenic games are by Thomas Heine Nielsen. For reading and commenting on various sections we would like to thank Mr Peter Fraser (ethnics), Prof. Paula Perlman (*theorodokoi*), Prof. Robert Parker (the *polis* as a religious organisation), Prof. Thomas Martin and Dr. Keith Rutter (coins), Prof. John Graham (colonisation).

This page intentionally left blank

A Key to the Inventory

This Inventory of *poleis* of the Archaic and Classical periods is the result of an investigation conducted by the Copenhagen Polis Centre in the years 1993–2003.¹ The Polis Centre is a research institution set up and funded by The Danish National Research Foundation for a ten-year period which expired in September 2003. As the name of the Centre reveals, its assignment has been to study the *polis*. The *polis* was the typical Greek form of community in the Archaic and Classical periods, the one Sophokles, Herodotos, Sokrates, Plato and Aristotle had in mind whenever they thought about man's place in society—the one we today must understand if we want to understand what, for example, Plato wrote. Nevertheless, in 1993 the *polis* had not yet been investigated by historians on a thorough empirical basis. There were some 1,500 *poleis* altogether, and they were spread over the entire Mediterranean world. Numerous case studies had been published, especially of Athens and Sparta. But nobody had ever conducted a comprehensive investigation which included the approximately 1,498 other *poleis*. How many of them do we know? How big were they? Where were they? What was common to at least a majority of them? Were Athens and Sparta typical or untypical *poleis*? Such a task was much too big for any individual scholar and had therefore never been properly undertaken. Right from its foundation in 1993 the Centre had two primary aims.

The first was to produce a comprehensive inventory of all known Archaic and Classical Greek *poleis* (city-states), including colonies, attested in contemporary sources. The plan was to compare this Inventory with all general references to the nature of the *polis* in the same sources, and then, on the basis of an analysis of both the extension and intension of the concept, to find out what the Greeks thought a *polis* was, and to compare that with what modern historians think an ancient Greek *polis* was. Thus, in this part of our research, we preferred the *emic* to the *etic* view preferred by others, and, in all our publications, we have carefully avoided mixing up the two different approaches: the term *polis* is often used synonymously with the term “city-state”, and the concepts behind the two terms are often,

but erroneously, thought to be co-extensive. The concept of *polis*, however, is an ancient concept and reflects the ancient Greeks' understanding of their own political and social order, whereas the concept of city-state is a modern heuristic concept invented by historians to describe not only the Hellenic *poleis* but also a number of other city-state cultures ranging from the Mixtec city-states in Mexico to the Malay city-states in Indonesia and from the Viking city-states in Ireland to the Swahili city-states in Kenya and Tanzania.² The Hellenic civilisation from the Archaic period down to the Roman Empire is only one of many civilisations organised into urbanised micro-states rather than forming one or a few large macro-states, each dotted with cities.

Consequently, the second major project undertaken by the Polis Centre has been to search for all occurrences in world history of regions broken up into city-states and to make a comparative study of them all, in order to elucidate similarities and differences; on the basis of this investigation we have suggested a redefinition of the concept of city-state and advocated the introduction of a new concept to be distinguished from the concept of city-state, viz. the concept of city-state culture. While each of the individual city-state cultures can be described in accordance with the *emic* view, the comparison between city-state cultures necessitates the *etic* approach and, being purely heuristic concepts, city-state and city-state culture are constructed and analysed in accordance with an *etic* view.

The only viable way to implement these two projects was to form two large international teams of experts. To provide a description of all attested city-state cultures, the Centre gathered a team of historians, philologists, theologians, archaeologists, anthropologists and sociologists, each an expert on one specific city-state culture. Including respondents, this team consisted of forty-eight scholars from seventeen countries. The results of this investigation were published in two volumes: *A Comparative Study of Thirty City-State Cultures* (Copenhagen, 2000) and *A Comparative Study of Six City-State Cultures* (Copenhagen, 2002).

² The concepts of city-state and city-state culture are described in Hansen (2000a) 16–22. For the difference between the concept of *polis* and the concept of city-state, see Hansen (1996) 7–8, (2000c) 599–601, 606–7; cf. 23 *infra*.

¹ For the original research programme, see Hansen (1994).

To construct the Inventory of *poleis*, the Centre built up a team of ancient historians and archaeologists, each responsible for describing all *poleis* within a defined region. In some cases two or three scholars shared a region; see *supra* vii–ix. All members of the team were issued with a standardised database card, showing the topics we had selected for investigation,³ and a vade-mecum explaining how to fill in the database cards and, on the basis of the cards, compose the descriptions of the individual *poleis* as well as the introduction to the chapter. All chapters were sent to the Centre in Copenhagen, where they were made consistent and edited by the two editors of this book. In addition to this book, the investigation entailed a number of publications. Seven symposia were held, and their acts published as *Acts of the Copenhagen Polis Centre 1–7* (Copenhagen, 1993–2004), and articles on issues related to the *polis* were sent to the Centre and successively published in *Historia*, Einzelschriften as *Papers from the Copenhagen Polis Centre 1–7* (Stuttgart, 1994–2004). For more detailed information about the Polis Centre publications, see *supra* xii–xiii.

As the title reveals, this book is principally an inventory of all identifiable Hellenic *poleis* of the Archaic and Classical periods. Now, an ancient Greek *polis* consisted of a nucleated centre, called *polis* in the urban sense, and a hinterland, called *chora* or *ge*. Accordingly, the description of a *polis* must include a description of its territory and in particular of other settlements lying within that territory. Furthermore, no *polis* existed in a vacuum. All the Hellenic *poleis* formed one huge network stretching from Emporion at the foot of the Pyrenees to Phasis at the foot of the Caucasus, and from Olbia at the mouth of the river Hypanis, to Naukratis in the delta of the Nile.⁴ But a *polis* did not have regular contact with *all* the other approximately 1,500 *poleis*. The large system of Hellenic *poleis* was subdivided into smaller clusters of *poleis*. Between the individual *polis* and the Hellenic world as a whole there was a kind of intermediary unit: the *ethnos*, an ethnic group associated with, and usually living in, a specific region, also called *ethnos*. When the project started in 1993, some colleagues suggested that we should print all the *poleis* in alphabetical order, starting with Abai in Phokis and ending with Zone in Thrace. Instead we have preferred to list the *poleis* region by region. Each of the chapters in Part 2 describes all *poleis* within a region and is introduced with a description of the

region and a list of all second-order non-*polis* settlements lying in the region.

1. The Regions

The subdivision of the Hellenic world into regions is a function of the subdivision of the Hellenes into *ethne*.⁵ Like *polis*, *ethnos* had both a personal and a geographical meaning.⁶ Apart from the Aegean Islands, the Greek homeland (*infra* 151) was subdivided into regions each inhabited by an *ethnos* in the personal sense.⁷ Akarnania, for example, was an *ethnos* inhabited by the *ethnos* of the Akarnanians. **In the Greek homeland every *polis*, except island *poleis*,⁸ belonged to an *ethnos*.** The Greek colonies, however, were not gathered together in regions inhabited by a specific ethnic group. Neighbouring *poleis* were often settled with colonists belonging to different *ethne*⁹ and sometimes colonists from different *ethne* joined to found a colony.¹⁰ Nevertheless, even the colonies tended to appear in regional clusters: all the *poleis* in Spain and France were primary or secondary colonies of Phokaia in Asia Minor. Kyrene was the founder of all the other *poleis* in Libya and kept them as dependencies. Some of the *poleis* in Sicily were founded by Dorians and some by Ionians, but the Sikeliotai came to think that they all formed a larger community,¹¹ and in C5–C4 Syracuse succeeded in controlling almost all the *poleis* in Sicily and some of those in Italy as well. In Skythia Pantikapaion became the hegemonic centre of the Bosporan kingdom and dominated all neighbouring *poleis*. And along the north coast of Asia Minor, Sinope played a similar dominant role.¹² Admittedly, these geographical segments were not ethnic entities as were the regions of Hellas itself, but, on the other hand, our endeavour to organise the Mediterranean world colonised by the Greeks into “regions” is not just a purely artifi-

⁵ The most recent treatments of the concept of *ethnos* are Hall (1997), (2002) and Malkin (2001b). For the constant re-grouping of the Hellenic *ethne* and formation of new *ethne*, see Nielsen (2002) 229–69.

⁶ For *ethnos* in the geographical sense, see Ps.-Skylax 34–35, 43–46.

⁷ Ps.-Skylax 34–65, cf. Hdt. 5.77.4; 7.32.2–3; Dem. 59.101; Aeschin. 2.116. For the earliest attestation of regions, see Hom. *Il.* 2.494ff.

⁸ The southern cluster of Aegean islands were called *αἱ Κυκλάδες νῆσοι* (Hdt. 5.31.2; Thuc. 1.4.1; Isoc. 4.136; Ps.-Skylax 48 and 58), allegedly because they were lying in a circle around Delos (Eust. *Comm. in Dionys. Per.* 525). Some were Ionian, some Dorian, and they never formed an *ethnos*. In a few cases an *ethnos* was co-extensive with a *polis*, e.g. Athens with Attika (Hdt. 1.57.3).

⁹ Thuc. 6.3–5, 7.57.

¹⁰ Arist. *Pol.* 1303^b25–^b3.

¹¹ Antonaccio (2001).

¹² Bosporan kingdom: Hind (1994) 488–502; Sinope: Graham (1964) 201–3.

³ A database card filled in for Tanagra is printed in Hansen (1996) 55–62.

⁴ For a substantiation of the view that all Hellenic *poleis* belonged to one and the same city-state culture, see Hansen (2000b) 141–45.

cial subdivision of the Greek world in the wider sense. Therefore, the *poleis* are here described region by region. Some of our regions are, more or less, modern constructs, e.g. Spain and France or the islands in the Aegean Sea; others are well-defined ethnic and sometimes even political entities, e.g. Arkadia and Boiotia. But, as explained above, even the artificial regions often have some coherence and the regional organisation has several advantages over a purely alphabetical listing of all *poleis*: the distinction between first-order and second-order urban settlements, i.e. the settlement pattern of the Hellenic world, can be studied only on a regional basis. Furthermore the important similarities and relationships between *poleis* in the same region can be understood only if the *poleis* are described side by side: wars between neighbouring *poleis*, the formation of federations mostly organised on a regional basis, the type of constitution which often is the same in most or all *poleis* within a region, similar style in the building of city walls and temples, coins struck on the same weight standard and with similar or identical types, inscriptions in the same dialect, the same naming habits, e.g. the use or omission of patronymics and/or sub-ethnics. Each chapter describes the *poleis* in one region and opens with a short description of the region and its characteristics: its name, extent, borders, population, settlement pattern and some aspects of political and social organisation that concern all the *poleis* of the region, i.e. the formation of a federation, or a religious festival celebrated by all the *poleis* within the region.

Rather than arranging the regions in alphabetical order, we have preferred to **organise this book as a *periplous*: we start in Spain and pass through Sicily, Italy and along the coasts of the Adriatic Sea to Akarnania, then through all of Mainland Greece and the Aegean Islands until we reach Makedonia and Thrace. The *periplous* proceeds along the north coast of the Propontis, round the coasts of the Black Sea, along the south coast of the Propontis to Troas, Aiolis, Ionia, Karia and Lykia. After detours to Crete, Rhodes and Cyprus, the journey ends with Syria, Egypt and Libya.**

2. The Non-*Polis* Settlements

An important part of the Polis Project is to investigate whether all major towns were *poleis* in the urban sense, and to what extent the *polis* town was the only nucleated settlement within the territory of a *polis* state, or just the

largest one, surrounded by a number of villages. A major obstacle to answering these questions is that the settlement pattern of the Hellenic world as known from written sources has never been investigated and, as known from archaeological evidence, can be ascertained only for a few scattered regions that have been surveyed during the last two decades.¹³

The publication in 2000 of the marvellous *Barrington Atlas* has changed the situation dramatically. All the compilers of the maps have had to take a position on the settlement pattern of every region of the Greek and Roman world. True, they record only whether a site is a settlement, not whether it is a *polis* or not. But they have all been asked to apply the same method and system of classifications, so that all the material is, in principle, comparable. When their classification of settlements is matched with our political classification of settlements according to whether or not they are *poleis*, it should be possible to suggest at least some answers to the above questions.

Accordingly, in 1995 we established a close co-operation with the *Barrington Atlas* (here abbreviated *Barr.*), and all members of our team were asked to use the atlas and its directories (of which we had preprints and proofs), to record all sites classified as settlements of the Archaic and/or Classical period, and then in the first part of each chapter to list all settlements not attested as *poleis*.¹⁴ Only sites classified as settlements were to be included. Sanctuaries, forts, towers and cemeteries were to be omitted. A comparison between this list and our list of *poleis* in the second part of each chapter ought to provide us with a picture of the settlement pattern seen from the political point of view. Was there any large urban centre in the region which was not a *polis* in the urban sense? And what proportion of all nucleated settlements in a region were *polis* centres?

The list of non-*polis* settlements falls into two parts. In the first part we record all settlements known from ancient sources, no matter whether they have been located or not. Included are sites mentioned in written sources as settlements of the Archaic and/or Classical periods. Of these some are known from archaeological evidence too, while some are known exclusively from written sources. Next we include sites mentioned in late sources as settlements of the

¹³ For ongoing surveys in 1994 and the area covered by each survey, see Alcock (1994) 250.

¹⁴ Conversely, the members of our team reported back to the *Atlas* on debatable locations, datings and classifications, and 11 members are listed among the reviewers, see *Barr.* xiii and xviii. Two scholars, S. Mitchell and G. Reger, were both compilers of maps in *Barr.* and authors of chapters of the *CPC* Inventory of *poleis*.

Hellenistic and/or Roman periods only, but archaeologically attested as settlements of the Archaic and/or Classical periods as well. The second part comprises settlements known exclusively from excavations or surveys and, so far, not identified with any of the settlements attested in the written sources.

Each entry follows a fixed scheme. The toponym is recorded, first the transliterated form in bold type and then the Greek form in brackets. Then come selected references to the settlement in ancient sources. If the source has a site-classification, it is added in brackets, e.g. (κώμη) or (ἐπίγειον) or, in late sources, (πόλις), referring to *polis* status in the Hellenistic and/or Roman period. A short description of archaeological remains may follow and the entry concludes with references to literature and, for the chronology, to *Barr.* *Barr.* distinguishes five periods: A (Archaic), C (Classical), H (Hellenistic), R (Roman) and LR (late Roman). Since we stop at the end of the Classical period, we record only *Barr.* A, or *Barr.* C, or *Barr.* AC. We do not normally record whether the site is known as a settlement in later periods too, and accordingly in *Barr.* marked H or LR.

As we have discovered, however, one problem is that *Barr.*'s coverage of second-order settlements varies considerably from map to map and, within a map, from region to region. Argolis, for example, is found on Map 58. In the introduction to the map the compilers write: "no sites known solely from survey are marked here, and likewise very few known only from excavation (their ancient names unattested in each instance)."¹⁵ In this inventory, in the chapter about Argolis (*infra* 599–619), Piérart attempts to list all sites classified as settlements, altogether seventeen known from ancient sources and thirty-three known exclusively from excavations and surveys. *Barr.* records sixteen of the settlements known from ancient sources, but none of the thirty-three archaeological sites. Conversely, according to *Barr.* Map 56 and the accompanying directory, there were on Lesbos, in addition to the six *poleis*, twenty-one settlements of the Archaic and/or Classical periods, fourteen mentioned in ancient sources, seven known exclusively from their archaeological remains. But according to Nigel Spencer and Hector Williams, only two of these were proper settlements. The others were either sanctuaries or single houses or, if they were settlements, later than the Classical period. These two cases represent the largest difference be-

tween the recording of second-order settlements in *Barr.* and in the inventory.

In the lists of non-*polis* settlements disagreements with *Barr.* are explicitly recorded. Missing settlements are recorded as: "Not in *Barr.*" Conversely, sites that according to the author(s) of our chapter ought to be excluded are recorded as "*Barr.* C, but only Hellenistic remains are attested" or "*Barr.* C, but only remains of a sanctuary have been found", etc. Such reservations are found in most chapters,¹⁶ but it must be kept in mind that even the adjusted lists of settlements in this volume can be trusted only for properly surveyed regions such as southern Argolis or Lakonia. In most regions only future surveys and excavations can provide us with a reliable picture of the settlement pattern.

3. The *Poleis*

Within each region the *poleis* are listed in alphabetical order and an entry is organised as follows:

NUMBER. All *poleis* are numbered sequentially from 1 to 1035 and, whenever possible, cross-references are to *polis* numbers not to page numbers, e.g. Seriphos (no. 517).

HEADING. As heading (in bold type) we use transliterated forms of the toponym and (in brackets) the city-ethnic in nom. sing. masc., e.g. **Korinthos** (**Korinthios**). If no toponym is attested, the heading is just the city-ethnic in nom. plur. masc., e.g. (**Eteokarpathioi**). For the meaning of the term city-ethnic, see 62 *infra*. A toponym marked with an asterisk is reconstructed from, e.g., a Latin form attested in Pliny's *HN*, e.g. ***Thydonos**. Only one form of toponym and city-ethnic is recorded, *viz.* the most common in Archaic and/or Classical sources rather than the one found in Strabo or Pausanias and preferred in many historical atlases, e.g. the *polis* on the north coast of the island of Ikaros which in Classical sources—and here—is called Oine, but in Strabo Oinoe. The Attic-Ionic form is usually preferred to an epic variant, e.g. Orchomenos instead of Erchomenos. If a *polis* changed its name and city-ethnic within the Archaic and Classical periods, both toponyms and city-ethnics are recorded, e.g. **Histiaia** (**Histiaieus**)/**Oreos** (**Oreites**).

MAP REFERENCE is to R. J. A. Talbert (ed.), *The Barrington*

¹⁶ Let me add that these unavoidable differences between *Barr.* and our Inventory have not in any way diminished our admiration for *Barr.* as one of our generation's greatest achievements in ancient history.

¹⁵ J. McK. Camp II and G. Reger, *Directory* 2: 875.

Atlas of the Greek and Roman World (Princeton, 2000), in this inventory abbreviated *Barr.* We record the map number, latitude and longitude, e.g. Delphoi: “Map 55. Lat. 38.30, long. 22.30.” The exact latitude is 38.29, but we record the coordinates with an exactitude of 5 minutes of arc only. If the *polis* in question is unlocated, we write for, e.g., Kallipolis: “Map 52. Unlocated.” If an unlocated *polis* is not recorded in *Barr.*’s map-by-map directory, we write for, e.g., Sombia: “Map 52. Unlocated. Not in *Barr.*” If the author agrees with the *Barr.* location, there is usually no further discussion of this issue. If the author disagrees with the *Barr.* location, a discussion of the issue follows either here or in a following section (indicated by “see *infra*”).

SIZE OF TERRITORY is subdivided into five different categories: 1: 0–25 km², 2: 25–100 km², 3: 100–200 km², 4: 200–500 km² and 5: 500 km² or more. In cases of doubt the size is recorded as one of the five numbers followed by a query or as one of two numbers. A *polis* that presumably had a territory of over 500 km² is recorded as 5?, and a *polis* with a territory of perhaps c.15 km² and certainly not over 100 km² is recorded as: 1 or 2. In the numerous cases of serious doubt, a query alone is used. The section further below about the territory and its borders may include a discussion of its size.

TYPE OF *POLIS* comprises four categories: A, [A], B and C. Type: A means that the community in question is called *polis* in at least one source of the Archaic and/or Classical period, no matter whether *polis* is used in the political, territorial or urban sense. Type [A] signifies a community subsumed under the heading *poleis* alongside a number of other communities. A community is classified as type B or C if it is not called *polis* in any source of the Archaic and/or Classical period but is known for one or more of the activities characteristic of a *polis*: being a member of a federation, striking coins, passing a proxeny decree, appointing a *theorodokos* to host foreign *theoroi*, having a victor in one of the Panhellenic games, possessing a *prytaneion* or a *bouleuterion*, defeating its neighbour in a battle, etc. The difference between B and C is that, in the case of B, we believe that the community was probably a *polis* and that it is only due to lack of sources that it is not explicitly attested as such, whereas in the C cases the identification of the site as a *polis* is less certain and in some cases a possibility only.

TYPES α , β AND γ indicate the degree of Hellenicity. A *polis* type α is a Hellenic *polis* in which elements of non-Greek civilisation are small or even insignificant (e.g. Akragas,

Poteidaia and Kyrene). A *polis* type β is either a mixed community in which Greeks and non-Greeks live side by side (e.g. Emporion in Spain or the *poleis* on Athos) or a not fully Hellenised community whose indigenous population has adopted a fair number of Hellenic institutions and customs mixed with their indigenous background (e.g. Halikarnassos and Xanthos). A *polis* type γ is a predominantly barbarian community in which there are some elements of Hellenic civilisation (e.g. Kaunos and most of the Karian *poleis* recorded in *SEG* 40 991–92). Many of the *poleis* types β and γ became fully Hellenised in the course of the Hellenistic period. Often the categorisation has to be based on a deplorably insufficient knowledge. Thus, if Ps.-Skylax classifies an otherwise poorly known community as a *polis Hellenis*, it is recorded in the inventory as an α , whereas more information sometimes shows that it should have been classified as a β , e.g. Phasis (no. 711). When the sources fail us, as often happens, we print a query. The distinctions between α , β and γ are, of course, fluid and some of our classifications may be questioned, but to refrain from applying this categorisation would lead to a grossly distorted picture of the Hellenic *polis* world.

In Mainland Greece and the adjacent islands all *poleis* were obviously type α . Therefore the distinction between α , β and γ is applied only outside what is traditionally called the Greek “homeland” or “heartland” (cf. 151 *infra*). The problem is to discover or, rather, to decide where to draw the line between Hellenic or Hellenised regions and regions in which Hellenic *poleis* were lying like islands in an otherwise non-Greek civilisation. In this inventory the “Greek heartland” comprises Mainland Greece from Epeiros to Makedonia,¹⁷ the adjacent islands in the Ionian and the Aegean Seas and the central part of the west coast of Asia Minor (Aiolis and Ionia); see *infra* 151. Thus, the categories α – γ are applied in the regions from Spain to Illyria, from Thrace to Troas, and from Karia to Libya. The discussion of this issue is usually placed at the end of the entry.

ATTESTATIONS OF TOPONYM AND CITY-ETHNIC. The focus is on sources of the Archaic and Classical periods, but references to Hellenistic and even Roman sources are often included and are always recorded if there is no earlier attestation. However, city-ethnics invented by Steph. Byz. are usually ignored. In Index 3 *infra*, sources later than C4l are marked (L). Variant forms are recorded, but simple differences in spelling ($\chi\sigma$ for ξ in the C5 Athenian tribute lists) or in dialect ($\tau\tau$ for $\sigma\sigma$) are usually ignored.

¹⁷ Epeiros: Malkin (2001a); Makedonia: Hornblower (2002) 89–91.

ATTESTATIONS OF *POLIS* STATUS. Here, as everywhere, the focus is on sources of the Archaic and Classical periods. In selecting the sources we prefer non-Athenian to Athenian sources (if we have a choice) and epigraphic sources to literary texts. We cover as many centuries as possible, citing sources of C7 (very rare), C6 (rare), C5 (common) and C4 (very common). We try to bring attestations of the different senses in which *polis* is used, i.e. in the political sense, in the urban sense and in the territorial sense. The very few attestations of *polis* in the sense of acropolis are recorded too. We omit references to named communities called *polis* in mythological sources, principally the *Iliad*, the *Odyssey* and tragedies set in the Heroic Age (see *infra* 26). Thus, Aeschylus' *Persians* is virtually the only tragedy cited in this section of an entry. A reference to Pindar can be used if it is to the *polis* of the victor he celebrates, whereas it is omitted if it occurs in the mythological part of the *epinikion*. If there are no attestations of *polis* status in Archaic and/or Classical sources, we cite attestations in later sources used retrospectively. Diodorus' native city, Agyrion, is called a *polis* in his description of events of 392 (Diod. 14.95.4–7) and his classification is corroborated by the fact that Agyrion struck bronze coins in C51. References to late sources in which a named community is classified as a *polis* in a contemporary context are used only if they can be combined with other information which indicates that the community in question may have been a *polis* in the earlier period. The first attestation of Aptara on Crete as a *polis* (no. 947) occurs in a treaty of C2e (SEG 41 742). But the coins struck by the Aptaraians c.330–270 indicate that Aptara was a *polis* already in C4s.

POLISMA, *ASTY*, *PATRIS*. References to *polis* status are followed by references to the community in question being called *polisma* or *asty* or *patris*. The two first terms concern the urban aspect of the *polis*, the third its status as a political community. Only sources of the Archaic and Classical periods are cited. Occurrences of *polites* and *politeia* are cited too, but not systematically except for communities which are not attested as *poleis*, so the occurrence of terms like *polites* and *politeia* may be the best evidence we have for *polis* status.

USE OF CITY-ETHNIC. In analysing the uses of the city-ethnic we distinguish an internal from an external use, and an individual from a collective. “Individual” signifies instances of the city-ethnic used as part of a name, mostly in the singular (IG XII.3 251.12–13: Ἀγοροτέλης [Ἄπο]λλωνί[δα] Κνίδιος) but sometimes in the plural (IG XII.3 251.15–16:

Καλλίγνωτος, Λυσαγόρας Πάριοι). “Collective” signifies the use of the city-ethnic denoting one or more unnamed citizens (Thuc. 8.92.2: Ἀργεῖος ἄνθρωπος) or the citizens collectively = the Argive *polis* (SEG 34 282.4: ὁ δᾶμος τῶν Ἀργείων). “Internal” signifies the use of the ethnic inside the *polis* in question (ΑΓΓΕΙΩΝ on C5–C4 coins), “external” signifies the use of the ethnic outside the *polis* (IvO 165: Ἀριστίων Θεοφύλεος Ἐπιδαύριος, an Olympic victor from C4m) or inside the *polis* when citizens had to be recorded alongside citizens from other *poleis* (IG IV².1 121.68: Ἐυφάνης Ἐπιδαύριος παῖς in a C4s cure inscription from Epidauros). If no earlier sources are available, attestations in Hellenistic sources of the different uses may be included, but in the analysis of the evidence *infra* in Index 8 only references in Archaic and Classical sources are taken into account. The use of sub-ethnics (see *infra* 59) is recorded in this section of the entry.

TERRITORY. The next section treats the territory and records its name (if known) and borders, and sometimes includes a discussion of its size. Second-order settlements (if any) and major extra-urban sanctuaries are listed here, as well as references to dependent *poleis* lying within the territory of the *polis* in question.

POPULATION. The rare pieces of information we have about the size of the population are usually reported after the territory. Most of the sources are army figures from which we can get a rough idea of the number of adult male citizens of military age who are fit for military service, e.g. Mantinea (no. 281). For some *poleis* we have (fragmentary) lists of adult male citizens or ephebes, e.g. Eretria (no. 370).

HISTORY. For a large and fairly well-known *polis* the central part of the entry starts with a chronological outline of its history. The major themes selected for mention are, for colonies, foundation and sometimes refoundation; for all *poleis*, involvement in wars and major battles, treaties and alliances, membership of leagues and federations; conquest, destruction and *andrapodismos* of the *polis*; conquest of other *poleis*; *sympoliteia* and/or synoecism with other *poleis*; inter-*polis* relations such as the sending and reception of envoys; the occurrence of *stasis*.

CONSTITUTION AND POLITICAL INSTITUTIONS are usually treated together and the section comprises information about type of constitution (monarchy, oligarchy, democracy) and change of constitution, the citizenry and its civic subdivisions (tribes, demes, phratries, etc.), political institutions (such as *ekklesia*, *boule*, *dikasteria* and *archai*) and

public enactments. If it is more convenient, information about *stasis* provoked by constitutional issues, membership of a federation and similar matters is treated here rather than in the preceding section.

PROXENOI. Attestations—for larger *poleis* selective—of *proxenia* given by the *polis* to citizens from other *poleis* and awarded by another *polis* to a citizen of the *polis*.

THEORODOKOI. Attestations of *theorodokoi* appointed to host *theoroi* sent out to announce the celebration of a Panhellenic festival and invite the *polis* in question to be represented at the festival and to respect the sacred truce.

PANHELLENIC VICTORS. For small *poleis* all victors are recorded, for large *poleis* a selection and/or a count of the number of victors at the four major Panhellenic festivals: the Olympia, the Pythia, the Isthmia and the Nemea. A few attestations of victors at the Amphiarraia and other festivals are recorded too.

DIVINITIES AND CULTS are recorded only in so far as they are attested in sources of the Archaic and Classical periods. We do not share the all too common belief that a cult mentioned by, e.g., Pausanias can be interpreted retrospectively and mentioned in a work about the Archaic and Classical periods. We are also suspicious of the view that the head of Athena on a coin proves that the *polis* in question must have had a cult of Athena. For the large *poleis*, only the major cults are mentioned, and lack of space forbids a detailed description of many others. Information about a tutelary divinity is always recorded, but we must bear in mind that it is often difficult to establish which divinity counted as the tutelary divinity, and that some *poleis* did not have a specific tutelary divinity, whereas others had several. Major festivals are mentioned and information about the calendar, if reported, belongs here.

THE URBAN CENTRE. The account of the *polis* in the urban sense begins with the defence circuit. A short description of the remains, if any, is followed by information about their date and about sieges, of which some may testify to fortifications antedating the present remains. The description of the town itself brings information about the size of the area enclosed by the walls, the layout of the city if grid-planned, and major public monuments: religious architecture (sanctuaries, temples and theatre), centres for sports and military training (*gymnasion*, *stadion*, *hippodromos*), political architecture (*prytaneion*, *bouleuterion*, *dikasteria*, *archeia*, occasionally a specific *ekklesiasterion*) and other buildings

related to the urban infrastructure (stoas, arsenals, harbour facilities, fountain houses, aqueducts).

MINT. The section on coins comprises information about dates, metals, standards, denominations, types and legends. References to handbooks, monographs and articles are, whenever possible, supplemented with a reference to *SNG Cop.*, the *Sylloge Nummorum Graecorum: The Royal Collection of Coins and Medals, Danish National Museum* 1–8 and suppl., one of the few large collections of Greek coins which fairly recently has been published in its entirety with illustrations.

DEGREE OF HELLENISATION. The entries for colonies and Hellenised communities often concludes with some remarks about the degree of Hellenisation. To what extent did the Hellenic colonists live side by side with the indigenous population? And to what extent were indigenous settlements Hellenised?

METROPOLIS. If the *polis* founded colonies in the Archaic and/or Classical periods, the names of the colonies are recorded with a reference to the relevant entries.

CHRONOLOGICAL DELIMITATION. The Inventory comprises Archaic and Classical *poleis* as attested in contemporary sources and, to some extent, in later retrospective sources and later sources interpreted retrospectively. The term “contemporary sources” is interpreted as follows: (a) upper limit: we leave out the Homeric poems. Although the *poleis* described in the *Iliad* and the *Odyssey* undoubtedly reflect physical and institutional aspects of historical *poleis*, they are set in a mythological context and do not belong in an inventory of named historical *poleis*. Thus our earliest literary sources are Hesiod’s *Works and Days* and the fragments of Archilochos and Tyrtaos. The oldest epigraphical source is probably the law from Dreros of C7m (ML 2; *Nomima* I 81). (b) Lower limit: we include literary sources and dated epigraphical sources down to the death of Alexander the Great in 323. Of epigraphical sources we also include as contemporary those dated to C4 without further specification, e.g. dedications, sepulchral inscriptions, some decrees, etc. Later retrospective literary sources are, e.g., passages in Diodorus, Strabo, Plutarch and Pausanias referring to events and institutions of the Archaic and Classical periods. Later retrospective epigraphical sources are, e.g., the renewal of a treaty originally concluded before 323, confirmation of an earlier grant, or references in inscriptions to earlier events. Later sources referring to their

own age are usually ignored, e.g. the descriptions of *poleis* found in Strabo and Pausanias. But later sources may be used if they can be interpreted retrospectively: a law or decree of c.320–300 may be used as evidence for the political institutions of the *polis* in question in C4m, provided that it can be assumed that the *polis* had not in the meantime been exposed to a change of constitution. Thus, Pontic Chersonesos (no. 695) seems to have been a democracy throughout the Classical period, and therefore the democratic citizen's oath of C4l/C3e may be used as evidence of the political institutions in C4s (*IOSPE* 1² 401).

Finally, for reasons explained *infra* 30–32 we have treated the three centuries from c.650 to c.323 as one period so that a synchronic presentation of the material is applied for the Inventory as a whole, but every entry includes, whenever possible, a description of the historical development of the *polis* in question, and we have drawn up an index of all *poleis* in the year 400, omitting all *poleis* that had disappeared before the end of C5 as well as those that emerged in C4 only (see *infra* 53–54 and Index 10).

SELECTION OF ATTESTATIONS. All source references are *exempli gratia*, especially in the case of large *poleis*. It would serve no purpose to list all occurrences of *polis* or *asty* applied to Athens or Corinth or Thebes; or to record every single *proxenos* and Panhellenic victor coming from large *poleis*.

SELECTION OF EVIDENCE. Similarly, the treatment of the various topics is selective and has to be. In the section about political institutions only the major magistrates are invariably listed, e.g. *strategoí*. Especially for large *poleis*, only the principal divinities and cults are mentioned. On the other hand, for small *poleis* and for larger *poleis* that are poorly attested in our sources, e.g. Karystos (no. 373), we sometimes have to record almost every single piece of evidence in order to shed some light on the history and institutions of the community.

ORGANISATION OF INFORMATION. Strict uniformity has been imposed in the first sections down to use of the city-ethnic. In the following sections the different chapters present a higher degree of variation both in the selection of topics and in the organisation of the material. Some scholars have focused more on cult and religion than on the archaeological remains of the urban centre. Others have done the reverse. Some submitted short succinct summaries, others detailed descriptions which we had to cut down to half their original size. Often we have deeply regretted that, to make

the chapters and the individual entries comparable in size and coverage of the sources, we had to cut out valuable and meticulously collected material. In other cases we have expanded very short entries. As can be seen from this publication, variations have often been allowed to persist. The descriptions of the mints, for example, range from summaries of essential features to elaborate accounts of almost all issues.

4. The Chronological Delimitation of the Project

We believe and argue that the Hellenic *polis* emerged in C8 and existed throughout the Archaic, Classical, Hellenistic and Roman periods. It disappeared only in late Antiquity.¹⁸ Nevertheless, we have limited our investigation to the Archaic and Classical periods for the following reasons. Philip II's victory over the Greek cities, Alexander's conquest of the Persian Empire and the foundation of approximately 300 new *poleis* in the Near East inaugurated not the demise of the *polis* but a transformation of it. The differences between the Classical and the Hellenistic *polis* leap to the eye if one pictures a *polis* in C1: city walls were no longer built and normally were not even repaired. If the *polis* was the residence of a prince or governor, there would be a palace. The political architecture had become monumentalised, especially the *bouleuterion*. The *gymnasion* had been moved from the suburbs into the urban centre and monumentalised. The *ephebeia*, unknown before C4, was now the most important public institution. The agora was now framed with monumental stoas. In addition to the urban centre we hear about a number of *komai*, second-order urban settlements situated in the hinterland of the *polis*. The women's place in the *polis* was no longer confined to religion; women had become much more integrated; and so had a significant number of free foreigners who in many *poleis* were admitted to the *ephebeia*. The *polis* was not to the same extent as before a society of adult male citizens. The civic subdivisions into which the citizenry had been organised had faded out, whereas a number of private or semi-private economic and social institutions had sprung up alongside the public institutions of the *polis*. To the cults of the old gods and heroes were now added new cults of

¹⁸ See Gauthier (1993), Millar (1993), Hansen (2000b) 145–49 and *infra* 20.

monarchs and deified abstractions such as *homonoia*. Not only a large number but all *poleis* had become dependencies. On the other hand, *autonomia* (self-government) had now become the explicit ideal and goal of the *polis*. The spectrum of constitutions is almost reduced to one type: *demokratia* prevails, while *tyrannis* and *oligarchia* are eclipsed. A growing co-operation between *poleis* had resulted in an institutionalised network of relations between the *poleis*: *isopoliteia*, arbitration in disputes, increased participation in the growing number of Panhellenic festivals, etc.

In spite of all the differences between a *polis* in C5–C4 and a *polis* in C1, most scholars who have worked with the *polis* in general without precise chronological limits have used the sources anachronistically. It is very common, for example, that scholars open their account of the concept of *polis* by quoting Pausanias' remark on the minute *polis* of Panopeus in Phokis.¹⁹ Thus, in their description of the emergence and nature of the Archaic and Classical *polis*, Finley and others use a source of the second century AD, although this source

¹⁹ Paus. 10.4.1, cited in an Archaic–Classical context by Finley (1981) 3–4; Kolb (1984) 58–59; Osborne (1987) 117–18. For a discussion of the anachronism, see Alcock (1995).

explicitly describes a contemporary *polis*. Similarly, numerous articles on *poleis* in Pauly's *Realencyklopädie* begin with the classification of the settlement found in Strabo's treatise of C1.

To avoid an anachronistic analysis and to understand the development of the *polis*, one must conduct two separate investigations: one of the Archaic and Classical *polis* based on Archaic and Classical sources and allowing a restricted use only of later retrospective sources, and one of the Hellenistic–Roman *polis* based on the later sources. Eventually, the historical development of the *polis* will emerge by comparing the two investigations. The Polis Centre has conducted the first study. The ideal solution would have been to conduct both investigations simultaneously. But the Polis Centre did not possess the necessary resources, nor did we have the time for such a gigantic project. We have to leave it to others to study the later transformation of the *polis*: the turn it took after Alexander the Great's conquest of the Persian Empire and the foundation of hundreds of new *poleis* in the Near East, as well as the further turn it took in C2m when the Greek *poleis* came under Roman rule.

The Importance of the *Polis*

To produce an Inventory of Greek *poleis* makes sense only if the *polis* was an essential element of Hellenic civilisation both as an institution and as a concept. That is usually taken for granted, but ought instead to be substantiated.¹ Was the *polis* really the political unit *par excellence*? Did it matter to the ancient Greeks if they lived in a *polis* rather than in some other form of community? Was it something in which they took pride? As an introduction to this work we can adduce a number of observations in support of the orthodoxy.

(1) In sources of the Archaic and Classical periods there are more than 11,000 occurrences of the term *polis* and almost as many of its derivatives: *polites*, *politeia*, *polisma*, *politikos*, *politeuein/politeuesthai*, etc. The majority of the occurrences of *polis* are found in Athenian sources, but some 2,000 come from non-Athenian texts.² The number of attestations shows that it was impossible for the Greeks to think or speak or write about any public matter without incessantly using the word *polis* and its derivatives.³ The term and the concept behind it were thus of the utmost importance, not just as the designation of a physical phenomenon but also as a key concept in Greek political thought.

(2) In Hellas in the Archaic and Classical periods “belonging” in a political context meant, first of all, belonging to one’s *polis*. For a Greek citizen the *polis* was his fatherland (*patris*). Above *polis* level he might belong to an *ethnos*;

below *polis* level he might belong to a civic subdivision (a *demos* or a *phyle*, etc.). But he would not think of sacrificing his life for his *ethnos* or his *demos*, whereas he was expected, if necessary, to die for his *polis*.⁴ The *polis* provided its citizens with a sense of common identity, based on traditions, culture, ceremonies, symbols and sometimes (presumed) common descent.

(3) Thucydides tells us that when, in 431, many Athenians had to evacuate their houses and sanctuaries in the countryside and move into Athens, they felt it “as if they were leaving their *polis*”.⁵ This passage is often adduced as evidence of the importance of the deme as a political unit and is sometimes paraphrased to mean “that the deme was, as it were, the *polis* writ small” or that “many citizens of Attica may have looked to their deme first and their city second”.⁶ But we doubt that the Thucydides passage has anything to do with demes. The reference is to the citizens’ homes (*oikiai*) and sanctuaries (*hiera patria*). There is nothing about demes. Some of these sanctuaries may have belonged to demes, but what Thucydides emphasised is the ancestral character of these sanctuaries, which, in many cases, stretched much further back than Kleisthenes’ reforms, when, probably, many of them (but not all) were transformed into deme cults.⁷ The principal opposition stressed by Thucydides is

This chapter is a revised and updated version of Hansen (1996a) 14–15.

¹ The conceptual and linguistic aspect of this problem has been judiciously problematised by Murray (2000) 234–35.

² Apart from Homer and Hesiod (see 8 *supra*), the more important non-Athenians are Archilochos of Paros, Alkaios of Mytilene, Tyrtaios of Sparta, Pindar of Thebes, Bacchylides of Keos, Herodotos of Halikarnassos, Theopompos of Chios, Ephoros of Kyme, Aineias of, probably, Stymphalos, the Oxyrhynchos historian (=Theopompos?), Ps.-Skylax, and c.1,000 attestations in non-Athenian inscriptions down to the end of C4.

³ Murray (2000) 235 holds that “any investigation of the word *polis* is likely to find it most frequently exemplified in the philosophical context of theories of the polis or in the geographical context of settlement patterns”. This statement is not supported by our findings. In Archaic and Classical texts there are some 2,500 occurrences of *polis* in historians (Hdt., Thuc., Xen., *Hell. Oxy.* and fragments of Theopomp., Ephor., etc.), some 3,000 in the Attic orators (most in Demosthenes and Isokrates), some 1,200 in drama (Aesch., Soph., Eur., Ar., Men. and fragments), and c.1,500 in inscriptions. There are some 2,200 attestations in Plato and Aristotle and no more than c.300 in geographical treatises (almost all from Ps.-Skylax). To complete the picture, there are c.300 occurrences in Homer, c.200 in lyric and iambic poets, and c.150 in Aineias the Tactician.

⁴ In Lykourgos’ patriotic speech *Against Leokrates*—the Athenian who fled from his fatherland in 338 after the defeat at Chaironeia—there are no fewer than 70 occurrences of *patris*, often juxtaposed with *polis*, laws (*nomoi*) and sanctuaries (*hiera*). To die for one’s *patris*=*polis* in Tyrtaios (fr. 10.1–4) and Anakreon (*Anth. Pal.* 13.4). For the identification of *polis* with *patris* see *infra* 49, Hansen (forthcoming) and Nielsen (2004). For the cosmopolitan view—rare before the Hellenistic period—that one’s *patris* is wherever one wants to live, see Eur. fr. 774, 1034; Ar. *Plut.* 1151; Isoc. 4.81.

⁵ Thuc. 2.16.2: ἐβαρύνοντο δὲ καὶ χαλεπῶς ἔφερον οἰκίας τε καταλείποντες καὶ ἱερὰ ἃ διὰ παντὸς ἦν αὐτοῖς ἐκ τῆς κατὰ τὸ ἀρχαῖον πολιτείας πατρία δίαίταν τε μέλλοντες μεταβάλλειν καὶ οὐδὲν ἄλλο ἢ πᾶσι τὴν αὐτοῦ ἀπολείπων ἕκαστος (“But it was with sorrow and regret they abandoned their homes and ancestral sanctuaries—which they had always had due to the ancient constitution—and had to change their whole way of life, and each felt it as if he was leaving his *polis*”).

⁶ The importance of the deme is stressed by, e.g., Parker (1987) 137; Thuc. 2.16.2 is “The best introduction to the world of the Attic demes”; Parker (1996) 102: “the deme was, as it were, the *polis* writ small”. Katz (1998) 123: “the deme was something like a miniature *polis*”. Hornblower (2002) 134: “many citizens of Attica may have looked to their deme first and their city second”; and Hornblower (1991) 269.

⁷ Whitehead (1986) 177. Far from all local cults were deme cults: Osborne (1985) 178–81. For sanctuaries and cults of the demes, see the C4f sacrificial

between living independently (*αὐτονομία*) in the country (*ἐν τοῖς ἀγροῖς*) and living in the city (*ἐν τῷ ἄστει*). It is the *oikia* that is the principal object of emotion, and we think that a better paraphrase would be: “my home is my *polis*”, or rather, “leaving my home is *almost like* leaving my *polis*”.⁸ What Thucydides wants to emphasise is the feelings an ordinary Athenian had towards his home, but the comparison he has chosen reveals the strong feelings a citizen must have possessed towards his *polis*.

(4) A Greek citizen’s full name consisted of his own name (*onoma*), his father’s name (*patronymikon*) and the name of his *polis*, in the form of either a city-ethnic or a sub-ethnic (*infra* 58). To have a city-ethnic and/or a sub-ethnic was a prerogative of the citizens of the *polis* and an indication of citizen status. In Western civilisation the Greeks are unique in using a kind of hereditary surname as an indication of political status, and this naming habit, which was used from the Crimea to the Pillars of Hercules, reveals how much it meant to a Greek to be a member of his *polis*.

(5) Most Greeks believed that human history had been a progress from bestiality to humanity and civilisation, and in many accounts the formation of *poleis* was a decisive step towards civilisation.⁹

(6) Aristotle describes man as a *politikon zoon* and asserts that a person who is *apolis* is either subhuman or superhuman.¹⁰ Other forms of community, such as the *oikia* or the *kome*, or the *ethnos*, are not as developed and valu-

calendars of Erchia (*SEG* 21 541) and Thorikos (*SEG* 36 136). The modern idea that Thucydides in this passage refers to demes must have arisen by the following line of thought. (a) The *polis* is a political community. (b) Accordingly, the comparandum must be a political community as well. (c) That is corroborated by the phrase *ἐκ τῆς κατὰ τὸ ἀρχαῖον πολιτείας* (16.2). (d) In C5 Athens the principal political unit below *polis* level was the deme. Therefore Thucydides must have had the demes in mind. However, the context (2.15–16) shows that Thucydides is contrasting the situation before and after the synoecism of Attika, and the presumption is that *ἐκ τῆς κατὰ τὸ ἀρχαῖον πολιτείας* is a reference to the situation before the synoecism, i.e. to a period long before Kleisthenes had created the demes, when Attika was still subdivided into a number of *poleis*, see 624 *infra*.

⁸ Note the idiom *οὐδὲν ἄλλο ἢ* which signifies that home and sanctuaries were like a *polis*, i.e. strictly speaking they were *not* a *polis*. For the same use of the idiom, see, e.g., Thuc. 4.120.3, 8.5.1; Andoc. 1.101; Ant. 2.4.3; Pl. *Hp.mai.* 289E.

⁹ Soph. *Ant.* 370: *ὑψίπολις versus ἄπολις*; Pl. *Resp.* 369C: having gathered many partners and helpers together in one settlement, we chose *polis* as the name for this cohabitation. Isoc. 3.6=15.254: brought together, we built *poleis* and gave laws and invented crafts. Arist. *Pol.* 1253^a30–31: the man who first set up [the *polis*] was responsible for the greatest benefits. Moschion fr. 6.6–8: at that time there was not yet a roofed house nor a spacious *polis* protected by stone towers. Philoch. fr. 2b: they called the *polis* an *asty* because, having lived dispersed as nomads, they now gathered together.

¹⁰ Arist. *Pol.* 1253^a2–4: *ὁ ἀνθρώπος φύσει πολιτικὸν ζῷον, καὶ ὁ ἄπολις διὰ φύσιν καὶ οὐ διὰ τύχην ἢ τοι φαῦλός ἐστιν, ἢ κρείττων ἢ ἀνθρώπος* (“Man is by nature a *polis* animal, and one who does not participate in the *polis* because of his nature and not by accident is either subhuman or superhuman”). For the

able as the *polis*, which is the perfect form of human society (*Pol.* 1252^a1–6, 1252^b27–31). The ideal life for which man is made is the life of a citizen (*Pol.* 1288^a38). *Ho politikos bios* is described as the life of a citizen who participates in the running of the political institutions of his *polis* (*Pol.* 1283^b42–84^a3). Similarly, persons who do not participate in the *polis*, such as women, foreigners and slaves, are essentially inferior. They live in the *polis* but they are not members of the *polis* (*Pol.* 1275^a7–8, 1326^a18–20). In his political philosophy Aristotle establishes a hierarchy within the human race, and only those who live in *poleis* and are members of a *polis*, typically adult male Hellenes, are capable of fulfilling man’s purpose in life (1327^b18–33).¹¹

(7) During the council of war before the battle of Salamis the Corinthian general Adeimantos tried to silence Themistokles by saying that he had no right to speak as long as he had no *patris* and was *apolis*. Now, Themistokles did not reply: “It is irrelevant whether or not we have a *patris* and a *polis*; what matters is that we have 200 ships.” No, his answer was that Athens had an even better claim than Corinth to be labelled *polis* and *ge* (here echoing *patris*) as long as the Athenians had 200 ships (Hdt. 8.61). This exchange of words is undoubtedly anecdotal, but it shows that Herodotos and his contemporary readers (or listeners) took the concept of the *polis* very seriously. It is worth noting that, a century and a half later, Lykourgos made the same point: in leaving Athens the Athenians had not left their *polis* but had just moved it to Salamis (Lycurg. 1.69).

(8) When Kyros had conquered the Ionian cities, their representatives met at the Panionion to discuss whether they should put up with being Persian subjects or consider the alternatives. But, according to Herodotos, already before the Persian conquest the philosopher Thales had advised the Ionians to set up a common *bouleuterion* at Teos, and his proposal ended with the remark that the other *poleis* would be inhabited as before, but would change their status and become like demes (Hdt. 1.170.3). The plan came to nothing, but the political status of a community—to be a *polis* or just to be a deme—was obviously a matter of considerable consequence.

(9) According to Thucydides, the so-called synoecism of Attika in the age of Theseus consisted in the reduction of a number of *poleis* to local communities without a *bouleuterion* and a *prytaneion* (Thuc. 2.15.2). Thucydides is emphatic in pointing out not just that all the other Attic

rendering “*polis* animal”, see Arist. *HA* 617^b13–14 and Hansen (1996b) 199 with n. 13.

¹¹ Miller (1995) 240–45; Hansen (1996b) 197–202.

communities lost their political institutions, but that one *polis* only was created by the reform.

(10) In Archaic and Classical authors from all parts of the Greek world there are several score of passages in which the importance of the *polis* is emphasised. The following four are typical. According to Phokylides, a C6 Milesian poet, “A small *polis* well settled on the top of a hill is better than stupid Nineveh.”¹² The pre-Socratic philosopher Demokritos of Abdera claimed that “a well-governed *polis* is the greatest prosperity and everything depends on that” (fr. 252). In Xenophon’s *Memorabilia*, *polis* is singled out as one of the essential human concepts that are worth discussing and need a definition (Xen. *Mem.* 1.1.16). Aristoxenos of Taras, a contemporary and pupil of Aristotle, is reported to have said about Myson, one of the Seven Sages, that he never rose to fame because he was not from a *polis* but from a *kome*, and an insignificant one at that.¹³

To conclude: the concept of the *polis* mattered to the Greeks. They did not just live in *poleis*, they found it important to live in *poleis* rather than in some other form of political community. They were highly conscious of this, and that is one reason why the *polis* and the ancient Greek concept of *polis* are so important and well worth studying.

As is apparent from this Inventory, the Hellenic world of the Archaic and Classical periods comprised more than a thousand *poleis* and, apart from some regions on the

¹² Phokylides fr. 4, Diehl: πόλις ἐν σκοπέλω κατὰ κόσμον οἰκεῖσα ἀμικρὴ κρέσσων Νίνου ἀφρανοῦσης.

¹³ Aristoxenos fr. 130, Wehrli = Diog. Laert. 1.108. Myson was from Chen (Pl. *Prt.* 343A), which was either an otherwise unknown community, or a perioikic *polis* in Lakedaimon (no. 328) or a small *polis* in Oita (no. 425). But even if Chen is identified with one of the two small *poleis*, that does not change Aristoxenos’ view of the comparative importance of a *polis* and a *kome*.

fringes,¹⁴ all Hellenes lived in *poleis*. Apparently every Greek colony was founded as a *polis* or became a *polis* not long after its foundation.¹⁵ Nevertheless, no one has ever investigated how many *poleis* there were and which settlements were actually *poleis*. For Hellas itself an ultra-short study by Ruschenbusch (1977)¹⁶ breaks new ground, but it is very sketchy and often controversial. For the colonies there is no comprehensive study at all. The *polis* and the concept of *polis* have been investigated either in general or in relation to one individual *polis*. The general studies are mostly based on sources relating to Athens, and most of the individual studies deal with the Athenian democratic *polis* of the Classical period or with Archaic and Classical Sparta.¹⁷ In recent years only two major studies have been explicitly devoted to the other Greek *poleis*: Hans-Joachim Gehrke’s monograph *Jenseits von Athen und Sparta* (1986) and a collection of articles entitled *Alternatives to Athens* edited by Roger Brock and Stephen Hodkinson (2000).

¹⁴ For Epeiros (*infra* 339), inland Akarnania (*infra* 352), inland Aitolia (*infra* 380), Makedonia (*infra* 795), see Davies (2000).

¹⁵ For the unconvincing modern distinction between *apoikiai* (which were *poleis*) and *emporia* (which were not), see 153 *infra*.

¹⁶ Updated in Ruschenbusch (1985).

¹⁷ The most recent comprehensive study in English is still Ehrenberg (1960, 2nd edn. 1969). In German it is Welwei (1983, 2nd edn. 1998). He has one chapter about Sparta (90–139) and one about Athens (140–250) followed by 13 pages about middle-sized and small *poleis*, viz. Corinth, Megara, Mytilene, Chios and Elis. In French, there are Ruzé (1997), Lonis (1994) and Bertrand (1992). In Ruzé short sections about Crete, Argos and Corinth are added to the main sections about Lakedaimon and Athens. Lonis is organised systematically and has much information about other *poleis* mixed with his treatment of Sparta and Athens. But, again, of the 25 translated sources which appear in his book printed in frames, no fewer than 20 are Athenian. Bertrand has substantial chapters about the other *poleis* and includes a chapter about the *poleis* imagined by Plato and Aristotle.

The Lifespan of the Hellenic *Polis*

This investigation covers only a segment of the lifespan of the Hellenic *polis*, viz. the Archaic and Classical periods. We have deliberately not attempted to search for the origin of the *polis* during the Dark Ages or investigate the life of the *polis* during the Hellenistic and Roman periods (see *io supra*). But our analysis of the *polis* in the periods we cover is of course related to our views about the full time-scale of the *polis*. Therefore we have an obligation in this introduction briefly to expound our views about the history of the *polis* from its emergence to its demise.

The chronology of the *polis* is still hotly debated. Can the *polis* be traced back to the Mycenaean period (c.1650–1100), or did it emerge in the Geometric period (c.900–700)? And if one prefers the latter view, did it emerge as early as C9, or as late as c.700? Scholars are still divided over these issues and even more over the question of when the *polis* came to an end. Some historians place the decline of the *polis* in C4 and its fall in the years after 338. The prevailing view, which we endorse, is that it persisted through the Hellenistic and Roman periods and disappeared in late Antiquity only after a long decline that lasted several centuries. The disappearance of the *polis* was gradual and imperceptible, just like its emergence.

1. The Origin of the *Polis*

For the origin of the Greek *polis* we have three different types of evidence: (a) the linguistic evidence obtained by a comparative study of related words in other Indo-European languages, (b) the literary and epigraphical evidence of C8–C6, and (c) the physical remains of early settlements.

A. The Linguistic Evidence

The study of the etymology of the term *polis* is extremely important, since by extrapolation it takes us back to a period before the earliest written sources we have. First it should

be noted that the early variant form of *polis*, namely *ptolis*, is probably attested in the Mycenaean Linear B tablets in the form *po-to-ri-jo*. But, alas, *po-to-ri-jo* is not attested as a noun, only as (part of) a personal name,¹ and we have no clue as to what *po-to-ri-jo* may have meant in Mycenaean Greek.

A comparison with other Indo-European languages yields better results. The Greek word *polis* is related etymologically to Old Indian *púr*, Lithuanian *pilis* and Latvian *pils*.² In all three languages the original meaning was “stronghold” or “castle”, but in Old Indian the word developed the meaning “town” or “city”, whereas in the two Baltic languages it seems to have kept its original meaning.³

From the etymology it is reasonable to infer that the original meaning of *polis* in Greek too must have been “stronghold”. Our sources support this assumption: in both literary and epigraphical texts of the Archaic and Classical periods *polis* is occasionally used synonymously with *akropolis* in the sense of “citadel”. But whereas *akropolis* could designate both an eminence used as a settlement and a fortified place devoid of human habitation, *polis* used synonymously with *akropolis* seems always to have denoted a small defensible hill-top *settlement*,⁴ and not just a hill-top *fortification*. Remains of such fortified settlements, dating from the period c.1000–800, have been found in Zagora on Andros, in Dreros and Anavlochos on Crete, and in several other sites of the Protogeometric and Geometric periods.⁵ We shall never know for sure, but it is not an unreasonable guess that such hill-top settlements were called *poleis* by their Greek inhabitants. To sum up: the Indo-European

¹ KN AS 1517.12, cf. Thumb and Scherer (1959) 335 §337 13a; Morpurgo Davies (1963) 262.

² Frisk (1970) 576–77; Monier-Williams (1899) 635: “púr, f. a rampart, wall, stronghold, fortress, castle, city, town”. See Strunk (1970) 2.

³ It is misleading when Benveniste (1973) 298 claims: “we have thus here an old Indo-European term, which in Greek, and only in Greek, has taken on the sense of ‘town, city’, then ‘state’”. In Sanskrit *púr* certainly developed the meaning “town”, “city”, and since many of these cities were actually states, I would not preclude that the word may take on the sense of “state” or “political community” as well. In Lithuanian *pilis* has developed “palace” and not “town” as its secondary meaning.

⁴ Phokylides fr. 4, Diehl: “a small *polis*, well settled on the top of a hill, is better than stupid Nineveh”; Thuc. 2.15.6, see Hansen (1998) 31.

⁵ Snodgrass (1991) 8; Novicki (1992).

etymology strongly suggests that the original meaning of *polis* was neither city (or town) nor state (or political community), but stronghold, and more specifically, a small defensible hill-top settlement.

After this brief survey of the etymology of the word *polis*, it is evident that the question, How old is the *polis*?, makes no sense when put crudely. In the sense of stronghold the *polis* may have a history that stretches back into the Mycenaean period. Yet what historians usually mean when they ask about the origin of the *polis* is something different, namely: How old is the Greek city-state?, i.e. how far back can we trace the *polis* as we know it from the written sources and the archaeological evidence of the Classical period? But even in this form the question is hard to answer, because the development of a type of society is a gradual process. When does a nucleated settlement deserve to be called a city? And when can its political organisation be taken to be a kind of state?

To cut the Gordian knot, we shall suggest here a preliminary definition of the Classical Greek *polis* and then investigate how far back this definition can be traced. The *polis* was a small, highly institutionalised and self-governing community of citizens (called *politai* or *astoi*) living with their wives and children in an urban centre (also called *polis* or, sometimes, *asty*) and its hinterland (called *chora* or *ge*) together with two other types of people: free foreigners (*xenoi*, often called *metoikoi*) and slaves.⁶

It is still debated whether the origins of the *polis* in this sense can be traced all the way back to the Mycenaean period.⁷ We prefer to follow those who believe that discontinuity overrides continuity.⁸ The palace-centred Mycenaean communities in Knossos, Pylos, Mycenae, Thebes and Athens must not be seen as, essentially, a type of *polis* that in the Dark Ages dwindled to insignificance but reappeared in C9–C8.⁹ The *polis* seems to have emerged in the Geometric period (900–700), not by devolution following the breakdown of Mycenaean society, but in connection with an upsurge in population, wealth and civilisation. Fur-

thermore, urbanisation and state formation seem to have developed interdependently. Consequently, to answer the question, When did the (Classical) *polis* emerge?, we have to work backwards from c.500 and as far back as our sources go.

B. The Written Sources

In our opinion, the earliest indisputable attestations of named communities called *poleis* in the sense of “city-state” are Thasos (no. 526) attested in Archilochos,¹⁰ Sparta (no. 345) attested in Tyrtaios,¹¹ and Dreros on Crete (no. 956) attested in the oldest Greek law preserved on stone.¹² In these sources *polis* has the sense of both a political community and an urban centre, and as a political community it is a community of citizens.¹³ All three sources are from C7m and point to a *terminus ante quem* of c.650 for the *polis* as a city-state.

What, then, about Homer? Pace Finley and others, who held that no trace of the (Classical) *polis* could be found in the Homeric poems,¹⁴ it is now generally believed and convincingly argued that *polis* in the sense of political community is amply attested both in the *Iliad* and in the *Odyssey*.¹⁵ A C6 Greek audience listening to a performance of the poems would have had no difficulty in recognising Phaiakian Scheria as a colony founded by Nausithoos (*Od.* 6.7–10, 262–72), and the two *poleis* depicted on the shield of Achilles (*Il.* 18.490–540) as contemporary walled cities.

The problem is that it is impossible to date the Homeric poems precisely. Comparative studies show that orally transmitted epic poems are constantly reformulated and undergo substantial changes until a specific performance is “frozen” by being committed to writing.¹⁶ Next, in their fixed form they are like a coin hoard: the latest coin dates from the time it was buried, whereas the oldest may have been struck centuries earlier. Similarly, the events and the societies described in an orally transmitted epic poem may belong to different strata and constitute a strange mixture of old and new. Let us adduce just one example, usually passed over in silence.¹⁷ The “Homeric city” is adorned

⁶ For a more elaborate version of this definition, see 30 *infra*.

⁷ For the Mycenaean origin of the Greek *polis*, see Drögemüller (1970) 487–92; Thomas (1981) 32–35 (but see next note) and van Effenterre (1985) 27–28 *et passim*.

⁸ e.g. Snodgrass (1980) 28–32 and his review of van Effenterre (1985) in Snodgrass (1986) 263–65. Thomas and Conant (1999) xxvi–xxvii. As regards political structure, Thomas is now inclined to emphasise the differences between the Mycenaean state and the *polis* of the Archaic and Classical periods.

⁹ The view that the *polis* of the Archaic period is essentially different from Bronze Age societies does not preclude the possibility that some of the Bronze Age communities were organised as city-states and formed a city-state culture. Thus, Crete in the New Palace period may have been a city-state culture comprising five self-governing city-states rather than one state with five major urban centres but governed from Knossos. See Cherry (1986) and Hansen (2002) 7.

¹⁰ Archilochos fr. 228, West; *polis* in the sense of community of citizens (*astoi*): fr. 13.2, in the sense of town: fr. 49.7.

¹¹ Tyrtaios fr. 4.4, West; *polis* in the sense of town (fr. 10.3); in the sense of community (fr. 4.8, 12.28) of citizens (*demotas andras* and *demou plethos* in fr. 4.5 and 9).

¹² ML 2.1–2, now dated C7m in *Nomima* 1 81, C7s in Koerner (1993) no. 90.

¹³ The distinction between citizens and non-citizens is attested, e.g., in Draco’s law on homicide (ML 86.28–9 (c.624)) and in a law from Gortyn (*I.Cret.* 4.13, *Nomima* 1.1 (C71)).

¹⁴ Finley (1956) 35; Austin and Vidal-Naquet (1977) 40.

¹⁵ Murray (1993) 63; Morris (1986) 100–4; Raaflaub (1993) 46–59 and (1997).

¹⁶ Lord (1962) 188–93; Bennet (1997) 513.

¹⁷ Hansen and Fischer-Hansen (1994) 25. It is striking that, emphasising the

with palaces¹⁸ and, occasionally, with temples.¹⁹ The palaces are to some extent reminiscent of those excavated in Pylos, Mycenae and Tiryns.²⁰ Such palaces disappeared at the end of the Bronze Age (c.1200–1100) and the oldest known palace in a Greek *polis* is that of Dionysios I in Syracuse, erected just before 400.²¹ Conversely, temples are unknown in the Mycenaean world but are the most conspicuous type of monumental architecture from c.700 onwards.²² References to temples are rare in the Homeric poems, but they are mentioned in descriptions of Troy and the city on Scheria. Thus, it is unlikely that any early *polis* had both a palace and a temple inside its walls, and it would be pointless to look for a historical site which matches the “Homeric City”. We must read Homer as poetry.²³ In many ways the poems mirror society of C8–C7; the occasional mention of temples is just one such example. But the “Homeric *polis*” also includes reminiscences of walled Bronze Age palaces, weapons and war chariots used in the Mycenaean period,²⁴ a vague knowledge about the great urban centres in the Near Eastern empires, and a city in a wonderland imagined by the poet(s) of the *Iliad* and the *Odyssey*. To disentangle these four elements is a very difficult task which we prefer to avoid.

Consequently, we cannot expect the Homeric poems to present us with a coherent picture of the political organisation of the societies described in the *Iliad* and the *Odyssey*. In the *Iliad* book 2 the composition of Agamemnon’s army and the origin of each individual contingent is described in a long passage called the Catalogue of Ships (*Il.* 2. 484–759). These verses contain the highest concentration of named *p(t)oleis* in the Homeric poems. But the *poleis* listed are not city-states. The toponyms classified as *poleis* or *ptoliethra* are towns in “territorial states” ruled by kings or princes. Thus, Crete is an island with 100 *poleis* all ruled by Idomeneus (*Il.* 2.645–52). Furthermore, a close study of all the settlements

enumerated in the Catalogue of Ships reveals that, with some notable exceptions, it reflects Greece in the Mycenaean period rather than in the Geometric or the Archaic period.²⁵ Conversely, the notable exceptions show that it is not a true picture of the Mycenaean world.²⁶ On the other hand, the *poleis* depicted on the shield of Achilles and the description of the Phaiakian *polis* Scheria must reflect the social and political structure of Hellas in the Geometric or early Archaic periods.

To make matters worse, we cannot even fix a *terminus ante quem*, since we do not know when the Homeric poems were written down. Some ancient historians are tempted to adopt Barry Powell’s suggestion that a man living on Euboia c.800–750 created the Greek alphabet out of the Phoenician with the express purpose of writing down the *Iliad* and the *Odyssey*.²⁷ A much more recent date is suggested by Minna Skafte Jensen, who argues that the Homeric poems were written down for the first time in Athens in C6m in connection with the Peisistratid reform of the Panathenaic festival (Jensen (1980) 96–171).

Summing up, we prefer to suspend judgement on the so-called Homeric Society²⁸ and, for the same reason, we refrain from using the Hesiodic poems which were also transmitted orally until they were written down, we know not when. Our cautious conclusion is that, as far as the written sources go, the essential characteristics of the Classical *polis* can be traced back to a *terminus ante quem* of c.650.

C. The Archaeology of Greece

On the other hand, archaeology has made great strides in recent years and the remains of urban centres may take us a step forward, or, rather, further back. Several early settlements have been excavated in the Aegean Islands: Zagora on Andros, Emporio on Chios, and Lefkandi on Euboia, just to mention three of the most prominent. Most of them are small hill-top settlements protected by a fortification wall. They flourished in the so-called Dark Ages (c.1000–800) and were all abandoned c.700 (Snodgrass (1991) 7–9). Were

Iron Age aspects of the poems, Morris and Powell (1997) make no mention of “Homeric” palaces and temples. For palaces we must go back to Wace (1962).

¹⁸ *Il.* 6.242ff (palace of Priam); *Od.* 1.365 (palace of Odysseus); *Od.* 3.387ff (palace of Nestor); *Od.* 4.20ff (palace of Menelaos); *Od.* 7.81ff (palace of Alkinoos).

¹⁹ *Il.* 1.39, 5.446, 7.83 (temple of Apollo in Troy); *Il.* 6.297–300 (temple of Athena in Troy); *Od.* 6.10 (temples of the gods in Scheria).

²⁰ Wace (1962) 490; Pöhlmann (1992) 191–92. Both the Mycenaean remains and the Homeric “Halls” (*domata*) are so magnificent that the traditional designation of them as “palaces” seems well chosen. For a perhaps exaggerated emphasis on the purely imagined character of the Homeric king’s house, see Dalby (1995). For an attempt to reconcile the Homeric “palaces” with remains of Iron Age residences, see Ainian (1997) 363–68.

²¹ Hansen and Fischer-Hansen (1994) 25–30.

²² For some “primitive temples” antedating 700, see Lawrence (1996) 61–65.

²³ Judiciously emphasised by Scully (1990) 2–3.

²⁴ Greenhalgh (1973) 7–18; Ducrey (1986) 38–41.

²⁵ Hope Simpson and Lazenby (1970) 153–71. See, however, the recent discussion of the Catalogue by McInerney (1999) who argues that it is “a product of the eighth century” (124).

²⁶ The most disturbing problem is the lack of correspondence between Nestor’s realm as described in *Il.* 2.591–602 and the evidence of the Linear B tablets found in the palace at Ano Englianos, discussed by Hope Simpson and Lazenby (1970) 155–56.

²⁷ Powell (1991) adducing as possible analogies (11–12), e.g., Wulfila’s invention of Gothic script c.AD 400. The epigraphic evidence, however, indicates that a much better analogy is, e.g., the Nordic runes. They were invented in the first century AD, but it took many centuries before they were used for longer texts.

²⁸ See also the judicious and cautious approach in Baurain (1997) 403.

such settlements the centres of early *poleis*? If *polis* is taken in the sense of a smallish settlement and/or stronghold, the answer is probably “yes” (see *supra*). But if *polis* is taken in its Classical sense of a town which was the centre of a self-governing political community, the answer is a *non liquet*. There are no traces of securely identifiable political architecture antedating c.550,²⁹ and the archaeological evidence cannot provide us with information about the political organisation of these early nucleated settlements. We have no idea about how Zagora was governed. It may have been a small self-governing community, or a subdivision of another political community, e.g. Lefkandi, or it may have controlled the whole of Andros.

Yet a study of the Greek colonies, especially the western colonies, may provide us with a clue. The traditional view is that the formation of the *polis* preceded colonisation (Graham (1964) 159). In recent years this view has been challenged by the opposite hypothesis: that the *polis* emerged or at least developed in consequence of colonisation, and that it is the emergence of the *polis* in the colonies that influenced *polis* formation in the homeland.³⁰ Urbanisation, the opposition between the Greek settlers and the native foreigners, and the conscious introduction of common laws and new political institutions are features that are central to the concept of the *polis*, and all may have developed in the colonies before they became prominent in Hellas itself. Now, in the Greek colonies in Sicily and southern Italy, urban centres of remarkable size can be traced back to their foundation in the C8s,³¹ or at least to a period shortly after their foundation. Obvious examples are Syracuse (no. 47) and Megara Hyblaia (no. 36).³² Furthermore, each colony is attested as a self-governing political community as far back as our written sources go, i.e. in the late C6. Combining the archaeological evidence of urban centres from the late C8 with the reasonable assumption that each of these colonies was founded or soon emerged as a self-governing political community, the inference is that the *polis* in its Classical sense of “city-state” can be traced back to c.734, when Syracuse was founded by some Corinthians headed by an

aristocrat called Archias. It does not necessarily follow that Corinth too was a *polis* at that time. The founding of, e.g., Syracuse may well have been a private enterprise organised by Archias, rather than a political enterprise warranted by a decision made by the Corinthian *polis*.³³ It is worth noting, for instance, that the district of Achaia in the northern Peloponnese was very active in colonisation in C8, but did not develop *poleis* internally until much later, probably not before c.500.³⁴ As clusters of villages, Corinth (no. 227), Argos (no. 347) and Athens (no. 361) can be traced back to the late Geometric period (Morris (1991) 33), but we do not know when they became *poleis* in the political sense of the term.

2. The End of the *Polis*

It is still a common view that the independent Greek *polis* flourished in the Archaic and Classical periods, but was crushed by the Makedonians and disappeared in C4s. The turning point is often pinned down to the battle of Chaironeia,³⁵ and from some accounts one gets the impression that the *polis* in the sense of city-state perished on the day the battle was fought, i.e. on 2 August 338. A collection of the available evidence, however, shows that the independent city-state was declining at least a century before Chaironeia, and that independence (*autonomia*) never was an indispensable characteristic of the *polis*,³⁶ whereas the *polis*, i.e. the political community of citizens united in the running of their city’s institutions, continued to exist throughout the Hellenistic and Roman periods;³⁷ and that is now, we think, the prevailing view.

The dissociation of the concept of *polis* from the concept of *autonomia* (Hansen (1995)) is supported by the observation that the concept of *autonomia* seems to have emerged as late as C5m (Ostwald (1982) 14–26), i.e. at least 200 years later than the concept of the *polis*. One might object that most *poleis* were independent before C5m, and that the concept was explicitly formulated only after *autonomia* began to come under threat in C5m, when the Delian League was transformed into an Athenian Empire. The problem with this explanation is that dependent *poleis* are amply attested

²⁹ Hansen and Fischer-Hansen (1994) 30, 35–36, 42–44, 75, 81. It is still debated whether the large apsidal peripteral building excavated in Lefkandi (c.1000) was a chieftain’s house or an early temple; see Lawrence (1996) 62.

³⁰ Malkin (1987) 12, followed by Hansen (1994) 15–16.

³¹ Reasonably reliable foundation dates of many of the western colonies, not always matching the foundation dates reported by Thucydides at 6.2–6, are now established by archaeological evidence alone, and there is no reason to suspect a circular argument, i.e. that archaeologists base the chronology of Protocorinthian pottery on Thucydides’ foundation dates, whereas historians argue that Thucydides’ dates are corroborated by the Protocorinthian pottery found in the colonies; see van Compernelle (1992); Morris (1996).

³² Fischer-Hansen (1996) 334–51.

³³ Graham (1964) 7, 220, followed by Osborne (1998).

³⁴ Morgan and Hall (1996).

³⁵ Cf., e.g., Thomas (1981) 40; Bengtson (1977) 286, 295; Green (1990) 53, 56, 80, 220, etc.; and, most recently, Cawkwell (1996) 98 and *passim*.

³⁶ Hansen (1998) 205 with n. 32.

³⁷ Gauthier (1993) and Millar (1993) 211–31 and 232–60; Davies (1984); Gruen (1993); Ward-Perkins (1998).

in the Archaic and early Classical periods. From C7m onwards all the Greek *poleis* along the coast of Asia Minor were first under Lydian and then under Persian rule, and won independence only in the 470s after the Greek victories in the Persian War. In C6 the Corinthian colonies along the western coast of Greece were dependencies ruled by relatives of the Corinthian tyrants. The three secondary colonies founded by Syracuse in the course of C7 were dependencies of Syracuse. And all the perioikic *poleis* in Lakadaimon and Messenia, some fifty to a hundred *poleis* altogether, had been reduced to dependent status before 600.

There can be no doubt, however, that the number of dependent *poleis* was considerably increased in the course of C5 and C4. During the period C5m–C4m many *poleis* were deprived of their *autonomia* by being members of the Delian or the Peloponnesian League and being exposed to the imperialistic aspirations of the two hegemonic *poleis*: Athens and Sparta; and during the same period hundreds of other *poleis* changed their status from being independent states to being constituent states of a confederacy that regularly comprised all the *poleis* within a region. By C4m we find federal states in Boiotia, Phokis, Lokris, Euboia, Thessaly, Epeiros, Aitolia, Akarnania, Achaia and Arkadia. Furthermore, many *poleis* along the coast of Asia Minor had once again become subject to the Persian king, as they had been in the period before the Persian Wars.³⁸ There is no historical atlas that includes a map of Greece c.350 showing which *poleis* were still independent and which had become dependencies, either by being dominated by one of the hegemonic cities or the Persian king or by being a member of a confederation. Such a map would reveal that when Makedonia under Philip II (360–336) began to manifest itself as a great power, the independent city-state was no longer the typical form of *polis*. What disappeared with the rise of Makedonia in C4s was not the *polis* but the hegemonic *polis* such as Athens, Sparta or Thebes. The other *poleis* could not necessarily tell the difference between having been dominated by Athens or the Persian king and, again, being dominated by the king of Makedonia or some other Hellenistic monarch.³⁹ Thus the *polis* (i.e. the small political community of citizens living in or around an urban centre and united in running its political institutions) survived the end of the Classical period, and though the independent city-state had declined long before the defeat at Chaironeia, the *polis*—as the Greeks themselves understood the term and the concept—persisted and prospered throughout the Hellenistic and Roman periods.

During the Hellenistic period the typical *polis* seems to have been a democracy which had its *autonomia* (in the now restricted sense of self-government rather than true independence) established or confirmed by royal rescript.⁴⁰ During the Roman Imperial period oligarchy replaced democracy; the focus of the political organisation became the council (*boule*) instead of the assembly (*ekklesia*) and the city was now governed by a local aristocracy which filled all important magistracies.⁴¹ Still the *polis* was a self-governing community centred on a town.

The end of the Greek *polis* began in the late third century AD, when Diocletian (284–305) created a centralised bureaucracy that crushed most of what was left of local self-government (Jones (1940) 85).⁴² In the West what remained of urban life succumbed after the invasion of the Germanic peoples in C5. But in the East the Greek *polis* persevered for more than a century, and here the demise of the *polis* was to a considerable extent caused by the rise of the Christian Church and its bishops (Saradi-Mendelovici (1988) 365–401). The bishops joined the imperial bureaucracy in undermining the self-government of the *poleis*; and the Church attacked the pagan urban institutions and urged its members to keep away from the agora, which, on the other hand, the pagan authors praised as the centre of urban life.⁴³ Furthermore, *polis* religion had implied that each *polis* had its individual cults and its own pantheon. The pagan gods and their cults were now replaced by a divinity which did not allow of local individuality. Yet the decline of the *polis* was a slow process, and *polis* was still an important political concept in the reign of Justinian (529–565). Procopius, for example, tells us how in AD 533 a small African village was turned by imperial decree into a *polis* in the political sense.⁴⁴ However, “with the close of Justinian’s legislation the history of the city as an institution abruptly ceases. When the last remnants of civic autonomy disappeared we do not know: the titles which regulate the constitution of the cities were not struck out of the Code till the great revision under Leo the Wise. But they cannot have long survived Justinian.”⁴⁵

⁴⁰ e.g. OGIS 229.9–16. Davies (1984) 306; Gauthier (1993) 217–25; Quass (1979).

⁴¹ Ward-Perkins (1998) 371–82; Jones (1964) 712–66.

⁴² One example is Menander Rhetor’s treatise on how to praise a *polis*, composed c.AD 300. The urban aspects of the *polis* are emphasised; but when it comes to the political achievements and the constitution of the *polis*, Menander admits that there is no longer much to be said here, because all Roman *poleis* are now governed by one [*polis*], sc. Rome! (360.10–16, 363.10–14).

The Inventory of *Poleis*

To counteract the Athenocentric studies of the *polis*, one of the main objectives of the Copenhagen Polis Centre has been to build up an inventory of all *poleis* of the Archaic and Classical periods. The principal purpose of this investigation is to find out what the Greeks thought a *polis* was, and to compare that with what modern historians think a *polis* is (Hansen (1994a) 14–17). The concept of *polis* found in the sources ought, of course, to be the same as that in modern historiography. But this is far from always the case. Let us adduce just one example. The orthodoxy is that the small Boiotian town of Mykalessos was *not* a *polis*; it was instead a *kome*. This is indeed the term used by Strabo, whose classification is cited in, for example, *RE* s.v. Mykalessos, and again in the *Princeton Encyclopedia of Classical Sites* (*PECS*).¹ What is passed over in silence in both these articles and in most other studies of the history of Boiotia is that Mykalessos is called a *polis* by Thucydides, not just once, but three times in a passage where he uses *polis* both in the urban and in the political sense of the word.²

Scores of other examples could be adduced. In such cases the modern historian's reaction has normally been to admit that such settlements may well be called *poleis* in our sources, but then to imply or to state explicitly that they were not *poleis* in the true sense.³ The curious result of such a policy is the view that our sources often apply the term *polis* to a settlement that, according to modern orthodoxy, was not a *polis*. We are faced with a *polis* that was *not* a *polis*.

The contradiction has its root in the fact that modern historians who write about ancient Greece like to use the term *polis* synonymously with the term “city-state” (e.g. Finley (1981) 4). But *polis* is a historical concept attested in Greek sources, while city-state is a modern heuristic concept (Hansen (2000a) 13). The term “city-state” (or, rather, the German term *Stadtstaat*) seems to have been coined in the mid-nineteenth century and was first applied to the Ro-

man republican concept of *civitas*,⁴ whence it was rapidly transferred not only to studies of the Greek *polis* (Gawantka (1985) 204–6) but also to investigations of Italian, German, Sumerian, Phoenician and Etruscan cities and, since the mid-twentieth century, to city-state cultures in Mesoamerica, West Africa and East Asia as well (Hansen (2000b) 600). Thus modern historical discussions of the city-state combine characteristics borrowed from many different cultures, and the concept of city-state is not co-extensive with the concept of *polis*. Mykalessos may well have been a *polis* in the eyes of the Greeks, although it is not a city-state in the eyes of a modern historian.

In order to avoid paradoxical statements of the type that a certain settlement though called a *polis* was not a *polis*, we suggest that the two terms *polis* and “city-state” should be kept apart and not used indiscriminately. The term *polis* should be restricted to the Greeks' own understanding of what a *polis* was, whereas the term “city-state” should be used only when we discuss modern historical analyses of ancient Greek society.

Consequently, instead of saying that Mykalessos, though called a *polis*, was not a *polis* in the true sense, the historian ought to say that Mykalessos, though apparently a *polis* in the age of Thucydides, was not a city-state. In this form the statement makes sense. Whether it is true is a different matter. Whenever the city-state is discussed, independence or *autonomia* are singled out as the most important defining characteristics.⁵ But a great number of communities called

⁴ The English term “city-state” was probably coined in 1885 as a rendering of the German term *Stadtstaat* in connection with the translation into English of J. Bluntschli, *Lehre vom modernen Staat*, 6th edn. (Berlin, 1886) 63 = *Theory of the State* (London, 1885) 60. The German term *Stadtstaat* was probably coined in 1842 as a rendering of the Danish term *Bystat* (by = town, cf. Derby) in connection with the translation into German of J. N. Madvig, *Blik på Oldtidens Statsforfatninger med Hensyn til Udviklingen af Monarchiet og en omfattende Statsorganisisme* (Copenhagen, 1840) 20 n. 2 = *Blicke auf die Staatsverfassungen des Alterthums, mit Rücksicht auf die Entwicklung der Monarchie und eines umfassenden Staatsorganismus*, in *Archiv für Geschichte, Statistik, Kunde der Verwaltung und Landesrechte der Herzogthümer Schleswig, Holstein und Lauenburg* (Kiel, 1842) 42. The terms *Bystat* and *Stadtstaat* were first applied to Rome in the republican period, and only later transferred to descriptions of, primarily, the Greek *polis* and the Italian *città*. The French term *cit - tat* and the Italian term *citt -stato* are both derived from *Stadtstaat* and/or *city-state* and neither is attested earlier than the twentieth century, see Hansen (1994b); (1998) 15–16.

⁵ Finley (1981) 4–5: “Aristotle . . . was writing about the autonomous city-

¹ Strabo 9.2.11, 14. Fiehn (1935); McAllister (1976).

² Thuc. 7.29.3, 5 and 7.30.2; see Hansen (1995a) 18–21.

³ Mykalessos is not counted among the Boiotian *poleis* in C5s in any of the major accounts of the political organisation of the region, cf. Swoboda (1910) 316–17 with n. 6; Busolt and Swoboda (1926) 1415–16; Roesch (1965) 37–43; Salmon (1978) 101; Bonner (1910) 406; Bruce (1967) 103–4; cf. Hansen (1995a) 13–15.

polis in our sources were *not* independent and did not enjoy *autonomia*.⁶ Thus Mykalessos was a dependency of Tanagra (*infra* 88); the Greeks thought it was a *polis*, but according to modern orthodoxy its lack of independence or *autonomia* indicates that it was not a city-state.

If we establish and acknowledge a distinction between the ancient historical concept of *polis* and the modern heuristic concept of city-state, it follows that we can conduct two different investigations of ancient Greek society which may lead to different conclusions: if we study the city-state and apply the modern historians' understanding of what a city-state is, we get one picture of Archaic and Classical Hellas. If we go through the written sources and list all settlements that are actually called *poleis* in contemporary texts, we investigate the ancient Greeks' understanding of their own settlement pattern and political organisation and get a different picture.

It would be wrong to say that one of the two pictures is the right one and that the other is misleading; rather, the two pictures are complementary. It is always legitimate to contrast a culture's perception of itself with an outsider's more detached perception of the same culture (Burke (1992) 45).

At the Copenhagen Polis Centre we want to know how the Greeks perceived their own settlement pattern, and therefore our investigation has been based, first of all, on a careful examination of the terminology used and the site-classifications found in our sources. In this type of study it is necessary to describe and define the ancient concept of the *polis* before we begin to compare it with the modern concept of the city-state. Since concepts have to be studied through language, we started with the terminology: in all literary and epigraphical sources of the Archaic and Classical periods we collected every attestation of the term *polis* in order to conduct two different investigations.

First, we examined how the term *polis* is used whenever we meet it. Our sources tell us, for example, that a *polis* waged war, or made peace, or entered into an alliance, or struck coins, or passed a law, or a sentence, or founded a

colony, or defrayed expenses, or repaired the walls, and we hear about the territory of a *polis*, or its roads and water supply, or its altars, or its protecting divinity.⁷ The next task was to examine every single attestation of the term *polis* referring to a named *polis* such as Corinth, or Melos, or Megalopolis.

In the first investigation we analysed all the passages we had listed, no matter whether they concern a named *polis* or refer to a *polis* or the *polis* in general; and for this investigation a specific law passed by the *polis* Dreros is just as valuable a source as is a general reference in Aristotle that it is the *polis* which is responsible for passing laws.⁸ In conducting the second investigation, we restricted ourselves to the attestations that contain an explicit reference to a named *polis* and ignored all the passages referring to the *polis* in general.

These two different investigations relate to a very simple but very important distinction, acknowledged in linguistics and applied in that branch of philosophy which is devoted to the definition and classification of concepts. The meaning of a term is one thing; that which is denoted by a term because it has a certain meaning is another. In linguistics this distinction is sometimes referred to as the distinction between connotation and denotation; in philosophy the two terms used are the intension of a term (that is, its meaning) and the extension of a term (that is, the totality of objects to which the term refers). Linguistically, the *connotation* (or meaning) of the term "state" is something like "a geographically delimited segment of human society united by common obedience to a single sovereign" (Watkins (1972) 150), but the term "state" *denotes* any existing state, such as Greece, Denmark, Russia or Australia. Philosophically, the *intension* of the term "state" is the sum total of all the properties that must be possessed by a community in order to be called a state; the *extension* of the term "state" is constituted by the total number of existing states.⁹ If we concentrate on the *connotation* or *intension* of a term, we can determine its meaning by listing the essential characteristics which the term connotes, and then afterwards establish a list of the objects which fulfil the requirements of our definition. If

state, the *polis* in Greek . . . The ancient city was soon to lose its autonomy. The process began soon after Aristotle died"; Murray and Price (1990) vii: "our focus has been the autonomous Greek city-state or *polis* from its origins in the 'Dark Age' until the point at which it was transformed into a basis for world civilization by the conquests of Alexander the Great"; Osborne (1987) 195: "The essential mark of the Greek city is political independence." (For city = *polis*, see *ibid.* 11); cf. Hansen (1995b) 21–25; (1998) 78–83.

⁶ Hansen (1995b) 21–43; (1996b); *infra* 87–92. While accepting the concept of the dependent *polis*, its application to the members of the Boiotian federation has been denied by Keen (1996) and Rhodes (1999); see *infra* 92.

⁷ Hansen (1998) 67–68. For an updated list focusing on the non-Athenian examples, see Hansen (2002) 24–25.

⁸ Law on the proclamation of crowns passed by the *polis* of Athens (Dem. 18.120); the passing of laws is one of the principal duties of a *polis* (Arist. *Rhet.* 1360^a18ff).

⁹ The connotation versus the denotation of a term: Mill (1842) book 1, sections 2, 5 and 6. The intension versus the extension of a concept: Rescher (1964) 26–27; Lyons (1977) i. 170. On the definition (connotation, intension) of the term *polis*, cf. Sakellariou (1989). On intensional and extensional definitions in historical studies, see Hansen (2000b) 600–1.

we concentrate on the *denotation* or *extension* of a term, we shall do it the other way round: we begin by enumerating all the denotata, i.e. all objects to which the term is applied. Next, we look for the essential characteristics which these objects have in common, and finally we establish the meaning of the term by assembling the common characteristics we have found in order to build up a picture of the concept behind the term.

After this digression, we shall return to our topic and ask the question: What is a *polis*? Let us subdivide the main question into three questions: Do we want to examine the term itself? Or the concept behind the term? Or the objects denoted by the term?

The term. An analysis of the term is principally a linguistic investigation, and in a study of ancient Greek history it is relevant only in so far as it can shed light on the meaning and uses of the term. By studying the etymology of the word *polis*, for example, we learn that it is related to Old Indian *pūr*, Lithuanian *pilis* and Latvian *pils*, and that these three words originally meant stronghold.¹⁰ Consequently the original meaning of *polis* must have been stronghold, and in this sense it may perhaps have been used about the fortified sites in Crete in C10 at, for example, Dreros and Anavlochos, etc.¹¹

The concept. Historians study a term not for its own sake but in order to grasp the concept behind the term, to determine its essence, to find all the essential characteristics that go with it and transform these criteria into a description or even a definition of the concept. In doing all this they are faced with the problem that they have to apply modern terms and concepts in their description both of the ancient societies themselves and of the concepts used by the ancients themselves to describe them. Sometimes historians prefer in their analysis to use modern terms, such as “state” or “settlement” or “town” or “village”; but sometimes historians take over an ancient term found in the sources and use it in transliterated form. As pointed out above, *polis* is precisely such a term (Gawantka (1985)) and accordingly we cannot conduct our investigation of the term *polis* before we have decided whether we want to study the ancient concept of *polis* as found in our sources or the modern concept of *polis* as we meet it in the nineteenth- and twentieth-century accounts of the history of ancient Greece, where the word *polis* is frequently used synonymously with the modern term “city-state”.

The objects. The third type of investigation is to focus on

the denotata and analyse the communities or settlements referred to by the word *polis*. Such a study is not necessarily bound up with a study of the term itself to the same extent as is an investigation of the concept. It is a commonplace, but nevertheless true, that language is the medium in which concepts are expressed and words are the principal traces that ancient concepts have left behind for the modern historian to study. Symbols expressed in painting or sculpture or architecture etc. are important accessories, but to conduct an investigation of an ancient concept without focusing first on the words used to express it would be a nonsense.

On the other hand, the *objects* to which a term refers leave many traces other than the term itself. If we focus on the objects rather than on the concept, an examination of the terms used about the objects may be relegated to the background, and that is in fact what has happened in recent studies of ancient Greek society. Inspired by the growing number of archaeological surveys of the Greek landscape, the focus of interest has shifted from the written to the archaeological sources, and from the towns to the countryside.¹² The result has been a rapidly increasing number of what can be called settlement pattern studies. Here the historian starts with the settlement pattern of a landscape, as far as it can be ascertained for macro-periods (Archaic, Classical, Hellenistic, Roman, late Roman), then the investigation is focused on the actual pattern of the social, economic and political structure of the landscape and its settlements, and only then does the historian start looking at the names given to the various types of settlement and the terms used to describe them (Hansen (1995c) 46–47). In such an investigation it does not matter very much how the Greeks classified the different types of settlement, and what they themselves thought of their settlement pattern comes second to the study of the settlement pattern itself.¹³

Prominent examples of such an approach are John Fossey’s studies of Phokis (1986), Boiotia (1988) and East Lokris (1990); Carter’s studies of Metapontion (1992) and, first of all, the impressive surveys conducted during the last two

¹² Judiciously pointed out by Davies (1998) 237: “The second contribution of economic anthropology, reinforced by the preoccupations and findings of archaeological survey work, has been to divert attention away from the towns and traders towards landscapes and their unurbanised inhabitants.”

¹³ See Fossey (1990) 94–95: “The overall conclusion must be that in this area it is purely an *archaeological* investigation, almost entirely bereft of written sources, which can reconstruct the history of Opountian Lokris. The primacy of archaeology as our means of investigating the past of this part—and of many others—of Greece, even in the ‘historical’ period is beyond dispute, *pace* those colleagues in the Classical profession who would see archaeology essentially as an adjunct, or peripheral aspect of their discipline.”

¹⁰ Hansen (1996a) 34; see 16 *supra*.

¹¹ Nowicki (1992) 72–73; Camp (2000) 49.

decades, especially in the Peloponnese.¹⁴ An account for the general reader, covering the whole of Hellas, is given by Robin Osborne in his *Classical Landscape with Figures* (1987). In this study the settlements under discussion are called either “cities” or “towns” or “villages” (*ibid.* 11). A discussion of the Greek terminology as applied to each individual settlement is eschewed. Admittedly, Osborne states in his preface that he will use the English term “city” synonymously with the Greek term *polis* in its political sense (*ibid.*). Nevertheless, he sometimes uses the term village about a settlement that, in a contemporary source, is unquestionably called a *polis* in the political sense.¹⁵ Such inconsistencies, however, do not necessarily diminish the value of his book, since the Greek terminology and the Greeks’ understanding of their own environment are issues deliberately left out of consideration in this type of study.¹⁶

Such investigations are extremely valuable in their own right, but they are not designed to answer the question: What is a *polis*? This is nevertheless still an important question, although to some extent it seems to have become a neglected one. That is why the Copenhagen Polis Centre was set up with the explicit aim of answering that question or at least shedding light on some important aspects of it. We started from the term and, as stated above, we studied both its meaning (or intension) and its denotata (or extension). Building up an Inventory of all named communities called *polis* in Archaic and Classical sources, we focused exclusively on attestations of the term *polis* linked to a named *historical* locality such as Corinth, or Megalopolis, or Thasos, or Miletos. On the other hand, we left out references to named *poleis* in a *mythological* context, e.g. the term *polis* applied to Troy, or Mykenai ruled by Agamemnon, or Athens by Theseus. As a result, all references to named *poleis* in the Homeric poems and in tragedy were omitted.¹⁷

¹⁴ Prominent examples are the surveys of central Boiotia (Bintliff and Snodgrass (1985)), northern Keos (Cherry, Davis and Mantzourani (1991)), southern Argolis (Jameson, Runnels and van Andel (1994)); central Laconia (Cavanagh *et al.* (1996–2002)); Methana (Mee and Forbes (1997)); Kyaneai in Lykia (Kolb (1993–2000)). For a survey of the area covered by surveys up to 1994, see Alcock (1994) 250.

¹⁵ According to Osborne, Elis is the only “city” (= *polis*) in the region and other settlements are described as “villages” (124–27), but in the *Hellenika* Xenophon repeatedly refers to several of them as being *poleis*, see 3.2.23, 3.2.30, 3.5.12, 6.5.2.

¹⁶ See e.g. Fossey’s thorough and valuable studies of the settlement pattern of Phokis (1986), Boiotia (1988) and Opountian Lokris (1990) in which he focuses on site-location and has no discussion whatsoever of the site-classifications found in our sources.

¹⁷ Both Homer and tragedy are extremely important sources for the general and ideological aspects of the concept of *polis*, but of no value for a study of *polis* as a site-classification applied to named historical communities. In the *Iliad* and the *Odyssey* most of the attestations of *p(t)olis* used about named

Next, for every single locality attested as a *polis* in a contemporary source, we collected information about some forty different aspects of its organisation: its territory, history, laws, constitution, *proxenoi*, cults, calendar, participation in Panhellenic games, mint, urban centre, walls, temples, political architecture, etc. In selecting the aspects we wanted to investigate, we used the information obtained in our first general investigation of the meaning of the word: since many sources confirm that it was a characteristic of a *polis* to strike coins, we recorded whether the individual *polis* in question had a mint. Since a participant in the Panhellenic games had to be a citizen of a *polis* in order to participate (*infra* 107), we recorded Panhellenic victors belonging to the *polis*. Since a *boule* was apparently characteristic of a *polis* and never attested in *komai* or *demoi*, we collected information about *boule*, etc. Many of the aspects we looked for could be studied only through archaeological evidence. Did the *polis* in question possess an *agora* or a *bouleuterion* or a *prytaneion*? Was its urban centre protected by a circuit of walls?¹⁸

Every community explicitly attested as a *polis* in a source of the Archaic and/or Classical period has been included in our inventory and classified as a *polis* type A.¹⁹ If the *polis* in question is not called *polis* individually but is listed

communities refer to Troy, sometimes to Argos, Sparta, Mykene, Pylos, Ithaka and a few other places. The most problematical passage is the Catalogue of Ships. The context is the Heroic Age and, in so far as they have a historical basis, many of the toponyms listed seem in fact to reflect the Mycenaean Age rather than the Iron Age “Homeric Society” (Hope Simpson and Lazenby (1970)). In Aischylos, Sophokles and Euripides the context is the imagined Heroic Age, and it is not very helpful to be told, for example, that Athens is a *polis* ruled by Theseus (*Eur. Suppl.* 4, 28, 114, etc.). Exceptional are a number of passages from Aischylos’ *Persai*. Again, in lyric poetry as well as in prose there are some references to mythological *poleis* which are left out of our investigation, cf. e.g. Lycurg. 1.62 (Troy) or Pind. *Ol.* 10.82 (Tiryns).

¹⁸ For a list of all these questions, see the database card filled in for Tanagra in Hansen (1996a) 55–62.

¹⁹ References to *poleis* in later sources are sometimes listed, but they are never used in the analysis as evidence of *polis* status in the Archaic and/or Classical periods. “Later sources” are subdivided into (a) *Retrospective*: the literary sources belonging here are, for instance, attestations of the term *polis* in Diodorus, Strabo, Plutarch, Pausanias, etc. explicitly referring to the Archaic and Classical periods, e.g. Strabo’s list of early synoecisms in 8.3.2 or *ἐπέμια πόλεις* in Paus. when associated with the Archaic or Classical periods (Rubinstein (1995) 218–19). Retrospective epigraphical sources are, for instance, the renewal of a treaty originally concluded before 323, confirmation of a grant, or references in inscriptions to earlier events (e.g. *IG* 11² 505.17ff and *IPriene* 37–38). (b) *Contemporary*: references to a community being a *polis* in the age of the author or document in question, e.g. Strabo’s remark that in his days Thespias and Tanagra are the only settlements which deserve to be called *poleis* (Strabo 9.2.5); Hellenistic proxeny decrees or alliances, etc. Sources of type (b) are exceptionally recorded but always ignored in our analysis. Sources of type (a) are often used for reconstruction of the history of the *polis* in question, but never accepted as evidence that a community was actually called a *polis* in the Archaic and/or Classical periods.

among other communities under the heading *polis* (cf. *infra* 45–46), it has been classified as a *polis* type [A].

The next step was to collect information about communities which are *not* actually called *polis* in any contemporary source, but which are known for a number of the activities we examined in our investigation of communities actually called *polis*. For example, the community in question had a *bouleuterion* or a *prytaneion*; its citizens are known as victors in the Panhellenic games; or it possessed a mint. Its urban centre was protected by a circuit of walls, and a citizenship decree passed by the assembly is preserved or referred to in a literary source.

If such a community shared a number of properties with the communities actually called *polis*, the presumption is that it was in fact considered to be a *polis* by the Greeks, and that, any day, a new inscription may turn up in which the community is attested directly as a *polis*. One example is the Thessalian city of Atrax. It had an acropolis wall of C5e and a C4 defence circuit protecting the lower town. In C4m it appointed a *theorodokos* to host *theoroi* from Epidauros, and it had a C4 mint, etc. But it was only in 1984 that a funerary epigram was found in which Atrax is explicitly called a *polis* (SEG 34 560).

All communities performing activities characteristic of a *polis*, but not explicitly attested as a *polis*, have been added to our inventory, but classified as *poleis* type B or C. The difference between B and C is that for a B we have substantial indications that it must have been a *polis*, whereas for a C only one characteristic is attested, and not a decisive one, or there are so few that we cannot be sure that it is only due to lack of sources that the community in question is not actually recorded as a *polis* in Archaic and Classical sources. Thus, the classification of a *polis* as type A or [A] is mechanical and dictated by our method, whereas the distinction between B and C is to some extent subjective in that it involves an evaluation of which activities were the prerogative of a *polis* and not performed by other types of community and which activities are so important that they qualify a *polis* as a type B rather than a type C.

It should be added that a *polis* type A or [A] is not necessarily a better source for *polis* status than a *polis* type B. In some cases an Archaic or Classical author describing a named community as a *polis* may have been misinformed, or he may mix up two homonymous communities. The C4 treatise ascribed to Ps.-Skylax, for example, is a rather unreliable source for remote regions, such as the south coast of the Black Sea, where the term *polis* is sometimes applied to

toponyms that apparently denote a river or a mountain.²⁰ In such cases a *polis* type A is dubious evidence for *polis* status compared with a *polis* type B for which a whole series of the essential characteristics is attested.

Thus, our principal criterion for inclusion and classification is (1) the requirement that a locality is called a *polis* in at least one contemporary source, i.e. in Archaic and Classical sources down to the death of Alexander the Great in 323, or (2) that, in the Archaic and Classical periods, it performed a number of the activities characteristic of a *polis*.

In adopting this method we were faced with a number of problems. (1) To what extent was *polis* a loaded term and consequently subject to manipulation? (2) To what extent are our sources consistent in their terminology? (3) To what extent did the word *polis* denote the same concept c.600 and again c.320? (4) To what extent will the mass of Athenian evidence result in an inventory of *poleis* that reflects the idea of a *polis* in Classical Athens but obscures the complexity of the concept as used in the rest of the Greek world? (5) To what extent is our investigation influenced by the fact that the word *polis* is used not just in one sense but has a number of different meanings? In particular, to what extent is the construction of an Inventory of *poleis* impeded by the fact that *polis* sometimes means “town” and sometimes “state”? (6) To what extent is the concept *polis* affected by the term being used not only about Hellenic but also about barbarian communities?

1. The Possible Bias of the Word *Polis*

If living in a *polis* was something worth fighting for, *polis* must have been a loaded term. Thus there is a risk that the use of the term was subject to manipulation and that the classification of a settlement as a *polis* should not be taken at face value, but scrutinised as to when and by whom the classification was made. If this is the case, it will affect our investigation of the concept and—more seriously—it may spoil the value of building up an Inventory of all attested *poleis*. Let us illustrate this problem by a short digression about the modern concepts of democracy and state.

²⁰ See *infra* Iasonia (no. 716), Karambis (no. 717), Kinolis (no. 720), Koloussa (no. 721), Limne (no. 725), Lykastos (no. 726), Odeinios (no. 727), Tetrakis (no. 731). However, some of these localities may have been *poleis*, cf. Euripos (no. 199) attested in Ps.-Skylax 34 but rejected by most scholars until the discovery of the *theorodokoi* lists from Epidauros (IG 1v².1 95.15) and Nemea (SEG 36 331.A.28–30).

The meaning (or intension) of the term “democracy” is, e.g., “a political system in which the whole people make the basic decisions on important matters of public policy” (Holden (1974) 8), whereas the reference (or extension) of the term comprises all democratically governed states (Lijphart (1984) 37–45). But nowadays “democracy” has become a “hurrah word” (Holden (1974) 2) and—apart from China, Iran, Nigeria and a few others—every nation claims to be a democracy. So an inventory including every state called a democracy will comprise the great majority of all states, many of which do not fulfil the criteria included in the definition suggested above. To study the concept of democracy on the basis of a list of states called democracies would be grossly misleading (Holden (1974) 6–8).

The meaning (or intension) of the term “state” is, e.g., “a geographically delimited segment of human society united by common obedience to a single sovereign” (Watkins (1972) 150); the corresponding reference (or extension) of the term comprises all states. Like “democracy”, the word “state” is a loaded term, and it really matters to a people whether or not their country is recognised as a state, but, unlike democracy, there is very little disagreement about which countries to include in or exclude from a list of all states. Today the world is subdivided into 192 territorial states—the 191 members of the United Nations plus the Vatican, which does not want to join the UN.²¹ There are a few more *de facto* states: Taiwan, which is not allowed to join the UN because of China; North Cyprus, which is not recognised as a state by anyone except Turkey; and Somaliland. And there are some communities that aspire to statehood without having obtained it yet, e.g. the Palestinians. In almost all cases statehood is something that matters, but—a handful of communities excepted—it is not a disputed issue whether a community is a state. Therefore, a study of the extension of the term “state” and of the essential characteristics shared by all states will be a very valuable contribution to our understanding of the concept of state in our times.

Let us return to the term *polis*. Was it, like “democracy”, a hurrah word? Or was it, like “state”, a loaded term, but not one which became a slogan to such an extent that it was constantly disputed whether or not a given community was a *polis*? Admittedly, the council of war before the battle of Salamis provides us with one such example: it testifies to a disagreement between the Corinthian and the Athenian generals as to whether or not Athens at that moment

was a *polis* (Hdt. 8.61). But this is a very special case, because the physical city did not exist any longer, whereas the population retained its identity.

There may have been other similar cases. Suppose, for example, that the inhabitants of a small town insisted on being recognised as a *polis* but were dominated by a strong neighbouring town whose inhabitants would deny that the small dependent town was a *polis*. One possible example is Aigosthena. In the Classical period the small fortified town of Aigosthena in northern Megaris was a dependency of the *polis* of Megara, and in a Megarian decree of c.300 it is classified as a *kome* (IG VII 1.18). But it is apparently referred to as a *polis* in the C4 *periplous* ascribed to Skylax (Ps.-Skylax 39). Furthermore, c.240 it became a member of the Boiotian federation and in a decree passed c.200 Aigosthena is explicitly called a *polis* (IG VII 207.4). We may reject the classification found in Ps.-Skylax and hold that, in c.240, Aigosthena changed its status from being a *kome* in Megaris into being a member state of the Boiotian Federation, i.e. a *polis* (Feyel (1942) 91). But we cannot rule out the possibility that the Aigosthenitai had always claimed that they lived in a *polis*, whereas the Megarians would only grant them the status of being a *kome*. Or, alternatively, the status of *kome* may occasionally have been compatible with that of a dependent *polis* (cf. *infra* 92 and Helisson (no. 273)).

The perioikic communities in Lakedaimon, on the other hand, are consistently referred to as being *poleis*.²² One suspects that the Spartans might have tried to deny them the status of *polis*, especially after the King’s Peace of 386,²³ but among the sources that classify the perioikic communities as *poleis* is Xenophon, who had no quarrel with the Spartans and, in our opinion, his use of the term guarantees that the Greeks were unanimous in their classification of the perioikic communities as dependent *poleis*, i.e. as *poleis* without *autonomia*.

Another scenario is the refugee government. If a *polis* was torn by *stasis* and if one of the factions was sent into exile by the other faction, the exiles might try to form a government and behave as if they were the true *polis* (Seibert (1979) 373–74). The best-attested example concerns a member of the Second Naval Confederacy. Among the Athenian allies is recorded Ζακυνθίων ο δῆμος ὁ ἐν Νήλλωι (IG II² 43 B 35–38). A comparison with the literary sources indicates

²² Hdt. 7.234.2; Thuc. 5.54.1 (pace the note in Gomme, Andrewes and Dover 1970); Xen. *Hell.* 6.5.21; Ages. 2.24; *Lac. Pol.* 15.3; Ps.-Skylax 46; Isoc. 12.179; Strabo 8.4.11; Paus. 3.2.6; Polemon, *Περὶ τῶν ἐν Λακεδαιμόνι πόλεων*, p. 50, Preller. See Shipley (1997).

²³ Paus. 9.13.2; cf. Hansen (1996b) versus Keen (1996) 116–17; see 89 *infra*.

²¹ All members of the UN are states. See *The Charter*, Chapter 2, Articles 3–4, and *Rules of Procedure of the General Assembly* 134–38.

that the *demos* in question was a rebellious faction of exiled democrats who had established themselves in a stronghold called Arkadia, probably to be identified with Nellos. Both Xenophon (*Hell.* 6.2.2–3) and Diodorus (15.45.4) contrast the exiled democrats with *οἱ ἐκ τῆς πόλεως Ζακύνθιοι*, indicating that the position held by the exiled democrats was *not* a *polis*. But the exiles in Nellos are included in the list of allied *poleis* appended to the decree proposed and carried by Aristoteles of Marathon. Now, from the use of the term *polis* in the heading of the list of allies we cannot infer that all the communities subsumed were actually *poleis* in the sense of being political communities of citizens. Nevertheless, we cannot preclude the possibility that the Athenians and the exiled democrats themselves would claim that the stronghold on Zakynthos was a *polis* (Dreher (1995) 176–78).

There are in fact other possible examples of rebellious splinter communities which seem to have succeeded in being recognised as *poleis* by some of the major *poleis*. In 403 the Athenians treated the exiled Samians as the Samian people proper (*IG II² 1.44*) and their representatives as “envoys” (49: *πρεσβεία*); and the Spartans seem in 370 to have claimed that the exiled Tegeatan oligarchs were the true Tegeatan state, not the democrats who had come to power (*Xen. Hell.* 6.5.36; cf. Gehrke, *Stasis*, 155).

However, other sources indicate that a group of exiles did not necessarily see itself as the *polis* in exile. In Siphnos in C4e the exiled oligarchic faction did in fact set up a kind of refugee government by electing a *strategos autokrator* and a *grammateus*; but their decision to attack Siphnos (now ruled by the democratic faction) is described as a “decree of the refugees”, not a decree of the Siphnians or the Siphnian *polis*, and the decision they make is to attack the *polis* of Siphnos (*Isoc.* 19.38–39).

To conclude: the exchange of words between Themistokles and the Corinthian general Adeimantos is the only unquestionable example of a community whose status as a *polis* is claimed by one person but denied by another. Also, there is nothing strange about the fact that a large group of exiles from a *polis* torn by *stasis* at least for a period tried to act as if they were the true *polis*. In our sources there is a remarkable agreement and very little disagreement about which communities were *poleis*, and the inference is that, like the word “state” but unlike the word “democracy”, the word *polis* did not become a slogan, and its application to named communities seems only very occasionally to have been a bone of contention. Admittedly, there were no “international criteria”—such as membership in a body like the UN—by which it was formally decided whether a

given political community was a *polis* or not. Yet the rules for participation in the Panhellenic festivals, principally the Olympic Games, may have served as a yardstick not too far removed from some modern international agreements about statehood. A competitor had to be “the legitimate son of free Greek Parents” and “officially registered on the citizen roster of his native city” (Finley and Pleket (1976) 61). We suspect that far from all *poleis* had rosters of citizens, but our sources show that every victor had to be a member of a community that had ratified the Olympic truce and that he was proclaimed victor as a citizen of his *polis* as well as in his own right (Nielsen (2002) 203–11).

2. How Consistent are our Sources in their Use of the Word *Polis*?

Next, are the sources consistent in the way they use the term *polis*?

Many historians are sceptical, and as an example I will quote Peter Rhodes’s reaction to the way the Copenhagen Polis Centre constructed its Inventory of *poleis*:

I suspect we shall find that the Greeks themselves were not wholly consistent in their use of the word. They did not have the advantages of being able to use Liddell and Scott or Ibycus; and we ought to add here that they could not benefit from the researches of the Copenhagen Polis Centre: that is, they were often not as tidy and systematic in their use of their language as a tidy and systematic scholar would wish, and the principle that any political entity which a Greek is known to have called a *polis* must have been a *polis* may not be a useful principle on which to base our research.²⁴

This apparently cautious approach may open up a different pitfall for modern historians: whenever a site-classification found in the sources does not fit their understanding of what a *polis* ought to be, they are inclined to dismiss the source as untrustworthy. Let us quote the judicious comment of Edmond Lévy: “Les modernes savent—ou croient savoir—mieux que les Anciens ce qu’est une cité, ce qui leur permet de reprocher à Hérodote d’appeler indûment telle localité une *polis*, d’affirmer que telle *polis* n’est pas une vraie *polis* ou de traduire à l’occasion, quand le texte grec ne correspond pas aux conceptions modernes, *polis* par ‘petite

²⁴ Rhodes (1995) 91–92. This was written in 1994, and it has to be added that, in the light of the investigations conducted after the 1994 symposium, Peter Rhodes has taken a much more favourable view of the method adopted by the Polis Centre.

cité’, ‘bourgade’ ou ‘établissement’” (Lévy (1990) 53–54). Like Lévy, we have always suspected that the ancient Greeks were more consistent in their use of the term *polis* than many modern historians believe—they were as consistent, we think, as modern Europeans are in their use of, e.g., the term “state” (see *supra* 28). No great dictionary or computer concordance is required to use a term with reasonable precision. Most educated persons do not know all the problems concerning how to define a state, but they nevertheless apply the term to named countries with very few mistakes, and this Inventory confirms that inconsistencies in the use of the term *polis* in Archaic and Classical sources are very few and far between.²⁵

Now, first we must make sure what we mean by “inconsistency”. In this context we take it to be an “inconsistency” if a named locality is described with mutually exclusive terms; whereas to describe a locality with two different terms that can be used synonymously is not an inconsistency. Let us adduce just two examples: if, as some scholars believe, Thorikos had been classified as a contemporary *polis* by Hekataios, or Eleusis by Ps.-Skylax,²⁶ these would have been flagrant inconsistencies, since Thorikos and Eleusis were incontestably demes and since, in Classical Attika, *demos* and *polis* were mutually exclusive terms.²⁷ On the other hand, to call a place *polis* in one passage but *chorion* in another one is not an inconsistency, since *chorion* is a vague term that could be used about any type of settlement.²⁸ Similarly, the terms *asty* and *polisma* are often used synonymously with the term *polis* in its urban sense (*infra* 47–48), which should cause no surprise.

In following these guide-lines, we have in our investigations looked out for two different types of inconsistency: (a) one author (or text) applies different and incompatible site-classifications to the same locality; (b) different authors apply different and incompatible site-classifications to the

same locality. We have found very few inconsistencies, and in some of these cases it can be debated whether there is an inconsistency at all. Let us adduce just one example of each type. (a) In Herodotos, both Anthele and Alponos are classified both as *poleis* and as *komai*.²⁹ (b) When referred to at large, the perioikic communities in Lakonia are called *poleis* in all our sources (*supra* n. 22); some of the named perioikic cities are called *poleis*, e.g. Anthene and Thyrea, but others are called *komai*, e.g. Oion, Tyros and Belbina.³⁰

Conversely, the sources testify to a considerable degree of consistency. It is no wonder that all sources refer to, e.g., Athens, Megara, Plataiai and Naupaktos as *poleis*. But it is worth noting that the consistency applies to many small settlements as well. There seem, for example, to have been six urban communities on the Athos peninsula (including Sane). They are called *poleis* by both Herodotos and Thucydides, five are listed in Ps.-Skylax’s *Periplus*, and five turn up in the Athenian tribute lists (Hansen (1996a) 20).

The conclusion of our investigations is that the Greeks used the term *polis* with remarkable consistency. One of the few notorious inconsistencies is Herodotos’ double classification of Alponos and Anthele as both *poleis* and *komai*, to which we can probably add some of the sites called *polis* in one source but known from other sources as civic subdivisions. There was a grey area between *polis* and civic subdivision, be it a *demos* or a *kome* or a *phyle*, etc. But the grey area seems to have been small, as small or perhaps even smaller than the contemporary grey area between what is a state and what is not a state. Today we have truly independent states, members of the EU, federal states, member states of federal states, protectorates, autonomous regions and colonies. And yet we can claim “that there has been a surprisingly broad area of agreement about what constitutes the essential elements of the modern state” (Pierson (1996) 6).

3. The Possible Change of Meaning of the Word *Polis* during the Period c.650–323

Our investigation covers the period c.650–323, but this span of more than 300 years forces us to address the question

²⁹ Alponos: Hdt. 7.216.1 (*polis*), 7.176.5 (*kome*); Anthele: Hdt. 7.176.2 (*polis*), 7.200.2 (*kome*).

³⁰ *Polis* applied to Thyrea (Thuc. 4.56.2–57.3), Thyrea and Anthene (Thuc. 5.41.2). *Kome* applied to Oion (Xen. *Hell.* 6.5.25–26); Tyros: (*F.Delphes* 111.1 68); Belbina: (*CGF Comica Adespota* fr. 343).

²⁵ I have once before had the same experience. Until recently it was universally accepted by modern historians that the C4 Athenians were inconsistent in their way of using the terms *nomos* and *psephisma* and that the assembly often legislated by *psephisma* although the passing of all *nomoi* rested with the *nomothetai*. A collection of all relevant sources showed that the Athenians were much more consistent in their legislative procedures and in their use of the terms *nomos* and *psephisma* than modern historians believed (without having examined the evidence). See Hansen (1983).

²⁶ Thorikos: Hecat. fr. 126, but see Hansen (1997a) 25–26; Eleusis: Ps.-Skylax 57, but see Hansen (1996a) 30–32.

²⁷ The so-called Marathonian τετραπόλις, composed of four δήμοι, is a contradiction in terms; but the tradition about the *polis* of Tetrapolis is probably an invention of C7–C6, see no. 361, *infra* 625.

²⁸ Compare, e.g., *Hell. Oxy.* 20.3, Chambers (where the small Boiotian communities synoecised with Thebes c.430 are called *choria*) with 21.5 (where the term *chorion* is used jointly with *polis* about Hyampolis, which was undeniably a *polis* in the political sense).

whether the concept of *polis* was transformed to such an extent that we ought to split it up into a number of successive concepts rather than perceiving it as, essentially, one concept which, of course, underwent some changes in the course of the period. The obvious way of dealing with this problem is to compare the standard picture of the C4 *polis* with what we find in our oldest sources: some C7–C6 laws inscribed on stone and what we can find in the fragments of contemporary lyric and iambic poets and in Hesiod's *Erga*.³¹

Let us repeat in greater detail what we stated more briefly before (p. 17): in the Classical period the *polis* was a small, highly institutionalised and self-governing community of adult male citizens (called *politai* or *astoi*) living with their wives and children in an urban centre (also called *polis* or, sometimes, *asty*) and its hinterland (called *chora* or *ge*) together with two other types of people: foreigners (*xenoi*) and slaves. As a political community, the *polis* was felt to be one's fatherland (*patris*) and it was identified with its citizens more than its territory. Thus, a city-ethnic, i.e. an adjective derived from the toponym denoting the urban centre, was used collectively as the name of the *polis* and individually as a kind of surname whenever a citizen from a *polis* was mentioned alongside citizens from other *poleis*. Adult male citizens possessed the monopoly of political decision making but they were often split up into opposing factions and rivalry might entail civil war (*stasis*). Furthermore, warfare between *poleis* was endemic; the defence of the *polis* was a central aspect of the community and the urban centre of the *polis* was usually walled.

Every single aspect of this description can be found in sources dating from c.600. The smallness of the *polis* is emphasised by Phokylides, a C6 Milesian poet.³² In a lost poem, paraphrased and echoed in numerous late sources, Alkaios argues that a *polis* is not just a town but a community. The personal sense of the word is emphasised at the expense of the urban sense, but the antithetical way of expressing his view reveals that others might prefer to describe a *polis* as a city in the urban sense of the term,³³ a sense of *polis* explicitly attested in Archilochos.³⁴ The

walls of the *polis* referred to in the paraphrase of Alkaios' poem are directly attested in other poets.³⁵ So, as far back as our written sources go, the word *polis* is used to designate both a community of human beings and its physical setting, i.e. an urban centre and its hinterland, two parts explicitly juxtaposed in one of Tyrtaios' poems.³⁶ Next, a C7s law from Dreros demonstrates that the persons who make up the *polis* act as a political community.³⁷ Here the *polis* in the sense of community is identified with its *politai*.³⁸ In another poem by Alkaios the citizens are described as some who participate in the meetings of the assembly (*ἀγορά*) and the council (*βόλλα*), both situated in the urban centre.³⁹ The highly institutionalised character of the *polis* is apparent from Tyrtaios' description of political decision making in C7m Sparta.⁴⁰ Rivalry between opposing factions of citizens leading to *stasis* is a recurrent theme in Alkaios' poems.⁴¹ Finally, a Solonian law testifies to an opposition between citizens (*politai*) and foreigners and shows that the citizens form a (small) privileged group different from and smaller than the inhabitants of the *polis* in the sense of a city with its hinterland.⁴² On the other hand, when Tyrtaios

found where there are men capable of saving themselves"). Hipponax fr. 50.1: οἴκει δ' ὀπισθε τῆς πόλιος ("He lives behind the city") (Ephesos).

³⁴ Arch. fr. 49.7: φιλήγητ' ὑκτωρ περὶ πόλιν πωλομένην ("A thief who wanders about the *polis* at night"). The reference is presumably to Thasos.

³⁵ Schol. Pind. Ol. 8.42: στέφανος γὰρ ὡσπερ τῶν πόλεων τὰ τεῖχη. καὶ Ἀνακρέων· νῦν δ' ἀπὸ μὲν στέφανος πόλεως ὄλωλεν (Anacr. fr. 391, PMG) ("since the walls of the *poleis* are like a crown, and Anakreon: 'the crown of the *polis* has now been destroyed'").

³⁶ Tyr. fr. 10.3–4: τὴν δ' αὐτοῦ προλιπόντα πόλιν καὶ πόνους ἀγροῦς / πωχεύειν πάντων ἔστ' ἀνηρότατον ("The worst fate of all is to have left one's *polis* and rich fields and live as a beggar"). Cf. also Solon fr. 36.25: πολλῶν ἂν ἀνδρῶν ἦδ' ἐχρηώθη πόλις ("the *polis* deprived of many men") is not just the town of Athens but all of Attika.

³⁷ ML 2.1–2 (law from Dreros, c.600): ἀδ' ἔφαδε πόλι ("It was thus decided by the *polis*").

³⁸ The earliest attestation of the term πολίτης ("citizen") is at Arch. fr. 109.1.

³⁹ Alkaios fr. 130.17–23, Lobel and Page: ζῶω μοῖραν ἔχων ἀγροῖωστίκων / ἱμέρρων ἀγόρας ἄκουσι / καρυ[ζο]μένας ἀγεσιλαῖδα / καὶ β[ό]λλας. τὰ πάτερ καὶ πάτερος πάτερ / κα . . . ηρας ἔχοντες πεδὰ τωνδῶν / τῶν [ἀ]λλαοκάκων πολῖταν / ἔ . . . [ἀ]πὸ τούτων ἀπελήλαμαι . . . ("It is my fate to live in the countryside although I long to hear the summoning of the assembly, Agesilaidas, and the council. . . the possessions of my father and grandfather . . . among these mutually destructive *politai* . . . I have been expelled from that . . .").

⁴⁰ Tyr. 4.3–10: ἄρχειν μὲν βουλήσ' θεομητιότους βασιλῆας, / οἷσι μέλει Σπάρτης ἱμερόεσσα πόλις, / πρεσβυγενέας τε γέροντας, ἔπειτα δὲ δημότας ἄνδρας / εὐθείας ῥήτρας ἀνταπαμειβομένους. / μυθεῖσθαι δὲ τὰ καλὰ καὶ ἔρδειν πάντα δίκαια / μῆδ' τι βουλεύειν τῆδε πόλει (ἀκολιόν), / δῆμον δὲ πλήθει νίκην καὶ κάρτος ἔπεισθαι. / Φοῖβος γὰρ περὶ τῶν ἰδὲ ἀνέφηνε πόλει ("The god-honoured kings shall rule the *boule*, they who care for the lovely *polis* of Sparta, and the reverend elders, and next the men of the people, answering with straightforward *rheta*. They shall speak what is good and what is just and shall not give the *polis* any (crooked) counsel. Victory and power shall rest with the multitude of the *demos*. For thus spoke Phoibos to the *polis* about these matters").

⁴¹ Alc. fr. 70, 130, 326.

⁴² Plut. Solon 24.4 (= fr. 75, Ruschenbusch): παρέχει δ' ἀπόριαν καὶ ὁ τῶν δημοποιήτων νόμος, ὅτι γενέσθαι πολίτας οὐ δίδωσι πλὴν τοῖς φεύγουσιν ἀει-

³¹ In excluding references to *poleis* in a mythological context (*supra* 8), I refrain from using the two Homeric poems and the *Theogony* by Hesiod.

³² Phokylides fr. 4, Diehl: πόλις ἐν σκοπέλω κατὰ κόσμον οἰκεῖσα σμικρῆ κρέσσων Νίνου ἀφρανούσης ("A small *polis* well settled on the top of a hill, is better than stupid Nineveh").

³³ Alkaios fr. 426, Lobel and Page: τὸν λόγον ὃν πάλοι μὲν Ἀλκαῖος ὁ ποιητῆς ἔειπεν . . . ὡς ἄρα οὐ λίθοι οὐδὲ ξύλα οὐδὲ τέχνη τεκτόνων αἱ πόλεις εἶεν ἀλλ' ὅπου ποτ' ἂν ὦσαν ἄνδρες αὐτοὺς σφύζειν εἰδότες ἐνταῦθα καὶ τεῖχη καὶ πόλεις ("The statement once made by the poet Alkaios . . . 'that *poleis* are neither stones nor timber nor the skill of builders but both walls and *poleis* are to be

uses *polis* in its personal sense and speaks of how the whole *polis* mourns for a brave soldier killed in battle, women and children are undoubtedly included among those who constitute the *polis*.⁴³ The *polis*'s mourning for a brave soldier reflects the ideology that citizens are expected to die for their *polis*, in this context conceived as their *patris*.⁴⁴ Wars between *poleis* are attested in dedications set up in Olympia to commemorate one *polis*'s victory over another *polis*, and here the *poleis* are identified by city-ethnics in the plural,⁴⁵ whereas city-ethnics used individually were inscribed c.600 by Greek mercenaries on the statue of Rameses II in Abu Simbel.⁴⁶

Thus, the essential elements in the concept of *polis* found in the late Classical period are all present c.600. The concept of *polis* had a core that persisted unchanged throughout the period in question. Writing about the *polis* in C4m, Aristotle can have had no difficulty agreeing with the Archaic texts quoted above, and if Alkaios had had an opportunity to read Aristotle's *Politics*, he would undoubtedly have been familiar with the philosopher's descriptions of the *polis*. How widespread this concept of *polis* was in c.600, and how many *poleis* there were in Alkaios' day, are different questions which we want to address in a different context.

4. Possible Regional Variations in the Meaning and Use of the Word *Polis*

Not only chronological but also regional variations must be taken into account. One might suspect that the concept of *polis* in Athens was different from what people thought a *polis* was in Mantinea, or Thebes, or Pantikapaion, or Syra-

φνγαί την εἰνῶν ἢ παρεστῆσις Ἀθήναιζε μετοικιζομένοις ἐπὶ τέχνη (“His law concerning naturalised citizens is a surprising one, because it granted naturalisation only to those who had emigrated with their families to practise a trade. Solon's object here, we are told, was not so much to discourage other types of immigrants as to invite these particular categories to Athens with the assurance that they could become citizens there” (trans. I. Scott-Kilvert)). I fully endorse the interpretation offered by Lambert (1993) 381–83, *pace* Davies (1978).

⁴³ Tyrnt. fr. 12.27–28, West: τὸν δ' ἀλοφύρονται μὲν ὁμῶς νέοι ἡδὲ γέροντες, / ἀργαλέω δὲ πόθω πάσα κέκηθε πόλις (“Young and old alike mourn for him and the whole *polis* is deeply grieved”).

⁴⁴ Tyrnt. fr. 10.1–2: τεθνάμεναι γὰρ καλὸν ἐνὶ προμάχοισι πεσόντα / ἄνδρ' ἀγαθὸν περὶ ἢ πατρίδι μαρνάμενον (“It is good for a brave man to fall and die, fighting in the front ranks for his *patris*”).

⁴⁵ SEG 24 300: Θεβαῖοι τῶν ἠγετιῶν (“The Thebans from the Hyettians”) (C6s).

⁴⁶ ML 7C: Τήλεφός μ' ἔγραφε ἡ Ἰαλισίους.

cuse, or Kyrene, etc. Consequently, since our investigation starts from the term *polis* as found in the written sources, and since the bulk of our texts are Athenian, we must beware of the risk that our inventory of *poleis* will reflect the idea of the *polis* in Classical Athens and obscure the complexity of the concept as used in the rest of the Greek world. The problem has three facets. (a) To what extent are our sources biased by dealing with Athens more than with the 1,034 other *poleis* described in this Inventory? It must be admitted that Athens, and especially C4 Athens, is the only *polis* for which almost all aspects of the community can be reconstructed with some confidence. (b) To what extent is our information about the 1,034 other *poleis* biased by being based on Athenian sources? Most of our information about the number and identity of Greek *poleis* in C5s comes from Thucydides and from the Athenian tribute lists. But Thucydides, though in exile, was an Athenian citizen, and the tribute lists must reflect the official Athenian view of the members of the Delian League (Schuller (1995)). (c) To what extent is our general and more abstract picture of the *polis* biased by the fact that the most important general discussions of the concept of *polis* are found in Plato's dialogues and in Aristotle's political treatises? Plato was an Athenian citizen, and Aristotle, though born in Stagiros in Thrace, spent most of his adult life in Athens.

The only way of testing whether an investigation of the concept of *polis* based on all sources will be biased by being too Athenocentric is to compare the concept of *polis* in the Athenian sources with what we find in all the non-Athenian authors and documents. Our investigation points to a remarkable degree of agreement between the Athenian view of the *polis* and what we know about the concept of the *polis* in the rest of the Greek world.

(1) As pointed out above, the concept of *polis* figures prominently in lyric and iambic poets of the Archaic and early Classical periods, especially in Archilochos, Tyrtaios, Alkaios, Solon, the Theognidea, Simonides, Bacchylides and Pindar. Of these, Solon is the only Athenian, and his concept of *polis* in no way stands out from that found in the others.

(2) Including restorations, the word *polis* is used approximately 1,450 times in inscriptions down to 300, c.425 times in Attic inscriptions and c.1,025 times in inscriptions from the rest of the Greek world. The word is used c.1,210 times about 242 named communities.⁴⁷ The remaining at-

⁴⁷ Altogether 135 of the 242 *poleis* are called *polis* individually in at least one inscription. Another 107 *poleis* are recorded only in inscriptions in which *polis* is just a heading of a list of named communities. By far the longest such list is the one appended to the so-called Charter of the Second Athenian Naval League

testations are to the *polis* in general or to an unidentifiable *polis*. The main difference between Athenian and non-Athenian inscriptions seems to be that, in publication formulas, the sense of “acropolis” is very common in Attic inscriptions down to C4e, but virtually unattested outside Athens.⁴⁸ Apart from that, a comparison of the occurrences of *polis* in laws, proxy decrees, funerary epigrams, inventories and other types of public document from different *poleis* reveals that the similarities in meaning and reference predominate in inscriptions from the entire Hellenic world (Hansen (1998) 67–68; Flensted-Jensen, Hansen, and Nielsen (2000)).

(3) Apart from Thucydides, our principal source for the meanings and uses of the term *polis* in C5 is Herodotos, and he was *not* an Athenian but a Halikarnassian who probably spent the last two decades of his life in Thourioi. If we focus on the intension of the term *polis*, we note, for example, that Herodotos and Thucydides both take a *bouleuterion* to be *the* public building which constitutes a *polis* in the sense of a self-governing community (Hdt. 1.170.3; Thuc. 2.15.2). And if we examine the extension of the term *polis*, we can compare the two historians’ classification of the Greek settlements from Argilos west of the river Strymon to Poteidaia on Pallene. Herodotos lists the *poleis* in this region in book 7 in connection with Xerxes’ march through Thrace. Thucydides treats the same region in book 4 in his description of Brasidas’ campaign in 424–422, and a number of the communities are mentioned again in the peace of Nikias. A comparison between the settlements called *polis* by either author reveals a remarkable agreement and there is no detectable disagreement (Hansen (1996a) 24).

(4) In his book *How to Survive under Siege*, Aineias the Tactician treats the *polis* both as a (walled) urban centre and as a political community which has to make decisions about its defence. His views of the *polis* are so varied and illuminating that they have inspired a historian to write an article entitled “Polisbegriff und Stasistheorie des Aeneas Tacticus” (Winterling (1991); see esp. 205–11). Who Aineias

(IG 11² 43 A79–90, B7–38). In the C5 Athenian tribute lists (IG 1³ 259–90) the only occurrence of *polis* in a heading is in IG 1³ 285.7 where, however, *πόλις* is completely restored. In the tribute lists from 434/3 onwards, *πόλις* does occur in some of the subheadings, the so-called rubrics, and the communities listed after such subheadings are included in our count. See 111 *infra*.

⁴⁸ In Attic inscriptions there are 115 attestations of *polis* referring to the Acropolis of Athens, plus the reference to the acropolis of Erchia in SEG 21 541. Outside Athens the only occurrences we have found are IG 1v 492.3 (Mykenai); ?SEG 41 725B (Eretria); IG x11.1 977A.35, 39 (Lindos); I.Ephesos 1.2 (Ephesos). In I.Délos 104–24.9 *polis* is completely restored. In SEG 26 1282.5–6 (Erythrai) the article τῆς shows that the sense is “town” and not “acropolis” (*pace* RO 17).

was is still in dispute, but the prevailing opinion—to which we subscribe—is that he was Aineias of Stymphalos, general of the Arkadians in the 360s (Whitehead (1990) 10–13). Thus he provides us with another non-Athenian view of the *polis*, but nevertheless one which is indistinguishable from what we would have obtained if a similar investigation of the concept of *polis* had been based on Thucydides, Xenophon and Demosthenes.

(5) As stated above, the questions we ask concerning every community called *polis* in a contemporary source have been generated by our investigation of how the term *polis* is used in all sources: a *polis* struck coins, passed laws, waged war, was protected physically by its walls and spiritually by its protecting divinity, etc. *Polis* appears as the subject in a large number of sentences which illustrate the variety of the activities performed by the *polis*. A list of such activities, in each case matching an Athenian with a non-Athenian source, demonstrates that there is no difference between Athens and elsewhere in what the *polis* is supposed to do.⁴⁹

(6) To the above examples must be added how other *poleis* are treated in Athenian sources. In the *Politics* Aristotle adduces some 270 historical examples to illustrate and exemplify his analysis of the *polis*. Only some thirty of his historical examples concern Athens, whereas the other 240 examples are drawn from a wide range of *poleis*, e.g. Lakedaimon, Syracuse, Kyrene, plus some eighty other *poleis*. The impression one gets from reading the empirical part of the treatise, *viz.* books 3–6, is that the work is far from being Athenocentric. It may, of course, be objected that Aristotle is interpreting all the other *poleis* and their constitutions in the light of the Athenian constitution, but in so far as we can check them, Aristotle’s generalisations about the *polis* seem to be based on the non-Athenian much more than the Athenian examples (Hansen (1998) 104–5).

To conclude: our non-Athenian sources are so numerous and varied that, with due caution, it seems perfectly possible to counteract any tendency to draw a too Athenocentric picture of the *polis*. Furthermore, a comparison between Athenian and non-Athenian sources indicates that an Athenian’s idea of a *polis* cannot have been radically different from what an Arkadian or a Milesian or a Syracusan thought a *polis* was. Quite the contrary.

⁴⁹ Hansen (1998) 67–68. For an updated list focusing on the non-Athenian examples, see Hansen (2002) 24–25.

5. The Multiple Meanings of the Word *Polis*

In the next section about the uses of the word *polis* it will be argued (1) that the word *polis* has several meanings; (2) that the two predominant meanings are “town” and “state”, with “territory” (= town plus hinterland) as a much less frequently attested third meaning; (3) that in many cases *polis* bears both the predominant senses simultaneously and can reasonably be rendered “city-state”; but (4) that in many other cases *polis* means either “town” or “state”. Now, if *polis* in the sense of town and in the sense of state was often used to denote essentially different objects, it would be a waste of time to draw up an Inventory of all *poleis*. Some of the entries would describe a town which was not the centre of a state, and others would describe a state which had no urban centre. The validity of the enterprise depends on the validity of one further observation made in the Polis Centre and therefore, for the fun of it, called the *Lex Hafniensis de civitate*.⁵⁰

It concerns the use of the word *polis* in ancient Greek texts down to c.300 and runs as follows:

[1]n Archaic and Classical sources the term *polis* used in the sense of ‘town’ to denote a named urban centre is applied not just to any urban centre but only to a town which was also the centre of a *polis* in the sense of political community. Thus, the term *polis* has two different meanings: town and state; but even when it is used in the sense of town its reference, its denotation, seems almost invariably to be what the Greeks called *polis* in the sense of a *koinonia politon politeias* and what we call a city-state.⁵¹

The *Lex Hafniensis* applies to Greek *poleis* only. For the use of *polis* in relation to barbarian communities, see *infra* 36.

An examination of all prose texts down to the end of C4 shows that there are 447 Hellenic communities called *polis* in the urban sense in Archaic and Classical sources (listed in Hansen (2000c) 182–92).⁵² Of these 447 urban centres, sixty-three must be left out of consideration because there is no other source antedating c.300 or referring to the Archaic and/or Classical periods (listed in Hansen (2000c) 193 nn. 40–41). Consequently there is no way of having the *Lex Hafniensis* either confirmed or disproved. Of the remaining 384 attestations, only twenty are problematic (discussed in Hansen (2000c) 195–202). One occurrence flatly contradicts

our observation: in *Poroi* 54 Xenophon proposes to build a *polis* in the mine district at Laureion and to have it populated with slaves. This imaginary nucleated settlement is the only unquestionable instance of a *polis* town which was *not* the centre of a *polis* state.⁵³ There are nineteen other instances in which it is an issue whether an attested *polis* town was a *polis* state as well. If, in everyone of these nineteen cases, we prefer an interpretation that does not conform with our rule, it still applies in 95 per cent of all cases.

Even assuming that some, or even all, of the twenty problematic *poleis* were not *poleis* in the political sense, that does not necessarily imply that they are exceptions to the rule. The explanation may well be that the author is simply wrong. When Theopompos, for example, in fr. 149 calls Dystos (no. 369) a *polis* in the urban sense, he may have been mistaken about the site-classification in *both* the urban *and* the political sense: *viz.* Dystos was a *demos* of Eretria and not a *polis* in any sense of the term, but Theopompos erroneously believed that it was. In that case the connection between the urban and the political aspect of the *polis* is not in dispute, and the error is due to Theopompos’ ignorance concerning the social and political organisation of Euboia.

The *Lex Hafniensis* testifies to one side of the close connection between the urban and political aspects of the concept of *polis*: every *polis* town was the urban centre of a *polis* state. The other side is the converse proposition: that every *polis* state was centred on a *polis* town. A full investigation has yet to be conducted, but a preliminary overview of the evidence does in fact support the converse proposition (Hansen (2004)).

Of all the 1,035 communities recorded in this Inventory, 287 are called *polis* in the political sense in Archaic and/or Classical sources. Of these, 204 are known to have had a walled urban centre attested not later than C4l.⁵⁴ For a further twenty-four *poleis* an urban centre is attested either archaeologically (Elis (no. 251)) or in literary sources (Aitna (no. 8)) or in both types of source (Sparta (no. 345)). Of the remaining fifty-nine *poleis*, twenty-three are unlocated and thirty-four unexplored, and in all these cases we must suspend judgement. Of communities called *polis* in the political sense there are only two for which no urban centre has been found, in spite of the fact that they have been fairly

⁵³ Gauthier (1976) 188 notes how surprising it is to find *polis* used in this context: “Cela surprend d’abord, car les bourgades dispersées du Laurion, même si elles s’étaient rapidement développées, n’auraient jamais formé une ville, au sens où nous entendons ce terme.”

⁵⁴ In fifteen cases, however, the walls are still undated and some of these are possibly (early) Hellenistic.

⁵⁰ For the meaning of *lex* in this context, see Hansen (2000c) 203–4.

⁵¹ Hansen (1996a) 28, 33; (2000c) 173–82.

⁵² The investigation was conducted in 1999. Additional information has resulted in a few minor revisions of the figures; see 75 n. 21. An updated survey will be published in a forthcoming volume.

thoroughly investigated: Epitalion in Triphylyia (no. 305) and Delphi in Phokis (no. 177).⁵⁵

A different approach leads to the same result: of the 287 communities called *polis* in the political sense, 243 (including Delphi) are attested as a *polis* in the urban sense as well. Of the remaining forty-four *poleis*, so far attested in the political sense only, twenty-six had a walled urban centre, and for five others an urban centre is attested. Of the remaining thirteen *poleis*, six are unlocated, six uninvestigated; for Epitalion, see *supra*.

Comparing the two investigations, it can be added that seventeen of the unlocated and twenty-seven of the unexplored *poleis* in the political sense are attested as *poleis* in the urban sense as well. Future surveys or excavations may in all forty-four cases disclose the remains of walls and/or habitation quarters. For the Classical period the only examples of communities explicitly attested as a *polis* in the political sense but apparently without a nucleated centre which the Greeks would call a *polis* in the urban sense seem to be Delphi and Epitalion, of which Delphi is in fact called a *polis* in the urban sense.⁵⁶ Of course, a *polis* town was only very exceptionally an urban centre inhabited by more than 10,000 persons, the minimum population of a “city” according to some modern historians.⁵⁷ On the other hand, an ancient Greek *polis* centre seems in the great majority of all cases to have had a population of more than 1,000 inhabitants (cf. *infra* 139).

The overall conclusion seems to be that, in the eyes of the Greeks, every *polis* town was the centre of a *polis* state, and every *polis* state was centred on a *polis* town. This conclusion is valid for the Classical period, and especially for C4. To a large extent it is valid for the Archaic period too, as appears from section (3) *supra* and from the information assembled in the Inventory below.⁵⁸ However, it must be remembered that, although the archaeological evidence about Archaic settlements grows rapidly every year, the col-

lected data are still much too scanty to allow of any firm conclusion.

The approach of the Polis Centre and the method we have used to collect the evidence and build up the Inventory are, of course, endorsed by all members of the team. But they are not approved of by all scholars in the field. Quite the contrary. A trend among modern ancient historians is to dissociate the concept of state from the concept of town and to further dissociate both concepts from the concept of *polis*. One of the most prominent of these historians is John Davies. Under the heading “town formation, state formation and *polis* formation”, he writes:

The separation of these processes in ancient Greece is probably the most difficult, and yet the most essential, of all the disjunctions that need to be made. They overlap in every possible way: yet not all states were, or became, *poleis* (e.g. Thessaly), not all towns became the centres of *poleis* (e.g. Acharnai, Gonnos), not all *poleis* were towns [for example, Eutaia in Mainalia (Xen. *Hell.* 6.5.12)], and so on.⁵⁹

A closer look at the examples adduced in support of the separation seems to point in the opposite direction. (a) Thessaly was not a state; it was, in some periods, a confederation (Hdt. 5.65.3, 4.78.3) consisting of the largest number of *poleis* in any Greek region (Xen. *Hell.* 6.1.14, 19; nos. 393–470).⁶⁰ (b) Acharnai was not a town, it was a *demos*, i.e. a local community. It may have had a nucleated centre, but not necessarily (see 626 *infra*). If it had, it may have been a mere village, not a town, and so far no trace of a town of Acharnai has been found (Travlos (1988) 1). (c) Gonnos (no. 463) was indeed a town, and it was certainly the centre

⁵⁹ Davies (1997) 29. The text in square brackets is n. 25 in which Davies also refers to Kolb (1984); Murray and Price (1990); Hansen (*CPCActs* 1) and Hansen and Raaflaub (*CPCPapers* 2).

⁶⁰ There is one source in which, perhaps, Thessaly is called a *polis*, i.e. schol. Eur. *Rhes.* 307=Arist. fr. 498 (Rose) or fr. 504.1 (Gigon): . . . καθάπερ φησὶν Ἀριστοτέλης ἐν Θεσσαλῶν πολιτεία γράφων οὕτως “διελῶν δὲ τὴν πόλιν Ἀλεῦας ἔταξε κατὰ τὸν κλήρον παρέχειν ἑκάστους, ἑπτάς μὲν τεσσαράκοντα, ὀπίστας δὲ ὀγδοήκοντα” (“As Aristotle says in the Constitution of the Thessalians where he writes: ‘subdividing the *polis* Aleuas laid down that each district should provide 40 men cavalry and 80 hoplites”). Larsen (1968) 17 believes that Aristotle here refers to all of Thessaly as one *polis*. That is not impossible, but it is unlikely. First, the text is emended by the editors: τὰς πόλεις (Arist. fr. 498, Rose) or τὴν πολιτείαν (Schwartz, Arist. fr. 504.1, Gigon, who does not note that he prints a conjecture). Even if we accept the text of the manuscripts, we cannot be sure that Aristotle refers to all of Thessaly. The reference may be to Larisa (no. 401), which was a *polis* in the usual sense. This is the view advocated by Helly (1995) 170–91. That the reference must be to Thessaly is based on the assumption that Aristotle’s κοινὴ Θεσσαλῶν πολιτεία (fr. 502) was a description of the Thessalian federal constitution. But that may well be a misinterpretation of the title. Like the Cretan *politeia*, the Aristotelian constitution of the Thessalians may have been an ideal type, a description of a *polis* constitution, constructed from information drawn from a number of Thessalian *poleis*.

⁵⁵ Excavations of the urban centre of Epitalion have, so far, disclosed remains of the Hellenistic and Roman periods. It cannot be precluded that future excavations will lead to the discovery of Classical material, or that the urban centre of Epitalion was moved to its present site in the Hellenistic period. It is perhaps more surprising that no remains of an urban centre have been found at Delphi, which twice in our sources is referred to as a *polis* in the urban sense (Hdt. 8.36.2; Ps.-Skylax 37).

⁵⁶ For the view that both Sparta and Mantinea were *poleis* in the urban sense, see Hansen (1997b) 35–37.

⁵⁷ De Vries (1984); cf. Horden and Purcell (2000) 93.

⁵⁸ The presumption is that there were fewer cities in the Archaic period than in C4, but there may have been fewer *poleis* too. Around 600 many of the C4 *poleis* may not yet have been recognised as *poleis* and may not yet have had an urban centre.

of a *polis*. It is explicitly called a *polis* in the urban sense by Herodotos (7.128.1, 173.4), referring to 480. It is attested as a *polis* in the political sense in a decree of c.300 (*SEG* 36 566), and it struck coins in C4. (d) Eutaia (no. 270) is attested as a *polis* at Xen. *Hell.* 6.5.12, and we are told that the settlement had a defence circuit. The site (Lianos) has not been excavated, but the abundance of sherds and minor architectural members found in the fields fit Xenophon's description of Eutaia as a *polis* in the urban sense.

From these examples and all the evidence assembled in this Inventory it follows that in Archaic and Classical Greece the concept of a state was interlocked with the concept of a town, and both concepts must be closely connected with the concept of *polis*.

6. Barbarian *Poleis*

Not only Greek but also barbarian towns are called *polis* by Greek authors; forty-seven named barbarian towns are labelled *polis* in Herodotos, seven in Thucydides, and twenty-one in Xenophon.

Sometimes these towns were actually urban centres of city-states. Thus, the Phoenician city and city-state Sidon is called a *polis* by Herodotos at 3.136.1, and in an Attic honorific decree for King Straton of Sidon the Sidonians are called citizens of Sidon (*IG* II² 141 = RO 21). Similarly, in Thucydides some Etruscan city-states are referred to as being *poleis* (6.88.6; cf. Arist. *Mir.* 837^b32), and so are the Elymean cities of Eryx and Egesta (6.2.3). Rome is classified as a *polis* in the urban sense by Ps.-Skylax 5, and in C4 Rome was actually a *polis* in the political sense too.

Sometimes the Greek historians and geographers seem—erroneously—to have believed that barbarian towns were *poleis* in the political sense and that the political structure of, e.g., the Persian Empire was not essentially different from that of Hellas. In his description of the battle of Salamis, for example, Herodotos tells us that Xerxes ordered a scribe to record the name, patronymic and *polis* of any captain who distinguished himself in the fight (8.90.4); Herodotos seems to assume that every Persian captain belonged to a *polis* and could be identified by his city-ethnic. Similarly, in 7.96.2 he ends his list of all the contingents of the Persian forces with the remark that he will not bother to give the names of all the leaders, first because the leaders of the individual *peoples* (*ethne*) were not worth mentioning, and second because, in each people, there were as many leaders as there were *poleis*

(Hdt. 7.96.2). Again, the political structure of the Persian Empire is represented as a plurality of *ethne*, each consisting of a number of *poleis*.

In most cases, however, the Greek authors must have applied the term *polis* to a barbarian urban centre knowing that, on the one hand, it was a nucleated settlement and, on the other hand, it was not a political community like a Greek *polis*. Herodotos says that there were 20,000 *poleis* in Egypt (2.177.1). He may have believed that there were 20,000 nucleated settlements, but we should not take him to believe that there were 20,000 self-governing polities. Again, in the *Anabasis* (1.2.14) Xenophon describes the Phrygian town Tyrieion as a *polis* in the urban sense (*πόλιω οἰκουμένην*), but a recently found inscription shows that only in C2m, by royal rescript, was Tyrieion granted the right to be a fully Hellenised *polis* in the political sense (*SEG* 47 1745).

This observation, however, does not invalidate our investigation, which concerns exclusively the term *polis* used about Greek towns. The Greeks used their own term *polis* about barbarian towns, no matter whether they were self-governing communities or not. It would be unwise to reverse the line of thought and infer from the frequent use of *polis* about barbarian towns which were *not* city-states that it must have been used in the same way when applied to Greek towns classified as *poleis*. Let us illustrate this point by an ancient parallel and a modern analogy.

The Greeks were notorious for reading their own names, terms and concepts into foreign cultures. Thus, they readily equated foreign divinities with the gods of their own pantheon. In Herodotos' account of Skythia we hear that Tabiti was Hestia, Papias was Zeus, Api was Ge, Goitosyros was Apollo, Argimpasa was Aphrodite, and Thagimasadas was Poseidon (4.59). We may find some common characteristic which can explain why, e.g., Argimpasa was called Aphrodite, but it would be a gross mistake from what we may know about Argimpasa to argue backwards and suppose that that must have applied to Greek Aphrodite as well.

The modern analogy concerns the European concept of a state. Since the nineteenth century, Europeans have been in the habit of referring to, e.g., the Bantu-speaking kingdoms in Uganda as "states" (Steinhart (1978)). Before 1967 these kingdoms were indeed political communities, and in some sense it is not wrong to call them states; but they were radically different from European states; the Europeans knew that they were applying their own concept of a state to a very different type of community, and it would be misguided in an analysis of the European concept of a state to take the labelling of these communities as states as an indication

that the term “state” was used in the same way in European politics and political thought. It would be equally misguided from the Greek habit of calling barbarian towns *poleis* to deduce that the Greeks must have used the term *polis* in the same way in relation to Greek towns.

The conclusion is that two separate investigations of the meanings and uses of *polis* must be conducted, one for Greek communities and one for barbarian, and only afterwards can a comparison be made in order to study similarities and differences. It must be added, however,

that it is not always easy to distinguish the Greek from the barbarian *poleis*, and some *poleis* were mixed: e.g. the five *poleis* in Athos (Thuc. 4.109.4) and some of the *poleis* in the Thermaic Gulf, viz. Therme (Hecat. fr. 146), Pella and Ichnai (Hdt. 7.123.3). In other cases there are reasons to doubt that some *poleis* in border districts were at all Greek, e.g. Kadyanda, Pinara and Tlos in Lykia (SEG 36 1216.4). Our method has been to include in our Inventory both mixed *poleis* and *poleis* for which the sources leave room for doubt.

Meaning and Reference of the Word *Polis*

It is the aim of this investigation to study what the Greeks themselves thought a *polis* was. Consequently, a survey of the term *polis* and the concept behind the term has to be an essential part of the study. The following is a summary of the investigation published in Hansen (1998) 17–34, where the sources are quoted both in Greek and in English translation.

Roughly speaking, the word *polis* had four different senses: (a) “stronghold” or “citadel”, (b) “nucleated settlement”, (c) “country” or “territory”, and (d) “political community”.¹ These four different meanings of the word *polis* have been established with reference to the modern terms we use: *viz.* stronghold, settlement, country, community, etc. This is what in linguistics is called a *lexical contrastive analysis* (Ascher (1994) 738). It is an indispensable method for modern historians who want to study ancient societies. But it must be supplemented with the question: were the ancient Greeks themselves conscious of a plurality of meanings of the term? Or is the attestation of four different meanings of the word *polis* just a result of the fact that we analyse an ancient concept through a modern language?

1. The Multiple Meanings of *Polis*

Of the many thousand occurrences of the word *polis*, there are in fact a few in which an author explicitly states that *polis* is a word with several meanings.

(1) In *Politics* 3.3 Aristotle discusses the identity of the *polis* and points out that *polis* is a word used in many different senses, of which two are specified in the passage: a topographical sense (a fortified place) and a personal one (the people inhabiting the place) (Arist. *Pol.* 1276^a17–27).

(2) In the Platonic *Definitions* the *polis* is defined partly as a settlement (*oikesis*) of a number of persons (*anthropoi*) living under common decisions (*koina dogmata*), and partly as a number of persons (*anthropoi*) under the same law (*nomos*) (Pl. *Def.* 415C). Again, a topographical sense is distinguished from a purely personal one.

¹ Hansen (1996) 25–39. In this provisional listing of the four senses we have been careful to avoid the terms “city” and “state”.

(3) According to the early Stoic philosopher Kleanthes, the *polis* is a habitation where people seek refuge for the purpose of administration of justice. Thus, *polis* is used in three different meanings: (a) about the settlement (*oiketeterion*), (b) about the community of inhabitants (*systema anthropon*), and (c) about a combination of (a) and (b) (Stob. *Flor.* 2.7.11i p. 208, Wachsmuth).² Similarly, the Stoic philosopher Chrysippos (*SVF* fr. 528) claims that *polis* has two different meanings: (a) a settlement (*oiketeterion*) and (b) a community of inhabitants (*enoikountes*), together with the citizens (*politai*).

(4) The *Etymologicum Magnum* is a Byzantine lexicon based on a wide reading of the Classical literature, and its entry *polis* (680.1–4) corroborates the distinction pointed out by the other three sources: “*polis* has two meanings: the buildings, as in ‘Lead this unfortunate man to the *polis*’ (Hom. *Od.* 17.10, quoted from memory), but it signifies also the multitude and the people, as in ‘The whole *polis* of Trojans has come forth against them fearlessly’” (Hom. *Il.* 16.69–70).

All four sources oppose a local and a personal sense of the word *polis*. The two principal meanings, however, are not “town” and “state”, but rather “settlement” and “community” (or “multitude of human beings”). Yet Aristotle’s reference to walls and Kleanthes’ mention of people who take refuge in the *polis* show that what they have in mind must be a *nucleated* settlement; furthermore, that *polis* designates a *political* community is indicated by the references to men living under the same laws and to the administration of justice in the community.

2. Synonyms for *Polis*

If we want to go further than the opposition between the two basic senses of “settlement” and “community” and investigate the various connotations of the word *polis* recognised

² For a judicious analysis of the Kleanthes fragment, see Schofield (1991) 130–35.

by the Greeks, we must make a new approach and study the words used synonymously with *polis*.

(1) In the sense of stronghold and/or small hill-top settlement, *polis* can be used synonymously with *akropolis* (Thuc. 2.15.6, Athens (no. 361); *IG XII.1* 677.13–19, Ialysos (no. 995), c.300).

(2a) In the sense of nucleated settlement, *polis* is used synonymously with *asty* (Dem. 18.215–16; Hdt. 4.201.3, Barke (no. 1025)) or *polisma* (Thuc. 1.107.2; Aen. Tact. 2.2, Sparta (no. 345)).

(2b) In the sense of nucleated settlement, *polis* is occasionally used synonymously with *emporion* (Xen. *Anab.* 1.4.6; Ps.-Skylax 2, Emporion (no. 2)) or *teichos* (Hdt. 7.108.2, Mesambrie (no. 647)) or *phrourion* (Thuc. 8.62.3, Sestos (no. 672)). For a rare attestation of *polis* used synonymously with *kome*, see *SEG* 37 340.3–9 = RO 14, Helisson (no. 273).

(3) In the sense of territory, *polis* is used synonymously with *ge* (Din. 1.77 compared with Lycurg. 1.89) or *chora* (Thuc. 2.72.3 compared with *I.Prusias ad Hypium* 135). For *polis* used synonymously with *chora* in the sense of country as a geographical rather than a political concept, see Poll. 9.27: “We must not pay attention to the poets who use the word *polis* even about countries (*chorai*), as for example Euripides in the *Temenidai*: ‘all of Peloponnesos is a prosperous *polis*’” (Eur. fr. 730, Nauck).

(4) In the sense of community, *polis* is often used synonymously with *anthropoi* (Pl. *Def.* 415C), or *andres* (Thuc. 7.77.7; Alc. fr. 426), or *politai* about the population of a *polis* (Arist. *Pol.* 1274^b41; *IG IV* 839 = *Syll.*³ 359.3–5 compared with *IG IV* 841.12, Kalauria (no. 360), C4–C3). Two frequent variants of this usage, both attested in Epidauros (no. 348) in C4, are (a) *polis* used synonymously with *demos* in the sense of people (*IG IV*².1 51.1–2), and (b) *polis* used synonymously with a city-ethnic in the plural denoting the citizenry (*IG IV*².1 47.1–2), both to be compared with *SEG* 26 445.

(5) In the sense of community, *polis* often denotes the governing body of the *polis* in question, especially the popular assembly, and is used synonymously with, e.g., *ekklesia* or *demos* or *halia vel sim.*, see *IPArk.* 5.22–24, Tegea (no. 297), 324/3; *SEG* 43 310.1–4, Skotoussa (no. 415), C4–C3; *IG IV*².1 615.1–2, Epidauros (no. 348), C4. For an example of *polis* denoting the people’s court in Athens, see Dem. 43.72. When *polis* denotes the supreme body of government in an oligarchy, the reference is, e.g., to a *gerousia* (*SEG* 27 631.1, Lyktos (no. 974), c.500).

(6a) From *polis* used synonymously with a body of government there is only a hair’s breadth to the more abstract use of *polis* as a designation of the political community as

such (*Syll.*³ 172.1–3, Histiaia (no. 372), 363/2); *Syll.*³ 278.5–7, Priene (no. 861), 334/3; *Syll.*³ 279.14–15, 25, Zeleia (no. 764), 334/3; *I.Lokris* 2.6–7, Lokris Epizephyrioi (no. 59), C4s. In this more abstract sense of the term, Aristotle describes the *polis* as a *κοινωνία πολιτῶν πολιτείας* (*Pol.* 1276^b2) or a *κοινωνία πολιτική* (*Pol.* 1252^a7), see the following section.

(6b) In the sense of community, *polis* is used synonymously with the general term for community or society, viz. *koinonia* (Arist. *Pol.* 1252^a1–7). This usage is best attested in Aristotle and seems, in any case, to be restricted to philosophical texts, see also Pl. *Resp.* 371B, or the Stoic idea of a divine *polis* reflected in Dio Chrys. 36.23.

(6c) In the sense of one’s country or fatherland, *polis* is often used synonymously with *patris* (Dem. 21.145; Pl. *Cri.* 51C; Thgn. 947, Megara (no. 225)); cf. *infra*.

(7) In the sense of community, *polis* is, exceptionally, used synonymously with *ethnos* about a people inhabiting not just a town with its hinterland but a whole region or a part of a region (*SEG* 15 397, a C4 Chaonian *polis* in Epeiros compared with Theopomp. fr. 382 and Ps.-Skylax 28, the Chaonians settled in *komai*).

3. Synonyms for *Polis* Distinguished from *Polis*

The investigation of the synonyms for *polis* can be taken one step further by investigating whether, in other contexts, the synonyms listed above are distinguished from *polis* or sometimes even opposed to *polis*.

Re 1: akropolis. In the sense of nucleated settlement, *polis* is normally distinguished from *akropolis*, which is the citadel lying inside the *polis* and sometimes protected by a separate defence circuit (Hyp. 6.17, Thebai (no. 221) 335; Xen. *Hell.* 4.4.15, Phleious (no. 355), C4e).

Re 2a: asty and polisma. To the best of our knowledge, there is no clear example of *polis* in the sense of a nucleated centre being distinguished from or opposed to either *asty* or *polisma*. *Polisma* seems almost always to be used synonymously with *polis* (in the sense of nucleated settlement);³ and whenever a distinction is made between *polis* and *asty*, it is *polis* in the sense of either country (Lycurg. 1.18) or

³ The only recognisable distinction is that *polisma* is mostly used about barbarian towns, towns in a remote past and towns in the border districts. The reason may be that such towns could be urban centres without being political centres as well. See Flensted-Jensen (1995) 129–31: Appendix: *Polisma*.

community (Thuc. 6.44.2; Diod.7.16⁴) that is distinguished from *asty* in the sense of town.

Re 2b: emporion, teichos, phrourion and kome. Almost all attested *emporia* of the Classical period were, in fact, *poleis* that possessed an *emporion*, in which case there is a clear difference between *polis* and *emporion* (Thuc. 1.13.5, Corinth (no. 227); Theopomp. fr. 62, Byzantion (no. 674)); but if this *emporion* was a prominent feature of the *polis*, it was common usage to say that the settlement *was an emporion* rather than to say that it *had an emporion* (Dem. 56.6, Athenai (no. 361); Thuc. 4.102.4 and Hdt. 7.113.1, Eion (no. 630)). Similarly, some *poleis*, especially dependent *poleis*, were essentially garrison towns and in such cases, too, it is only to be expected that the settlement was classified sometimes as a *teichos*, and sometimes as a *polis* (Hdt. 1.149.1, Neon teichos (no. 824); Dem. 3.4 and Hdt. 4.90.2, Heraion teichos (no. 676)).⁵ Describing the effects of the Spartan occupation of Dekeleia, Thucydides notes that Athens became a *phrourion* rather than a *polis* (Thuc. 7.28.1).

Kome, however, is different: like village and town today, *kome* and *polis* are almost always mutually exclusive site-classifications, see Pl. *Resp.* 475D. The overlap between the two terms seems to occur principally when *kome* is used in a political sense about a subdivision of a larger *polis*, as in the case of Helisson (no. 273), which remained a *polis* in the urban sense but also in the political sense by acquiring the right to provide a chief magistrate, like the other *poleis*, i.e. the other *poleis* dominated by Mantinea (no. 281) (SEG 37 340=RO 14 (C4f)).

*Re 3: Chora and ge.*⁶ The two pairs of words: *polis/chora* (SEG 37 340.3–9=RO 14 (C4f), Helisson (no. 273)) and *polis/ge* (SEG 9 72.4–5 (C4l), Kyrene (no. 1028)) are essentially two pairs of antonyms, just like city/country in the modern world. However, by a common kind of participatory opposition, which linguists sometimes call semantic marking,⁷ both *polis* (Aen. Tact. 15.9–10) and *chora* (Arist. *Pol.* 1326^b26 and 27^a3–5) are attested as the generic term for the totality of town (called *polis*) and hinterland (called *chora* or *ge*). The use of the terms can be illustrated in the following way:

<i>polis</i> (community or country)	<i>chora</i> (territory)
<i>polis</i> (town) <i>chora</i> (hinterland)	<i>polis</i> (town) <i>chora</i> (hinterland)

⁴ Quoting an oracular response of c.500 allegedly given to King Perdikkas of Makedonia, see Hatzopoulos (1996) i. 464–65.

⁵ See M. H. Hansen, “*Teichos* in the Sense of Fortress or Garrison Town”, forthcoming.

⁶ For a full discussion of *polis* versus *chora* or *ge*, see Hansen (1997a) 20–25.

⁷ Lyons (1977) i. 307–8. As an example, consider the antonyms *ἡμέρα* and *νύξ*. Like the English word “day”, *ἡμέρα* can denote both the 24-hour period and the daytime as opposed to the night hours, whereas *νύξ* invariably means “night”.

As a generic term, *polis* is attested far more frequently than *chora*. By accident, we believe, no single passage seems to have survived in which *ge* is used both as a generic term in the sense of country and in the specific sense of hinterland, being opposed to *polis*.

Re 4: politai. Sometimes the *politai* are distinguished from the *polis* in the sense of town (Xen. *Hell.* 3.1.21; IG I³ 40.4–6, Chalkis (no. 365) 446/5). Mostly, however, the distinction made is between *polis* in a more abstract sense, denoting the political community as such (see 6a *supra*), and the *politai* as a physical manifestation of the community, i.e. “the people” (Thuc. 8.72.1; SEG 38 662.3–7, Poteidaia (no. 598), C4m). It is worth noting that *polis* and *politai* never occur as mutually exclusive terms in phrases like “the *polis* did this, but the *politai* did that”.

Re 5: ekklesia vel sim. The numerous attestations of a distinction being made between *polis* and *ekklesia vel sim.* should cause no surprise since, in such cases, *polis* refers to the community in a more abstract sense, whereas *ekklesia* specifically denotes the popular assembly (SEG 30 990.4–10, Corinth (no. 227), 325–275).

Re 6a: koinonia (politike). As already noted, *polis* is distinguished from the citizens (*politai*) or from the political institutions whenever it occurs in the more abstract sense of political community and designates a kind of public power above both ruler and ruled;⁸ see *Syll.*³ 359.3–8, Kalaureia (no. 360), C4.

Re 6b: koinonia. Aristotle claims that the political community is the supreme form of community and comprises all other forms of community, of which some are social, some are religious, and some are commercial, etc. (Arist. *Eth. Nic.* 1160^a8–30). Thus, the *polis* is one specific type of *koinonia* distinguishable from other types, see, e.g., *Pol.* 1252^b30–31: “consequently, every *polis* exists by nature, as much as the original *koinonai*”. Yet, although *polis* is one of several types of *koinonia*, there is no trace in the sources of an opposition between *polis* and *koinonia* corresponding to our opposition between state and society.

Re 6c: patris. There is no attestation of *polis* and *patris* being used as antonyms; but from a Panhellenic perspective, Hellas could be described as the *patris* and contrasted with the individual *poleis* (Isoc. 4.81). Lysias severely criticises the cosmopolitan view that one’s *patris* is not one’s *polis* but wherever one happens to live and own property (Lys. 31.6).

Re 7: ethnos. Like *polis* and *chora*, *polis* and *ethnos* are

⁸ See Hansen (1998) 67–73.

essentially antonyms and not synonyms. When opposed to *chora*, the word *polis* is used in the sense of settlement *versus* hinterland, see *supra re* 3, but when opposed to *ethnos*, the emphasis is on *polis* as a community centred on a town (Hdt. 5.2.2; IG IV².1 68.76–78 = *Staatsverträge* 446 (303/2)) as against larger communities.

The synonymous use of *polis* and *ethnos* is, in almost all cases, due to the fact that *polis* could be used as a generic term for “political community”, comprising not just the small *poleis* which we today call city-states but also other types of political community, such as whole regions which were not (yet) split up into *poleis* (e.g. Aitolia), or federations often composed of *poleis* (e.g. Boiotia), or large kingdoms (e.g. Makedonia). This usage is particularly common in headings (Hansen (1997b)), and is found both in documents and in literary sources: the list of members of the Second Athenian Naval Confederacy is headed by the phrase: “these *poleis* were allied to the Athenians” (IG II² 43.78); but in addition to forty-four *poleis* in the strict sense, the list includes three rulers, two federations and at least one splinter community (Dreher (1995) 174–81). Thucydides opens his account of the Peloponnesian War with a survey of the allied *poleis* of, respectively, the Lakedaimonians and the Athenians: “Each of the two parts went to war having the following *poleis* as their allies” (Thuc. 2.9.1); but then he lists peoples like the Boiotians, the Lokrians and the Phokians side by side with proper *poleis* such as Megara, Ambrakia, Leukas and Anaktorion. Since *ethnos* was commonly used to designate any form of political community that was not a *polis* in the proper sense, the opposition between *polis* and *ethnos* is, essentially, an example of the same kind of semantic marking as in the case of the antonyms *polis/chora* and it can be illustrated in the following way:

<i>polis</i>	
.....	<i>ethnos</i>
<i>polis</i>	<i>ethnos</i>

In references to an individual political community, on the other hand, attestations of *polis* = *ethnos* are few and far between, see Hansen (1998) 124–32.

4. The Relative Importance of the Different Meanings

To sum up: a study of the sources that avoids a contrastive lexical analysis leads to the conclusion that *polis* is attested

in the following different senses: (1) = *akropolis*, (2) = *asty* or *polisma*, (3) = *chora* or *ge* (especially when *polis* is used as a generic term for *polis* + *chora*), (4) = *politai* or *anthropoi*, (5) = *ekklesia* or some other supreme body of government, (6) = *koinonia* (*politike*) or *patris*, and (7) = *ethnos* (especially when the plural form *poleis* is used as a generic term for *poleis* + *ethne*).

The senses are listed here in what is generally believed to be their historical sequence,⁹ but they are all attested in sources of the Archaic period so that the sequence is a reconstruction behind the sources we have. On the other hand, they are not equally important and some hardly ever occur.

(a) It is well known that the original sense of stronghold (*akropolis*) is rare in Archaic texts and, apart from some frozen formulas, it disappears in the course of the Classical and Hellenistic periods.¹⁰ A study of the relative frequency with which the different senses occur shows that, apart from the frequent occurrence of *polis* = *akropolis* in early Attic inscriptions,¹¹ attestations of *polis* in the sense of stronghold amount to fewer than three per thousand of all attestations.¹²

There are in particular two passages in Thucydides which illustrate that even in Athens, where the formulaic use of *polis* in the sense of *akropolis* was widespread, an Athenian would not have the meanings “stronghold” or “citadel” springing to his mind when he heard the word *polis*, except, of course, when it was applied in one of the frozen formulas. In all other cases the word *polis* would not be used synonymously with, but rather distinguished from or even opposed to, *akropolis*.

When Thucydides tells us that the Acropolis was called *polis* by the Athenians, he points out that the reason for this usage is that the Acropolis was once the centre of the urban settlement (Thuc. 2.15.6; cf. also Phokylides fr. 4, Diehl). Again, when Dekeleia was fortified and all grain had to be brought by sea to Athens, Thucydides makes the comment that Athens had become a fortress (*phrourion*) instead of a *polis* (Thuc. 7.28.1). This would be a strange comment if *polis* had been commonly used as a synonym of *akropo-*

⁹ On the sequence of the senses of (a) “nucleated settlement” and (b) “political community”, see Hansen (1997a) 37–42.

¹⁰ Plut. *Pelop.* 18.1; Paus. 1.26.6. See Hansen (1996) 34–36.

¹¹ In Attic inscriptions there are, at present, some 120 occurrences (many of them restored) of *polis* designating the Acropolis. For 394/3 as the *terminus ante quem*, see Henry (1982). But in the sacrificial calendar of Erchia, dated to c.375–350, there are eight occurrences of *polis*, two designating the Acropolis in Athens, and six the local acropolis in Erchia.

¹² Wyse (1904) 476–77, with 24 quotes from Attic literature. Lévy (1983) 56–60 denies that this sense of *polis* is attested in Homer; but see *Il.* 4.514 and 7.370. Sakellariou (1989) 155–59 and Hansen (1996) 35 adduce a few examples from non-Athenian inscriptions.

lis in the sense of stronghold or fortress. On the contrary, the comment suggests that a *polis* was, essentially, different from a *phrourion*, i.e. a town, not a fortress.

(b) Passages in which “country” or “territory” is the principal sense of *polis* constitute fewer than 2 per cent of all occurrences (*infra* 44). It must be added, however, that in numerous passages “territory” or “country” is a connotation that goes with the principal sense of (nucleated) settlement or (political) community or both, cf., for example, Lys. 3.10: “I was so much in doubt about what to do in face of my opponent’s lawless behaviour that I decided to leave the *polis*.” The context shows that the plaintiff preferred to leave not just the city of Athens, but also Attika.

Again, the territorial sense of *polis* is intertwined with the urban and the political sense when *polis* is used in the generic sense of community comprising a nucleated settlement (*polis*) and its hinterland (*chora* or *ge*), see Lycurg. 1.38: “To such a pitch did he carry his treason that, so far as his decision went, the temples were abandoned, the posts on the wall unmanned and the *polis* (town) and the *chora* (hinterland) left deserted. And yet in those days, gentlemen, who would not have pitied the *polis* (community)?” Or when *polis* is used in the generic sense of settlement comprising a nucleated settlement (*plethos oikion*) and its hinterland (*chora* or *ge*), see Arist. *Oec.* 1343^a10–11: “a *polis* is a mass of houses (*oikiai*), of hinterland (*chora*) and of possessions sufficient for a good life”.

Thus, in the overwhelming majority of all passages *polis* is used either in the sense of nucleated settlement or in the sense of political community. But, as noted by Kleanthes (*supra* 39), the two senses of settlement and community are often combined and indistinguishable, as is attested, for example, at Thuc. 4.49.1: “At the end of the summer the Athenians and Akarnanians in Naupaktos waged war against Anaktorion, a Corinthian *polis*, and took it by treason.” The description of Anaktorion as “the Corinthians’ *polis*” indicates that it was a dependent *polis*, i.e. a political community; but the piece of information that they “took it by treason” shows that the *polis* was also a fortified town which the Athenians conquered because it was betrayed to them by some traitors behind the walls.

To sum up: the ancient definitions indicate that *polis* was used in two basic meanings: (1) a settlement, and (2) a community. The study of synonyms, on the other hand, shows that, in the sense of settlement, a *polis* was almost invariably a nucleated settlement, i.e. an *asty*, and only exceptionally an *akropolis*. In the sense of community, the *polis* was almost invariably a *politike koinonia*, i.e. what we

call a “polity” or a “state”, sometimes identified with its territory (consisting of a *polis* with its *chora*), sometimes with its population (especially its body of *politai*), sometimes with its political institutions (especially its *ekklesia*), and sometimes conceived as an abstract public power above the citizens and their political institutions.

Furthermore, when used as a generic term denoting a number of named political communities, *polis* comprised not just *poleis* in the meaning of the word described above (a *polis* with its *chora* organised as a *koinonia politon politeias*), but all types of community which in other contexts were usually classified as *ethne* or *koina*.

The rare attestations of *polis* denoting a *chora* in the geographical sense without being a political community (see section 3 *supra re* 7) are best explained as an extension of the much more frequent use of *polis* to denote the territory of a political community. And the exceptional attestations of *polis* denoting an individual *ethnos* should be seen in the light of *polis* used as the generic term for *poleis* plus *ethne*. Both usages are so marginal that further discussion can safely be relegated to appendix I in Hansen (1998) 124–32.

5. The Classification of the Different Meanings in this Inventory¹³

The above analysis covers both occurrences of *polis* used in general about any *polis* or all *poleis*, and occurrences of *polis* denoting one or more named *poleis*. As stated above, in this Inventory references to the *polis* in general are irrelevant, and the focus is on attestations of *polis* applied to one or more individual *poleis*. For all practical purposes they can be included under one of the three following principal meanings: “territory”, “city” and “polity”. There are, of course, numerous overlaps, i.e. occurrences of *polis* where one of the three senses is the principal meaning and one or both of the others are connotations. To illustrate how we distinguish between the different senses, we find it expedient to list some examples which show that it is possible to isolate occurrences of *polis* (a) used in the urban sense without the political, (b) used in the political sense without

¹³ In this section the argumentation is so closely tied up with the linguistic interpretation that the passages cannot just be cited; they must be quoted in Greek followed by a translation into English.

the urban, (c) used in the territorial sense without either of the other two senses, and (d) used in two or three senses simultaneously.

Re (a): polis in the urban sense is attested, e.g., when a *polis* is opposed to its hinterland (called *chora* or *ge*);¹⁴ when one walks from the *polis* into the fields, or returns from the fields into the town;¹⁵ when the distance from a *polis* is measured in stades;¹⁶ when a road leads towards the *polis*;¹⁷ when a house is lying in the *polis*;¹⁸ or the reference is to the higher-lying part of the *polis*,¹⁹ or to the water supply of the *polis*;²⁰ when a cult festival is celebrated outside the *polis*;²¹ when a defence circuit is built around a *polis*;²² when a *polis* is besieged,²³ or set on fire,²⁴ or destroyed;²⁵ when, during a civil war, the state is split up into one faction in control of the town while the other faction is driven out of the town.²⁶

Re (b): polis in the political sense is attested when a *polis*

¹⁴ Dem. 18.203 speaks about the Athenians in 480, οἱ καὶ τὴν χώραν καὶ τὴν πόλιν ἐκλιπεῖν ὑπέμεναν εἰς τὰς τριήρεις ἐμβαίνοντες (“who endured to go on board the ships and leave their *chora* and *polis*”).

¹⁵ Dem. 47.63: ὁ δ’ Εὐεργος οὐτοσι εὐθὺς ἐκ τῆς πόλεως . . . ἐλθὼν εἰς ἀγρόν (“but this Euergos went straight from the *polis* to the field (*agros*)”). Xen. *Hell.* 5.4.3: the Theban liberators in 379 πρὸς τὰς πόλιν ἀλλοθιν, ὡς δὴ ἐξ ἀγροῦ ἀπίοντες . . . ἐπεὶ δ’ εἰσῆλθον εἰς τὴν πόλιν (“they came to the gates as if they came back from the fields (*agros*) . . . but when they had entered the *polis*”).

¹⁶ Ps.-Skylax 33: Ἀμβρακία πόλις Ἑλληνίς, ἀπέχει δὲ αὐτῆ ἀπὸ θαλάττης στάδια π’ (Ambrakia is a Hellenic *polis* situated 80 stades from the sea”).

¹⁷ IG IV².1.116.20: ἐν ταῖ δὴ οὐδὲ ταῖ εἰς πόλιν ἀγρούσιαι (“on the road that leads to the *polis*”).

¹⁸ SEG 43 713.35–36: τὴν οἰκίαν [τ]ὴν ἐμ πόλει, (“the house in the *polis*”). I. *Cret.* IV 72.IV.32: τέγαναι μὲν τὰν ἐν πόλι (“the houses in the *polis*”).

¹⁹ Thuc. 4.112.3: Βρασιδάς μὲν οὐν καὶ τὸ πλῆθος εὐθὺς ἄνω καὶ ἐπὶ τὰ μετέωρα τῆς πόλεως ἐτρέπετο (“Brasidas and the majority of his men moved straight uphill towards the higher lying parts of the *polis*”).

²⁰ Hdt. 3.60.2: ὄρυγμα . . . ὀρώρυκται . . . δι’ οὗ τὸ ὕδωρ ὀχετευόμενον διὰ σωλήνων παραγίνεται εἰς τὴν πόλιν (“a cutting has been made whereby water is brought, through pipes, into the *polis*”).

²¹ Aen. *Tact.* 17.2: εὐορτῆς γὰρ πανδήμου ἕξω τῆς πόλεως Ἀργείων γενομένης (“A festival for all the people was held outside the *polis* of the Argives”).

²² Thuc. 1.93.1: οἱ Ἀθηναῖοι τὴν πόλιν ἐτείχισαν (“The Athenians fortified the *polis*”). *Syll.*³ 141.4: τευχίζαντας τὰν πόλιν (“Having fortified the *polis*”).

²³ Thuc. 1.116.2: ἐπολιόρκον τρισὶ τείχεισι τὴν πόλιν καὶ ἐκ θαλάσσης ἅμα (“They (the Athenians) laid siege to the *polis* (Samos) by means of three walls and at the same time they besieged it from the sea”).

²⁴ Hdt. 8.50.2: ὁ γὰρ διὰ Βοιωτῶν τραπέμενος στρατὸς ἅμα Ξέρξης ἐμπρήσας Θεσπιέων τὴν πόλιν . . . ἤκέ τε ἐς τὰς Ἀθήνας (“On its march through Boiotia Xerxes’ army burned down the Thespians’ *polis* . . . and came to Athens”).

²⁵ Dem. 18.36: τί οὐν συνέβη μετὰ ταῦτ’ εὐθὺς, οὐκ εἰς μακρὰν; τοὺς μὲν Φωκέας ἀπολέσθαι καὶ κατασκαφῆναι τὰς πόλεις αὐτῶν (“What happened immediately hereafter? The Phokians were annihilated and their *poleis* pulled down”). *Syll.*³ 344.7: ἐὰν δὲ δεῖ κατασκάπτειν τὴν ὑπάρχουσαν πόλιν (“If it is necessary to pull down the existing *poleis*”) (Teos (no. 868)).

²⁶ Thuc. 1.24.5: ὁ δῆμος αὐτῶν ἐξεδιώξε τοὺς δυνατοὺς, οἱ δὲ ἐπληθόντες μετὰ τῶν βαρβάρων ἐλήχοντο τοὺς ἐν τῇ πόλει κατὰ τε γῆν καὶ κατὰ θάλασσαν (“The (Epidamnian) *demot* expelled the upper-class citizens; but they returned with the barbarians and plundered those in the *polis* both by land and sea”). See also SEG 26 1282.4–7: μή ἐξείνα[ι] τῶν στρατηγῶν διαλλάξαι μηθενὶ πρὸς τοὺς ἐν τῇ πόλει ἄνευ τοῦ δήμου τῶν Ἀθηναίων (“None of the generals must come to an agreement with those in the *polis* without the consent of the Athenian people”).

passes a law,²⁷ or takes up a loan,²⁸ or consults an oracle.²⁹ For a long list of activities performed by the *polis* in the political sense, see *CPCActs* 5 (1998) 67–68. Particularly clear instances of *polis* in the political sense alone are the attestations of *polis* being opposed to *asty*, see, e.g., Thuc. 6.44.2: παρεκομίζοντο τὴν Ἰταλίαν τῶν μὲν πόλεων οὐ δεχομένων αὐτοὺς ἀγορᾶ οὐδὲ ἄστει (“They (the Athenian navy) sailed along the Italian coast and some *poleis* did not admit them to their agora or to the *asty*”).

Re (c): polis in the territorial sense is attested, e.g., when the river Styx is said to be in the *polis* of Nonakris;³⁰ when Xerxes’ army marched through the *polis* of Agore;³¹ when the Spartan army pillaged the eastern part of the *polis* of Thebes right up to the *polis* of Tanagra;³² or when a verdict prescribed that the corpse of an executed criminal be thrown over the border of the *polis*.³³

Re (d): polis used in the urban and political senses simultaneously is attested in, e.g., the following four passages: Din. 1.24: πόλις ἀστυγείτων καὶ σύμμαχος ἐκ μέσης τῆς Ἑλλάδος ἀνήρπασται (“A neighbouring allied *polis* has been destroyed and removed from central Hellas”). Here the first adjective qualifies the *polis* as a city—*sc.* Athens’ neighbour Thebes, which in 335 was razed to the ground by Alexander—the second as a state. Xen. *Hell.* 3.1.13: τῶν οὐκ ὑπηκόων πόλεων προσέλαβεν ἐπιθαλαττιδίας Λάρισάν τε καὶ Ἀμαξιτὸν καὶ Κολωνάς, ξενικῶ μὲν Ἑλληνικῶ προσβαλοῦσα τοῖς τεύχεσιν (“and of the independent *poleis* he took those lying along the coast, *viz.* Larisa, Hamaxitos and Kolonai, attacking their walls with a Greek mercenary force”). That the *poleis* are independent shows that they are political communities; that they are lying on the coast and walled shows that they are urban centres as well. Aen. *Tact.* 28.1: προνοεῖσθαι δὲ καὶ τάδε ἐν φόβῳ οὔσης πόλεως.

²⁷ ML 2.1: ἀδ’ ἔφαδε πόλι (“Thus it was decided by the *polis*”) (Dreos (no. 956) C7).

²⁸ I. *Locri* (Costabile) 2.6: ἐχρήσατο ἡ πόλις πᾶρ τῷ θεῷ (“The *polis* borrowed from the God”).

²⁹ IG IV².1.122.77: [ἐ]δοξε ταῖ πόλι εἰς Δελφοὺς ἀποστειλαῖ [ι] χρησομέ[ι]νους . . . (“It was decided by the *polis* to send messengers to Delphi to ask . . .”).

³⁰ Hdt. 6.74.2: ἐν ταύτῃ τῇ πόλι λέγεται εἶναι ὑπ’ Ἀρκάδων τὸ Στυγὸς ὕδωρ (“The Arkadians say that the waters of Styx are in that *polis*”).

³¹ Hdt. 7.58.2: ὁ δὲ κατ’ ἤπειρον στρατὸς . . . ἐποιεῖτο τὴν ὁδὸν διὰ τῆς Χερσονήσου . . . διὰ μέσης δὲ πορευόμενος πόλιος τῇ οὐνομῶ τυγχάνει ἐὼν Ἀγορῆ (“The land force made its way through the Chersonesos . . . and marched right through a *polis* called Agore”).

³² Xen. *Hell.* 5.4.49: τὰ πρὸς ἔω τῆς τῶν Θηβαίων πόλεως ἐδὸν (ὁ Ἀγησίλαος) μέχρι τῆς Ταναγραίων: ἔτι γὰρ τότε καὶ τὴν Τάναγρον οἱ περὶ Ὑπατόδωρον, φίλοι ὄντες τῶν Λακεδαιμονίων, εἶχον (“Agesilaos pillaged the eastern part of the *polis* of Thebes up to the *polis* of Tanagra; because the pro-Lakedaimonian faction of Hypatodoros was still in control of Tanagra”; cf. Hansen (1998) 170).

³³ Din. 1.77: τὸν τῆς Ἑλλάδος ἀλιτρίων ἀποκτείναντας ἐξόριστον ἐκ τῆς πόλεως ποιῶσα (“Having executed the arch-criminal of Hellas to throw his corpse over the border of the *polis*”).

πόλις τὰς μὲν ἄλλας κεκλείσθαι, μίαν δὲ ἀνεῶχθαι (“When a *polis* is in a state of terror the following precautions too are needed. Keep all gates closed except one” (trans. Whitehead)). The *polis* stricken by fear is a community of citizens, but the reference to the gates indicates that it is also a walled settlement. Hdt. 8.35.1: καὶ γὰρ τῶν Πανοπέων τὴν πόλιν ἐνέπρησαν καὶ Δαυλίων καὶ Αἰολιδέων (“They (the Persians) set fire to the *polis* of the Panopeans, and to those of the Daulians and Aioliideans as well”). The *polis* set on fire is, of course, a town, but the identification of the *polis* by the city-ethnic instead of the toponym shows that it is also a political community.³⁴

Polis used in the urban and territorial senses simultaneously is attested in, e.g. *I.Cret.* IV.144.9–11: τοῖς ἐμὲ πόλι Φουκίονσι τοῖς [τ’ ἐλευθέρους καὶ τοῖς δώ]λοις (“Those who live in the *polis*, both free and slaves”). The reference must be to all free and slaves who live in the *polis* of Gortys, i.e. the urban and rural population combined. Xen. *Hell.* 6.5.12: καὶ καταλαβὼν πόλιν ὁμορον ὄσαν Εὐταίαν . . . ὁμως οὐκ ἠδίκησε τὴν πόλιν (“Having conquered the *polis* of Eutaia, which bordered [on Mantinea], he [Agesilaos] did no harm to the city”). When Eutaia (no. 270) is described as bordering on Lakedaimon, *polis* is used in the territorial sense, but from the following description it is clear that the *polis* taken by Agesilaos is the urban centre inhabited by the old, the women and the children while the adult males of military age are on campaign.

Polis used in the political and territorial senses simultaneously is attested in, e.g. *SEG* 36 750.14–16: αἰ μὲν κέ τις δίκας γενομένης κατὰ τὸν νόμον φύγηι ἐκ τὰς πόλιος ἢ ἀπυθάνη . . . (“If one in a trial in accordance with the law is sentenced to exile from the *polis* or to death . . .” (Mytilene, c.340–330)). A sentence of exile from the *polis* applies specifically to the territory but in a wider sense to the community as such. Xen. *Hell.* 4.4.6: αἰσθανόμενοι ἀφανιζομένην τὴν πόλιν διὰ τὸ καὶ ὄρους ἀνασπᾶσθαι καὶ Ἄργος ἀντὶ Κορίνθου τὴν πατρίδα αὐτοῖς ὀνομάζεσθαι (“They (the Corinthians) felt that their *polis* was being wiped off the map by the removal of the boundary stones and by their fatherland being called Argos instead of Corinth”). Here the community as such is being destroyed by the removal of the stones marking the boundary of the territory.

Of all the numerous occurrences of *polis* used in all three senses simultaneously, it suffices to quote one non-Athenian and one Athenian example. (a) Hdt. 7.22.3–23.1: ἐν δὲ τῷ ἰσθμῷ τούτῳ, ἐς τὸν τελευταῖον ὁ Ἄθως, Σάνη πόλις Ἑλλάδος

οἴκηται, αἱ δὲ ἐκτὸς Σάνης, ἔσω δὲ τοῦ Ἄθω οἰκημένα, τὰς τότε ὁ Πέρσης νησιώτιδας ἀντὶ ἠπειρωτῶν ὄρμητο ποιεῖν, εἰσὶ αἶδε, Δίον, Ὀλόφυξος, Ἀκρόθωρον, Θύσσοι, Κλεωναί. πόλιες μὲν αὐταὶ αἱ τὸν Ἄθων νέμονται (“In this neck of land where Athos ends is built a Hellenic *polis*: Sane, and those built in Athos south of Sane—which the King of Persia then planned to turn into island *poleis* instead of mainland *poleis*—are the following: Dion, Olophyxos, Akrothoon, Thyssos and Kleonai. These are the *poleis* that inhabit Athos”). When Herodotos lists the six *poleis* which are situated on Athos, he thinks of them as towns with territories, but the verb οἰκεῖσθαι (“to be inhabited”) connected with *polis* suggests the town more than the territory, whereas the verb νέμεσθαι (“inhabit”) suggests as its subject the inhabitants of a town rather than the town itself; moreover, the reference to Sane as a Hellenic *polis* indicates that the six settlements are conceived as polities as well; thus the word *polis* is probably intended to convey all three meanings simultaneously: town, territory and state. (b) Xen. *Hell.* 2.2.9: Λύσανδρος δὲ ἀφικόμενος εἰς Αἶγιαν ἀπέδωκε τὴν πόλιν Αἰγινηταῖς (“When Lysandros came to Aigina, he gave the *polis* back to the Aiginetans”). In this case it does not make sense to distinguish between the various meanings. What Lysander gave back to the Aiginetans was the city, the island and the political community as such.

Finally, it must be admitted that it is not always easy to determine when a named locality is specifically called *polis*. Sometimes one named town is classified as a *polis*, e.g. *Aen. Tact.* 18.13: Τέως πόλις εὐμεγέθης; sometimes a number of named towns are classified collectively as *poleis*, e.g. Hdt. 1.144.3: διὰ ταύτην τὴν αἰτίην αἱ πέντε πόλιες, Λίνδος καὶ Ἰγλήσος τε καὶ Κάμιρος καὶ Κῶς τε καὶ Κνίδος, ἐξεκλήσαν τῆς μετοχής τὴν ἕκτην πόλιν Ἀλικαρνησσόν (“For this reason the five *poleis*, Lindos, Ialysos, Kamiros, Kos and Knidos, excluded the sixth *polis* Halikarnassos from membership [of the Dorian Hexapolis]”). This passage is unproblematical. We learn that there were altogether six *poleis*, and there are six toponyms to match the site-classification. But if the classification takes the form of, e.g., αἶδε αἱ πόλιες followed by a number of toponyms, we cannot always be sure that all the toponyms listed were actually intended to be understood as *poleis*.³⁵ In some passages *polis* is used as a generic term or a heading, and in such cases whole peoples—e.g. *ethne* which are never called *polis* when referred to individually—may be listed alongside communities which are frequently classified as *poleis* in other sources

³⁴ Three further examples are Hdt. 7.154.2, Xen. *Hell.* 5.2.11 and *Hell. Oxy.* 21.5.

³⁵ This point is especially relevant in the case of Ps.-Skylax, see Hansen (1996) 30–32 and Flensted-Jensen and Hansen (1996) 140–43.

(Hansen (1997*b*), *supra* 7). To illustrate this problem, let us adduce four examples, two from literary and two from epigraphical sources.

Herodotos' list of *poleis* fighting in the battle of Salamis is sandwiched between the phrases *συνελέχθησαν τε δὴ πολλῶν πλεῦνες νέες ἢ ἐπὶ Ἀρτεμισίῳ ἐναυμάχουσι καὶ ἀπὸ πολλῶν πλεόνων* ("Many more ships were gathered than those involved in the naval battle of Artemision and from many more *poleis*") (8.42.1) and *ὡς δὲ ἐς τὴν Σαλαμίνα συνήλθον οἱ στρατηγοὶ ἀπὸ τῶν εἰρημένων πολίων* ("When the generals from the above-mentioned *poleis* had convened at Salamis") (8.49.1). All the twenty-two communities listed as *poleis* in 8.42–8 happen to be *poleis* in the sense of city-states. But in Thucydides' list of Athenian and Spartan allies in the Peloponnesian War, the heading *πόλεις δὲ ἐκάτεροι τάσδε ἔχοντες ξυμμάχους* (2.9.1) includes a number of *ethne*, none of which was a *polis* in the usual sense, e.g. the Boiotians, the Lokrians and the Phokians.

In the Delphic accounts of contributions to the rebuilding of the temple of Apollo of the year 361/60, all seven communities listed under the heading *τάδε πόλεις καὶ ἰδιῶται ἐπάρξαντο* (CID II 4.1.1–II.29) were actually city-states. But in the so-called Charter of the Second Athenian Naval League, the heading *Ἀθηναίων πόλεις αἰδε σύμμαχοι* (IG II² 43.79) is followed by a list of forty-three city-states, three dynasts, two federations and one splinter community (Dreher (1995) 181, 189–91). From the use of *polis* as

a heading it would be a mistake to conclude, e.g., that the three monarchies and two federations listed in IG II² 43 were *poleis*;³⁶ but it would equally be a mistake to take the heading as decisive evidence that the forty-three other communities were actually *poleis*. For each and every community this piece of information must be established from other sources in which *polis* is applied specifically to the community in question. From *polis* as a heading we can infer that most of the communities listed were believed to be *poleis*, and sometimes they all were, but we must always be aware of the universal custom: under a term used as a heading to subsume some instances that do not fit the term to perfection (Hansen (1997*b*) 9–11).

The conclusion is that each occurrence of *polis* must be studied in context. There is no way of laying down a general rule for how to handle this problem, but we have decided that, in the Athenian tribute lists and in the list of members of the Second Athenian Naval League, *polis* must be treated as a mere heading.³⁷ Thus, if an ethnic or a toponym is recorded in these lists, we cannot take it as evidence that the community in question was called a *polis* in the political sense; we can only infer that the community must have been a political unit.

³⁶ The 191 members of the United Nations may all be states (as presupposed in the *Charter*, chapter II, article 3) but far from all are nations or nation-states.

³⁷ For the Athenian tribute lists, see Schuller (1995); for the Charter of the Second Athenian Naval League, see Dreher (1995).

Meaning and Reference of the Words *Asty* and *Polisma*

In Archaic and Classical Greek texts *polis* is by far the most common word for what we call a “town” or “city”. But the Greeks had a number of other words, viz. *asty*, *polisma*, *polismation*, *polichne* and *polichnion*. The three last words can be ignored in this context. They are frequently found in texts from the Hellenistic and Roman periods, but hardly ever attested in older sources.¹ *Asty* and *polisma*, however, are important site-classifications in sources from all periods.

(1) *Asty*. It is a well-known fact that the two most common meanings of the word *polis* in Classical sources are “town” and “state”, and that the word *asty* is used synonymously with *polis* in the sense of town, but never in the sense of state.² It has also been noted that *asty* is a fairly common word in the *Iliad* and in other Archaic texts, but becomes more and more rare in the Classical period and is gradually replaced by *polis* (Lévy (1983)).

To these generally accepted truths we have added two further observations: (a) that there are passages in the Archaic sources where *asty*, like *polis*, denotes the community and not just its urban centre,³ and (b) that the derivative *astos* never has the sense of “city-dweller” or “town-man” but invariably designates a person of citizen birth (whereas *polites* usually designates a person with citizen rights).⁴ Thus, the distinction between *asty* in the sense of urban centre and *polis* in the sense of political community is not quite as sharp as sometimes believed, and it is further reduced by a study of attestations in Archaic and Classical sources of *asty* applied to named urban centres. The collection of these attestations in Index 6 shows that the term *asty* is not

used about any urban centre, but exclusively about a town which in the same source or in other sources is called *polis* and is known to have been the urban centre of a *polis* in the political sense. Although *asty* does not mean an urban centre of a political community, it invariably denotes such a centre.

The Index comprises references to named Hellenic towns of the late Archaic and Classical periods. We have omitted references in poetry to mythical towns, such as Troy or Tiryns in the Heroic Age,⁵ as well as references to barbarian towns, such as Sardes or Babylon.⁶ Due to the Athenocentric nature of our evidence, the majority of all references to the term *asty* in Classical sources are to the city of Athens, often opposed to its port, the Peiraeus.⁷ And this imbalance—well known in all studies of ancient Greek society—is in this particular case further aggravated by the general custom in all sources to refer to the two parts in the civil war of 404–403 as *οἱ ἐκ Πειραιέως* (i.e. the democrats) and *οἱ ἐξ ἄστεως* (i.e. the oligarchs).⁸ Yet there is still a fairly substantial number of scattered passages in which the word *asty* is used to express the concept of town in general or to designate named towns other than Athens; and the attestations show that all the urban centres described with the term *asty* are *poleis* in the political sense. The only problematical site is Eion, for which, however, see Hansen (2000) 197–98. Finally, it is worth noting that the word *asty* held its ground in poetry longer than in prose, and that it was used not only about large *poleis*, such as Athens and Thebes, but also about *poleis* which the Greeks themselves considered to be very small, viz. Plataiai and Tenos.

(2) *Polisma*. Like *asty*, *polisma* signifies a city in the urban sense, and like *asty* it is commonly used in poetry as well as in prose about mythical and/or barbarian towns.⁹ Unlike *asty*, however, *polisma* occurs almost exclusively in literary sources. The only attestation in inscriptions is in a C41 honorific decree from Kos in which Halasarna is called a

This chapter is a revised and updated version of Hansen (1997) 58–60 and Flensted-Jensen (1995) 129–31.

¹ *πολισμάτιον* (Ephor. fr. 27); *πολίχνη* (Thuc. 7.4.6); *πολίχμιον* (Isoc. 5.145, 12.89; Pl. *Resp.* 370D). However, three Classical *poleis* were named *polichne*, viz. no. 789 in Troas (Strabo 13.1.45), no. 860 in Ionia, and no. 982 on Crete (Steph. Byz. 532.4–5). It is worth noting that only the city-ethnics are attested in Classical sources. The toponyms of nos. 789 and 982 are attested in late sources only, that of no. 860 is not attested at all, but reconstructed from the city-ethnic. Finally, *Polichna* was the name of the settlement to which the Klazomenians moved their urban centre in C51 (Thuc. 8.14.3; 8.23.6) and the name of a settlement in the territory of Chios (Hdt. 6.26.2).

⁹ Flensted-Jensen (1995) 129–31.

polisma.¹⁰ There are not many occurrences of *polisma* in Archaic and Classical sources. The word is much rarer than *polis* in the urban sense, and it is also less common than *asty*. But in prose it is not only used in a mythological context or about barbarian towns, it is also found in descriptions of Greek cities of the Archaic and Classical periods. It is sometimes erroneously believed that *polisma* means a small city or town.¹¹ That sense is connected with the diminutive

¹⁰ *I.Cos* 7.3: πόλισμα τὸ ἐν Ἀλασάρναι, cf. 10. For the date, see *RFIC* 70 (1942) 13, 6B.6.

polismation, unattested in Archaic literature and extremely rare in Classical sources. When applied to a named town of the Archaic and Classical periods, *polisma* once again resembles *asty* in that it is used synonymously with *polis* in the urban sense and seems invariably to denote a town which was the urban centre of a *polis* in the political sense. There is not one unquestionable attestation of *polisma* being used about a second-order urban settlement.

The Concept of *Patris*

If asked what his “fatherland” is, a citizen of a modern state would hardly be in doubt about the answer. His fatherland is the “community of laws and institutions with a single political will” of which he is a member.¹ This community is, as the family metaphor implies, “something to which one is naturally tied”² and it has the emotional power to “inspire love, and often profoundly self-sacrificing love”³ as well as the right to ask for sacrifices.⁴

In ancient Greek *πατρίς* and *πάτρα* are, of course, words with similar implications, derived as they are from the same stem as *πατήρ*, “father”; the exact meaning is “fatherland” (see Index 7). It is noteworthy, moreover, that *patris* often occurs in contexts which link it to other kinship terms such as “mother”,⁵ “parents”,⁶ “sister”,⁷ “brother”,⁸ “children”,⁹ “son”,¹⁰ “wife”,¹¹ “husband”,¹² “ancestors”,¹³ “relatives”,¹⁴ and *genos*.¹⁵ This suggests that the family implications of the term *patris* were very much alive¹⁶ and of significance. Since the Greeks took family relations to be based *inter alia* on love,¹⁷ it follows that *patris* is a term with highly positive emotional associations.

A number of texts contain variations on the theme that the *patris* is the thing dearest to a man.¹⁸ To be separated from the *patris* is, as the *Theognidea* point out (783–88),

“without joy”,¹⁹ and to die and lie buried “far from the *patris*” is even more miserable as attested in many sepulchral inscriptions.²⁰ The right and proper thing is to die and lie buried in one’s *patris*,²¹ and in the passionate epilogue of Dem. 57 the speaker envisages the possibility of suicide simply in order to ensure that he will be buried by his relatives “in the *patris*”. Going into exile is another way of losing the *patris*, and mentions of exile often trigger mentions of *patris*, thus emphasising that the concept of exile involved the idea of loss of *patris*.²²

In a political context the most important single aspect of the *patris* is probably the requirement to sacrifice one’s life for one’s fatherland. Modern states have persuaded colossal numbers of citizens to lay down their lives in wars, and dying for one’s country has assumed a moral grandeur. Similarly, the theme of death “for the *patris*” is a recurrent one in Archaic and Classical Greek texts,²³ and that death in defence of the *patris* was considered of moral grandeur is clear from, e.g., Tyrtaios’ famous verses: *τεθνάμεναι γὰρ καλὸν ἐνὶ προμάχοισι πεσόντα / ἄνδρ’ ἀγαθὸν περὶ ἧι πατρίδι μαρνόμενον* (fr. 10.1–2, West).

There cannot, then, be any reasonable doubt that a Greek of the Archaic and Classical periods could think of his *patris* almost as a next of kin, as the sweetest thing on earth; it was the proper place for him to be buried, it was what he

lost when going into exile or regained by his return, it was something for which he would lay down his life; indeed, it was an object of his love.²⁴ It was, finally, something in which he took pride.²⁵

1. Entities Called *Patris*

But which entity did an ancient Greek consider to *be* his *patris*? To this question there are presumably four conceivable answers: (1) his local community of residence, such as a *kome* or *demos vel sim.*; (2) his *polis*; (3) the region in which he resided, e.g. Phokis, Thessaly, etc.; and (4) Hellas itself. It is, in fact, a man's *polis* that is regularly conceived of as his *patris*, as will be clear from consideration of each of these four entities.

Re (1) There is only a single possible example of a community below *polis* level (i.e. *kome*, *deme*, etc.) that is called *patris* in a Classical source. Paus. 7.17.7 reports the text of an inscription reportedly to be found on a monument erected at Olympia in the 80th Olympiad (460–457):

Οἶνία Οἰβώτας στάδιον νικῶν ὄδ' Ἀχαιὸς
πατρίδα Πάλειαν θῆκε' ὀνομαστοτέραν.²⁶

There was no *polis* in Achaia by the name of Paleia. Pausanias claims that Paleia was the ancient name of Dyme (cf. Strabo 8.7.5), “for it is the custom of Greek poets to use ancient names instead of more modern ones” (Loeb); if that is taken at face value, Dyme should be added to the list of *poleis* called *patris* (*infra*) and that seems perfectly possible. However, Dyme is reported to have been created by (an undated) synoecism of eight *demoi* (Strabo 8.3.2), and modern scholars are inclined to believe that Paleia was one of these demes.²⁷ If that is the case, we have an example of a local community below *polis* level being called *patris*. However, it should be noted that according to Pausanias the monument commemorated a victory won in 756; it is thus not a contemporary source that applies *patris* to Paleia, and it cannot be excluded that the author of the epigram did not know anything about the status of Paleia in 756 or even that he thought of it as a *polis*.²⁸ But the important observation

²⁴ Eur. *Suppl.* 506–7; *Phoen.* 358–59; Lycurg. *Leoc.* 88: ἐφάλουν τὴν πατρίδα; 100: τὸ τὴν πατρίδα φιλεῖν; 101: ἐποίησε τὴν πατρίδα μᾶλλον τῶν παίδων φιλοῦσαν.

²⁵ Hdt. 6.126.3; Philemon *Comicus* fr. 109, Kock.

²⁶ On the reliability of Pausanias' epigraphic quotations, see Habicht (1985) 64–94.

²⁷ See Dyme (no. 234).

²⁸ Greeks of the Classical period regularly thought of earlier periods in

here must be that this text, enigmatic as it is, is the only source that possibly applies *patris* to a community below *polis* level.

Re (3) It is slightly more common to find regions such as Phokis and Thessaly described as *patris*; in six sources the concept of *patris* is applied to nine different regions:

Aitolia: Hdt. 6.127.1–4.

Arkadia: Dem. 18.95–96 (295–96).

Euboea: Dem. 18.95–96 (295–96).

Messenia: Thuc. 6.4.6.²⁹

Molossia: Hdt. 6.127.1–4.

Peloponnese: Xen. *Hell.* 7.1.23.³⁰

Phokis: *CEG* II 799 (c.300).

Pontos: *IG* II² 10108 (C4m); cf. *CEG* II 528; *AM* 66 (1941) 53–54.³¹

Thessalia: Dem. 18.95–96 (295–96).

Of these nine regions, five are called *patris* in passages where they are listed as instances under the general heading *πατρίδες vel sim.*

(1) At 6.127.1–4 Herodotos lists the suitors of Agariste, the daughter of Kleisthenes, the tyrant of Sikyon. Herodotos indicates the origins of the twelve suitors in various ways: by city-ethnics, a regional ethnic, or by prepositional phrases, and the origin indicated for each suitor amounts to a statement of his *patre*: in ten cases the *patre* is a *polis*,³² but in two it is a region (Aitolia and Molossia). What seems to have happened here is that Herodotos, in a list of entities of which the majority (the ten *poleis*) can properly be called *patre*, has included two (Aitolia and Molossia) which the designation fits less well. This is a procedure which is not unknown, and it resembles the way in which states that are not proper *poleis* may be listed with *poleis* in a list prefaced by the heading *πόλεις*.³³ Moreover, Herodotos could presumably indicate the origins of these suitors only by stating

contemporary terms; cf. Hansen (2000) 159–60 on Troy, Messene and Krisa, all three described as *poleis* by Classical authors.

²⁹ Thuc. 6.4.6: τοὺς δὲ Σαμίους Ἀναξίλας Ἐργίτων τύραννος οὐ πολλῶ ὕστερον ἐκβαλὼν καὶ τὴν πόλιν αὐτὸς ἐνμικτεῶν ἀνθρώπων οἰκίας Μεσσηνῆ ἀπὸ τῆς ἐαυτοῦ τὸ ἀρχαῖον πατρίδος ἀντανόμασεν.

³⁰ Xen. *Hell.* 7.1.23: ἐγγενόμενοι δὲ τις Λυκόμηδης Μαντινεὺς, γένει τε οὐδενὸς ἐνδεῆς χρήμασί τε προήκων καὶ ἄλλως φιλότιμος, οὗτος ἐνέπλησε φρονήματος τοὺς Ἀρκάδας, λέγων ὡς μόνοις μὲν αὐτοῖς πατρίς Πελοπόννησος εἴη, μόνοι γὰρ αὐτόχθονες ἐν αὐτῇ οἰκοῖεν, πλείστον δὲ τῶν Ἑλληνικῶν φύλων τὸ Ἀρκαδικῶν εἶη καὶ σώματα ἐγκρατέστατα ἔχοι.

³¹ *AM* 66 (1941) 53–54: πατρίδα μὲν Πόντον Κύπρις κατέχει, ἐμὲ δὲ Ἀπθίς / κρύψε πρὸ ἡλικίας Δωρίδα τῶιδε τάφωι.

³² Sybaris (no. 70), Siris (no. 69), Epidamnos (no. 79), Argos (no. 347), Trapezous (no. 303), Paion (no. 288), Elis (no. 251), Athens (no. 361), Eretria (no. 370), and Krannon (no. 400).

³³ See Hansen (1997), (1998) 124–25.

their regional affiliations, since neither Molossia nor Aitolia was subdivided into *poleis* in C6f.

(2) In the *Speech for the Crown* Demosthenes has a long list of men who have betrayed their *patris* to Philip II (Dem. 18.295–96). His list of traitors is very similar to the Herodotean list except that the “heading” *patrīdes* is appended to, not prefaced to, the list. Again, it is a list indicating the origins of various men, and again this origin amounts to statement of their *patris*. In a list containing seven *poleis*³⁴ that can properly be called *patris* are included three regions (Thessalia, Arkadia and Euboia) which, though each subdivided into *poleis*, are not themselves *poleis* and for which the designation *patris* fits less well than it does for *poleis* proper.

(3) The application of *patris* to the Peloponnese may perhaps be explained from the context in which it occurs. The description of the Peloponnese as *patris* occurs in a speech by the Arkadian federal politician Lykomedes of Mantinea, who urges the Arkadian federal assembly to attempt an independent line in foreign policy instead of following Thebes blindly. He is reported by Xenophon to have stated that the Arkadians were the only ones for whom the Peloponnese was the *patris* since they were the only autochthonous people on the peninsula. So, the application here is clearly propagandistic and prompted by the well-established Arkadian tradition of autochthony.³⁵

(4) The epigram that describes Phokis as the *patris* of a Pythonikes (CEG II 799 (c.300)) may profitably be compared to another contemporary monument that celebrates a Magnesian Pythonikes (CEG II 855 (C4l)):

Φωκεὺς μὲν γένος εἰμί, πάλην δ' με Πύθ[ια παῖδας]
νικῶντα ἐστεφάνω[σε] εἰκόνι [τ]ῆδε πατρ[ίς].
(CEG II 799).

Μάγνης μὲν γενεάν, στάδιον δέ με Πύθια παῖδας
νικῶντα ἐστεφάνωσε εἰκόνι τῆδε πόλις.
(CEG II 855)

Obviously, in these two very similar epigrams the first two syllables of the hexameters were employed to state the origin of the athlete. In the Magnesian case it works well since the city-ethnic of Magnesia is exactly disyllabic. However, of twenty-eight attested Phokian city-ethnics only a single one is disyllabic (*Δελφός*). So unless the victor originated from Delphi itself the author of the epigram had to come up with an alternative proposal. His choice was the regional

³⁴ Argos (no. 347), Elis (no. 251), Messene (no. 318), Sikyon (no. 228), Corinth (no. 227), Megara (no. 225) and Thebes (no. 221).

³⁵ For Arkadian autochthony, see Nielsen (2002) 66–72. See also Kopp (1992) 172. Cf. also Dem. *Epit.* 4 for an association between *patris* and autochthony.

ethnic instead of a city-ethnic, and so Phokis was described as *patris* since he also preferred *πατρίς* to *πόλις* for the last two syllables of the pentameter. His reasons for this preference can only be conjectured. Perhaps *polis* was felt to sit less well with a regional ethnic such as *Φωκεύς* than was *πατρίς*. Possibly so, but it should be noted that one rare usage of *polis* was in fact to apply it to larger regions such as Thessalia or Sikelia or to multipolate islands such as Keos, Cyprus or Euboia, and in particular in verse “where poetical expression matters more than terminological precision”.³⁶ So *polis* would have been possible and perhaps *patris* was not preferred for any particular reason but simply because in many contexts it served as an emotional substitute for *polis*.³⁷

(5) According to Thuc. 6.4.6, Anaxilas of Rhegion (reigned 494–476) renamed Zankle “Messene” ἀπὸ τῆς ἑαυτοῦ τὸ ἀρχαῖον πατριδος, i.e. after the region of Messenia in the Peloponnese. There were *poleis* in Messenia prior to the partial liberation from Sparta in 369, but only four (Aithaia (no. 312), Asine (no. 313), Mothone (no. 319) and Thouria (no. 322)) can be confidently identified, and if Anaxilas traced his Messenian ancestry back to the time of the Messenian wars³⁸ of the early Archaic period, there were probably not even four *poleis* in Messenia. It seems, again, that a regional description was the only way to identify Anaxilas’ “fatherland of olden times”.

(6) Unless “Pontos” was an alternative name for a *polis* in the Black Sea area or an otherwise unknown *polis*,³⁹ the description of Pontos as *patris* is a clear case of the application of the term to a named entity which was not a *polis*, though it is the only such unambiguous use.

To sum up: most of the applications of *patris* to regions larger than a single *polis* may be explained from their context as not wholly proper or slightly forced uses of the term, but not all. However, even if we accept all six sources, the number is still small when compared to the eighty-five *poleis* described as *patris*.

Re (4) The cosmopolitan view that a man’s *patris* is where he wants to live is rare prior to the Hellenistic period though not unattested.⁴⁰ But to think of Hellas as one’s *patris* is equally rare and runs equally counter to the traditional view that the *patris* is the *polis* where you were

³⁶ Hansen (1998) 124–32.

³⁷ See Nielsen (2004) 51, 69–74.

³⁸ For Messenians in Rhegion in the early Archaic period: Heracl. Lemb. 55; Strabo 6.1.6; Paus. 4.23.6.

³⁹ Cf. CEG II 528 *ad loc.*

⁴⁰ Cf. Hansen, forthcoming, n. 1, citing Eur. fr. 774, 1034 (cf. fr. 1047); Ar. *Plut.* 1151; Isoc. 4.81. See also the vehement denunciation of this view at Lys. 31.6.

born and raised.⁴¹ The thought occurs most prominently in Isokrates' *Panegyrikos* 81,⁴² where the crusading rhetor claims—contrary to all the facts—that the Greeks of the Hellenic League who defeated the Persians had realised his own ideal in ἴδια μὲν ἄστυ τὰς αὐτῶν πόλεις ἡγούμενοι, κοινὴν δὲ πατρίδα τὴν Ἑλλάδα νομίζοντες εἶναι (“regarding their own *poleis* simply as their individual cities, and being of the opinion that Hellas was their common *patris*”).⁴³ But even in Isokrates this is unique, and his normal view is the traditional one which regards each individual *polis* as the *patris* of its citizens.⁴⁴

Re (2) Of the *poleis* included in this Inventory eighty-five⁴⁵ are called *patris* in Archaic and Classical sources.⁴⁶ It should be immediately clear that in comparison with other entities sometimes called *patris* this number is significant, and that the regular and traditional use of *patris* is in reference to a man's *polis*, and *patris* may indeed be said to be a positive emotional substitute for *polis*.⁴⁷

⁴¹ Cf. Hom. *Od.* 10.415–17.

⁴² It may also be present in Aesch. *Pers.* 186, 403, but not emphatically so. Cf. also Lycurg. *Leoc.* 104.

⁴³ See the excellent comments of Buchner (1958) 89 on this extraordinary passage.

⁴⁴ *Ibid.*

⁴⁵ All *poleis* of type A, except four of type [A] (Phigaleia (no. 292); Krannon (no. 400); Phalanna (no. 468); Kallatis (no. 686)); four of type B ((Thelphousa (no. 300); Samos the klerouchy (no. 865); Astypalaia (no. 476); Pholegandra (no. 513)) and one of type C (Trapezous (no. 303)).

⁴⁶ On this number, see Nielsen (2004) 64–65.

To conclude: Greeks of the Archaic and Classical periods thought of their *patris* almost as a next of kin; it was the sweetest thing on earth; it was the proper place to be buried; it was what they lost by going into exile or regained by their return; it was something for which they would lay down their lives. It was, in short, an object of their love and Greeks took pride in their *patris*. Though other entities were very occasionally described as *patris*, the *patris* was in the overwhelming majority of all cases the man's *polis*, and the term *patris* may be said to function almost as a synonym of *polis*. So, to a Greek the *patris* was his *polis*, and for his *polis* he was expected to be ready to lay down his life. Let it finally be noted that this conclusion is derived not *only* from Athenian sources (which admittedly predominate in this as in any discussion), but also from a wide range of non-Athenian sources.⁴⁸ The view of *patris* presented above was, then, in all probability one shared throughout the Greek world.⁴⁹

The Number of *Poleis*

This Inventory comprises 1,035 communities, each certainly or probably or possibly a *polis* in the Archaic and/or Classical periods. But not all were *poleis* at the same time. Some early *poleis* had disappeared for good already in the Archaic period, e.g. Arisba on Lesbos (no. 768) swallowed up by Methymna, presumably in C6, or Megara Hyblaia in Sicily (no. 36), destroyed by Gelon in 484. Other *poleis* were founded in the course of the period covered by our investigation, e.g. Megalopolis (no. 282) synoecised in 368, or developed to become a *polis*, e.g. Kassopa (no. 100) in C4m, or took on board so many aspects of Hellenic civilisation that they became Hellenised or at least partly Hellenised *poleis* before the end of the Classical period, e.g. Xanthos (no. 943). A reduction in the number of *poleis* in some parts of the Hellenic world was counterbalanced by an increase in other parts. In C6–C5 Euboia had about a dozen *poleis*, but in C4m only four were left. Although it cannot be proved, it is a fair guess that several small Arkadian *poleis* disappeared or at least lost their *polis* status when Megalopolis was synoecised in 368. Along the coasts of the Adriatic Sea numerous new *poleis* were founded in C4f by Dionysios I, but in the same period several of the neighbours of Syracuse were destroyed and disappeared as *poleis* for a shorter or longer period. And many of the Sicilian communities included in this inventory became Hellenised *poleis* only in the wake of Timoleon's campaigns. Of all the seventy-two Karian *poleis* recorded below, only a handful were Hellenic colonies. The rest were indigenous communities which, in C4s, had become sufficiently Hellenised to count as *poleis*. But before Hellenisation gathered momentum under the Hekatomnids in C4, many of these communities were Karian cities and city-states, not Hellenised *poleis*, and they would not have deserved inclusion if this inventory had stopped in c.400. Nor would many of the *poleis* in Epeiros.

Furthermore, we cannot be sure that all the communities included in the Inventory were actually *poleis*. Some of those classified as a *polis* type C would undoubtedly be struck off the Inventory if we had had perfect sources. And even some of the *poleis* type A are not beyond doubt: some remote sites in the Pontic region, for example, are recorded in Ps.-Skylax

as a *polis* or even a *polis Hellenis*, but several are presumably ghost-*poleis*, see 27 *supra*.

Conversely, we must take into account what the Germans call a *Dunkelziffer*, i.e. the difference between a number actually attested in the scattered sources we have and the estimated total number we would be able to record if we had had perfect sources. There can be no doubt that a considerable number of Archaic *poleis* have disappeared without leaving any trace of their existence. Lesbos, for example, may in C7 have had more than the six *poleis* mentioned by Herodotos; cf. 1018 *infra*. The tradition was that there had once been 100 *poleis* in Lakadaimon.¹ With the sources we have, a maximum of twenty-four can be described.

Because of the constant transformation of the political map of the Hellenic world, the list of all *poleis* in the Archaic and Classical periods must be supplemented with a list of *poleis* in a given year, and the year we have chosen is 400. It would be interesting to have a similar list for 480, i.e. the line of separation between the Archaic and Classical periods; but lack of sources makes it impossible to draw a picture of the *polis* world in the year of Xerxes' invasion of Greece.

The list of *poleis* in 400 (see Index 10) omits all *poleis* that had disappeared before 400 as well as all *poleis* that were colonised or synoecised or Hellenised in the course of the period 400–323. As the evidence stands, 862 of the 1,035 *poleis* were certainly or presumably or at least possibly Hellenic *poleis* in the year when the 10,000 mercenaries had to fight their way back to Greece, when Elis was forced by Sparta to surrender many of its dependencies, and when Sokrates was about to stand trial in Athens. Of these 862 *poleis*, 437 are explicitly attested as *poleis* in sources of the Classical period (type A), 221 are known to have performed a number of activities characteristic of a *polis* (types [A]B and B), and for 204 there are indications but no proof that they were *poleis* both in the political and in the urban sense of the term (types [A]C and C).

A total of 862 *poleis* is a minimum figure, but the presumption is that, including a *Dunkelziffer*, the total number

¹ Strabo 8.4.11; Steph. Byz. 46.4, 87.16, etc. The source is probably Polemon's treatise: *Περὶ τῶν ἐν Λακεδαιμόνι πόλεων*, *Suda* Π 1888.

of *poleis* in any one year can hardly have passed 1,000,² and 1,500 *poleis* altogether, as we guessed when we started the project in 1993, must be considered a maximum: i.e. the number of all *poleis* from the beginning of the colonial period in C8m down to the death of Alexander the Great in 323.

The approach of the Polis Centre has been to find out what the Greeks thought a *polis* was. Consequently, it is pertinent to ask: did the Greeks c.400 know how many *poleis* there were in the Hellenic world? If Agesilaos in 371 had asked Epameinondas how many *poleis* there were in Boiotia,³ the Theban statesman might not have known the exact number by heart, but we are convinced that there was a right answer and that in a few minutes he would have been able to come up with it. If you had put the same question to an ordinary citizen in one of the Boiotian *poleis*, he might not have been able to name the exact figure, no matter how long he was given to state his answer; but he would have known for sure of which *polis* he himself was a citizen, and he would have known about all its neighbours and

² According to Xenophon, the Thracian Chersonesos was settled with 11 or 12 *poleis* c.400 (*Hell.* 3.2.10). There are 15 in the Inventory, of which, however, one was not a *polis* in 400 and 5 are type [A]C. According to Demosthenes, Philip II had 22 Phokian *poleis* dioecised in 346 (*Dem.* 19.123), to which we must add Abai and Delphi. The Inventory comprises altogether 29 *poleis* of which 2 seem to have disappeared in 480 and 2 are classified as *poleis* type C. In these and in several other regions all or almost all *poleis* are still identifiable.

³ For the (anecdotal?) exchange of words between Epameinondas and Agesilaos in 371, see Paus. 9.13.2 and Plut. *Ages.* 28.1–3.

about the major Boiotian *poleis*. If you had asked him how many Hellenic *poleis* there were altogether, he might have missed the total indicated here by 100 per cent or more.⁴ The scholars in Aristotle's Lykeion are probably the only Greeks who could have come up with an educated guess, and who may perhaps have asked the question. In some respects this is not so different from what we experience in the modern world. A Member of Parliament in a modern state would probably know that in 2002 there are close to 200 states in the world, 192 to be exact. An ordinary citizen, even an educated one, would not know and might miss the right figure by 100 per cent. A majority of the citizens of the members of the EU are probably ignorant of how many states there are in Europe. The difference between the Greeks and us is that any citizen in a modern state can look it up in a book or find it on the internet in a few minutes, whereas we believe that no count was ever made of the number of *poleis* in the Hellenic world until the Roman Imperial period when, probably, the administrators would know how many *poleis* there were in each of the Greek-speaking provinces and new *poleis* were created by decree of the emperor.⁵

⁴ The only adding up of *poleis* found in the sources, is Bdelykleon's claim that there were 1,000 *poleis* in the Delian League (*Vesp.* 707), but that is a deliberate exaggeration.

⁵ Pallantion was made a *polis* by Antoninus Pius (*Paus.* 8.43.1). Hadrian sent a letter to the citizens of Naryka in East Lokris in which he acknowledges the *polis* status of Naryka (unpublished bronze stele in the Louvre).

Toponyms as Evidence for *Polis* Identity

While the *LGNP* edited by Peter Fraser and Elaine Matthews has revolutionised the study of Greek personal names, toponyms and ethnics have not been systematically and comprehensively investigated since 1911, when G. E. Benseler published the 3rd edition of W. Pape's *Wörterbuch der griechischen Eigennamen*.¹ Since the name of a community, *in casu* a *polis*, is an important aspect of its identity, each entry in the inventory begins with information about what the *polis* was called and to what extent attestations of the name can contribute to the identification of the community as a *polis*. One characteristic of ancient Greek political communities is that they were called sometimes by the toponym, sometimes by the ethnic, and the study of the toponyms is inextricably bound up with the study of the related ethnics. As argued most clearly by Gschnitzer (1955), there are basically two forms of ethnics: those derived from an older toponym (*Κορώνθιος* derived from *Κόρωνθος*) and those from which a new toponym is derived (*Ἀρκάς* generating *Ἀρκαδία*). Most of the toponyms generating ethnics denoted a nucleated settlement, whereas toponyms derived from ethnics denoted a region.²

This important observation must be modified in one respect: the chronological sequence of the word-formation is far from universal. The toponym *Μαντινεία*, for example, must have been derived from the ethnic *Μαντινεύς*. If it had been the other way round, the toponym *Μαντινεία* would have generated the ethnic *Μαντινεάτης*, cf. *Τεγέα* > *Τεγεάτης*, *Ἀσέα* > *Ἀσεάτης*, etc.³ Conversely, the Bottiaians lived originally in Bottia in Makedonia but emigrated and settled down in western Chalkidike in a region called Bottike. In this case the sequence was probably *Βοττία* > *Βοττιαῖοι* > *Βοττικῆ*.⁴

Even though the sequence of the word-formation is not as clear-cut as stated by Gschnitzer, it is still true and important to note that some ethnics are related to a toponym denoting an urban settlement, others to a toponym denoting a region.

Now, the nucleated settlement corresponding to the ethnic was often the urban and political centre of a *polis*, but it could also be a small town or a village lying in the territory of a *polis*, cf. Tamynai on Euboea or Tripodiskos in Megaris.⁵ It is impossible linguistically to separate a toponym denoting a *polis* from a toponym denoting a village or a town lying in the territory of a *polis*. However, the distinction can be ascertained by a number of other criteria, see 88 *infra*, and it is this distinction that enables us to subdivide the related ethnics into city-ethnics—i.e. ethnics corresponding to a toponym denoting a *polis*—versus those sub-ethnics that correspond to a toponym denoting a civic subdivision of a *polis*, typically a *demos* or a *kome*. See 59–60 *infra*.

This chapter is about toponyms denoting a *polis*. That is a topic not much debated in books and articles about the concept of *polis*. In most accounts it is briefly stated that the *polis* as a political community was named after its people, and called by the city-ethnic in the nominative plural, whereas the toponym was used exclusively about the urban centre of the *polis*.⁶ That is largely true, but there are important exceptions, so important in fact that they modify the prevailing picture.

It is true that the toponym often signifies the nucleated centre, i.e. the *polis* in the urban sense; but the *polis* town had a hinterland and there are numerous attestations of the toponym denoting the town plus its hinterland, i.e. the territory of the *polis*;⁷ sometimes the toponym may even denote the hinterland to the exclusion of its urban centre.⁸

Even more important is the fact that, contrary to the al-

⁵ Cf. *Ταμύναι* (Aeschin. 2.169), an Eretrian deme inhabited by the *Ταμυναιεῖς* (IG XII.9 249.III.241); *Τριποδίσκος* (Steph. Byz. 637.1), a Megarian *kome* inhabited by the *Τριποδίσκιοι* (Plut. *Mor.* 295B).

⁶ Gschnitzer (1955) 121–22; Finley (1984) 10. The observation goes back at least to Tittmann (1822) 528.

⁸ Apollonia (no. 545), Xen. *Hell.* 5.3.1; Argos (no. 347), Thuc. 4.133.2; Erochos (no. 181), *SEG* 27 143; Oropos (no. 214), Hyp. 3.16; Phleious (no. 355), Xen. *Hell.* 4.4.15; Tanagra (no. 220), Thuc. 4.91.7.29.2; Thebes (no. 221), Xen. *Hell.* 5.2.25.

¹ One exception is Zgusta (1984).

² There is no need in this context to discuss other ethnics not related to toponyms, e.g. the ethnics of the three Dorian *phylai*: Hylleis, Dymanes, Pamphyloi.

³ Bölte (1930) 1291; Risch (1957) 66; Nielsen (2002) 169–70.

⁴ Gschnitzer (1955) 129–30.

most universal modern orthodoxy,⁹ the toponym was often used synonymously with the city-ethnic to denote the community, i.e. the *polis* in the political sense.¹⁰

In treaties *poleis* identified by toponym are not commonly found, but there are some examples: in the C61 treaty between the Sybaritai and the Serdaians the *polis* Poseidonia is recorded as a guarantor of the agreement (*Staatsverträge* 120); in the Peace of Nikias six members of the Delian League have the conditions for their membership defined in the peace treaty and all six *poleis* are called by toponym: Argilos, Stagiros, Akanthos, Skolos, Olynthos and Spartolos (*Staatsverträge* 188 = Thuc. 5.18.5).

We know the members of the Delian League from the Athenian tribute lists. Most are invariably recorded by their ethnic; but thirty-two are recorded sometimes by ethnic and sometimes by toponym, and for no fewer than fifty-two only the toponym is attested in the inscriptions we have. To record a community by its toponym is attested more frequently in the assessment decrees than in the tribute lists (*infra* 112).

Coins were inscribed with the name of the issuing *polis*. In the great majority of cases the legend is the ethnic, usually in the genitive plural, but twenty-one *poleis* used the toponym as the name of their community; in seventeen cases the toponym alternates with the ethnic; in four cases the toponym is the only legend to be found on the coins (*infra* 147).

In lists of *theorodokoi* the name of each *theorodokos* is preceded by the name of his community recorded as a toponym. The use of the toponym instead of the ethnic is undoubtedly dictated by the fact that the lists are itineraries of the *theoroi* sent out from the Panhellenic sanctuary in question to invite the *poleis* they visit to join the sacred truce during the festival and to send a delegation to the festival. But the *theoroi* to be hosted by the *theorodokoi* were sent out on a political mission, and each of the communities identified by the toponym must have been a political community (*infra* 104).

In the speeches delivered in the Athenian assembly or in the popular court, a *polis* in the political sense is almost always identified by its ethnic, but there are attestations of the toponym, which in this case must be treated as exceptions.¹¹

⁹ Which I shared myself until 1992; cf. Hansen (1991) 58.

¹⁰ Hansen (1993) 29 nn. 139–40 (the political sense); (1996) 38–39 (a brief account of the political and the territorial senses); Whitehead (1996) (a full account of the political sense).

¹¹ Isoc. 15.109; Korkyra (no. 123); Dem. 20.61; Thasos (no. 526) and Byzantion (no. 674).

The picture changes when we move from documents to historians and philosophers.¹²

In all historians the toponym is frequently used in a political sense. According to Herodotos, the Dorian *pentapolis* comprised Lindos, Ialysos, Kamiros, Kos and Knidos (1.144.3). Thucydides tells us about *stasis* in Kerkyra (3.69.2), Rhegion (4.3.1) and Akragas (7.46), not *stasis* among the Akragantians, etc. In his paraphrase of the King's Peace of 386, Xenophon lists Lemnos, Imbros and Skyros as *poleis* exempted from the *autonomia* clause (Xen. *Hell.* 5.1.31 = *Staatsverträge* 242). For a long list of attestations from the three major historians, see Whitehead (1996), to which can be added examples from fragments of other historians: Ephoros mentions the tyrants of Pherai, not the Pheraians (fr. 95), and the Oxyrhynchus historian (=Theopompos?) uses a mixture of ethnics and toponyms in his description of the Boiotian federal constitution: of the eleven Boiotian districts, one consisted of the Haliartioi, the Lebadeis and the Koroneis, another of Akraiphnion, Kopai and Chaironeia (*Hell. Oxy.* 19.3). The shift from city-ethnic to toponym is just a stylistic variation which shows that the difference between the ethnic and the toponym must not be overemphasised.

Perhaps unexpectedly, philosophers offer the proportionately highest number of examples. Admittedly, toponyms and ethnics do not abound in Plato's dialogues, but there are numerous passages in which the Athenian and Spartan states are identified by the toponym, not by the city-ethnic.¹³

In Aristotle's *Politics* book 5, which all the way through treats the *polis* as a political community, the most common way of naming a *polis* is by the phrase *ἐν*+toponym in the dative; thus, Aristotle mentions *ἡ ἐν Ἑρακλείᾳ στάσις* (1306^a37) or *ἡ ἐν Χίῳ ὀλιγαρχία* (1306^b5), and he has *ἐν Ῥόδῳ ὁ δῆμος* (1302^b32) instead of *ὁ Ῥοδίων δῆμος* as one would expect (cf. Dem. 15.15, 28). In the book the use of the toponym to denote a *polis* in the political sense outnumbers the use of the city-ethnic by at least two to one.

Finally, examples from poetry are less significant because every attestation may be treated as an instance of metonymy or poetic personification.

To conclude: the use of toponyms to signify sometimes the town, sometimes the territory and sometimes the polity

¹² For the category of documents to cover speeches delivered in the assembly and the court, see Hansen (2001).

¹³ Lakedaimon used about the *polis* in the political sense: *Cri.* 52E; *Alc.* 121A; *Hip. mai.* 284A; *Resp.* 599D; *Minos* 320B; *Leg.* 628E, 636E, 683D, 712D. Athens: *Hipp.* 229B; *Ep.* 336D. For Sparta and Athenai juxtaposed, see *Leg.* 753A.

matches the use of the term *polis* to signify either the town or the territory or the polity. And the three different senses in which toponyms are found puts into perspective three aspects of the *polis* that we find important and want to emphasise throughout this inventory: (1) the emphasis on

the urban centre as the heart of the *polis*, (2) town and community as almost indistinguishable aspects of the *polis*, and (3) the close connection between the urban centre of the *polis* and its hinterland which, together, constitute the territory of the *polis*.

Ethnics as Evidence for *Polis* Identity

A prominent aspect of the Greek *polis* was its name, and the huge onomastic material preserved in literature and on stone is probably the richest source we have for the fragmentation of the Hellenic world into *poleis*. Whenever citizens from different *poleis* gathered together, the obvious way of identifying an individual was to call him by his *polis* and to use an adjectival form of the name of his *polis* as a kind of surname to be added to his name. Moreover, since the *polis* in the sense of “state” was a community of citizens rather than a country, the usual way of naming a *polis* was to use the nominative plural of an adjectival form of the name of the city as the official name of the community itself and to use the toponym as the name of its urban centre. Thus a citizen of Ambrakia was called Ἀμπρακιώτας,¹ and the name of his *polis* was (οἱ) Ἀμπρακιῶται,² whereas the toponym Ἀμβρακία was mostly used about the urban centre of the community.³ Although the collective use of the adjective is the more important in a historical investigation of political communities, most problems of classification and identification are connected with the individual use, and therefore the first and longer part of this chapter will be devoted to personal names.⁴

1. The Ethnic Used Individually as the Name of a Citizen

A. Name, Patronymic and Ethnic⁵

The full name of a Greek citizen living in a *polis* consisted of his own name (*onoma*), his father’s name (in scholarly prac-

tice: *patronymikon*),⁶ and the name of his *polis* (in scholarly practice: *ethnikon*) or a subdivision of his *polis* (in scholarly practice: *demotikon*).⁷ In the strict sense the name of an adult free Greek citizen was just his *onoma* and the addition of patronymic and/or ethnic/demotic was dictated by the context.⁸ In cases of homonymity, to avoid mistaken identity when a citizen’s name appeared alongside those of fellow citizens, his father’s name was often added to the name itself, and in some *poleis* membership of a civic subdivision could be added to his name and patronymic.⁹ When a citizen’s name appeared alongside those of citizens from other *poleis*, his *polis* affiliation was added to the name (and patronymic),¹⁰ and in *poleis* that internally recorded a citizen’s membership of a civic subdivision, the *polis* affiliation usually replaced the civic subdivision.¹¹ In some cases, however, his affiliation with a region was added to,¹² or replaced,¹³ his *polis* affiliation. For non-Greeks there was a fourth possibility, namely to be named after a whole na-

⁶ At Dion. Hal. *Ant. Rom.* 3.48.2 πατρωνυμικόν refers to the Roman family name. In *Etyμ.Μαγν.* 165.38ff πατρωνυμικόν is used about names such as Ἀτρεΐδης, not about the father’s name in the genitive case.

⁷ For a discussion of the problem to what extent the ethnic was part of the name, see Hansen (1996) 176–78.

⁸ *Ibid.* Name: Χαρμαντίδης (IG I³ 1328 bis); name and patronymic: Μικίων Ἡρακλείδο (IG I³ 1327); name and demotic: Ἴεροκ(λ)ῆς Κεφαλῆθεν (IG I³ 1331); name, patronymic and demotic: Λύσις Δημοκράτος Αἰξωνεύς (SEG 34 199); name and city-ethnic: Ἡφαίστης Χίος (IG I³ 1345); name, patronymic and city-ethnic: Αἰσχρίων Φιλίσκο Κνίδιος (IG I³ 1346); name and regional ethnic: Κέφαλος Θεσσαλός (IG I³ 1375); name, patronymic and regional ethnic: Νουμήνιχος Ἡρακλείτου Βοιώτιος (IG II² 8419).

⁹ *AJP* 56 (1935) 358–72 is a C41 list of many hundred Kolophonian contributors to the rebuilding of the walls. All have a patronymic added to their name, and a handful or so have a name indicating their *genos* added to their name and patronymic, e.g. Ἀρτεμίδωρος Γεροντίδω (642), Ἀρτεμίδωρος Ἐκατονόμου (616), Ἀρτεμίδωρος Ἐκατονόμου Ἡγητορίδης (865–66), cf. the note on page 372 and *infra* n. 15).

¹⁰ Cf. the C4m list of Karthaian *proxenoi* (IG XII.5 542). The preserved fragment contains the names of some 50 citizens from 27 *poleis*, and each *proxenos* is recorded by name, patronymic and city-ethnic.

¹¹ The Athenian statesman Aristophon appears with his demotic in the decree he moved in 343/2 (IG II² 224.6–7: Ἀριστοφών Ἀριστοφάνους Ἀζχρηεῖς) but as an Athenian in the Karthaian list of *proxenoi* (IG XII.5 542.43–44: Ἀριστοφών Ἀριστοφάνους Ἀθηναῖος).

¹² See the C4f Delphic list of contributions to the rebuilding of the temple of Apollo, *CID* II 12.1.67: Ἀκουσίας Μέδωνος Θεσσαλός ἐξ Ὀρθου, II.1: Κλεόμαντις Καφυνεὺς Ἀρχαίς, II.31–32: Διονύσιος Καλλυκλέους Κεῖος ἐξ Ἰουλίδος.

¹³ In the C41 list of victors in the Lykaia in Arkadia (IG V.2 549–50) all Arkadians are called by their regional ethnic (Ἀρκάδες) whereas all foreigners are called by their city-ethnic, e.g. Ἀθηναῖος, Ἀργεῖος.

This chapter is a condensed and updated version of Hansen (1996).

¹ Πολυμήδης Τέλλνος Ἀμπρακιώτας (*CID* II 4.111.27–28).

² With the article: Thuc. 1.46.1–2; without the article: ML 27.11.

³ Ἀμβρακία πόλις Ἑλληνίς. ἀπέχει δ’ αὐτῆ ἀπὸ θαλάττης στάδια π’ (Ps.-Skylax 33). For the numerous exceptions, see 55–57 *supra*.

⁴ For a brief but penetrating survey, see Fraser (1995).

⁵ In this section, as in the others, we try to restrict the treatment to the Archaic and Classical periods. We have, however, to discuss some Hellenistic inscriptions as well because they have often—and sometimes with good reason—been used retrospectively as evidence of Archaic and Classical institutions and naming habits.

tion: *Αἰγύπτιος, Θράξ, Ῥωμαῖος*.¹⁴ But that need not detain us, since we are dealing with names of Greeks, not barbarians.

The purpose of the name and the patronymic was to identify the person as an individual different from everybody else. The third part of the name, however, often served the opposite purpose: it indicated membership of a group,¹⁵ which was never the family, as one might have expected, but either a “clan” (e.g. a *genos*), a “brotherhood” (e.g. a *phratría*), a “lineage” (*patra*), a “tribe” (e.g. a *phyle*), a municipality (e.g. a *demos*), a state (e.g. a *polis*) or a whole region (often called *ethnos*). True, the word *genos* usually denotes a “family” or a “clan”,¹⁶ and etymologically *phratría* is derived from the Indo-European word for “brother” and *patra* from the word for “father”.¹⁷ But whenever *genos* or *phratría* or *patra* are used in a technical sense for civic subdivisions, they refer to artificial groups, not surviving kinship organisations,¹⁸ and accordingly the personal names corresponding to the names of *gene* or *phratriai*, though mostly patronymic in form, cannot be taken as evidence of family names.¹⁹ Thus, apart from the *patronymikon*, which usually changed every generation,²⁰ the Greeks did not use family names as the Romans did or as we do, and hereditary family names *added* to the name

¹⁴ <Ἐρμῆος Αἰγύπτιος (IG I³ 1341 bis); Ἐκαταῖος Ζωνίου Θράξ (I.Iasos 191.12); Σέρδων Ῥωμαῖος (IG IX.2 115.25).

¹⁵ In lists of names each consisting of an *onoma* and a *patronymikon* the occasional addition of a third part, indicating e.g. a civic subdivision, must have served the purpose of distinguishing between two homonymous persons, cf. n. 9. But in lists in which every person is recorded with his *demotikon* or *ethnikon* the principal purpose must have been to indicate membership of a group; see, e.g., the ethnics in the C4 lists of victors in the Amphiareia in Oropos (I.Oropos 520 (329/8)) or the demotics in the Eretrian lists of citizens of C4/I C3e (IG XII.9 240–54).

¹⁶ Family: ἄτιμος ἔστω καὶ αὐτὸς καὶ γένος τὸ ἐξ ἐκείνου (SEG 12 87.20–21); clan: τ[ὸ] γένος τὸ Εὐμο[λπιδ]ῶν (IG II² 1231.14–15).

¹⁷ Chantraine (1980) 864 (*πάτρα*) and 1226 (*φρατρία*).

¹⁸ On the *genos*, see Roussel (1976) 87–88, adducing the Samian *gene* as an example (IG XII.6 17.30 and 30.28); for the equation between the *genos*, a body hereditary by nature, and the *hekatostys*, an obviously artificial numerical grouping, see Shipley (1987) 284–85; Bourriot (1976) i. 14–17; ii. 1380 adduces the 360 *gene* in Archaic Attika as an example of artificial *gene* used as civic subdivisions (Arist. *Ath. Pol.* fr. 3). On the artificial nature of *phratriai*, see Lambert (1993) 9–10 and Cordano (1992) 91. On *patrai*, see Andrewes (1957); Gabrielsen (1997) 131–49.

¹⁹ An obvious parallel is the use of hereditary bynames in Ireland. From the fourth century AD onwards it was common to use surnames prefixed by Mac or O', e.g. O'Neill; see Hanks and Hodges (1988) xxv–xxvi: “These surnames originally signified membership of a clan, but with the passage of time, the clan system became less distinct, and surnames came to identify membership of what is called a ‘sept’: a group of people all living in the same locality, all bearing the same surname, but not necessarily descended from a common ancestor.”

²⁰ Except when a son had his father's name, e.g. *Δημοσθένης Δημοσθένους*. In other cases the *onoma* and the *patronymikon* could alternate for several generations; cf. e.g. *Ἀρμόδιος* I–IV alternating with *πρόξενος* I–IV, stemma in Kirchner (1901–3) i. 152.

and patronymic are unattested. There are only a few exceptional attestations of the grandfather's name being recorded after the patronymic.²¹ The common way of indicating a person's lineage was in the form of a partitive genitive in the plural and not as an integral part of the name itself; cf., for example, one of the *ostraka* from the Athenian Agora cast against a member of the Alkmaionidai: [Ἀλκ]μεων[ιδῶν Καλ]λίχσεν[ος Ἄρ]ιστο[νύμο] (Hesperia 19 (1950) 389 no. 30) or Herodotus' mention of a member of the Skopadai: τῶν Σκοπαδῶν Διακτορίδης Κρανώνιος (Hdt. 6.127.4).

To conclude: in addition to the patronymic, we have basically three types of appellation added to the name itself, namely: one denoting a subdivision of a *polis*, one denoting the *polis* itself, and one denoting units larger than the *polis*.

B. Sub-Ethnics

Orthodox terminology is restricted to two terms: *demotikon* and *ethnikon*. This is, in our opinion, unsatisfactory. *Demotikon* is a term invented by modern historians and it is too narrow by being restricted to names related to one specific type of civic subdivision only, viz. the *demos*; the *ethnikon*, on the other hand, is too broad in meaning because it covers names related to *poleis* as well as names related to regions. The *ethnikon* must be subdivided into two different types, and in addition to the *demotikon*, we must invent a more general term that denotes all names related to units smaller than the *polis*.

Demotics in the strict sense, that is names derived from toponyms which denote *demoi*, are found only in Attika, Euboea, Rhodes and a few other places. But side by side with demotics, we must study the common habit in many parts of the Hellenic world of supplementing a name and, sometimes, a patronymic with a name denoting a tribe (*phyle*), a village (*kome*), a “brotherhood” (*phratría*), a “lineage” (*patra*), a “clan” (*genos*), or some other artificial subdivision, like a *pentekostys*, a *hekatostys*, a *chiliastys*, or a *symmoria*.²² As a comprehensive term to denote all such names,

²¹ See e.g. *Μεγακλῆς ἡπποκράτος Ἀλκμεονίδο* inscribed on an *ostrakon* from Kerameikos (Mdl 106 (1991) 153). The *παππωνυμικόν* (cf. *Suda* A 1276) is more frequently attested in later periods.

²² Examples of various subdivisions of a *polis* used with personal names: a *demos*: Ἐλπίνος Δυστό(θεν) (IG XII.9 191.B.6 (C4I), Eretria, cf. Knoepfler (1997) 355–71); a *kome*: Σουσαρίων . . . υἱὸς Φιλίνου Μεγαρόθεν Τριποδίσκιος (Sousarion fr. 1, West); a *phyle*: [---]ν <Ἐγγυδῆχο Ἡυλλεύς (SEG 39 411.26 (C5I), Megara); a *phratría*: Ἀριστίων Ἐριλαῖς (IG IV².1 49.14–15 (C4–C3), Epidaurous, cf. Jones, POAG 107–8); a *patra*: Κλεόδαμος Δωριεύς (SEG 30 355.5 (C4I), Argos, cf. Piérart (2000) 297–301); a *genos*: Ἀπολλώνιος Ἀπολλοδώρου Προμήθειας (AJP 56 (1935) no. 1 lines 631–32 (C4I), Kolophon, cf. Robert (1969) 1241–43); a *pentekostys*: Λεαῖθος Κλεωναί (SEG 30 355.3 (C4I), Argos, cf. Piérart (2000) 300–1); a *hekatostys*: Διονύσιος Πασάωνος Ἐκαστοῦς Κυνσοῦρ[ις]

including demotics, we suggest *sub-ethnic*,²³ whereas the term *demotikon*, or demotic in English, should be restricted to names indicating membership of a deme proper.

What is common to the various types of sub-ethnic is first that they are based on some kind of civic subdivision, and second that they are restricted to citizens. It is characteristic that the sub-ethnics, all designating a group smaller than a *polis*, were invariably applied to *politai*, that is to full members of a *polis*, and furthermore, to citizens operating within their own *polis*. As far as we know, there is no attestation of a name signifying a *phratRIA* or a *phyle* or a *demos*, etc. being applied to a slave; and examples of Athenian women identified by a demotic in the nominative case are few and so late that the notion of citizenship had lost its original meaning.²⁴ Rhodian women of citizen status are regularly recorded with a feminine demotic but, again, all attestations are Hellenistic or later.²⁵ Also, a citizen would only use his sub-ethnic when he was at home; there are scattered attestations of citizens identified by ethnics within their own *polis*²⁶ or by sub-ethnics outside their own *polis*,²⁷ but as a rule, whenever a citizen was abroad, the sub-ethnic was commonly replaced by an ethnic denoting his *polis*.²⁸

(IG 1v².1 42.18–21 (C31), Megara); a *chiliastys*: *Ἀριστοκράτης Ἀριστοκράτου Συμώνηος* [L] (*Ephesos* 906.13–14 (C1), Ephesos, cf. Jones, *POAG* 312–13); a *symtoria* (combined with a *pyrgos*): *Ἀρτέμ(ω)ν τοῦ Φιλαίου Πύργου Φιλαϊδῆς* (CIG 3064 = *PEP Teos* 79.9 (C3–C2), Teos, cf. Jones, *POAG* 306–8).

²³ At the symposium in Copenhagen in August 1995 I offered a prize to the participant who could invent a suitable term. Dr. James Roy coined the term sub-ethnic and won the prize (a bottle of good Australian red wine).

²⁴ IG 11² 6781: *Σειλία Ἐραῖνη Μαραθωνία*, second century AD; see Vestergaard *et al.* (1992) 8 with n. 7.

²⁵ Migeotte (1993); cf. Fraser (1995) 69–70; cf. *SEG* 27 461 (C41–C3e) and 480 (Hell.).

²⁶ The internal use of the individual city-ethnic occurs when a citizen in his own *polis* is recorded alongside citizens from other *poleis*, cf. *Ἀρισταγόρας Δελφός* in the Delphic *neoroiioi* accounts (*CID* 11 10.1.10 (357/6)). Furthermore, “throughout the Greek world sculptors signed their bases, even in their home-city, by their ethnic” (Fraser (1995) 72). In Index 8, attestations of the individual and internal use of the city-ethnic are marked II.

²⁷ IG 11² 230: *Ἰπποθένης* [75] *Μ[ι]νθ(ο)ν(ο)υ(θ)έ(ν)ου* and several other Eretrians recorded in the Attic copy of a treaty between Eretria and Athens concluded in 341/40. *Μινθονυθένης* is one of more than 50 Eretrian demes. *SEG* 30 355, an Argive proxy decree of C41 for an Athenian recorded as *Πάμφυλον Αἰσχύτου Ξυπραιαῖον Ἀθηναῖον*. Cf. *Ἀριστοκράτην Χάρητος Ἀθηναῖον Θορικῖον* in a C4m proxy decree from Paros (*SEG* 48 1135.12–13).

²⁸ In the C4 Delphic accounts published in *CID* 11 almost all the persons recorded are foreigners; 141 different ethnics are attested, 109 city-ethnics and 32 regional ethnics, but not one single sub-ethnic. Olympic victors were recorded with the name of their *polis* added to the name and patronymic (*IVO* 165; *P Oxy.* 222, 2381). In one single case it has been suggested that a victor was identified by the name of his deme. At 7.17.7 Pausanias quotes the following epigram: *Οἰνία Οἰβώτας στάδιον νικῶν δδ’ Ἀχαιοῦ πατρίδα Πάλειαν θῆκε’ ὀνομαστοτέραν* (by winning the foot-race Oibotas of Achaia, the son of Oimias, made his fatherland Paleia more famous). The epigram commemorates a victory of (allegedly) 756, inscribed on a statue base set up in 460 (Paus. 6.3.8). Paleia is usually taken to be a *demos* belonging to Dyme (Jones, *POAG* 132). The presumption is, however, that Paleia was originally a self-governing community and only later subsumed

C. The Regional Ethnic versus the City-Ethnic

The traditional term *ethnikon* is commonly used to cover two very different categories: first the *ethnikon* proper, i.e. an *ethnikon* denoting one or more persons belonging to a people inhabiting a region (*Βοιωτός, Ἀρκάς, Φωκεύς*), or a part of a region (*Μαινάλιος, Ἀποδωτός*)²⁹ or a geographical unit much larger than a region (*Πελοποννήσιος, Σικελιώτης*),³⁰ etc., and second the *ethnikon* which denotes one or more persons inhabiting a *polis*: *Ἀθηναῖος, Κορινθῖος, Θεσπιεύς, Ταναγραῖος*.

The ancients, and Stephanos of Byzantion in particular, made no distinction between the two different types and used the term *ἔθνικόν* indiscriminately about e.g. the Boiotians (Steph. Byz. 174.3) and the Akraiphnians (Steph. Byz. 63.5). The modern practice of applying the term to the people inhabiting a region as well as to the citizens of a *polis* is probably borrowed directly from Stephanos’ lexicon and has no other authority. But the word *ἔθνικόν* is late and rare, and Stephanos’ use of it is rather idiosyncratic. The first attestation of *ἔθνικόν* is in Strabo, who uses the term in a very different way, namely to distinguish *βάββαροι* from “Ἕλληνες” (Strabo 14.2.28).

Both for our understanding of the use of personal names and for an investigation of the nature of the Greek *polis* it is extremely helpful to distinguish between the two different types of ethnic.³¹ First, as pointed out by Dittenberger (1906) 167–68, the distinction is borne out by a linguistic observation. Some ethnics he designates as *primitive Volksnamen*, such as *Ἀρκάς, Λοκρός, Θράξ*; others, however, are *Ableitungen von Ortsnamen* such as *Μεγαρεύς* and *Ἀθηναῖος*. An ethnic designating a citizen of a *polis* is typically *von einem Ortsnamen abgeleitet* and becomes the name of what Gschnitzer has called an *Ortsgemeinde*.³² The city-ethnic was typically an adjective or a substan-

under Dyme (Meyer (1949)). Furthermore, all the evidence we have for demes in Achaia comes from Strabo and Pausanias, and in this and other cases it is illegitimate to project their site-classifications back into the Archaic period. For a list of the ethnic *Ἀθηναῖος* recorded on gravestones found outside Attika, see Hansen (1982) 187–88.

²⁹ IG v.2 1.16 (C4f): *Μαινάλιοι Ἁγίας, Εὐγεντινίδας, Ξενοφῶν* (Arkadian sub-tribe); Thuc. 3.100.1: *Τεῖσανδρον τὸν Ἀποδωτὸν* (Aitolian sub-tribe).

³⁰ *CID* 11 32.44 (326/5): *Ἀριστομένηδης Πελοπονναῖος*, in fact a Sikyonian (*CID* 11 100.1.4–5) who in the Amphiktyonic Council filled one of the two seats assigned to the Dorians; IG 11² 10287 (C4f): *Ἀπολλωνίδης Εὐναέτο Σικελιώτης*.

³¹ Hansen (1995) 45–51; Nielsen (1996) 117–32.

³² Gschnitzer (1955) 134: “Aus der Beobachtung der Namenbildung, des Verhältnisses zwischen den Orts- und Ländernamen einerseits, den Verbänden (Ethnika) andererseits, haben wir zwei Haupttypen griechischer Gemeinwesen unterscheiden gelernt: die aus nachbarschaftlichen Bindungen

tive derived from a toponym, i.e. the name of a *polis*, e.g. *Μεγαρεύς* derived from *Μέγαρα*, *Ναυκρατίτης* derived from *Ναύκρατις*, *Κορύθιος* derived from *Κόρυθος*, *Λαμφακηρός* derived from *Λάμφακος*, and *Ῥηγῖνος* derived from *Ῥήγιον*.³³ The toponym from which a city-ethnic could be derived was mostly the name of a town, but it could also be, e.g., the name of a river³⁴ or a mountain,³⁵ or a valley³⁶ or a whole region.³⁷ The ethnic denoting a whole region, on the other hand, is mostly of the *primitive Volksnamen* type, and becomes the name of what Gschnitzer and others call a *Stammesgemeinde*, so that we are faced with the reverse phenomenon: in the *Stammesgemeinde* it is the name of the region that is derived from the name of the people inhabiting the region. For exceptions to the chronological sequence, see 55 *supra*.

Second, that the Greeks were conscious of this distinction between two forms of ethnic is apparent from the fact that, sometimes, the two different types are combined to form a fourfold name so that the full name consists of *onoma*,

patronymikon, *ethnikon* denoting a region and *ethnikon* denoting a *polis*.³⁸

Therefore, we suggest that we distinguish between two types of ethnic: the *regional ethnic* or *ethnic proper* denoting an *ethnos*, that is either a people or a tribe inhabiting either a whole region (e.g. *Ἀρκάδες*, *Αἰτωλοί*, *Ἑπειρώται*) or a part of a region (e.g. *Παρράσιοι*, *Ἀποδοτοί*, *Ἀρκτάνες*)³⁹ and, on the other hand, the *city-ethnic* denoting the *polis* to which the named person belonged.⁴⁰ In contradistinction to sub-ethnics and city-ethnics, both invariably connected with bodies which were administrative and political entities, the regional ethnics sometimes designated areas, particularly islands, which were divided between several *poleis*, each with its own city-ethnic (e.g. *Λέσβιος*,⁴¹ *Κεφαλλάν*) and sometimes inhabited by people who did not even belong to the same *ethnos* (e.g. *Σικελιώτης*, *Εὐβοιεύς*, cf. Meyer (1967) 398)).

Sub-ethnics are attested in a few *poleis* only.⁴² In most Hellenic *poleis* the name of a citizen inside his *polis* seems to have consisted of an *onoma* to which, especially in public documents, was often added a patronymic,⁴³ but hardly ever a sub-ethnic. The use of sub-ethnics was virtually unknown in the Archaic period, and in the Classical period it was commonly used in a few *poleis* only, principally Athens, Eretria and Argos. There are haphazard occurrences from other *poleis*, but at least sometimes their purpose is just to distinguish between otherwise homonymous persons⁴⁴ and not universally to record the citizens' membership of a civic subdivision. In the few *poleis* in which sub-ethnics were used, the civic subdivisions from which the sub-ethnics were derived are often attested in inscriptions of the Archaic and, especially, the Classical periods, while the sub-ethnics are found only in Hellenistic and Roman inscriptions, and the presumption is that, in many cities, the use of sub-ethnics was often a convention introduced in the Hellenistic period.

hervorgegangenen Ortsgemeinden und die in die Zeit vor der Landnahme zurückreichenden Stammesgemeinden.”

³³ Substantives end in either *-εύς* or *-της* (*-τας*); adjectives in *-ιος*, *-ηρός* or *-ίνος*. See Dittenberger (1906) 168; Risch (1957); Gschnitzer (1983). Instead of an adjective derived from a toponym the city-ethnic could take the form of a prepositional group, typically *ἐξ* plus the name of the *polis* in the genitive case. In almost all cases the two forms are used synonymously, sometimes even about the same person when mentioned in different contexts; cf. e.g. Nikasichares of Plataiai, who is called *Νικασιχάρης Πλαταιεύς* when listed as Naopoiis (CID II 122 col. 2.7) but *Νικασιχάρης Βοιώτιος ἐκ Πλαταιῶν* in a proxeny decree (*F.Delphes* III.3 116). Or compare two almost contemporary Athenian sepulchral inscriptions commemorating citizens from the small Boiotian *polis* of Skaphlai (no. 204), of which one has *Σκαφλεύς* (IG II² 11202 (C4f)) and the other *ἐΣκαφλάων* (IG II² 11654 (C4m)). In this chapter all examples illustrate the use of the adjectival form and we cite no further examples of *ἐξ*+ toponym.

³⁴ The ethnic *Γελῶος* (Thuc. 6.4.4) is derived from *Γέλα*, the name of a river, and the *polis* *Γέλα* was named after the river, as stated by Thucydides at 6.4.3 and confirmed by the coins which have the legend *ΓΕΛΑΣ*, the name of the river-god (Jenkins (1970) 165). But even in this case the presumption is that the ethnic *Γελῶος* was derived directly from *Γέλα*, the name of the community (Thuc. 7.80.2) and the town (Hdt. 7.153.2), and thus only indirectly from the name of the river.

³⁵ The ethnic *Λάτμιος* (Ap. Rhod. *Argon.* 4.57) is derived from *ὄ Λάτμιος*, the mountain in Karia (Hecat. fr. 239 = Strabo 14.1.8), beneath which was *ἡ Λάτμιος*, the homonymous *polis* (SEG 47 1563,7–8 (C4l)) whose citizens were called *ὄ Λάτμιοι* (SEG 47 1563,14).

³⁶ The ethnic *Ἥλειος* is derived from *Ἥλις*, the valley (*Ἔλις*), a toponym designating both the entire region between Achaia, Arkadia and Triphylia and the town of Elis (synoecised in 471). In this case both the ethnic *Ἥλειος* (ML 27.9) and the name of the town *Ἥλις* must be derived from the name of the region, and the ethnic is probably older than the name of the town, see Gschnitzer (1955) 125–26.

³⁷ e.g. *Λακεδαιμόνιος* derived from *Λακεδαίμων*, undoubtedly because in this case a whole region had been united to form one *polis*. *Λακεδαίμων*, however, denotes not only the region, but also its urban centre (Hdt. 1.82.1). Note that alongside *Λακεδαίμων* (Pl. *Resp.* 599D) and *Λακεδαιμόνιοι* (Thuc. 5.23.1) the toponym *Σπάρτη* (Ar. *Av.* 814–15; Hdt. 7.234.2) and the city-ethnic *Σπαρτιάται* (Thuc. 1.132.1) were also used as names of the Spartan state.

³⁸ Lazzarini 374.1: [*Ἐ*]πιδδῶλος τὸπ[ό]λλωνι Βοιώτιος ἔχς Ἐρχ[ο]μενὸν (C5f); *IvO* 147 (Paus. 6.10.8–9): *Τέλλον Δαήμονος Ἀρκᾶς Ὀρεσθάσιος* (472), and see *supra* n. 12.

³⁹ *Ἡ Παρράσιοι* in Arkadia (Thuc. 5.33.1), the *Ἀποδοτοί* in Aitolia (Thuc. 3.100.1) and the *Ἀρκτάνες* in Epeiros (SEG 15 384 (C4f)).

⁴⁰ For the term “city-ethnic”, see Fraser and Röhne (1957) 93, 95–96. In *CPCActs* 2: 63 n. 189 we coined the term *politikon* to replace *ethnikon* denoting a *polis*. On reflection, we prefer to use an existing term instead of adding to the confusion by creating a new one.

⁴¹ For the view that there was some kind of a Lesbian federation, see Robert (1969) 816–26.

⁴² The evidence for sub-ethnics is reviewed in Hansen (2004).

⁴³ See the selection of lists of magistrates, *proxenoi* and naturalised citizens in Michel 645–68 and the list of priests and *theoroi* nos. 857–78. The chapters comprise 46 inscriptions from all parts of Greece and, with the exception of no. 861 (= *IG* IV 517, see *supra*) the patronymic is invariably recorded.

⁴⁴ The *gene* of Kolophon and the use of unidentified sub-ethnics in Styra.

The restrictions on the use of the sub-ethnics were the same everywhere: they were almost invariably used inside the *polis* and only by fellow citizens, not by foreigners, and they are hardly ever attested outside the *polis* itself.⁴⁵

D. City-Ethnics

The most common form of ethnic used in Greek inscriptions of all periods and from all places is the city-ethnic, i.e. an ethnic derived from or at least related to a toponym which denotes a *polis*. Occasionally the city-ethnic is identical with the toponym and in such cases it is difficult, sometimes impossible, to decide whether an occurrence of the form is the toponym or the city-ethnic.⁴⁶

The ubiquitous use of city-ethnics is dictated by—and testifies to—the political subdivision of the Hellenic world into *poleis* and the constant communication between citizens from different *poleis*. Resident foreigners, often from other *poleis*, constituted an important element in the population of the standard Greek *polis*.⁴⁷ Furthermore, the incessant interaction between the *poleis* in diplomacy, in trade, in religion and in sports entailed that citizens from different *poleis* all the time had to be mentioned side by side in documents of various kinds. In such cases it was customary all over the Greek world to use city-ethnics for identification, and accordingly, even in regions where the prevailing habit was to use name and patronymic only, there is some evidence of city-ethnics being applied both to citizens and to foreigners.⁴⁸

A citizen was identified by his city-ethnic when he was abroad on public mission,⁴⁹ or represented his *polis* in one of the Panhellenic games⁵⁰ or when, in his own *polis*, he

had to be recorded side by side with citizens from other *poleis*, e.g. as a member of a board of officials composed of representatives from several *poleis*,⁵¹ or when he was the victor in games arranged by his own *polis* but open to foreigners as well as to citizens,⁵² or when he had a dedication put up in a sanctuary which was frequented by foreigners as well as by locals.⁵³ Conversely, in almost every *polis* foreigners are recorded with their city-ethnics, e.g. in proxeny decrees,⁵⁴ in lists of foreigners to whom the *polis* in question had awarded *proxenia*,⁵⁵ in lists of persons who had consulted an oracle or a health resort,⁵⁶ in dedications of votive offerings in foreign sanctuaries,⁵⁷ in lists of contributors to an *epidosis* comprising citizens and metics alike,⁵⁸ in sepulchral inscriptions commemorating metics,⁵⁹ etc. By adding up all this evidence it is possible to find attestations of most, if not all, city-ethnics and thus to come up with a rough estimate of the total number of *poleis* in the Classical Greek world.⁶⁰

How easy is it to identify city-ethnics? Because of lack of sources for the settlement pattern of Archaic and Classical Greece, we are sometimes in doubt whether a name indicating membership of a group is a sub-ethnic denoting a subdivision of a *polis*, or a city-ethnic denoting a *polis*, or a “regional ethnic” denoting a whole region or a part of it. Let

⁴⁵ See, e.g., *ναποσιέοντος Σμυλιώνος Δελφοῦ* in a Delphic account (*CID* II 32.1).

⁴⁶ See, e.g., the Elean recorded as Olympic victor in 396: *Εὐπόλεμος Ἰηλείος στάδιον* (*P. Oxy.* 2381; Paus. 6.3.7).

⁴⁷ See, e.g., a dedication to Asklepios set up in Epidauros by an Epidaurian: *Ἀρίσταρχος Ἀριστάρχου Ἐπιδαύριος Ἀσκληπιῶ* (*IG* IV².1 238), cf. also 200, 204, etc.

⁴⁸ See, e.g., the base of Boiotian *proxenoi* in Delphi, *F. Delphes* III.3 77–116, cf. Roesch (1982) 447–62. See also Marek (1984).

⁴⁹ *IG* XII.3 251 (C4), Anaphe; *IG* XII.5 542 (C4m), Karthaiia; *PEP Chios* 50 (Chios).

⁵⁰ The C4 cure inscriptions set up at the Asklepieion in Epidauros record 20 different city-ethnics (*IG* IV².1 121–24).

⁵¹ *IG* IV².1 255–67 are dedications by foreigners set up in the Asklepieion in Epidauros.

⁵² See, e.g., the late C4 list of all who have contributed to the building of the walls of Kolophon which includes a number of foreigners, *AJP* 56 (1935) 358–72, ll. 123–958. Of the foreigners, the “big spenders” have an ethnic added to their name and patronymic (ll. 139ff). The “little spenders” have just the word *μέτοικος* added after the patronymic (ll. 373ff).

⁵³ There seems to be some connection between the use of sub-ethnics (in names of citizens) and city-ethnics (in names of foreigners). In sepulchral inscriptions foreigners with city-ethnics are well attested in *poleis* whose citizens use sub-ethnics (Athens, Rhodos, Chalkis, Eretria), whereas in *poleis* in which sub-ethnics are not used the sepulchral inscriptions are mostly confined to the name without the patronymic and with very few attestations of city-ethnics (Central Greece and the Peloponnese). For the common use of the name without patronymic and ethnic, see Fraser and Rönne (1957) 92–101 and Fraser (1995) 77–78.

⁵⁴ The city-ethnic is attested for 877 of the 1,035 communities included in this Inventory. For 738 communities it is attested in Archaic and/or Classical sources, see Index 8. For 139 communities it is attested in Hellenistic or, in a few cases, Roman sources, see Index 3.

⁴⁵ For Rhodos, see Fraser (1995) 75; for the exceptional recording of Eretrian demes outside Eretria, see e.g. *IG* II² 230 with W. Wallace’s comments in *Hesperia* 16 (1947) 145.

⁴⁶ e.g. *Δελφοί* (no. 177), *Ἐρωχός* (no. 181), *Παραποτάμοι* (no. 188), *Πανοπέους* (no. 190), *Πεδιείς* (no. 189), all in Phokis; *Μαργανείς* (no. 259) in Elis; *Λεόντωνοι* (no. 33) in Sicily and *Θούριοι* (no. 74) in Italy. Passages in which it is particularly difficult to distinguish between toponym and ethnic include Thuc. 2.30.2 (the four *poleis* on Kephallenia (nos. 125, 132, 135, 136)), Xen. *Hell.* 3.2.25, 30 (Marganeis); *Hell. Oxy.* 21.5 (Pediéis) and *SEG* 48 1027 (Labrys (no. 702)).

⁴⁷ Arist. *Pol.* 1326^a18–20. Even the minute *polis* of Koresia on Keos had legal requirements concerning metics and manumitted slaves (*IG* XII.5 547.9–11).

⁴⁸ City-ethnics were not commonly used as part of the name in Boiotia, but are attested in, e.g., dedications from Ptoion: *SEG* 30 478a: [*όκραυφ*]ιεύς κ’ *Ἀρνούαλος* and *Ἐπιχάρες* *ho Θεβαίος* (C6–C5), see n. 54 *infra*.

⁴⁹ Xen. *Hell.* 6.1.2: *Πολυδάμας Φαράουλος* addressing the assembly of the people in Sparta; *IG* II² 109.8–9: *περὶ ὧν λέγει Ἀστυκράτης ὁ Δελφό[ς] καὶ οἱ μετ’ αὐτοῦ . . .*

⁵⁰ See e.g. the lists of Olympic victors in *P. Oxy.* 222 and 2381. For the view that a participant “represented” his *polis* at the games, see Dem. 58.66, and the provision that victors at the four Panhellenic centres were granted free meals in the *prytaneion* for the rest of their life (*IG* I³ 131.11–15).

us adduce two examples. (a) Ἀσκραῖος is an ethnic which in literary sources is applied to Hesiod and his brother Perses (Hermesianax quoted by Ath. 697D; Steph. Byz. 134.1–2). If it is a genuine ethnic and not a late invention it is difficult to decide whether it is a sub-ethnic denoting a *kome* or a city-ethnic denoting an early *polis*.⁶¹ (b) In 464 the Olympic victor in the pankration was Ἐφουδίων Μανάλιος (schol. Ar. *Vesp.* 1191 = *ISE* no. 253). Was he a citizen of the Arkadian *polis* Mainalos, in which case Μανάλιος is a city-ethnic? Or did he belong to the Mainalian tribe (Thuc. 5.77.1), in which case it is a regional ethnic? There is no obvious answer (Nielsen (2002) 274 n. 21).

In the great majority of cases, however, we can easily distinguish city-ethnics from both sub-ethnics and regional ethnics, and in all these cases the attestation of a city-ethnic is a crucial criterion for establishing *polis* identity. To sum up: if the toponym from which the ethnic is derived designates an urban centre, and if it can be demonstrated that this settlement was not the urban centre of a civic subdivision, such as e.g. a *kome* or a *demos*, then it is almost certain that the toponym designated a *polis* and that the ethnic was used to denote a *polites*, i.e. a citizen of the *polis* in question. It is for this type of ethnic that we propose to use the more specific term “city-ethnic”.

E. *Ethnics as Evidence for Political Status*

Regional ethnics and city-ethnics are all related to toponyms, and so are those sub-ethnics that designate a village (*kome*) or a municipality (*demos*) and some of those that designate a *phyle*.⁶² All the toponyms behind the ethnics can, of course, be placed on a map, and so we must address the question of whether the “message” conveyed by the ethnic is primarily topographical or political. The tradition of naming a person after the place of birth and/or habitation

⁶¹ Both by Hesiod (*Op.* 639–40) and by Ephoros (fr. 1), Askra is classified as a *kome* lying in Thesopian territory and once destroyed by Thespians (Arist. fr. 580). Thus, Ἀσκραῖος may be a sub-ethnic but, if so, it would be the only sub-ethnic in all of Boiotia (Hansen (1995) 45–51). Alternatively, Askra may once have been a *polis* conquered by Thespians but with a city-ethnic that survived the conquest. In that case Ἀσκραῖος would be the oldest of all city-ethnics. A third solution seems preferable: the ethnic Ἀσκραῖος is unattested in inscriptions and known from late literary sources only; furthermore it is used exclusively about Hesiod and his brother. The presumption is that it is neither a city-ethnic, nor a sub-ethnic, but invented by Hellenistic literary critics who had to mention Hesiod alongside Solon the Athenian, Arion the Corinthian, etc.

⁶² Jones, *POAG* 4 distinguishes between two main categories of civic subdivisions: “territorial” and “personal”. *Demoi* and *komei* were invariably territorial. Of the *phylai*, some were territorial (e.g. the three *phylai* on Rhodes) but some were purely personal (e.g. the 3 Dorian and the 4–6 Ionian *phylai*).

is known in many countries.⁶³ Now, is the ancient Greek way of using ethnics basically “topographical” or is the message conveyed political? This problem is best treated separately for sub-ethnics, city-ethnics and regional ethnics.

(A) *Sub-ethnics* Since the sub-ethnics are related to civic subdivisions, and since civic subdivisions apply to “citizens and only citizens” (Jones, *POAG* 1), there can be no doubt that sub-ethnics associated with toponyms mirror the political rather than the geographical structure of the society in question. Furthermore, membership of a civic subdivision was ultimately hereditary; thus, sub-ethnics derived from toponyms can have indicated the bearer’s place of birth or residence for only a few generations after the system was introduced; thereafter their significance, if any, must have been purely political.

(B) *City-ethnics* The city-ethnic is derived from a toponym designating a *polis*. But the *polis* was both an urban centre and a political community. Was the message conveyed by the city-ethnic an affiliation with the *polis* as an urban centre or as a political community? The accepted view is that such ethnics are restricted to citizens and thus (like the sub-ethnics) political in character (Dittenberger (1907) 15). Basically we share this view, but it requires some elaboration and a slight modification.

(a) An early C4 law from Oropos prescribes that every person who consults the oracle must have his name and the name of his *polis* recorded by the *neokoros*.⁶⁴ On a strict interpretation of this law we should expect all the consultants to be *politai*, their “surnames” to be city-ethnics, and the oracle to be accessible only to Greeks who were citizens of a named *polis*. But a C3 inventory records two regional ethnics (Αἰτωλός and Ἀκαρνάν) alongside two city-ethnics: Καρυστία, Κορώνθιος (*IG* VII 303.60–65), and an early C3 manumission shows that the oracle was consulted by Μόσχος Μοσχίωνος Ἰουδαῖος (*SEG* 15 293.10). On the assumption that the Classical law was still in force, the inference is that the phrase τὸ ὄνομα . . . τῆς πόλεως covered not just city-ethnics in the strict sense but other types of ethnic as well, including ethnics of non-Greeks. Thus the message is not strictly “political”. *Polis* is here used as a generic term which comprised types of community other than *poleis* in the sense of city-state.

(b) Persons from *poleis* that had been destroyed con-

⁶³ Hirzel (1962) 51–62; Hanks and Hodges (1988) xxv (England), xxx (France), xxxi (Spain), etc.

⁶⁴ *I.Οροπος* 277.39–43 (C4e): τὸ ὄνομα τοῦ ἐγκαθεύδοντος ὅταν ἐμβάλλει τὸ ἀργύριον γράφεσθαι τὸν νεωκόρον καὶ αὐτοῦ καὶ τῆς πόλεως καὶ ἐκτιθεῖν ἐν τοῖς ἱεροῖς γράφοντα ἐν πετεῦροι σκοπεῖν <τ>οῖ βολομένοι.

tinued to use their city-ethnic in spite of the fact that there was no longer any political community of which they were members. One example is Olynthos, demolished by Philip II in 348. Nevertheless, numerous Hellenistic inscriptions provide us with attestations of Olynthians, the latest dating from C1.⁶⁵

(c) If city-ethnics were purely political we would expect that, like sub-ethnics, they were attested in the masculine but hardly ever in the feminine. True, women were to some extent citizens, and in female names a frequent habit was to use the *ketikon* instead of the *ethnikon*: thus *Πλανγών Τολμίδου Πλαταική* versus *Τολμίδης Πλαταεύς*.⁶⁶ This expectation squares with the evidence of public documents in which, with a few exceptions,⁶⁷ women are conspicuous by their absence, but private inscriptions present a different picture, and the sepulchral inscriptions in particular provide us with numerous attestations of city-ethnics in the feminine nominative. In C4 Attic inscriptions no fewer than forty-two city-ethnics are attested in the feminine (Hansen (1996) 196); and that reveals an important difference between sub-ethnics and city-ethnics, *viz.* that feminine city-ethnics are far more common than feminine sub-ethnics. But, on reflection, that is only what we should expect. As stated above, sub-ethnics are almost invariably used within the *polis*, whereas city-ethnics are mostly found outside the *polis*. They are especially well attested in sepulchral inscriptions where they commemorate persons who lived as free foreigners in a *polis* in which they had no political rights. If they stayed on for many years, perhaps even many generations, the connection with their own *polis* must have weakened, and they must have thought of it as their city of origin rather than as the *polis* in which they could exercise their political rights if they returned.⁶⁸ Accordingly, their use of the ethnic in sepulchral inscriptions would no longer be felt as an indication of their status as citizens; and under such circumstances it would be only natural to apply the ethnic to women as well as to men. It is worth noting that

on tombstones wives normally retained their own ethnic when it differed from that of the husband.

(d) In Delphic manumissions the origin of the manumitted slave is often recorded, but if the slave came from a *polis* the regular form used is not the city-ethnic but *τὸ γένος ἐξ* plus the toponym in the genitive case, e.g. *σ[ώμα] γυ[ναικεῖον δι ὄν]ομα Σωσώ, τὸ γένος ἐ[κ Δε]λφῶν*, presumably because it was the prerogative of a citizen to be called by an ethnic.⁶⁹ But even slaves could sometimes have a city-ethnic added to their name. One example is a C2 funerary inscription commemorating twenty-two slaves with ethnics but without patronymics. Two of the names recorded are *Βίθυς Ἰστριανός* and *Δαμάς Ἰστριανός* (*IG* ix.1 1778). Now, *Ἰστριανός* is the city-ethnic derived from *Ἰστρος*, the Milesian colony near the estuary of the Danube. It is still a moot point how to interpret this ethnic, but the prevailing view is that, in this and similar cases, the city-ethnic indicates the location of the slave market in which the slave in question was sold.⁷⁰

(e) The city-ethnic *Ναυκρατίτης* is attested in several documents of C5I and C4. Those who refuse to believe that Naukratis was a *polis* before Alexander the Great hold that the ethnic in this case must indicate the city where a person lives and not the community of which he is a member.⁷¹ But *Ναυκρατίτης* is attested, e.g., in an Athenian proxy decree and in a Delphic list of contributions to the rebuilding of the temple of Apollo.⁷² The context as well as other evidence indicates that Naukratis was a *polis* in C5–C4 and that *Ναυκρατίτης* is used as a city-ethnic.

These modifications must not obscure the basically correct view that city-ethnics were primarily political. The view can be further corroborated by two observations:

First, it is true that the ethnic *Λακεδαιμόνιος* used collectively might comprise *perioikoi* as well as *Spartiatiai* (*Hdt.* 9.28.2), but there is no attestation of *Λακεδαιμόνιος* being used individually as the surname of one of the *perioikoi*.⁷³ Nor is there any attestation of *Ἀθηναῖος* being used as the

⁶⁵ *SEG* 19 595: *Ἡρακλεώδωρος Ἀριστονίκου Ὀλύνθιος*, C4–C3 (Thasos); *SEG* 18.254, C3–C2 (Delphi); *IG* II² 10021, C2–C1 (Athens); *IG* XII.2 202, C1 (Mytilene); see Zahmt (1971) 115 with nn. 7 and 8. See also *Ἐχέλαος Φιλωνίδου Πλαταεύς* in a Troizenian citizenship decree of 369 (*Syll.*³ 162.2–3); and Skaphlai may provide us with a similar example, see Hansen (1995) 28.

⁶⁶ *Λ.Οροπος* 673, a C4 sepulchral monument from Oropos. See further, e.g. *Μαντωνική* (*IG* II² 9281; *Pl. Symp.* 211D); *Χαλκιδική* (*IG* VII 1573); *Θεσπική* (*IG* VII 3172b.1), etc. Cf. Dittenberger (1907) 13–15.

⁶⁷ *F.Delphes* III.2 205.7–8: *Κεφάλιων Μεγαρέως καὶ Βοῖδι[ο]ν Μεγαρικῆ* in an amphiktyonic decree of 273.

⁶⁸ See *SEG* 27 571; 32 850 (found in Chalkis, undated): *Ἀσκληπιάδης / Ἀναξίππου / Ἐφέσιος / Εἰκοσι καὶ δύο ἔτη ζήσας πολὺν ὄνον ἀπνευστὶ / ἄκρατον πῖνον αἵμαγαγὼν ἔθανον / υἱὸς Ἀναξίππου. κλήζον μὲν Ἀσκληπιάδην / ὄνομα καὶ πατέρα ἦν γένος ἐξ Ἐφέσου.*

⁶⁹ *F.Delphes* III.2 226.2–3 (C2s). For a list of examples, see Dittenberger (1907) 19.

⁷⁰ Varro, *Ling.* 8.21. See Pippidi (1966) 232–35; Fraser (2000) 152–53. We would like to thank Prof. Alexandru Avram for drawing our attention to this problem. For a similar example, see *SGDI* 2130.3: *σῶμα γυναικεῖον δι ὄνομα Νικάσιον τὸ γένος Τρωνίδα*, cf. Robert (1960) 73. The alternative interpretation is, of course, that the named persons were enslaved citizens of the *poleis* in question.

⁷¹ Bresson (1980) 316–17.

⁷² *IG* II² 206 (Athenian proxy decree of 349/8 for *Θεογένης ὁ Ναυκρατίτης*); *CID* II 4 (list of contributors in 360, including *Ναυκρατίται ἐξ Αἰγύπτου* (col. 1.37), *Εὐτέλης Ναυκρατίτης* (col. 3.21) and *Τύρις Ναυκρατίτας* (col. 3.24)).

⁷³ I have asked the compilers of the *Oxford Lexicon of Personal Names*, and they have confirmed the statement made in the text on the basis of the evidence at present available.

surname of a metic or a slave who came from Athens or lived in Athens. The enormous amount of evidence we have indicates that to be called *Ἀθηναῖος* was the prerogative of an Athenian citizen.⁷⁴

Second, in societies in which names are derived from a toponym and used to indicate the person's place of birth, the toponyms designate every type of settlement ranging from farmsteads and hamlets to major towns and even whole regions.⁷⁵ If the Greek ethnics had been invented and used in personal names primarily to indicate the person's place of origin, names of hamlets and villages would have developed ethnics as well as the administrative units of the *poleis* and the towns which were the urban centres of the *poleis*. But whenever we hear about inscribing persons with their full names, the reference is to their *polis*,⁷⁶ or to an administrative subdivision of the *polis*.⁷⁷ Furthermore, our sources show that in many regions the only attested ethnics are derived from names of *poleis*, that is from communities which are either directly attested as *poleis* in our sources or from communities which share so many characteristics with the attested *poleis* that they undoubtedly would have been attested as *poleis* themselves had we better sources. Arkadia (Nielsen (2002) 39–40), Boiotia (Hansen (1995) 45–51) and Crete (*infra* 1144) may serve as examples.

(C) *Regional ethnics* By the term regional ethnic we understand—as stated above—an ethnic associated with a toponym which denotes an area larger than a *polis* and often subdivided into *poleis*. Two different types are discernible: (a) as pointed out above, many regional ethnics are *primitive Volksnamen*, e.g. *Αἰτωλός*, *Ἀχαιός*, *Βοιωτός*, *Κρής*, *Λοκρός*, *Φωκεύς*, but others (b) resemble the city-ethnics in being *Ableitungen von Ortsnamen*, e.g. *Εὐβοιεύς*, *Λέσβιος*, *Σικελιώτης*. When used for personal identification the regional ethnic is either added to the city-ethnic so that the

person has a fourfold name, or the regional ethnic replaces the city-ethnic and is often used in the same contexts.

Is the message conveyed political or topographical? To answer this question we must distinguish between (a) the ethnics from which toponyms are derived (e.g. *Ἀχαιός* derived from *Ἀχαιοί*) and (b) the ethnics which are derived from toponyms (e.g. *Εὐβοιεύς* derived from *Εὐβοία*). Almost all the regions associated with the ethnics in group (b) were islands, and none of them was a political unit. In every case the island was split up into a number of *poleis*, and with one or two exceptions these *poleis* were not united to form a league or a federal state. Thus, ethnics like *Εὐβοιεύς*, *Κείος*, *Λέσβιος* and *Σικελιώτης* must be primarily topographical. They testify to a certain feeling of belonging to the same people. But they do not denote a political community in the same way as city-ethnics do. The Keians, for example, were split up into four *poleis* and formed a federation for a few years only during the fourth century.

The ethnics subsumed by Dittenberger under the heading “primitive Volksnamen” (type a) are more difficult to interpret. In this case the region denoted by the toponym is traditionally assumed to have been a (loosely organised) political community before it was broken up into *poleis*, and again many of these regions formed federations of *poleis*. Thus the regional ethnics may have had some political significance. But what is the message when regional ethnics, type (a) and (b) alike, occur side by side with city-ethnics, as they often do? Let us adduce some examples.

(a) Olympic victors were almost invariably designated by their city-ethnic,⁷⁸ but occasionally we come across a victor designated by a regional ethnic only. Cretan victors are just called *Κρήτες* and we have no information about the *poleis* to which they belonged.⁷⁹ (b) Victors in the games in honour of Zeus Lykaios are called by their regional ethnic, *Ἀρκάς*, if they come from one of the Arkadian cities, but by their city-ethnic if they come from other parts of Greece (i.e. *Ἀθηναῖος*, *Ἀλείος*, *Ἀργεῖος*, *Λακεδαιμόνιος* and *Μιλήσιος*). The only exception is an Akarnanian victor who, like the Arkadians, is called by his regional ethnic: *Ἀκαρνάν*.⁸⁰ (c) The Epidaurian cure inscriptions from the Asklepieion record sometimes a city-ethnic, sometimes a regional ethnic, and sometimes no ethnic at all.⁸¹

In these and similar cases regional ethnics are recorded

⁷⁸ See Moretti's list in *Olympionikai*.

⁷⁹ *Διόγνητος* 488 (Phot. *Bibl.* 151A); *Αἰγείδας* 448 (*P.Oxy.* 222 col. 2.26); [---] *ἰώνιος* 396 (*P.Oxy.* 2381); *Σωτᾶδος* 384 (Paus 6.18.6).

⁸⁰ *IG* v.2 549–50, covering the years 320, 316 and part of 312.

⁸¹ *IG* iv².1 121–27. See, e.g., *Ἰθμονικά Πελλανίς* (121.10); *παῖς ἄφωτος* (121.41); [*Πάνδαρος Θεσσαλός*] (121.48).

⁷⁴ In this case I have also consulted Prof. John Traill, who told me that his inventory did not include any such case.

⁷⁵ For the sake of variation we adduce here some examples from our own country: Damgaard (a farmstead), Hardenberg (a manor), Astrup (a village), Hobro (a town), Falster (a large island), see Sondergaard (1979) 129–30.

⁷⁶ Chios: *PEP Chios* 12.30–33 (c.320): ἀναγραφάντων εἰς τὴν στήλην τὴν προξενικὴν τὴν τε πόλιν ἐκατέρων καὶ τὰ δνόματα πατρῶθεν (“On the stele recording proxenies let them inscribe the *polis* and the name with patronymic of each member of both groups (of jurors)”). *Milet.* 1.3 138.27–29 (282): ἀναγράψαι δὲ τῶν δανεισάντων ἐκάστων τὰ δνόματα πατρῶθεν καὶ τῆς πόλεως, ἧς ἂν ἕκαστος ᾗ, εἰσὴλὴν λθίνην (“On a marble stele shall be inscribed the name of each lender and that of his father and of the *polis* to which each one belongs”). *Milet* 1.3 152 C 92–93 (C2m): τοῖς δὲ ἐξετασταῖς ἀναγράψαι τὰ δνόματα αὐτῶν πατρῶθεν καὶ τὰς πόλεις εἰς στάλαν... (“On a stele shall be inscribed the names of each of the inspectors and that of his father and the *polis*”).

⁷⁷ *Milet.* 1.3 146A.33–35 (209/8): ποιεῖσθωσαν τὴν ἀπογραφὴν . . . πατρῶθεν καὶ ἧς ἂν ὦσι φυλῆς (“Let them record the patronymic and the *phyle* to which they belong”). For Athens, see *supra* n. 8.

side by side with city-ethnics. The presumption is that a person identified by a city-ethnic was a citizen of the *polis* in question. Are we allowed by analogy to assume that persons identified in the same document by regional ethnics must have been citizens too? Was Diognetos, the Olympic victor of 488, a Cretan who preferred his ethnic or, rather, island identity to his political status as a citizen of one particular Cretan *polis*? In the list of Lykaian victors the regional ethnic *Ἀρκάδας* strongly emphasises the Panarkadian nature of the games and there is no reason to doubt that all the fifteen Arkadian victors recorded in the preserved part of the list were citizens of Arkadian *poleis* who in this context were called by their regional ethnic instead of their city-ethnic.

In western Greece in particular, tribal ethnics were used to indicate citizen status and not just habitation. The Molossian Federation, for example, founded in C4e, was composed of ten(?) territorial “tribes” and in public documents the tribal ethnic was regularly added to a citizen’s name, cf. e.g. *Εἰδύμμος Ἀρκτάν* (SEG 15 384.7–8 (C4f)) or *Δροάτας Κέλαι[θος]* (SEG 23 471.2 (C4s)).⁸²

The use of regional ethnics has been adduced as evidence of federal citizenship, especially when combined with a city-ethnic; but the name *Θαρράδας Φρονήμονος Κρής Ὀάξιος* (IG II² 9087 (C3)),⁸³ engraved on an Attic sepulchral monument, is enough to show that a fourfold name is not necessarily evidence of federal citizenship, and in Arkadia the regional ethnic—either alone⁸⁴ or in combination with one of the city-ethnics⁸⁵—is attested both before the formation and after the dissolution of the Arkadian Federation.

To conclude: sub-ethnics are strictly political, city-ethnics are primarily political, whereas regional ethnics form a mixed group: those derived from toponyms (type b) are primarily topographical, whereas those designating a people (type a) may signal a feeling of ethnic identity, but not necessarily membership of a political community. The political connotation became prominent only in regions organised on a tribal basis or if the region formed a federa-

⁸² See Hammond (1967) 531.

tion and if the ethnic was used to signify federal citizenship, which was far from always the case.

F. The Greeks’ Attitude to the Use of Ethnics

So far we have treated the problem of how we can use ethnics as sources for *polis* identity without addressing the question of *why* the ethnic could be used in this way. So let us ask the question: what did it mean to the Greeks in certain contexts to have sub-ethnics or city-ethnics as part of their name? A person’s name is part of his identity, and to many persons it matters by what name they identify themselves and are called by others. In our culture the prevailing pattern is to have one or more first names and a hereditary surname designating the family to which one belongs, and many persons take pride in belonging to a specific family and bearing its name. In numerous cases a person’s nationality has to be recorded but it never becomes a part of the name itself. The name of the cyclist who won the Tour de France in 1996 was Bjarne Riis. On the rostrum it was proclaimed that he was Danish but his name is not Bjarne Riis Dansker. That the ancient Greeks used sub-ethnics and city-ethnics as part of their personal names is significant in several respects.

First, in Western civilisation the Greeks seem to have been the only people to use inherited names as an indication of political status. In all other European countries toponyms used as names or names derived from toponyms denote habitation or place of origin without conveying any information about the political status of the named person.⁸⁶ The closest we can get to the Greeks’ political use of surnames is perhaps the habit in some countries of using a preposition plus a toponym as a name indicating aristocracy, e.g. de Montesquieu, von Bismarck or van Velde. The ancient Greeks’ use of personal names reveals how much it meant to a Greek to be a member of his *polis* (*supra* 13), and the fact that the use of sub-ethnics and city-ethnics was a prerogative of the citizens to the exclusion of foreigners and slaves reminds us to what extent the *polis* as a political community was a community of the citizens only. In any Greek city one could always tell the insider from the outsider by his full name.

Second, to use a word indicating membership of a political community as part of a name is possible only if people from many different communities live together, and if each group is fairly small. In a modern nation with millions

⁸⁶ See Hanks and Hodges (1988) xxiv–xlv.

of citizens it would make no sense to use a term indicating nationality as a part of a name, except when one or a few persons settled somewhere in a foreign country and there were called by their country of origin, e.g. French or Welsh.⁸⁷ Thus, a pre-condition for the standard Greek way of distinguishing people by their city-ethnic was the large number of *poleis* combined with the constant interaction between citizens from different *poleis* and the widespread migration from one *polis* to another.

2. Ethnics Used Collectively about a State or its Citizens

A. Unnamed Citizens

When used individually and (mostly) in the singular,⁸⁸ the ethnic was part of a citizen's full name. When used collectively it signified one or more unnamed members of the community in question⁸⁹ or the community as such.⁹⁰ A usage halfway between the individual and the collective is attested in some lists of officials,⁹¹ or *epheboi*,⁹² or *proxenoi*,⁹³ or mercenaries⁹⁴ in which personal names are grouped according to city-ethnics. In such lists the ethnics are used collectively, each as the heading of a number of names. On the other hand, the usage is individual in so far as the named persons are further identified as members of a specific community, be it their civic subdivision, their *polis* or their *ethnos*. Since the ethnics used as headings

⁸⁷ Ibid. xxi.

⁸⁸ For attestations of the individual use of the city-ethnic in the plural, see e.g. Arist. *Pol.* 131^b21: Πύθων καὶ Ἡρακλείδης οἱ Αἰνιοί; IG XII.3 251.15–16: Καλλίγνωτος Λυσσαγόρας Πάριοι, C4 (Anaphe).

⁸⁹ Singular form: Ἄργεῖος ἄνθρωπος (Thuc. 8.92.2); plural form: Θηβαίων ἄνδρες ὀλίγω πλείους τριακοσίων (Thuc. 2.2.1).

⁹⁰ IG VII.1.5 (c.300): ἐπειδὴ τοὶ Αἰγυοστεινῆ[ι] ἀνάγγελλον. . . (a sub-ethnic); IG IV².1.47.1–2 (C4): ἔδοξε τοῖς Ἐπιδαυρίοις (a city-ethnic); Lazzarini 983 (C4): Φωκεῖ[ς τῶν] πόλλων [ἀνέθ]ηκαν. . . (a regional ethnic).

⁹¹ e.g. IG V.2.1, a C4f list of Arkadian *damiorgoi* appended to an honorific decree. The headings recorded are: Τεγεάται, Μανάλιοι, Λεπρεάται, Μεγαλοπολίται, Μαντινῆς, Κυνούριοι, Ὀρχομένιοι, Κλητόριοι, Ἡραῆς and Θελφούσιοι, i.e. 2 regional ethnics and 8 city-ethnics, each followed by between 2 and 10 personal names.

⁹² See IG XII Suppl. 555, a C4–C3 list of Eretrian *epheboi* grouped according to their demes.

⁹³ See PEP Chios 50, a C4m list of Chian *proxenoi*: 3 regional ethnics and 15 city-ethnics are used as headings of one or more personal names.

⁹⁴ IG I² 1956, a large fragment of a C4f list of mercenaries in Athenian service grouped according to ethnics. For the date, see SEG 46 243. Most of the headings are city-ethnics, e.g. Θηβαῖοι, Καρύστιοι, Μηθυμαῖοι, etc., but quite a few are regional ethnics, i.e. Θεσσαλοί, Αἰνιάνες, Κάρες, Λύκιοι, Αθμάνες, Λοκροί, Βοιωτοί, Φωκεῖς, Θράκες, Ἡπειρώται and Ἀχαιοί.

are not part of personal names, we prefer to emphasise the collective aspect of the usage.

B. States

For our purposes the most important collective use of the city-ethnic was as the name of the *polis* itself. It is used mostly without, but sometimes with the definite article.⁹⁵ A not infrequent variant is the genitive plural depending on the noun ἡ πόλις or ὁ δῆμος.⁹⁶ As is well known, the Greek *polis* was conceived as a community of citizens rather than a territory ruled by a government (*infra* 70). One result of this way of viewing the *polis* was the habit of calling it by the city-ethnic in the plural rather than using the toponym itself. Admittedly, there are quite a few attestations of the toponym being used as the name of the *polis* (*supra* 56), but they are outnumbered by the prevailing habit of using the city-ethnic in the plural: the monument dedicated to Apollo from the booty won in the battle of Plataiai is inscribed with thirty-one city-ethnics (ML 27). Almost all treaties are concluded between parties identified by ethnics (*Staatsverträge* vols. 2 and 3). In the C5 Athenian tribute lists and assessment decrees recording the members of the Delian League, most entries have the form of an ethnic, and toponyms are used only occasionally (IG I³ 71, 77, 100, 259–90; see *infra* 112). The Charter of the Second Athenian Naval League records forty-five city-ethnics, two regional ethnics and three names of rulers (Dreher (1995) 189–91). The recipients of grain from Kyrene during the corn crisis of the 320s are recorded in the form of forty-one city-ethnics in the dative plural plus two names of rulers (SEG 9 2 = RO 96). In the C4 Delphic accounts 109 different city-ethnics in the plural are used to designate *poleis* as donors or as *poleis* who provide amphiktyonic officials (CID II pp. 300–5).⁹⁷ Finally, if an Archaic or Classical Greek coin has a legend, it is usually the city-ethnic in the genitive plural, often abbreviated (Guarducci (1969) 615–705, *infra* 144).

In all these documents and on the coins as well, sub-ethnics are conspicuous by their absence. Some of the documents above list city-ethnics only, others mix city-ethnics

⁹⁵ Compare, e.g., Ἐρχομένιοι ἀπέθειαν τοῖς Διὶ τοῖς Ὀλυπίοις Φορονεία[θεν] (Lazzarini 994 (C5m)) with πᾶργεῖοι ἀπέθειν τοῖς Διὶ τὸν Φορόνθοθεν (Lazzarini 993 (C5e)).

⁹⁶ Compare F.Delphes III.4 371.33–34 (C4): τὰ[δ]ε ἔδοξε[ε]ν Δ[ε]λφοῖς with F.Delphes III.4 414.3–4 (C3f): ἔδοξε τὰ πόλει τῶν Δελφῶν. Furthermore, see e.g. two proxyen decrees from Karthaiia: IG XII.5 534.2–5 (C3): ἐπειδὴ Ἡγησικλῆς Ἀγαθοφάνου Κύθνιος . . . εἰνὸς ὦν [δ]ι[ε]ρε[λ]λ[ε]ι τῶι δήμωι τῶι Καρθαῖέων . . . IG XII.5 540.2–4 (C3): ἐπειδὴ Λύκων Πυθῆα Βυζάντιος εἰνὸς ὦν τυγχάνει τῆι πόλει[ι] τῆι Καρθαῖέων.

⁹⁷ Add [A]εβαδύς—102.1.11.

with a few regional ethnics, which conforms with the habit of using a regional ethnic as the name of a political community comprising a whole region, typically a federation.⁹⁸

To conclude: every *polis* seems to have used the plural of the city-ethnic as the name of the state and, conversely, whenever the plural of an ethnic can be identified as a city-ethnic and is used as the name of a political community, this community must have been a *polis*. Let us adduce an example. The Lamponeieis in Troas are recorded as members of the Delian League (*IG* 1³ 270.1.38). The ethnic *Λαμπονειεύς* is derived from the toponym *Λαμπώνεια*

⁹⁸ See, e.g., Φωκε[ῖς τῶ] πῶλλον[ι ἀνέθ]ηκαν δ[εκάταν... (Lazzarini 983 (C4)) or [ἔδοξεν] Φωκε[ῖσι] (*IG* 1² 70.20 (378/7)) or ΦΩΚΕΩΝ (Head, *HN*² 339 (357–346)) and [τ]αῖρ δίκαις, ταῖρ κα(τ) τῶν Βοιωτῶν Μένανδρος [κ'] Ἀριστόλοχος τοῖρ Ἀθαναῖος ἐδικαζάταν (*SEG* 26 475.3–4 (C5f)) or ἄρια... [ὄς] Βοιωτοῖ ὄριπταγ (*SEG* 23 297.1–3 (C4–C3)) or ΒΟΙΩΤΩΝ (Head, *HN*² 352 (C4s)).

- (*IG* 1³ 267.1.28) or *Λαμπώνιον* (Hdt. 5.26). We know from Herodotos that Lamponeia was a nucleated settlement, and it has been convincingly identified with a site that has traces of an Archaic fortification wall covering 27 ha. Combining the evidence that Lamponeia was an urban centre with the evidence that the Lamponeieis constituted a political community which was a member of the Delian League, we can infer that Lamponeieis is a city-ethnic and accordingly that Lamponeia must have been a *polis* (no. 783), and that is further confirmed by coins of C5l–C4m with the legend *ΛΑΜ*. City-ethnics used collectively and especially in public documents constitute one of the most important types of source from which we can infer *polis* status of communities not explicitly called *polis* in any extant text.

Territory and Size of Territory

According to the Greek conception, most clearly formulated by Aristotle, a *polis* was “a community (*koinonia*) of citizens (*politai*) with regard to the constitution (*politeia*)”.¹ It is at once apparent that Aristotle picks up only two of the three elements that comprise the modern juristic idea of a state (*CPCActs* 5: 36–40), the people and the constitution; the territory is left out altogether, and that is not by chance. For Aristotle asserts that no one is a citizen by mere domicile in a particular place (*Pol.* 1275^a7), and that a common space to live in is not the essential aspect of a *polis* (*Pol.* 1280^b30). Thus, Aristotle hits upon one important difference between the *polis* and the modern state. We nowadays tend to equate a state with its territory—a state is a country (*CPCActs* 5: 38, 117); whereas the Greeks identified the *polis* primarily with its population—a *polis* is a people (*CPCActs* 5: 56–64).

This is well known and basically true. But it must not lead to the inference that the territory was *not* an element in the concept of the *polis*. Aristotle’s definition of the *πόλις* as a *κοινωνία πολιτῶν πολιτείας* (*Pol.* 1276^b1) is proposed in connection with the problem of the identity of the *polis*, and Aristotle discusses three different criteria for deciding when a *polis* has changed so much that it has become a different *polis*: (a) change of place (*topos*), (b) change of people (*anthropoi*) and (c) change of constitution (*politeia*).² He rejects (a) and (b) as superficial and prefers (c), but it is important to note that the territory is discussed as one of the three relevant parameters. Similarly, in book 2 of the *Politics* Aristotle asserts that the *polis* is a community, and that its first and most fundamental aspect shared by the members is the place where they live (1260^b40–61^a2). A common space to live in is, after all, a necessary condition for a *polis* (1280^b31–32).

Of course the Greeks knew all about the territory of a *polis*: the frequently used penalty of exile³ consisted pre-

cisely in the right of anyone to kill the outlaw if found within the territorial bounds,⁴ and we know of laws and verdicts which prescribed that the corpse of an executed criminal be thrown over the border of the *polis*.⁵ So the Greeks were perfectly capable of saying “the *polis* stretches to this-and-this point and not beyond”. The borderline of a *polis* was often marked with boundary stones (*horoi*);⁶ we are told that territorial disputes had to be settled by international arbitration⁷ and might result in wars between *poleis*.⁸

Next, the term *polis* is sometimes used in the sense of territory, denoting both the *polis* (in the sense of town) and its hinterland: Herodotos tells us that Xerxes’ army in 480 marched straight through a *polis* called Agore; and Xenophon reports that Agesilaos pillaged “the eastern part of the *polis* of Thebes right up to the *polis* of Tanagra”.⁹ In both these passages *polis* is used to denote the *territory* of a *polis*: Xerxes’ army did not march through the gates of the city of Agore, and Agesilaos did not pillage “the countryside east of the city of Thebes up to the city of Tanagra”. There are some four score other examples of territory as the principal meaning of *polis*,¹⁰ and they show that the territory in question almost always is a town and its hinterland. Attestations of *polis* in the sense of country

⁴ Andoc. 1.96; Dem. 23.37, 39ff; Philoch. fr. 30 (Athens); *Syll.*³ 194 (Amphipolis); *Nomima* 1 105B (Teos and Abdera). See Swoboda (1905); Hansen (1976) 75–76.

⁵ Din. 1.77: τὸν τῆς Ἑλλάδος ἀλιτῆριον ἀποκτείναντας ἐξόριστον ἐκ τῆς πόλεως ποιῆσαι (“you must put to death the man who has ruined Hellas and throw his body over the border of the *polis*”).

⁶ Xen. *Hell.* 4.4.6: “the Corinthians perceived that their *polis* was being eclipsed both by the removal of the *horoi* and by their fatherland being called Argos instead of Corinth . . .” See Rousset (1994). *IG* xii.5 543 (Karthaiia); *IG* vii 2792 = *SEG* 36 411 (Boiotian *horos* marking the border between Akraiphia and Kopai); *Syll.*³ 134.22–23 (Miletos and Myous); *IPArk* 14 (Orchomenos).

and used about large regions (e.g. Thessaly, cf. Lys. 6.6) or multipolate islands (e.g. Keos, cf. Lys. fr. 90) are few and far between (*CPCActs* 5: 124–32).

Similarly, a toponym could be used to designate a *polis* not only in the senses of nucleated settlement or political community but also in the sense of territory (*supra* 55). Thus the name *Θηβαί* designated not only the urban centre (Hdt. 1.92.1); it could also be used synonymously with the ethnic *Θηβαῖοι* to denote the Theban political community (Dem. 19.325), or synonymously with *Θηβαίς* (Hdt. 9.65.1) to denote the hinterland (Xen. *Hell.* 5.2.25), just as the term *polis* was used to designate either the Theban political community (*SEG* 28 465.3–4 (C4m)), or the town (Dem. 18.216), or the territory (Xen. *Hell.* 5.4.49).

To sum up: of the three aspects of the concept of *polis*, the territory mattered less than the people and the government, but it was still an important element which the ancient Greeks did not ignore. It is true that a people thrown out of their territory could still persist as a *polis*. Thus, Themistokles claimed that Athens—or rather the Athenians—were still a *polis* although the Persians had occupied Attika (Hdt. 8.61.2; Aesch. *Pers.* 347–50). But in a similar situation Nikias told his army that they were strong enough to *become* a *polis*, as soon as they chose to settle down somewhere.¹¹ So, although “the *polis* is its men” (Thuc. 7.77.7), a *polis* is also a settlement in a given place.

Apart from such exceptional cases as the Athenian army in 480, every *polis* had a territory and the concept of the *Polis ohne Territorium*, coined by Franz Hampl (1939), should be abandoned as a fallacy. Yet, following Hampl, some historians still seem to believe that a *polis* could be completely deprived of its territory but nevertheless persist as a self-governing community of citizens, i.e. as a *polis*.¹² The concept of a *Polis ohne Territorium*, however, has been rejected by other historians, mostly on general grounds.¹³ Let us add that all Hampl’s examples of *Poleis ohne Territorium* testify to the existence of dependent *poleis* (*ὑπήκοοι πόλεις*), and he points out quite correctly (16–17) that a city which lost its *autonomia* could persist as a *polis*. But that does not amount to evidence of “*Poleis ohne Territorium*” (*CPCActs* 5: 55). Just as an Attic deme had a territory marked with *horoi* inside Attika which was the territory of the Athenian

¹¹ Thuc. 7.77.4: *λογίζεσθε δὲ ὅτι αὐτοὶ τε πόλις εὐθύς ἐστε ὅποι ἂν καθέζησθε* (“consider that you immediately become a *polis* yourselves wherever you choose to settle down”).

¹² e.g. Gschnitzer (1958) 161–78; Meyer (1968) 68; Duthoy (1986) 6; Lévy (1990) 55.

¹³ See Chr. Habicht’s (1959) review of Gschnitzer (1958) 705ff; Ehrenberg (1965) 115–19; Ampolo (1980) xxxiii–xxxiv; Sakellariou (1989) 80–84; Ampolo (1996) 305.

polis, so, at a higher level, we have dependent *poleis* whose territories were part of the territory of a larger *polis* (see *infra* 87–88).

One main characteristic of the territory of the *polis* was its small size. That is well known and often emphasised, albeit mostly in vague terms. In the only study specifically devoted to this issue, Ruschenbusch (1985) 259 concludes that “die Normalpolis” had a territory of 25–100 km². His findings are confirmed by this inventory. Of the 1,035 communities included in our inventory, 166 are unlocated. But for 635 of the remaining 869, i.e. close to three-quarters of the total, it is possible to assess the size of the territory, at least roughly, and to place it in one or, at most, two of the following five categories: 25 km² max., 25–100 km², 100–200 km², 200–500 km², 500 km² minimum. The distribution is as follows:

1 or 1? (25 km ² max.)	95
1 or 2 (100 km ² max.)	109
2 or 2? (25–100 km ²)	177
2 or 3 (25–200 km ²)	38
3 or 3? (100–200 km ²)	71
3 or 4 (100–500 km ²)	11
4 or 4? (200–500 km ²)	66
4 or 5 (200 km ² min.)	7
5 or 5? (500 km ² min.)	61
total	635

Thus, some 60 per cent of the *poleis* had a territory of max. 100 km², and close to 80 per cent had a territory of max. 200 km². Only 10 per cent had a territory of over 500 km². Both the mode and the median fall between 25 and 100 km². The mean, however, is c.150 km². This shows that a mean can be a dangerous simplification and that the “Normalpolis” may be a misleading concept. A more nuanced picture emerges if we select a number of regions for further study. The following four confirm the accepted view of c.25–100 km²:

Thracian Chersonesos: c.950 km², c.15 *poleis* = c.65 km² per *polis*

Phokis: c.1,600 km², c.25 *poleis* = c.65 km² per *polis*

Triphylia: c.600 km², 8 *poleis* = c.75 km² per *polis*

Pallene, Sithonia and Akte: c.1,100 km², 20 *poleis* = c.55 km² per *polis*

But other regions testify to much larger territories:

Arkadia: c.4,700 km², c.39 *poleis* = c.120 km² per *polis*

Crete: c.8,200 km², c.49 *poleis* = c.167 km² per *polis*

Lesbos: c.1,600 km², 6 later 5 *poleis* = c.266 later 320 km² per *polis*

Eubolia: c.3,600 km², 14 later 4 *poleis* = c.257 later 900 km² per *polis*

On the whole, colonies had larger territories than *poleis* in the Greek homeland, see Index 9 *infra*, often separated by areas settled with indigenous communities. And while some very small islands were the smallest of all *poleis*, *viz.* Delos (3 km²), Belbina (8 km²), Rheneia (14 km²) and Leukai (2.5 km²), at least some of the multipolate islands were settled with *poleis* that, on average, were much larger than the so-called *Normalpolis*, *viz.* Eubolia, Kephallenia, Crete, Lesbos and especially Cyprus.

Almost all *poleis*, however, came within the ideal maximum size we have suggested for city-states in general:

Essentially, a city-state's territory is the immediate hinterland of its urban centre, and a city-state which extends its frontiers beyond its immediate hinterland begins to lose one of its characteristics. Given the simple means of transportation in former times, and given the fact that a city-state is a community whose members are in close contact with one another, the maximum extent of the immediate hinterland can, ideally, be fixed at one day's march from the urban centre = c.30 km.¹⁴ The inference is that the territory of a city-state may cover c.3,000 km² max. Larger city-states are indeed attested, but then they are no longer city-states to the same extent as their smaller neighbours. (*Thirty City-State Cultures* 17)

In the great majority of *poleis* it was even possible to get from the border to the urban centre and back again in one day. And there were just four which exceeded the suggested maximum size of 3,000 km²: *viz.* Syracuse, Sparta, Pantikapaion and Kyrene. How were they organised? It seems worthwhile to shift the attention from the smallest to the largest *poleis* and study not only these four oversized *poleis*

¹⁴ A different approach leads to a similar result. The Italian word for "local patriotism" is *campanilismo*. The explanation is that, traditionally, the immediate hinterland of a *città* was believed to be as much land as one could see from the top of the *campanile* in the urban centre. If the view is not obstructed by mountains *vel sim.* the visual range from the top of a *campanile* is something like 25–30 km

but also other *poleis* with territories of over 1,000 km². No more than thirteen such *poleis* are known, *viz.*

Argos (c.1,400 km² in C4l)

Athenai (c.2,500 km²)

Byzantion (c.1,500 km²)

Elis (over 1,000 km²)

Eretria (c.1,500 km² in C4)

Kyrene (c.1,750 km²)

Megale polis (planned as *polis* of c.1,500 km², perhaps over 1,000 km²)

Miletos (perhaps c.2,000 km²)

Pantikapaion (over 3,000 km²)

Rhegion (1,000–1,300 km²)

Rhodos (1,400 km²)

Sparta/Lakedaimon (c.8,400 km² before 371)

Syrakousai (c.12,000 km² in C4)

These super *poleis* had emerged in one of four different ways: some had subjected neighbouring *poleis* and turned them into municipalities (Argos, Eretria). Some had subjected neighbouring *poleis* but kept them as dependent *poleis* (Elis, Pantikapaion, Sparta/Lakedaimon, Syrakousai). Some had expanded over a large territory where, apparently, there were no other *poleis* (Athenai, Byzantion, Kyrene, Miletos, Rhegion). Two were created by synoecism but in, probably, both cases it was a partial synoecism in which the participating communities persisted as dependent *poleis* side by side with the new central *polis* (Rhodos, Megale polis).

In their fully developed form the big *poleis* were of two different types. While small *poleis* were so small that they had just one urban centre—the *polis* in the urban sense—the big *poleis* all had a number of second-order nucleated settlements scattered over their territory. In some cases these villages or towns were just municipalities, in other cases they were polities, i.e. dependent *poleis*. It is interesting to note that Athens is the obvious example of the first type, Sparta of the second.

Polis versus Chora—The Settlement Pattern

There are two basic forms of settlement: nucleated and dispersed.¹ The opposition is clear in principle; the crucial question is where to draw the line in practice, and that is a problem which stands out clearly as soon as we move from an abstract to a more concrete form of analysis. In modern studies of the settlement pattern of ancient Greece and its colonies a distinction is usually made between three forms of habitation:² first-order sites (called *towns* or *cities*), second-order sites (called *villages* or *hamlets*) and third-order sites (called *farmsteads* or *homestead farms*).³ In all investigations, towns and villages are grouped together as nucleated settlements and opposed to isolated farmsteads, which are seen as the characteristic form of dispersed settlement.⁴

The next problem is, of course, where to draw the line between a town and a village, and again between a hamlet and a farmstead. Farmsteads are often described as “isolated” but there are in fact attestations of clusters of farmsteads,⁵ and sometimes it can become a matter of definition how to distinguish between the two forms of settlement.⁶ For the distinction between a town and a village, three different parameters are used: (a) the function of a settlement within a region, (b) the physical size of the settlement, and/or (c) the number of inhabitants. *Re* (a): in a region with a number of nucleated settlements, one is usually larger than the others and serves as the principal urban centre of the whole region.⁷ Such an urban centre is sometimes called a *central place*,⁸ undoubtedly a translation of the German

term *Zentralort*.⁹ The hierarchy can be observed at different levels. Sometimes the central place is called a city and the smaller centres towns;¹⁰ but often the central place is a town and the smaller centres are classified as villages.¹¹ In this case the first-order site is defined in relation to the surrounding smaller nucleated settlements and no absolute figures in hectares or population size are needed in order to establish a distinction between first- and second-order sites. *Re* (b) and (c): as to size of habitation area and number of inhabitants, there are considerable variations and I will here restrict myself to two examples. In the monumental investigation of southern Argolis the authors propose to classify all sites of 5 ha or more as towns;¹² whereas the size of the population is the preferred parameter in Frank Kolb’s judicious introduction to *Die Stadt im Altertum*, where he states a minimum population of 1,000 inhabitants as one of his criteria for accepting a site as a *Stadt*.¹³ In both cases the authors admit that the limit is very arbitrary, but it is perhaps not a coincidence that the two criteria seem to correspond: in the southern Argolis survey the authors suggest that towns in the Classical period had a population density of 250 persons per ha,¹⁴ i.e. a total population of c.1,250 persons for a town so small that it was almost a village.

The recent settlement pattern studies have changed our understanding of ancient Greek society in many respects, but the two most important insights have been (a) that we can now, in some instances at least, trace the people who lived in the countryside and assess the relation between the urban and the rural population,¹⁵ and (b) that in some parts of Archaic and especially Classical Greece many of those who inhabited the countryside lived dispersed in iso-

lated farmsteads and not nucleated in villages.¹⁶ Both these major conclusions have been obtained by archaeological surveys of selected stretches of the Greek countryside, and in their analysis of the evidence the archaeologists have deliberately preferred modern concepts—such as town, village and farm (stead)—whereas a discussion of ancient Greek terms is either avoided or confined to a historical section. If, however, we shift the focus from the archaeological to the written sources and ask how the ancient Greeks perceived their own settlement pattern, we are faced with a whole range of problems which concern both the terms used for first-, second- and third-order settlements and the Greeks' understanding of the distinction between nucleated and dispersed settlement. First, the terminology.

1. First-order sites present no serious difficulty. They are called *polis*, and in literary and epigraphical sources alike this term is applied over and over again to 447 named urban centres which were also the political centres of the *poleis* in question (*supra* 34–35). If the emphasis is on the urban aspect of the settlement, the words *asty* or *polisma* are sometimes used synonymously with *polis* (in the sense of town) (*supra* 47–48). Moreover, like *polis* in its urban sense, both *polisma* and *asty* are exclusively used about towns which were political centres of *poleis* in the political sense (*supra* 47–48). Thus the principal incongruity between the ancient and the modern terminology is that, even when the *polis* is seen as an urban centre, the ancient Greeks had the political aspect in mind, whereas modern analysis emphasises the cohabitation itself, irrespective of the political status of the site.

2. It is much more difficult to understand the ancient Greek terminology used to describe villages and hamlets. The principal term used is, of course, *kome*, which does indeed designate what we would call a village or a hamlet,¹⁷ although it is also sometimes found in the sense of a quarter of a town.¹⁸ The problem is that, although most historians believe that *komai* must have outnumbered *poleis* many times,¹⁹ our Archaic and Classical sources provide us with the names of fewer than thirty named localities which are explicitly classified as *komai*²⁰ as against 491 named communities classified as *poleis*.²¹

One might object that it should not cause any surprise

¹⁹ Snodgrass (1990) 132: “*komai* . . . must have been many times more numerous than the actual *poleis*.”

²⁰ Hansen (1995) 65–67.

²¹ 447 called *polis* in, principally, the urban sense plus 44 attested as *poleis* in the political and/or territorial senses only.

that philosophers, orators and historians use the term *polis* much more frequently than the term *kome* since in accounts of politics and wars it is only natural to mention “states” rather than “municipalities” or “villages”. But this observation, though it contains a core of truth, is not quite to the point. It is true that many battles were fought outside a *polis*, e.g., in Boiotia, the battles of Plataiai in 479, the battle of Tanagra in 457, the battles of Koroneia in 447 and 394, and the battle of Chaironeia in 338. But just as many battles were fought near what we would call villages, e.g. the battle of Keressos c.520, the battle of Oinophyta in 457, the battle of Delion in 424, the battle of Tegyra in 375, and the battle of Leuktra in 371. Whereas Plataiai, Tanagra, Koroneia and Chaironeia are explicitly described as *poleis* in our sources, none of the others is ever referred to in Archaic or Classical sources as being a *kome*. The epigraphical sources tell the same story: although many inscriptions concern local administration and the infrastructure of the *polis*, the term *polis* occurs much more frequently than the term *kome*. Furthermore, a collection of the few attestations we have reveals an interesting geographical pattern: we hear about *komai* in the Dorian Peloponnese, in some parts of central and western Greece, in Makedonia and Thrace and along the west coast of Asia Minor.²² But, Mantinea excepted, *kome* is hardly ever used about villages in the non-Dorian Peloponnese, Attika, the north-eastern part of Hellas, the islands in the Aegean, and all the colonies.²³

The reason for the uneven distribution of attestations of *komai* is believed to be that the term *kome* was Dorian, whereas the term *demos* was used in the non-Dorian parts of Hellas, cf. Arist. *Poet.* 1448^a35–37: οἱ δὲ Δῶροι [the Dorians] μὲν γὰρ κώμας τὰς περιουκίδας καλεῖν φασιν, Ἀθηναίους δὲ δήμους.²⁴ But again, demes are attested in a few *poleis* only,²⁵

²² See the lists in Hansen (1995) 63–68.

²³ The only attested *kome* in Italy and Sicily is one in the territory of Lokris (FGrHist 577 fr. 2). In Attika *Archontes komes* are attested for Phaleron (IG 11² 1598A.9, 18; cf. IG 11² 3103). On the islands *komai* are attested in the territory of Histiaia (Hdt. 8.23.2) and the only attested village on Tenos was called *Kome* (IG 111.5 872.19 (c.300)). According to Aristotle (fr. 566), many Naxians were settled κατὰ κώμας. But the fragment stems from a late source (Ath. 348B) and we cannot be sure that Aristotle used the term *kome*. In Thessaly the inhabitants of Pherai are referred to as κωμηῖται in one of Euripides' tragedies (Eur. *Alc.* 476).

²⁴ Arist. *Poet.* 1448^a35–37: they say that they themselves call the surrounding settlements “*komai*”, but the Athenians “*demoi*”. For a critical analysis of this passage, see Hansen (1995) 71.

²⁵ See Jones, *POAG*. Outside Attika and the Athenian klerouchies, *demoi* of the Archaic and Classical periods are known from Euboia (ibid. 73–79), Kalyrna (ibid. 231), Kos (ibid. 239ff) and Rhodos (ibid. 243–49). In later periods *demoi* are also attested in Amorgos (ibid. 214), Elis (ibid. 145), Miletos (ibid. 323ff), Naxos (ibid. 213), Stratonikeia (ibid. 335) and Thessalonike (ibid. 268). Strabo 8.3.2 states that Mantinea, Tegea, Heraia, Aigion, Patrai and Dyme were synoecised from various numbers of *demoi*. We have no source to confirm that

and, moreover, although *demos* often denotes a village,²⁶ the word does not mean village, but rather “municipality” or “local community”.²⁷ In this sense it is applied to a territorial subdivision of the *polis*²⁸ and most *demoi* were undoubtedly centred on a village.²⁹ Some demes, however, were not villages but quarters of a town or a city³⁰ and, moreover, there is some evidence that a *demos* could be a district with dispersed settlement and no nucleated centre at all.³¹

To sum up: *kome* means village and is applied to small nucleated settlements. It is mostly used in a socio-economic context without relation to the political structure of the *polis* to which it belongs; and there seem to be only two unquestionable attestations of *kome* used about the civic subdivisions of a *polis*, namely in sources relating to Megara,³² and in the C4 *sympoliteia* by which Helisson became a *kome* of the Mantinean *polis* (SEG 37 340.7–8=RO 14). *Demos*, on the other hand, means municipality, not village, but mostly denotes a civic subdivision which was centred on a village. In any case it is a gross exaggeration for the Classical period to claim that, by and large, *poleis* were subdivided into either *demoi* or *komai*. In the Hellenistic and Roman periods, on the other hand, *komai* are copiously attested both in literary sources, especially in Strabo, and in inscriptions.³³

3. It is even more difficult to find out how the Greeks designated the third-order sites, and the evidence we have reveals that the ancient Greek language has no word that specifically and indisputably conveys the sense of “farm” in English

all these Peloponnesian *poleis* were synoecised from *demoi*. On the contrary, other sources show that Mantinea was organised into *komai*, not *demoi*.

²⁶ See, e.g., Hdt. 3.55.2: “I met Archias in Pitane (the *demos* to which he belonged)”; Isoc. 7.46: “they [the ancient Athenians] divided the *polis* into *komai* and the *chora* into *demoi*”.

²⁷ See, e.g., Hdt. 9.73.2: “The Tyndaridai invaded Attika and expelled the *demoi* (ἀνίστασαν τοὺς δήμους)”. In the sense of “make (people) migrate” (LSJ A.111.2), the object of ἀνίσταμι is always one or more persons, see *infra* 123, and in this passage “villages” would be a mistranslation of δήμους.

²⁸ Jones, POAG 4–7.

²⁹ The best example is the centre of Halai Aixonidai at Palaiochori near Ana Voula, see Lohmann (1993) i. 129–34 and *infra* 626.

³⁰ In Athens Kollytos, Kydathenaion, Skambonidai, Melite, Koile and Keiridai were strictly urban demes lying inside the walls (Traill (1986) 126, 129, 130, 134, 136). Lindos, on the other hand, was probably a town made into one single deme whose members were called Λυδοπολίται (RE Suppl. 5: 746).

³¹ Atene may have been a deme with dispersed settlement and without a nucleated centre, see Lohmann (1993) 126–36. Halimous is another example of such a deme, see Hansen (1997) 22–23, *infra* 626 and Cohen (2000) 120–22, who, in our opinion, goes too far by almost denying that demes could have, and in many cases must have had, a nucleated centre.

³² The Megarid settled in 5 *komai* (Plut. Quest. Graec. 17); Megara organised into *komai* of which one is Aigosthena (IG VII 1.18 (c.300)). Pace Charneux (1984) and Jones, POAG 114–15, there is no evidence that Classical Argos was organised into *komai*, see Piérart (2000) 300.

³³ For a judicious treatment, see Schuler (1998) 22–32.

or “ferme” in French or “Bauernhof” in German, etc. Instead the Greeks had to make use of a number of words, none of which had the sense of “farm” but every one in a proper context could be used to designate a farm.³⁴ Thus, χωρίον may denote a farm, especially when combined with the word οἰκία.³⁵ The meaning of the word, however, is just “place” and it could also be used about, e.g., a *polis*, an Attic deme or a deserted part of an island.³⁶ Next, ἀγρός means “field” but sometimes refers to a farm;³⁷ ἀλλή, properly a court, can also denote farmsteads,³⁸ and ἐπαυλίς or ἐπαύλιον is another word attested in the sense of farmstead.³⁹ Obviously, for want of a proper term the Greeks had to use a whole range of different words to express what we call a farm or a farmstead.

To conclude: modern archaeological analysis operates with a fairly fixed and simple terminology for first-, second- and third-order sites, *sc.* city/town, village/hamlet and farm/farmstead; but the ancient Greeks had a fully developed terminology for the first-order sites only, namely *polis* or, synonymously, *polisma* or *asty*. For second-order sites they had the terms *kome* (which is surprisingly rare and restricted to certain parts of the Greek world) and *demos* (which does not mean village although it often denotes a village); finally, for third-order sites they had no term at all but only a number of words that in proper context denoted what we call a farm. So far, we have found no ancient literary source and only one—Hellenistic—inscription in which we meet the tripartite set of terms that correspond to our town—village—farm, *viz.* Antigonos’ letter of c.303 about the synoecism of Teos and Lebedos in which he mentions villages (*komai*) and farms (*epaulia*) outside the town (*polis*).⁴⁰

Next, sources in which different kinds of settlement are contrasted show that the ancient Greeks opposed settlement in the *polis* to settlement in the *chora*, but did not distinguish

³⁴ For terms designating real property and thus sometimes a farm, see Pritchett (1956) 261–69. See now the meticulous discussion in Schuler (1998) 73–100.

³⁵ Finley (1985) 124 no. 14: ὄρος οἰκίας καὶ χωρίον καὶ οἰκίας τῆς ἐν ἄστει. IG II² 1241 (300) is a lease of a *chorion*. The ensuing contract includes detailed regulations concerning the cultivation of the land, and it appears that lease of the *chorion* includes a house, a strong indication that the whole estate is a farmstead and not just a plot of land. See now Jones (2000).

³⁶ The word χωρίον is used about Naupaktos, which was a *polis* (Thuc. 3.102.4), or about the Acharnai, which was a *demos* (Thuc. 2.19.2, only some MSS) or about an empty part of Korkyra (Thuc. 1.52.2)

³⁷ Men. Dysc. 5–7; Dem. 53.6, 57.10.

³⁸ Syll.³ 169.40ff (Iasos, c.350); Dion. Hal. Ant. Rom. 6.50.3.

³⁹ Diod. 12.43.1: he pillaged the so-called Akte and set fire to the *epaulis*.

⁴⁰ Syll.³ 344.98: ὅσαι δ’ ἂν κώμαι ἢ ἐπαύλια ὄσων ἐξ[ω τῆς πόλεως ὑμ]ῶν (“as many *komai* or *epaulia* as there are outside your *polis*”).

habitation in villages from habitation in isolated farmsteads. Let us adduce some examples.

From Thucydides' description of the evacuation of Attika in 431 it is clear that more than half of the Athenians had lived in the countryside for centuries, until they were forced by the Peloponnesian War to move into the city of Athens. But the passage does not reveal whether the homes they were forced to leave were villages or isolated farmsteads.⁴¹

Euripides' tragedy *Orestes* includes a report of a meeting of the *ekklesia* in which several Argives address the assembly. One of them is described as an honest and courageous farmer who does not often visit the city and attend its political meetings. Again we would like to know whether this admirable person lived alone on his farm or in a small village with other farmers of the same disposition.⁴²

In the *Laws* Plato envisages a settlement pattern in which a central *asty* is surrounded by twelve *komai*. Here every citizen is supposed to own one house in the *asty* and one in the *chora* (Pl. *Leg.* 745B–E), and the presumption is that the house in the *chora* was in one of the twelve villages and not in the countryside,⁴³ but Plato's account is notoriously vague and some scholars have preferred to believe that the citizens had their country houses scattered over the countryside.⁴⁴

In *Politics* book 1 Aristotle states that the *polis* emerged by a synoecism of *komai*, each of which, again, emerged from an aggregate of scattered *oikiai*.⁴⁵ The *polis* is the key theme of the rest of the work; the *oikia* is analysed in book 1 and referred to occasionally in the later books, but the concept of *kome* is never treated properly. It is just mentioned at the beginning of book 1 as the link between *oikia* and *polis*, and in the later books it is referred to only twice and in passing.⁴⁶ In books 2–8 the principal opposition is between the *polis* (or *asty*) and the *chora*, as is apparent from the following example: in the description of democracy in book 6 we are told that the peasants live scattered over the countryside and are therefore prevented from frequenting the *ekklesia*, but nothing is said about whether they live nucleated in villages or dispersed in farmsteads.⁴⁷

Finally, in several sources dispersed settlement (*σποράδη*) is opposed to settlement in *poleis*, and in these sources

there is either no mention of settlement in *komai* or, if there is, settlement in *komai* is linked with dispersed settlement and opposed to settlement in the *polis*.⁴⁸

Thus, for modern historians and archaeologists the settlement pattern is in focus, and therefore the nucleated settlements are subdivided into towns and villages and opposed to (isolated) farmsteads. For the ancient Greeks themselves the social and political aspects of community life mattered more than the settlement pattern, and when they thought about how the population of a *polis* was settled, they focused on the opposition between *polis* and *chora* instead of the opposition between nucleated settlement in town and villages *versus* dispersed settlement; therefore they separated those who lived in the countryside (in villages or farms) from those who lived in the urban centre, and they devoted almost all attention to the *polis* itself. To live in *komai* without any urban centre was seen as an old form of habitation (Xen. *Hell.* 5.2.7), which antedated the *polis* (Arist. *Pol.* 1252^b10–30) or, in contemporary society, as an old-fashioned form of habitation surviving in marginal and backward regions of Hellas (Thuc. 3.94.4).

Even though the Greeks showed little interest in second-order settlements, it is still important to assess their number, their distribution and their character, at least in the Greek homeland. Admittedly, the study of the settlement pattern of ancient Greece is still in its infancy and a reliable picture can be drawn only for the few regions that have been surveyed during the last three decades. Also, for the regions settled with Greek colonies, it would be impossible to present a survey of the entire settlement pattern, comprising both the Greek and the indigenous settlements. Here the study must be restricted to the settlement pattern in the immediate hinterland of each *polis*. But for every region in the Greek homeland described in this inventory, the introduction to the chapter includes a list of attested non-*polis* settlements, first those mentioned in ancient sources, and then those known exclusively from their physical remains, brought to light by excavations and/or surveys. Of those settlements which are attested in ancient sources, many have been identified with archaeological sites, but some are still unlocated.⁴⁹

One major result of the investigation is that there seem to have been two basic types of region: some with a fairly small

⁴¹ Thuc. 2.16.2, see the interpretation *supra* 12.

⁴² Eur. *Or.* 917–30, cf. Roy (1996). ⁴³ Piérart (1974) 15–21, 39–41.

⁴⁴ e.g. Wilamowitz and Pöhlmann, quoted by Piérart (1974) 39.

⁴⁵ Arist. *Pol.* 1252^b9–24; the synoecism is indicated by the verb *συνήλθον* (^b20, cf. *infra* 117 n. 16), and the dispersed settlement with the adjective *σποράδες* (^b23).

⁴⁶ Arist. *Pol.* 1261^a27–9; 1280^b40–81^a1.

⁴⁷ Arist. *Pol.* 1319^a28–32: “Besides, people of this class can readily come to the assembly, because they are continually moving about in the city (τὸ ἄστυ) and in the agora; whereas farmers are scattered over the country (διὰ τὸ διεσπάρθαι κατὰ τὴν χώραν) and do not meet or feel the same need of assembling together.”

⁴⁸ Isoc. *Hel.* 35; Pl. *Prt.* 322A–B; Philoch. (*FGrHist* 328) fr. 2a.

⁴⁹ Some of the unlocated settlements known from written sources are undoubtedly identical with some of the unidentified archaeological sites. So the total number of attested non-*polis* settlements must be lower than the sum of (a) the settlements known from written sources and (b) settlements known exclusively from excavation and surveys.

number of comparatively large *poleis* and a large number of second-order settlements within each *polis*, and some with a high number of fairly small *poleis*, each with very few second-order settlements within its territory or none at all. The first type is found in the eastern part of the mainland where the *polis* emerged early, in Euboia, Boiotia, Attika, the Isthmos and Argolis.⁵⁰ For very different reasons a similar settlement pattern is also found in the westernmost regions where *polis* formation took place as late as in the Classical period: Epeiros, Akarnania and Aitolia. In these regions the population was long settled in *komai* apart from all the colonies along the coasts founded by Corinth and Elis.⁵¹ The second type prevails in the rest of Greece and on the Aegean Islands.⁵² In Asia Minor there were apparently many second-order settlements in Ionia, whereas the *poleis* outnumbered the other settlements in Mysia, Troas, Aiolis and on Lesbos.⁵³ Thus, regions settled in *poleis* with few villages between the *poleis*⁵⁴ seem to be the rule rather than the exception. In this respect there is a very sharp contrast indeed between ancient Greece and Greece of the nineteenth and twentieth centuries with its five-digit number of villages and hamlets as against a comparatively small number of towns.⁵⁵

Moreover, the rapidly growing number of archaeological surveys of the Greek countryside shows that the majority of the population lived in the urban and political centre of the city-state, the *polis* town, and a minority only was settled

⁵⁰ Euboia (14 : 35, to which must be added a high number of unrecorded demes); Attika (1 (or 2 including Salamis) : 100+, for the demes as settlements, see 626 *infra*); Megaris, Korinthia, Sikyonia (3–5 : 19); Argolis (11 : 50).

⁵¹ Epeiros (26 : 45); Akarnania (30 : 25); Aitolia (15 : 31); cf. Ps.-Skylax 28, 30, 31, 32; Thuc. 3.94.4.

⁵² West Lokris (12 : 7); Phokis (29 : 6.10); Achaia (16 : 9); Elis (20 : 12); Arkadia (39 : 31); Triphylia (8 : 6); Messenia (11 : 7); Lakedaimon 24 : 33, but many perioikic *poleis* unidentified); East Lokris (11 : 7); Doris (4 : 0); Thessaly and adjacent regions (78 : 52); Mygdonia, Chalkidike, Bisaltia (83 : 26). Rousset (1999).

⁵³ Ionia (34 : 75); Asiatic coast of the Propontis (30 : 6); Troas (29 : 13); Lesbos 6 : 2?); Aiolis (36 : 17); Karia (72 : 9, but many communities recorded as *poleis* type C₇); and many indigenous second-order settlements not recorded).

⁵⁴ One of the best known is Koresia on Keos (no. 493), see Cherry, Davis and Mantzourani (1991) 337–40.

⁵⁵ *Ibid.* 383–402.

in the countryside either in villages or in farmsteads.⁵⁶ And this settlement pattern is found not only in the regions with many *poleis* and few second-order settlements but even in some of the regions with a relatively high number of settlements in the countryside, i.e. in Boiotia and in Argolis.⁵⁷ Only in very large *poleis*, such as Athens, did the extra-urban population outnumber those who lived in the *polis* centre. Attika was exceptional in having several score, perhaps more than 100 nucleated centres, only one of which was a *polis*. In Classical Greece the degree of urbanisation seems to have been inversely proportional to the size of the *polis*. The smallest *poleis* had the highest degree of urbanisation, whereas the few large *poleis* had a higher percentage of its population settled outside the *polis* town.

The inference is, on the one hand, that the Greeks had a skewed view of their own settlement pattern, one that favoured the urban centre, *sc.* the *polis*, at the expense of settlements in the countryside, either nucleated or dispersed. On the other hand, on the Greek mainland villages were probably not as numerous as an Athenocentric view of Greek history has made us believe. In the Hellenistic and Roman periods, however, the picture changed. There is a much larger number of settlements classified as *komai*, especially in the eastern part of the Greek world, and they occur both in the epigraphical and in the literary sources, especially in Strabo and Pausanias.⁵⁸

The overall conclusion is that there is no ancient Greek set of terms that fits the very neat modern archaeological tripartition into towns, villages and farmsteads. The Greeks focused on the political aspects of community life rather than on the settlement pattern. They distinguished the *polis* from the *chora* and did not pay much attention to whether the *chora* was settled in villages or in farmsteads.

⁵⁶ The conclusion of all the surveys listed in n. 15 *supra*, cf. Hansen (2004) 11–16.

Types of Constitution

The *polis* had a government, i.e. a set of political institutions (*politeia*) manned by citizens (*politai*) in charge of political decision making and enforcement of the legal order. The meaning of these three key terms—*polis*, *polites*, *politeia*—and their interconnection is most clearly expounded by Aristotle in *Politics* book 3: *polis* is defined as a community (*koïnonia*) of citizens (*politai*) about their political institutions (*politeia*).¹ A *polites* is defined as a person who is entitled to participate in government (*arche*) and administration of justice (*krisis*);² and *politeia* is defined as the structure of a *polis*' political institutions (*archai*) and in particular of the supreme body of government (*kyria panton*).³ That this is not just an idiosyncratic Aristotelian conception of what a *politeia* was appears both from literary sources⁴ and from the preserved documents, e.g. the so-called Charter of the Second Athenian Naval League of 378/7 (*IG* 11² 43.20) and, to cite a non-Athenian source as well, the oath on the League of Corinth taken in 338/7 by all *poleis* that joined the League (*Staatsverträge* 403 4.34–35 and 9.29–30). In both cases *politeia* designates the structure and organisation of the political institutions of the members, cf. *infra*.

The word *politeia* means literally “citizenship”, and that is by far the most common meaning attested all over the Greek world in hundreds of decrees by which a named person is awarded citizenship (*politeia*) in the *polis* that passed the decree.⁵ In the ancient Greek world citizenship was, essentially, what it has become once again in our times, i.e.

the legally defined hereditary membership of an individual in a state whereby the member (in the modern world called a citizen or a national) acquires political, social and economic privileges that a non-citizen member of the community does not enjoy, or enjoys only partially. As a rule, a person is a citizen of one state only (Pierson (1996) 27–30). In the Middle Ages and in the Early Modern period citizenship was restricted to (some of) those who lived in the cities, and in its full sense it survived only in city-states, but since the French Revolution citizenship has been dissociated from the connection with the urban centres and has recovered its connection with political participation at state level.⁶

In ancient Greece the corresponding terms used were *politeia* to denote citizenship itself, and *polites* to denote the citizen if the emphasis was on a citizen's exercise of his political rights,⁷ whereas *astos* (masculine)⁸ and *aste* (feminine)⁹ were commonly used to denote a person of citizen birth. As a rule, a person was a *polites* of one *polis* only.¹⁰ Again, Aristotle concurs with this double aspect of citizenship, saying that, in practice, citizenship is defined as being born from citizens (1275^b22–24), whereas, functionally, citizenship is defined by participating in the running of the political institutions of one's *polis* (1275^a22–33). Citizenship was not restricted to (some of) those who lived in the urban centres, and neither *polites* nor *astos* was used in the sense of “townsman” and opposed to *agroikos* in the sense of “countryman”.¹¹

¹ 1276^b1–2: εἴπερ γὰρ ἐστὶ κοινωμία τις ἢ πόλις, ἐστὶ δὲ κοινωμία πολιτῶν πολιτείας (“If the *polis* is a community, and a community of citizens with respect to the constitution”), cf. *CPCActs* 5: 133–34. For the juxtaposition of *polis*, *polites* and *politeia* as the three cornerstones of political organisation, see Lys. 18.1; Aeschin. 3.8; Dem. 8.69–70, 18.308; Lycurg. 1.142; Isoc. 7.20, 8.50–51, 16.17–18; Pl. *Resp.* 501E; *Leg.* 715B; Thrasymachos fr. 1.

² 1275^b22–23: πολιτῆς δ' ἀπλῶς οὐδενὶ τῶν ἄλλων ὀρίζεται μᾶλλον ἢ τῷ μετέχειν κρίσεως καὶ ἀρχῆς (“the citizen is defined by nothing else more than by participating in the administration of justice and in holding office”).

³ 1278^b8–10: ἐστὶ δὲ πολιτεία πόλεως τάξις τῶν τε ἄλλων ἀρχῶν καὶ μάλιστα τῆς κυρίας πάντων (“The constitution is the city's organisation of the offices and particularly of the supreme office”). For *πόλεως* as a subjective genitive, see Hansen (1994) 93–94.

⁴ Thrasymachos of Chalkedon fr. 1; Anaximenes of Lampsakos [*Rhet. Al.*] 1446^b20; *Hell. Oxy.* 18.3.

⁵ *F.Delphes* 111.4 378 (C4m); *I.Oropos* 4 (C4l); *IG* 1v².1 615 (Epidaurus (C4)); *IG* 1v 748 (Troizen (C4)); *IG* xi.4 510 (Delos (C4l)); *IG* xii Suppl. 245 (Andros (C4f)); *Tit. Cal.* 5 (Kalymna (C4)); *I.Olbia* 14 (C4s); *I.Ephesos* 1427 (C4); *SEG* 40 392 (Triphylia (C4e)). Bordes (1982) 49–107.

⁶ Riesenberg (1992) 106–17, 140–86 (citizenship in the medieval cities), 253–66 (revival of participatory citizenship during the French Revolution).

⁷ *IG* iv 841.12, see Lévy (1985).

⁸ Solon fr. 4.6; Anac. *Anth. Gr.* 6.143.3–4; Dem. 57.46. *Polites* and *astos* juxtaposed in Arist. *Ath. Pol.* 26.4.

⁹ For *aste*, see *Syll.*³ 1015.6–7 (Halikarnassos (C3)); *Egypt. I. Metr.* 33.1 (Naukratis). The feminine form *politiss* is sometimes used of females of citizen birth, see Arist. *Pol.* 1275^b33, 1278^a28; *IG* xii.7 386.21 (Aigiale (C3)); *IG* v.2 268B.31 (*politiss apo genous*, Mantinea (C1)); *I. Kos* 178.6 (Kos (C3)). For Athens, see Mossé (1985) 77–79. There is, we think, no attestation of *politiss* signifying a female citizen exercising citizen rights.

¹⁰ Citizens of a *polis* that founded a colony acquired citizen rights in the colony but lost *politeia* in their *polis* of origin; see Graham (1964) 111, 117. Most persons were citizens of one *polis* only, but double citizenship was not unknown; see Busolt (1920) 229–30 and *CPCActs* 5: 115 with n. 586. To have double citizenship became extremely common in the course of the Hellenistic period.

¹¹ Although the ancient Greeks showed a tendency towards clustering together in urban centres, it is a curious fact that they never coined a word to

From the primary sense of citizenship, *politeia* developed two secondary meanings: (a) in a very concrete sense *politeia* designated the body of citizens as opposed to all non-citizens;¹² (b) in a more abstract sense it designated the structure of the body of citizens¹³ and is traditionally and in our opinion correctly rendered “constitution” or “form of government”.¹⁴ Thus, in 378/7 the Athenians stipulated that each member of the Second Naval League was entitled to have the *politeia*, i.e. the type of constitution it preferred (*IG* II² 43.20–21); and in 338/7 all members of the Corinthian League agreed under oath that they would not interfere with the *politeia*, i.e. constitution, of any of the other members (Dem. 17.10 = *Staatsverträge* 403).

It is apparent from both sources that different *poleis* had different forms of *politeia*,¹⁵ and in Greek political theory *politeiai* were divided into types according to how many people constituted and manned the principal organs of government. Basically, there were three constitutional types: the rule of the one, the few and the many. Pindar is the first we know who distinguished between rule by a tyrant, or the wise, or the whole army.¹⁶ About a generation later, Herodotos has a debate about the three basic types of constitution, here described as *demos*, *oligarchia* and *monarchia*.¹⁷ In C4e Plato called the three forms *tyrannis*, *aristokratia* and *demokratia*.¹⁸ In C4f the theory was further developed and extended by giving each of the three main types a positive and a negative variant (i.e. one a Good Thing and the other a Bad Thing). That theory can be found *in nuce* in Xenophon’s *Memorabilia* and fully developed in Plato’s

denote the urban population—like our “townsman” in English or “Städter” in German or “citadin” in French. The term *polites* is almost invariably linked to the concept of *polis* in the political sense and only very exceptionally used in the sense of townsman (Hom. *Od.* 7.13; Pl. *Resp.* 370C).

¹² *SEG* 9 1.61: οἱ ἄλλοι πάντες οἱ ἐν τῇ πολιτείᾳ; Lycurg. 1.79; Arist. *Pol.* 1297^b1, 12, 37, cf. Hansen (1994) 95–97.

¹³ To Isokrates the *politeia* is the soul of the *polis* (7.14, 12.138); to Aristotle it is the form (*eidos*) of the *polis* (1276^b2–11, cf. *CPCActs* 5: 133). Bordes (1982) 127–38.

¹⁴ Lévy (1993) 75–90; Miller (1995) 143–53. A fourth sense, not relevant in this context, is “line of policy” advocated by a political leader (Aeschin. 3.150).

¹⁵ de Romilly (1959); Bleicken (1979).

¹⁶ Pind. *Pyth.* 2.86–88: ἐν πάντα δὲ νόμον εὐθύγλωσσοσ ἀνὴρ προφέρει, παρὰ τυραννίδι, ζῆλόπταν οὐ λάβρος στρατός, ᾧ πάντων οἱ σοφοὶ τηρέωντι (“A man straightforward in speech brings forward social order to everything he does, both under a tyranny, and when the boisterous host, and when the wise watch over the city”, trans. Ostwald (2000) 15).

¹⁷ Hdt. 3.82.1: τριῶν γὰρ προκειμένων καὶ πάντων τῷ λόγῳ ἀρίστον ἔχοντων, δῆμον τε ἀρίστου καὶ ὀλιγαρχίας καὶ μονάρχου πολλῶ τοῦτο πρόεχευ λέγω (repeated in 82.5) (“In so far as three (types) are under debate and all are presented in the best possible light: the best form of *demos*, *oligarchia* and *monarchos*, I hold that the last one is the best”).

¹⁸ Pl. *Resp.* 338D: τὸν πόλεωσ αἱ μὲν τυραννοῦνται, αἱ δὲ δημοκρατοῦνται, αἱ δὲ ἀριστοκρατοῦνται (cf. 338E) (“Of the *poleis* some are governed in a tyrannical, some in a democratic, and some in an aristocratic fashion”).

Statesman,¹⁹ but it received its classic formulation in Aristotle, in book 8 of the *Nicomachean Ethics* and especially in book 3 of the *Politics*.²⁰ He distinguished between a good and a bad form of monarchy (*basileia* versus *tyrannis*), minority rule (*aristokratia* versus *oligarchia*) and majority rule (*politeia* versus *demokratia*).

To what extent does Aristotle’s systematic classification of *politeiai* match the *polis* world in which he lived? If we move from philosophy to history, the basic tripartition is found in both literary and epigraphical sources. Thucydides presents as the Thebans’ view in 428 that there are three types of constitution: *demokratia*, *oligarchia* and *tyrannis*, but *oligarchia* is attested in two forms: a positive one called *isonomos oligarchia* and a negative one described as *dynasteia oligon andron*.²¹ A speech delivered before the Athenian jurors in 400/399 distinguishes between *demos*, *oligarchia* and *tyrannos*.²² In a treaty of 362/h between the Athenians, the Arkadians, the Achaians, the Eleans and the Phleasians, the three types are called *demos*, *oligarchia* and, probably, *tyrannos*.²³ In 345 and again in 330 Aischines stated that any community had one of three *politeiai*: either *tyrannis*, or *oligarchia* or *demokratia*.²⁴ In a contemporary treatise Isokrates refers to the three types as *monarchia*, *oligarchia* and *demokratia*.²⁵

Admittedly, the classification of constitutions is best attested in Athenian sources. Yet, Pindar was from Thebes, Herodotos from Halikarnassos, Thucydides claims to report a Theban view, and the tripartition is found in three East Greek documents of the early Hellenistic period: a C3e law from Ilion regulates how *demokratia* can be protected

¹⁹ Xen. *Mem.* 4.6.12; *Cyrop.* 1.1.1; Pl. *Pol.* 291C–292A, cf. *Leg.* 712C.

²⁰ Arist. *Pol.* 1279^b22–^b10, cf. *Eth. Nic.* 1160^a31–^b21; Hansen (1993); Rowe (1998).

²¹ Thuc. 3.62.3: ἡμῶν γὰρ ἡ πόλις τότε ἐτύγχανεν οὔτε κατ’ ὀλιγαρχίαν ἰσόνομον πολτεῦουσα οὔτε κατὰ δημοκρατίαν ὅπερ δὲ ἐστὶ νόμοις μὲν καὶ τῷ σωφρονεστάτῳ ἐναντιώτατον, ἐγγυτάτῳ δὲ τυράννου, δυναστεία ὀλιγῶν ἀνδρῶν εἶχε τὰ πράγματα (“At that time our *polis* happened to be governed neither as an *isonomos oligarchia*, nor as a *demokratia*. No, a *dynasteia* of a few men was in power and that is the opposite of constitutional and prudent government and very close to tyranny”). The adjective *isonomos* suggests that the positive form of *oligarchia* is close to *demokratia*, cf. Thuc. 3.82.8, whereas the negative form of *oligarchia* is close to *tyrannis*. For the description of *oligarchia* as such as a *dynasteia oligon*, see Plato. *Plt.* 291D.

²² Lys. 6.30: τὸν ἀνδρα οὐ δῆμος, οὐκ ὀλιγαρχία, οὐ τύραννος, οὐ πόλις ἐθέλει δεῖξασθαι (“No one would admit this man, neither a *demos*, nor an *oligarchia*, nor a *tyrannos*, nor a *polis*”).

²³ Heavily but plausibly restored at *IG* II² 112.24–26: [ἐὰν δὲ τις] . . . τὸν δῆμον [καταλύη τὸν Ἀθηναίων ἢ τυράννον κα]θιστήη ἢ ὀλιγαρχίαν . . . (“If anyone tries to abolish the Athenian *demos*, or tries to set up a *tyrannos* or an *oligarchia* . . .”).

²⁴ Aeschin. 1.4: ὁμολογοῦνται γὰρ τρεῖς εἶναι πολιτεία παρὰ πᾶσιν ἀνθρώποις, τυραννὶς καὶ ὀλιγαρχία καὶ δημοκρατία (repeated at 3.6) (“It is commonly agreed that in the whole world there are three forms of *politeia*: *tyrannis*, *oligarchia* and *demokratia*”).

²⁵ Isoc. 12.132: ἐγὼ δὲ φημὶ τὰς μὲν ιδέας τῶν πολιτειῶν τρεῖς εἶναι μόνας, ὀλιγαρχίαν, δημοκρατίαν, μοναρχίαν (“I hold that there are three forms of *politeia* altogether: *oligarchia*, *demokratia* and *monarchia*”).

against *oligarchia* and the rule of a *tyrannos*;²⁶ a C4–C3 decree from Erythrai was passed after the restoration of democracy (*demos*) in order to prevent future attempts to instal a tyrant (*tyrannos*) or an *oligarchia*;²⁷ and a civic oath from Kalymna from the same period makes the citizens swear that they will not install a tyrant (*tyrannos*) or an *oligarchia* or any other constitution (here called *politeuma*) except *demokratia*.²⁸

So, the tripartition of types of constitution was not just a philosophical idiosyncrasy, nor was it an invention of Plato and Aristotle to classify the forms of constitution according to the number of rulers. The numerical classification is clearly attested in many other and sometimes older sources: both *basileia* and *tyrannis* are characterised as forms of *monarchia*.²⁹ The term *oligarchia* means the rule of the few. In democratic ideology *demos* is identified with the whole of the citizen body,³⁰ and idioms like the rule of *to plethos* or *hoi polloi* are used synonymously with *demokratia*.³¹

On the other hand, what is attested in all sources is the basic tripartition into *tyrannis*, *oligarchia* and *demokratia*. The division of each of the three basic types into two subtypes seems to have been peculiar to the Athenian philosophers. Aristotle had it from Plato, and since it is found both in Plato and in Xenophon's *Memorabilia*, it may go back to Sokrates.

From a theoretical point of view, that of Plato and Aristotle, *basileia* was primarily the positive form of monarchy and *tyrannis* its perversion. In a historical perspective, prominent in other sources, *basileia* was an old form of constitution, known from Homer and echoed in Attic tragedy. It had survived in Sparta, in remote regions and among the barbarians (*infra*), but in the period best covered by our

²⁶ *Iliion* 25.19–22: [ὁς δ'] ἂν ἀποκτείνῃ τ[ὸν τ]ύραννον ἢ τὸν ἡ]γεμόνα τῆ[ς] δλιγαρχ[ί]ας ἢ τὸν τῆν δ[ημοκρα]τίαυ καταλύον[τ]α . . . [τά]λαντον ἄργυρ[ί]ον λαμβάνειν παρὰ τῆς πό[λεως] . . . (cf. 43–46, 116–19) (“Whoever kills the *tyrannos* or the leader of the *oligarchia* or the man who attempts to abolish the *demokratia* . . . shall receive a talent of silver from the *polis*”).

²⁷ *I.Erythrai* 503.2–6: ἐπειδὴ οἱ ἐν τῇ δλιγαρχίᾳ τῆς εἰκόνας τῆς Φιλίτου τοῦ ἀποκτείναντος τὸν τύραννον τοῦ ἀνδριάντος ἐξέλιοντο ξίφος, . . . ὅπως ἂν ὁ δῆμος φαίνεται πολλὴν ἐπιμέλειαν ποιούμενος . . . τῶν ἐνεργετῶν . . . δεδόχθαι τῇ βουλῇ καὶ τοῦ δήμου . . . (“Since the ruling oligarchs took away the sword from the statue of Philotes who had killed the tyrant . . . and in order to demonstrate that the *demos* cares for its benefactors, it has been decided by the *boule* and the *demos* . . .”).

²⁸ *Tit. Cal.* xii 21–22: δλιγαρχίαν δὲ οὐδὲ τύραννον οὐδὲ ἄλλο πολίτευμα ἕξω δαμοκρατίας οὐ καταστάσω (“I shall not set up an *oligarchia* or a *tyrannos* or any other form of *politeuma*, except *demokratia*”). For *politeuma*, see Lévy (1993).

²⁹ *μοναρχία* and *βασιλεία*: Pind. *Pyth.* 4.165–66; Isoc. 5.107; *μοναρχία* and *τυραννίς*: Hdt. 7.154.1; Thuc. 1.122.3.

³⁰ Thuc. 6.39.1: ἐγὼ δὲ φημι πρῶτα μὲν δῆμον ξύμπαν ὀνομάσθαι, δλιγαρχίαν δὲ μέρος (“I hold that *demos* is a name designating all (citizens), *oligarchia* just a part”).

³¹ τὸ πλῆθος: Lys. 28.13; Isoc. 1.36; οἱ πολλοί: Aeschin. 3.234; Thuc. 2.37.1.

Classical sources, c.450–323, it was no longer a constitution practised in the Greek world of *poleis*.³² It is worth noting that Aristotle shares the historical view when he moves from the more theoretical approach in book 3, chapters 7–8, to a more political analysis in chapter 14.³³ Also, the 158 Aristotelian *politeiai* were subdivided into four categories: democratic, oligarchic, tyrannical and aristocratic constitutions. *Basileia* is notoriously absent.³⁴

Apart from Plato and Aristotle, praise of *aristokratia* as the positive form of rule of the few is attested in a few sources only,³⁵ and then in a dubious context: in Thucydides, moderate *aristokratia* is held up as a suspicious political slogan for what he in other contexts calls *oligarchia*,³⁶ and in Aristophanes' *Birds* the verb *aristokrateisthai* is supposed to denote an attractive form of government but is used as a punning joke on Aristokrates the son of Skellias who a few years later was one of the 400 oligarchs.³⁷ In the comic poet Heniochos, *aristokratia* is juxtaposed with *demokratia* and both are derided as bad forms of constitution.³⁸ In Isokrates, *aristokratia* is a characteristic not of the rule of the few but of the Athenian democracy as instituted by Theseus.³⁹ On the other hand, both the noun *aristokratia* and the words derived from it occur frequently in Plato and abound in Aristotle to describe the positive counterpart of *oligarchia*; according to Xenophon, Sokrates used *aristokratia* in this sense,⁴⁰ but it is extremely rare in other literary sources of the Classical period and unattested in inscriptions.⁴¹

Finally, the systematic subdivision of popular rule into two variants is peculiar to Plato and Aristotle. Admittedly, Aristotle disclaims responsibility for having invented the use of the word *politeia* as a term for a positive form of popular

³² Carlier (1984) 137–230 (Homeric kingship), 240–324 (Spartan kingship), 325–484 (kingship in other *poleis*).

³³ Hansen (1993) 95.

³⁴ Diog. Laert. 5.27: πολιτεία πόλεων δυοῖν δεοῦσαν ῥεῖ κατ' εἶδη δημοκρατικά, δλιγαρχικά, τυραννικά, ἀριστοκρατικά (“158 constitutions of *poleis* according to their form: democratic, oligarchic, tyrannical, aristocratic”).

³⁵ Herodotus describes the rule of *hoi aristoi* as *oligarchia*; Hdt. 3.81.1: δλιγαρχία, 3: ἄνδρες οἱ ἀριστοί.

³⁶ Thuc. 3.82.8: πλῆθος ἰσονομίας πολιτικῆς καὶ ἀριστοκρατίας σώφρονος προτιμήσει (“a preference either for the political *isonomia* of the people, or for a moderate *aristokratia*”); see also 8.64.3. Cf. 5.31.6 where the opposition is between *demokratia* and *oligarchia*.

³⁷ Ar. Av. 125–26, cf. Dunbar (1995) 172–73.

³⁸ Heniochos fr. 5.15–17: γυναῖκα δὲ αὐτὰς [πόλεις] δύο ταραττέτον τινε αἰε συνοῦσαι. Δημοκρατία θατέρα ὀνομ' ἐστὶ τῇ δὲ Ἀριστοκρατία θατέρα, δι' ἧς παπερνήκασιν ἦδη πολλὰκις (“Two women disturb them [the *poleis*] continuously by their presence: one is called *demokratia* the other *aristokratia*; and because of them they have often behaved like drunkards”).

³⁹ Isoc. 12.131, 153.

⁴⁰ Xen. Mem. 4.6.12.

⁴¹ The only epigraphic reference to *aristokratia* is in a C3e hymn from Epidauros (*IG* 1v².1 128.3).

rule.⁴² He may have been influenced by the Attic orators' use of the term *politeia* as a synonym for *demokratia*.⁴³ In any case, the only epigraphical attestation of *politeia* as a specific form of constitution is almost completely restored.⁴⁴

To conclude, the sixfold model of constitutions and the classification of *basileia* and *aristokratia* as the positive forms of *tyrannis* and *oligarchia* seem to be the invention of the followers of Sokrates, primarily Plato and Aristotle, and it is undoubtedly due to their influence that *aristokratia* became established as a specific type of constitution and received an important after-life from Polybios in the Hellenistic period lasting to the present day.

Even if we restrict the analysis to the basic tripartition of constitutions, there is an important difference between the philosophers and all other contemporary sources: in Plato and Aristotle *tyrannis*, *oligarchia* and *demokratia* are the perverted variants of the rule of the one, the few and the many. In other sources *demokratia* is singled out as the good form of constitution, whereas *tyrannis* and *oligarchia* in the Classical period almost invariably are criticised as bad constitutions.⁴⁵ The last one to treat *tyrannis* as an acceptable form of constitution was Isokrates, in speeches composed in C4e, and by then he was the only author to take that view.⁴⁶ In his constitutional debate Herodotos makes Megabyxos speak in praise of *oligarchia*; in Thucydides the Thebans describe their present constitution as an oligarchy based on equality (*oligarchia isonomos*). Isokrates admits that *oligarchia*, like democracy and monarchy, can be a good form of constitution if only the best citizens are placed in positions of power. And in the so-called *Rhetoric to Alexander*, usually ascribed to Anaximenes of Lampsakos, there is an analytical and unbiased passage about legislation in oligarchies, probably the most important impartial account of *oligarchia*, although it is mostly overlooked.⁴⁷ These four scattered sources make up the neutral or positive references to *oligarchia*. Yet the rule of the one and the rule of few were rather common forms of constitution in the age of Plato and Aristotle (*infra*). Apart from Sparta and some peripheral regions of the Hellenic world,⁴⁸ there is no

evidence that a monarch who ruled a *polis* would call himself *basileus*. Nor would he call himself a *tyrannos*. We are in fact ignorant of how a monarch of the Classical period would describe himself or be described by his subjects. The Deinomenid monarch Polyzelos had himself inscribed as *anax* of Gela on the bronze charioteer in Delphi,⁴⁹ and the Bosporan princes of Pantikapaion used the title *archon*.⁵⁰ Similarly, there is no compelling evidence that the few who in many *poleis* had monopolised the government would call themselves *hoi oligoi* and their constitution *oligarchia*, nor would they commonly use the terms *hoi aristoi* and *aristokratia*.⁵¹ We are deplorably ignorant of the ideology and organisation of tyrannies and oligarchies. Most of what we know, we owe to Plato's and Aristotle's negative accounts. We conclude that what we really lack in order to understand the types of constitution in the Greek *poleis* in C5–C4 is not a positive account of democracy—there are plenty, cf. Raafaub (1989)—but positive or at least neutral descriptions of the constitutions that are classified as oligarchies and tyrannies.⁵²

Thus, in the Inventory, when we classify the constitution of a *polis*, we distinguish between *basileia*, *tyrannis*, *oligarchia* and *demokratia*, but we ignore variants of the two latter types, and all attestations of *basileia* belong in the Archaic period. Monarchies of the Classical period are classified as monarchies (Mon.) if we do not know that they were considered to be tyrannies. Assigning a *polis* constitution to one of the basic four types is often impossible, and even when we have some relevant information it is not always easy. The technical terms—*tyrannis*, *oligarchia*, *demokratia* and their derivatives—are only occasionally used in our sources, and in many cases the classification has to be based on an interpretation of how the attested political institution works and what the decision-making stratum of the citizen population is called. If major decisions are left to a general assembly, it is an indication of democracy, whereas major decisions made by a *boule* or by magistrates point to an oligarchy. If those in power are called *plousioi* or *pacheis* or *hoi oligoi*, the constitution is registered as an *oligarchia*, whereas a democracy is suggested by the use of *hoi aporoi*, *to plethos*, *pantes* or *demotikos*, etc. In a few cases of serious doubt, we

⁵⁰ RO 65: ἀρχοντας Παιρισάδεος Βοσπόρου καὶ Θεοδοσίης, καὶ βασιλεύοντος Σινδῶν καὶ Μαϊτῶν πάντων. It is worth noting that Pairsades uses the title *archon* in relation to the Greek *poleis* but *basileus* in relation to the indigenous tribes.

⁵¹ For a discussion of the terms used to designate the ruling class in an oligarchy, see Schulz (1981) and Stein-Hölkeskamp (1989) 8 and *passim*.

⁵² For oligarchy, see Ostwald (2000); for tyranny, see Berve (1967).

have used Mix.? to describe a *polis* with an unidentifiable mixture of characteristics, and that leads to the next major problem: what about the “Mixed Constitution”?

In actual fact, all *polis* constitutions were mixed. As noted by Aristotle, each constitution was composed of a number of elements, and each element could be essentially democratic (e.g. sortition of magistrates from among all citizens) or essentially oligarchic (e.g. election of magistrates by and/or from among citizens who fulfilled a census requirement) (*Pol.* 1298^a10–1301^a15). But in an oligarchy some officials might be selected by lot. In democracies some major magistracies were filled by election, and for others eligibility depended on a census requirement. Both in tyrannies and in oligarchies, there could be a general assembly in which major decisions were made or at least ratified by acclamation.⁵³ It was the overall character of a constitution that was taken into account when a *politeia* was classified as a *tyrannis* or an *oligarchia* or a *demokratia*. As appears from all the sources cited above, the generally accepted view was that every constitution would belong to one of the three basic types. The mixed constitution appears as a specific type of constitution alongside the three types in late sources only.⁵⁴

Furthermore, the mixed constitution was a theoretical construction, much discussed by the philosophers, but with very few attested echoes outside their schools.⁵⁵ As pointed out above, the basic tripartition of constitutions into the rule of the one, the few and the many, i.e. *tyrannis*, *oligarchia* and *demokratia*, is found in all sources: both in documents and in all literary genres (poetry, history, rhetoric and philosophy), and it is known from both Athenian and non-Athenian sources. To the end of the Classical period the mixed constitution is known exclusively from Athenian political philosophy. It is unattested in inscriptions, in speeches delivered before the assembly or the court, and in historians with one single exception: Thucydides’ description of the constitution of the 5000 in Athens in 411–410 as “a balanced blending of the few and the many” (8.97.2). The picture changes somewhat in the Hellenistic period, and the oldest document in which we may find an echo of the mixed constitution is, we believe, in Kyrene’s constitution of c.321 (*SEG* 9 2).

⁵³ Oligarchies with an assembly include Sparta (Plut. *Lyc.* 6) and Thebes (Hdt. 5.79.1). The typical Cretan *polis* seems to have had an *ekklisia* with restricted powers (Arist. *Pol.* 1272^a10–12). In Athens meetings of the assembly continued under the tyranny of Peisistratos (Arist. *Ath. Pol.* 16.8 with Rhodes (1981) 218–19). Meetings of the assembly in Syracuse were still convened under the tyranny of Dionysios I (Diod. 14.64.5; Arist. *Oec.* 1349^a34).

⁵⁵ Aalders (1968); Nippel (1980).

What picture do we get of the basic types of constitution if we turn from the general descriptions of the types to what we know about the constitution of individual *poleis*? As appears from Index 11, we have some information about the constitution of close to 200 *poleis*, but often the information covers a few years only of the three centuries covered by this investigation. A full analysis of the material is impossible in this context. Two short comments must suffice to show its potential value.

(1) According to Aristotle, *oligarchia* and especially *demokratia* were overwhelmingly the commonest constitutions in Greece in his own time; *basileia* had virtually disappeared; furthermore, like kingship, *tyrannis* was more widespread in the earlier period and was no longer, says Aristotle, a common form of constitution.⁵⁶ Aristotle is right about *basileia*, but the evidence we have contradicts his views about *tyrannis*. A survey of Index 11 shows the following distribution of the three basic types of constitution in C4: *tyrannis* thirty-nine, *oligarchia* forty-seven, *demokratia* fifty-nine. Furthermore, *tyrannis* was not found only in remote regions such as Sicily or the Pontos. After a nadir in the Greek homeland in C5, tyrannies reappeared in C4 all over the Hellenic *polis* world, and in Aristotle’s lifetime *poleis* were ruled by tyrants in the Peloponnese, in Euboia, in Thessaly and in Lesbos, etc. Again, oligarchy was still a very common type of constitution, especially in C4f, and it is first in the age of Alexander that democracy becomes the predominant type of constitution.

(2) In modern peace research a popular theory is that democracies do not fight one another, and if all states in the world become democracies, there will be peace in the world. Since the Western democracies are young and even today constitute a minority among states, historical investigations have been adduced in support of the theory, and ancient Greek history in particular has been in focus.⁵⁷ It is held that in the Greek world there is only one example of a democracy fighting a democracy, namely the war between Athens and Syracuse in 415–413, and advocates of the democratic peace

⁵⁶ *Oligarchia* and especially *demokratia* as the prevailing types of constitution: *Pol.* 1286^b21–22, 1291^b7–13, 1296^b22–23, 1301^b30–40. *Basileia* virtually nonexistent in the age of Aristotle: *Pol.* 1313^a3–4; *tyrannis* not a common type of constitution either: *Pol.* 1305^b7–21. Monarchy superfluous in the fully developed *polis*: *De motu an.* 703^a29–34. See Hansen (1993) 93–96. Demosthenes, undoubtedly exaggerating, held the opposite view to Aristotle: oligarchy was the prevailing type of constitution and Athens was almost the only surviving democracy (Dem. 15.19).

⁵⁷ Weart (1998) criticised by Robinson (2001a). Weart’s reply (2001) is countered by Robinson (2001b).

theory often hold that, after all, Syracuse was not a true democracy.⁵⁸

The theory does not stand up to scrutiny.⁵⁹ First, Syracuse (no. 47) was a democracy in C5s. Second, a more careful examination of the historical record reveals that there are in fact numerous examples of wars between democratic city-states. In C5s Taras (no. 71), then a democratic *polis*, had a dedication sent to Delphi in which the Tarentines commemorated a victory over Thourioi (no. 74), colonised in 444/3 and issued with a democratic constitution allegedly

⁵⁸ Judiciously discussed and countered in Robinson (2001a).

⁵⁹ Focusing on the Peloponnesian War, Russett (1993) 43–71, in this chapter assisted by W. Antholis, has a whole list of wars between democracies. Their findings disprove the democratic theory, but the investigation is based on Rex Warner's translation of Thucydides combined with a somewhat superficial knowledge of the constitutions of the *poleis* in question; as a result the analysis is far from always convincing. Thus, the contention (57–58) that democratic Thourioi fought democratic Athens in 412/11 (Thuc. 8.35.1) overlooks the fact that Thourioi (no. 74) in 413 had exiled 400 Athenians and probably introduced an oligarchic constitution. For a much more professional criticism of the theory, see Robinson (2001a).

written by Protagoras. In 424 Athens attacked the democratically governed *polis* of Herakleia Pontica (no. 715). In 373 democratic Thebes (no. 221) conquered and destroyed democratic Plataiai (no. 216). In the 360s Athens made several attempts to reconquer Amphipolis (no. 553), probably a democracy at the time. The Social War was fought in 357–355 between Athens and four members of the Second Athenian Naval League: Byzantion (no. 674), Chios (no. 40), Kos (no. 497) and Rhodos (no. 1000); of these, Byzantion, Kos and Rhodos were democracies and only Chios had an oligarchic constitution. In all these cases the war must have been decided by a vote taken among the people in assembly. Other examples can easily be added⁶⁰ and they indicate that the people as a whole seemed to be just as militant and bellicose as a ruling upper class or a single ruler, whether hereditary or elected.

⁶⁰ Robinson (2001a) 603–4 correctly points to the war between Syracuse (no. 47) and Akragas (no. 9) c.445.

A Typology of Dependent *Poleis*

One of the objectives of the Polis Centre has been to dissociate the concept of *polis* from the concepts of independence and *autonomia*, and to introduce the concept of the dependent *polis*.¹ This concept, however, is very complex: dependent *poleis* existed in many different shapes and sizes, and certain types of dependent *poleis* were common in some regions but virtually non-existent in others. We have isolated the following fifteen different types of dependent *polis*.

- (1) A *polis* situated inside the territory of a larger *polis*, e.g. Mykalessos inside Tanagra (Boiotia).
- (2) A *polis* in the *peraia* controlled by an island, e.g. the Aktaian *poleis* controlled by Mytilene.
- (3) An *emporion* organised as a *polis* dependent on a larger *polis*, e.g. the Thasian *emporion* on the coast of Thrace, or on a barbarian overlord, e.g. Naukratis.
- (4) A colony being a *polis* dependent on its mother city, e.g. the Corinthian colonies, of which Ambrakia may serve as an example.
- (5) An Athenian *klerouchy* and/or colony, e.g. Hephais-tia and Myrina on Lemnos.
- (6) A perioikic *polis* in Lakonia, e.g. Kythera.
- (7) A *polis* that is a member of a federation, e.g. Orchomenos, which regained its *autonomia* in 395 when it broke away from the Boiotian Federation.
- (8) A *polis* that is a member of a hegemonic league (*symmachia*) which has developed into an “empire” (*arche*), e.g. the *hypekooi poleis* in the Delian League.
- (9) A *polis* that persists as a *polis* after a *sympoliteia* with another *polis*, e.g. Helisson after its *sympoliteia* with Mantinea.
- (10) A *polis* that persists as a *polis* after a *synoikismos*, e.g. Ialysos, Kamiros and Lindos after the foundation of Rhodes in 408/7.
- (11) A *polis* that, together with other *poleis*, makes up a

“tribal state”, e.g. the Mainalian *polis* Pallantion in Arkadia.

- (12) A *polis* that is controlled by an empire/kingdom, e.g. the *poleis* in Ionia ruled by the Persian king from c.540 to the 470s and again from the King’s Peace of 386 to Alexander’s conquest of Asia Minor in 334.
- (13) A *polis* founded as a fortress, e.g. Mesambrie, a Samothrakian *teichos* on the Thracian coast, or Kasmenai, a Syracusan fortress west of Akrai.
- (14) A major port of an inland *polis*, e.g. Notion, the port of Kolophon.
- (15) A *polis* that is at the same time a civic subdivision of another *polis*, e.g. Koresia on Keos, which is a *phyle* of Ioulis; Helisson, which is a *kome* of Mantinea; and Dion, which is a *demos* of Histiaia.

First, there is, of course, a considerable overlap between the different types.

The Thasian *emporion* (3) were situated in the *peraia* (2) and were thus *poleis* inside the territory of a larger *polis* (1).

Naukratis was an *emporion* (3) controlled by the Pharaoh (12).

The Lakonian perioikic communities (6) were all situated in the territory of the Spartan *polis* (1).

Notion, the port of Kolophon, may have been an *emporion* (3) and was in any case situated inside the territory of Kolophon (1); furthermore, after the King’s Peace of 386 both Kolophon and Notion were ruled by the king of Persia (12).

An *emporion* (3) might be a colony dependent on its mother city (4), e.g. Olbia, which kept up close relations with Miletos even in C4.

In the *sympoliteia* treaty between Helisson and Mantinea (9) it is explicitly stated that Helisson became a part of Mantinea (1).

Poteidaia was both a Corinthian colony controlled by the mother city (4) and a dependent member of the Delian League (8).

This chapter is a revised and updated version of Hansen (1997).

¹ For the concept of the dependent *polis*, see Hansen (1993) 18–20, (1994) 16, (1995a) 34–39, (1995b), (1995c) 73–78, (1996b) 127–33. By far the best treatment of dependencies in the ancient Greek world is Gschnitzer (1958). It is important to note that Gschnitzer intentionally avoids addressing the question to what extent dependencies were *poleis* (141–53). Instead, he applies two modern criteria: (1) die Abhängigkeit von einem Vorort, (2) das Verfließen des Staatsbegriffs (143ff).

Kythera was both an island controlled by a mainland *polis* (2) and a perioikic community (6).

Helisson became a dependent *polis* in consequence of a *sympoliteia* (9), but was also a *kome* of Mantinea (15).

Kamiroi, Ialysos and Lindos persisted as dependent *poleis* after the synoecism of Rhodos in 408/7 (10) but, by the same event, they became *phylai* of the new Rhodian *polis* (15).

Second, each type allows of a whole range of relations between larger and smaller *poleis* so that the line between independent and dependent *poleis* is fairly easy to understand in principle, but almost impossible to draw in practice.

All the information we possess about member states of federations being deprived of their *autonomia* concerns the Boiotian Federation and the Chalkidic Federation, which were both hegemonic in type and dominated by, respectively, Thebes and Olynthos. The relation between the *poleis* and the federal institutions may have been different in, e.g., the Phokian and the Arkadian federations, neither of which seems to have been dominated by one of the constituent *poleis*. In these two cases, and in others as well, the member states may have retained their *autonomia* unimpaired. Similarly, leagues, and even hegemonic leagues, were in principle alliances between independent *poleis*, and the members were reduced to dependencies only if the *hegemon* succeeded in turning the *symmachia* into an *arche*.

Some of the perioikic communities were obviously dependent *poleis*, but others seem to have been *komai*, e.g. Oion in Skiritis (Xen. *Hell.* 6.5.25–26).

Third, having established the concept of the dependent *polis*, and having disposed of independence as the essential criterion for distinguishing a *polis* from a municipality, we have to address the question: if many *poleis* were dependencies, what was then the difference between a dependent *polis* and a civic subdivision, such as a *demos*, a *kome*, a *phratria*, a *phyle*, etc.?²

Like a *polis* (dependent or independent), a civic subdivision could have its own temples, including a theatre, its own cults and its own festivals. It had its own assembly, in which both laws (*nomoi*) and decrees (*psephismata*) could be passed and taxes and liturgies imposed; there were separate local magistrates and a local court.³ But, in contradis-

inction to a *polis* (dependent or independent), a civic subdivision had no *prytaneion*, no *bouleuterion* and no *boule*; its members were citizens of the *polis* of which the subdivision was a part, and were not citizens of the civic subdivision as such; a local assembly had no right to pass citizenship decrees and proxeny decrees; a local court could impose fines but was not empowered to pass a sentence of death or exile, and no civic subdivision seems to have had a prison (*desmoterion*). A civic subdivision did not have its own coins, and it had no right to enter into relations with foreign states. The members of a civic subdivision could form a unit of the army of the *polis*, but would not operate as a separate army.

1. Evidence for the Examples Adduced Above

Re (1) Mykalessos (no. 212) is called a *polis* both in the urban and in the political sense by Thucydides at 7.29–30; the city-ethnic (in its collective and external use) is attested by Thuc. at 7.30.3; and Mykalessos struck coins on the Aiginetan standard from c.500 to 480 and from 387 (or earlier) to 374 (or later) (Head, *HN*² 346; cf. Hansen (1995a) 63). In the Hellenistic and Roman periods Mykalessos was located in the territory of Tanagra (no. 220) (Strabo 9.2.11, 14; Paus. 9.19.8), and that seems to have been the case already in C5e (Fossey (1988) 83–84, 222–23; Hansen (1995a) 36–37).⁴ Within the Tanagraian territory, however, Mykalessos had its own territory, called *Μυκαλησσός*, which seems to have stretched as far as the Euboian Gulf (Paus. 9.19.5; Bakhuizen (1970) 20–21, 148–49).

Re (2) The Aktaian *poleis* were a cluster of *poleis* on the coast of Asia Minor north and east of Lesbos, possessed by the Mytilenians (no. 798) in C6–C5 (Thuc. 3.50.3, 4.52.3). As listed in the assessment decrees of 425 and 421, the group consisted of *Α[χίλλε]ιον* (no. 766), *Ἄνταν[δ]ρο[ς]* (no. 767), *ἡ[αμάχ]σιτος* (no. 778), *Ἴ[λιον]* (no. 779), *Α[άρι]σα* (no.

Index III in Jones, *POAG* 396–404. For the Attic demes, see Whitehead (1986). Two of the best Classical sources for civic subdivisions outside Athens are the regulations for the *phratria* of the Labyadae at Delphi (*CID* 1 9 (C4f)) and the decrees passed by the *phratia* of the Klytidae at Chios (Michel 997 (C4l)).

⁴ In 431 Aulis was presumably one of the unwallied settlements incorporated into Thebes ([*Ἀὐ*]λίδος at *Hell. Oxy.* 20.4 as restored by all editors). In that case Mykalessos may have been situated in the territory of Thebes rather than in that of Tanagra (so Roesch (1965) 38, 51); but that does not affect the basic point made here: both in the political and in the urban sense Mykalessos was a dependent *polis* lying in the territory of a larger *polis*. That Aulis belonged to Tanagra in C3 is apparent from Nikokrates (*FGrHist* 376) fr. 1.

² For the concept of “civic subdivision”, see Jones, *POAG* 3–11 and *passim*.

³ For all the activities within the powers of civic subdivisions, see Analytical

784), Ὀ[φρύν]ειον (no. 786), Ροίτειον (no. 790), Νῆσος Πορδοσελένε (no. 831) and several others (IG I³ 71.III.124–40, 77.IV.14–27). They belonged to Mytilene but passed to the Athenians in 427 after they had suppressed the Mytilenians' revolt (Thuc. 3.50.3). In 424 several of them were reconquered by Mytilenian refugees (Thuc. 4.52.3), but at least Antandros was soon recovered by the Athenians (Thuc. 4.75.1). They are called *poleis* by Thucydides at 4.52.3, where *polis* is used in the urban and political senses combined, and that they were *poleis* in the political sense can be further corroborated, e.g. in the case of Antandros. The city-ethnic Ἀντανδριοί is used at Thuc. 8.108.4; from c.440 onwards Antandros issued coins inscribed *ANTAN* (Head, *HN*² 541); and in 410 the Antandrians voted to give *politeia* to the Syracusans (Xen. *Hell.* 1.1.26).

Re (3) In his description of Xerxes' march through Thrace, Herodotos refers to a number of *poleis* belonging to the Thasians (no. 526) (Hdt. 7.108.2, 109.2). The same part of the Thracian coast is described by Thucydides in his account of Thasos' revolt against Athens, and the Thasian possessions on the coast are here referred to as being *emporía* (Thuc. 1.100.2, cf. also Dem. 50.47). Three of them, *viz.* Galepsos (no. 631), Oisyme (no. 635) and Phagres (no. 636) are mentioned by name in Ps.-Skylax 67, where they are listed under the heading πόλεις Ἑλληνίδες αἰδε and further described as ἐμπόρια (Hansen (2004a)).

In Herodotos Naukratis (no. 1028) is described both as a *polis* and as an *emporion* (Hdt. 2.178.1, 179.1). That Naukratis was a dependency is apparent, e.g. from the royal rescript by which Nectanebo I (378–60) imposed a 10 per cent tax on all gold, silver and manufactured goods in Naukratis (quoted in Lloyd (1975) 28). That it was also a *polis* is strongly indicated by the following three observations: (a) Herodotos' consistent use of *polis* to denote an urban centre which was also a *polis* in the political sense; (b) the reference to a *prytaneion* in Naukratis in a work by, presumably, the C4 historian Hermeias of Methymna (Ath. 149D = *FHG* II 80 fr. 2; (c) the use of the city-ethnic *Ναυκρατίτης* in proxeny decrees, Delphic accounts and Attic sepulchral inscriptions (cf. no. 1028 and *supra* 64).

Re (4) Ambrakia (no. 113) was a Corinthian colony (Thuc. 2.80.3). Like many other Corinthian colonies it retained very close relations with its mother city, and was in fact a Corinthian dependency from its foundation to the end of the Classical period: in the Archaic period Ambrakia was ruled by members of the Kypselid family (Arist. *Pol.* 1304^a31–33, 1311^a40), its coins had Corinthian types, and some were

in fact struck in Corinth (Graham (1964) 121–22); as late as 341 Ambrakia is still described as a Corinthian possession (Dem. 9.34). Thus, Ambrakia was a dependency, but there can be no doubt that it was also a *polis*: it is repeatedly referred to as a *polis* both in the urban sense (Thuc. 3.113.2, 4, 5) and in the political sense (Thuc. 3.113.6). After the expulsion of the tyrants Ambrakia had a democratic constitution (Arist. *Pol.* 1304^a31–33), and the Aristotelian collection of constitutions included an *Ambrakioton politeia* (fr. 481.1). Ambrakia is listed as a *polis* providing seven ships to the Greek fleet in 480 (Hdt. 8.42.1, 45.1, 49.1); in 426/5 Ambrakia concluded a peace with Akarnania and Amphilocheian Argos (Thuc. 3.114.3); and c.330 a *theorodokos* was appointed to host the *theoroi* announcing the Heraia at Argos (*SEG* 23 189.1.10).

Re (5) In 499 Lemnos was settled with Athenians (Hdt. 6.137–40; IG I³ 522 *bis*, 1164–65; IG XII Suppl. 337, cf. Figueira (1991) 253–56; Salomon (1997) 31–37), in C5m probably supplemented with klerouchs (Graham (1964) 178–84). Whether the Athenians were full citizens is still in dispute (Salomon (1997) 31–66), but nobody disputes that Lemnos was an Athenian dependency. Yet the two cities on the island, *viz.* Myrina (no. 502) and Hephaistia (no. 503), are classified as *poleis* in one of the subheadings in the Athenian tribute lists: [πόλ]ες αἰδε στρατιάι μισθὸν ἐτέλεσαν . . . Ἐφαιστιῆς, Ἰμβριοί, Μυρναῖοι vacat (IG I³ 285 col. 1.107–11). Furthermore, the inhabitants are recorded with their own ethnics (cf. Hdt. 6.140.2) and not recorded as “Athenians living in . . .”. In C4 the Lemnians were klerouchs (*Agora* XIX L3.33–34; Cargill (1995) 60) and Athenian citizens (Dem. 4.34). It is a moot point whether it is possible to distinguish between Athenian klerouchs and Athenians permanently settled on the island as argued by Salomon (1997) 91–154. Yet in the King's Peace of 386, the Athenian possessions Lemnos, Imbros and Skyros are explicitly described as *poleis* exempted from the *autonomia* clause (Xen. *Hell.* 5.1.31) and both cities on Lemnos are called *poleis* in the political sense by the Athenian Lykophron, who had served two years on Lemnos as *hipparchos* (Hyp. 2.18). Both Myrina and Hephaistia struck bronze coins from C4f onwards (Kroll and Walker (1993) 179).

Re (6) Kythera (no. 336) was a perioikic community, ruled by a *kytherodikes*—a Spartan official elected for one year—and controlled by a garrison of hoplites (Thuc. 4.53.2); but like many other perioikic communities it is called a *polis* (Thuc. 4.54.1–2; Ps.-Skylax 46), and the inhabitants are referred to by the name *Κυθηριοί*, which is probably a

city-ethnic and thus indicates their status as citizens. Other sources that refer to the Lakedaimonian perioikic communities as being *poleis* are: Pherekydes (*FGrHist* 3) fr. 168; Hdt. 7.234.2; Thuc. 5.54.1; Xen. *Hell.* 6.5.21; Ages. 2.24; *Lac. Pol.* 15.3; Ps.-Skylax 46; Isoc. 12.179; Strabo 8.4.11; Paus. 3.2.6; Polemon, *Περὶ τῶν ἐν Λακεδαίμονι πόλεων*, p. 50 Preller (C3–C2), cf. Shipley (1997).⁵

Re (7) Orchomenos (no. 213) was a member of the Second Boiotian Federation (*Hell. Oxy.* 20.3), but in 395 the Orchomenians joined Sparta and defected from the federation (Xen. *Hell.* 3.5.6). During the peace negotiations in 392/1 the Boiotians were prepared to renounce their claim to Orchomenos and allow the city to retain the *autonomia* it had obtained by breaking away from the Federation (Andoc. 3.13, 20).⁶ Similarly, the Spartans obviously believed that the members of the Boiotian Federation had been deprived of their *autonomia* (Xen. *Hell.* 3.5.18, 5.1.36, 6.4.3). The Plataians (and other Boiotian *poleis* as well) believed that they had been deprived of their *autonomia* (Isoc. 14.10, 17). The Athenian view, as expressed by Andokides (3.13, 20), Isokrates (14.10, 17) and Autokles (Xen. *Hell.* 6.3.9), seems to have been that Thebes had deprived the other Boiotian cities of their *autonomia*. And according to Xenophon, even the Thebans had to admit that the other Boiotian *poleis* were no longer *autonomoi* (*Hell.* 4.8.15, 5.1.32–36). See the Appendix *infra*.

Re (8) On *hypekooi* versus *autonomoi poleis* in the Delian League the principal source is Thucydides, and especially his list of Athenian allies at 7.57.3–5. At 57.3 he starts by making a clear-cut distinction between those who are *ὑπήκοοι* (= *φόρου ὑποτελείς*) and those who are *ἀπὸ ξυμμαχίας αὐτόνομοι* (7.57.3). According to the traditional interpretation of the passage, Thucydides mixes up the two categories in 4–5,⁷ but by taking proper note of the *μὲν* . . . *δέ* opposition in 4, it can be shown that Thucydides does respect the basic distinction between *ὑπήκοοι* and *αὐτόνομοι σύμμαχοι* all the way through the passage, and that, apart from the Chians and the Mytilenians, all other members of the Delian League had been enslaved and subjected: the Chians and the Mytilenians were the only *autonomoi symmachoi* left (cf. Hansen (1995b) 32–33; cf. also Thuc. 1.67.2, 1.139.1, 3;

1.140.3–4, 144.2, 3.10.5, 6.84.2–3). Being *autonomos*, however, was perfectly compatible with membership of a league as long as the conditions were not imposed unilaterally by the *hegemon*, and as long as the *hegemon* did not interfere in the domestic affairs of its allies; see Thuc. 1.97.1: *ἡγούμενοι δὲ αὐτονόμων τὸ πρῶτον τῶν ξυμμάχων καὶ ἀπὸ κοινῶν ξυνόδων βουλευόντων τοσάδε ἐπήλθον* (“exercising then what was at first a leadership over allies who were *autonomoi* and took part in the deliberations of common assemblies, the Athenians achieved the following results”, Loeb trans., modified); and the Peace of Nikias quoted by Thuc. at 5.18.5: *τὰς δὲ πόλεις φερούσας τὸν φόρον τὸν ἐπ’ Ἀριστείδου αὐτονόμους εἶναι* (“The *poleis* shall be *autonomoi* paying the *phoros* as it was under Aristides”).

Re (9) The C4e *sympolititeia* between Helisson (no. 273) and Mantinea (no. 281) includes the following provisions: *τὸς [Ἐ]λ[ι]σ[τ]ῶν Φάσιος Μαντινέας ἦναι Ἰῆσιος καὶ ὁμοίος . . . φέρ[ο]ντας τὰν χώραν καὶ τὰν π[ό]λιν ἢ Μαντιν[έ]αν . . . μόνοντας τὰς [πό]λεις τῶν Ἐλισφασίων ὡσπερ ἔχ[ε]ι ἢ πάντα χρόνον, κόμα[ν] ἔασαν τὸς Ἐλισφάσιος τῶν Μαντινέων—θέαρον ἦναι ἐξ Ἐλισό[ν]τι κατὰπερ ἐς ταῖς ἄλλαις πόλιν* (“The Heliswasians are to be Mantineans, with the same and equal rights . . . incorporating their *chora* and *polis* into Mantinea, while the *polis* of the Heliswasians remains as it is, for all time, the Heliswasians being a *kome* of the Mantineans. There is to be a *theoros* from Helisson, as there is from the other *poleis*”) (*SEG* 37 340.3–9 = RO 14). In this document the term *polis* is used three times about Helisson: twice explicitly and once implicitly. (1) In the phrase *φέρ[ο]ντας τὰν χώραν καὶ τὰν π[ό]λιν ἢ Μαντιν[έ]αν*, the emphasis is on Helisson as an urban centre rather than as a political community, cf. *DGE* 147.3–7 (= *Syll.*³ 141); *IOSPE* I² 401.1–7 (= *Syll.*³ 360); *Syll.*³ 647.8–9. (2) In the phrase *μόνοντας τὰς [πό]λεις τῶν Ἐλισφασίων ὡσπερ ἔχ[ε]ι ἢ πάντα χρόνον*, it is impossible to decide whether the reference is to Helisson as a town or as a political community. But, as noted 34 *supra*, the term *polis* is almost exclusively applied to a town which was also the centre of a *polis* in the political sense. (3) Finally, we believe that Helisson is implicitly described as a *polis* in the clause *θέαρον ἦναι ἐξ Ἐλισό[ν]τι κατὰπερ ἐς ταῖς ἄλλαις πόλιν*. A possible interpretation of this phrase is, admittedly, that Helisson is granted the right to send a *theoros* like the other communities (which are *poleis*), but this mostly poetic use of the pronoun *ἄλλος*, though attested (cf. e.g. Pl. *Grg.* 473D), is not often found in Classical prose, and the rendering “like the other *poleis*” is much more common and straightforward-

⁵ The *polis* status of the perioikic communities has been called in doubt by Mertens (2002). For a reply to Mertens, see Hansen (2004b).

⁶ It must, however, be taken into account that Andoc. 3 is spurious, see Harris (2000).

⁷ Gomme, Andrewes and Dover (1970) iv. 434; Lévy (1983) 264–65; Bosworth (1992) 124–25. For a succinct synopsis of the orthodoxy, see Schuller (1974) 110 with n. 184.

ward. It follows that Helisson was a *polis* in the sense of political community like the other *poleis* that sent *thearoi*. Next, in Arkadia the *thearoi* were chief magistrates, and to allow Helisson to provide a *thearos* (like the other *poleis*) is in itself an indication that Helisson was still a *polis* in the political sense.

Re (10) In, presumably, 408/7 (Diod. 13.75.1) the new Rhodian *polis* (no. 1000) was built and populated by citizens from the three old *poleis* on Rhodos: Ialysos (no. 995), Kamiros (no. 996) and Lindos (no. 997). Yet, in describing events of 390, Xenophon refers to the Rhodian *poleis* in the plural, and the passage shows that Ialysos, Kamiros and Lindos were still considered to be *poleis* at least in the urban sense (Xen. *Hell.* 4.8.25, cf. *CPCA* 2: 111 n. 23). Hellenistic and later inscriptions describe Ialysos as a *polis* both in the urban sense (IG XII.1 677.16 (c.300)) and in the political sense (IG XII.1 58.21 (Roman)), and there are several other indications that all three old Rhodian communities kept their status as (dependent) *poleis* throughout the period from the synoecism in C51 to C3 AD (Gabrielsen (2000) 192–95). (a) The assembly, called ἐκκλησία, is attested in *Tit. Cam.* 105.26–27 (C4f). (b) A council, called οἱ μαστροί, is attested after the synoecism both in Kamiros (*Tit. Cam.* 105.6 (C4f, restored)) and in Ialysos (IG XII.1 677.16 (c.300)). (c) In c.394, citizens of Ialysos were appointed *proxenoi* by Athens as their father had been (Walbank (1978) no. 72; *SEG* 28 48; cf. Gabrielsen (2000) 192 with n. 91). (d) The existence of a system of demes and the practice of using demotics as the third part of personal names were upheld throughout the Classical and Hellenistic periods. Sub-ethnics are attested for Lindos c.325 (*I.Lindos* 51; IG XII.1 761), for Kamiros (*Tit. Cam.* 110.1–2) and for Ialysos (IG XII.1 166) in the Hellenistic period. Both *ekklesia* and *boule* are institutions characteristic of a *polis* and unattested in civic subdivisions. So to have an *ekklesia* and a *boule*, to have citizens appointed *proxenoi*, and to be organised into demes and use sub-ethnics are strong indications of *polis* status, and all three institutions corroborate the attestations of Ialysos, Kamiros and Lindos as (dependent) *poleis* after the synoecism in C51.

Re (11) In southern Arkadia there were in the Classical period four “tribes”: viz. the Eutresians, the Kynourians, the Mainalians and the Parrhasians (Nielsen (1996a) 100–3, (1996b) 132–41). They were political communities on a par with the large *poleis* such as Tegea, Mantinea and Orchomenos: we hear that the Parrhasians were made *autonomoi* in consequence of a war between Sparta and Mantinea c.423–421 (Thuc. 5.33.3). In 368, when Megalopolis was

founded, the Parrhasians and the Mainalians provided two *oikistai* each, while the others came from Kleitor, Mantinea and Tegea (Paus. 8.27.2). And of fifty *damiourgoi* listed in an Arkadian federal decree of the 360s, three were Mainalians and five were Kynourians (IG v.2.1.16–19, 40–45). Each tribe was composed of a number of communities, which are often called *polis* in contemporary sources (e.g. the Mainalian city of Eutaia, which is called *polis* by Xenophon at *Hell.* 6.5.12), and that they were *poleis* in the political sense of the term is apparent from, e.g., the case of Pallantion (no. 289). The Mainalian city of Pallantion (Paus. 8.27.3) had its own coinage (Head, *HN*² 451). Pallantion furthermore had its own Delphic *theorodokos* in C51 (*REG* 62 (1949) 6.1.1), and in 370 Pallantion handed over to the Confederacy some Tegean refugees, presumably without reference to the Mainalian tribe (Diod. 15.59.3). In C41 Pallantion concluded a treaty of friendship with Argos (*SEG* 11 1084) without reference to the tribe which, however, may well have been no longer in existence (Nielsen (1996a) 102–3).

Re (12) In the King’s Peace of 386 it is explicitly stated that all the *poleis* along the west coast of Asia Minor were to lose their *autonomia* and be ruled by the king of Persia: Ἀρταξέρξης βασιλεὺς νομίζει δίκαιον τὰς μὲν ἐν τῇ Ἀσίᾳ πόλεις ἑαυτοῦ εἶναι καὶ τῶν νήσων Κλαζομενᾶς καὶ Κύπρου, τὰς δὲ ἄλλας Ἑλληνίδας πόλεις καὶ μικρὰς καὶ μεγάλας αὐτονόμους ἀφεῖναι πλὴν Αἰήμου καὶ Ἴμβρου καὶ Σκύρου. ταύτας δὲ ὥσπερ τὸ ἀρχαῖον εἶναι Ἀθηναίων (“King Artaxerxes finds it just that the *poleis* in Asia shall belong to him and, of the islands, Klazomenai and Kypros. The other Hellenic *poleis*, small and large alike, shall be left *autonomoi* except Lemnos, Imbros and Skyros. They shall belong to the Athenians, as of old”) (Xen. *Hell.* 5.1.31). Thus, all the *poleis* became dependencies and their status is well illustrated by, e.g., three decrees passed by Mylasa (no. 913) in the period 367–354 (RO 54). The decrees acknowledge the supremacy of the Persian king, Artaxerxes II, and his satrap, Mausollos (1–2, 17–18, 32–33), but they are decisions made by the people in assembly (2–4, 19–20), and the community is repeatedly described as ἡ πόλις ἡ Μυλασέων (7, 10, 23, 46). Conversely, when Alexander “liberated” the Asian *poleis* from Persian rule, they were considered once again to be *autonomoi*; see the decree passed by the people of Priene in the autumn of 334 (*I.Priene* 2 = Tod 186.1–4).

Re (13) Mesambrie (no. 647) was one of the fortresses situated in the Samothrakian *peraia* west of Doriskos, but not (yet) located; see Hdt. 7.108.2: “On his march from Doriskos Xerxes first passed the Samothrakian fortresses, of which

the westernmost is a *polis* called Mesambrie.” Kasmenai (no. 29) was a secondary colony founded by Syracuse in 643 (Thuc. 6.5.2), explicitly described by Herodotos as a *polis* (Hdt. 7.155.2), admittedly in the urban sense but presumably denoting a community which was a *polis* in the political sense as well (Hansen (1996a) 39–54, (2000) 198–99). For Kasmenai as a frontier fortress, see Di Vita (1990) 350.

Re (14) According to Aristotle, Notion (no. 858) and Kolophon (no. 848) were two parts of one *polis*, but they are adduced in the fifth book of the *Politics* as an example of how the shape and nature of the territory (*chora*) can make it difficult to keep a *polis* united and result in *stasis* (Arist. *Pol.* 1303^b7–10); and other sources show that Notion had developed into a (dependent) *polis*. Notion may have been classified as a *polis* by Hecat. fr. 233; in the Athenian tribute lists the Notieis never pay together with the Kolophonians but are always recorded separately (*IG* I³ 270.1.8, 272.1.24–25, 280.1.39, 283.III.23, 285.1.95), and the city-ethnic, *Νοτιεῖς*, is still attested in C4 sources (*IG* II² 1.48–49; Arist. *Pol.* 1303^b10). According to Thucydides, Notion belonged to Kolophon (Thuc. 3.34.1–4), but it had its own *theorodokos* to host the *theoroi* who announced the Heraia at Argos (*SEG* 23 189.II.7 c.330)), and only towards the end of C4 did Notion enter into a *sympoliteia* with Kolophon (Robert (1969) 1244–45).

Re (15) (a) Koresia (no. 493) is recorded as a *polis* both in Classical sources and in a C3 law regulating a festival: *ἔστιν δὲ τοὺς τε πολίτας καὶ οὓς ἡ πόλις κέκληκεν* (“to host the *politai* and those invited by the *polis*”) (*IG* XII.5 647.9), but in a C4 list of citizens from Ioulis c.154 *Κορήσιοι* are listed alongside citizens from six other civic subdivisions (*IG* XII.5 609.IV.175ff), usually taken to be *phylai*; see Ruschenbusch (1982) and Jones, *POAG* 205. (b) By the *sympoliteia* between Mantinea and Helisson of C4e, Helisson (no. 273) became a *kome* of Mantinea, but at the same time persisted as a *polis* (*SEG* 37 340, see (9) *supra*). (c) Dion on Euboia (no. 368) was a member of the Delian League and is recorded in the tribute lists from 451/50 (*IG* I³ 262.I.28) to 432/1 (*IG* I³ 280.I.80). It was assessed for tribute in 425/4 (*IG* I³ 71.I.78). From the Athenian regulations for Histiaia of C5s it appears that Dion was a deme of Histiaia, but was a separate circuit of jurisdiction (*IG* I³ 41.100–2 = *SEG* 32 3; Koch (1991) 175, 202). Similarly, Dion (and Athenai Diades) are attested as dependencies of Histiaia in the last decade of C5 (*IG* XII.9 188.18–19 = *Staatsverträge* 205 (post 411); *Eretria* XI 82 with nn. 338–39 (post 404)). Thus, in C5s, Dion seems to have had a double status, partly as a *polis* depending on Histiaia and partly as a *demos* of Histiaia.

APPENDIX

Autonomia and the *Poleis* of the Boiotian Federation in C4

Following Keen (1996) against Hansen (1995b, 1996c), Rhodes (1999) argues that the member *poleis* of the Boiotian Federation may have preserved their *autonomia*. Summarising the principal sources, Rhodes concludes:

For Hansen, there is no problem: membership of the Boeotian federation was incompatible with *autonomia* (except for the dominant *polis*, Thebes). . . . Now, there is no doubt that that is how the Spartans saw the matter. . . . It may be that they [the Thebans] believed and the other Boiotians who were happy that their *poleis* should be members of the Boeotian federation also believed, that membership of the Boeotian federation was not incompatible with *autonomia*. We think this possibility is rejected too easily by Hansen.

We note that Rhodes does not discuss the sources which show that, on this issue, the Athenians agreed with the Spartans (Andoc. 3.13, 20; Isoc. 14.10, 17; Xen. *Hell.* 6.3.9). He mentions Andokides, but takes him to favour the Spartan view without pointing out that he is stating an Athenian view. Even if we follow

Harris (2000) in believing that Andoc. 3 is spurious, the passages in Xen. and Isoc. still show that the Athenians sided with the Spartans on this issue and believed that the Thebans had deprived the other Boiotian *poleis* of their *autonomia*. Similarly, Rhodes cites Xen. *Hell.* 4.8.15 and 5.1.32–33 and 36 as evidence of the Spartan view without discussing that, as written, these passages show that the Thebans themselves shared the Spartans’ view of *autonomia*, perhaps unwillingly, but that is no wonder. At the peace conference in 392/1 the Thebans feared that they might be forced to restore the *autonomia* of the Boiotian *poleis* (Xen. *Hell.* 4.8.15). That is a strange way of putting it if everybody but the Spartans believed that the Boiotian *poleis* were in fact *autonomoi*. Again, at the peace conference in 386 Agesilaos demanded that the Theban envoys include the *autonomia* clause in their oath on the peace (Xen. *Hell.* 5.1.32–33). If the Thebans and the other Boiotians had believed that the Boiotian Federation respected the *autonomia* of the smaller member *poleis*, it would have been easy for the envoys to take the oath just as requested by Agesilaos. Yet they refuse and say that they have not been commissioned to

do that. It has been objected that Xenophon, being pro-Spartan and anti-Theban, presents a distorted view of what happened and consistently favours the Spartan interpretation of *autonomia* (Keen (1996) 119). But Tuplin (1993) has shown that Xenophon is often critical of the Spartans, and Christensen (2001) has added to this that he often draws a favourable picture of the Thebans. Finally, Rhodes (1999) 39 agrees with us ((1996c) 134–36) against Keen ((1996) 115–16) that the Spartan perioikic *poleis* were not *autonomoi*. But the exchange of words between Agesilaos and Epameinondas in 371 as reported by Plut. *Ages.* 28.1–3 is based on the belief that the Boiotian and the Lakedaimonian *poleis* possessed the same or at least a similar degree of

autonomia. Now Plutarch's story may be no more than an anecdote, but if we take it seriously, it shows that Epameinondas did not believe that the Boiotian *poleis* were *autonomoi*. To conclude, we note that, to counter the evidence set out above, Rhodes does not cite one single source that directly supports his view that the Boiotian *poleis* were still *autonomoi* under the Federation. Everything is circumstantial evidence, and Rhodes cautiously says that the Thebans and the Boiotians *may* have believed, etc. Over the years, Rhodes and I have come to agree, by and large, on most of the important issues about *autonomia* and dependent *poleis*, but on this particular issue we still disagree.

Civic Subdivisions

“Civic subdivisions” is a modern term which in this context denotes the subdivisions of a *polis* or, rather, of its citizenry.¹ They were civic in the sense that membership was open to citizens and only citizens. Foreigners and slaves were excluded, and women too:² the civic subdivisions testify to the Archaic and Classical *polis* as an association of the adult male citizen population. They were subdivisions in the sense that, at any level, every citizen belonged to one and only one of these units. They were public administrative units. Thus, households (*oikiai*),³ some kinship groups (such as *gene*)⁴ and some religious groups (such as *thiasoi*) were not normally civic subdivisions. They were private organisations, sometimes in the borderland between the private and the public, and only exceptionally do they appear as genuine public organisations.⁵

There were two basic types of civic subdivision: some were territorial, some personal. The main territorial subdivisions were the *demos* and the *kome*; but *phylai* too could be territorial units.⁶ By far the most important purely personal subdivision was the *phyle*. Other important forms were the *phratrīai*, the *patra* and various groups designated by numbers: the *chiliastys*, the *hekatostys*, the *pentekostys*, etc. (see Index 13). But even the territorial subdivisions were to some extent personal because membership of a subdivision, be it territorial or personal, was hereditary in the male

line. Therefore, by migrations, territorial subdivisions were slowly transformed into personal ones, unless they were reorganised at intervals.

Some *poleis* could have as many as five or six different sets of civic subdivisions. Older subdivisions were often allowed to persist alongside new ones, though now deprived of their political importance, and several *poleis* had two incongruent systems of *phylai*, one that probably preceded the emergence of the *polis* and one created by the *polis* (see *infra*). Some civic subdivisions formed a system, like a nest of Chinese boxes;⁷ others were incongruent and cut across one another.⁸ A survey of civic subdivisions from all parts of the Hellenic world shows that they had three main functions: (1) to control admission to citizenship; (2) to serve as wards when the *polis* had to fill a board of officials so that each ward supplied one or more members of the board; (3) to serve as units of the army.

It is no wonder that modern states are organised into municipalities or some other type of smaller unit; but why were civic subdivisions needed in states as small as the Greek *poleis*? In small and middle-sized *poleis* all citizens could meet whenever they wanted, and it would never be difficult for the magistrates to get in touch with any of the citizens. One answer is that all Greek *poleis* had an immensely elaborate and complicated set of political institutions, and to have a whole set of criss-crossing civic subdivisions was just one aspect of the complicated political morphology of any Greek *polis*. Another answer is that civic subdivisions are known principally from the large *poleis* such as Athens or Argos or Eretria, where they were indispensable because the *polis*, and especially Athens, was too big to be a proper face-to-face society. They are unattested in many small and middle-sized *poleis*, and the presumption is that there were none. In Boiotia there is no trace of *phylai*, *demoi* and *kōmai*, and the evidence of *phratrīai* is late. The epigraphic record is so rich that the absence of evidence in this case

¹ The study of civic subdivisions has been revolutionised by the fundamental study of Nicholas Jones, *Public Organization in Ancient Greece* (1987) = *POAG*. Much of what follows is a summary of his findings.

² The exclusion of women is not explicitly mentioned in Jones, *POAG*, but is evident from the material he has collected. In Athens (no. 361), the *polis* we know best, women were excluded from the *demoi*, *trittyes* and *phylai* but could, of course, be priestesses as they could at *polis* level (Jones (1999) 123–33).

³ *CPCActs* 5: 135–37. Karthaia (no. 492) is, so far, the only *polis* in which *oikoi* are attested as civic subdivisions.

⁴ As usual, the best evidence for *gene* concerns Athens and by far the best recent treatment is that of Parker (1996) 56–66, 284–327. He concludes that the *gene* had no political importance in C4 (57). In the Archaic period, on the other hand, every public priesthood seems to have been filled by the members of a designated *genos* (65). There are two possible interpretations of the evidence: (a) in the Archaic period the *gene* were civic subdivisions of the Athenian *polis*; (b) in the Archaic period the *gene* were private or semi-private organisations and the appointment of priests had not yet been taken over by the *polis*.

⁵ In Jones, *POAG*, *gene* are registered as civic subdivisions in four *poleis* only: Erythrai (no. 845), Kolophon (no. 848), Pygela (no. 863) and Samos (no. 864). The evidence for Samos is Hellenistic and not included in this inventory.

⁶ Cf. the Kleisthenic *phylai* in Attika and the three *phylai* in Rhodes (no. 1000) after the synoecism.

⁷ Like the Athenian *phylai*, *trittyes* and *demoi* (no. 361), or the Eretrian *phylai*, districts and *demoi* (no. 370), or the Argive *phylai*, *phatrai* and *pentekostyes* (no. 347).

⁸ In Epidauros (no. 348) 4 *phylai* and 39 territorial units cut across one another in a way not yet fully understood. In Athens (no. 361) the subdivision into *phratrīai* was completely unrelated to the subdivisions into *demoi*.

can be taken as evidence of absence: apparently, the Boiotian *poleis* had no civic subdivisions of any consequence. Similarly, no civic subdivisions are known on Lesbos and in Aiolis and the *phylai* attested in Thessaly are all Hellenistic and may have been introduced in C4–C2.⁹ There were no Aiolian *phylai* to match the three Dorian and the four to six Ionian, and it seems reasonable to infer that civic subdivisions were unknown in the Aiolian-speaking regions of Hellas.¹⁰ But Boiotia bordered on Attika, subdivided into 139 *demoi*, and on Euboia, where demes were very important in three of the four major *poleis* (Chalkis (no. 365), Eretria (no. 370) and Histiaia/Oreos (no. 372)) and may have been in Karystos (no. 373) as well. However, subdivisions were not confined to the larger *poleis*. Here as in all other contexts, generalisations are deceptive: Delos (no. 478) was one of the smallest of all *poleis*. Nevertheless its population was organised into four *phylai*, further subdivided into *trittyes*.

Apart from Athens, almost all the evidence we have comes from inscriptions. There is a heavy concentration of information from the late Classical and early Hellenistic periods. Jones's magisterial study comprises some 200 *poleis* (POAG 2). For over half of these, all the information we have is Hellenistic or Roman. We have restricted our investigation to the Archaic and Classical periods, and consequently the number of attested *poleis* drops to about 100, including a dozen not covered by Jones's study.¹¹

The history and origin of the civic subdivisions has become one of the most controversial issues in Greek history since 1976, when Denis Roussel published a major monograph about the *phylai* and *phratriai*, and Felix Bourriot one about the *gene*. Independently of one another they argued that the civic subdivisions we know of were created by the *polis* and did not predate the emergence of the *polis*, as hitherto believed by almost all ancient historians.¹² Roussel's and Bourriot's theories were widely accepted, but they were based on a selection of the available sources only and

have to be revised, especially in the light of the much broader study of Jones, POAG.

It is true that direct evidence is scarce and cannot be traced further back than C7: there is no doubt that the Spartan army in C7 was organised into the three Dorian *phylai*: the *Hylleis*, the *Dymanes* and the *Pamphyloi* (Tyrtaos fr. 19.8, West). Also, in C7 Athens the *phratRIA* was an important unit, as is indisputably attested in Drakon's law on homicide (IG I³ 104.18, 23).

The indirect evidence of an early origin, on the other hand, is substantial: the attestation of the Dorian *phylai* in, for example, Korkyra, though late, indicates that they go back to at least C8m, and their presence in Argos, Megara, Corinth, Sikyon, Epidauros and Troizen points in the same direction. It seems reasonable to presume that the four to six Ionian *phylai* were important civic subdivisions in many Milesian colonies and can be traced back to the C8 (Piérart (1983) 4). Admittedly, *phylai*, *phratriai* and similar groups were not true kinship organisations. But the same observation applies to tribes of all periods all over the world: the first thing to be remembered is that the consanguinity that binds all the members of a tribe together is not a factual but a presumed consanguinity. By contrast with a family and a lineage, a "tribe" is not a kinship group in the literal sense of that term.

Next, we must remember what is often forgotten, that Roussel's theory about the late development of *phylai* and *phratriai* is no more than an ingenious theory based on an argument from silence, and it is strange that so many historians in this particular case have accepted an *argumentum e silentio* at face value.¹³ We know for sure that *phylai* and *phratriai* in many *poleis* were transformed during the Archaic and Classical periods and that the new subdivisions were often purely artificial, without the slightest claim to being kinship groups even in a remote sense. But they replaced earlier organisations which were, allegedly, kinship groups. When these older *phylai* and *phratriai* were introduced and how they were organised is a moot point. Especially after Nicholas Jones's study it is hard to deny that both the Dorian and the Ionian *phylai* must go back to the period before the colonisation, i.e. before C8.¹⁴ Some of the civic subdivisions seem to have predated the *polis* or, rather, they were converted into a system of civic subdivisions in connection with the emergence of the *polis*. Others, however, were deliberately created by the *polis* and those that were

⁹ Jones, POAG 79–81; Helly (1995) 173 n. 123.

¹⁰ Apart from *phratRIES*, attested in the late Hellenistic period only (Knoepfler (1981) 148–49), we know of no civic subdivisions in Boiotia (Jones, POAG 79). Similarly, no civic subdivisions are known from all the Thessalian *poleis* apart from a few attestations of *phylai*, presumably introduced in the Hellenistic period (ibid. 79–81). Lesbos, apparently, had no civic subdivisions either, and remarkably few (all Hellenistic) are found in Aiolis. It seems reasonable to infer that civic subdivisions were unknown in the Aiolian-speaking regions of Hellas.

¹¹ *Sikelia*: Engyon (no. 14), Himera (no. 24), Kamarina (no. 28), Naxos (no. 41), Selinous (no. 44). *Phokis*: Antikyra (no. 173). *Euboia*: Styra (no. 377). *Islands*: Astypalaia on Kos (no. 498), Paros (no. 509). *Thrakia*: Abdera (no. 640). *Pontos*: Chersonesos (no. 695). *Crete*: Datala (no. 954). *Libya*: Kyrene (no. 1028).

¹² As duly noted by Roussel (1976) 5, this view was advocated already by Max Weber in 1920, see Weber (1999) 180–83.

¹³ e.g. Finley (1983) 44–47; Davies (1997) 24, 28.

¹⁴ Jones, POAG xvii–xviii, mentions Roussel's work without taking issue with his theories. For a critical appraisal of the whole issue, see Gehrke (2000).

earlier than the *polis* were transformed, sometimes beyond recognition.

Another moot point is how much and how often the civic subdivisions were transformed in the course of the Archaic and Classical periods. Jones argues that the civic subdivisions show a high degree of permanence (1), and that almost all innovations took place during the Age of the Tyrants (12–13). Yet a closer look at the attested reforms indicates that civic subdivisions were subject to constant transformations and with the passage of time became more and more artificial—yet another instance of the Greeks’ conscious and continuous remodelling of their society and institutions.¹⁵ Reforms and revisions of civic units are so

¹⁵ In Argos (no. 347) the *phratrai* were introduced or reformed in C5m and the *pentekostyes* in C4m. The system of numbered *phratraiai* and *triakades* in Kamarina (no. 28) was either introduced or changed c.461. In Eretria (no. 370) the *phylai* go back to c.500 at the latest, but the districts no further than

frequently attested that in most cases it is unwarranted to assume that a system attested in Hellenistic sources can be retrojected back into the Classical period. There are, of course, exceptions: when the six old Ionian *phylai* are attested in colonies founded by Ionian *poleis*, they probably go back to the foundation of the colony. Again, in the case of Crete it seems reasonable to assume that the *phylai* known from Hellenistic sources were civic subdivisions in the Archaic and Classical periods as well (1148 *infra*).

c.400. In Mantinea (no. 281) the system of dependent *komai/poleis* is attested for Helisson (no. 273) in C4m. It is unlikely that it goes back to C6. In Ioulis (no. 491) the *phylai* were reformed in C4s and Koresia (no. 493) became a *phyle* of Ioulis. In, probably, C4 the Dorian *phylai* in Kalymna (no. 485) were replaced by or supplemented with 7 *phylai* and 5 *demoi*; in Herakleia Pontike (no. 715) the 60 *hekatostyes* seem to belong to C4f; the Samian *hekatostyes* (no. 864) cannot be traced further back than 322, etc. Furthermore, civic subdivisions were created or reformed whenever there was a synoecism and, similarly, *stasis* and revolutions often entailed a reorganisation of the citizen body and the civic subdivisions.

Proxenoī as Evidence for Polis Identity

A *proxenos* is commonly defined as “one city’s official friend in another city”.¹ *Proxenia* is indeed an institution inextricably connected with the *polis* (see Index 14),² but it is neither co-extensive with the *polis* nor as old as the *polis*. The earliest epigraphical attestations of *proxenoī* date from, probably, C6f³ and the earliest references in literary sources are found in Pindar.⁴ Apart from a few possible harbingers, the *proxenia* grew up in C6s, and in C5m it was a well-established institution (Wallace (1970) 189–94).

The origins of the institution are obscure and, of course, a matter of controversy. Especially in western Greece the *proxenos* seems originally to have been a witness to or a guarantor of a transaction involving two interested parties.⁵ Thus, some gods and the *polis* of Poseidonia are listed as *proxenoī* of a treaty concluded c.510 between Sybaris and the Serdaians (*Staatsverträge* 120.5–8). In Archaic Greece, on the other hand, and later all over the Greek world, the *proxenos* is attested as the protector of somebody in need of assistance. What binds the two meanings together is that in both cases the service rendered by the *proxenos* concerns one or more foreigners (*xenoī*) (Gauthier (1972) 57–59).

The etymology of the noun *πρόξενος* and the verb *προξενεῖν* does not help us to settle the question about the origin of the institution: “the prefix *προ-* may mean ‘on behalf of’ or ‘instead of’, *ξένος* may mean ‘guest friend’ or, more generally, ‘foreigner’”.⁶ Thus the original meaning of *πρόξενος* is either (a) a person who acts in the interest of a foreigner or (b) a person who replaces a guest-friend (and hosts a foreigner).⁷ It is worth noting that the first etymology matches *proxenos* in both senses whereas the second fits *proxenos* in the sense of “public guest friend”, but not in the sense of “witness” or “guarantor”.

Irrespective of the origin of the institution and the ety-

mology of the term, there can be no doubt that the classical *proxenia*, as attested in the entire Hellenic world, was a privilege and an honour bestowed by *polis* A on a citizen of *polis* B who thereby officially was assigned the task of furthering the interests of *polis* A in his own *polis*⁸ and, in particular, the task of hosting and helping citizens of *polis* A when they came as visitors.⁹ The literary sources adduced here concern Athens. The best epigraphical evidence in support of this description of the *proxenia* is a standard formula which with variations is found in proxyeny decrees from all parts of the Greek world: a person who for some time has assisted visitors from a *polis*, and has shown himself as a friend of that *polis* in general, is now appointed *proxenos* by the *polis* in question.¹⁰ He is still supposed to show the same loyalty towards the *polis* and hospitality towards its citizens, but now he is publicly recognised as the official *xenos* of the *polis* in question.¹¹

The *proxenia* has been compared, in some ways rightly, to the modern consulate but with certain reservations: the *proxenos* was officially appointed by the *polis* whose citizens he served but not by his own *polis*.¹² A corollary of this was that a *polis* might have more than one *proxenos* in another

¹⁰ IG XII.7 6: ἐπειδὴ Ἐπίκτητος ἀνὴρ φιλότιμος ἐστὶν περὶ τὴν πόλιν τὴν Ἀρκεσινέων καὶ τοὺς ἀφικνομένους εἰς Θήραν ποιεῖ ἀγαθὸν ὅτι ἂν δύνηται καὶ λόγοι καὶ ἔργωι, δεδῶχθαι τῷ δήμῳ εἶναι Ἐπίκτητον Καλλιγνώτου Θηραίων πρόξενον τῆς πόλεως τῆς Ἀρκεσινέων . . . (“Since Epiktetos is loyal to the *polis* of Arkesine and in word and deed does whatever good he can towards those who come to Thera, it has been decided by the people that Epiktetos the son of Kallignotos of Thera shall be *proxenos* of the *polis* of Arkesine . . .”) (Arkesine, C4); IG I³ 80 (Athens, C51); II² 206 (Athens, C4m); *F.Delphes* III.3 157 (Delphi, C3f); IG V.2 263 (Mantineia, C3–C2); IG XII.5 110 (Paros, C4); IG XII.5 1002 (Ios, C4–C3). IG XI.4 562 (Delos, C3f); IG XII.5 798 (Tenos, C3); SEG 31 712 (Olbia, C2); IG XII.8 151 (Samothrake, C3e); *I.Ephesos* 1428 (Ephesos, C4).

¹¹ That is apparent from, e.g., IG II² 176.16–24 (C4f), a rider to an Athenian proxyeny decree in which the proposer explains that the purpose of awarding *proxenia* to some Kyrenaiaans is to ensure that the Athenians also in future can have some Kyrenaiaans to assist them when they come to Kyrene. See also IG XII.5 528 (Karthaiia, C4m) and IG XII.8 267 (Thasos, C3f) in which a *proxenos* because of his continued loyalty and hospitality towards the *polis* and its citizens is promoted to citizen.

¹² Hasebroek (1928) 137; Gauthier (1972) 25, 59. Sparta was unique in that it was one of the king’s prerogatives among the Spartiates to appoint the *proxenoī* who assisted foreign visitors in Lakedaimon (Hdt. 6.57.2). Since grants of proxyeny to Lakedaimonians by foreign *poleis* are attested (IG II² 106.14 (Athens, 368/7)) we must infer that Spartan *proxenoī* were officially appointed both by their own *polis* and by the *polis* they served.

polis. In C4m the small *polis* of Karthaia on the island of Keos had at least fifteen different *proxenoi* in Athens (IG XII.5 542). Furthermore, *proxenia* was sometimes awarded to a citizen who did not reside in his own *polis* but in the *polis* that had appointed him *proxenos*;¹³ he was accordingly prevented from performing the functions normally connected with *proxenia*, and in such cases *proxenia* was first of all an honour bestowed on a meritorious foreigner.

There is a broad agreement among scholars that *proxenia* was an institution of the *polis* (*supra* n. 2), but *poleis* were not the only communities awarding *proxenia* to loyal foreigners. The authority responsible for a proxy decree is almost invariably identified by an ethnic found either in the preamble of the decree, e.g. Δελφοὶ ἔδωκαν τῶι δευρί προξενίαν (F.Delphes III.1 146) *vel sim.* or as an adnominal genitive: πρόξενον εἶμεν Βοιωτῶν τὸν δεῖνα (IG VII 2407). Exceptionally, a proxy decree was issued by a monarch or prince, usually one who ruled a Hellenised but still semi-barbarian community.¹⁴ Apart from monarchs, the issuing authority, usually referred to by ethnic, was (a) a tribe,¹⁵ or (b) a federation,¹⁶ or (c) a *polis*, or (d) some private or semi-private organisation¹⁷ (Marek (1984) 121–28). Proxy decrees issued by private or semi-private organisations are rare and unattested before the Hellenistic period.¹⁸ It is not always easy to distinguish between (a) and (b), but that is of no consequence for this investigation. The important issue is whether we can distinguish (c) from (a) and (b), and that is in fact possible by inspecting the type of ethnic used. *Ethne* and *koïna* are identified by regional or sub-regional ethnics, *poleis* by city-ethnics and, as argued above (63), it is only exceptionally a problem to determine whether an ethnic is a regional ethnic or a city-ethnic.¹⁹ So, whenever we

have an ethnic derived from the name of an urban centre, we can infer, *a priori*, that the decree must have been passed by either a *polis* or a civic subdivision centred on a nucleated settlement (a *demos* or a *kome*, etc.). Among the hundreds of proxy decrees of the Archaic and Classical periods there is not one single securely attested example of an award by a civic subdivision.²⁰ Therefore, the ethnic used to identify the issuing authority must in all such cases be a city-ethnic, not a sub-ethnic, and the community responsible for the decree must be a *polis*.

A similar—but not identical—line of reasoning applies when we move from the community issuing the decree to the person awarded *proxenia*. It is usually taken for granted that he is a *citizen* of the community to which he belongs, but how do we know? It is not explicitly stated in the proxy decree, but it can be inferred implicitly from the fact that he is identified by an ethnic which, provided it can be recognised as a city-ethnic, shows that he is a citizen of the *polis* in question (*supra* 62).

A complicating factor is that occasionally the honorand is identified by a sub-ethnic. But in all such cases the sub-ethnic appears alongside the city-ethnic,²¹ and there is not one single unquestionable attestation of a *proxenos* identified by sub-ethnic alone.²²

Another problem is that not all *proxenoi* are identified by city-ethnics and/or sub-ethnics. In some cases the *proxenos* is a monarch or a tyrant,²³ in others he is identified by a regional ethnic.²⁴ The Aitolian base in Delphi, for example, was inscribed in C2m with thirteen proxy decrees

²⁰ Rhodes (1995) 103, 107. The observation covers all types of civic subdivision: *phylai*, *phratriai*, *patrai*, *gene*, *komai*, *demoi*, *hekatostyes*, etc. The important point in this context is to distinguish between city-ethnics denoting *poleis* and sub-ethnics denoting civic subdivisions with an urban centre (*komai* and *demoi*). For communities that were dependent *poleis* but at the same time civic subdivisions of another *polis*, see 92 *supra*. Pace Marek (1984) 11, there is no reason to believe that the honours listed in a decree passed by Mykene c.200 may have comprised *proxenia* (SEG 3 112).

²¹ F.Delphes III.2 74 (C3): Δελφοὶ ἔδωκαν Καλλία Καλλιᾶδου Ἀθηναίου, φυλῆς Ἀντιοχίδος, δήμου Ἀγυλιέως . . . προξενίαν . . .

²² One possible example is the proxy decree issued by Pairsades and his sons for [. . . . ω]ι Διον[υσίου] Πειρα[εῖ] (IOSPE II 1.1 (C4s)), recorded as an Athenian in LGPN Διονύσιος no. 622. However, at SyllP 217 n. 2 Dittenberger suggests that the honorand was a citizen of Amisos (no. 712, see Theopomp fr. 389) rather than an Athenian from the deme of Peiraeus. By letter, M. Osborne has informed us that Dittenberger must be right and that the classification in LGPN of the son of Dionysios as an Athenian is a mistake.

²³ F.Delphes III.1 392: the sons of Kerseleptes, the king of the Odrisians in C4m, is appointed *proxenos* of the Delphians; Syll.³ 187 = I.Knidios 603: Iphides, the tyrant of Abydos in C4f, is appointed *proxenos* of the Knidians; Syll.³ 168: Mausolos of Mylasy, the tyrant of Halikarnassos in C4f, is appointed *proxenos* of the Erythraians.

²⁴ *Proxenoi* identified by regional ethnic: F.Delphes III.1 146: Αἰτωλῶ (C4m); BCH 70 (1946) 40: [Φω]κεῖ (C4f); Syll.³ 267: Μακεδόνι (C4s); F.Delphes III.1 412: Κρητί (C4l); PEPChios 50.6: Βοιω[τίος] (C4); IG XII.3 251.5: Θεσσαλός ἐκ Φαρσάλου (C4).

¹³ Pythagoras, the Athenian *proxenos* in Selymbria, was buried in Athens (IG I³ 1134 (C5m)). Euenor, an Akarnanian doctor from Amphiloichian Argos, practised in Athens in C4l, where he was awarded first *proxenia* (IG II² 373 (322/1)) and later *politeia* (IG II² 374 (c.307–302)).

¹⁴ Mausolos awarded *proxenia* to all Knossians in C4f (ILLabraunda no. 40 = Hornblower, *Mausolos* no. 7) and the Bosporan princes Pairsades and his sons awarded *proxenia* to a citizen of Amisos (IOSPE II 1, C4s).

¹⁵ Usually referred to as an *ethnos*. One example is SEG 38 464, a proxy decree of C2f passed by the assembly of the Prasaibans, a small Epirote tribe; cf. Hammond (1967) 654–55.

¹⁶ Usually referred to as a *koïnon*. One example is *proxenia* awarded by the general assembly of the Boiotian Federation: ἔδοξε τῶι δάμωι πρόξενον εἶμεν Βοιωτῶν τὸν δεῖνα . . . (IG VII 2407–8 (C4f)), cf. Beck (1997) 101.

¹⁷ Marek (1984) 121–28.

¹⁸ Poland (1909) 438–39; Marek (1984) 127. One example is IG II² 1012 (C2l).

¹⁹ One rare example is the inscription from Olympia: Γόργος Λακεδαιμόνιος πρόξενος Φαλιέων (SEG II 1180a (C6l–C5e)), LSAG 190 no. 15 prefers a date in C6f). Here Φαλιέος is probably a city-ethnic, but we cannot preclude the possibility that it is a regional ethnic. In IvO II *proxenos* is juxtaposed with *damiourgos* and denotes a type of official, not a *proxenos* in the sense of a city's official friend in another city; cf. Gauthier (1972) 41–46 and *infra* no. 249.

(*F.Delphes* III.1 142–54 (C4–C2m)), nine of which are for Aitolians without further specification, three are for Nauaktians and one for an Aigaian. Each of the nine Aitolians was probably a citizen of an Aitolian *polis* as well as being Aitolian, and the omission of the city-ethnic may be a convention. Another Delphic proxeny decree of C4, not on the Aitolian base, is for an Aitolian from the *polis* of Makynaea.²⁵ However, since the city-ethnic is specified in four cases out of the thirteen, we cannot preclude the possibility that the nine others were honoured as Aitolians, i.e. as citizens of a federation, not as citizens of one of the member states of the federation.

To conclude: only some proxeny decrees passed by *poleis* spell out that the decision was made by the *polis*,²⁶ but whenever the issuing authority is identified by an ethnic derived from the name of an urban centre we can infer that the decree was issued by a *polis* and that the ethnic is a city-ethnic. Similarly, from the preservation of a proxeny decree for a person identified by a city-ethnic and, on rare occasions, a sub-ethnic too we can infer that the community to which the honorand belonged was a *polis*. In the majority of cases this inference is corroborated by other sources in which the community is explicitly called a *polis*. But whenever that piece of information is missing, the proxeny decree in itself justifies the classification of the community in question as a *polis* type B, i.e. a community which most probably was a *polis* but happens not to be attested as a *polis* in any Archaic or Classical text, undoubtedly due to lack of sources.²⁷ In the Archaic and Classical periods *proxenia* was awarded by institutions at *polis* level or above, and no proxeny decree was passed by a civic subdivision.

Attestations of *proxenia* culminate in C3f, but the institution is found in *poleis* all over the Hellenic world in C4 and is already well attested in C5. The only regions for which there are no attestations of *proxenia* in *poleis* of the Archaic and Classical periods are Spain and France, Epeiros and Lykia. In all three cases there is a good explanation: the Greek colonies in Spain and France are poorly attested in written sources; *polis* formation came late to Epeiros; and full-scale Hellenisation of Lykia belongs to the Hellenistic period.

²⁵ Another example is the Athenian *proxenos* Euenor (*supra* n. 13). In the proxeny decree he is called an Akarnanian (*IG* II² 373.4), but in the citizenship decree an Argeian (*IG* II² 374.11).

²⁶ *IG* IX².1390: [ε]δοξε τὰι πόλι τῶν Στρατιῶν Ἀνοσίαι . . . προξενίαν δόμεν (c.400); *IG* XII.5.24: πρόξενον [ε]ἶναι Ἀισχυλοῦ Σωσιμάχο[υ Πά]ριον τῆς πόλεως τῆς Σικε[ληνῶν]ν . . . (C4/C3e). Cf. *IG* XII.5.114 + add. (Paros, C4); *IG* XII Suppl. 245 (Andros, C4f); *IG* XII.7.5–6 (Arkesine, C4m).

²⁷ e.g. Makynaea (no. 149); Proschion (no. 154); Ascheion (no. 232); Phelloe (no. 242); Kyphanta (no. 335); Oinouos (no. 338); Pellana (no. 341).

The evidence we have shows that *proxenia* was found not only in large *poleis* but also in middle-sized and small *poleis*. Almost every *polis* seems to have had a network of *proxenoi* in other *poleis* and, conversely, many of its citizens served as *proxenoi* for citizens coming from other *poleis*. A large proportion of the proxeny decrees stem from Athens,²⁸ an oversized *polis*, or from Delphi, a small *polis* but a Panhellenic centre.²⁹ But *proxenia* is epigraphically attested not only in decrees but also in lists. Many *poleis* seem to have kept a central record of their proxeny decrees and sometimes published on stone a list with the name and *polis* affiliation of all their *proxenoi*.³⁰ Small and large fragments of such lists are preserved.³¹ Most are Hellenistic, but there is a C5 list from Lousoi (*IG* v.2 387) and C4 lists from Anaphe (*IG* XII.3 251), Chios (*PEPChios* 50) and Karthaia (*IG* XII.5 542). The most impressive is the one from Karthaia. It shows that this small *polis* in C4m had some 140 *proxenoi* in approximately thirty to forty different *poleis*. In most cases there were one or perhaps two *proxenoi* from a *polis*, but some fifteen of the *proxenoi* were Athenians. The preserved bottom of a list of *proxenoi* from the small *polis* of Anaphe is inscribed with the names of seven *proxenoi* from seven different *poleis*. We do not know how many names were inscribed on the missing upper part of the stele.

Both the literary and the epigraphical evidence shows that the enormous network of *proxenoi* that grew up in the late Archaic and Classical periods was of the utmost importance both collectively in the political relations between *poleis* and individually in the social and economic relations between citizens from one *polis* who had dealings with citizens from another *polis*.

However, especially in Hellenistic honorific decrees, *proxenia* is listed as one honour among many others in a way which suggests that in such cases it had become an empty title. These examples have influenced the interpretation of many other attestations of *proxenia* in sources where it is impossible to assess the importance of the institution. Scholars are divided over the issue³² and it is

²⁸ Walbank (1978) publishes 94 Athenian proxeny decrees from before 480 to c.400; Lambrechts (1958) lists 141 Athenian awards of proxeny covering the period 482–323.

²⁹ Marek (1984) 217–19 lists 39 Delphic awards of proxeny covering the period 370–323.

³⁰ Both types of record are referred to in *IG* VII 5–6 (Megara (C4l)). Chios had a στήλη προξενική inscribed with the names, patronymics and city-ethnics of the *proxenoi* of Chios (*PEPChios* 12.31, 42–43 (C4l)).

³¹ Gschnitzer (1974) 694–700; Marek (1984) 134–37.

³² Gschnitzer (1974) 644, who quotes Wilhelm (1942) for the functional and Klaffenbach (1966) 82–85 for the honorific interpretation of *proxenia*. The political importance of the institution is emphasised by Perlman (1958) and Marek (1984) 1–3.

sometimes presented as an alternative: *proxenia* was either a service or an honour, or rather it was originally a service that over time deteriorated into an empty honour. We prefer a *both . . . and* to an *either . . . or* and suggest that *proxenia* as a service always co-existed with *proxenia* as an honour,³³ only the scales tipped so that, eventually, honorific *proxenia* became the more prominent aspect of the institution. In this respect *proxenia* and *politeia* are similar. Right from the Archaic period *proxenia* was an honour bestowed on meritorious foreigners; often it implied the continued performance of services to the *polis* in question and to visitors from the *polis*, but sometimes it was a mere title awarded because of earlier services but not implying further services in the future. Similarly, *politeia*, naturalisation, was an honour by which the honorand sometimes became a full citizen of the *polis* in question, but sometimes became an honorary citizen. From C4m it became common in honorific decrees to combine *proxenia* with *politeia* and bestow both privileges on the same person.³⁴ But from a functional point of view the two privileges were mutually exclusive: if the honorand took advantage of the citizenship and became a full citizen of the *polis* in question, he could no longer host foreigners in his old *polis*, and if he stayed in his own *polis* and performed his services as *proxenos* he could not take advantage of the citizenship he had obtained.

The services expected from a *proxenos* in return for the honour bestowed on him by the patron *polis* were sometimes rendered to individual citizens but sometimes to the *polis* as such. The two aspects are aptly covered by the formula which, with variations, was used in proxeny decrees from all over the Hellenic world: “NN of *polis* X is honoured because of his unfailing loyalty towards *polis* Y and because, in word and deed, he does what good he can towards those citizens of Y who visit *polis* X” (see n. 10).

Most *proxenoi* seem to have been upper-class and one well-attested way of being appointed *proxenos* was, during a shortage of grain, to send cheap grain to a *polis* and hope to be rewarded with the honours of *proxenia* and/or *politeia*.³⁵

³³ In c.320 two panels of foreign judges, 5 from Andros and 5 from Naxos, were called to Chios to hear some cases. When they had completed their mission successfully, the Chians bestowed a whole series of honours on the judges, including hereditary *proxenia* (PEPChios 12). This is an obvious instance of honorific *proxenia*, but it is not unlikely that these judges, on their return to Andros and Naxos, were approached by visiting Chians and asked to perform the tasks of a *proxenos*.

³⁴ Din. 1.45; Wilhelm (1942) 45–50; IG xii.6 18 (C4l). Following Wilhelm (1942) 45–50, Gschnitzer (1974) 720–21 attempts to avoid the dilemma by suggesting that the honorand might stay on for some time in his old *polis* but later move to the *polis* that had awarded him both *proxenia* and *politeia*.

³⁵ IG ii² 342, 360, 398; 400 (320s); I.Ephesos 1455 (C4l).

In the economic sphere, other services expected from the *proxenos* were usually for the benefit of individual citizens from the patron *polis* (Dem. 52.5, 9, 10, 24).

While services rendered to individuals were often private, the help a *proxenos* offered his patron *polis* was usually of a political nature. Since a *proxenos* usually had some influence both in his own *polis* and in the *polis* whose *proxenos* he was, it was natural that *proxenoi* were used in diplomacy. They were often sent as envoys to their patron *polis* (Xen. *Hell.* 6.3.2–4; Aeschin. 3.138), and they hosted and assisted envoys coming from the patron *polis* (Xen. *Symp.* 8.39). It was an Argive *strategos* and a Spartan *proxenos* in Argos who on behalf of their *polis* negotiated a truce with the Spartans in 418 (Thuc. 5.59.5), and it was an Argive *proxenos* in Sparta who told the Argives about the Spartan conditions for peace after the Argive defeat at Mantinea (Thuc. 5.76.3). The use of *proxenoi* in interstate affairs could take many other forms: in a list of contributions to the Boiotian Federation to support its conduct of the Third Sacred War appears, alongside a number of *poleis*, the Boiotians’ *proxenos* in Tenedos. He is put down for 1,000 drachmas, obviously a political gesture of a semi-public kind (IG VII 2418.15–16 = RO 57 (C4m)). Again, when in 382 Brasidas marched his army from Lakedaimon to Chalkidike he was guided through Thessaly by five Thessalians, of whom one was the Chalkidians’ *proxenos* in Pharsalos (Thuc. 4.78.1; cf. Hornblower (1996) 257–58). Given that the purpose of Brasidas’ expedition was to break up the Chalkidian federation, the *proxenos*’ assistance to the Spartans points to an internal conflict in the federation, and that leads on to a different aspect of the political role of *proxenoi*.

In addition to their official assistance in diplomacy, the *proxenoi* often played a more secret and sinister role in interstate relations. The bonds of guest-friendship between a *proxenos* and the *polis* that had made him *proxenos* often resulted in a case of divided loyalties. Given that the citizens of many *poleis* were split into opposed factions which often had close connections with sympathising factions in other *poleis* (*infra* 124), a *proxenos* might easily be involved in espionage and treason (Gerolymatos (1986)), and to be a *proxenos* of one of the hegemonic *poleis* might in troubled times be a dubious honour and a dangerous job. During the Delian League and again during the Second Athenian Naval League, the Athenians used their network of *proxenoi* to control the members; and Athenian proxeny decrees often included a clause protecting the Athenian *proxenos* in a member *polis* against being molested or even murdered by

his fellow citizens.³⁶ Such clauses were not just empty words: in the 360s a *stasis* in Ioulis between a pro-Athenian and an anti-Athenian faction entailed the murder of the Athenian *proxenos* in Ioulis and, subsequently, an Athenian sentence of death was passed on his murderers (*IG* II² 111.27–45 = *RO* 39).³⁷

This and other examples show that there was a close link between *proxenia* and *stasis* in Classical Greece. *Proxenoï* provided their patron *polis* with political information (Gerolymatos (1986)). One example is what Polydamas, the Spartan *proxenos* in Pharsalos, told the Spartans about the political aspirations of Iason of Pherai (*Xen. Hell.* 6.1.2–16).

³⁶ The Delian League: *IG* I³ 162, cf. Meiggs (1949). The Second Athenian Naval League: *IG* II² 111.39–41, cf. Mosley (1973) 6.

³⁷ Conversely, if a member of one of the two Leagues was satisfied with the rule exercised by an Athenian *epitropos* or *archon* stationed in his city, the *polis* might bestow *proxenia* on the Athenian (*IG* XII 7.5 (C4m)).

More subversive was the role a *proxenos* could play in a *stasis* in which one of the factions in his own *polis* relied on help from his patron *polis* to overthrow the regime and come to power. Thus, in collusion with the Spartans, the Spartan *proxenos* in Elis planned in 399 to overthrow the Eleian democracy. However, in the initial phase he and his followers did not succeed in murdering the leader of the democratic faction in Elis and the *coup* failed (*Xen. Hell.* 3.2.27–30; *Paus.* 3.8.4). Again, in the 430s the Corinthians brainwashed the Korkyreans they had taken prisoners in the naval battle of 435. Then, in collusion with their *proxenoï* in Korkyra, the Corinthians had them ransomed and sent back to Korkyra, where they began to agitate against Athens. The result was the disastrous *stasis* that broke out in 427 (*Thuc.* 1.55.1, 3.70.1).

Theorodokoi as Evidence for Polis Identity

In the course of the Classical period it became standard procedure that Panhellenic festivals were announced by *theoroi* sent out from the community responsible for the festival to all the communities which could be expected to participate in the celebration (Boesch (1908) 7–11).¹ The technical term for the *theoroi*'s announcement was *epangelia* (Thuc. 5.49.2–3; 8.10.1; *SEG* 12 373.28 = Rigsby (1996) 26.11 (242/1)). The sources we have show that the *theoroi* were sent to all parts of the Hellenic world and it became customary in each and every community visited by the *theoroi* to have an officially appointed person whose duty it was to host and assist the *theoroi* (Perlman (1995), (2000)). Such a host was called a *theorodokos* and he was appointed sometimes by the community in which he lived, but sometimes by the community that sent out the *theoroi* (Perlman (2000) 60–62). The *theoroi* were normally sent out the year before the festival was celebrated, and the purpose of their mission was to invite the various communities to participate in the festival, to bring sacrifices in the name of their community, and to respect the sacred truce that was proclaimed in connection with the festival (Isoc. 4.43–44; Perlman (1995) 118). In the Classical period *theorodokoi* are attested in connection with the Olympic Games (*Syll.*³ 171 = *IvO* 36 (365–363 = Perlman (2000) O.1)), the Pythian Games (*Syll.*³ 90 with *SEG* 25 576 (C51); *SEG* 24 379), the Nemean Games (*SEG* 36 331 = Perlman (2000) N.1 (C41)²), the Asklepieia at Epidaurus (*IG* IV².1 94–95 (C4m) = Perlman (2000) E.1)), and the Heraia at Argos (*SEG* 23 189 = Perlman (2000) A.1 (C4s)).³ Our principal sources for the C4 *theorodokia* are substantial fragments of long lists of *theorodokoi* living in the places to be visited by the *theoroi* (see Index 15). The lists were drawn

up by the communities responsible for the festivals and were organised as itineraries of the *theoroi*. The lists that are relevant for this investigation are two from Epidaurus covering the years 359 (*IG* IV².1 94) and 355 (*IG* IV².1 95), and two from Argos both of C41, one concerning the Nemea (*SEG* 36 331) and one concerning the Heraia (*SEG* 23 189). Finally there is a short list from Delphi, the oldest of them all, probably to be dated to C51 (*Syll.*³ 90).⁴

From the term itself it has been deduced that the principal duty of the *theorodokos* was to host the *theoroi*, to accommodate and feed them, and to guide them to their next destination. But, to issue the invitation and obtain a recognition of the sacred truce, the *theoroi* must get access to the rulers of the community, either an assembly or a council or some magistrate or, perhaps, a monarch, and, being foreigners, they might need the collaboration of a citizen of the place they visited. According to several scholars, in particular Robert, Daux and Perlman, the presumption is that, *inter alia*, the *theorodokos* acted as an intermediary between the *theoroi* and authorities of the place they visited.⁵ A different view has been advanced by Kahrstedt (1936), followed by Cook (1973, 1988) and Cabanes (1976). The places visited by the *theoroi* were just settlements, and from the lists of *theorodokoi* recording all the toponyms of the places visited by the *theoroi*, no inference can be made about the political status of the community.⁶

Thus, the problem remains: was the *theorodokia* a kind of political office so that the attestation of a *theorodokos* in a particular place can convey information about the political status of the community in question? Or was the *theorodokia* a semi-private institution essentially unrelated to the political institutions?

In favour of a political interpretation of the institution it has been adduced that the *theorodokia* was often connected with the *proxenia* (Monceaux (1886) 259–66). The *proxenia* was unquestionably a political institution, especially in the

¹ That it was Elis that was responsible for the *epangelia* of the Olympic Games is proved by Thuc. 5.49.2–3; that the Pythian Games were announced by Delphi may be inferred from *SEG* 24 379; for Argos as the responsible authority for the Nemean Games, cf. *infra*.

² If Aristonous (listed without toponym in B 24 as the last of the Makedonian *theorodokoi*) is identical with the *somatophylax* of Alexander the Great (Perlman (2000) 251–52) it follows that the list must be dated to the years after 320 (Perlman (2000) 236) rather than to 323/2 as suggested by Miller (*SEG* 36 331).

³ So far, there is no evidence for the Isthmia and the evidence for the Hemerasia in Lousoi is Hellenistic (C41–C3e); cf. Perlman (2000) L.1–5). The list of Nemean *theorodokoi* "could date either from 331/0 . . . to 324 B.C. or from *post* 324 B.C. to 313 B.C." (Perlman (2000) 109). Perlman prefers the later date but does not exclude the earlier one.

⁴ The longest of all the lists and the first to be found and published is a Delphic list of C31 published by Plassart in *BCH* 45 (1921) 1–85.

⁵ Robert (1946) 506–10, (1982) 330–33; Daux (1949) 2; Perlman (1995) 115–18, (2000) 32–34, 45–60. Cf. also Cabanes (1976) 116–20; Gauthier (1979).

⁶ Kahrstedt (1936) 425; Cook (1973) 221, 242–43, (1988) 9–19. Rigsby (1986) 353 n. 1 suspends judgement.

Classical period, and the link between the two institutions indicates that the *theorodokia* was a political institution too.

As an argument dissociating the *theorodokia* from the *proxenia* it has been objected that the *theorodokoi* served the god of the sanctuary connected with the festival while the *proxenoi* served the *polis*.⁷ But it would be wrong to infer that it was the sanctuary which appointed or authorised the *theorodokoi*. Especially the evidence from Argos shows that *theoroi* were sent out and *theorodokoi* were appointed and/or authorised by the *polis* that administered the sanctuary and organised the festival (SEG 11 1084 = Perlman (2000) A 3 (C4)), not by the sanctuary itself. The C4 list of Nemean *theorodokoi*, for example, was drawn up by Argos, not by Nemea, which was a sanctuary without being a *polis* (SEG 36 331; cf. Perlman (2000) 131–52).

Another argument dissociating the *theorodokia* from the *proxenia* has been that the *proxenoi* are identified by ethnics, the *theorodokoi* by a toponym, and that this testifies to an essential non-political character of the *theorodokia* since the Greeks invariably used ethnics to identify political communities (Charneux (1966) 160–62, 167–68). This observation can be countered by two other observations: (a) the lists of *theorodokoi* are itineraries reflecting the routes followed by the *theoroi* and the topographical organisation of the lists is the reason for the toponym being preferred to the ethnic (Perlman (2000) 29); (b) the orthodoxy that political communities are invariably identified by ethnics is a gross exaggeration. The legends on coins are often toponyms instead of ethnics; in the Athenian tribute lists the toponym is sometimes used to denote a member of the Delian League which indisputably was a *polis*; and in all major Greek authors the toponym is not infrequently found in places where a modern teacher of Greek prose composition would have marked it as an error and replaced it with the corresponding city-ethnic. Thus, given the context, there is nothing anomalous about using a toponym to denote a political community (*supra* 56).

The next argument adduced against the political character of the *theorodokia* concerns the status of the *theorodokoi*. If they had been officials of some kind, they would all have been citizens of their community. But the lists show that some were women and some foreigners (Charneux (1966) 160–62). However, in the Classical lists there is only one woman, *viz.* Kleopatra, and she was a queen (SEG 23 189.1.11). The other attestations of women belong in the

Hellenistic period and, in all cases, the women served alongside men, as was then usual in a number of contexts. All the examples of non-citizen male *theorodokoi* are Hellenistic, and some of these persons, perhaps all, were Ptolemaic officers in charge of the city visited by the *theoroi* (Perlman (2000) 38–39).

But even assuming, for the sake of argument, that the duties incumbent on a *theorodokos* were purely private and without political overtones, there can be no doubt that the visit of the *theoroi* was political. If the purpose of their announcement of the forthcoming festival was to ensure that the community they visited would send a delegation to the festival and respect the sacred truce, then they must have stopped where they could get in touch with the authorities. Thus, the places they visited must have been the political centres of the communities in question, and therefore the list of *theorodokoi* can be used as evidence of the political status of these localities irrespective of the extent of the duties of the *theorodokoi*. Of course, that does not amount to proof that the place was a *polis*. It may have been the centre of an *ethnos* or a large monarchy (Gauthier (1979) 126; for examples, see *infra*).

Third, the debate over the nature of the *theorodokoi* has been obscured by the orthodoxy that a *polis* must be in possession of full independence and, accordingly, that dependent status is incompatible with being a *polis*. The recognition of the fact that there were a large number of dependent *poleis* (*ὑπήκοοι πόλεις*) has changed the character of the controversy. Thus, in 359 there were Epidaurian *theorodokoi* in Koroneia, Lebadeia, Orchomenos, Thebes and Thespiai. Now, Koroneia, Lebadeia, Orchomenos and Thespiai were member states of the Boiotian Federation and, in 359, they were in fact dependencies of Thebes. Gauthier (1979) 126–27 infers that this part of the Epidaurian list cannot be used as a source for the political status of the places in which there were *theorodokoi* to host the *theoroi*. If one takes the concept of the dependent *polis* into account, the inference is rather that the loss of independence did not necessarily entail that the Boiotian cities lost their status of being *poleis* or the right to be visited by Panhellenic *theoroi* and to have a *theorodokos*. Similarly, Naulochon, the port of Priene, and Notion, the port of Kolophon, were both dependent *poleis* in C4, and in c.330 both had *theorodokoi* to host *theoroi* from Argos.

In the preserved lists of *theorodokoi* the places visited by the *theoroi* are almost always identified by a toponym apparently denoting a settlement. In two cases only the place where a *theorodokos* resides is indicated by a regional eth-

⁷ Boesch (1908) 119–20; cf. SEG 11 1084.27–30 = Perlman (2000) A.2: ἡμεν δὲ καὶ προξένους καὶ εὐεργέτας τῶν Ἀργείων καὶ θεωροδόκους τοῦ Διὸς τοῦ Νεμέου καὶ τῆς Ἥρας τῆς Ἀργείας (C4).

nic (Thesprotoi, Molossoi⁸), and in a further four cases by the name of a region (Chaonia, Epeiros (*bis*), Makedonia⁹). Thus, there are altogether six attestations of peoples and regions as against 135 attestations of toponyms which probably denote urban centres. The problem is: were these towns invariably *poleis*? Or could some of them be mere urban centres lying in the territory of a *polis* or in a community organised as a tribe or a monarchy, as suggested by Gauthier (1979) 126? A survey of the evidence may provide us with an answer to this question. Of altogether 135 toponyms recorded in the C4 lists of *theorodokoi*, ninety-three are explicitly attested as *poleis* in Archaic and Classical sources (*poleis* type A),¹⁰ and seven others, though not called *polis* individually, are attested in lists of communities under the heading *πόλεις αἰθε* *vel sim.* (*poleis* type [A]).¹¹ For twenty-two more toponyms there is additional evidence strongly suggesting that they denoted *poleis*, e.g. coins, proxeny decrees, defence circuits (*poleis* type B),¹² and so we are left with thirteen communities for which *polis* status can seriously be called in question (*poleis* type C).¹³ It is worth noting that eleven of the twenty-two toponyms classified as *poleis* type B and eight of the thirteen classified as type C belong in the regions of Epeiros, Akarnania and Aitolia. The high number of Bs reveals how inadequate our sources are for these regions: *polis* status in C4m is strongly indi-

cated by, e.g., a C4 mint and *polis* status in the last decade of C4 combined with remains of impressive defence circuits enclosing nucleated habitation. It is probably just because of the paucity of the evidence that we have no direct contemporary attestation of these communities as *poleis* in the political and/or urban senses. The high number of Cs, however, may suggest a different explanation: apart from Greek colonies along the coasts, *polis* formation in these regions often took place as late as C4. Thus, it is a moot point whether these eight toponyms can be expected to denote proper *poleis* in the urban and political senses.

Let us adduce Kassopa as an example illustrating the problems we are facing. Kassopa lay in Epeiros where *polis* formation took place as late as in C4m and sometimes perhaps even later.¹⁴ In Ps.-Skylax three sections are devoted to the Epeirote tribes: the Thesprotoi (30), the Kassopoi (31) and the Molottoi (32). Ps.-Skylax's treatise has been compiled from many sources and was revised several times. Therefore it is impossible to date the work; but there seems to be a case for taking c.330 to be the *terminus ante quem* for the treaty as a whole and for some chapters to assume a date of C4e while others may even go back to C5 (Flensted-Jensen and Hansen (1996) 137–38). In each of the three chapters describing Epeiros, the author states that the people (*ἔθνος*) lived *κατὰ κώμας*, and no *πόλις* is mentioned between Korkyra described at 29 as a *πόλις Ἑλληνίς* and Amphilochoian Argos called *πόλις* at 33. But in the Epidaurian list of *theorodokoi* of, probably, 356, Kassopa is recorded between Pandosia, a colony of Elis, and the Thesprotoi, still recorded as a tribe (IG IV².1 95.24–6). The presumption is that the chapter in Ps.-Skylax antedates the Epidaurian list of *theorodokoi* and the shift from the ethnic *Κασσωποί* and the toponym *Κασσωπία* found in Ps.-Skylax 31 to the toponym *Κασσώπα* found in the Epidaurian list of *theorodokoi* strongly suggests that Kassopa was by now a *polis*, a presumption which has been supported by the recent excavations of the site. They have revealed that the city of Kassopa must have been founded around the mid-fourth century (Hoepfner and Schwandner (1994) 114–79); the excavators consider the circuit to belong to the period immediately after the synoikism and suggest a date c.350 (ibid. 123 with n. 298). The earliest attestation of Kassopa as a *polis* in the political sense is a C4l–C3e dedication on a statue base (SEG 34 589; cf. Diod. 19.88.3: *Κασσωπιάν πόλιν* (rC4l)), but, combining the literary, epigraphical and archaeological evidence, we have reason to assume that Kas-

⁸ *Θεσπρωτοί* (IG IV².1 95.26); *Μολοσσοί* (IG IV².1 95.31).

⁹ *Χαονία* (IG IV².1 95.29); *Ἐπειρος* (IG IV².1 95.23; SEG 23 189.11); *Μακεδονία* (IG IV².1 94.b.9). In a number of cases the name of a region is recorded without the name of a *theorodokos*, i.e. as a heading of several toponyms denoting towns within the region and each matched with the name of a *theorodokos*.

¹⁰ *Sikelia*: Akragas, Gela, Katane, Leontinoi, Syrakousai, Zankle. *Italia*: Herakleia, Kroton, Lokroi, Metapontion, Rhegion, Taras, Thourioi. *Adria*: Apollonia. *Epeiros*: Kassope, Pandosia. *Akarnania*: Alyzeia, Ambrakia, Anaktorion, Argos, Astakas, Korkyra, Leukas, Oiniadaí, Stratos. *West Lokris*: Amphissa, Naupaaktos, Oianthea. *Phokis*: Delphi. *Boiotia*: Koroneia, Lebadeia, Orchomenos, Thebes, Thespiai. *Corinthia*, *Megaris*, *Sikyonia*: Corinth, Megara, Sikyon. *Achaia*: Helike. *Arkadia*: Alea, Heraia, Kleitor, Pallantion, Stymphalos, Tegea. *Attika*: Athens. *EuBoia*: Eretria. *Islands*: Andros, Seriphos, Thasos. *Thessalia*: Atrax, Homolion, Larisa. *Makedonia*: Methone, Pydna. *Thrace*: *Axios to Strymon*: Apollonia, Arethousa, Amphipolis, Argilos, Aineia, Akanthos, Aphytis, Mende, Olynthos, Potidaia, Skione, Stagiros, Stolos/Skolos. *Thrace, Strymon–Nestos*: Datos. *Thrace, Nestos–Ebros*: Abdera, Ainos, Maroneia. *Propontic Thrace*: Kios, Lampsakos. *Troas*: Tenedos. *Aiolis*: Kyme. *Ionia*: Chios, Ephesos, Erythrai, Klazomenai, Lebedos, Magnesia (Mai), Miletos, Nauolochon, Notion, Pygela, Teos. *Karia*: lasos. *Cyprus*: Salamis, Soloi. *Syria–Libya*: Barke?, Euhesperides?, Kyrene, Taucheira?

¹¹ *Italia*: Terina. *Aitolia*: Kalydon. *Thessaly*: Gyrtion. *Chalkidike*: Dikaia, Kalindoia. *Thrace, Strymon–Nestos*: Neapolis. *Propontic Thrace*: Myrleia (Bryllion).

¹² *Epeiros*: Phoinike. *Akarnania*: Echinon, Euripos, Koronta, Limnaia, Me-deon, Palairos, Phoitiái, Thyreion, Torybeia. *Aitolia*: Proschion. *Achaia*: Phara? (perhaps in Arkadia). *Arkadia*: Alea, Methydrión, Pheneos, Torthyneion. *Thessaly*: Pharkadon. *Makedonia*: Allante. *Chalkidike*: Lete, Trallos. *Thrace, Strymon–Nestos*: Berga. *Cyprus*: Kourion.

¹³ *Epeiros*: Artichia, Poionos or Torone?, Zmaratha. *Akarnania*: Derion, Hyporeiai. *Aitolia*: Akripós, Phyleia, Therminea. *Arkadia*: Halous, Koila. *Thessaly*: Oxynton, Pythoion. *Propontic Thrace*: Miletouteichos.

¹⁴ The following section is a slightly revised version of Hansen (1995) 61.

sopa was a *polis* created in C4f and probably by some kind of synoikism of *komai*.

For several of the other communities in Epeiros and Akarania, the entry in the list of *theorodokoi* is the only source we have: the toponym denotes an unlocated settlement, the person serving as *theorodokos* is otherwise unknown, and the information we possess cannot be linked to archaeological evidence. In all these cases we must simply suspend judgement and leave the toponym as being possibly the name of a *polis* (type C), but we cannot preclude the possibility that it was the name of the urban and political centre of some *ethnos* or *koinon*.

To conclude: to send *theoroi* to the major Panhellenic sanctuaries and to participate in the Panhellenic festivals was one of the characteristics of a *polis* (*SEG* 22 444, cf. 27 106 (C5f)), and in C4 to have one or more *theorodokoi* to host the *theoroi* sent out to announce the festival can be taken as an important indication that the community in question was a *polis*; but it was not a *sine qua non* for being a *polis*. Once again Kassopa is a relevant example. The Epidaurian list of *theorodokoi* in Epeiros in 356 records Epeiros, Pandosia, Kassopa, the Thesprotoi, Poionos, Chaonia, Artichia, the Molossoi and Zmaratha (*IG* IV².1 95.23–30, 73–77). But in the Argive list of *theorodokoi* of c.330 the only entry left is [Ἀπρ]ε]ρος. Κλεοπάτρα (*SEG* 23 189.1.11). Following Cabanes (1997) 81–87 we can assume that the various tribes, regions and *poleis* recorded in 356 were now united

in a single political community called Epeiros. But that does not mean that the urban communities had lost their status of being *poleis*. Kassopa is explicitly attested as a *polis* in C4l–C3e (*supra*), and for the other urban centres recorded in the Epidaurian list, *viz.* Artichia, Pandosia, Poionos and Zmaratha, *polis* status is a possibility that must be taken into account. Pandosia is recorded as a *polis* in the 340s (Dem. 7.32; Theopomp. fr. 206) and may still have been a *polis* c.330. For the other towns we have no evidence and must suspend judgement.

Let us end this chapter with a warning: all the lists of *theorodokoi* are fragmentary, and even the completely preserved parts show surprising gaps. To mention just one example: in the Epidaurian list of 359 the *theoroi* visiting Boiotia south of Lake Kopais stop at Thespiai and Koroneia. Why is Haliartos missing from the list of *theorodokoi*? We know of no answer to this question and many others like it. We can only conclude from the material we possess that it is illegitimate to apply an argument from silence and infer that Haliartos was not a *polis* in 359. Thus, the absence of a *theorodokos* says nothing about the political status of a community, whereas the attestation of one testifies to one aspect of the political organisation of this community, and if the location in which the *theoroi* were hosted by a *theorodokos* was a town, the presence of a *theorodokos* indicates that it was the centre of a political community, i.e. a *polis*.

Victors in Panhellenic Games as Evidence for *Polis* Identity

In the Classical period athletic contests were arranged by numerous communities throughout the Greek world,¹ e.g. by Pellene (no. 240) and by Pheneos (no. 291) in the Peloponnese. Some of these festivals, e.g. the *Asklepieia* at Epidaurus (no. 348), were of Panhellenic stature and developed systems of *epangelia* and *theorodokia*.² However, the four truly Panhellenic festivals were those at Olympia, Nemea, Isthmia and Delphi, arranged in an institutionalised circuit (*periodos*)³ from C6.⁴ The four Panhellenic sanctuaries acted as important centres for *polis* interaction⁵ and information about activity at these sanctuaries (oracle consultation, communal dedications, athletic participation, etc.) is included in the descriptions of the individual *poleis* in order to illuminate such interaction (see Index 16).

Even more important, however, is the fact that participation and victory in one of these four games are a very strong indication that the community to which the athlete belonged was a *polis*. From C6s onwards, participation in the Panhellenic games provides us with evidence of *polis* status.⁶ Since we know most about the organisation of the Olympic Games, and since the best-known participants in the games are the victors, the discussion will centre around *Olympionikai*; but, the assumption is that the Nemean, the Isthmian and the Pythian Games were all organised in basically the same way as the Olympic Games.

An athlete who wanted to compete at the Olympic Games not only had to be a Greek;⁷ he also had to be a citizen

of a recognised Greek state,⁸ i.e. he had to belong to a community which had accepted and respected the sacred truce⁹ proclaimed by the Eleian *theoroi*.¹⁰ This is evident from the events of 420 as narrated at Thuc. 5.49.1–50.4.¹¹ In 420, the Eleians excluded Sparta from participation in the Olympics.¹² The Spartan exclusion was based on the fact, as the Eleians would have it, that the Spartans had violated the sacred truce by sending hoplites into territory which Elis claimed as its property.¹³ A fine was imposed on the Spartans under Olympic law.¹⁴ Since Sparta refused to pay the fine, the city was excluded from the Games.¹⁵ This ban on Spartan participation meant that no individual Spartan could compete in the Games. Accordingly, the Spartan aristocrat Lichas, son of Arkesilaos, entered his hippic team not as Spartan but as Theban (or Boiotian).¹⁶ The inference is that an athlete was allowed to compete only if he belonged to a community which had accepted the Olympic truce announced by the Eleian *theoroi* and respected the truce to the satisfaction of the Eleian authorities. It was shown in the section on *theorodokoi*¹⁷ that the duties of the Panhel-

λων. Ἀλέξανδρος δὲ ἐπειδὴ ἀπέδεξε ὡς εἴη Ἀργεῖος, ἐκρίθη τε εἶναι Ἑλλήνην καὶ ἀγωνιζόμενος στάδιον συνεξέπιπτε τῷ πρώτῳ. The 30 days' training period at Elis prior to the Games is not attested in the Archaic and Classical periods (Lee (2001) 28). On other requirements etc., see Crowther (1996).

⁸ A scholion in Syrianos says: νόμος τὸν ἄπολιν ἐν Ὀλυμπίᾳ μὴ ἀγωνίζεσθαι (*Rhetores Graeci*, ed. Walz, 4.546.25–26). No Archaic or Classical source explicitly states such a rule, but the following discussion will demonstrate that *de facto* a similar rule must have regulated Olympic participation at least in the Classical period.

⁹ On the sacred truce, see Lämmer (1982–83).

¹⁰ See the chapter on *theorodokoi* *supra* 103–6.

¹¹ On these events, see Roy (1998) and Nielsen, forthcoming.

¹² Λακεδαιμόνιοι τοῦ ἱεροῦ ὑπὸ Ἡλείων εἰρχθησαν ὥστε μὴ θύειν μηδ' ἀγωνίζεσθαι (Thuc. 5.49.1).

¹³ ἐπὶ Φύρκον τε τείχος ὄπλα ἐπενεγκεῖν καὶ ἐς Λέπρεον αὐτῶν ὄπλιτας ἐν ταῖς Ὀλυμπιακαῖς σπονδαῖς ἐσπέμψαι (Thuc. 5.49.1).

¹⁴ Thuc. 5.49.1.

¹⁵ Thuc. 5.50.2.

¹⁶ Thuc. 5.50.4 says that Lichas' team—which was victorious—was announced as Boiotian (*Βοιωτῶν δημοσίου*); however, Xen. *Hell.* 3.2.21 says that Lichas had handed the team over to the *Thebans* (*Λίχα παραδόντος Θηβαίου τοῦ ἄρμα*) and Paus. 6.2.2 says that Lichas entered the team *ἐπὶ δνόματι τοῦ Θηβαίων δήμου* and states that the Eleian victory records named the victor not as Lichas but as the Theban *demos*. So, Thucydides may be a little imprecise here (so *HCT ad loc.* suggests that “Thucydides may have made a mistake in writing *Βοιωτῶν*”).

⁵ Lys. 33.1–2; Isoc. 4.43–44; Lewis (1996) 30. See also the vivid description in Casson (1979) 76–80 of the travelling occasioned by the Panhellenic games.

⁶ The discussion does not consider the effects which Panhellenic athletic victories might have on the *poleis* of origin of the victors; for such a discussion, see Mann (2001).

⁷ That Olympic competitors had to be of Greek ethnicity appears from Hdt. 2.160.1 though that passage does not explicitly contrast Greeks with other ethnic groups: οἱ δὲ (sc. Ἡλείοι) ἔφασαν καὶ σφέων καὶ τῶν ἄλλων Ἑλλήνων ὁμοίως τῷ βουλομένῳ ἐξεῖναι ἀγωνίζεσθαι; however, it also appears from Hdt. 5.22.2 where there is an explicit contrast with non-Greeks: Ἀλεξάνδρου γὰρ ἀεθλεύειν ἐλομένου καὶ καταβάτος ἐπ' αὐτὸ τοῦτο οἱ ἀντιθουσόμενοι Ἑλλήνων ἔξεργόν μιν, φάμενοι οὐ βαρβάρων ἀγωνιστέων εἶναι τὸν ἀγῶνα ἀλλὰ Ἑλλή-

lenic *theoroi* were political and that the places visited by the *theoroi* were the political centres of *poleis*, *ethne* or monarchies. When an athlete of a given community is attested as an Olympic victor, the implication is that the community to which he belonged had been visited by the Eleian *theoroi* and was thus a political centre. If it can be shown that it was not the centre of an *ethnos* and not a monarchy, then we can assume that it was a *polis*.

The framework of the Panhellenic festivals was thus highly politicised, in the most literal sense of that word.¹⁸ The *epangelia* was conducted by the *poleis* in charge of the sanctuary celebrating the festivals, the *polis* of Elis (no. 251) in the case of the Olympics;¹⁹ the *polis* of Delphi (no. 177) in the case of the Pythian Games;²⁰ in the case of the Nemean Games it was the *polis* of Argos (no. 347)²¹ after it had taken over the presidency of the Games from the minor *polis* of Kleonai (no. 351); and in the case of the Isthmian Games it seems a fair inference from Thuc. 8.9.1–10.1 that a system of *epangelia* was administered by the *polis* of Corinth (no. 227) by C51.²² The *theoroi* who conducted the *epangelia* did so at centres which were in the overwhelming majority of the cases *poleis*,²³ and the *theorodokoi* who assisted the *theoroi* were appointed either by the epangelic *poleis* themselves or by the *poleis* of which they were citizens.²⁴ *Poleis* which met the requests of the *epangelia* sent sacred delegations of ambassadors (also called *theoroi*)²⁵ to the festival, and “the *theoroi* of each *polis* conducted ritual acts in the Panhellenic sanctuaries in the name of that *polis*”,²⁶ and the sending of such embassies was obviously a *polis* concern.²⁷

Moreover, the athletes competed not only on their own behalf; they represented their *poleis* as well: mention of a victor commonly includes the recording of the *polis* to which he belonged.²⁸ Isocrates makes Alkibiades Junior say of his father that “although in no way untalented nor weak of body, he held the gymnastic games in contempt since he knew that some of the athletes were lowborn and from small city-

states . . .”;²⁹ the clear implication is that the (lack of) prestige of a given *polis* reflected back on its athletes who were thus in a certain sense representatives of their *poleis*.³⁰ Conversely, an athlete’s success in its turn reflected back on his *polis*.³¹ *Poleis* bent on international glory might buy a victory from a successful athlete as Ephesos did in 384,³² an incident which demonstrates that the Olympics were also thought of as a competition between *poleis*.³³ Classical *poleis* took great pride in the victories of their citizens: in 412, Exainetos of Akragas, victor in the Olympic *stadion* race, was escorted into the city by all Akragantine chariots, a clear testimony to the public importance attached to such a victory.³⁴ Conversely, *poleis* were greatly concerned if their athletes were ‘dishonoured’ by the Olympic authorities: according to Xenophon, a contributing reason for the Spartan war on Elis in C51/C4e was the whipping of Lichas at the Games of 420;³⁵ and in C4l, when the Athenian athlete Kallippos had been convicted of having bribed his opponents, the Athenians sent no less a figure than Hypereides to have his fine lifted; when that proved impossible, the Athenians boycotted the Games.³⁶

In other words, in the Classical period there was no sharp distinction between athletics and politics, and the attestation of a Panhellenic victor in this period is a good indication that the community of the victor was a *polis*. But presumably we cannot place quite the same significance on all *Archaic* victors. For instance, Lousoi (no. 279) is said to have produced an *Olympionikes* in 708;³⁷ nobody would seriously claim that Lousoi was a *polis* at that date.³⁸ There is thus a dividing line somewhere which is difficult to pin down, quite apart from the fact that the historicity of the earliest recorded victories may be questionable.³⁹ However, it does seem a reasonable position to assume that by C6 Panhellenic athletics had been politicised in the sense outlined above, or was in the process of becoming so.

It does, for instance, seem likely that by C6 the athletes were identified with the *poleis* to which they belonged: thus, in the list of *Olympionikai* as compiled by Moretti, if we

look at the victors assigned to C6,⁴⁰ in all but four cases⁴¹ Moretti is able to indicate their local community/*polis* and not merely their regional affiliation *vel sim.*⁴² True, this is possible mostly on the basis of later sources, but it *does* probably imply that there was an identification of athlete with *polis* by C6.⁴³ Also, according to Paus. 6.18.7, the practice of erecting victory monuments began in C6m when wooden statues of Praxidamas of Aigina⁴⁴ and Rhexibios of Opous⁴⁵ were erected; Pausanias saw these statues and was able to identify them, presumably from inscriptions as he does elsewhere.⁴⁶ If he did identify them from inscriptions, these probably used city-ethnics to describe the athletes, and this would confirm the impression that by C6 athletes were identified with their *poleis*.⁴⁷ SEG 11 1227 (c.500) describes an *Olympionikes*⁴⁸ as Λακεδαιμόνιος⁴⁹ and thus confirms that city-ethnics were used in commemorations of Archaic victors.⁵⁰

That Archaic *poleis* coveted Panhellenic victories is indicated by a possible instance of a public hippic team as early as 672⁵¹ and by the report, if historical,⁵² that Solon legislated on the amounts of money to be paid to Athenian Panhellenic victors.⁵³ But the best source is probably Xenophanes' critique of the honours paid to *Olympionikai*.⁵⁴ Possibly composed prior to 520⁵⁵ but certainly reflecting the later Archaic period, its evidence is highly relevant in the present context. The poet criticises the high standing of successful athletes in the eyes of the *astoi*: that is, *politai*.⁵⁶ The issue addressed is thus that of the relation between athlete and *polis*, and indeed the term *polis* appears four times in the poem (9, 19, 20, 22) alongside such terms as *δημόσιος* (8) and *ἐνομήν* (19). The poet clearly knew of such rewards for victory as *proedria* (7), public entertainment (8–9: *στῆ*

εἴη δημοσίων κτεάνων / ἐκ πόλεως) and cash payments (9: *δῶρον ὃ οἱ κερμήλιον εἴη*).

It would, then, not be unreasonable to infer that already in C6 *poleis* exulted at Panhellenic victories, that athletic success reflected back on the *polis* of the victor, and that *poleis* identified with their athletes who (were) in their turn identified with their athletes.

Most importantly, a newly found inscription of c.525–500 from Olympia⁵⁷ indicates that by that time *poleis* played a significant role in the formal organisation of the Olympic Games. The inscription twice (4–5, 5–6) refers to a particular group of polities, “the Eleians and their *symmachoi*”,⁵⁸ which seems to have held a peculiar position in the formal arrangements concerning the Games. The text furthermore refers generically to a *theoros*, an official envoy of a *polis*.⁵⁹ The general tenor of the text led the editors to the important observation that the traditional view that an athlete was on his own in Olympia is in need of serious modification;⁶⁰ and the information about *theoroi* in C6l indicates that an athlete did not participate independently of his *polis*.⁶¹ In short, this c.525–500 inscription confirms that by C6l the formal organisation of the Olympics was already politicised or in the process of becoming so.⁶²

It seems, in conclusion, that in C6 and in the Classical period the attestation of a Panhellenic victor from a given community is a strong indication that this community was a *polis* (if it was not an *ethnos* or a monarchy) and in actual fact most communities with attested victors *were poleis*.⁶³

⁵⁷ Ebert and Siewert (1999).

⁵⁸ i.e. the Eleian *perioikoi* who lived in *poleis*, see Roy (1997) 285–89.

⁵⁹ Ebert and Siewert (1999) 409: “ein offizieller Festgesandter der Heimatpolis”.

⁶⁰ Ibid. 410: “die herkömmliche Auffassung, die auswärtigen Athleten seien in Olympia völlig auf sich allein angewiesen, ist nach unserer Inschrift, wie es scheint, nicht mehr aufrecht zu erhalten”.

⁶¹ Ibid. 412: “revidiert . . . das herkömmliche Bild eines von der Heimatpolis weitgehend isolierten Auftretens eines Athleten beim olympischen Agon beträchtlich.” Cf. Nielsen (2002) 210.

⁶² There was no system of *theorodokia* in the Archaic period (Perlman (2000) 18–29), but it has been suggested that Elis (no. 251) was one of the *poleis* pioneering the institution of *proxenia* “to facilitate the operation of an international sanctuary” (Wallace (1970) 194, 195–96).

⁶³ Most of the communities in the list below were *poleis* of type A: Aitna (no. 8); Akragas (no. 9); Gela (no. 17); Himera (no. 24); Kamarina (no. 28); Naxos (no. 41); Syrakousai (no. 47); Zankle (no. 51); Kroton (no. 56); Lokroi (no. 59); Metapontion (no. 61); Poseidonia (no. 66); Rhegion (no. 68); Sybaris (no. 70); Taras (no. 71); Thourioi (no. 74); Apollonia (no. 77); Epidamnus (no. 79); Ambrakia (no. 113); Korkyra (no. 123); Stratos (no. 138); Delphi (no. 177); Parapotamioi (no. 188); Orchomenos (no. 213); Thebai (no. 221); Thespiiai (no. 222); Corinth (no. 227); Megara (no. 225); Sikyon (no. 228); Aigeira (no. 230); Pellene (no. 240); Elis (no. 251); Kleitor (no. 276); Mantinea (no. 281); Oresthasion (no. 287); Stymphalos (no. 296); Tegea (no. 297); Lepreon (no. 306); Messene (no. 318); Sparta (no. 345); Argos (no. 347); Epidauros (no. 348); Phleious (no. 355); Troizen (no. 357); Aigina (no. 358); Athens (no. 361); Chalkis (no. 365); Eretria (no. 370); Karystos (373); Opous (no. 386); Larisa

⁵⁰ Nielsen (2002) 208; cf. Hermann (1988) 119: “Mag die Inschrift der Siegerstatue noch so kurz sein—kaum je fehlt der Name der Heimatpolis.”

⁵¹ Entered by Dyspontion (no. 250); cf. *Olympionikai* no. 39.

⁵² The historicity of the report is accepted by Mann (2001) 68–80.

⁵³ Plut. *Sol.* 23.

⁵⁴ Xenophanes fr. 2, West. On this fragment see Bowra (1938); Marcovich (1978) 16–26; Kurke (1993).

⁵⁵ So Bowra (1938) 258; but see Marcovich (1978) 22–23. Tyrtaios fr. 12, West also implies that athletic success was highly regarded by Archaic *poleis*.

⁵⁶ *Astos* is a synonym of *politēs*, see Hansen (1997) 10–11.

It is not *proof* of *polis* status, though, and the Inventory excludes communities whose *polis* status is suggested *solely*

(no. 401); Pharsalos (no. 413); Andros (no. 475); Kos Meropis (no. 499); Melos (no. 505); Peparethos (no. 511); Thasos (no. 526); Pella (no. 543); Maroneia (no. 646); Byzantion (no. 674); Mytilene (no. 798); Chios (840); Ephesos (no. 844); Klazomenai (no. 847); Kolophon (no. 848); Magnesia (no. 852); Miletos (no. 854); Samos (no. 864); Smyrna (no. 867); Halikarnassos (no. 886); Ialysos (no. 995); Rhodos (no. 1000); Barke (no. 1025); and Kyrene (no. 1028).

Some were *poleis* of type [A]: Kaulonia (no. 55); Terina (no. 73); Aigion (no. 231); Dyme (no. 234); Patrai (no. 239); Heraia (no. 274); Phigaleia (no. 292); Krannon (no. 400); Pielinna(ion) (no. 409); and Skotoussa (no. 415).

A few were *poleis* of type B: Pisa (no. 262) but here the victor is very early and without influence on its classification as a *polis* type B which is valid only for the mid-360s; Dipaia (no. 268); Lousoi (no. 279); Methydion (no. 283); Pheneos (no. 291); Kleonai (no. 351); Tiryns (no. 356); and Astypalaia (no. 476).

Our sources sometimes describe victors not by city-ethnics but by regional ethnics, e.g. *Θετταλός* (e.g. *Olympionikai* nos. 291, 316, 384); or sub-regional ethnics such as *Μαυιάλιος* (e.g. *Olympionikai* nos. 377, 393, 408); or by the

by the attestation of a Panhellenic victor,⁶⁴ except in very special cases.⁶⁵

ethnics of multipolate islands such as *Κείσιος* (*Olympionikai* nos. 116, 203, 288) or *Κρήσις* (e.g. *Olympionikai* nos. 297, 367b, 390). Such areas were all subdivided into *poleis* but in default of more detailed evidence it cannot be determined to which *polis* such victors belonged or why ethnics other than city-ethnics were preferred in describing them.

⁶⁴ See Mainalos in the list of pre-Hellenistic settlements in Arkadia (*infra* 507).

⁶⁵ Two communities of the wider region of Elis, Dysponton (no. 250) and Lenos (no. 257), are included as *poleis* of type C in the chapter on Elis, primarily on account of some early Archaic *Olympionikai*. However, Elis is known to have contained a plurality of *poleis* (cf. Ps.-Skylax 43; Diod. 11.54.1) in particular prior to the synoecism of 471 (on which see Roy (2002)). It is extremely difficult to identify these Eleian *poleis* and so the attestation of *Olympionikai* from two local communities of wider Elis carries somewhat more weight than they would otherwise and leads to the classification of these communities as *poleis* of type C.

The Delian League

The Delian League was by far the largest of all the Hellenic *symmachiai* and the one whose members we know best thanks to the preservation of a substantial part of the Athenian tribute lists (*IG* 1³ 259–90) and assessment decrees (*IG* 1³ 71, 77, 100). The names of some 330 members are still preserved in the fragments (see Index 18).¹ We can infer that each of these members was a political community, but not necessarily an independent community. Over the years the Delian League was transformed from an alliance into an “empire” in which only very few of the members were independent and in possession of *autonomia*. The great majority had become what Thucydides called *ὑπήκοοι πόλεις*—dependent *poleis*.² They were all dependent on Athens, but within the League there were other forms of subordination too: it appears from the lists that Erythrai possessed a number of satellites which, however, in some years are recorded as individual payers.³ The Aktaiai *poleis* in Troas were part of the *peraia* of Mytilene (no. 798),⁴ and Galepsos on the coast of Thrace (no. 631) was a Thasian *emporion*.⁵ So, all members were polities in some sense, but how many were actually *poleis*? And how many were Hellenic *poleis*?

The headings of all the tribute lists are so fragmentary that we cannot say whether they included the term *polis*.⁶ On the other hand, in the assessment decree of 425/4 the heading of the list of the members is preserved and it does contain the term *polis* (*IG* 1³ 71.58). Furthermore, the allies are collectively referred to as *poleis* in all the Athenian decrees which regulate the Delian League. One example suffices in this context: *polis* occurs eight times in the preserved parts of the coinage decree referring collectively to each and

every member of the League (*IG* 1³ 1453 pp. 898–99); for the other attestations, see Schuller (1995) 165 with nn. 2–14.

In all these documents, however, *polis* is a generic term, and when a term appears as a heading, it is often used less precisely than when applied to individual members of the class subsumed under the term (cf. Hansen (1997a) 9). Even on the reasonable assumption that all the headings of the tribute lists included the term *polis*, we cannot be sure that the Athenians would apply the term *polis* individually to every polity recorded in the lists.

We are on safer ground when we find *polis* used in the tribute lists as a subheading in the so-called rubrics followed by a list of, at most, a dozen names of allies.⁷ But even here *polis* is just a heading, and although these rubrics in their present state do not include any community which can be recognised as a tribal community or a dynast ruling a territory, we cannot infer without further evidence that each and every polity listed in the rubrics was believed to be a *polis*.

An attempt in the lists to distinguish *poleis* from other types of polity was made at the Polis Centre symposium in 1995. Both in the tribute lists and in the assessment decrees the recording of the allies is mostly by ethnic but sometimes by toponym, and sometimes the recording alternates between ethnic and toponym. On the assumption that the Greeks used ethnics to designate *poleis* and toponyms to designate other types of community, Avram and Schuller suggested that the allies recorded by ethnic were *poleis*, those recorded by toponym were not *poleis*, and those that changed from toponym to ethnic were primarily polities whose *phoros* was initially paid by private citizens (the *idiotai* rubrics in the lists) whereas they were recorded by ethnic when, later, the *phoros* was paid by the *polis*.⁸ This very neat explanation of the occurrence of toponyms among the ethnics does not stand up to detailed examination.

First, the general assumption that *poleis* in the political

¹ 322 members are recorded by toponym and/or, presumably, city-ethnic; some of these are multipolate islands, cf. n. 14. 6 members are recorded by, presumably, regional ethnic; 5 Karian dynasts are recorded of whom 3 ruled *poleis* (also recorded among the 322 allies); and 1 ruled some Karians (also recorded among the regional ethnics). Furthermore the names of 19 members have been unconvincingly restored by the editors of *ATL* (*infra* 1360). Some members are not recorded in the inscriptions, viz. Chios (no. 883), Delos (no. 478), Lesbos (5 *poleis*) Samos (no. 864) and Skyros (no. 521). For a list of Athenian allies which were not members of the League, see Ste Croix (1972) 103.

² Hansen (1995) 32–33, *supra* 90 no. 8; Schuller (1974) 54–56, 109, 121.

³ Hansen (1997b) 24–25.

⁴ See *supra* 88 no. 2.

⁵ See *supra* 89 no. 3.

⁶ The occurrence of [τὸμ. πόλι]εον in the postscript to the first list is almost completely restored (*IG* 1³ 259, *postscriptum* 5–6), and [πόλιες] is completely restored in the heading of *IG* 1³ 287.7 and 289.6.

⁷ *IG* 1³ 278.vi.5–37; 279.ii.76–100; 280.ii.68–82; 281.i.59–66, ii.31–41 (completely restored), iii.42–68; 282.ii.34–56, B.11–21; 283.iii.32–35, fr. 2 (completely restored); 285.i.107–16, iii.78 (completely restored). Cf. *IG* 1³ 71.iii.124–40, iv.126–47 (restored); 77.14–26. On the “rubrics”, see *ATL* iii 78–89; Schuller (1981).

⁸ Schuller (1995) 168; Avram (1995) 195.

sense are not normally called by toponym has to be modified considerably; see *supra* 56.

Second, in the inscriptions altogether eighty-four allies are recorded by toponym; of these thirty-two are listed sometimes by toponym, sometimes by ethnic; in almost all cases there is no detectable reason for the variation, nine are explicitly called *polis* in other classical sources (type A), seventeen were probably *poleis* (types [A]B and B), and six may have been *poleis* but we have no evidence (types [A]C and C). Of the fifty-two allies recorded by toponym only, twenty-four are directly attested as *poleis* in other classical sources (type A), eleven are known for important activities typical of a *polis* (type [A]B and B), for thirteen we have no further information (types [A]C and C), and four have not got an entry in the inventory.⁹ The result is that most of the communities recorded by toponym were certainly or probably *poleis*. For a dozen or so the answer is that we have no evidence to settle the issue. The members in Lykia and Kilikia were probably indigenous polities, and some positive evidence which may indicate that allies recorded by toponym were *not poleis* is restricted to two communities, *viz.* Leros and Teichioussa, see *infra* 114. For unknown reasons toponyms occur much more frequently in the assessment decrees than in the tribute lists.¹⁰

Instead of distinguishing between toponyms and ethnics, we must compare the lists of allies with the information we have about the *polis* status of all the members, and for this purpose we have subdivided the entries in the lists into three groups: (1) allies recorded by toponym and/or by what is or seems to be a city-ethnic; (2) allies recorded by what is or seems to be a regional ethnic; (3) allies recorded by the name of a ruler.

Re (1) This group comprises the great majority of the allies, altogether 324 members. Of these 165 are explicitly called *poleis* in other classical sources (type A), eighty-one are known to have performed activities characteristic of a *polis* (types [A]B and B), e.g. striking coins, sending envoys to other *poleis*, getting a citizen appointed *proxenos* by another *polis*, having a *prytaneion* etc.¹¹

We are left with seventy-eight allies for which the entry in the Athenian lists is the only evidence that the ally in question was a political unit. Seven of these are not included in

this Inventory,¹² and two have broken names so that it is impossible to decide whether they are recorded by ethnic or by toponym. The remaining sixty-nine allies fall into three groups: for thirty-three we know both the ethnic and the toponym from which the ethnic was derived. Such a community was apparently centred on a nucleated settlement designated by the toponym; so the ethnic is a city-ethnic, and the presumption is that these communities were *poleis*. For fifteen allies we know only the toponym, and in the light of the above observations we are inclined to hold the reverse view of that of Avram and Schuller: the registration in the tribute lists indicates that these allies were polities; that they are registered by toponym indicates that they were centred on a nucleated settlement, i.e. that they were *poleis* rather than tribal communities of some sort. For twenty-one allies we know only the ethnic. There is no evidence to show that the ethnic was derived from the name of a nucleated settlement. Thus, it may have been a regional ethnic and the polity designated by the ethnic may not have been a *polis*, but some kind of “tribal” community, cf. e.g. the Amyndeis (no. 873), the Erineis (no. 884), the Hymisseis (no. 890) and eight other Karian members of the alliance. Alternatively, it may have been a sub-ethnic designating a civic subdivision and not a *polis*. Here some of the Rhodian members of the Delian League may serve as an example. In addition to the three well-attested *poleis*—Ialysos, Kamiros and Lindos—the tribute lists record four Rhodian allies: the Brikindarioi (no. 993), the Diakrioi (no. 994), the Oiatai (no. 998) and the Pedieis (no. 999). The first three were certainly, and the fourth possibly, situated in the Lindian territory. The Oiatai are twice recorded as *Οὐάται Λυδίων*.¹³ Like Tanagra and Erythrai and several other *poleis*, Lindos was presumably a *polis* with dependent *poleis* inside its territory. Alternatively, we have to assume that these four communities were just civic subdivisions which for unknown reasons were treated as individual members of the Delian League and recorded by their sub-ethnic. Of the seven members not included in the Inventory five were indigenous communities (see n. 12). For Leros and Teichioussa, see the appendix *infra*. That is as far as we can get. To conclude: of all the 323 in this group, 245 were certainly or probably *poleis*¹⁴ and for forty-eight of

¹² The Ionian settlements Leros (probably no longer a *polis* in C5), Teichioussa, see *infra*; and 5, probably, non-Greek allies: the Polichnaioi Kares in Karia, Hiera, Telemessos and Tymnesos in Lykia, and Silyon in Pamphylia.

¹³ *IG* I³ 259.111.26; 261.111.28, cf. *ATL* I 513.

¹⁴ The number of *polis* members is in fact 19 higher. 9 *poleis* are never recorded in the lists (Chios, Delos, Lesbos (5 *poleis*), Samos and Skyros), and on some multipolate islands the *poleis* paid together and were registered by the name of the island: Amorgos: 3 *poleis*; Keos: 4 *poleis* (Koresia once recorded

⁹ *Ionia*: Leros, Teichioussa; *Lykia*: Hiera; *Kilikia*: Silyon.

¹⁰ Unpublished MA thesis by Bjørn Paarmann.

¹¹ Coins: Dikaia (no. 568); envoys: Elaiou (no. 663); *proxenos*: Kallatis (no. 686); *prytaneion*: Sigeion (no. 791).

the remaining seventy-seven allies the chance that they were *poleis* seems to outweigh the chance that they were tribal communities of some kind. For the remaining twenty-nine there is no evidence.

Re (2) In addition to all the allies recorded by city-ethnic and/or toponym there are in the lists some communities listed not by city-ethnic but by regional ethnic: viz. the Bottiaians,¹⁵ the Lykians,¹⁶ some Karians,¹⁷ and three communities recorded by an ethnic which may be a city-ethnic denoting a *polis* but may also have been a regional ethnic denoting a people: the Maiandrioi,¹⁸ the Markaioi,¹⁹ and the Mysoi.²⁰ The Bottiaians are known to have formed a federation composed of *poleis*.²¹ All the other peoples are located in the northern or southern part of the west coast of Asia Minor: the Mysoi lived on the south coast of the Propontis, the Markaioi in Troas, the Maiandrioi in Karia. We do not know the precise identity and location of the Karians ruled by Tymnes. The Lykians formed a syntely and in 446/5 they paid 10 talents.²² At that time most of Lykia was ruled from Xanthos by Kuprlli and it is a reasonable assumption that the ten talents were paid by Kuprlli on behalf of that part of Lykia he ruled.²³ The Lykians are not recorded in later lists, but some Lykian cities appear in other lists and in the assessment decree of 425/4.²⁴ The three remaining ethnics may have been names of tribal communities, but they may also have been *poleis*. In *ATL* the Maiandrioi are associated with a *polis* called Maiandros; Mysoi too have been interpreted as a city-ethnic and associated with the toponym Mysia. About the Markaioi there is no further evidence.

Re (3) Finally there are a few names of persons. They

separately); Kos: 3 *poleis*; Lemnos: 2 *poleis* (sometimes recorded separately); Mykonos: 2 *poleis*; Peparethos: 3 *poleis*; Skiathos: 2 *poleis*.

¹⁵ Βοττιαῖοι: *IG* 1³ 266.11.19

¹⁶ Λύκιοι (*IG* 1³ 261.1.30; 262.v.33; 266.111.34) *ATL* 1 513–14. It appears from the third reference that the Lykians formed a syntely.

¹⁷ Viz. those ruled by Tymnes, see *supra*.

¹⁸ Μαϊάνδριοι (*IG* 1³ 71.1.133; 259.111.29; 261.1v.5; 267.v.19) *ATL* 1 514–15, *Barr. map* 61, lat. 37.45, long. 27.25, identified with a city which in Steph. Byz. 425.20–22 is called Maiandropolis or Maiandros.

¹⁹ Μαρκαῖοι (*IG* 1³ 100 = Krateros fr. 23). Μαρκαῖοι (Steph. Byz. 433.14, MS B, MSS A and V have Μαρκαῖσσοιοι) Μάρκαιοιν (conj. Meineke). Steph. Byz. describes Markaion as a mountain in the Troas near Gergis whose inhabitants are called Markaioi (or Markaiisioi). On the assumption that Stephanos' source is Krateros who again copied the assessment decree of 410/09, *IG* 1³ 100 records the Μαρκαῖοι [---] (fr. 23) as if they appeared on the stone.

²⁰ Μυσοί: *IG* 1³ 71.111.69–70; 259.v.15.

²¹ *IG* 1³ 76.43–53; cf. Flensted-Jensen (1995) 126–28.

²² Λύκιοι καὶ συν[τελ] (*IG* 1³ 266.3.34).

²³ Keen (1998) 118–24, *infra* 114.

²⁴ Iera (*IG* 1³ 71.11.153–54); Telemessos (*IG* 1³ 266.111.33, restored at 261.1.29 and 262.v.32); Tymnessos (*IG* 1³ 71.1.141).

are obviously rulers and are traditionally described as “dynasts”. Altogether five appear in the inscriptions and they are all Karian: Paktyes Idymeus,²⁵ Pikres Syangeleus,²⁶ Sa[---] Killareus,²⁷ Sambaktys²⁸ and Tymnes.²⁹ Three of them, i.e. Paktyes, Pikres and Sa[---], were probably rulers of *poleis*, viz. Killareis (no. 901), Idyma (no. 893) and Syangela (no. 931), and they were not essentially different from the tyrants who ruled *poleis* in other parts of the Greek world. Only one of the five, Tymnes, is explicitly described as the ruler of a people rather than a *polis*. To conclude: The Delian League was unquestionably a League of *poleis*. The positive evidence for non-*polis* members is restricted to Leros³⁰ and Teichioussa, to the Bottiaians, the Lykians and some Karians, and to one ruler, Sambaktys who may or may not have been the ruler of a *polis*. For the rest the evidence is a *non liquet*.

On the other hand, not all the *poleis* were Hellenic *poleis*. Quite a few were mixed communities (marked β) and for many of the Karian, Pamphylian and Kilikian members of the League the other evidence indicates that these *poleis* were basically barbarian city-states in a Hellenic context and with a thin varnish of Hellenisation (marked γ). They did not become proper Greek *poleis* until the Hellenistic period. Especially Lykia seems in C5 still to have had its own indigenous culture and political organisation. The Lykian alphabet and coinage betray Greek influence, but it would be wrong to see Lykia as part of the Greek world before the Hellenistic or at least the Hekatomnid period (Marksteiner (2002)). Therefore, the Pamphylian *polis* Sillyon and the Lykian *poleis* have been kept out of the inventory except the Greek colony Phaselis (no. 942). Also, some of the Karian, Pamphylian and Kilikian polities, included in the Inventory and recorded as *poleis* γ, have been given the benefit of the doubt and would probably have been removed from the Inventory if we had had better sources.

³⁰ Leros may have been a *polis* in the Archaic period, see no. 504.

APPENDIX

Leros and Teichioussa

The ethnic Leros is attested in C6, presumably as a city-ethnic,³¹ but in the Hellenistic and Roman periods it was a demotic designating one of the Milesian demes.³² Thus Leros (no. 504) seems to have been a *polis* in the Archaic period but a civic subdivision in the Hellenistic period. What was its status in C5? And what was that of Teichioussa? The evidence we have comes from the Athenian tribute lists. In the first list, that of 454/3 (*IG* 1³ 259), Miletos, Leros and Teichioussa are recorded, the Milesians separately in the third column (19),³³ Leros and Teichioussa together in the sixth: 19–20: Μιλέσιοι [ἐ]χς Λέρο : ΗΗΗ. 21–2: [Μι]λέσιοι [ἐκ Τ]ειχιόσσε[ς : ---]. In the 420s Μιλέσιοι, Λέρος and Τειχιόσσα appear side by side; sometimes they pay together (*IG* 1³ 285.1.88–90; 289.36–38, cf. 71.1.121–22), sometimes separately (*IG* 1³ 284.15–17). Why were Leros and Teichioussa recorded alongside Miletos? With the improved reading of *IG* 1³ 259.111.18–19 there is no longer any cogent reason to suppose an opposition in 454 between Milesians who had revolted against Athens and Milesians in Leros and Teichioussa who were loyal to Athens.³⁴ On the other hand *stasis* in Miletos and Athenian intervention is attested in [Xen.] *Ath. pol.* 3.11 and *IG* 1³ 21 (450/49 or 426/5). Apparently, we have a choice of three interpretations: (a) By

³¹ Demodokos fr. 2.1–2, West = *Ant. Pal.* 11.235, see no. 504 *infra*.

³² *I.Didyma* 215.B.1 (first century AD), cf. Jones, *POAG* 323–24.

³³ At 259.111.18–19 *IG* 1³ still has Meritt's (1972) conjecture: *Νεοπο[λιτῶν ἐκνν] Μιλέ[το ἐν Λεύκοι]*, but later Lewis accepted Piérart's suggestion (1974) 164–67 to read the lines as two separate entries of which the second records the contribution of the Milesians (Lewis (1994) 295), cf. Gorman (2001) 223–24. Thus, the preferable reading is 111.18: *Νεοπο[λιτῶν ---]*, 19: *Μιλέ[σιοι ---]*.

³⁴ Argued by Piérart (1974) against Meritt (1972).

C5m Leros and Teichioussa had already become Milesian demes and were civic subdivisions recorded separately as Athenian allies and sometimes paying separately; (b) during a severe *stasis*, the Milesians were for a period split up into three rival polities centred in Miletos, Leros and Teichioussa. For a *stasis* between three and not two factions, cf. Athens in C6f; (c) just as Erythrai seems to have had a number of small dependent *poleis* lying on its territory, so Miletos may have had Leros and Teichioussa as dependent *poleis*, not yet fully incorporated into Miletos and therefore in some cases recorded separately as members of the Delian League. The three scenarios are by no means incompatible. The recording at 259.vi.19–22 of Leros and Teichioussa as inhabited by Milesians may be adduced in favour of (a) but it is unlikely that mere civic subdivisions were recorded separately as members of the Delian league. *Stasis* leading to a temporary fragmentation of Miletos into three polities (*poleis*?) may explain the entry in 454/3, but not the entries in the 420s when the three communities usually paid together. If there was *stasis* in the 420s, it did not result in the formation of three separate polities. On the other hand, if Leros and Teichioussa had been dependent *poleis* we might have expected the ethnic Λέριοι instead of Μιλέσιοι ἐχς Λέρο, but not necessarily, cf. e.g. Imbros (no. 483), one of the dependent *poleis* inhabited by Athenians and attested sometimes as Imbrians and sometimes as the Athenian *demoi* on Imbros. As the evidence stands we have preferred not to record Teichioussa as a *polis* and to restrict the existence of a Lorian *polis* to the Archaic period.

The Emergence of *Poleis* by *Synoikismos*

The topic of this chapter is the voluntary or enforced relocation of communities (see Index 21). The Greek terms most commonly used are the noun *συνοικισμός* with the verbs *συνοικίζεω* and *συνοικεῖν*.¹ They are frequently found in sources of the Hellenistic and Roman periods, but the noun *συνοικισμός* is unattested in Archaic and Classical texts,² and the verbs are not common in pre-Hellenistic sources either. Furthermore the verbs are used in our texts not only about the relocation of neighbouring communities³ but also about the foundation of distant colonies which we treat separately *infra* 150–53.⁴ Therefore, more than in the other chapters, the analysis of synoecism has to include retrospective sources of the Hellenistic and Roman periods and, by excluding colonisation, we are applying a modern delimitation of the concept of synoecism whereas, apparently, the Greeks did not draw a sharp line between the two phenomena.

Synoikismos means “moving together” and can be used of any kind of joint settlement, including matrimonial cohabitation.⁵ When used in the specific sense of relocation of peoples, it denotes the relocation of one or more communities either to a new-built settlement where the immigrants become merged with one another, or to a pre-existing settlement where the immigrants become merged with the inhabitants. An example of the first form is the synoecism of Rhodos (no. 1000) in 408/7 whereby communities coming from the *poleis* of Lindos, Ialysos and Kamiros founded a new urban centre and gave it the name of the island: Rhodos. An example of the second form is the syn-

oecism in C4m whereby the city of Orchomenos (no. 286) was reinforced by a contingent of immigrants coming from the small *polis* of Euaimon.

In a broader and less precise sense, however, *synoikismos* also covers the relocation of a community to a new-built settlement without any merging of different communities. In some cases people were relocated to a distant place, and what is described is, in fact, an act of colonisation.⁶ In other cases the community in question was moved to a new settlement lying only a few miles away.⁷

This section is devoted to synoecism in the strict sense, and colonisation is treated separately *infra* 150–53. This distinction is universally accepted by modern historians;⁸ but is it possible to draw a clear line between the two phenomena? Demand (1990) 8 is one of the few historians who explicitly address the problem:

Colonization differed significantly from relocation, however, in that only a small segment of the community moved, leaving the mother city intact. In relocation the intention was a total removal and replanting of the civic body. Nevertheless, in some relocations small remnants of the community may have stayed behind, either because some residents refused to leave or because they were left ‘officially’ to tend immovable shrines. Therefore we must define relocation by recorded or inferred intention rather than by entirely successful implementation of plans.

The distinction proposed by Demand is admirably clear,

⁶ According to Davies (1992) 28, an act of colonisation is described as a *synoecism* only if the colony was a joint foundation of several *poleis*. That is often the case, cf. Thuc. 1.24.2 about Epidamnos as a joint colony of Korcyra and Corinth, but in our sources the terms *συνοικισμός* and *συνοικίζεω* are also applied to the sending out of colonists from one *polis* only, e.g., Raikelos (Arist. *Ath. Pol.* 15.2); colonies founded by Eretria or by Chalkis (Arist. fr. 618); Amphipolis (Diod. 12.32.3); “Porneropolis” (Theopomp. fr. 110); Abydos and Prokonnesos (Strabo 13.1.12); Chalkidian colonies in Chalkidike (Strabo 7 fr. 11). Examples of long-distance relocations are Alalie C6m (no. 1), Kolophon C7m (no. 848) and Phokaia C6m (no. 861).

⁷ Diodoros uses the verb *μετοικίζεω* to describe the relocation of Pydna (Diod. 13.49.2) and of Oropos (Diod. 14.17.3), but at 15.94.1–3 this verb is used synonymously with *συνοικίζεω* to describe the synoecism of Megalopolis. The best-known examples of short-distance relocations are: Lilaia (no. 185) C5; Oropos C5l (no. 214); Pydna C5l (no. 544); Abdera C4m (no. 640); Chersonesos C5s (no. 695); Klazomenai C6m (no. 847); Skepsis C6 (no. 792); Kolophon C5l (no. 848); Magnesia 400 (no. 852); Priene? C4 (no. 861); Karyanba in C4l? (no. 896); Knidos in C4 (no. 903); Latmos in C4m (no. 910); Myndos in C4e (no. 914); Syngela in C6m? (no. 931).

⁸ Moggi, *Sin.*; Demand (1990) 8–9; Davies (1992) 27–28; Rhodes (2001).

¹ In Hellenistic sources the verb *μετοικίζεω* is often used synonymously with *συνοικίζεω*, cf. Diod. 13.75.1 (Rhodos 408/7), 15.94.1 (Megalopolis 368).

² The oldest occurrence of *συνοικισμός* is Polyb. 4.33.7, where it is used retrospectively about the synoecisms of Messene and Megalopolis in C4f. Thuc. 3.3.1 uses *ἔσυνοικίσθη* about the synoecism planned by Mytilene in 428 and *IPArk* 15.2, 55–56, 74–75 (= *Staatsverträge* no. 297) has *συνοικία* about the synoecism of Euaimon and Orchomenos in C4m. Similarly the Athenian festival celebrating the synoecism of Attika was called *συνοικία* (Thuc. 2.15.2; *IG* 1³ 244.C.16).

³ *συνοικίζεω*: Thuc. 2.16.1 (Athens in the age of Theseus); Thuc. 3.2.3 (Mytilene 428); *Hell. Oxy.* 20.3 (Thebai 431); Dem. 19.263 (Olynth 370s); Aeschin. 3.113 (Kirra in C6e); Lycurg. 1.62 (Messene 370/69). Used about synoecism in general: Thuc. 1.10.2; Isoc. 15.82. *συνοικεῖν*: Thuc. 2.68.5 (Argos Amphiloichikon 440s) Arist. *Ath. Pol.* 39.3 (Eleusis 403).

⁴ *συνοικίζεω*: Thuc. 1.24.2 (Epidamnos) Thuc. 3.93.1 (Herakleia Trachinia); Thuc. 6.5.1 (Himera); Arist. *Ath. Pol.* 15.2 (Raikelos). *συνοικεῖν*: Arist. *Pol.* 1303^a28 (Sybaris).
⁵ Hdt. 2.121ζ; Men. *Aspis* 133.

but does not stand up to scrutiny. In 408/7 it was not the intention to evacuate Lindos, Ialysos and Kamiros and make Rhodes the only urban centre of the island. Rhodos city (no. 1000) was settled by three contingents of citizens each coming from one of the three *poleis*, but the three founding cities persisted after the synoecism both as nucleated centres and as dependent political communities, and they were still referred to as being *poleis*. Similarly, the three communities which contributed to the synoecism of Kos (no. 497) in 366/5 did not disappear after the emergence of the new city, and Arkadian Euaimon probably persisted after its synoecism with Orchomenos (no. 286) in C4m. Not one single Arkadian *polis* is known to have disappeared in consequence of the synoecism of Megalopolis (no. 282) in 368. And a glance at the index of synoecisms shows that it was the exception to relocate a community in its entirety. As a rule a synoecism was both planned and performed as a relocation of a part of the population of the settlements involved.

A different and, we think, preferable criterion by which one can distinguish between colonisation and synoecism in the strict sense is the distance between the old and the new settlement. By contrast with colonisation, a synoecism in the strict sense entailed a relocation of populations over short distances only. The communities involved in a synoecism were neighbours and, in Hellas, they belonged to the same region, e.g. Achaia, Elis, Arkadia, etc. The establishment of a colony entailed an opposition (though not necessarily a confrontation) between the colonists and the indigenous population. After a synoecism the relocated people continued to live in their own region and with the same neighbours. Another difference is that a synoecised *polis* did not have a *metropolis* (though it could have one or more *oikistai*⁹).

A synoecism which involved the foundation of a new city had a number of aspects of which some were urbanistic and some were political. By the synoecism of Megalopolis a new urban centre was created with defence circuit, agora, temples, theatre, stoas and habitation quarters. But at the same time was created a polity whose citizens were ruled by their own assembly, council and magistrates. A new *polis* had emerged both in the urban and in the political sense.

The two aspects were often combined, but the prevailing view among ancient historians is that they could appear separately: there were “political synoecisms” which did not entail any relocation of communities¹⁰ and “physical sy-

noecisms” which consisted in relocation of communities unaccompanied by political reforms.

It is true that there were synoecisms which did not lead to the creation of a new *polis*, e.g. those of Olynthos (no. 588) in 432 and the 370s. But purely political synoecisms are unattested, apart from one which is mythological, *viz.* the synoecism of Attika as described in Thuc. 2.15.1–2: originally Attika was divided between a number of *poleis*; but Theseus closed down the *prytaneia* and *bouleuteria* of all the other *poleis*, he had their magistracies discontinued and created instead one centralised *polis* with one *bouleuterion* and one *prytaneion*. The settlement pattern continued unchanged; nevertheless Thucydides describes the reform as a synoecism: *Θησεὺς . . . ξυνώκισε πάντας*. In other sources, however, the unification of Attika is described as a proper physical synoecism.¹¹ In Classical Athens Theseus’ synoecism of Attika was celebrated at a festival called *Synoikia*.¹² The name of the festival indicates that what the Athenians celebrated was not just the political unification of Attika but the foundation of Athens. Thucydides seems to have kept the traditional terms but reinterpreted the event.

Apart from Theseus’ synoecism of Attika, which even the Greeks themselves placed midway between myth and history, there is one other similar example of a so-called political synoecism, *viz.* Herodotos’ description of the Ionians’ abortive attempt to unite and become one *polis* (Moggi, *Sin.* 95–99). After the sack of Sardis by Kyros c.547/6 the Ionian cities convened a meeting in which, according to Herodotos, Thales the philosopher proposed that the Ionians should set up a common *bouleuterion* for all the Ionian *poleis* in Teos (no. 868), whereby all the other *poleis*, though kept as urban centres just as before, would change their status and become demes instead of *poleis* (Hdt. 1.170.3).

Thus, the political unification of a number of *poleis* by the creation of a common central place for political decision making seems to be an abstraction just like the social contract in later political philosophy. Of the two examples we have of a “purely political synoecism” one is mythological and interpreted differently by Thucydides and our other Athenian sources; the other is a proposal that came to nothing and is not even called a synoecism by our only source. As far as we know the history of Greece, there is no example of a synoecism, whereby a new *polis* in the political sense was set up through an agreement between a number of settlements by which each surrendered (some of) its self-government to a set of political institutions convened in

⁹ Megalopolis had 10 (Paus. 8.27.2), Messene 1 (Paus. 4.26.7).

¹⁰ Kahrstedt (1932) 1435; Demand (1990) 10; Davies (1992) 28 type v; Rhodes (2001) 1161; Moggi, *Sin.* nos. 12, 16, 35, 36, 37, 39, 44, 47.

¹¹ Isoc. 10.35; Diod. 4.61.8; Plut. *Thes.* 24.1.

¹² Thuc. 2.15.2; IG 1³ 244C.16; Parker (1996) 14.

one of the settlements, while the settlement pattern was left intact. We know of formation of federations, called *koina* or *sympoliteiai*,¹³ but they did not entail any political eradication of the *poleis* involved; the *poleis* of a federation persisted as member states of the new common organisation. Again we know of one *polis* being incorporated into another *polis* and transformed into a civic subdivision or a dependent *polis* of a larger and more powerful *polis*,¹⁴ but such purely political annexations did not entail the creation of a new common political centre.

All well-attested examples of *polis* formation by synoecism seem to have involved the relocation of one or more communities. As suggested by the terminology, it was the physical and not the political aspect of a synoecism that was the more important. A synoecism seems invariably to have involved relocation of people from one or more settlements to one settlement which thereby was founded or reinforced. But usually only a part of the population of the communities involved was transferred to the new or reinforced settlement. The dissociation of the political aspect from the essential physical character of several synoecisms has been further substantiated by a number of recent investigations. (a) The evidence we have about the political reforms of Demonax of Mantinea strongly suggests that Mantinea (no. 281) was a *polis* before the synoecism described by Strabo. So this synoecism was probably the reinforcement of a pre-existing *polis* not the creation of a new one (Nielsen (2002) 192). (b) The synoecism of Elis (no. 251) in 471 was not the creation of a new *polis* but the reinforcement of an existing one. There is ample evidence that Elis was a *polis* in C61, both in the urban and in the political sense, and that the synoecism of 471 was principally demographic and urbanistic (Hansen (1995) 58–60; Roy (2002)). (c) The political unification of Rhodos was a protracted process and the formation of the Rhodian *polis* in the political sense should not be reduced to the political aspect of the synoecism in 408/7 which, according to our source, consisted in the creation of an urban centre (Gabrielsen (2000) 180–90). (d) A recent study of the coinage of Kos (no. 497) demonstrates that the Koan mint, traditionally connected with the synoecism of 366/5, must have started striking coins already in the 390s (Ingvaldsen (2002)).

If we focus on the urbanistic aspect of the synoecism, we can say that, in principle, there are the following four

forms of synoecism:¹⁵ (a) a *polis* is created by merging a number of *komai* or *demoi*; (b) a *polis* is created by merging two or more *poleis*; (c) a *polis* is reinforced by absorbing one or more neighbouring *komai* or *demoi*; (d) a *polis* is reinforced by absorbing one or more neighbouring *poleis*; (e) possible variants are a combination of (a) and (b) and a combination of (c) and (d).

Re (a) This is Aristotle's model of the emergence of the *polis* in *Politics* book 1: a number of *komai* were united to form a fully fledged *polis*. That Aristotle has a synoecism in mind is clear from the term he uses, viz. *συνήλθον* (*Pol.* 1252^b20). This verb is found again in several other descriptions of synoecisms and is almost a technical term.¹⁶ Aristotle's model is a very likely explanation of how many *poleis* must have developed, but it is not well attested historically. The best-known case is the synoecism of the *polis* of Mantinea in 370, created by the relocation of the population of five *komai*; but since it was a refoundation of a *polis* split up into *komai* only 15 years earlier, this synoecism is not a good example of how *poleis* developed from scratch. More relevant in that context are Megara and Tanagra. We learn that both *poleis* were originally settled in *komai*, but in both cases the source is probably one of the Aristotelian *politeiai*,¹⁷ and the synoecisms must have taken place so early that Aristotle and/or his pupils cannot have had access to explicit and reliable information. Therefore we cannot know whether they tailored the evidence they had to fit their model or whether they built their model on the evidence they had. A third example is a whole series of synoecisms mentioned by Strabo in connection with the synoecism of Elis in 471. Mantinea was synoecised from five demes, Tegea from nine, Heraia from nine, Aigion from seven or eight, Patrai from seven, and Dyme from eight.¹⁸ All these Aristotelian synoecisms may be historical but they are very difficult to place in time and they are unsupported by older and more reliable sources. Better examples are probably the C4m synoecisms of Metropolis in Thessaly (no. 403), known from Strabo 9.5.17 and, especially, Kassopa in north-western Greece (no. 100) where *polis* formation took place as late as the mid-

¹⁵ Hansen (1995) 57–58. Writing about *komai*, Swoboda (1924) 956–60 concentrates on (a) and (c) which he further subdivides by distinguishing between whether the entire population in the *komai* is removed to the *polis* or whether the *komai* are allowed to persist as villages side by side with the *polis*.

¹⁶ Arist. *Eth. Eud.* 1242^a7–10; Isoc. 3.6 = 15.254; *Anonymus Iamblichi* 6.1, DK; Strabo 7, fr. 11; 8.3.2; schol. Thuc. 2.16. Demand (1990) 26–27.

¹⁷ The source is in both cases Plut. *Quaest. Graec.* For Megara, see no. 17 (*Mor.* 295B–C); for Tanagra, see no. 37 (*Mor.* 299C–E). For the view that the ultimate source of Plut. *Quaest. Graec.* is the Aristotelian collection of *politeiai*, see Giesen (1901) 464 and Hansen (1995) 53.

¹⁸ Strabo 8.3.2; Moggi, *Sin.* 15 (Patrai), 20 (Dyme), 21 (Aigion), 23 (Tegea), 24 (Mantinea), 41 (Heraia); cf. Demand (1990) 61–72.

¹³ Giovannini (1971) 16–24.

¹⁴ Cf. the incorporation of Styra (no. 377) and Grynchai (no. 371) into Eretria in, probably, C51 (Moggi, *Sin.* 227–35) and the incorporation of Posideion (no. 376) and Dion (no. 368) into Histiaia/Oreos in C4e (Moggi, *Sin.* 236–37, 242–50).

fourth century. In Ps.-Skylax three sections are devoted to the Epeirote tribes: the Thesprotoi (30), the Kassopoi (31) and the Molottoi (32). In each chapter the author states that the people (*ἔθνος*) lived *κατὰ κώμας*, and no *polis* is mentioned between Korcyra described at 29 as a *πόλις* 'Ἑλληνίς and the Amphilochaian Argos called *πόλις* at 33. But in the Epidaurian list of *theorodokoi* of, probably, 356 Kassopa is recorded between Pandosia, a colony of Elis, and the Thesprotoi, still recorded as a tribe (*IG* IV².195.24–26). The shift from the Kassopoi in Ps.-Skylax to Kassopa in the list of *theorodokoi* strongly suggests that Kassopa was by now a *polis* and that is confirmed by recent excavations of the site. They have revealed that the city of Kassopa must have been founded around the mid-fourth century (Hoepfner and Schwandner (1994) 114–79). The excavators consider the circuit to belong to the period immediately after the synoecism and suggest a date around C4m (*ibid.* 123 with n. 298). Kassopa is probably the best-attested example of the emergence of a *polis* by a synoecism of *komai*, the model advocated by Aristotle in Book 1 of *Politics* (Hansen (1995) 61).

Re (b) To create a new *polis* by the relocation of people from a number of neighbouring *poleis* is remarkably well attested and here belong three of the most famous synoecisms of the classical period: those of Rhodos in 408/7, of Megalopolis in 368 and of Kos in 366/5. It is worth noting that in all three cases the synoecism was partial: the *poleis* which contributed to the founding of the new *polis* persisted after the synoecism and probably all were still *poleis*, though now dependent *poleis* and, in some sense, civic subdivisions of the new *polis* they had founded.

Re (c) There are surprisingly few attestations of the reinforcement of an existing *polis* by the relocation of people from second-order settlements within the territory. When Histiaia (no. 372) was moved to Oreos in C5m, the *polis* was reinforced by relocation of the population of Oreos, until then a Histiaian deme, and a century later the tyrant Philistides had the Elopies relocated from the territory into the town. In C5m Salmakis seems to have been incorporated into Halikarnassos (no. 886), and in the same period Lepreon (no. 306) was reinforced by absorbing what was left of northern Pylos.

Re (d) The most common type of synoecism seems to have been a large *polis*' incorporation of smaller neighbouring *poleis*, sometimes one at a time, sometimes several simultaneously.

As was the case with the other three types, the synoecism could be arranged by mutual agreement, or at least peacefully. In this category belong the synoecisms of Elis in 471 (no. 251), of Olynthos in 431 (no. 588), of Halikarnassos c.370 (no. 886), of Orchomenos in Arkadia in C4m (286), of Thebes in Achaia Phthiotis in C4s (no. 444), and of Latmos in C4l (no. 910). Sometimes the small *poleis* persisted (e.g. Halikarnassos 370 and Orchomenos C4m), sometimes they disappeared but then reappeared shortly afterwards: the small *poleis* incorporated into Olynthos disappeared in 431 but were apparently refounded by the Peace of Nikias ten years later.

But the synoecism could also be the result of a war, whereby a large *polis* conquered a small *polis* and had its population relocated and amalgamated with its own population. The two best-known examples are the synoecisms carried out by Syracuse (no. 47) and Argos (no. 347). In both cases the smaller *poleis* were conquered one by one, and the growth of the population of the larger *polis* was achieved by a whole series of successive enforced synoecisms.

Finally, the small settlements involved in a synoecism did not have to be either *poleis* or second order settlements (*komai* or *demoi*). Of the six small communities synoecised into Thebes (no. 221) in 431, four were *poleis*, but two were presumably second-order settlements, *viz.* Aulis and Schoinos. We cannot be certain that all the communities synoecised into Halikarnassos c.370 were *poleis*. One or more may have been towns without the status of *polis* and, for lack of supporting evidence, Side is here recorded among the non-*polis* sites in Karia. Similarly, *polis* status cannot be presumed for all the forty communities listed by Pausanias as participating in the synoecism of Megalopolis (Paus. 8.27.3–7). On the other hand it must be remembered that the forty communities listed by Pausanias may have been designated prospectively in 371, but not all were actually synoecised in 368.¹⁹

To conclude: the institution of synoecism shows, once again, how the Greeks radically and consciously interfered with what can be called natural growth of communities and, often with surprising success, imposed artificial relocations and reorganisations of their polities. *Synoikismos* is yet another aspect of the rationality of the Greek *polis*.

Destruction and Disappearance of *Poleis*

The frequent wars often entailed the destruction or the dismemberment of a *polis* and the annihilation or enslavement or expulsion of its population (see Index 20). Such disasters happened so frequently that a kind of technical terminology was developed for all the variants. To destroy the urban centre of a *polis* was usually called “to raze it to the ground” (κατασκάπτει τὴν πόλιν, noun: κατασκαφή).¹ To split up a *polis* into small villages was called “to break up the settlement” (διοικίζεω τὴν πόλιν, noun: διοικισμός).² To annihilate and/or enslave the population was called ἀνδραποδίζεω or ἐξανδραποδίζεω τὴν πόλιν (noun: ἀνδραποδισμός),³ and for the expulsion of the population the proper phrase was ἀναστάτους ποιεῖν τοὺς δέυνας or ἀνάστατον ποιεῖν τὴν πόλιν (noun: ἀνάστασις).⁴ Other idioms could be used, but those above occur so frequently that they deserve to be treated as technical terms. They describe four different phenomena which often occurred together: the destruction of a *polis* was almost always accompanied by the annihilation or enslavement or expulsion of its population or with its fragmentation into village communities. It must be added that not only *poleis* but also second-order settlements could be exposed to *andrapodismos* and physical destruction of the urban centre.⁵

1. *Enslavement* The term *andrapodismos* is invariably used in connection with the conquest and sack of a (besieged)

¹ κατασκάπτει (Isoc. 14.7; Dem. 18.36); κατασκαφή (Lys. 13.8; *I.Erythrai* 21.9–10 (C4s)). Used retrospectively by Arrian, Diodoros, Plutarch and Strabo, etc.

² τὴν πόλιν διοικίζεω (Dem. 5.10); Μαντινάς διοικίζεω (Isoc. 8.100). The noun διοικισμός is found in late sources only (Harp. M5).

³ The verbs ἀνδραποδίζεω (active: Hdt. 1–151.2; middle: Hdt. 1.76.2) and ἐξανδραποδίζεω (active: Xen. *Hell.* 2.1.15; middle: Hdt. 1.66.3) designate the “enslavement” of a *polis*. In the middle voice the verb ἀνδραποδίζεσθαι (Xen. *Mem.* 1.2.62) is also used about the illegal attempt by a kidnapper to make another person his slave or to have him sold off as a slave. With a few exceptions, see n. 6, the noun ἀνδραποδισμός denotes the enslavement of the population of a city (Dem. 1.5; Isoc. 4.100; Pl. *Resp.* 469B; Thuc. 2.68.9). Cf. Ducrey (1968) 107–47 and Volkmann (1990) who covers C4s as well as later periods.

⁴ ἀναστάτους ποιεῖν τοὺς δέυνας (Isoc. 4.108) or ἀνάστατον ποιεῖν τὴν πόλιν (Thuc. 6.76.2; *IG* 1³ 40.5–6); ἀνάστασις (Isoc. 15.127; Dem. 1.5). For the meaning of the phrase, see the appendix *infra*.

⁵ Destruction in 342 of Porthmos, a fortified settlement in the territory of Eretria (Dem. 9.58, 10.8). *Andrapodismos* of Hykkara 415 (Thuc. 6.62.3–4). In 341 Tyrodiza and Krobyle suffered *andrapodismos* by an Athenian army commanded by Diopieithes (Dem. 12.3; Dem. 8 *hypoth.* 2–3). Tyrodiza was probably a *polis*, but Krobyle seems to have been a non-*polis* settlement on the north coast of the Propontis.

city; it never occurs in, e.g., a description of the fate of a vanquished army after a lost battle, or the fate of the rural population after a raid in the territory of a *polis*. Nor is it used about the kidnapping of a person for the purpose of having him sold off as a slave.⁶

Down to 323 we know of altogether forty-six applications of *andrapodismos*.⁷ In some sources the term is used without any further description of what it implies,⁸ but in several cases the various facets and consequences of an *andrapodismos* are spelled out: sometimes the men who survived the conquest of the city were enslaved together with their wives and children.⁹ But often only women and children were enslaved while surviving adult males were killed off.¹⁰ The city was pillaged,¹¹ and razed to the ground.¹² The territory was handed over to neighbouring *poleis* or peoples.¹³ The enslaved women and children were either given to the soldiers who had conquered the city,¹⁴ or they were sold

⁶ The kidnapper is called ἀνδραποδιστής (Arist. *Ath. Pol.* 52.1) and the crime ἀνδραπόδισις (Xen. *Apol.* 25). In Plato's *Laws* ἀνδραποδισμός occurs twice in senses not attested in other sources: about illegal acquisition of a slave by conspiring with the slave in order to bring about a change of ownership (879A), and about the illegal detention of a free person to prevent him from appearing in court (955A). Kidnapping is not involved in either case although it was the crime normally committed by the ἀνδραποδιστής. See Hansen (1976) 39–48.

⁷ Including the three cases in which the entire population was killed off, see *infra* n. 18. Furthermore we know of at least three *andrapodismois* which were planned but not carried into effect: viz. of Mytilene in 427 (Thuc. 3.36.2) of Athens in 404 (Xen. *Hell.* 2.2.20; Isoc. 8.105; Dem. 19.65), and of Delphi in 356 (Paus. 3.10.4).

⁸ e.g. Arisbe (no. 795) C6; Eion (no. 630) 476/5; Chorsiai (no. 202), Koroneia (no. 210) and Orchomenos (no. 213) 346.

⁹ Miletos (no. 854) 494; Eretria (no. 370) 490; Euboeia (no. 15) c.485–83; Megara Hyblaia (no. 36) c.483; Mykenai (no. 353) c.460; Argos Amphiloichikon (no. 115) c.440; Torone (no. 620) 422; Iasos (no. 891) 412; Katane (no. 30) 403; Pharsalos (no. 413) 395; Rhegion (no. 68) 387; Poteidaia (no. 598) 356; Olynthos (no. 588) 348; Thebai (no. 221) 335.

¹⁰ Barke (no. 1025) c.514; Plataiai (no. 216) 427; Mytilene (no. 798) 427 (planned); Thyrea (no. 346) 424 (assuming that only the adult male Aiginetans were sent to Athens and executed); Skione (no. 609) 421; Melos (no. 505) 415; Himera (no. 24) 409; Selinous (no. 44) 409; Iasos (no. 891) 405; Orchomenos (no. 213) 364; Sestos (no. 672) 353.

¹¹ Thyrea (no. 346) 424; Katane (no. 30) 403; Naxos (no. 41) 403; Olynthos (no. 588) 348.

¹² Pellene (no. 240) C6e; Naxos (no. 507) 490; Mykenai (no. 353) c.460; Plataiai (no. 216) 427; Thyrea (no. 346) 424; Himera (no. 24) 409; Selinous (no. 44) 409; Iasos (no. 891) 405; Katane (no. 30) 403; Naxos (no. 41) 403; Orchomenos (no. 213) 364; Tenos (no. 525) 362; Thebai (no. 221) 335.

¹³ Naxos (no. 41) 403; Katane (no. 30) 403; Thebai (no. 221) 335.

¹⁴ Barke (no. 1025) c.514; Himera (no. 24) 409.

off as booty at public auction.¹⁵ Sometimes the city was not destroyed but handed over to new settlers together with the territory.¹⁶ In the strict sense the term *andrapodismos* covers the enslaving of either the entire population or the women and children. But when the term is found without any further specification, the presumption is that it covers several or all of the elements listed above.¹⁷ It may be significant, however, that the term does not occur when the entire population of a conquered city was killed off and no one enslaved.¹⁸

2. *Destruction* The conquest of a *polis* was often followed by the demolition of its walls, which is here treated in the chapter about defence circuits of *poleis*. In this context belongs the more severe treatment that could befall a *polis*: to be razed to the ground. The method mostly used was apparently to set fire to the town and leave the destruction to the flames.¹⁹ To pull down and demolish the houses and sanctuaries would be a slow and laborious task. It is only occasionally attested in the sources and then in addition to the burning of the *polis*.²⁰ There can be no doubt that a *polis* was plundered before it was destroyed, but that is commonly taken for granted and is only occasionally specified.²¹

As pointed out above, the destruction of a *polis* was often combined with the *andrapodismos* of its population. In fifty-six instances, however, we hear about the destruction of a *polis* without any mention of the enslavement of its population. In forty-one cases we have no information at all about what happened to the inhabitants, either because it is passed over in silence in our sources²² or because the destruction is attested archaeologically but not mentioned

in any text.²³ It is reasonable to suppose that some of these *poleis* were exposed to an *andrapodismos* in addition to the attested destruction of the city. But in the remaining fifteen cases we are explicitly told what happened to the people: sometimes they escaped before the city was conquered;²⁴ sometimes they were allowed to leave after the conquest;²⁵ sometimes they were expelled;²⁶ sometimes they were exposed to a *dioikismos*²⁷ and sometimes they were relocated. The Syracusans in particular seem to have practised a policy whereby all or some of the inhabitants of a conquered *polis* were transferred to Syracuse and naturalised.²⁸

3. *Expulsion* A third scenario was to expel the population of a conquered *polis* without any destruction of its urban centre which then could be given to new settlers. It is less often attested than expulsion of the inhabitants combined with physical destruction of the town, but it seems to have been the fate of at least ten *poleis*, of which one, Herakleia in Trachis, had its population expelled twice within a generation.²⁹ Thus, when the Athenians expelled the Aiginetans in 431 and sent Athenian colonists to the island, the Lakedaimonians had the Aiginetans resettled in Thyrea (Thuc. 2.27); and when the population of Halos in Malis was expelled, their town was given to the Pharsalians (Dem. 19.39).

4. *Frequency and effect* Our fragmentary sources provide us with information about 113 cases of *andrapodismos* or expulsion of the population of a *polis* and/or destruction of its urban centre. But in addition to individual attestations, *andrapodismos* and destruction of large numbers of unnamed *poleis* are mentioned in various contexts.

In 494 when the Persians had quenched the Ionian Revolt,

Apollonia (no. 627) 356; Nikaia (no. 385) 353; Naryka (no. 384) 352; Galepsos (no. 631) 356; Sermylia (no. 604) 348; Singos (no. 605) 348; Stagiros (no. 613) 348; Halikarnassos (no. 886) 334; Sigeion (no. 791) 334?

²³ Himera (no. 24) C6e; Siris (no. 69) C6f–m; Phokaia (no. 859) 546; Smyrna (no. 867) c.545; Phagres (no. 636) C5e; Morgantina (no. 37) 459/8; Nymphaion (no. 704) C4e; Pylos (no. 263) c.360; Stryme (no. 650) c.350; Nikonion (no. 688) c.331; Idalion (no. 1013) C4l.

²⁴ Kolophon (no. 848) c.660; Thespiiai (no. 222) 480; Plataiai (no. 216) 480; Athens (no. 361) 480, 479; Orneai (no. 354) 416/15; Akragas (no. 9) 406; Gela (no. 17) 405.

²⁵ Methone (no. 541) 354.

²⁶ Dyspontion (no. 250) 470; Tiryns (no. 356) 460; Plataiai (no. 216) 373.

²⁷ Smyrna (no. 867) c.545; Mantinea (no. 281) 385; Phokian *poleis* in 346; cf. Hansen (1995) 75–78.

²⁸ Kamarina (no. 28) 484; Kaulonia (no. 55) 389; Hipponion (no. 53) 388. A combination of *andrapodismos* and *metoikesis* was used in Euboeia (no. 15) 485–83 and Megara Hyblaia (no. 36) c.383.

²⁹ Smyrna (no. 867) C7e; Histiaia (no. 372) 446; Siris (no. 69) C5s; Aigina (no. 358) 431; Poteidaia (no. 598) 429; Delos (no. 478) 422; Herakleia (no. 430) 395 and 371; Trapezous (no. 303) 360s; Lyktos (no. 974) C4m; Halos (no. 435) C4m.

¹⁵ Iasos (no. 891) 405; Pharsalos (no. 413) 395; Rhegion (no. 68) 387; Olynth (no. 588) 348.

¹⁶ Barke (no. 1025) c.514; Argos Amphiloichikon (no. 115) c.440; Plataiai (no. 216) 427; Kyme (no. 57) 421; Skione (no. 609) 421; Melos (no. 505) 415; Poteidaia (no. 598) 356.

¹⁷ In Thucydides' description of the Athenians' treatment of Melos in 415 the term *andrapodismos* denotes the enslaving of women and children only, while Isokrates at 4.100 uses *andrapodismos* to cover the slaughter of the men as well as the enslaving of the women and children.

¹⁸ Samos c.517; Sybaris 510; Olynthos 479.

¹⁹ κατακαίνειν (Hdt. 8.33; Thuc. 4.57.3); ἐπιμαρπράναι (Hdt. 8.35.1; 8.50.2; 8.53.2; 9.13.2; Xen. Hell. 6.5.32; Isoc. 4.96; 16.13; Diod. 13.57.6–58.3); πυρὶ πῶλον νέμειν (Hdt. 6.33.2).

²⁰ By Herodotos 9.13.2 in connection with the destruction of Athens in 480. By Diodoros 13.57.6 in connection with the destruction of Selinous in 409.

²¹ Sybaris (no. 70) 510; Kyme (no. 57) 421; Selinous (no. 44) 409; Akragas (no. 9) 406; Gela (no. 17) 405; Methone (no. 541) 354.

there seems to have been an *andrapodismos* and/or destruction of several *poleis* that had participated in the Revolt. That of Miletos is described in some detail. An *andrapodismos* of Phokaia and the other Ionian *poleis* is implied by Herodotos, but its implementation is not mentioned (6.17, 31.1–2).

In his account of Xerxes' expedition in 480, Herodotos describes the destruction of most of the Phokian *poleis* (8.33, 35), of Thespias and Plataiai in Boiotia (8.50.2), and of Athens (8.53; 9.13), but several other *poleis* between the Hellespont and Attika may have suffered the same fate.

According to Demosthenes, Philip destroyed Olynthos, Methone, Apollonia and thirty-two other *poleis* in Thrace (Dem. 9.26), and Hypereides claims that the inhabitants of forty *poleis* on Chalkidike were expelled by Philip in consequence of his conquest of Olynthos in 348 (fr. 80, Jensen). Both orators are undoubtedly exaggerating, but the presumption is that more *poleis* were razed to the ground than the three Demosthenes mentions by name, cf. Theopomp. fr. 27.

After the Phokians had capitulated to Philip in 346, their cities were destroyed (Dem. 18.36, 41; 19.65, 141; Aeschin. 2.162; Paus. 10.3.2) and the inhabitants forced to move to a number of scattered villages (Diod. 16.60.2; Dem. 19.81). According to Demosthenes 19.23, twenty-two *poleis* were exposed to this *dioikismos*.

Full sources would undoubtedly have provided us with evidence of another three-digit number of *poleis* which were destroyed and/or exposed to *andrapodismos* or *anastasis*. On the other hand, we have reason to believe that the fate suffered by these *poleis* was less disastrous than it appears. The descriptions in our sources of *andrapodismos* and destruction of *poleis* convey the impression that usually the annihilation of a *polis* was carried out successfully and that all that was left of a flourishing community was a heap of dismantled houses and some women and children deprived of their liberty and deported to other *poleis*.³⁰ But reading the sources for the history of the region one or two generations later and studying the archaeological remains of *poleis* exposed to destruction and *andrapodismos*, we often discover that the annihilated *polis* still existed, and apparently flourished almost as if nothing had happened.

Of forty-six *poleis* exposed to *andrapodismos*, only five or perhaps six disappeared for good.³¹ A further six persisted as *poleis* but were settled with new inhabitants,³² whereas

three to five may have lost their status as *poleis* but persisted as municipalities lying in the territory of a larger *polis*.³³ The remaining thirty-one *poleis* appear in our sources as sometimes even flourishing communities only a decade or a generation after the *andrapodismos*.³⁴ In quite a few cases we know that the *polis* was resettled with people who had survived the *andrapodismos*;³⁵ but even in cases when the *polis* was taken over by new settlers, the community seems to have maintained its former identity, not only its name, but also its dialect, its traditions, and its cults.

Of fifty-two *poleis* destroyed after their conquest, eight seem to have disappeared for good³⁶ and at least two lost their status as *poleis* but persisted as municipalities.³⁷ No fewer than forty-two survived as *poleis*, or were refounded shortly after the destruction. The fate of the twenty-two Phokian *poleis* which allegedly were demolished in 346 is particularly interesting because some of the defence circuits that can still be seen are now believed to antedate the *dioikismos* and presumed destruction in 346 (see 401 *infra*).

The overall conclusion is that annihilation of a *polis* seems to have been achieved in about a score of the 112 individually attested *poleis*. In the other cases the *andrapodismos* must have been partial and the destruction of the city superficial. Just as it has been shown that the devastation of the countryside of a *polis* must have been less disastrous than is alleged in the sources,³⁸ so it can be shown that in most cases the destruction of the urban centre of a *polis* and the annihilation of its population must have been less effective and disastrous than appears from the accounts found in Herodotos, Thucydides, Xenophon, Demosthenes and Diodoros.

Naxos (no. 41) 403; Olynthos (no. 588) 348; Arisbe may have persisted as a *kome* of Methymna. Tyrodiza (no. 681) may have disappeared in 341.

³² Olynthos (no. 588) 479; Skyros (no. 521) 476/5; Argos Amphilochikon (no. 115) c.440; Kyme (no. 57) 421; Poteidaia (no. 598) 356; Sestos (no. 672) 353.

³³ Arisbe (no. 795) C6?; Euboia (no. 15) 485–83; Mykenai (no. 353) c.460; Thyrea (no. 346) 424?; Sybaris (no. 70) was destroyed in 510 but is attested in C5f as, probably, a dependent *polis* of Kroton.

APPENDIX

The Meaning of τὴν πόλιν ἀνάστατον ποιεῖν οἱ γενέσθαι

The lexica distinguish between two meanings of the adjective ἀνάστατος: when the subject is a people, the suggested rendering is “driven from one’s house and home”, but when the subject is πόλις or χώρα, the meaning is said to be “ruined”, “laid waste”.³⁹ Following Powell (1938) s.v. we suggest that “ruined” is misleading and that “laid waste” is better replaced by “depopulated”.

First, there are numerous passages in which it is impossible to tell whether “ruined” or “depopulated” is the preferable translation; but there are some passages in which an ἀνάστατος πόλις is certainly a *polis* whose population has been expelled, but not a “ruined *polis*”.

In Isokrates’ letter to Archidamos we are told how Greek mercenaries in Asia Minor treated the Hellenic *poleis*: they made them *anastatoi* by killing some inhabitants, expelling others, depriving some of their possessions and maltreating women and children in the most abominable fashion. Spelling out what it means to make a *polis* *anastatos*, all the atrocities concern the population, none the physical destruction of the town.⁴⁰

In his speech *Against Leokrates* (60–62) Lykourgos charges Leokrates with having deserted his *polis* and claims that, by leaving the *polis* the way Leokrates did, the *polis* would become uninhabited (τὴν πόλιν ἀοίκητον ἂν γενέσθαι). But to become ἀνάστατος is the death of a *polis* (πόλεως ἐστί θάνατος ἀνάστατον γενέσθαι). Again, the point is that the *polis* is deserted, not that it is destroyed.

Second, the adjective ἀνάστατος and the noun ἀνάστασις are derived from the verb ἀνίσταμαι. This verb means “make to stand up”, “raise up”, or “make people emigrate” and, when used intransitively, the meaning is often to “be compelled to migrate”, “be depopulated” (*LSJ* s.v.). If the object is a building or a statue

³⁹ “Ruined”, “laid waste” (*LSJ*); “Zerstört” (Pape); “détruit”, “ruiné” (Magnien-Lacroix); “devastado” in *Diccionario Griego-Español* is ambiguous. In translations into English “ruined” is often replaced by “destroyed” or “laid in ruins”.

⁴⁰ *Isoc. Ep.* 9.9: τὰς δὲ πόλεις τὰς Ἑλληνίδας, εἰς ἣν ἂν εἰσέλθωσιν, ἀναστάτους ποιούσιν, τοὺς μὲν ἀποκτείναντες . . . κτλ.

vel sim., the meaning is to “build” or “set up”, never to “destroy” or “pull down”. Similarly, the noun ἀνάστασις followed by an objective genitive denoting a building or a statue *vel sim.* is not attested in the sense of “destruction”; on the contrary, it bears the meaning “erection”. Thus, Demosthenes claims that the most laudable deed for which Konon was rewarded was the erection of the walls of Athens in the 390s (Dem. 20.68: ἀνέστησε τὰ τεῖχη and 72: ἡ τῶν τειχῶν ἀνάστασις). It would be odd if the adjective ἀνάστατος carried the meaning “ruined”, “destroyed”, especially since the meaning “forced to migrate” or “depopulated” seems to fit all occurrences: under the sense “ruined”, “laid waste”, *LSJ* s.v. ἀνάστατος cites Soph. *Trach.* 240: ἀνάστατος δορὶ χώρα, but *LSJ* s.v. ἀνίστημι cites Hdt. 5.29: χώρα ἀνεστηκνία and Eur. *Hec.* 494: πόλις πᾶσ’ ἀνέστηκε δορὶ under the sense “to be depopulated”.

To conclude: we suggest that the principal meaning of ἀνάστατος γενέσθαι is never “to be ruined” or “to be destroyed” but “to be expelled” when the subject is a people and “to be depopulated” when the subject is a city or a region. It is, of course, true that many conquered cities were destroyed as well as depopulated, see the evidence above, and it cannot be ruled out that “destroyed” may in some cases be a connotation, but that does not change the observation that the basic meaning of ἀνάστατος πόλις seems to be “a *polis* made to rise up and depart”; i.e. when connected with the adjective ἀνάστατος, the noun πόλις is used in the personal rather than in the urban sense of the word. Thus, when the phrase ἀνάστατον ποιεῖν οἱ γενέσθαι τὴν πόλιν occurs, we can safely infer that the population was expelled and the city depopulated, but unless we have other information, we cannot be sure that the *polis* was physically destroyed.⁴¹

⁴¹ One example is the fate of Kamarina in 484: Thuc. 6.5.3: καὶ αὐτὸς ὑπὸ Γέλωνος ἀνάστατος γενομένη τὸ τρίτον κατωκίσθη ὑπὸ Γελάων. Hdt. 7.156.2: Καμαριναίους ἅπαντας ἐς τὰς Συρακούσας ἀγαγὼν πολίτας ἐποίησε, Καμαρινῆς δὲ τὸ ἄστυ κατέσκαψε. We learn from Thucydides that Kamarina was depopulated, from Herodotus that it was both depopulated and razed to the ground.

Stasis as an Essential Aspect of the *Polis*

In Hellas in the Archaic and Classical periods “belonging” in a political context meant, first of all, to belong to one’s *polis*. Like the modern state, the *polis* provided its citizens with a feeling of common identity, based on traditions, culture, ceremonies, symbols and sometimes (presumed) common descent. For a Greek citizen the *polis* was his fatherland (*patris*) for which he was expected, if necessary, to die, just as the modern state expects “every man to do his duty” (*supra* 49).

However, sources describing and debating the *polis* show (a) that a *polis* was not a harmonious unit but that most *poleis* were split up into what in the sources are called two opposed *poleis*.¹ (b) The two *poleis*—i.e. the two factions—were often one of the rich (supporting oligarchy) and one of the poor (supporting democracy).² (c) Alternatively, the two factions might be two different ethnic groups living side by side as citizens of the same *polis*. This situation was especially common in colonies whose citizens were recruited from different *poleis*.³ (d) A third scenario was discord inside one of the two major social groups, in particular rivalry between two sub-factions of wealthy citizens in an oligarchy.⁴ (e) The goal of each faction was to control and (if necessary) to reform the political institutions of the *polis*.⁵ (f) The opposition between the two factions within

a *polis* entailed a constant tension and discord resulting in repeated outbursts of civil war, during which each faction was prepared to collaborate with a congenial faction in a neighbouring *polis*, or in a distant but hegemonic *polis*. The members of each faction were, in fact, willing to sacrifice the freedom (*eleutheria*) and independence (*autonomia*) of their *polis* if only they could gain the upper hand over the opposite faction.⁶

The authors who provide us with such a view are Ps.-Xenophon, Thucydides, Euripides, Isokrates, Plato and Aristotle. They all emphasise the opposition between the wealthy citizens supporting oligarchy and the commoners supporting democracy. But the fifth book of Aristotle’s *Politics* duly lists the alternative factors.

Even more importantly, one might object that the authors cited here were all Athenians or persons living in Athens, and may give a seriously distorted picture of the Greek world. Aineias the Tactician, however, draws a similar picture, and he is probably to be identified with the Arkadian general from Stymphalos.⁷ In his treaty of how to survive under siege he mentions treason among the besieged as a major risk. The theme is selected for special treatment in four chapters: 10, 11, 14 and 17. In some cases the threat comes from foreigners or mercenaries inside the walls of the besieged city.⁸ But often the risk of betrayal is connected with the lack of concord (*homonoia*) among the citizens,⁹ and of five historical examples reported in chapter 11, at least three and probably four concern rivalry between wealthy oligarchs and democratic commoners.¹⁰ Again, many out-

This chapter is based on Hansen (forthcoming).

¹ Pl. *Resp.* 422E; 551D; *Leg.* 945E; Arist. *Pol.* 1310^a4ff; Eur. fr. 173, Nauck; cf. Thuc. 3.82–83.

² Pl. *Resp.* 555B, 557A; Arist. *Pol.* 1266^b37–8; 1289^b27–40; 1290^b18–20; 1302^a10–13; 1303^a1–2.

³ Arist. *Pol.* 1303^a25–7, citing 8 examples: Sybaris (no. 70), Thourioi (no. 74), Byzantion (no. 674), Antissa (no. 794), Zankle (no. 51), Apollonia Pontike (no. 682), Syracuse (no. 47) and Amphipolis (no. 553). In Antissa—the only one of the 8 *poleis* which was not a colonial foundation—*stasis* was caused by the Antissaans having accommodated a large number of exiled Chians.

⁴ *Stasis* between sub-factions of wealthy citizens: Arist. *Pol.* 1302^a8–15 and 1305^b2–06^b2 with 22 examples: Massalia (no. 3), Istros (no. 685), Herakleia Pontike (no. 715), Knidos (no. 903), Erythrai (no. 845), Athens (no. 361) in 411 and 404, Larisa (no. 401), Abydos (no. 765), Herakleia Pontike (again) (no. 715), Amphipolis (no. 553), Syracuse (no. 47), Aigina (no. 358), Apollonia Pontike (no. 682), Pharsalos (no. 413), Elis (no. 251), Corinth (no. 227), Abydos (again) (no. 765), Larisa (again) (no. 401), Eretria (no. 370), Thebes (no. 221), Herakleia Pontike (again) (no. 715).

⁵ Thuc. 3.82.8; Arist. *Pol.* 1301^a20–25 and the rest of book 5 *passim*. Cf. Gehrke (2001). There is a close connection between *stasis* and change of constitution (*metabole politeias*); cf. Arist. *Pol.* 1301^b5, 1302^a16–17), but the two phenomena must not be equated: (a) when *stasis* was caused by rivalry between two groups

of rich citizens in an oligarchy, a *coup* or a revolution would not normally involve a change of constitution (cf. *supra* n. 4). (b) A change of constitution might take place peacefully and constitutionally without any *stasis* between opposing factions being involved; cf. Arist. *Pol.* 1303^a14–15: μεταβάλλοντι δ’ αἱ πολιτεῖαι καὶ ἀνευ στάσεως (“constitutions may also change without *stasis*”) followed by three examples. Arist. *Pol.* book 5 is often described as an analysis of *stasis*; it is in fact an analysis of *metabole politeias* (1301^a20–25).

⁶ Thuc. 3.82.1; Arist. *Pol.* 1307^b19–25; Ps.-Xen. *Ath. Pol.* 1.14, 3.10; Isoc. 16.17.

⁷ See the penetrating study by Winterling (1991).

⁸ Foreigners: 10.9–10, 10.13. Mercenaries: 10.7, 10.18, 11.4.

⁹ (Lack of) *homonoia* among the citizens: 10.20, 14.1, 17.1.

¹⁰ The 5 examples are Chios (no. 840), Argos (no. 347), Herakleia Pontike (no. 715), Lakedaimon (no. 345) (anecdotal and about the early history of Sparta) and Korkyra (no. 123). We agree with Winterling (1991) 216–19 that the language, style and content of chapter 11 differ from those of the other chapters, but we

breaks of *stasis* are known from Diodoros, and his sources are partly Antiochos of Syracuse and Timaios of Tauromenion (for the numerous *staseis* in Sicily and southern Italy) and partly Ephoros of Kyme (for, especially, the *staseis* in Hellas C4f). Herodotos is the best source we have for *staseis* in the Archaic period and he must have got his information from local informants and non-Athenian historical traditions. The testimony of these non-Athenian sources provides us with a valuable addendum to the information obtained from the Athenian authors.

Attested outbreaks of civil war fully corroborate the general statements made by the Athenian philosophers and historians. In 1985 H.-J. Gehrke published his book *Stasis: Untersuchungen zu den inneren Kriegen in den griechischen Staaten des 5. und 4. Jahrhunderts v. Chr.*¹¹ It is one of the most important contributions to our understanding of classical Greek history published in the twentieth century. Part I is an inventory of all attestations of *stasis* in C5 and C4. Gehrke excludes Athens, Sparta and the western Greeks. Given the frequency of *stasis* among the western Greeks, the exclusion of this part of the Hellenic world is regrettable. However, the lacuna has since been filled by S. Berger, *Revolution and Society in Greek Sicily and Southern Italy* (1992).

Gehrke's inventory comprises 283 incidents of *stasis*¹² in seventy-eight different *poleis*,¹³ and Berger adds seventy-two further examples in sixteen *poleis*. Syracuse tops the list with twenty-seven attested outbreaks of *stasis* in the period c.650 to 279/69. At the other end of the scale is Sparta: after a long period of recurring *staseis*, it enjoyed a system of good laws (*eunomia*), and in the late fifth century it had not been exposed to any violent change of constitution for centuries (Thuc. 1.18.1). Yet, it must be remembered that the Lakedaimonians' foundation of Taras in 706 was the result of a *stasis* (Antiochos (*FGrHist* 555) fr. 13; Arist. *Pol.* 1306^b31), and that the *coup* planned by Kinadon in 400 was a *stasis* that might have triggered a civil war (Xen. *Hell.* 3.3,5–11).

As surveyed in Index 19, this inventory records 279 outbreaks of *stasis*¹⁴ in 122 named *poleis*. To this already im-

can see no reason to reject it. In the opening of the chapter it is explicitly stated that it is taken over from another treatise, probably one of Aineias' own lost books and probably placed here by Aineias himself. If that is the case, the chapter must be included in any interpretation of the treatise as a whole; see Whitehead (1990) 128.

¹¹ As the title says, Gehrke's study covers the period 500–300. For *stasis* in the Archaic period, see Lintott (1982) 13–81.

¹² Gehrke, *Stasis* 255–57, based on his inventory 13–199.

¹³ Leaving out regions (Achaia, Aitolia, Akarmania, Parrasia, Phokis, Thesaly) and *poleis* in which the attestation of a *stasis* can be questioned.

¹⁴ The Inventory and Index do not include a number of incidents which

pressive number must be added information about *stasis* affecting all or most *poleis* in a region: in 421 discord among rival factions in the Parrhasian *poleis* induced one of the factions to seek support from the Lakedaimonians who readily sent a relief force. This *stasis* must have affected as many as half a score of the Parrhasian *poleis*.¹⁵ In 366 the Thebans had the constitutions of all the Achaian *poleis* changed into democracies, and forced the new democratic regimes to exile the members of the oligarchic factions. However, the exiles soon returned to their *poleis* and, apparently, reintroduced the oligarchic constitutions.¹⁶ More than a dozen *poleis* went through this double change of constitution which happened in the course of less than a year. In the majority of all these cases the source is Aristotle, Diodoros, Herodotos, Thucydides or Xenophon. Yet, although these authors may offer a biased account, there is no reason to believe that they invented the rival factions and civil wars they describe. Given the very fragmentary nature of our sources, there can be no doubt that discord among the citizens and civil war were problems which most of the time affected most of the Greek *poleis* from Massalia to Herakleia Pontike.

The further conclusion is that, in case of conflict between loyalties, belonging to one's social group often mattered more than belonging to one's *polis*. That is undoubtedly treason, but it would count as treason for the losing faction only; and that is why the Greeks had so many laws and regulations against high treason,¹⁷ so many political actions against possible traitors,¹⁸ so many citizens living in exile,¹⁹ and so many reconciliations and general

Gehrke records as outbreaks of *stasis*. (1) Gehrke includes some examples of *stasis* attested in a region but not in any named *polis*, see nn. 15, 16. (2) According to Gehrke, *Stasis* 257, a *stasis* often lasted a few days only. Therefore consecutive occurrences within weeks or months of *coup*, counter-*coup*, and sometimes counter-*coup* to counter-*coup* are counted as separate outbreaks of *stasis* (e.g. Sikyon 366ⁱ, 366ⁱⁱ, 366ⁱⁱⁱ), whereas in this inventory they are treated together as consecutive outbursts of one *stasis*. (3) Gehrke includes some 50 incidents where, in our opinion, our sources testify to a change of constitution only, and not to any *stasis* as the reason for the change (e.g. Ambrakia 338, 336; Amisos 334; Andros 411, 393; Antissa 405, 403/2) etc.; cf. n. 5 *supra*). On the other hand, in addition to the *staseis* in Sicily and southern Italy we include *staseis* before 500, and a number of *staseis* not included in Gehrke's study: Abydos (no. 765) c.360, Chaironeia (no. 201), Orchomenos (no. 213) and Siphai (no. 218) 424, Knossos (no. 967) C5e, etc.

amnesties to end civil wars.²⁰ *Stasis* was an everyday phenomenon.

The fact that so many Greeks were willing to sacrifice the freedom (*eleutheria*) and independence (*autonomia*) of their *polis* requires an explanation.²¹ By giving up autonomy in the sense of independence, one could keep what was much more important: *viz.* the self-government of one's *polis* exercised by one's own faction.²² If the opposing faction came to rule the *polis*, it would impose its will on you and your fellows in all matters, day in and day out. If you came to rule, you would be in control of almost all decisions that mattered in everyday life. What would you lose by sacrificing the *autonomia* of the *polis*? You would have to pay tribute, but not necessarily a large one; in times of war you might have to assist the hegemonic *polis*. But essentially the *polis* was left as a dependent, but still self-governing community.²³ Dependent status became a nuisance only if a *polis* had to suffer a foreign garrison on its acropolis, or if its self-government was constantly interfered with by outside harmosts or *episkopoi*.

On the other hand, apart from the help from the neighbouring *polis* to subdue the opposing class, there might be a bonus: *viz.* that a small *polis* could have the hegemonic *polis* as its protector, and so be safe from being attacked by neighbours who might be a more severe threat than the, perhaps, more distant hegemonic *polis*. So, what endangered the prosperity and well-being of a *polis* was not so much the loss of *autonomia* as the lack of *homonoia*. Accordingly, what the Greeks prayed for was not *autonomia* but *homonoia* and freedom from *stasis*. As far as we know,

²⁰ Selinous c.500 (*IvO* 22=*Nomima* 1 17); Mytilene c.330 (*IG* XII 2 6); Chios 332 (RO 84); Nakona c.300–270 (*SEG* 30 119; 39 1014).

²¹ For the view that *eleutheria* and *autonomia* were all-important to a Hellenic *polites* of the classical period, see Ehrenberg (1947) 48: "Was not Athenian treatment at least of the loyal States moderate? . . . But no Greek . . . would ever see things in this light . . . because they could not help thinking mainly, if not exclusively, in political terms, that is to say in terms of Polis life and in particular of Polis autonomy . . . Nothing counted when weighed against the loss of political freedom." Quoted and convincingly contradicted by Ste Croix (1954–55) 29.

²² Gehrke, *Stasis* 359: "Die Griechen liessen sich relativ leicht beherrschen, paradoxerweise nicht, weil sie zur Servilität geboren waren, sondern im Gegenteil, weil sie nichts mehr perhorreszierten als Herrschaft, die Herrschaft ihres inneren Gegners, und nichts mehr schätzten als Freiheit, die Freiheit von eben dieser Herrschaft." In our opinion, this lucid analysis of the role of *stasis* in Greek society is fully supported by the sources, e.g. by Brasidas' speech in Akanthos as reported by Thucydides at 4.86.4–5: "I have not come here to take part in factional politics (*ξυστοασιάσεων*). It would be a dubious sort of liberation if I were to go against Spartan tradition and either enslave the many to the few (*τὸ πλεόν τοῖς ὀλίγοις*) or the minority to the whole people (*τὸ ἔλασσον τοῖς πάσι*). That would be worse than foreign rule (*χαλεπωτέρα γὰρ ἂν τῆς ἀλλοφύλου ἀρχῆς εἴη*)" (trans. Hornblower). For a different view, dictated by different circumstances, see Thuc. 8.48.5.

²³ For the concept of the dependent *polis*, see Hansen (1995) and *supra* 87–94.

autonomia was never deified in any *polis* and made the object of a cult, whereas *homonoia* became a goddess whose cult was venerated all over the Greek world, especially from the fourth century onwards.²⁴

So we have belonging to one's *polis* as against belonging to one's social group or, especially in colonies, ethnic group. How was the belonging expressed? When the belonging and loyalty were towards one's *polis*, the answer is: in the phalanx the citizen was standing next to his fellow citizens fighting for his *polis*; in the political assemblies the citizen was sitting next to his fellow citizens discussing *polis* matters; in the religious processions the citizen was walking alongside his fellow citizens celebrating one of the Olympian gods, perhaps the patron deity of his *polis*. In each of the three fields the *polites* filled a fixed place in a recognisable *polis* institution, be it the *ekklesia*, the *phalanx* or the *komos*. And the citizens would be called on almost daily to participate in one of these institutions (Hansen (2000) 165–70).

But which were the groups for which a citizen felt so strongly that they could outweigh his loyalty to his *polis*? What were they called? Which common cause united such groups? And how were they organised?

The best-known word for such a faction is *στάσις*. The word is derived from the verb *ἵστημι* and must have undergone the following development of meaning. Its basic meaning is "position" or "stand",²⁵ from which the following metaphorical senses are derived: (1) closest to the literal meaning is "stand" in the sense of "standpoint".²⁶ The next step is probably that, being used about about a standpoint you share with a number of other persons, the meaning of *stasis* is shifted from the standpoint itself to the group of persons who take the same stand on some issue. Thus, *stasis*

²⁴ PMC 884; Παλλὰς Τριτογένει' ἄνασσ' Ἀθηναί, ὄρθον τήνδε πόλιν τε καὶ πολίτας ἄτερ ἀλγέων καὶ στάσεων καὶ θανάτων ἄωρων, σὺ τε καὶ πατήρ ("Pallas, Triton-born, queen Athena, uphold this city and its citizens, free from pains and strifes and untimely deaths—you and your father" (Loeb)). The importance of *homonoia* is stressed by Xen. *Mem.* 4.4.16: ἀλλὰ μὲν καὶ ὁμόνοια γὰρ μέγιστον τε ἀγαθὸν δοκεῖ τοῖς πόλεσιν εἶναι καὶ πλειστακίς ἐν αὐταῖς αἰ τε γερονσίαι καὶ οἱ ἀριστοὶ ἄνδρες παρακελεύονται τοῖς πολίταις ὁμονοεῖν, καὶ πανταχοῦ ἐν τῇ Ἑλλάδι νόμος κείται τοὺς πολίτας ὁμόνους ὁμονοῆσαι, καὶ πανταχοῦ ὁμόνουσι τὸν ὄρκον τοῦτον ("For the *poleis* concord (*homonoia*) is the greatest blessing, and in the *poleis* the senate and the best men exhort the citizens to live in concord, and everywhere in Hellas a law lays down that the *politai* must swear that they will live in concord, and everywhere do they take this oath"). For the cult of *Homonoia*, see Thériault (1996).

²⁵ Placing, position of a statue: ἀναγορεύσαι τὴν τῆς εἰκότος στάσιν Ἀμφιφάρον τὸν μέγαν τῶν γυμνασίων ἀγῶνι ("to announce the erection of the statue during the Great Amphipharaia at the sports competition") (*Syll.*³ 675.34, Oropos C2). Position of an army before a battle (*Hdt.* 9.21.2).

²⁶ Best known from the theory of forensic rhetoric according to which the crucial point in the argumentation is called the *stasis*: Quint. *Inst.* 3.6.3; Hermagoras fr. 10, Matthes: *στάσις* ἐστὶ φάσις καθ' ἣν ἀντιλαμβάνομεθα τοῦ ὑποκειμένου πράγματος ("a *stasis* is a statement in accordance with which we tackle the matter in hand").

acquires its well-attested sense of group or faction.²⁷ Then, in the plural, *stasis* comes to designate two or more groups holding conflicting views on key issues.²⁸ Finally, the focus of meaning shifts from the groups holding conflicting views to the conflict between such groups, and *stasis* develops its most common metaphorical sense: *viz.* “discord” and ultimately, “civil war”.²⁹ To sum up, the development of meaning is: (1) stand, (2) standpoint, (3) group of persons sharing a standpoint, (4) in the plural two or more groups of persons holding conflicting standpoints, (5) the conflict between such groups, civil war.

In this context the important sense is (3): group of persons, faction, political group.³⁰ A person belongs to a *stasis*, and his sense of being a *stasiotes* is stronger than his sense of being a *polites*. The opposition between being a *stasiotes* and being a *polites* is explicitly emphasised by Plato at *Plt.* 303C: “those who participate in the running of these constitutions can be disregarded as partisans rather than statesmen” and *Leg.* 715B: “those who legislate for the sake of a particular group we shall call partisans, not citizens”.³¹ Next, *stasis* almost invariably denotes a group which by force or stratagem attempts to suppress opposing groups, assume power and change the constitution. A *stasis* is not a political group or party working within the framework of the political institutions of the *polis* (Hansen (1987) 74). One exception is Thucydides’ account of the Thessalian army at 2.22.3 where we learn that the regiment provided by Larisa was com-

manded by two *strategoî*, each representing his *stasis*. In all other sources a *stasis* is a revolutionary group.

An inspection of the sources shows that factions (*staseis*) are designated and described in one of three different ways.

(1) The group is defined by its affiliation with another *polis*. Thus, from the name of a *polis* or an *ethnos* a verb is formed with the sense of “fraternising with” the *polis* or *ethnos* in question. One example is οἱ Ὀρχομενίζοντες used by Hellanikos about Boiotians affiliated with Orchomenos. Other similar verbs are Ἀττικίζοντες, Λακωνίζοντες, Ἀργολίζοντες, Φιλιππίζοντες.³²

(2) The group is defined and designated by its preference for a form of constitution, mostly democracy versus oligarchy.³³ But sometimes the rivalry between rich and poor may result in the setting up of a tyranny.

(3) The group is defined and designated by its wealth and the social position of its members. Typically the poor are opposed to the wealthy.³⁴

As is well known, the three ways of designating and defining the groups are not mutually exclusive. On the contrary, they usually go hand in hand. The poor favoured democracy and, in C5 and C4, they looked to Athens for support against the rich, who favoured oligarchy and looked to Sparta for support.³⁵ So, we are fairly well informed about the ideology of the two groups, but we are remarkably ignorant of

³² For a copious collection of examples, see Gehrke, *Stasis* 268–9.

³³ Aen. Tact. 11.13: ἐν Κορκύρα δὲ ἐπανάστασιν δέον γενέσθαι ἐκ τῶν πλουσίων καὶ ὀλιγαρχικῶν τῷ δήμῳ (ἐπεδήμει δὲ καὶ Χάρης Ἀθηναῖος φρουρὰν ἔχων, ὅσπερ συνήθην τῇ ἐπινασάσει) ἔτεχνίσθη τοιοῦδε . . . (“In Korkyra a revolt of the wealthy and oligarchs against the democracy—a revolt supported by the Athenian Chares who was living there at the time as garrison-commander—was successful, thanks to a scheme . . .” (trans. Whitehead)).

³⁴ This opposition dominates Aristotle’s *Politics* book 5. The terms used by Aristotle are εὐποροί, πλούσιοι, γνῶριμοί, ὄλγοι versus ἄποροι, πένητες, δῆμος, πολλοί, πλῆθος. Sources in Gehrke, *Stasis* 311. However, Gehrke does not think that wealth versus poverty is the most important factor in the formation of factions, and is inclined almost to reject or at least to question the source value of the general testimonies about *stasis* found in Thucydides, Plato, Aristotle, Isokrates and Xenophon. I am much more inclined to believe that these sources do in fact provide us with a reliable picture of the driving forces behind a good many of the outbreaks of *stasis*.

³⁵ Some of the key passages in Thucydides are 1.19, 3.82, 4.76, 5.82, 6.39, 8.21. For the whole issue, see Ste Croix (1954–55), who correctly emphasised the importance of *stasis* and described many of the mechanisms connected with *stasis*. He also correctly attacked and demolished the belief that a Greek citizen’s loyalty was invariably towards his *polis* and that its *eleutheria* and *autonomia* were what mattered above all (see *supra* n. 21). But he did that in connection with a not very convincing interpretation of Thucydides, arguing that there was a “Thucydides the reporter”, writing the narrative parts as against a “Thucydides the historian”, writing the speeches (2–3). Furthermore, Ste Croix was a professed and orthodox Marxist and, although many of his acute observations were solidly supported by the sources and could have been made by any non-Marxist scholar as well, they were explicitly or implicitly dismissed as Marxist exaggerations. Because of such considerations, his article was attacked and his analysis of Thucydides contradicted, especially by Bradeen (1960), and all the important observations about *stasis* were almost forgotten.

²⁷ Thuc. 7.50.1: ἡ τοῖς Συρακοσίοις στάσις [ἐς] φιλία ἐξεπεπτώκει (“the faction supporting the Syracusans had been expelled”).

²⁸ Thuc. 4.71.1: αἱ δὲ τῶν Μεγαρέων στάσεις φοβούμεναι, οἱ μὲν μὴ τοὺς φεύγοντας σφίον ἐσαγαγόν αὐτοὺς ἐκβάλη, οἱ δὲ μὴ αὐτὸ τοῦτο ὁ δῆμος δέαιος ἐπίθηται σφίον καὶ ἡ πόλις ἐν μάχῃ καθ’ αὐτὴν οὖσα ἐγγὺς ἐφεδρευόντων Ἀθηναίων ἀπόληται . . . (“Of the two factions in Megara one feared that he (Brasidas) might call the exiles back and expel themselves, while the other faction feared that the *demos*, apprehensive of this very danger, might attack them so that the *polis* would be destroyed by internal fighting while the Athenians were lying in wait nearby . . .”). Cf. Hdt. 1.59.3; Arist. *Ath. Pol.* 13.4; *Oec.* 1348^a36.

²⁹ Disunity, discord: Arist. *Pol.* 1302^a9–13: ἐν μὲν γὰρ ταῖς ὀλιγαρχίαις ἐγγίνονται δύο, ἢ τε πρὸς ἀλλήλους στάσις καὶ ἔτι ἢ πρὸς τὸν δῆμον, ἐν δὲ ταῖς δημοκρατίαις ἢ πρὸς τὴν ὀλιγαρχίαν μόνον, αὐτῶν δὲ πρὸς αὐτῶν, ὅ τι καὶ ἄξιον εἶπεν, οὐκ ἐγγίνεται τῷ δήμῳ στάσις (“two types of discord grow up in oligarchies: one between the oligarchs themselves, and one between the oligarchs and the *demos*. In democracies the only form of discord is towards the oligarchy, whereas discord within the *demos* hardly ever occurs”). Civil war: Hdt. 8.3.1: στάσις γὰρ ἐμφυλιος πολέμου ὁμοφρονέοντος τοσοῦτω κακίον ἐστὶ ὅσων πόλεμος εἰρήνης (“civil war is as much worse than a war in which the people stand united, as war itself is worse than peace”). The development of meaning suggested here is a reconstruction, and the sense of civil war can be traced back to Solon (fr. 4.19, West), quoted at Dem. 19.255.

³⁰ *Stasis* used about a political faction: Hdt. 1.59–60 (Athens); Thuc. 2.22.3 (Larisa, official civic subdivisions?); 4.71.1 (Megara); 7.50.1 (Akragas); Arist. *Ath. Pol.* 11.2, 13.4, 14.4, 15.1 (Athens); *Oec.* 1348^b1 (Phokaiia).

³¹ *Plt.* 303C: οὐκ ὄντας πολιτικούς, ἀλλὰ στασιαστικούς. *Leg.* 715B: στασιώτας ἀλλ’ οὐ πολίτας τούτους φαιμέν.

how the groups were organised and how their members could express their feeling of identity, loyalty and belonging. We know that the groups were often called *hetaireiai*, but apart from what we know about the oligarchic Athenian *hetaireiai* in 411 and 404 we are left in the dark about *hetaireiai*, and particularly democratic *hetaireiai*, in the Greek *poleis*. There are two explanations of our ignorance.

(a) *Stasis* was civil war; it was by definition an unconstitutional and criminal act. The dominant group of citizens would control the institutions of the *polis* of which we are well informed. The opposing group would have to organise its revolt in secret, and its organisation had to be kept a secret. If the group succeeded in ousting the opposing group, it would take over the control of the *polis* institutions; if it lost, its group would be annihilated. That is why such groups have left so few traces in our sources.

Let us adduce one example. In Samos in 412 a democratic faction deposed a ruling oligarchy.³⁶ Two hundred oligarchs were executed and 400 exiled. The revolt is described as “the revolt of the people in Samos” (*ἡ ἐν Σάμῳ ἐπανάστασις ὑπὸ τοῦ δήμου*), whereas the decision to kill or exile the 600 oligarchs is ascribed to “the Samian people” (*ὁ δῆμος ὁ Σαμίων*). Here *demos* is obviously used in two different senses. The *demos* behind the revolt is “the common people”, forming a group, but not being officially organised as a body of government in any sense. The *demos* behind the proscription of the 600 oligarchs is the Samian state, undoubtedly the *ekklesia* which by a majority, perhaps unanimously, who knows, must have voted for the motion to execute or exile the members of the opposing faction.

(b) Most of our sources for constitutional and political matters are Athenian, and in many cases we use our detailed knowledge about Athenian institutions to supplement the meagre sources for other *poleis*. Thus, from our rich information about debates in the Athenian *ekklesia* we presume that such debates took similar forms in *poleis* where we know that they had an *ekklesia* but do not know anything about how it worked. But Athens was famous for being a fairly homogeneous society, and suffered from *stasis* only twice during the long period of democratic rule from 507 to 322. Almost all we know about the ancient Greek *hetaireiai* as political clubs and centres of the oligarchs comes

from these two episodes in 411 and 404 BC.³⁷ The absence of well-organised factions in Athens, apart from the years 411 and 404, prevents us from guessing how such factions were usually organised in other *poleis*, where they probably played a much more prominent part in politics.

Conclusion: in times of peace and under settled conditions a Greek citizen’s principal loyalty was to his *polis* and that was where he belonged politically. But in troubled periods and especially in times of war his loyalty to the *polis* was often overridden by his loyalty towards a group within the citizenry—often a social group, but sometimes an ethnic group, especially in colonies—and he was mostly, but not always, prepared to sacrifice the *autonomia* of his *polis* in order to get the upper hand of the opposing *stasis* in his *polis*. Thus, civil war inside the *poleis* was an inescapable effect of war between *poleis*,³⁸ and even more than external peace, i.e. *eirene*, concord, i.e. *homonoia*, was the desired but usually unobtainable ideal in the classical Greek world.

In the Western world since the Renaissance loyalty towards the state has almost always been stronger than loyalty towards one’s social group. The result has been relatively infrequent civil wars, and war with other nations has not fostered disunity or civil war. On the contrary, it has united the people. To have a common enemy has often fostered an otherwise unknown spirit of self-sacrifice, and has often entailed a temporary co-operation between opposed parties.³⁹ Furthermore, since the Age of Napoleon, nationalism—conceived as the one-to-one relation between nation and state formation—has been and still is one of the strongest forces in history (Thomson (1957) 885). And in cases when discord has resulted in civil war and dissolution of the state, the root of the discord has mostly been opposition between ethnic groups, as is sadly apparent even today, especially in central and eastern Europe.

In ancient Greece we find almost the reverse situation. Mostly, the citizens of one *polis* had the same ethnic identity as the citizens of the neighbouring *poleis*: they were all Hellenes. In many cases they have the same sub-ethnic identity: they were all Boiotians or Phokians, etc. In each *polis* all the citizens usually belonged to one and the same ethnic group and even subgroup. The best proof of the prevailing ethnic homogeneity of the Greek *polis* is, in fact,

³⁷ Literature on *hetaireiai*: Aurenche (1974) 15–32; Calhoun (1913) 4–7 and *passim*; Connor (1971) 25–32; Hansen (1987) 72–86; Konstan (1997) 60–3.

³⁸ This conclusion is an almost verbatim confirmation of the views expressed by Thucydides at 3.82.1–2.

³⁹ Simmel (1955) 87–88, 92–93; restated with modifications by Coser (1956) 87–95.

³⁶ Thuc. 8.21. We follow those who believe that Samos in 412 was an oligarchy now overturned by the democratic faction; see esp. Gomme, Andrewes and Dover (1981) 44–7 and 155–56. The alternative explanation, preferred esp. by Gehrke, *Stasis* 142–44, is that the ruling democrats had 600 of their opponents killed or executed in order to prevent an oligarchic *coup*.

that when, occasionally, two different ethnic groups were living side by side as citizens of the same *polis*, the result was civil war—just as has been the case in modern Europe. That happened sometimes in the colonies when the colonists came from different *poleis*. Ethnic homogeneity among the

citizens of a *polis* and shared with citizens of neighbouring *poleis* must be contrasted with political disunity and discord both among the citizens of any *polis*—leading to *stasis*—and among citizens of neighbouring *poleis*—leading to *polemos*.

The *Polis* as a Religious Organisation

Since Fustel de Coulanges ((1864) 280–81 and *passim*) it has commonly been claimed that religion was the dominant aspect of community life: (1) “the *polis* provided the central framework in which Greek religion operated”;¹ (2) “in the world of the Greek cities the opposition between the sacred and the profane—which we assume to be fundamental in the area of religion—was either blurred or utterly irrelevant”.² Thus, (3) “religion provided the framework and the symbolic focus of the *polis*. Religion was the very centre of the Greek *polis*.”³ In our opinion, this holistic view of the *polis* is skewed, and it is particularly the second and third propositions we find misleading.

Re (1) With one small *addendum* we are in agreement with the first proposition: “the *polis* came to provide the central framework in which Greek religion operated”.⁴ The Greek pantheon with its sanctuaries and cults was not invented by the *polis*; it was much older than the *polis* and taken over by the *polis*. When did that happen? A predominant view is that it happened early and that the *polis* emerged out of the activities connected with the building of temples and the communal organisation of religious festivals.⁵ There can be no denying that the rise of temple building and the emergence of the *polis* took place simultaneously, *viz.* in C8–C6, and the two phenomena were probably connected; but at the same time there is ample evidence of what must have been private cults during the Archaic and early Classical period: family or clan cults are attested side by side with *polis* cults in the new sacred law from Selinous of C5f.⁶ Temple building by *poleis* is attested in the Archaic period,⁷ but we hear also about temples

financed and built by private persons and families.⁸ In Archaic Athens all public priesthoods were filled for life from among members of the *gene*.⁹ The *polis* took over in the course of the Classical period, and an increasing number of priesthoods were filled from among all Athenians.¹⁰ The general picture is that when the *polis* emerged its organisation and control of religion was not particularly strong; it grew constantly in the course of the period and had become paramount in C4s.

Re (2) The opposition between the sacred and the secular is abundantly attested in our texts. It was a matter of life or death to a citizen whether or not the olive tree he had uprooted was a sacred one (Arist. *Ath. Pol.* 60.2), and there would be an unambiguous answer to the question. A clear distinction between sacred and public money is acknowledged in inscriptions (Migeotte (1998)), e.g. on C4–C3 bronze tablets from Lokroi Epizephyrioi, all recording money which the *polis* borrowed from the sanctuary of Zeus Olympios and repaid to the sanctuary (Costabile (1992) 113–14). When in need of money, the *polis* could of course make a decision about what could be a compulsory loan of sacred money, but the loan had to be repaid to the gods in due time. There is no evidence that sacred money was “secularised” or “expropriated” by the *polis* (Linders (1975) 12–18). Again, when you had entered a *temenos*, you were treading on sacred ground,¹¹ and certain activities did not take place on festival days, etc.¹² To draw the line between the sacred and the secular was as easy—or, rather, as difficult—as it was in the Middle Ages and still is. There was, and has always

The first part of this chapter is based on Hansen (2000) 167–69.

⁴ For the following, see Burkert (1992) and (1995).

⁵ Snodgrass (1980) 33, 58; Sourvinou-Inwood (1993) 11; Polignac (1994) 15; Voyatzis (1999) 150–53.

⁶ SEG 43 630, cf. Jameson *et al.* (1993) 114–16.

⁷ The treasure of the Siphnians in Delphi (Hdt. 3.57.2); the stoa of the Athenians in Delphi (ML 25 (C5f)); the temple of Athena Nike in Athens (ML 44 (C5m)). Direct evidence is sparse but it is commonly believed that almost all temples were built by the community, i.e. in most regions mostly by the *polis*. See Morgan (1993) 19; Polignac (1995) 19–20; Nielsen (2002) 176–84.

⁸ The Kleomenes who “made” (ἐποίησε) the C6 temple for Apollo in Syracuse (IG xiv 1) may have been the patron who paid for the temple (Hellmann (1999) 100). The Alkmaionidai rebuilt the temple of Apollo in Delphi (Hdt. 5.62.2–63.1; Arist. *Ath. Pol.* 19.4); Themistokles built a shrine for Artemis Aristoboule in Athens (Plut. *Them.* 22.2–3); Xenophon erected a temple for Artemis at Skillous (Xen. *An.* 5.3.7–9). Some of these persons may have acted on behalf of their *polis*, but not the Alkmaionidai who were in exile, and probably not Xenophon who was a foreigner.

⁹ Hereditary groups of upper-class citizens, based on descent in the male line and apparently subdivisions of the *phratriai* (Aeschin. 2.147; IG i³ 6 (C5f); Parker (1996) 56–66, 284–327). See 95 *supra*.

¹⁰ The first attested example is the priestess of Athena Nike (ML 44 (C5m)).

¹¹ Parker (1983) 160–170; Jost (1992) 112–15. For the common and widespread distinction between sacred property, public property and private property: IG v.2 6A.37–42 = RO 60 (Tegea); Arist. *Pol.* 1267^b33–4.

¹² Parker (1983) 154–60; Burkert (1985) 225–27.

been, an overlap. Religion was indeed extremely important; almost every human act, including a meal, was introduced with a ritual (as it still was until our grandparents' generation), but religion constituted one aspect only of *polis* life, and not necessarily the focal one, which was the *polis* as a community of *politai*. Both a battle and a general assembly were preceded in Antiquity by a sacrifice, in the Middle Ages by a prayer. Both rituals were important, but neither turned the battle or the assembly meeting into a sacred act like a procession during a festival.

Re (3) Both as a political and as a military organisation the Archaic and Classical *polis* was a male society from which women were excluded.¹³ Female citizens possessed citizen status and transmitted citizen status to their children, but they did not perform the political activities connected with citizenship. They were *astai* rather than *politai*.¹⁴ Religion was different. Here women took part in the rites and cults both of their household and of the *polis* itself (Just (1989) 23). There were some cults from which women were excluded,¹⁵ but similarly there were others from which men were excluded, e.g. the *Thesmophoria*.¹⁶ Most goddesses were served by priestesses rather than by priests (Holderman (1985) 299–330). In religion women were insiders, they joined in the performance of many rituals, and even possessed an official status (Kearns (1996*b*); Jones (1999) 123–33).

¹³ Vidal-Naquet (1983) 26; Bruhns (1994) 79–83. In almost all sources the exclusion of women from politics and armed forces is taken for granted, and therefore not explicitly prohibited. For Athens see the shocking idea “to hand over the *polis* to the women” and give them political rights (Ar. *Eccl.* 210) or to allow them to join in the defence of the *polis* (Pl. *Resp.* 451C–57C; *Leg.* 814C). The explicit exclusion of women from the *prytaneion* of the *polis* is attested, e.g., for Naukratis (Ath. 150A). Again, although there are numerous honorific decrees for women (e.g. *IG* XII 7 36, Amorgos (C2)), it is extremely rare to find citizenship among the privileges bestowed on a female honorand. One example is the poet Aristodama of Smyrna (C3). In Chalaia she is honoured with *proxenia*, and her brother with *politeia* (*F. Delphes* III.3 145) but in Lamia she obtains in her own right both *proxenia* and *politeia* (*Syll*³ 532). Another example is the Molossians' grant of citizenship to Philista, the wife of Antimachos, during the reign of Neoptolemos (C4) (*SEG* 15 384). For the extended rights and duties of women in the Hellenistic and Roman periods, see Bremen (1996). In C3–C4 they appeared as *euergetai* (Bremen (1996) 13–19) and performed liturgies (Bremen (1996) 25–30).

¹⁴ For *aste*, see *Syll.*³ 1015.6–7 (Halikarnassos (C3); *Egypt. I. Metr.* 33.1 (Naukratis)). The feminine form *politiss* is sometimes used of females of citizen birth, see Arist. *Pol.* 1275^b33, 1278^a28; *IG* XII 7 386.21 (Aigiale (C3)); *IG* V 2 268B.31 (*politiss apo genous*, Mantinea (C1)); *I. Kos* 178.6 (Kos (C3)); *Dem.* 57.30 (Athens). For Athens, see Mossé (1985) and Jones (1999) 123–33. There is, we think, no attestation of *politiss* signifying a female citizen exercising citizen rights. Queens, of course, are a case apart, as they have always been throughout history.

¹⁵ “Women were sometimes excluded from the cults of Poseidon, Zeus, and Ares, all emphatically masculine gods” (Parker (1983) 85). For the exclusion of women from the cult of Poseidon see, e.g., *Syll*³ 1024.9 = *LSCG* 96, Mykonos C.200.

¹⁶ The most widespread Greek festival and the principal form of the Demeter cult, celebrated by (married) women of citizen status. See Burkert (1985) 242–46.

Next, a sanctuary was sacrosanct and functioned as a place of refuge (Sinn (1993)). A person who escaped into a sanctuary or held on to an altar was protected against violence not only from his personal enemies, but also from officials. Even when the suppliant was a criminal, the punitive authority of the *polis* stopped at the threshold of the temple.¹⁷ But if the *polis* authorities violated the *asylon*, as sometimes happened, there was no one to punish them but the gods. These observations reveal two important aspects of Greek religion: on the one hand, *polis* religion was not necessarily the core of the *polis*. On the other hand, there was no institutionalised and organised religious sphere distinct from and, sometimes, opposed to the *polis* sphere. In the Greek world there was nothing like the mediaeval opposition between two competing power organisations: the Crown and the Church.

It is of paramount importance for our investigation that we have taken the political rather than the religious institutions to be the centre of the *polis*.¹⁸ If we had shared the view that religion was the centre of the *polis*, this inventory would have been organised differently. We would not have based our investigation on the ancient concept of the *polis* as a community of adult male *politai* united through their *politeia*, i.e. their political institutions; we would instead have started by listing Archaic and Classical temples, sanctuaries, divinities and communal cults, and then have treated the economic, social, political and military aspects of the *polis* as functions which derived their meaning and importance from the religion. Another result would have been that the emphasis on the urban aspect of the *polis* would have been toned down. While the political aspects of the *polis* were closely connected with the *polis* in the urban sense and concentrated in the city, sanctuaries were placed all over the territory and the opposition between *polis* and *chora* was of secondary importance in religion.

The essence of *polis* religion were prayers and animal sacrifice performed by priests at annual or monthly festivals organised by *polis* officials at public expense and attended

¹⁷ In c.632 Kylon attempted to set himself up as the tyrant of Athens. He escaped and his followers took refuge at an altar on the Acropolis. Although they were manifestly guilty of treason, it was considered a sacrilege and a pollution of the whole city when the Athenian archons had them dragged away from the altar and executed (Thuc. 1.126.10–11). The Spartan officials did not dare to have Pausanias killed in the temple of the goddess of the Brazen House (Thuc. 1.134.1–2).

¹⁸ In our endeavour to see religion as one aspect of the *polis* and not necessarily the predominant one, we follow Walter Burkert (1992) and (1995). With Moses Finley (1981) 23 we share the “insistence on the secular quality of public life” and with Oswyn Murray we share the view of the *polis* as an essentially rational community centred on its political institutions; see Murray (1990) 19–22, (2000) 241–42, and Hansen (1990) 215 n. 1, (1991) 63–64.

by all members of the community.¹⁹ The *polis* festivals were indeed the most spectacular aspect of Greek religion; but we must not forget that there were private cults as well, some performed by individuals, such as the cult of the dead, some by private organisations.²⁰ It suffices here to mention an inscription from Halikarnassos in which a priestess is instructed to perform both private and public sacrifices, including a monthly sacrifice on behalf of the *polis*, for which she is paid one drachm by the *polis*.²¹ In any sanctuary many of the sacrifices were made, and many of the votive offerings donated, by individuals—both citizens and foreigners—and on their own initiative.²²

To conclude, *polis* religion was religion (a) used by the *polis* itself, or (b) organised by the *polis*, or (c) directly created by and related to the *polis* and its institutions. In fact, “*polis* religion” has conveniently been subsumed under those three headings (Burkert (1995) 202). *Re (a)*: Every communal activity was accompanied by religious acts; thus a meeting of the people’s assembly in Athens was opened with a sacrifice, a prayer and a curse.²³ *Re (b)*: Both gods and heroes were worshipped publicly by the whole community in connection with the large festivals, which were organised by the *polis* and usually attended by all the *polis*’ inhabitants (not just the citizens). *Re (c)*: As the *polis* developed, new cults were set up which were directly and specifically connected with the *polis*’ political institutions. In the council house there was, typically, a cult for Zeus or Athena with the epithet Boulaïos (-aia).²⁴ Similarly, abstract political concepts were sometimes deified: in Athens the democratic constitution was represented as a goddess, *Demokratia*, to whom the *strategoï* made annual sacrifices.²⁵ *Homonoia*, Concord, was another personified deity worshipped in many *poleis*, though especially in the Hellenistic and Roman periods (Thériault (1996)). Deification of the *polis* itself, however, is unattested until the Hellenistic period, when, e.g., the sculptor Eutychides created the cult image of Antiocheia in the shape of Tyche with a turret crown on her head and her right foot on the river god Orontes (Balty (1981)). The closest we get to a cult of the *polis* as such is the public cult of Hestia, the goddess

of the (public) hearth, placed in a building which in most *poleis* was called the *prytaneion*. The focus of the cult was a hearth with an eternal flame which was meant to symbolise the eternal life of the *polis* (Miller (1978)).

Although the *polis* was not deified, many *poleis* had a specific patron god or goddess;²⁶ some of the *polis*’ symbols were connected with its tutelary divinity, for example Poseidon with trident as shown on the coins of Poteidaia (no. 598) or on the shields of Mantinean hoplites; and the annual festival for the patron deity was one of the grandest. Whenever we have information about the protective divinity of a *polis*, it is recorded in the Inventory. The problem is that it is virtually impossible to set up a list of criteria by which one can identify the patron divinity of a *polis*; and the sources we have indicate that some *poleis* had no identifiable patron divinity, whereas others had several.²⁷ To have one specific tutelary god for all aspects of the *polis* is, in fact, not easily compatible with the polytheism practised by the Greeks. The concept of the tutelary god or goddess seems to some extent to be a modern one. So, in principle, one ought to record all divinities attested for every single *polis*, including, of course, the cults of heroes. Especially in colonies where the *oikistes* could be turned into a hero, the hero cult of the *oikistes* was an important one.²⁸ But to include all attested divinities of the Archaic and Classical periods and all their cults cannot be contained within the framework of this investigation. As in the case of magistrates or *proxenoi* or Panhellenic victors, it has been necessary to exemplify and to record major divinities only, including the specific protective divinity of the *polis* in question, if known. The result is here, as with all other parameters included in this investigation, that the material has to be very selective for large *poleis* for which several score of cults of divinities are known, and most comprehensive for very small *poleis* for which information about a sanctuary of a major divinity may be the only or one of the best pieces of evidence we have for the *polis* status of the community.

Furthermore, it is of course *polis* cults that are described in this Inventory. Sanctuaries and divinities specifically connected with communities above or below *polis* level are either briefly mentioned in the introduction or passed over in silence, except for the two crucially important sanctuaries at Olympia and Delphi of which brief descriptions have been incorporated. The concept of *polis* religion must

²⁸ Leschhorn (1984) 98–105.

be taken seriously, and it must be taken into account that sanctuaries and cults of divinities did not constitute a distinguishing mark of a *polis*, something by which the *polis* differed from (a) smaller and (b) larger political units. *Re (a)*: Erchia was an Attic deme, a civic subdivision of the Athenian *polis*. Yet, a sacrificial calendar of C4f lists cults of a score of divinities, including cults of Zeus Polieus and Athena Polias, to be performed sometimes on the Athenian Acropolis, sometimes on the acropolis of Erchia (*SEG* 21 541, 22 131). By contrast with, e.g., the Eleusinian mysteries, there is no indication that the rituals performed by the deme of Erchia were shared by all Athenians and formed part of the Athenian *polis* religion. *Re (b)*: Thermos was the religious centre of Aitolia and since C4 of the Aitolian League, but Thermos was not a *polis* and the sanctuary of Apollo in Thermos was common to all Aitolians. If a communal cult had been evidence of *polis* status, both Thermos and Erchia should have been included in this inventory as *poleis*.

One further complication is the chronological limits of the Inventory, which in this case are particularly difficult to respect. This Inventory goes down to 323, but often the best or only source we have for the sanctuaries and divinities of a *polis* is a description found in Pausanias, in some scholia, or in late lexica. When can the information obtained from such sources be used as evidence of *polis* religion in the Archaic and Classical periods? Let us take Pausanias. He reports what he saw, i.e. the sanctuaries standing in the first half of the second century AD. Some of them can be dated by a historical reference connected with the shrine, or by the information that the sanctuary was adorned with a statue made by a named sculptor who can be dated to the period before 323. Sometimes Pausanias calls a temple old, but that is not enough to ensure that it had been erected in C4s or earlier and assigned to the specific divinity mentioned by Pausanias. External evidence can be crucial, e.g., if Pausanias' testimony can be connected with the remains of a sanctuary of the Archaic

and/or Classical periods, or, what is less convincing, with Archaic or Classical coins with types representing the divinity in question. The information found in scholia and lexica presents similar methodological problems, and in the majority of all cases we are unable to date the information we get. Nevertheless, on the assumption that religious beliefs and rituals are old and prone to persist unchanged for many centuries, the information in late sources about sanctuaries and divinities is not infrequently used as evidence for *polis* religion of the Archaic and Classical periods. Yet, the evidence we possess shows that religious beliefs and practises changed as rapidly, sometimes even more rapidly, than social and political institutions.²⁹ Old cults were transformed, sometimes beyond recognition, and new cults were introduced. Therefore the use of Hellenistic and Roman sources to describe *polis* religion of the Archaic and Classical periods must be avoided unless the source is retrospective or can be associated with other sources which explicitly concern the period before 323. The repudiation of late sources entails that our lists of Archaic and Classical divinities and cults are rather short, much shorter than similar lists in, e.g., *RE*.³⁰

For the reasons outlined above, a person who wants to study the cults of, e.g., Artemis in the Archaic and Classical Greek world must not expect in this Inventory to find all or even most of the relevant cults. Only a selection of the divinities is recorded; especially the large *poleis* are under-represented, and only the major divinities are included in Index 17.

²⁹ Bremmer (1994) 84–100.

³⁰ Like this Inventory, Zaidman and Schmitt-Pantel's exemplary book (1992) about religion in the ancient Greek city covers the Archaic and Classical periods. As an example of "the pantheon in operation" the authors adduce Mantinea and print a translation and commentary of Pausanias' description of the divinities and temples of Mantinea. Altogether 22 divinities are listed. Only 10 of these divinities are attested in the period covered by the book. For the other 12 all evidence is Hellenistic and/or Roman: viz., Zeus Soter, Zeus Kharmon, Zeus Epidotes, Demeter (both countryside and town), Dionysos, Aphrodite Melainis, Aphrodite Anchisia, Aphrodite Symmachia, Antinoos (of course), Artemis and Asklepios; cf. Jost (1985).

City Walls as Evidence for *Polis* Identity

The prevailing view among ancient historians and classical archaeologists is that defensive walls were not an essential aspect of the Archaic and Classical *polis*, either as a concept¹ or as a physical phenomenon.² According to the orthodoxy, very few *poleis* had a defence circuit in the Archaic period, and even in the Classical period many *poleis* were unfortified, most notably Sparta (no. 345) and Elis (no. 251).³

Our investigations suggest a different picture of the *polis* (see Index 23). We shall treat the concept of *polis* separately from what we know about individual walled *poleis* and start with the concept. In the Classical period the defence circuit was an essential, though not indispensable, element of the *polis*. According to Euripides, the wild *Kyklopes* lived in caves, not in a walled *polis* like civilised Greeks (Eur. *Cycl.* 115–18). In the introduction to his *Histories* Thucydides surveys the progress of civilisation in Hellas from the earliest settlements to the end of the Persian War, and one of the turning points is the transition from unwallled *poleis* lying inland (1.2.2, 5.1, 6.1) to coastal *poleis* protected by walls (1.7.1, 8.2). Thucydides dates the turning point to the period after King Minos' thessalocracy but before the Trojan War. Similarly, Xenophon's *Sokrates* imagines that the building of defence circuits round the *poleis* is one of the changes that has happened since the Heroic period when Sinis, Skiron and Prokroustes were at large (Xen. *Mem.* 2.1.14). True, in *Laws* Plato prefers a *polis* without walls, like Sparta (*Leg.* 778D), but Aristotle points out that this is an extremely old-fashioned view and argues that the only sensible policy for a *polis* is to have walls (*Pol.* 1330^b32–31^a20).⁴

A survey of the defence capability of known *poleis* shows that the Greeks of the Classical period sided against Plato and took Aristotle's advice. The Inventory includes 491 communities directly attested as *poleis* in Archaic and/or Classical sources (*poleis* type A). Of these, thirty-two are unlocated. Of the remaining 459 *poleis*, 261 are attested as fortified before the end of the Classical period, some

by the remains of walls dated to the Archaic and Classical periods, others through direct or indirect references to walls in written sources, many through both types of evidence combined. Only four *poleis* are positively known to have been unfortified until the end of the Classical period: Delos (no. 478), Delphi (no. 177), Gortyns (no. 960) and Sparta (no. 345), whereas Elis (no. 251), Magnesia on the Maiander (no. 852) and Tralleis (no. 941) were still unfortified in 400. Admittedly, for 186 *poleis* we have no explicit information. But thirty-two of these have remains of walls reported as undated. Future investigations may assign some of these walls to the Classical period. Of the cities included in our inventory "barely 10% have been investigated to any significant extent" (Morgan and Coulton (1997) 87) and the view that walls are not likely to disappear completely does not stand up to scrutiny. There are numerous instances of ancient walls of which not a stone is left, although in some cases travellers of the eighteenth and nineteenth centuries reported visible remains.⁵

There can be no denying that, even though a few *poleis* were still unwallled, the Greeks of the Classical period thought of their *polis* as centred on a walled town. Today this view is gaining ground (Ducrey (1995) 251–55). What is still highly controversial is that the picture does not change significantly if we move back to the Archaic period. Again, we shall start with the concept and with our principal source for the Greeks' conception of man and society: the *Iliad* and the *Odyssey*. In this context we do not have to take a position on the date of the Homeric poems. What we want to stress is that, in C6f and even earlier, the *Iliad* and *Odyssey* were undoubtedly recited in public as well as in private schools and had become an important part of the cultural baggage of the Greeks in all parts of the Hellenic world (*Hymn. Hom. Ap.* 172–73; Xenophanes fr. 11). The Homeric *polis* is protected by—and adorned with—steep walls and beautiful towers. Not only named cities are protected by walls, like Troy (*Il.* 3.153ff), Thebes (*Il.* 19.99) and Tiryns (*Il.* 2.559). When the poet alludes to a *polis* in general, or a *polis* in fairyland, it is once again the walls that are the essential characteristic,

The first part of this chapter is based on Hansen (1997) 52–53 and 2000 (160). The section about attested walls of the Archaic period is by Rune Frederiksen.

¹ Starr (1957) 98; Nippel (1989) 1032.

² Wycherley (1967) 10; Snodgrass (1991) 9. For a different view, see Camp (2000) 48–49.

³ See Lawrence (1979) 121.

⁴ See Winter (1971) 1–2.

⁵ The city walls of Tegea were seen by Bérard in the 1890s, but today nothing is left; see Pfauth (1997) 49–51.

cf. the walled *polis* depicted on the shield of Achilles (*Il.* 18.514), or the walls around the *polis* of the Phaiakians (*Od.* 6.10, 266). Also, the “steep” wall (αἶψυ τε τεῖχος, *Il.* 6.327) or “long” walls (τείχεα μακρά, *Il.* 4.34) of a *polis* are among the standard epithets used to describe a city (Scully (1990) 41–53).

Now, we have to consider the possibility that the epic poems depict a historic society, a society much earlier than that known by his audience c.600. The walls protecting Troy or Tiryns may be reminiscences of the walled Bronze Age settlements combined with a vague knowledge about the impressive city walls found in the Assyrian Empire in the period c.885–612. Still, the presumption is that an audience listening to the poems c.600 would recognise the walls of the Phaiakians and those on the shield of Achilles as part of their own world, and this assumption is confirmed both by the archaeological evidence (*infra*) and by several of the fragments we have of contemporary lyric and iambic poets.

A papyrus fragment of one of Tyrtaios’ poems, undoubtedly describing the Messenian War, refers to the tower and wall of the Messenians (fr. 23, West = *P.Berol.* 11675). In a lost poem, paraphrased and echoed in numerous late sources, Alkaios argues that a *polis* is not just a town but a community: “*poleis* are neither stones nor timber nor the skill of builders but both walls and *poleis* are to be found where there are men capable of saving themselves” (Alc. fr. 426). Here the personal sense of the word is emphasised at the expense of the urban sense, but the antithetical way of expressing his view reveals that others might prefer to describe a *polis* as a walled town (Hansen (1997) 52). Commenting on Pindar *Ol.* 8.42, the scholiast says that “crown (*stephanos*) is used metaphorically about the wall since the walls of the *poleis* are like a crown, cf. Anakreon: ‘the crown of the *polis* has now been destroyed’” (fr. 391, *PMG*). Since the preserved poems by Hesiod do not deal with warfare they have no mention of city walls but the *Aspis*, a later poem (c.500?) ascribed to Hesiod, praises “the well-towered *polis* of men” (270: εὔπυργος πόλις ἀνδρῶν).

The conclusion seems to be that well-built walls with towers and gates were one of the most important characteristics, perhaps even the most important single characteristic of the *polis* as a town c.600. Thus, the defence circuit was an essential aspect of the *concept* of the Archaic *polis*. How does this view fit with what we know about individual walled *poleis* of C7 and C6?⁶

Excavated remains of city walls dated by external evi-

dence—i.e. walls associated with stratified datable objects—constitute the most securely dated category of walled *poleis* of the Archaic period. No fewer than eleven *poleis* had defence circuits associated with remains antedating 600, and they include Smyrna (no. 867), Paphos (no. 1019), Abdera (no. 640), Halieis (no. 349) and Megara Hyblaea (no. 36). Hill-top settlements are attested as well as settlements on level ground, and the geographical distribution is considerable. Remains of walls built in the period between 600 and 550 have been found in eighteen *poleis* from all over the Mediterranean, including Eu(h)esperides in North Africa (no. 1026), Massalia in France (no. 3) and Bouthrotos in Epeiros (no. 90). Examples from Euboeia (Eretria (no. 370)) and East Lokris (Halai (no. 380)) show that city walls were not confined to colonies and other *poleis* in the periphery of the Greek world. An additional twenty *poleis* have walls that can be dated to the period 550–480/79 and they include Istros in the Black Sea Area (no. 685) and more *poleis* in the Greek homeland, such as Kalydon (no. 148), Ambrakia (no. 113), Argos (no. 347) and Thasos (no. 526). Thus, dating by stratified objects provides us with evidence of altogether forty-nine *poleis* enclosed by walls in the Archaic period.

The other category of archaeologically attested city walls consists of remains which with some probability have been dated to the Archaic period because of their construction and masonry style. There are fifty-three defence circuits in this group so that for altogether 102 *poleis* there are remains of walls older than 480/79.

In addition to the archaeological evidence literary sources provide us with information about fortified *poleis* of the Archaic period, in most cases *poleis* exposed to a siege. Almost all the evidence comes from Herodotos: four *poleis* with walls antedating 550 can be listed, ten between 550 and 500, and finally twenty-three between 500 and 479. Ten of these thirty-seven sites overlap with the forty-nine sites where physical remains of walls have been found. So adding the *poleis* attested as fortified in literary sources to those whose fortifications are attested archaeologically, we reach a total of 129 *poleis* attested as fortified in the Archaic period, to which must be added an unknown number of Archaic walls demolished and thus obliterated in the Classical and Hellenistic periods because they had to be replaced by new walls that enclosed a larger area.⁷

A survey of all the evidence, including the walls of the Classical period, provides us with the following data. Of all the 1,035 communities included as *poleis* in this Inventory,

⁶ The following section down to the cue for n. 7 is by Rune Frederiksen.

⁷ Unpublished dissertation by Rune Frederiksen.

166 are unlocated. Of the 869 located *poleis*, remains of walls of the Archaic and/or Classical periods are attested for 438, and a further ninety *poleis* are referred to in written sources as being fortified. Thus 60 per cent of all are explicitly attested as walled settlements. Furthermore, while altogether 222 of the *poleis* are attested in literary sources as fortified, no more than nineteen are attested as unfortified, and of these six are attested in later sources as fortified. On the other hand, not all *poleis* had a defence circuit protecting the entire settlement. A total of 101 *poleis* had both a fortified acropolis and a defence circuit enclosing the lower town. But at least sixty-nine *poleis* seem to have had a fortified acropolis only. In most cases the acropolis wall is older than the town wall, or the two walls are contemporary, but there are examples of acropolis walls that are built later than the town walls.

There can be no doubt that in C4 almost every *polis* had a *teichos*, at least one protecting the acropolis, and for a *polis* not to be protected by walls was both exceptional⁸ and regarded as old-fashioned.⁹ Not just in poetry but in reality, a defence circuit had become an indispensable aspect of the town, just as it was in the Middle Ages. But there is an important difference in the function: in the mediaeval town the sharp division between city and country began

⁸ Xen. *Hell.* 6.5.28: Sparta (no. 345); Xen. *Hell.* 3.2.27: Elis (no. 251), not contradicted by 3.2.30, if we accept Dindorf's emendation of *σφέας* to *Φέας*.

⁹ Arist. *Pol.* 1330^a32–5, contradicting the view expressed by Plato at *Leg.* 778Dff.

at the gates. They were guarded all the time and closed during the night. Furthermore, customs were often exacted on all goods which passed the gates.¹⁰ In ancient Greece, city walls were erected for defence purposes only; the gates were guarded in time of war (Aen. *Tact.* 28.1–4); but in peacetime, anyone could pass freely during the daylight hours,¹¹ and, though at night the gates were probably shut, they seem not to have been guarded, and people could still get in and out.¹² The only evidence that customs were levied at the gates is a lexicographical note of doubtful value.¹³ If it can be trusted, the reference must be to imported goods on which duties were usually paid in the harbour, but occasionally at the gates if they had been brought to the city overland. It is unbelievable that anything was levied on produce brought into the city by citizens who worked their fields in the countryside but lived in the town. Thus, in contradistinction to what happened in the Middle Ages, the walls around an ancient Greek *polis* did *not* become a barrier between the town and its countryside, except in periods of war.

¹⁰ Bertelli (1978) 41–44.

¹¹ When in 413 Diitrephes made his surprise attack on Mykalessos, the gates were open and apparently unguarded (Thuc. 7.29.3). Similarly, Xenophon tells us at *Hell.* 5.4.20 that in 378 when Sphodrias made his surprise attack on the Peiraieus, there were no gates to protect the town.

¹² From Andokides' account of the mutilation of the *Hermai* it is apparent that Diokleides could pass the gates around midnight and start his walk to the Laureion mines (Andoc. 1.38).

¹³ Hes. *Δ* 1256: *διαπύλιον τέλος τι παρ' Αθηναίοις οὕτω ἐκαλεῖτο* ("Diapylon ('through the gate'): there was a duty in Athens that had this name").

The *Polis* as an Urban Centre

What kind of urban centre did a Greek of the Classical period picture to himself when he heard the word *polis*? Modern historians' immediate answer to this question is often restricted to quoting Pausanias' reluctant classification of Panopeus as a *polis* in spite of the absence of administrative offices, a *gymnasion*, a theatre, an agora and a fountain house.¹ But Pausanias' account misses the mark by 500 years. If we focus on contemporary sources and want to avoid a too Athenocentric picture, the best we can do is to read Aineias the Tactician's treatise, *How to Survive under Siege*.² Aineias is a fourth-century author. Admittedly he writes in Attic Greek, but he was probably an Arkadian.³ Another important source is a long fragment of a *periegesis* by Herakleides of Crete in which Athens, Chalkis and the Boiotian *poleis* are described briefly.⁴ Herakleides is a Hellenistic author, but so early that we find it admissible to use his account as a source for the *polis* of the late Classical period. To these two texts which both treat the *polis* in the sense of town can be added scattered remarks and passages from literary and epigraphical sources of the Archaic and Classical periods. Finally, a particularly interesting passage is found in the Pseudo-Aristotelian treatise *Peri Kosmou* (*De Mundo*) 400^b15–20. This treatise was presumably written as late as the first century AD but “it contains much that is genuine Aristotelian doctrine” (Ross (1949) 11) and is therefore included here, with due caution, as a possible source for C4s.⁵ A survey of the sources leads to the following sketch.

A *polis* (in the sense of an urban centre) was a town which was also the political centre of a *polis* (in the sense of a state), and there are very few attestations of an urban settlement which was called a *polis* without being the centre of a self-

This chapter is an updated and revised version of Hansen (2000a) 154–56.

¹ Paus. 10.4.1–2; cf. e.g. Finley (1981) 3–4; Kolb (1984) 58–59; Martin (1974) 30. The passage is discussed and rejected as a valid source for the *polis* of the Archaic and Classical periods by Alcock (1995) 326–29.

² See the excellent description of the “Durchschnittspolis” by Winterling (1991) 205–11.

³ Whitehead (1990) 12–14.

⁴ In the MS he is called *κρητικός*, which Müller for no obvious reason changed into *κρητικός*, so he was probably from Crete; see Pfister (1951). We quote the text of K. Müller in GGM I 97–106.

⁵ The passage has no mention of a *gymnasion*, perhaps the most important public building in a Hellenistic *polis*, and that may indicate that it goes back to C4.

governing community.⁶ It follows that in most *poleis* (in the sense of state) there was only one urban settlement which was called *polis*. Such a *polis* had a hinterland, called *chora*⁷ or *ge*,⁸ and a *polis* lying on the coast would have a harbour, called *limen*⁹ or *epineion*,¹⁰ often including an *emporion*, i.e. a special market for foreign trade.¹¹ The port of a large inland *polis* could itself be a major urban settlement which occasionally was considered a *polis* in the urban sense,¹² and could be a *polis* in the political sense too.¹³

Almost all *poleis* were enclosed by a circuit wall (*supra* 135) which in most cases must have been the line of demarcation between the *polis* (in the sense of town) and its *chora* (in the sense of hinterland); see *supra* 137. But sometimes, even in *poleis* with walls, the line of demarcation between *polis* and *chora* was a boundary stone inscribed *ὄρος πόλεως*,¹⁴ which may have been placed outside the walls to demarcate a zone in which there was a ban on erecting houses.

Of the other urban settlements inside the territory of a large *polis* some were centres of civic subdivisions, but some were just centres of habitation and local trade without any political institutions at all.¹⁵ Some of the larger *poleis*, however, succeeded in dominating or subduing some of the

⁶ For the very few possible exceptions, altogether 20 out of 384 attestations, see Hansen (2000b) 195–202 and *supra* 34.

¹⁵ e.g. Solygeia (Thuc. 4.42.1–2), Asai and Mausos (Theopomp. fr. 173), all in the territory of Corinth. There is no evidence that Corinthian *komai* were organised as civic subdivisions. See Hansen (1995b) 61–71; Gschntzer (1991) 429, 434ff.

neighbouring *poleis*, and if these dependencies were allowed to persist as *poleis* in the political sense, their urban centre would also be called a *polis*.¹⁶

Even very small *poleis* seem to have had a four-digit number of inhabitants,¹⁷ and the population of a *polis* was often so numerous that the inhabitants did not know one another.¹⁸

As a town the *polis* was first of all a centre of habitation, and through excavation or survey archaeologists have come to distinguish between two different types of nucleated settlement: (A) a small settlement, often placed on an eminence, which was extended downhill and grew to become a proper town, and (B) a cluster of closely set villages which eventually were merged into a conurbation with a defence circuit enclosing the entire settlement.¹⁹ In towns of type (A) the eminence (acropolis) was often walled and clearly distinguished from the habitation quarters below.²⁰ The acropolis was sometimes reserved for sanctuaries and other public buildings,²¹ but sometimes had room for habitation as well.²² To have an acropolis was not a characteristic confined to *poleis* of type (A). Many *poleis* of type (B) possessed a proper acropolis close to or as a part of the conurbation: e.g. Corinth (no. 227), Argos (no. 347) and Athens (no. 361).

The most urgent need of the *polis* as a habitation centre was a sufficient supply of fresh water, and as a specific type of public architecture many *poleis* were adorned with one or more fountain houses where the inhabitants could supplement the water drawn from wells in private houses.²³

Every *polis* was divided into publicly owned quarters,

¹⁶ Helisson (no. 273), a dependency of Mantinea, is called *polis* in the urban sense at SEG 37 340.6–7. Mykalessos (no. 212) a dependency of Tanagra (or, perhaps, Thebes), is called *polis* in the urban sense at Thuc. 7.29.3.

¹⁷ Even the tiny *polis* of Koresia (no. 493) seems to have had c.1,000 inhabitants, and the urban population of Plataiai (no. 216) must have totalled c.2,000; cf. Hansen (1997) 27–28. Several *poleis*, however, can have had no more than some 100 inhabitants, e.g. Chorsiai (no. 202). For two different, but not very different gues(s)timates of the Boiotian urban population, see Bintliff (1997) and Hansen (1997) 62–63.

¹⁸ Aen. Tact. 4.5, 39.5; see Hansen (2000a) 158–59 and Winterling (1991) 206. Athens was too big to be a face-to-face society: Hansen (1987) 8 with n. 60; Cohen (1997).

¹⁹ This typology was invented and developed by Snodgrass (1987–89) 56–64 and (1990) 130–31. Examples of type (A) are Aigeira (no. 230), Aigion (no. 231), Eretria (no. 370) and Haliartos (no. 206, the one selected by Snodgrass as a typical example of type A). Examples of type (B) are Argos (no. 347), Athenai (no. 361), Sparta (no. 345) and Thespiiai (no. 222, the one selected by Snodgrass as a typical example of type B); see also Morgan and Coulton (1997) 124.

²⁰ e.g. in Thebes (no. 221); cf. Symeonoglou (1985) 117–22. For attestations of a separately walled acropolis, see Index 23.

used for walls, streets, harbours, and all kinds of public architecture, some of it monumental, as against privately owned habitation quarters, used for (mostly) fairly simple family houses.²⁴ Mansions and palaces were virtually unknown before the late Classical and Hellenistic periods, and that goes even for *poleis* governed by a tyrant.²⁵ Instead of the dichotomy between public and private space we sometimes meet a tripartition into sacred (*hieron*), public (*demosion*) and private (*idion*) space, or, alternatively, a primary distinction between private and public space is supplemented with a subdivision of public space into sacred and profane.²⁶

Habitation quarters were often irregular with crooked streets and haphazardly arranged houses, but in the Classical period an astonishing number of towns had adopted the centralised planning of streets and habitation quarters which erroneously has been ascribed to Hippodamos of Miletos, the C5 architect of the Peiraieus (Martin (1974) 221–52). To have a town organised in accordance with a rigid plan can be traced back to the colonies founded by the Greeks in Sicily in C8l.²⁷ And during the Archaic and Classical periods a constantly growing number of *poleis*, first outside and later in Hellas itself, were organised in accordance with a rectangular street plan. But even more important than having the streets laid out in rectangular fashion was the habit of having the rectangular blocks framed by the streets subdivided into lots of equal size, mostly eight or ten or twelve lots per block, and standardising the houses constructed on the lots;²⁸ they were a kind of ancient terrace houses not too far removed from what is known from some parts of some modern European cities. The degree of town planning and rationalisation practised in the so-called Hippodamian *poleis* was as astonishing as the degree of planning and rationalisation practised in the artificial subdivision of the citizen body into, e.g., *phylai*, *phratriai* and *hekatostyes*, etc. (Murray (1997)), or as astonishing as the rigorous planning and rationalisation practised in the

fountain houses are known from Megara (no. 225); Corinth (no. 227); Phigaleia (no. 292), still used; Athens (no. 361) and Olynthos (no. 588).

running of the political institutions (Hansen (1991) 314, 319–20).

Apart from being a centre of habitation, the *polis* was a centre of (a) political institutions, (b) cults, (c) defence, (d) industry and trade, and (e) education and entertainment.

Re (a) As a political centre the *polis* accommodated all the central political institutions and the buildings in which they resided (Index 24): a *prytaneion*,²⁹ a *bouleuterion*,³⁰ and a number of *archeia*.³¹ For some unknown reason *dikasteria* are only exceptionally mentioned in our sources.³² Only a few *poleis* had a separate *ekklesiasterion*.³³ In the Archaic period a meeting of the assembly, called *agora*, was presumably held in the *agora*.³⁴ In Classical sources there are quite a few references to assemblies of the people being held in the theatre,³⁵ and the *agora* was no longer seen as the obvious political centre of the *polis* where assemblies were held;³⁶ but the *prytaneion*, the *bouleuterion*, a *dikasterion* or a *stoa* with offices of magistrates were often placed in the *agora* or next to the *agora*.³⁷ In the Archaic and Classical periods almost all the public political buildings were small and undistinguished, and monumental political architecture began to appear only in C4.³⁸

Re (b) As a centre of public cult the *polis* housed a number of sanctuaries,³⁹ some with monumental buildings such as temples⁴⁰ and theatres.⁴¹ Until a generation ago the prevailing view was that almost all the major public sanctuaries were erected within the walls of the *polis*,⁴² and that the temples were typically placed on the acropolis. This view has been considerably modified in two respects: (a) many

of the major sanctuaries were extra-urban and often situated right on the threshold to the territory, almost as a demarcation of the territory.⁴³ (b) As time went on, new cities had their urban sanctuaries interspersed between the habitation blocks and no longer erected on the acropolis.⁴⁴ Sanctuaries of Athena, Apollo and Aphrodite are typically found inside the walls, whereas sanctuaries of Zeus, Demeter, Hera and Poseidon are often situated in the hinterland.⁴⁵ Correspondingly, festivals connected with the urban sanctuaries were celebrated in the *polis*,⁴⁶ whereas festivals for the gods who had their temples in the countryside were celebrated in the *chora*.⁴⁷

All the remains of Archaic and Classical buildings show that monumental architecture⁴⁸ was sacred architecture, and all written sources confirm that the archaeological evidence presents a true, not a skewed, picture of what monumental architecture was in the Archaic and Classical Greek world. According to Thucydides (1.10.2) the edifices to be admired by posterity are the temples. Again, when the Athenians denounce the destruction of Athens during the Persian invasion, it is the burning of the temples on the Acropolis for which they seek retribution (Lycurg. 1.81; Plut. *Per.* 17.1). Setting prestigious public against plain private architecture, Demosthenes speaks of temples as opposed to houses owned by the political leaders of the preceding century (Dem. 3.25–26). And listing the monumental buildings in Athens he mentions the Propylaea, the Parthenon, the stoas and the docks but makes no reference to the Pnyx, the *bouleuterion*, the *dikasteria* or the *prytaneion* (Dem. 22.76, cf. 23.207). Almost all *poleis* must have had at least one monumental temple, and to have a temple can be seen as a characteristic of a *polis*, although not one by which a *polis* could be distinguished from other types of settle-

⁴⁶ Aen. Tact. 10.4.

⁴⁷ Aen. Tact. 17.1.

⁴⁸ Greek “monumental” buildings have the following characteristics: (1) they are built by the public (the *polis*) and for public use (Coulton (1977) 17–18). (2) They require an architect as opposed to a builder (ibid. 15–17). (3) They are grander than necessary for their purpose: including the forecourt the *bouleuterion* at Miletus covered 2,100 m² and the auditorium itself could accommodate 1,200–1,500 persons, but most councils had fewer than 500 members, and Mas-salia and Kroton are exceptional in having had 600 (Strabo 4.1.5) and 1,000 (Val. Max. 8.12.15. ext.1) respectively. (4) They are of fine materials and distinguished workmanship: when the temple of Apollo at Delphi was rebuilt after the fire of 548, the Alkmaionidai paid for having marble substituted for limestone (Hdt. 5.62.3). (5) They are often embellished with ornaments, e.g., fluted columns crowned by capitals, sculptured metopes and *akroteria*, etc. (6) They are expensive and labour-intensive. Some types of public building for which architects were often used were of ordinary local limestone, completely undecorated and in no way larger than necessary. Nevertheless they must have been so costly and so time-consuming to construct that by this criterion alone they deserve to be called “monumental”. City walls (Arist. *Pol.* 1331^a12) and theatres (Diod. 16.83.3) are obvious examples.

ment. There was of course a world of difference between many of the peripteral temples in the Greek homeland and the simple temples *in antis* in many of the colonies in the Pontic region. But there was a similar difference between the fairly distinguished private houses in Miletos and the dug-outs built by the colonists in Olbia.⁴⁹

Re (c) As a centre of defence the *polis* was a town whose walls could protect its inhabitants as well as the rest of the population. Walls are an essential aspect of the *polis*, and inside the walls was enough open space to accommodate the rural population for as long as the enemy occupied and pillaged the countryside.⁵⁰ Protracted warfare might lead to a siege of the *polis* and sometimes to its conquest, either by being betrayed by insiders or by being stormed or by being starved into surrender. Since military events loom large in ancient historiography, the defence aspect of the *polis* is particularly well attested in our literary sources. The army was made up of the citizens each of whom owned his own weapons, and, Sparta excepted, there were probably no barracks and no arsenals before the Hellenistic period, when mercenaries and professional standing armies were gaining ground.⁵¹ Coastal *poleis* usually had a harbour with shipsheds for warships.⁵²

Re (d) As an economic association the centre of the *polis* was the agora,⁵³ the epicentre was often a harbour, and in sources dealing with the economy of the *polis*, the agora and the *limen* are often juxtaposed.⁵⁴ Every *polis* had an agora,⁵⁵ which in Archaic and early Classical towns was just an open square marked off with *horoi*.⁵⁶ A *polis* might have an *emporion*, i.e. a market reserved for foreign trade.⁵⁷ In the Classical period all traces of the agora as an assembly place have vanished, and the agora was

now primarily the market-place. Shops and booths were erected,⁵⁸ many of a temporary nature.⁵⁹ An agora was often adorned with a stoa (see Index 25).⁶⁰ Later and especially in *poleis* with a grid plan, the agora was flanked with two⁶¹ or even three stoas,⁶² some of which were used for shops.⁶³

Re (e) As a centre of education and entertainment the *polis* was the place where the schools for children were found.⁶⁴ The more advanced education of adults was often connected with the *gymnasia*,⁶⁵ which, however, were primarily centres for sport and military training.⁶⁶ In the Archaic and early Classical periods *gymnasia* were usually placed outside the *polis*,⁶⁷ but in the course of the late Classical and Hellenistic periods the *gymnasion* was moved inside the walls⁶⁸ and became perhaps the most important public building⁶⁹ housing what was now the most important institution in the *polis*, viz. the *ephebeia*.

Of entertainments, often connected with the major religious festivals, the two most spectacular types were competitions in sport, conducted in a *palaistra*,⁷⁰ a *stadion*⁷¹ or a *hippodromos*,⁷² often connected with a *gymnasion*,⁷³ and drama, performed in the theatre.⁷⁴ In the Archaic and early Classical periods both the *gymnasion* (with *palaistra*, *stadion* and *hippodromos*)⁷⁵ and the theatre⁷⁶ were simple constructions which in most *poleis* have left no traces whatsoever, but all three types of building were monu-

mentalised in the course of the late fifth and fourth centuries.

Summing up, how did the *polis* change between c.600 and c.320? A circuit of walls became an almost indispensable part of the *polis*, and one which in Aristotle's opinion was a major adornment of the city. Apart from the defence circuit, temples were virtually the only type of monumental architecture worth mentioning down to the end of the Archaic period. Theatres with a stone *koilon* began to be constructed in the fifth century only and, with a few notable exceptions, political architecture was not monumentalised until the Hellenistic Age. Remains of *gymnasia*, *stadia* and hippodromes tell the same story. They are conspicuous by their absence until the late fifth century, but became

impressive monumental buildings during the Hellenistic period. From an architectural point of view, however, the most dramatic change of the *polis* seems to have been in the layout and construction of private houses. A growing number of *poleis* were organised in accordance with a rectangular street plan, but even more important is that the rectangular blocks framed by the streets were subdivided into lots of equal size, mostly eight or ten or twelve lots per block, and the houses constructed on the lots were also standardised; they were a kind of ancient terrace houses. A crucial problem is to what extent and how the town planning was organised by the *polis* in the sense of a political community; but that is a problem which has to be further investigated.

Coins as Evidence for *Polis* Identity

In the Hellenic world in the Archaic and Classical periods most coins were struck by *poleis* (see Index 26). How do we know? (a) In the written sources there are general statements that striking coins was one of the tasks incumbent on a *polis* (Pl. *Resp.* 371B; Arist. *Mag. mor.* 1194^a18–25). (b) From other sources we obtain information about mints of individual communities explicitly attested as *poleis* (Dem. 24.212–14, Athens; *IG XII.2.1* (C5s), Mytilene and Phokaia; *Syll.*³ 218.14–15 (C4f), Olbia). (c) The majority of all Greek coins of the Archaic and Classical periods can be ascribed to communities which in contemporary written sources are explicitly called *poleis*, e.g. the C5s silver drachms from Taras inscribed *TAPANTINΩN* compared with Thuc. 6.44.2: τῶν πόλεων . . . Τάραντος (*infra* 299, 302). Taras is a straightforward example; there are many like it, but it may be difficult and sometimes even impossible to ascribe a coinage to a known community or to identify this community as a *polis*.

Initially we shall set aside the anepigraphic coins and concentrate on those which carry a legend.¹ Legends on Archaic and Classical Greek coins fall into the following groups: (a) an ethnic usually in the genitive plural, sometimes in the nominative singular; (b) the ktetic form of the ethnic, usually in the neuter singular; (c) a toponym either in the genitive or in the nominative; (d) the name of a person; (e) the name of a god or a hero, usually together with a representation of the divinity in question; (f) symbols indicating date or denomination; (g) miscellaneous other terms conveying a message to the user of the coin. The legends may be spelled out, but often they are abbreviated, and the different types can be illustrated as follows.

Re (a) Examples of the ethnic in the genitive plural are *AINIANΩN*, C4f (Head, *HN*² 291); *AMO(PΓIΩN)*, C4l (Head, *HN*² 481); *BOIΩTΩN*, c.338–315 (Head, *HN*² 352); *EYBOI(EΩN)*, C4f (Head, *HN*² 362); *KATANAIΩN*, c.400 (Head, *HN*² 134); *KNΩΣIΩN*, C4f (Head, *HN*² 461); *ΝΑΓΓIΔEΩN*, C5l (Head, *HN*² 725); *NEAIΠOAITEΩN* (Rutter, *HN*³ 70); *ΣTYMΦAAIΩN*, C4f (Head, *HN*² 454); *ΦΩKEΩN*, C4m (Head, *HN*² 339); *XAAKIΔEΩN* (in Thrace), C4f (Head, *HN*² 209). Nominative singular forms are *NEA-*

ΠOAIΘHΣ (Rutter, *HN*³ 68); *PHΓINOΣ*, or *PEΓINH*, or *PEΓINON*, C5l–C4e (Head, *HN*³ 187–91). For an occasional nominative plural form, see *ΠOΔIOI* (Babelon, *Traité* ii.2 1015).

Re (b) Examples of the ktetic form of the ethnic are *APKAIΔIKON*, C5 (Head, *HN*² 448); *OΛYNIPIKON*, C5e (Head, *HN*² 420); *ΔEPPONIKON* or *ΔEPPONIKOΣ* (Makedonian tribe), C5e (Head, *HN*² 202); *ΘEΣΠIKON*, C4f (Head, *HN*² 354); *ΝΑΓΓIΔIKON*, C5l (Head, *HN*² 725), cf. Babelon, *Traité* ii.1 890–95; *NEOΠOAIITIKON* (Rutter, *HN*³ 68).

Re (c) Examples of the toponym in nominative or genitive are *AKPAΓAΣ* or *AKPAΓANTOΣ*, C6s–C5f (Head, *HN*² 120); *ΔIKAIΔA* (in Thrace), C5m (Head, *HN*² 252); *ZAKYNΘOΣ*, C5s–C4f (Head, *HN*² 429); *AAKYΔΩN* (in France), C4 (Head, *HN*² 6); *NEHIIOAIΣ* (Rutter, *HN*³ 68); *PEΓION*, C5e (*HN*³ 187).

Re (d) A personal name, either in the nominative, or in the genitive, or in a prepositional phrase, is mostly the name of a mint official, often abbreviated. Occasionally it may be the name of the engraver. In other cases it is the name of a ruler or a general or a mercenary leader. Examples are *EIII ΔEMOKPITO* on C5s coins from Abdera (Head, *HN*² 254), a mint official who is perhaps identical with the pre-Socratic philosopher Demokritos of Abdera. For names of engravers, see *EYAINETO* on some Syracusan coins of C5f (Guarducci (1974) 532). In most cases names of mint officials and engravers are easily distinguished from names of rulers and mercenary leaders. Examples of such names are *obv.* *ΘEMICTOKAEOΣ*, *rev.* *MA* on C5f coins of Magnesia on the Maiandros struck by Themistokles in exile (Head, *HN*² 581); *ΠAYCANIA* and *ΦIAIPIΠOY* on coins struck by King Pausanias of Makedonia in 390–389 and by Philip II in 360–336 (Head, *HN*² 221–22); *MAYCCΩAΛO* on coins struck by Mausolos in 377–353 (Head, *HN*² 629); *obv.* *ΦΩKEΩN*, *rev.* *ONYMAPXOY* or *ΦAAAIKOY* on coins struck by these Phokian generals during the Third Sacred War (Head, *HN*² 339); *rev.* *ΔIΩNOΣ* and *ZA* on coins perhaps struck by Dion of Syracuse on Zakynthos preparing his campaign against Dionysios II of Syracuse in 357 (Head, *HN*² 430).

¹ For a full study, see Guarducci (1969) 615–705; (1974) 530–39.

Re (e) Names of gods or heroes are often added to a picture of the divinity to ensure identification. On some C4 coins of Herakleia in Loukania we find *AΘANA* with head of Athena in Corinthian helmet (Head, *HN*² 72). On C4 coins of Larisa is the legend *ΑΛΕΥΑ* with the head of Aleuas, the eponymous ancestor of the Aleuadai (Head, *HN*² 299). Sometimes it is a matter of interpretation whether a name is the name of a god or a toponym. The legend *ΑΚΡΑΓΑΣ* alongside the head of young Akragas on some C4 bronze coins must be the name of the river-god (Head, *HN*² 123); but *ΑΚΡΑΓΑΣ* or *ΑΚΡΑΓΑΝΤΟΣ* together with the eagle must designate the homonymous town (Head, *HN*² 123), and that shows, once again, that the toponym of a town was often used synonymously with the city-ethnic to denote the political community and not just its urban centre (*supra* 56).

Re (f) Examples of denominations are *ΤΤΤ*=tritetartemion, *H*=hemibol on coins of Kranioi on Kephallenia from c.400 (Head, *HN*² 427); *ΟΒΟΛΟΣ* on C5–C4 coins of Metapontion (Rutter, *HN*³ 1639–40). Rare examples of a date on a coin are all later than the Classical period.

Re (g) Various other legends include, e.g., *ΟΙΚΙΣΤΑΣ* (C4s), referring to Herakles as the founder of the *polis* of Kroton (Head, *HN*² 98); *ΔΑΜΟΚΡΑΤΙΑΣ* (C4), referring to the constitution of the island of Telos (Head, *HN*² 642); *ΣΥΝ(MΑΧΙΚΟΝ)*, referring to an alliance of anti-Spartan *poleis* 394–386 (Kraay (1976) 248).

Moving from a survey of the different kinds of legend to a survey of the communities which had a mint, we can establish the following list of authorities attested as striking coins: (1) *poleis*, (2) *ethne*, sub-*ethne* and islanders inhabiting multipolate islands, (3) federations, (4) amphiktyonies, (5) alliances, (6) rulers, (7) generals and mercenary leaders, and (8) sanctuaries.² All the examples adduced above belong in one of these categories. Some may be placed in two of the categories simultaneously.

Re (1) Attested *poleis* among the examples adduced above are Akragas, Dikaia, Katane, Knosos, Nagidos, Neapolis, Stymphalos, Rhegion, Thespiiai and Zakynthos (a monopolate island).

Re (2) The Ainians were an *ethnos* living to the south of Thessaly, and the Parrhasians an Arkadian sub-*ethnos*; the

Euboians and the Amorgians were inhabitants of a multipolate island.

Re (3) In C5l–C4e the Boiotians, the Phokians and the Chalkidians in Thrace were organised as confederations. It should be noted that ethnic groups (2) can only be distinguished from federations (3) when we have external evidence about the political organisation of the community in question. Thus, the C5 triobols and obols inscribed *ΑΡΚΑΔΙΚΟΝ* may testify to a certain co-operation between the various Arkadian communities, but an Arkadian Federation was set up only after the battle of Leuktra in 371 (Nielsen (1996)). The *ΑΡΚΑΔΙΚΟΝ* triobols and obols may have been a festival coinage connected with the Panarkadian Games in honour of Zeus Lykaios, or a coinage issued by Tegea. In the first case it also belongs in group (8) *infra*, in the second case also in group (1) *supra*.

Re (4) The coins inscribed *ΑΜΦΙΚΤΥΟΝΩΝ* were struck, probably in Delphi, by the council of the Amphiktyonic League in the years after the Third Sacred War (Head, *HN*² 342).

Re (5) A number of coins from the Propontic region and the coast of Asia Minor have *obv.* the child Herakles strangling two snakes; legend: *ΣΥΝ*, an abbreviated form of either *ΣΥΝΜΑΧΩΝ* or *ΣΥΝΜΑΧΙΚΟΝ*. On the reverse are the types and legends of the members of the alliance. They were struck either in 404 (Ashton (1993) 9) or, rather, in the years 394–386 by an anti-Spartan alliance of Greek *poleis* (Kraay (1976) 248). The common obverse shows that they were alliance coins, the different reverses that they were struck by a number of communities, all attested as *poleis* in other sources, viz. Byzantion, Ephesos, Iasos, Knidos, Kyzikos, Rhodos and Samos. For a Sicilian *ΣΥΜΜΑΧΙΚΟΝ* coinage connected with Timoleon, see *infra* 148.

Re (6–7) Pausanias and Philip II were kings, Themistokles and Mausolos were satraps, Onomarchos, Phalaikos and Dion were generals and mercenary leaders. The coins issued by the kings of Makedonia were common to all the *poleis* and regions over which the king ruled. And the coins of Onomarchos and Phalaikos were legal tender in all the Phokian *poleis*. But the coins struck by Themistokles have on the reverse *ΜΑ*, which indicates that it was also a *polis* coinage, viz. of Magnesia.

Re (8) The staters with the legend *ΟΛΥΜΠΙΚΟΝ* were probably struck in C6l–C5e for use at the Olympic Games (Babelon, *Traité* ii.1 887–90). C4s coins inscribed *ΕΚ ΔΙΔΥΜΩΝ ΙΕΡΗ* were issues of the sanctuary of Apollo at Didyma in the territory of Miletos (Head, *HN*² 585). The

² That coins could be struck by a *phourion* depends on an unconvincing identification of the C5 coins inscribed *ΣΤΙΕΑΝΑΙΟΝ* with *Στιέλλα* classified as a *φρούριον* by Steph. Byz. 588.7; see Stielanaioi (no. 46). Even accepting the identification, it must be added that *phourion* could be used synonymously with *polis*, see Thuc. 8.62.3, where both terms are applied to Sestos (no. 672); cf. Nielsen (2002).

issuing authorities may have been Elis and Miletos, respectively, cf. *infra* 498 and 1083.

Is it possible to isolate coins struck by *poleis* from coins struck by *ethne*, or multipolate islands, or federations, or amphictyonies, or rulers, or mercenary leaders, or sanctuaries? This question can be answered in the affirmative if we take a closer look at the coins inscribed with ethnics. As pointed out 59 *supra*, we can distinguish between three different types of ethnic: (1) regional ethnics (ethnics denoting, in the singular, a person and, in the plural, a people inhabiting a region), (2) city-ethnics (ethnics denoting, in the singular, a person and, in the plural, a people inhabiting a *polis* and its hinterland), and (3) sub-ethnics (ethnics denoting, in the singular, a member of a civic subdivision and, in the plural, the members of a civic subdivision, be it a *phyle* or a *phratiria*, or a *patra*, or a *hekatostys*, or a *kome*, or a *demos*).

First, not one single coin of the Archaic and Classical periods is inscribed with a sub-ethnic, such as the Hylleis of a Doric community, or a gentilician group ending in *-ιδαι*, be it a *phratiria* or a *patra* or some other group. Nor is any *demos* or *kome* attested as having its sub-ethnic on a coin. In the older numismatic literature, including Head's *HN*, there are a four examples of coins allegedly struck by a civic subdivision and inscribed with a sub-ethnic. But one of the examples was later discarded as a misinterpretation, another is a puzzle to which there is no answer yet, and in the two remaining cases the issuing authority was in fact not a civic subdivision but a *polis*.

(1) Under cities of Lesbos, Head, *HN*² 559 lists a bronze coin of C4l: *obv.* head of Athena, *rev.* female head with *sphendone*, legend: *AIGI*. Head notes that, according to Strabo 12.2.2, Aigeiros was a *κώμη* between Methymna and Mytilene. The coin has no known provenance, and Mason (1993) 243 comments that “the supposed coins of Aigeiros are, we suppose, a phantom . . . consisting of a single bronze with the inscription *AIGI*, which could just as easily be assigned to Aigeira in Achaia, Aigina or Aigion”. Thus, we do not have to assume that *AIGI* is an abbreviated form of a sub-ethnic denoting a *kome*.

(2) Some rare billon coins of C5f have with good reason been assigned to Lesbos. They are inscribed *KIΘI* (Head, *HN*² 560, *infra* 1018). Yet no attested Lesbian toponym fits this legend. The coins may have been struck by a Lesbian *polis* which disappeared in C5f and has not left any other trace. In any case, there is no evidence that the coins were minted by any Lesbian second-order settlement we know of.

(3) A C4–C3 issue of bronze coins has *obv.* Triptole-

mos in winged car drawn by snakes, *rev.* pig standing on Eleusinian bakchos; legend: *EΛEYΣI* and, on one coin, *AΘE* (Head, *HN*² 391; *SNG Cop. Attica* 414–19). According to Kroll and Walker (1993) 26–28 the legend is not an abbreviated form of the sub-ethnic *EΛEYΣI(NIΩN)* but of the *ktetikon* *EΛEYΣI(NIAKON)*, and the coin inscribed *AΘE* reveals that they were struck by the Athenian mint for the festival of the Mysteries, not by the Eleusinians.

(4) The Salaminians on the island of Salamis struck bronze coins in C4. Types: *obv.* female head (nymph Salamis?), *rev.* “Boiotian” shield and sword in sheath with strap (shield of Aias?); legend: *ΣΑΛΑ*. The beginning of this coinage is now dated c.400 (Kroll and Walker (1993) 215). The legend is probably the abbreviated form of the ethnic *Σαλα(μυνίων)*, indicating that the coins were struck on Salamis by the Salaminians, but *Σαλαμύνιος* is not a *demotikon*, or another form of a sub-ethnic. Salamis is explicitly classified as a *polis* in Ps.-Skylax 57, and accordingly the adjective is a city-ethnic, not a sub-ethnic.

The inference is that all ethnics on coins, including ktetic forms, must be either regional ethnics or city-ethnics. As explained above, these two types of ethnic are in most cases easily distinguishable,³ and we can therefore establish a list of 420 Archaic and/or Classical mints issuing coins inscribed with city-ethnics.⁴ These 420 mints constitute the bulk of the material. The remaining twenty-three mints recorded in Index 26 struck exclusively anepigraphic coins (eight mints), or coins inscribed with a toponym only (four

³ A list of Archaic and Classical coins inscribed with regional or sub-regional ethnics or names of multipolate islands includes Achaia C4f (*ΑΧΑΙΩΝ*, Head, *HN*² 416); Ainians, C4f (*ΑΙΝΙΑΝΩΝ*, Head, *HN*² 291); Akarnanians, C4 (*ΑΚ*, Head, *HN*² 333); Amorgioi, C4l (*ΑΜΟ*, Head, *HN*² 481); Arkadians, C5 (*ΑΡΚΑΔΙΚΟΝ*, Head, *HN*² 444); Bisaltians, C5f (*ΒΙΣΑΛΤΙΚΩΝ*, Head, *HN*² 200); Boiotians, C5–C4 (*ΒΟΙΩΤΩΝ*, Head, *HN*² 348, 352); Bottiaians, C5l–C4e (*ΒΟΤΤΙΑΙΩΝ*, Head, *HN*² 213); Chalkidians, C4f (*ΧΑΛΚΙΔΕΩΝ*, Head, *HN*² 209); Derrones, C5f (*ΔΕΡΡΟΝΙΚΟΣ*, Head, *HN*² 202); Edo-nians, C5f (*ΗΔΟΝΕΩΝ*, Head, *HN*² 201); Euboians, C4f (*ΕΥΒΟΙ(Ε)ΩΝ*, Head, *HN*² 362); Koans, C6–C5 (*ΚΩΣ*, *ΚΩΙΝ*, Head, *HN*² 632); Lemnians, C4m (*ΛΗΜΝΙ*, Head, *HN*² 262); Lesbians, C5s (*ΛΕΣ*, Head, *HN*² 558); Lesbians/Aiolians, C4s (*ΑΙΟΛΕ*, Head, *HN*² 559); East Lokrians, C4s (*ΛΟΚΡΩΝ ΥΠΟΚ* or *ΕΠΙΚΝΑ*, Head, *HN*² 336); Molossians, C4m (*ΜΟΛΟΣΣΩΝ*, Head, *HN*² 321); Parrhasians, C5s (*ΠΑΡ*, Head, *HN*² 451); Peparethians, C4m (*ΠΕΠΑ*, Head, *HN*² 313); Perrhaebians, C4 (*ΠΕΡΡΑΙΒΩΝ*, Head, *HN*² 304); Petthalians, C4m (*ΠΕΤΘΑΛΩΝ*, Head, *HN*² 304); Phokians, C6–C5 (*ΦΟΚΙ*, Head, *HN*² 338).

⁴ In 267 cases the ethnicon (or ktetikon) is spelled out or, if abbreviated, there is no doubt that it is an abbreviation of the ethnic. In 153 cases the legend is abbreviated in such a way that the full form may have been either the toponym or the city-ethnic. In most cases it is undoubtedly the city-ethnic that is abbreviated, but even if it is the toponym, that does not make any difference in relation to the identification of the mint as belonging to a *polis*: in so far as the toponym denotes an urban settlement, it indicates *polis* status of the community in question as much as the city-ethnic derived from the toponym; cf. *infra*.

mints), or a regional ethnic (three mints), or the name of a ruler (six mints), or the name of a god (two mints).

Most of the anepigraphic coins are Archaic or early Classical and can be ascribed to communities which later in the Classical period struck coins with similar types but now with legends in addition to the types. In Index 26 there are no more than eight mints of the Archaic and Classical periods known exclusively from anepigraphic coins.⁵ In these cases it is the iconography or the provenance that make the identification of such coins possible. Such identifications are admittedly problematic, and it is important to point out that none of the communities in question has been included in this inventory on the sole authority of the anepigraphic coins ascribed to the community.

Twenty-one mints struck coins inscribed with toponyms (see Index 26).⁶ Most of these coins come from mints which used the city-ethnic alternating with the toponym. But there are four mints from which the surviving coins are inscribed with a toponym only. Two of these cities are classified as *poleis* in other Classical sources,⁷ and there is supporting evidence that the two others were *poleis* as well.⁸ There is in fact only one attestation of coins inscribed with a toponym denoting what is otherwise known as a second-order settlement, e.g. a large village or a harbour town: some C4 obols have *obv.* horned (?) youthful male head, legend: ΛΑΚΥΔΩΝ, *rev.* wheel (Head, *HN*² 6). Λακύδων was the port of Massalia (Eust. *Comm. in Dionys. Per.* 75; Pomp. 2.77), and there is no evidence to show that it was ever a *polis*.⁹ These coins may be evidence of a mint run by a second-order settlement, but other coins with similar types have on their reverse the legend *MA*. As pointed out in Roscher (1894–97) 1813, Λακύδων is not a toponym but the name of a divinity: the harbour of Massalia personified. The presumption is that the coins were struck by the *polis* of Massalia, just as the Eleusinian coins were struck by Athens (*supra*). Thus, all coins inscribed with a toponym

denoting an urban centre were probably struck by *poleis* in the political as well as in the urban sense.¹⁰

In addition to the coins inscribed with a city-ethnic, some coins inscribed with a regional ethnic alone, and some inscribed with a regional ethnic and a city-ethnic combined were probably struck by *poleis*.

Some Arkadian staters of C4f are an example of the first category. The types are *obv.* Pan, *rev.* Zeus Lykaios with the legend *APK* in monogram and, on some, *IIO* and *ΘE*. These types are identical with those used in the Hellenistic Age by Megalopolis and inscribed *MET*. Furthermore *IIO* and *ΘE* are presumably abbreviations of the names Possikrates and Theoxenos, two of the ten *oikistai* of Megalopolis. The generally accepted view is that these coins were issued by Megalopolis (no. 282) rather than by the new Arkadian Federation (Head, *HN*² 445). The other two examples which are relevant in this context are the Eretrian coins (no. 370) inscribed with the name of the island *EYBOI* and some Pontic coins of c.400 inscribed with the regional ethnic ΣΙΝΔΩΝ. It is usually believed that the issuing authority in this case was not the Sindian tribe, but the *polis* Gorgippia (no. 696).

An example of the second category are some Boiotian coins of C5f which have *obv.* *TA* in the openings of a Boiotian shield and *rev.* *BOI* in a wheel of four spokes. The presumption is that these coins were struck by Tanagra (no. 220) in the period after the Persian War when Thebes was disgraced and the leadership of the Boiotian *poleis* passed to Tanagra. But the *obv.* legend indicates that these coins were a *polis* issue of Tanagra as well.

On coins from six of the mints included in Index 26, the only legend is the name of the ruler of the *polis* in question, which seems unproblematic,¹¹ and in two cases, both communities lying along the Adriatic coast, the only inscription on the coins is the name of a divinity.¹²

After this presentation of the material we want to focus on the coins inscribed with city-ethnic or toponym. For the sake of argument, let us disregard the few anepigraphic coins as well as those inscribed with a regional ethnic only or the name of a ruler or a divinity. We are then left with 424 mints that struck coins with a city-ethnic and/or a toponym denoting an urban centre. Of these, 261 are mints

⁵ Anaphe (no. 474), Andros (no. 475); Aphrodisias (no. 1005), Eion (no. 631), Hyampolis (no. 182), Kythnos (no. 501), Phasis (no. 711), Seriphos (no. 517). Note that 4 of the 8 are Kykladic islands.

⁶ Akragas (no. 9), Katane (no. 30), Selinous (no. 44), Tyndaris (no. 49), Zankle/Messana (no. 51), Kyme (no. 57), Metapontion (no. 61), Neapolis (no. 63), Pandosia (no. 64), Pyxous (no. 67), Taras (no. 71), Zakynthos (no. 141), Imbros (no. 483), Kos (no. 497), Aineia (no. 557), Dikaia (no. 568), Dikaia (no. 643), Herakleia (no. 715), Kromna (no. 723), Iolla (no. 812), Gortyns (no. 960). It is worth noting that almost all are colonies and that there is a heavy concentration in Sicily and Italy.

⁷ Dikaia (no. 643) and Herakleia (no. 715).

⁸ Pyxous (no. 67) is retrospectively classified as a *polis* by Diodoros; Kromna (no. 723) for which the city-ethnic is attested in a C4m treaty between Sinope and Herakleia which the Krommitans are allowed to join if they so wish.

⁹ Cf., by contrast, the coins issued by Naulochon (no. 857), the port of Priene.

¹⁰ Pace Gauthier (1975) 166, who argues that a toponym would denote the town, not the state. For the use of a toponym to denote the political community, see 56 *supra*.

¹¹ Nikonion in the Pontic region (no. 688) and 5 *poleis* on Kypros: Amathous (no. 1012), Idalion (no. 1013), Lapethos (no. 1017), Salamis (no. 1020), and Soloi (no. 1021).

¹² Apollonia (no. 77) and Issa (no. 81), both explicitly attested as *poleis* in other sources.

of communities which are explicitly attested as *poleis* in other sources (*poleis* type A). A further 122 are not called *poleis* in our sources, but they are communities for which we have other evidence indicating that they were in fact *poleis* (*poleis* type [A]B and B). The presumption is that the remaining thirty-seven were *poleis* for which coins are the principal or the only evidence of *polis* status (*poleis* type C).¹³ In none of these thirty-seven cases is there any evidence indicating that they were *not poleis*.

To conclude: coins are an extremely valuable type of evidence whenever the problem is to distinguish *poleis* from *demoi* or *komai* or *phylai* or other types of civic subdivision. The problem with the numismatic evidence is how to distinguish *polis* issues from issues struck by communities above *polis* level: *ethne*, federations, kings and tyrants ruling a plurality of *poleis*, etc. Here, however, the distinction between regional ethnics and city-ethnics offers an almost infallible guide-line, if we restrict the investigation to coins with city-ethnics. All such coins seem to have been struck by *poleis*.

To strike coins inscribed with city-ethnics was a sign of *polis* status, but not of independence. *Poleis* which were members of a federation could have a mint alongside the federal mint;¹⁴ or coins were struck whose legends combined the regional ethnic, signifying the federation, with an abbreviated form of the city-ethnic, signifying the *polis* in question.¹⁵ Dependent members of a hegemonic league struck coins in the name of their *polis*.¹⁶ Corinthian colonies, though still dependent on their *metropolis*, struck staters combining the Corinthian Pegasos with a legend signifying the colony.¹⁷ Some Athenian klerouchies had a mint.¹⁸ Many *poleis* subjected to the king of Persia issued their own coins.¹⁹ Even though Philip II came to rule

Thessaly in 344/3, he did not suppress the civic coinage of Larisa.²⁰ The Athenian coinage decree of C55 is the only known case in which a hegemonic *polis* interfered with the right of its dependent *poleis* to strike coins.

A different problem to be taken into account is that coins struck by a *polis* were not necessarily struck by a Hellenic *polis*. Many barbarian communities learnt to strike coins from the Greeks, they imitated the Greek types, and might also provide their coins with Greek legends.²¹ This legend was one sign of Hellenisation, but if it is the only information we have, it is a moot point whether such communities deserve to be included among the Hellenic *poleis*. In Sicily, for example, there was a rapid Hellenisation of indigenous communities in C45 in the wake of Timoleon's campaigns, and for many communities, coins with Greek types and legends are the best evidence we have; see n. 13 *supra*.

How many of the Hellenic *poleis* struck coins in the Archaic and/or Classical periods? Of all the 1,035 *poleis* included in this Inventory, a mint is attested for no more than 444, i.e. for fewer than half the *poleis* we know of. But, as usual, our sources are poor. It is, we think, an educated guess that the present survival rate of ancient Greek coins is less than one in a thousand and perhaps no more than one in tens of thousand,²² and of these fewer than half, we guess, have been published. Numerous mints are attested by a handful of coins only.²³ Sometimes a *polis* mint was in operation for a short time and had a fairly small output, which indicates that scores of mints, especially small mints, are probably unattested in the available material. Conversely, we have coins struck by unidentified communities, many of them probably *poleis*, which have left no other evidence of their existence.²⁴ There can be little doubt that the list

²⁰ Martin (1985) 41–59, esp. 54.

²¹ Barbarian *poleis* that struck Greek coins include, e.g., Solous in Sicily (Head, *HN*² 170), Damastion in Illyria (Head, *HN*² 318), Selge in Pamphylia and Tarsos in Kilikia; see *infra* 1213–14. The Lykian towns struck coins with Greek types but indigenous legends, see *infra* 1139.

²² Of the Athenian gold coins struck in 407 less than 1 in 3,000 are known today (Kraay (1976) 68–69). Of the staters, drachms and hemidrachms struck in Delphi in C4m by the Amphiktyonic League c.1 in 10,000 are known today (Kinns (1983)).

²³ Mints attested by 1, 2 or 3 preserved coins include Alopekonnesos (no. 659), Dion (no. 569), Euromos (no. 885), Galepsos (no. 631), Imachara (no. 26), Kytaiion (no. 969), Larymna (no. 383), Nisyros (no. 508), Palairos (no. 131), Phagres (no. 636), Phytaioi (no. 1035), Posideion (no. 1022), Skapsai (no. 608), Trachis (no. 432).

²⁴ In this context a few examples will suffice: from southern Italy we have several unidentified issues of C61: incuse coins inscribed *AMI* (Rutter *HN*³ 1356–7), some rare coins inscribed *ΣΟ* (Rutter *HN*³ 1728), and three pieces inscribed *ΙΑΑΙ* or *ΜΟΑ* (Rutter *HN*³ 1105–6). Among the Boiotian coins of C4f, all with the Boiotian shield on the obverse, most can be assigned to well-known Boiotian *poleis*, but some have legends which do not fit any of the Boiotian communities we know of, viz. *ΔΙ* or *ΑΟ/ΑΩ* or *ΗΙ* (Head (1881) 57–

¹³ The majority of these are border communities in which the striking of coins in C4 is the first clear sign of Hellenisation. There are 17 such *poleis* type C in Sicily and 6 in Aiolis. Those in Sicily are: Akrai (no. 10), Alontion (no. 12), Galaria (no. 16), Herbessos (no. 22), Hippana (no. 25), Imachara (no. 26), Kentoripe (no. 31), Kephaloïdion (no. 32), Longane (no. 35), Morgantina (no. 37), Mytistratos (no. 39), Nakone (no. 40), Petra (no. 42), Piakos (no. 43), Sileraioi (no. 45), Stielanaioi (no. 46), Tyrrhenoi (no. 50). Those in Aiolis are Boione (no. 805), Chalkis (no. 806), Gambriion (no. 808), Iolla (no. 812), Perperene (no. 829), Tisna (no. 835).

¹⁴ e.g. Haliartos (no. 206); cf. Hansen (1995) 63, additional note.

¹⁵ Coins of the Phokian *poleis* Antikyra (no. 173), Elateia (no. 180), Ledon (no. 184) and Lilaia (no. 185) (Head *HN*² 339).

¹⁶ In the Classical period East Lokris was presumably a hegemonic league dominated by Opous (no. 386) (Nielsen (2000) 118–19). But coins were struck by at least 2 and probably 3 of the dependent members: Larymna (no. 383), Skarpehia (no. 387), and Thronion (no. 388).

¹⁷ Head, *HN*² 406–7.

¹⁸ Myrina (no. 502) and Hephaistia (no. 503) on Lemnos, Imbros (no. 483) and Salamis (no. 363); cf. Martin (1995) 272–3.

¹⁹ Cf. all the C4 mints attested in Troas, Aiolis, Ionia and Karia.

of Archaic and Classical *poleis* with a mint will grow in the future, partly by the discovery of new coins and partly by a careful inspection of the thousands of catalogues of coin auctions in which one can find information about a seven-digit number of ancient Greek coins in unpublished private collections.²⁵

Even if it can be presumed that full sources would provide us with evidence of another three-digit number of *polis* mints, there can be no denying that far from all *poleis* had a mint. Sometimes two *poleis* shared a mint,²⁶ and often a

58). From the Pontic regions are some rare silver and bronze coins of C₅–C₄ with the legend *TAM* (*infra* 930). There are the staters with 3 dolphins and the legend *ITIOΣ* once assigned to Karpathos but now left without identification (Cahn 1957); and the anepigraphic coins with warrior (*obv.*) and lyre (*rev.*), once assigned to Kalymna, have suffered the same fate (Wartenberg 1998). From Asia Minor there are C₆–C₅ lion staters inscribed *OYA* (Head, *HN*² 585), and bronze coins with Apollo on both sides and the *rev.* legend *ΣKA* (Head, *HN*² 548; *infra* 1002), etc. In all probability many of the unidentified coins were struck by Greek *poleis* which, so far, have left no other trace of their existence but would have been recorded in our inventory if we had had better sources.

²⁵ Of the coins struck by the Roman emperor Pescennius Niger (193–94 AD) some 1,100 are known today. C.250 are in museums and published private collections, but no fewer than 850 other coins have been found and identified by inspection of numismatic auction catalogues, of which the Fitzwilliam Museum in Cambridge now possesses a spectacular collection of over 32,000 items (information provided by T. V. Buttrey).

²⁶ Adranon and Piakos (nos. 6 and 43), Leontinoi and Katane (nos. 33 and 30), Lipara and Mytistratos (nos. 34 and 39), Kyme and Neapolis (57 and 63), Siris and Pyxous (nos. 69 and 67), Lamia and Trachis? (nos. 431 and 432), Lampsakos and Ilion (nos. 748 and 779), Mytilene and Phokaia (nos. 798 and 859), Gortyns and Phaistos (nos. 960 and 980), Kyrene and Euesperides (nos. 1028 and 1026), Barke and Taucheira (nos. 1025 and 1029).

polis was satisfied with using the coins struck by its neighbours.²⁷ To have a mint was not a *sine qua non* for being a *polis*, but it was nevertheless one of the activities typically performed by a *polis*. When discussing the evidence we have for establishing *polis* status, it is illuminating to juxtapose coins and walls: far from all *poleis* struck coins, but to have a mint is a good indication of *polis* status. Not every *polis* had a defence circuit, but to have one is an indication of *polis* status. The evidence of the coins enables us to separate *poleis* from civic subdivisions which never had a mint. On the other hand, coins were also struck by tribal communities and by organisations comprising a number of *poleis*, or a number of citizens from different *poleis*, and it requires a careful analysis to distinguish between coins struck by *poleis* and coins struck by larger units. The evidence of defence circuits enables us to separate *poleis* (which had an urban centre) from tribal communities and larger organisations such as federations and leagues. On the other hand, many second-order settlements had defence circuits, and it requires a careful analysis to distinguish between walls surrounding a *polis* and walls surrounding smaller units such as villages or harbours.

²⁷ Cf. *IG* XII 7.67.55: Arkesine uses coins struck by Athens or Alexander. See Martin (1995) 277.

Colonies and Indigenous Hellenised Communities

Most accounts of the history of Greece in the Archaic period highlight an opposition between self-grown *poleis* in Hellas (or Greece) as against emigrant polities founded outside Hellas and mostly in the Archaic period c.750–500.¹ Most of the colonies, called *apoikiai*,² were independent *poleis*; some were just trading stations (*emporía*). This picture of the Greek world is not wrong, but it is not true either. It is much too clear-cut in the distinctions on which it is based. Explicitly or implicitly it is taken for granted (1) that Hellas covered Mainland Greece, the adjacent islands and the west coast of Asia Minor, to the exclusion of all regions north and west of Akarnania as well as north-east and south-east of the Aegean Sea; (2) that all the Hellenic *poleis* outside this “Hellas” were emigrant communities; (3) that they were founded by *metropoleis* situated inside “Hellas”; (4) that emigrant *poleis* were invariably placed outside “Hellas”; (5) that colonisation abated c.500, perhaps even earlier,³ and did not gather momentum again until the colonisation of the Near East initiated by Alexander the Great; and (6) that colonies were of two types: *apoikiai*, which were independent *poleis*, and *emporía*, which were not *poleis*. All six propositions need modification.

Re (1) It is a qualified truth that Hellas was confined to Mainland Greece, the adjacent islands and the west coast of Asia Minor. We are not here going to trace, once again, the origin of the concept of Hellas; I prefer to investigate what Hellas covered in the Classical period.⁴ At first one is struck by the number of apparent contradictions in our sources. Sicily is sometimes distinguished from Hellas (Theopomp. fr. 193) but sometimes seen as a remote part of Hellas (Pind. *Pyth.* 1.75 with scholia; Eur. *Cyc.* 297–98). Epeiros is outside

Hellas according to Thucydides (2.805) and Ephoros (fr. 143), but the region around Dodone and the river Acheoos is called “old Hellas” by Aristotle (*Mete.* 352^a34) and was considered to be part of Hellas by Herodotos (2.56).⁵ In the King’s Peace of 386 (Xen. *Hell.* 5.1.31) the *poleis* in Asia given to the king are opposed to the Hellenic *poleis* (*πόλεις Ἑλληνίδες*) which, in a paraphrase of the Peace (Xen. *Hell.* 6.3.12), are called the *poleis* in Hellas; yet, in the same work Agesilaos is quoted for juxtaposing the *poleis* in Asia with the *poleis* in *his own part* of Hellas (Xen. *Hell.* 3.4.5). Herodotos describes Xerxes’ invasion of Greece as the campaign “through Europe against Hellas” (7.8β) or “through Thrace against Hellas” (7.105). So Xerxes had to march through all of Thrace before he reached Hellas; but according to Xenophon, a growing problem in Hellas was Olynthos, the largest *polis* along the coast of Thrace (Xen. *Hell.* 5.2.12).

In our opinion the clue to the contradictions can be found in the *C4 periplous* ascribed to Ps.-Skylax. This treatise is organised into three main sections: Europe (1–69), Asia (70–106) and Libya (107–112). Europe is subdivided into three parts: the regions west of Hellas (1–33), Hellas (34–65), the regions north and east of Hellas (66–68), plus a summary in 69. Now, the subdivision of Europe is not just into three parts with Hellas covering the central part. In the Chapter about Ambrakia (33) Ps.-Skylax says that from this point Hellas begins to be “continuous” (*συνεχής*) until the Magnesian *polis* Homolion; and in 65 Ps.-Skylax ends his account of Magnesia with the note that Hellas is “continuous” from Ambrakia until this point. Thus, it is not Hellas, but, strictly speaking, the “continuous” part of Hellas that covers the regions from Ambrakia to Homolion. It follows that from the Pillars of Herakles to Epeiros and from Makedonia back the Pillars of Herakles, the coasts of the Mediterranean and the Pontic Sea were dotted with *poleis*, each of them part of Hellas, but separated by land settled with barbarians. In Ps.-Skylax such a *polis* is called a *polis Hellenis*, but in other sources it can be called a *polis Hellas* (Hdt. 7.22.3; Thuc. 6.62.2), a strong indication that it was part of Hellas. So, according to this view, *all* Hellenic

¹ Graham (1982) 83; cf. (1964) 1–8; Bengtson (1977) 91–93; Baurain (1997) 269–86; Osborne (1996) 119–27; Orrioux and Schmitt-Pantel (1999) 42–66; Eder (1999) 653–64.

² “Emigrant community” would be a better rendering of *apoikia* than “colony” (criticised by Osborne (1999) 252). But the traditional rendering “colony” is acceptable if we avoid all comparisons with the Roman *colonia* and use “colony” in its modern sense of “a country or an area settled and controlled by people from another country, sometimes by force” (*Oxford Advanced Learner’s Dictionary of Current English* (1995) s.v.).

³ C.600: Orrioux and Schmitt-Pantel (1999) 45. C.580: Murray (1993) 102; Ridgway (1996) 363. C.550: Bengtson (1977) 91.

⁴ For the origin, see Hall (2002) 129–34. For the extent, see Hall (1989) 165–72: “The Boundaries of Hellas”.

⁵ See 7 *supra* and Malkin (2001).

poleis were situated in Hellas: wherever there was a Hellenic *polis*, it was Hellas.⁶ Thus, all the Greek colonies were part of Hellas, but surrounded by “barbarian” regions which were not part of Hellas.⁷ Admittedly the traditional view of a fairly clear division between self-grown *poleis* in Hellas and colonies outside Hellas may be supported by a passage in Thucydides: After the Trojan War, he says (1.12.4), Hellas enjoyed peace and established colonies (*apoikiai*), the Athenians to Ionia and the islands, the Peloponnesians to Sicily, Italy and some places in Hellas. The presumption is that Sicily, Italy, Ionia and the islands were outside Hellas at the beginning of what we call the Dark Ages, but Thucydides’ description of the colonisation is also compatible with the view found in Ps.-Skylax: that, by the colonisation, Hellas was extended to comprise all the Hellenic communities wherever they were but, of course, not the areas between the Hellenic communities.

On this interpretation, it is not a contradiction to hold that Sane in Thrace was a *polis Hellas* (Hdt. 7.22.3), i.e. a part of Hellas, while Thrace was outside Hellas (Hdt. 7.8β), an interpretation supported by numerous other sources.

Herodotos twice lists votive offerings set up in Hellas, some by Kroisos (1.92.1–2) and some by Amasis (2.182.1). Those dedicated by Kroisos are found in Thebes, Ephesos, Delphi and Branchidai in the territory of Miletos. Those set up by Amasis are found in Kyrene, Lindos and Samos.

When the 10,000 were encamped at Kalpe on their way to Byzantion, Xenophon tells them that they are “at the gates of Hellas” (Xen. An. 6.5.23: ἐπὶ ταῖς θύραις τῆς Ἑλλάδος ἐσμέν), and, similarly, Kallisthenes described (stinking) Byzantion as the “the arm-pit of Hellas” (FGrHist 124 fr. 5.13: ἐκάλει . . . τὸ Βυζάντιον μασχάλην τῆς Ἑλλάδος). So, Byzantion was part of Hellas; but, like Thrace, the Propontic region and Troas as such were outside Hellas, cf. Hdt. 9.114.2 where a squadron is said to sail from Abydos towards Hellas.

In his Olympian speech of 388 Lysias complains that Hellas is in a disgraceful state because some parts are under the barbarian—i.e. the Asian *poleis* ruled by the king of Persia—while other *poleis* have been uprooted by tyrants—i.e. by Dionysios I of Syracuse.⁸ In this speech the *poleis* in Asia, Sicily and Italy are subsumed under Hellas.

To conclude, it serves no purpose to distinguish between colonising *poleis* in Hellas and colonies outside Hellas, but, for the sake of argument, we shall in the following sections refer to the modern and widely accepted concept of a “Hellas”, or “Greece”, which stretched from Akarnania to Thessaly and included the adjacent islands and the west coast of Asia Minor (Eder (1999) 654). In English this “Hellas” is often called “the Greek heartland” or “the Greek Homeland” (Snodgrass (1980) 41), as opposed to *apoikia* which actually means “a settlement far from home” (Hammond (1959) 112; cf. Osborne (1996) 119). In German it is often called *das Mutterland* (Bengtson (1977) 91; Schuller (2002) 117), suggesting a link to *metropolis*. We shall refer to it as “Hellas”.

Re (2) Not every Hellenic *polis* outside “Hellas” was a colony settled with a contingent of immigrants sent out by a *metropolis*. Some colonies were the result of a private initiative,⁹ and sometimes the colonists may have come in a trickle and not as a contingent.¹⁰ Even more important is the fact that many settlements were indigenous communities which became Hellenised by acculturation. Such settlements were neither founded by Greek settlers nor conquered and taken over by Greeks. They became Hellenised over a long period through immigration of individual Greek settlers and through regular interaction with neighbouring Hellenic communities. One aspect of their Hellenisation was to be equipped with an invented Greek foundation story or myth to make them more like the proper Greek colonies in the region. The distinction between colonies and Hellenised polities is apparent from numerous sources. Describing the six *poleis* on Athos, Thucydides tells us that Sane was a colony of Andros, whereas the five others were *poleis* inhabited by “bilingual barbarians” with different ethnic backgrounds mixed with a few Chalkidians; i.e. the majority of the population were barbarians who spoke Greek and their own native tongue (Thuc. 4.109.3–4).¹¹ Again, in his account of Kimon’s campaign in Karia, Ephoros distinguishes between two types of *poleis* lying along the coast: some were colonised from Hellas and some

⁹ Graham (1964) 7–8; (1982) 143. Osborne (1999) wants to describe private enterprise as the regular procedure in the early period, by contrast with the Classical period when colonists were sent out by the *polis*. But the evidence for the earliest colonies is thin and, e.g., the Corinthian colonies founded in C7 were certainly public ventures, initiated by the Kypselid tyrants.

¹⁰ The colony usually mentioned in this context is Pithekoussai (Ridgway (1992) 108; Osborne (1999) 257–59), which, however, seems to have been a regular *apoikia* (no. 65 *infra*), cf. Graham (1997).

¹¹ The tradition that Kleonai in Athos was colonised by Chalkidians (Heraclid. Lemb. 62) carries no weight against Thucydides’ explicit account: see no. 580 *infra*. It cannot be precluded that Herakleides mixed up Chalkidians from Sithone with Chalkidians from Chalkis on Euboa.

⁶ Cf., however, Herakleides Kretikos, who says (3.6), without any qualification, that Hellas stretches from the Peloponnese to Homolion in Magnesia.

⁷ Gorgias fr. 11a; Hellan. fr. 4; Eur. Med. 536; Hipp. Ep. 25; Lys. 2.25; Pl. Phd. 78A; Dem. 9.27.

⁸ Lys. 33.3: ὁρῶν οὕτως αἰσχρῶς διακεκμημένην τὴν Ἑλλάδα καὶ πολλὰ μὲν αὐτῆς ὄντα ὑπὸ τῶν βαρβάρων πολλὰς δὲ πόλεις ὑπὸ τυράννων ἀναστάτους γεγεννημένας (cf. 5).

were bilingual *poleis* garrisoned by the Persians (fr. 191 = *P Oxy.* 1610, cf. *Diod.* 11.60.4). This Inventory comprises 129 Hellenised communities as against 279 colonies. There is a small overlap. Tauromenion, for example, was a partly Hellenised community which in 392 was colonised by Syracuse. In eighty-two cases our sources do not allow us to decide whether a *polis* was a colony or an indigenous Hellenised community.¹² Such communities were particularly common in Italy, in Sicily (Fischer-Hansen (2002)) and especially in Karia, where there were a few scattered Greek colonies of which only Halikarnassos and Knidos can be traced today, as against some sixty other polities of which the great majority must have been indigenous Hellenised *poleis*.

Re (3) Many of the major Hellenic colonies were indeed founded by mother cities situated in “Hellas” as described in (1) above, but others were founded by the colonies themselves, a phenomenon called secondary colonisation (see Index 27). In some cases even tertiary colonisation is attested. Melaina Korkyra, for example, was refounded in C4l by Issa, itself a colony founded in C4f by Syracuse, itself a colony founded by Corinth in 733. In overviews of Greek colonisation, secondary colonisation is often mentioned in passing, but hardly ever discussed as an essential element of colonisation, and the ubiquitous distinction between colony and mother city does not always take into account that the colony becomes a *metropolis* when secondary colonies are founded. According to Ridgway (1996) 362 the major *metropoleis* in the Archaic period were Chalkis, Corinth, Eretria, Megara, Miletos and Phokaia. Eder (1999) 654 has a list of twenty major colonisers, all of them in “Hellas”. Why are Massalia, Sinope, Syracuse and Thasos not mentioned as well?¹³ Secondary colonisation was particularly important in Sicily, Italy, Illyria and Libya, where colonies founded by colonies outnumber colonies founded by *poleis* in “Hellas”.

Re (4) It is true that most colonies were founded outside “Hellas”, but it must not be forgotten that quite a few colonies were placed in “Hellas”. Out of altogether 279 colonies, fifty were situated in “Hellas”. What then is the difference between a colony and a synoecised *polis* such

as Megalopolis? Well, the founding of Megalopolis was in some respects treated like an act of colonisation, e.g. by having oikists, and the most conspicuous difference seems to be that a synoecised *polis* was created by immigration from neighbouring communities, whereas a colony was settled with people who had travelled a long way to reach their destination; cf. the Corinthian colonies in Akarnania or Herakleia Trachinia in Malis. Again, there is a close connection between the refoundation of a colony outside “Hellas” and the refoundation of a *polis* in Hellas which had been annihilated by an *andrapodismos* and a destruction of the urban centre but was resettled sometimes immediately after the disaster, sometimes later.

Re (5) The colonisation during the Classical period is mostly underestimated, but perhaps for obvious reasons.¹⁴ Colonisation is always treated in the chapters about Archaic history, and there one may find a short mention of colonisation during the Classical period as well (Graham (1982) 83), but since colonisation was not as prominent an aspect of Greek history between the Persian War and Alexander the Great, it is often passed over in silence in the relevant chapters. Yet, it appears that, including Athenian klerouchies, no fewer than seventy-two colonies were either founded or refounded in C5 and C4f, and it is also worth noting that the big *metropoleis* in this period were no longer Chalkis or Corinth or Miletos, but Syracuse (with sixteen colonies) and Athens (with twenty-one colonies, including a number of short-term klerouchies and colonies).

Re (6) All the evidence we have supports the view that the Greek settlements abroad were *poleis*. Out of 279 colonies founded by the Greeks and recorded in this inventory, 197 are explicitly attested as *poleis* in Archaic and/or Classical sources (type A), twenty-five are recorded under the heading *polis* (type [A]), thirty-two were probably *poleis* (type B), and twenty-five may well have been *poleis* but the evidence is slight (type C). Conversely, John Graham’s list of 139 colonies founded between 800 and 500 includes only four which are not recorded as *poleis* in this Inventory.¹⁵ The most recent list of “Greek settlements abroad” is that of Robin Osborne, which covers the entire period from the beginning of the Dark Age to the end of the Classical

¹² The decision whether a given *polis* was a colony or a Hellenised indigenous community depends on the interpretation of our sources, both archaeological and literary. Is the presence of large amounts of Greek painted pottery an indication of trade or colonisation? Is an entry in Eusebios’ chronicle or a Hellenistic foundation myth sufficient evidence of colonisation? Each individual case must be judged by itself, and here we follow the decisions made by the authors of the chapters.

¹³ Thasos is treated as both a colony and a *metropolis* by Graham (1964) 81.

¹⁴ *OCD*³ 362–63 has articles about colonisation in the Archaic and in the Hellenistic period, but none about the Classical period.

¹⁵ Graham (1982) 160–62: (1) Agathe, a secondary colony founded by Massalia. It may have been a *polis* founded as a fortification, but evidence for *polis* status is too late to allow inclusion in this Inventory of *poleis* (*infra* 159). (2) Apollonia, the harbour of Kyrene, which became a *polis* only in C1 (*infra* 1236). (3) Dikaiarchia, the harbour of Kyme in Italy, a Samian foundation of C6s. Again, the evidence for *polis* status is too late to allow inclusion (*infra* 256). (4) Tanais, a Hellenistic foundation of C3 (Bredow (2002)).

period.¹⁶ Again, almost all the settlements listed by him are included in this Inventory as *poleis* types A, [A] B or C.¹⁷ The inference is that, with very few possible exceptions, every colony was founded as a *polis* or developed into a *polis* not long after its foundation.¹⁸ Furthermore, there is no basis in

¹⁶ Osborne (1996) 121–25. His list therefore includes 13 settlements in Aiolis, Ionia and on Cyprus founded before 800, as well as 15 settlements founded after 500. Osborne omits a number of colonies listed by Graham, e.g. Adra, Ainos, Alopekonnosos, Argilos, Assa, Bisanthe, etc., but includes a few others presumably founded in the period c.800–500 but, for various reasons, not mentioned by Graham (Amorgos, Astypalaia, Dioskourias, Euboia, Kallatis, Kydonia, Leros, Side and Thera). Thus, Graham does not believe the tradition that Thera was a Spartan colony.

¹⁷ Note the following divergencies between Osborne's list (1996) 121–25 and the present Inventory of *poleis*: (1) Amastris emerged by a synoecism in C_{3e}, i.e. after the end of the Classical period (*infra* 926). (2) Gryneion is not attested as a colony of Myrina. (3) Hyria may perhaps have been founded by some shipwrecked Cretan sailors but was a Lapygian and not a Hellenic *polis* (Hdt. 7.170.2–3). (4) Nikaia, originally a Tyrrhenian colony, was refounded by Massalia c.260 rather than in C₄ (*infra* 160). (5) Parthenope, the harbour of Kyme, may have been an early *polis*, but the evidence is too slight to allow inclusion, and it is here listed among the non-*polis* settlements (*infra* 257). (6) Prusias was a Hellenistic settlement, and there is no good evidence that it was a C_{7s} colony of Miletos (*infra* 929). (7) Satyrion is here treated under Taras (*infra* 299). (8) We do not know of any Milesian colony called Patraios.

¹⁸ Colonies whose *polis* status has sometimes been questioned, in our opinion erroneously, are Eion (no. 630), Kasmenai (no. 29), Mylai (no. 38), Naukratis (no. 1023), Phasis (no. 711), Pithekoussai (no. 65) and Stryme (no. 650). They are all attested as *poleis* in Classical sources; see Hansen (2000) 197–200. Akrai (no. 10, type C) remains a problem, but is clearly treated by Thucydides (6.5.2) as a colony of the same status as Kamarina, which was demonstrably a *polis*.

the sources for the traditional distinction between *apoikiai* which were *poleis* and *emporía* which were not. Almost all, perhaps even all, the communities of the Archaic and Classical periods which are described as *emporía* in the sources are attested as *poleis* as well (Hansen (2004)).

On the other hand, the almost universal claim that the colonial *poleis* were independent must be modified (Hansen (1997) 32–34). It is well known that the Athenian *klerouchies* and colonies remained dependencies of Athens (Graham (1964) 166–210), but many of the the Corinthian colonies were dependent *poleis* too (Graham (1964) 118–53), and there is ample evidence of close political bonds between Miletos and its colonies (Graham (1964) 98–117). In C₅–C₄ Syracuse created a small city-state empire and, for most of the period, the majority of the Greek colonies in Sicily and several in Italy and in the Adriatic were dependent *poleis* dominated by Syracuse. In the Pontic region numerous *poleis* became part of the Bosporean kingdom and dependent on Pantikapaion, in particular Hermonassa, Kepoi, Kimmerikon, Kytaia, Myrmekeion, Nymphaion, Sindike, Theodosia and Tyritake. Similarly, Sinope is known to have ruled its colonies as dependent *poleis*; cf. entries for Kerasous, Kotyora and Trapezous, and Amisos was another dependency of Sinope although not a colony of that city.

PART 2

Inventory of *poleis*

The composition of this inventory began in 1993. By 1998 most of the 46 chapters had been submitted, while a few arrived as recently as Spring 2003. Most chapters were completed in the period 2000–2002, but some are revised and updated versions of text submitted before the turn of the Millennium. In all chapters literature published in 2003 and 2004 has been taken into account only sporadically.

This page intentionally left blank

SPAIN AND FRANCE (INCLUDING CORSICA)

ADOLFO J. DOMÍNGUEZ

I. The Region

The region under consideration here is made up of at least three different areas, partially recognised as such in antiquity: Iberia, Southern Gaul and the island of Corsica. The only common elements characterising these different areas are colonisation by Phokaia (no. 859) and the fact that both Iberia and southern Gaul were, at least to some extent, within the area dominated commercially and possibly politically by Massalia (no. 3). Moreover, these areas mark the westernmost limit of the Greek presence in the Mediterranean.¹ Although Greek contacts with Tartessos in Iberia are attested for C7l by Herodotos' mention of Kolaios' voyage (4.152.2) and for C7l/C6e by his mention of Phokaian travellers (1.163.1), Greek *poleis* do not seem to have existed in Tartessian territory, despite the offer made by the native king, Arganthonios, to the Phokaians, that they could establish themselves in his territory wherever they wished (Hdt. 1.163.3).

In spite of such contacts and despite the existence of strong commercial links with the Iberian world, the presence of Greek *poleis* in Iberia is limited to its north-eastern end; it was in Gaul that Massalia (no. 3), the most important Greek *polis* of the area, was founded. Massalia ended up controlling—economically and perhaps also politically—all the western world colonised by Phokaia; moreover, Massalia made a series of foundations, some of which may possibly have been *poleis*, although for the most part they were presumably merely “fortress-colonies”.

In Corsica the situation is different, because only a single Greek foundation is attested there, Alalie (no. 1), a city that was clearly independent of Massalia; it did not, however, survive the events of c.540 (*infra*).

1. Corsica (Kyrnos)

The island of Corsica, Kyrnos (Κύρνος, ἥ) in Greek (Hdt. 1.166.3; Diod. 5.13.3; Strabo 5.2.7), is only rarely mentioned by ancient authors. Strabo 5.2.7 gives its measurements² and stresses the uncivilised nature of its inhabitants,³ but he provides hardly any information about the history of the island, though he does offer an interesting account of the foundation of Elea: when the Phokaians left their city, they sailed first to Corsica and Massalia under the direction of one Kreontiades and, rejected in both places, they founded Elea.⁴

Diodorus alludes to the good harbours of the island and mentions the two most important (ἀξιόλογοι) cities, Kalaris and Nikaia (Diod. 5.13.3 = Timaios (FGrHist 566) fr. 164). In the case of Kalaris, Diodorus has clearly misunderstood it as the name of the Phokaian foundation, Alalie (no. 1); his information undoubtedly concerned Alalie: he affirms that it was a Phokaian foundation and that the Phokaians were expelled from the island by the Tyrrhenians not long after they had settled there.⁵ This mistake may possibly be explained by a confusion between Alalie (falsely rendered as Kalaris, perhaps due to a certain phonetic resemblance to the Etruscan and Roman name of the city, Aleria) and the Phoenician city of Karalis (today Cagliari) in Sardinia.

The other important city was Nikaia; according to Timaios ((FGrHist 566) fr. 164), it was a foundation of the Tyrrhenians, planted when they were masters of the sea (θαλαττοκρατοῦντες) and had conquered all the islands along the Tyrrhenian coast;⁶ however, Clerc (1927) 258

² 160 miles in length and 70 miles in width; the perimeter is given as 3,000 stades.

³ ἀγρωτέρους εἶναι θηρίων.

⁴ Strabo 6.1.1: πλεῖσται πρῶτον εἰς Κύρνον καὶ Μασσαλίαν μετὰ Κρεοντιάδου, ἀποκρουσθέντας δὲ τὴν Ἑλέαν κτίσαι.

⁵ Diod. 5.13.3–4: τούτων δὲ τὴν μὲν Κάλαρν Φωκαεῖς ἔκτισαν, καὶ χρόνον τιὰ κατοικήσαντες ὑπὸ Τυρρηγῶν ἐξεβλήθησαν ἐκ τῆς νήσου.

⁶ On these islands, see Plin. HN 3.81.

¹ Cf. Ps.-Skymnos 149–50 on Mainake: αὕτη πρὸς Εὐρώπῃν δὲ τῶν Ἑλληνίδων πόλεων ἀπασῶν ἐσχάτην ἔχει θέσιν.

defends the Greek identity of Nikaia on the basis of its name, though others have suggested that the city may have been founded as a result of the Etruscan and Punic defeat of the Greeks in the battle of Alalie. In any case, it has not been located, and its presumed relationship to Alalie remains to be proved (Gras (1993)).

The best and most abundant information on the foundation of a Greek *polis* in Corsica is given by Herodotos in the account of the foundation of Alalie (no. 1; Hdt. 1.165–66). As far as we know, Alalie was the only Greek *polis* on the island; in time, it became an Etruscan city, conquered later by the Carthaginians and finally by the Romans (L. Cornelius Scipio: *CIL* 2.32); in 81, Sulla established a military colony at Aleria (Plin. *HN* 3.80.6; cf. Pompon. 2.122).

2. The Mediterranean Coast of France (Iberia and Ligystike)

This region consists of territory that in antiquity was called by at least two different names: Iberia (*Ἰβηρία*, Thuc. 6.2.2) and Liguria (*Λιγυστική*, Arist. *Mete.* 351^a16). According to Avienus' *Ora maritima* 612–14—probably one of the oldest surviving sources—the river Oranus (Hérault) divided Iberia from Liguria.⁷ The fragments of Hekataios do not distinguish sharply between Iberia and Liguria, although one may have described the Misgetes as an *ethnos* of Iberia,⁸ while another possibly considered the Elisykes to be a Ligurian *ethnos*.⁹ However, at Hdt. 7.165 the Elisykes are distinguished from both the Iberians and the Ligurians. Hekataios may have placed Massalia in Liguria.¹⁰

In a fragmentary reference to Aischylos, Pliny states that this poet placed the river Rhône in Iberia (*HN* 37.32 = Aesch. fr. 73a, Radt); however, Ps.-Skylax 3 seems to think of the region from Emporion (no. 2) to the river Rhône as territory occupied by intermingled Iberians and Ligurians: ἀπὸ δὲ Ἰβήρων ἔχονται Λίγυες καὶ Ἰβήρες μυγάδες μέχρι ποταμοῦ Ῥοδανοῦ. The text may imply not so much ethnic mixture as the co-existence of these two

ethnic groups in a territory which would comprise, more or less, modern Languedoc (Gailledrat (1997) 34).¹¹ East of the Rhône, Ps.-Skylax 4 mentions only the Ligurians: ἀπὸ Ῥοδανοῦ ποταμοῦ ἔχονται Λίγυες. The picture provided by Ps.-Skymnos is different: above (ἐπάνω) the Iberians he places the Bebrykes (200–1); below (κάτω) the *parathalatioi* Ligurians he then places the Greek cities founded by Massalia, from Emporion to Antipolis (201–16). Massalia itself he places in Liguria (211).

Strabo 3.4.19 points out that while earlier authors—he relies partially on information originating from Aischylos—placed the boundaries of Iberia beyond (ἐξέω) the Rhône, i.e. on its western bank, in his own day the boundaries were placed in the Pyrenees; this information seems to come from Artemidoros (cf. Steph. Byz. 324.2–6 and Gallazzi and Kramer (1998) 196–97).

It seems, then, that in the Archaic and early Classical periods the Greeks had imprecise and ill-defined notions about the borders between Iberia and Liguria: they ran somewhere between the rivers Hérault and Rhône. On their arrival the Celts seem to have pushed the Ligurians to the east and to have replaced them in the southern regions of France or even to have created situations in which peoples of different ethnicities co-existed, especially in the eastern part of this region (Celto-Ligurians: Arist. *Mir. ausc.* 837^a7). From C4 the region around Emporion—the Pyrenees—probably came to be considered as the border between Iberia and southern Gaul; references to areas of mixed population continue to occur, however, though such references are not further developed by any ancient author. The end of the process took place in the Roman period when, as Strabo points out, the borders were fixed in the Pyrenees. At the same time, Strabo 4.1.1 calls all of the region between the Pyrenees and the Alps *Transalpine Keltike*, and Liguria is limited to the region east of Massalia and, more specifically, from Monoikos to Italia (Strabo 4.6.3). In Roman terminology, we may speak about the *prouincia Gallia Narbonensis*, from the Pyrenees as far as the river Var; to the east of it, one would enter Italy (Plin. *HN* 3.31).

In the present context, the chief characteristic of the area described above is that this was the main area of Massaliote expansion.

The earliest Greek presence in the area seems, at least on the basis of the literary evidence, to be concentrated at

⁷ 612–14: *huis alueo [Orani] Hibera tellus atque Ligyes asperi intersecantur.*

⁸ Hecat. fr. 50 *apud* Steph. Byz. 454.11: *Μίσηγρες, ἔθνος Ἰβήρων. Ἐκαταῖος Εὐρώπη.* The Misgetes are commonly placed to the north-east in the Iberian peninsula; their name seems to be related to the Greek verb *μίσγω*, which suggests that to the Greeks they appeared in some way “mixed” (Padró and Sanmartí (1992) 188).

⁹ Hecat. fr. 53 *apud* Steph. Byz. 267.15: *Ἐλισυκοί, ἔθνος Λιγύων, Ἐκαταῖος Εὐρώπη.*

¹⁰ Hecat. fr. 55 *apud* Steph. Byz. 435.18–19: *Μασσαλία, πόλις τῆς Λιγυστικῆς κατὰ τὴν Κελτικὴν, ἀποικὸς Φωκαέων. Ἐκαταῖος Εὐρώπη.*

¹¹ These “mixed populations” (*μυγάδες*) are sometimes brought into connection with the *Μίσηγρες* mentioned by Hecat. fr. 50 (Jannoray (1955) 378; Gailledrat (1997) 34).

Massalia (no. 3) itself, a foundation of c.600. However, archaeological evidence suggests the possibility of pre-colonial contacts between Greeks and indigenous populations, e.g. the three cups and the oenochoe of C7l from the indigenous cemetery of Le Peyrou, near the place where Agathe (*infra*) was later founded (Nickels *et al.* (1981); Nickels (1989)), and the sporadic finds of C7l Greek pottery at Maillhac (Gailledrat (1997) 69–70).

However, the foundation of Massalia marked the real beginning of Greek presence and expansion in the region, an expansion that was basically a coastal phenomenon; besides, the expansion of Massalia was a long-term process running from C6 to the beginnings of the Roman occupation of the region. Massaliote activity, moreover, varied from period to period: during C6 and C5e it was directed towards the development of commercial interests (Bats (1988)), whereas from C5l/C4e it aimed primarily at establishing greater territorial control through the foundation of colonies and fortified centres. Such settlements are, obviously, of greater interest to our sources and are described below. Whether any of the settlements founded by Massalia in this period, and presumably dependent on it, can be considered *poleis* (albeit dependent *poleis*; cf. Hansen (1997b)) is uncertain: some may have been *poleis*, but in no case does the evidence warrant inclusion in the Inventory, which includes only two possible Massaliote foundations: Emporion (no. 2) and Rhode (no. 4). Of these, Emporion certainly and Rhode possibly were founded prior to C4. According to ancient writers, Massalia's reason for founding these settlements was the need for defence against the barbarians living in the direction of Iberia as well as towards Liguria (Strabo 4.1.5); trade interests or the wish to control the coastline may have provided an additional reason (as implied by Strabo 4.1.9, 10 and 4.6.3).

The following Greek settlements on the Mediterranean coast of France are mentioned by our sources.

Agathe (Ἀγάθη) Ps.-Skymnos 202–8 seems to include Agathe in the πόλεις Ἑλληνίδες founded by the Phokaian Massaliotes (Μασσαλιῶται Φωκαεῖς), although in this passage, strictly speaking, *polis* is not used about Agathe. Strabo 4.1.5–6 calls it a *polis* and an *epiteichisma* founded by Massalia (κτίσμα Μασσαλιωτῶν; cf. Plin. *HN* 3.33: *Agatha quondam Massiliensium*) for protection against the barbarians living in the direction of Iberia. It may have been a “*polis* founded as a fortress” (12) in the typology of Hansen (1997b). Archaeology has revealed two phases of occupation; in the earlier phase Agathe was probably only an *emporia*,

and remains of C6–C5f houses of mudbrick seem to belong to it; to the later “Massaliote” phase from C5l belong houses with stone basements and mudbrick walls. It seems that the city had a grid plan in this phase. The C5l city covered 4.25 ha (Nickels (1983) 421–22, (1995)). At least two phases of the circuit wall have been established, the oldest dating to C6, and showing repairs during C5 (Nickels and Marchand (1976); Nickels (1982) 273–74). The territory of Agathe was divided into plots from at least C4e; its area has been estimated at c.20,000 ha, partly devoted to agriculture, and containing at least 1,500 *kleroi* (Clavel-Lévêque (1982); García (1995)). *Barr.* 15, AC.

Antipolis (Ἀντίπολις) Ps.-Skymnos 216 seems to consider Antipolis the most remote of the cities founded by Massalia (ἀπτόων [sc. πόλεων] ἐσχάτη). Strabo 4.1.5 includes it among the *epiteichismata* set up for defence against the barbarians and describes it as one of the *poleis* of the Massaliotes (4.1.9). In 155/4 Antipolis certainly belonged to Massalia (Polyb. 33.8.1), and it still belonged to Massalia prior to 49 (Strabo 4.1.9; Gschnitzer (1958) 24), but its status in the Archaic or Classical period is unknown. The ancient city of Antipolis must be somewhere below modern Antibes; however, the relatively abundant Archaic finds (Clergues (1969); Ducat (1982) 89–90) must belong to the native village; the remains of the supposed Archaic Greek city are, consequently, unlocated so far (Bats (1990)). A Greek presence in Classical times can be proved only by Greek inscriptions, especially the verse dedication set up by one Therpon to Aphrodite in C5s (*IG* xiv 2424; *LSAG* 288 no. 3; cf., however, the doubts expressed by Clerc (1927) 257 on the circumstances of its discovery). *Barr.* 16, AC.

***Athenopolis** (*Athenopolis*) This place, qualified by Plin. *HN* 3.35 as *Massiliensium*, must be sought on the coast between the *Citharista portus* (La Ciotat or, better, Olbia) and Forum Iuli (Fréjus) (Pompon. 2.77). *Barr.* 16 (St-Tropez?), HR.

Avenion (Ἀβενιόν) Steph. Byz. 146.16 calls it a πόλις *Μασσαλίας*; he does not give any indication of his source, but it may be Artemidoros, as in the entry on *Καβελλιών* (Cavellio; see *infra*; cf. Brunel (1945) 130). It is undoubtedly to be identified with modern Avignon, assigned by Strabo 4.1.11 and Plin. *HN* 3.36 (*Avennio*) to the Cavares. The reason for its designation as a “city of Massalia” must be sought in the close links that the Gauls of this region maintained with Massalia (Clerc (1927) 242–43; Barruol (1975) 233–44). Massalia presumably never included this area within its

territory (Arcelin (1986)), though some scholars have maintained this (Barruol (1975) 224–25). *Barr.* 15, AC.

Azania (Ἀζανία) Steph. Byz. 31.1–2 states that, in addition to the region in Arkadia (cf. Nielsen and Roy (1998)), there was a city called Azania which belonged to Massalia (he cites Philon of Byblos: ἔστι καὶ Μασσαλίας ἄλλη, ὡς Φίλων). The city has not been identified and although it might well be a site controlled by Massalia (Brunel (1945)), we cannot entirely rule out the possibility that Stephanos or Philon made a mistake (e.g. by confusing Massalia with Mainalia, *vel sim.*?). *Barr.* 15, unlocated, H.

Kabellion (Καβελλιών) Steph. Byz. 345.17 calls it a πόλις Μασσαλίας; his source is Artemidoros' *Geography*. Strabo calls it Καβαλλιών (4.1.3, 11) and assigns the city to the Cavares, as does Plin. *HN* 3.36 (*Cabellio*). It is to be equated with modern Cavaillon, and its relationship to the Massaliote dominion must be similar to that of Avenion (cf. *supra*). *Barr.* 15, HRL.

Kyrene (Κυρήνη) Among the *poleis* of that name mentioned by Steph. Byz. 396.18–19, one is assigned to Massalia. It is otherwise unknown, but Barruol (1975) 224 has suggested identifying it with the site of La Couronne, where the quarries exploited by Massalia were located (Strabo 4.1.6). *Barr.* 15, unlocated (La Couronne?), H.

Monoikos (Μόνοικος) Strabo 4.6.3 describes it merely as a harbour (λιμῆν), although in Steph. Byz. 456.7 it appears as a *polis* in Liguria, accompanied by a reference to Hekataios (fr. 57). Not in *Barr.*; Hecat. fr. 57 indicates A.

Nikaia (Νίκαια) This is one of the *poleis* founded by Massalia as a fortress (*epiteichisma*) for protection against the barbarians according to Strabo 4.1.5, who includes it among the πόλεις τῶν Μασσαλιωτῶν situated between Massalia and the river Var (Strabo 4.1.9; cf. Steph. Byz. 474.22; Plin. *HN* 3.47). The city existed in 154 (Polyb. 33.8.2), but is absent from Ps.-Skymnos 216; if we accept that Timaios is the main source for that passage in Ps.-Skymnos, Nikaia probably had not yet been founded by 260 (the date of Timaios' death; Bats (1986) 29, 40, n. 57; Bats and Mouchot (1990) 223; Bats (1992) 273). It provides the most interesting evidence as to the kind of control exercised by Massalia over its dependencies (Strabo 4.1.8; *CIL* V 7914). It corresponds to modern Nice. *Barr.* 16, AC.

Olbia (Ὀλβία) Ps.-Skymnos 216 mentions Olbia as a *polis* within the series of cities founded by Massalia to the east, and Strabo 4.1.5 adds that Olbia was one of the

epiteichismata founded by Massalia for protection against the barbarians. The archaeological evidence suggests that Olbia was a “*polis* founded as a fortress” (cf. Hansen (1997b) 36). The earliest city wall is dated to c.340–330 (Coupry (1986) 391–96; Bats *et al.* (1995) 372–76) and the city was laid out on a grid plan; it seems that Olbia was a square of 165 m × 165 m (Coupry (1986) 397–99; Bats and Brenot (1990) 208–9). The size of the city suggests that its population cannot have exceeded c.1,000 persons (Coupry (1974) 196), i.e. between 200 and 240 citizens of military age, which would amount to an infantry battalion or *σύνταγμα* (Coupry (1986) 397–99). Olbia had an agrarian territory of 305 ha, distributed in lots already from C4m (Benoit (1985) 45–47). Several cult places and other public works have been excavated at the site. *Barr.* 16, HRL.

Rhodanousia (Ῥοδανουσία) This is described as a *polis* founded by Massalia by Ps.-Skymnos 208 and perhaps by Strabo 4.1.5, who also includes it among the *epiteichismata* designed to protect Massalia from the barbarians living around the river Rhône. Steph. Byz. calls it both πόλις Μασσαλίας (542.15) and πόλις ἐν Μασσαλίᾳ (546.1). The foundation date of the city is unknown, and its identification is likewise uncertain: some scholars have suggested identifying it with the site known as Espeyran (Saint-Gilles-du-Gard) (Barruol and Py (1978) 94–100), though recently doubts have been expressed (Bats (1986) 41, n. 63; Py (1990) 112–13, 284–85). *Barr.* 15 (Espeyran?), CHR.

Sekoanos (Σηκοανός) Leaning on the authority of Artemidoros, Steph. Byz. 562.7 describes Sekoanos as a πόλις Μασσαλιωτῶν; however, we may be dealing here with a mistake by Stephanos (πόλις instead of ποταμός?; so *Barr.* 15, unlocated, H). It must be one of the rivers between the Rhône and Massalia, or even a waterway, perhaps the *fossa Mariana* (Barruol (1975) 199–200).

Stoichades Islands (Στοιχάδες) Strabo 4.1.10 mentions these five islands and says that they were tilled by the Massaliotes, who in ancient times (τὸ παλαιόν) had built a fort (*φρουρά*) there to prevent piracy. Steph. Byz. 585.19 merely says πρὸς Μασσαλίᾳ. The modern name is Îles d'Hyères. *Barr.* 16, CHRL.

Tauroeis (Ταυρόεις) Tauroeis was one of the fortress-cities (*epiteichismata*) founded by Massalia to protect the coast against inland barbarians (Strabo 4.1.5, 9); the defensive character of the site is stressed by Caesar (*B Civ.* 2.4.5), who calls Tauroentum *castellum Massiliensium* (r49). Artemidoros (*apud* Steph. Byz. 608.6) places the foundation

in the time of the fall of Phokaia (i.e. c.540). It is located at the modern town of Le Brusç, and it is generally accepted that the foundation of the city must be placed in C3l or C2e (Arcelin (1986) 65; Bats (1986) 29, 40 n. 57; Brien-Poitevin (1990); Bats (1992) 273). *Barr.* 16, HR.

***Theline** (*Theline*) Avienus (*Ora maritima* 690–91) says that the city of Arelate (Arles), by the river Rhone, was formerly called Theline, “when it was inhabited by Greeks” (*Arelatus illic ciuitas attollitur, Theline uocata sub priore saeculo, graio incolente*). Strabo 4.1.6 is silent about the Greek identity of Arelate but describes it as a πόλις καὶ ἐμπόριον οὐ μικρὸν. Archaeology suggests the existence of a Greek *emporion* from c.540, which lost its Greek character from—perhaps—C4f (Arcelin (1995)). *Barr.* 15, ACH.

Troizen (*Τροιζήνη*) The last of the cities called Troizen and mentioned by Steph. Byz. 639.9, it is in Italy, but belongs to Massalia (ἐν Μασσαλίᾳ τῆς Ἰταλίας). In addition, Eust. *Il.* 1.442 mentions a Massaliote city called Troizen and placed in Italy (καὶ ἔτέρα ἐν Ἰταλίᾳ Μασσαλιωτικῇ). Some scholars suggest that this Troizen must be a fortress located in southern France, but situated east of the river Var and so, formally, beyond the frontier between the *prouincia* and Italia, but subject to Massalia, as was Nikaia (Strabo 4.1.9) and the other Massaliote *poleis* in Italy listed by Ptol. *Geog.* 3.1.2 (cf. Barruol (1975) 223); others emend the text of Stephanos and suppose the existence of two cities called Troizen, one in the territory of Massalia and another in Italy (cf. Brunel (1974)) or suggest a mistake in Stephanos’ and Ptolemaios’ reading of their sources (cf. Clerc (1927) 247–49); finally, it has been suggested that Massaliote Troizen in Italy cannot be other than the city of Poseidonia (cf. Morel (1992) 20–21), neighbouring on and supposedly closely related to Phokaian Hyele (no. 54), in its turn apparently closely related to Massalia (Ps.-Skymnos 250: καὶ Μασσαλιωτῶν Φωκαέων τ’ Ἑλέα πόλις). Not in *Barr.*

3. The Mediterranean Coast of Spain

The Greeks referred to the coast of the Iberian peninsula by the generic name Ἰβηρία, a term which, as time went on, ended up as the name of the whole peninsula (Strabo 3.4.19). The name *Iberia* seems to have been coined by the Greeks to designate the westernmost places in the Mediterranean visited by them since C7l; it presumably derives from the name of the river Hiberos; however, the name *Hiberos* was applied to several rivers of the Iberian peninsula in antiquity (Domínguez (1983); Jacob (1988); Gailledrat (1997) 35–36),

and this fact may explain the different and sometimes contradictory views which ancient writers hold on the extent of Iberia (cf. Strabo 3.4.19). However, even if Herodotos (1.163) still distinguishes between Tartessos and Iberia, the C5l historian Herodoros of Herakleia (*(FGrHist* 31 fr. 2a) includes within Iberia all of the coast between the western end of the peninsula and the river Rhône, and so Strabo’s definition of Iberia may be valid from C5l onwards: οἱ δὲ νῦν ὄριον αὐτῆς τίθενται τὴν Πυρρήνην (3.4.19).

If the late and hardly reliable references to Rhodian colonisation in Iberia (see Rhode (no. 4) with Domínguez (1990) and Santiago (1994b)) are disregarded, the only Greeks to frequent Iberia seem to have been the Samians and, above all, the Phokaians (Hdt. 4.152, 1.163.164; Domínguez (1991a), (1996) 26–31). Archaeological evidence for the earliest contacts, of C7l/C6e, is found at e.g. the Tartessian town of Onoba (modern Huelva; Cabrera (1988–89)), at the Phoenician city at Cerro del Villar (Cabrera (1994)) and at the Iberian village at the location where Emporion was eventually founded (Aquilué *et al.* (1998) 24–25). However, these early contacts did not lead to the foundation of Greek *poleis*: only Emporion developed the structures of a *polis* and then only several decades after the initial contacts between Greeks and natives. The Greek settlements in Iberia were foundations of the Phokaians (no. 859) or, perhaps, of the Phokaians from Massalia (no. 3); at least, it seems that Massalia ended up controlling, probably both economically and politically, a major part of the coastal regions of Iberia.

The Greek settlements in Iberia mentioned by our sources are the following.

Alonis (*Ἄλωνίς*) Artemidoros (*apud* Steph. Byz. 80.7) describes Alonis as a νῆσος καὶ πόλις Μασσαλίας. It is not completely certain that Alonis was located in Iberia, although it may be the place called *Allone* by Pompon. 2.93, and situated in the *Sinus Illicitanus*; it could also be the *Ἄλωναί* of Ptol. *Geog.* 2.6.14. It remains unlocated, although many suggestions have been advanced for its site (García y Bellido (1948) 58–59); recently, Rouillard (1991) 303–6 has suggested that it may be on modern Santa Pola, where excavations have revealed a (native) fortified settlement of C5s and finds show strong Greek influences (Moret *et al.* (1995); Badié and Moret (1997)). *Barr.* 27 (S. Pola?), CHRL.

Hemeroskopeion (*Ἡμεροσκοπεῖον*) Hemeroskopeion was the most famous (*γνωριμώτατον*) of the three πολίχνια Μασσαλιωτῶν between the river Jucar and New Carthage (Strabo 3.4.6: μεταξὺ [...] τοῦ Σούκρωνος καὶ

τῆς Καρχηδόνας) and the only one known by name. To the Romans it was *Dianium*, on account of its sanctuary of Artemis Ephesia (Strabo 3.4.6). Artemidoros (*apud* Steph. Byz. 302.1) considers it a *polis* of the Celtiberians, founded by the Phokaians: πόλις Κελτιβηρῶν, Φωκαίων ἄποικος. Avienus, *Ora maritima* 476–77—probably the earliest reference to the city—says merely that it had been inhabited in ancient times (*Hemeroscopium quoque habitata pridem hic ciuitas*), but was deserted in his own day. In spite of the strong Greek influence in the presumed area of location (Dominguez (1991a) 125–27), the existence of this city cannot be demonstrated by archaeological evidence, and it is not impossible that the literary tradition for its existence arose only in Roman times (Pena (1993)). *Barr.* 27 (Denia), CHRL.

Mainake (*Μαυάκη*) The earliest reference to Mainake is in Avienus' *Ora maritima* 427–31; he does not give any information about its origins and identifies it incorrectly with Malaka: *Malachaeque flumen, urbe cum cognomine, Menace priore quae uocata est saeculo*. Ps.-Skymnos 146–50 calls Mainake a πόλις *Μασσαλιωτική* and considers it the most remote of the Greek *poleis* founded in Europe: αὐτὴ πρὸς Εὐρώπην δὲ τῶν Ἑλληνίδων πόλεων ἀπασῶν ἔχει θέσιν. Strabo 3.4.2 likewise describes Mainake as the most westerly *polis* ever founded by the Phokaians (ὑστάτη τῶν Φωκαϊκῶν πόλεων πρὸς δύσει κειμένην), on the basis of received tradition (*παρειλήφμεν*), but he distinguishes its ruins from Phoenician Malaka. In spite of the great quantity of hypotheses regarding its possible location, neither the date nor the character of Mainake have been clarified (for a recent summary and a new proposal, see Jacob (1994)). *Barr.* 27 (Cerro del Peñón?), ACH.

Several other Iberian toponyms of allegedly Greek *poleis* are known (Jacob (1985)), but only in two cases have scholars suggested that they were in fact Greek: Pyrene and Cypsela. (1) *Pyrene* is mentioned by Hdt. 2.33.3 as the place where the river Istros begins (*Ἴστρος τε γὰρ ποταμὸς ἀρξάμενος ἐκ Κελτῶν καὶ Πύρηνης πόλιος . . .*); its Greekness is inferred by some scholars from Avienus, *Ora maritima* 558–61, which states that formerly, near the Pyrenees, there stood an opulent city which traded frequently with the Massalites (*quondam Pyrenae latera ciuitas ditis laris stetisse fertur, hicque Massiliae incolae negotiorum saepe uersabant uices*). (2) The second toponym, *Cypsela*, is known only from Avienus, *Ora maritima* 527–29, which says that the city of Cypsela, whose remains had completely disappeared in his day (*hic stetisse ciuitatem Cypselam iam fama tantum*),

est, nulla nam uestigia prioris urbis asperus seruat solum), stood in ancient times by the *iugum Celebanticum*. Though no source describes Pyrene or Cypsela as Greek cities, scholars have suggested identifying them with Emporion (no. 2) in the early phases of its development (Pyrene = Emporion: Hind (1972); Cypsela = Emporion: Lamboglia (1949), (1974); and Oikonomides (1974)). One of these identifications may possibly hit the mark; however, given the scarcity of information, we cannot press the issue of the identification of these toponyms with the city of Emporion, which probably bore that name already by C6l (*SEG* 37 838).

4. *The Massaliote Colonisation*

This is not the place for a detailed discussion of the colonisation activities of Massalia (no. 3), which affected mainly the coastal regions of Iberia, Gaul and Liguria. However, a few words must be said. Our sources frequently vary in their descriptions of the origins of individual sites, which are sometimes described as Massaliote and sometimes as Phokaiian foundations. It seems that later sources especially tend to conflate these two terms, obviously because Massalia itself was a foundation of Phokaia. Consequently, it is sometimes difficult to identify the founder of a site. In any case, it seems that Massalia was from the beginning the centre for the Phokaiian designs on the western Mediterranean (Gantès (1992); Tréziny (1995)). At least, Massalia soon began to expand its area of influence, mainly westwards. The main evidence for westward expansion comes from Emporion (no. 2), where the *Palaia Polis* (modern San Martín de Ampurias) seems to have been frequented by Greeks from c.600, and where the first Greek settlement, dated c.575, has a strong Massaliote flavour (Aquilué *et al.* (1998) 26–28); a close relationship with Massalia seems to continue until at least C6l; but from C5 Emporion develops its own area of economic and perhaps political interests (Sanmartí (1992)).

Within the area in which Phokaia and/or Massalia had interests in the Archaic and Classical periods were other settlements that later sources describe as *poleis*, e.g. Agathe (*supra*) and Rhode (no. 4). It is not certain, however, that they were all *poleis*; thus, while Rhode minted coins during C4, Agathe did not. There is no information about the status of the settlements that were not *poleis*; they may have been trading ports or *emporion* frequented by the Massalites (or even by the Phokaiians). Archaeology has revealed a network of C6–C5 Massaliote trading posts in southern France, and such sites attest to the wide trading interests of Massalia

(Bats (1992)). In most cases the names that the Greeks eventually applied to these sites remain unknown, but it is not impossible that their names were misinterpreted by later writers as names of Greek *poleis*.

From C5l Massalia began to secure her control of the coastal regions of southern France by establishing a network of fortress-cities, beginning with Agathe, “promoted” to this status from the previous status of *emporion*; this policy continued well into Roman times (Strabo 4.1.5). Olbia, founded in 340 or 330, shows clearly the military character of these foundations (see *supra*). The remainder of these Massaliote fortress-colonies seem to have been founded in Hellenistic times, the later ones undoubtedly at a time when Massalia benefited from the assistance of the Roman army in subduing the native tribes living inland (Strabo 4.1.5; Bats (1986); Arcelin (1986)). It is not wholly clear what type of relationship cities like Agathe and Olbia had to Massalia; it is tempting to consider them as “*poleis* founded as fortresses” according to the typology suggested by Hansen (1997b) 36 no. 12; they may have been dependent *poleis* (Gschnitzer (1958) 25), as even Strabo (4.1.5 or, implicitly, 4.1.9) seems to attest (at least for later times) when he speaks about the *ὑπήκοοι* of Massalia; some scholars have considered them to be similar to *klerouchies* (Sanmartí (1992) 29), but we should not rule out the possibility that these places were used by Massalia as bases to develop the penetration inland of her commercial interests (Clavel-Lévêque (1985) 81).

From C5 Emporion (no. 2) seems to have begun to develop its own interests; it began to mint coins and to erect public buildings and, perhaps, to constitute itself as a *polis*; Rhode (no. 4) seems to follow a similar path slightly later.

It is not known when the three *πολίχνια* *Μασσαλιωτῶν* (Strabo 3.4.6) situated between the river Jucar and New Carthage were established; the only one known by name, Hemeroskopeion, was perhaps not a *polis*, and Artemidoros considers it a Phokaian foundation. If the site at La Picola can be related in any way to Alonis, it was clearly not a Greek *polis* but a native fortress-town strongly influenced in its lay-out and defensive works by Greek models of the Classical period. Whether those two places depended on Massalia or Emporion (or on Massalia through Emporion?) cannot be ascertained.

II. The *Poleis*

1. **Alalie** Map 48b. Lat. 42.10, long. 9.70. Size of territory: 3(?). Type: A:a. The toponym is *Ἀλαλίη*, *ἡ* (Hdt. 1.165.1,

166.3). A city-ethnic is not attested; Herodotos refers to the community as *οἱ Φωκαεῖς* (1.166.2 *bis*).

Alalie is called a *polis* in the urban sense at Hdt. 1.165.1 (*ἀνεστῆσαντο πόλιν*). The name of the territory is unknown, but its extent, after C6m when the refugees from Phokaia arrived, has been calculated at 200 km² (Gras (1985) 404), and it may have been divided into lots (Jehasse and Jehasse (1987) 380). The “epocised” city put a fleet of sixty ships to sea (Hdt. 1.166.2), which indicates a population of c.20,000 inhabitants (Gras (1985) 400–6) or even more (Domínguez (1985) 375–76).

Alalie was founded by Phokaia (no. 859), in accordance with an oracle, 20 years before the fall of Phokaia, i.e. c.560 (Hdt. 1.165.1). In c.546 the Phokaians decided to relocate their city in reaction to the Persian threat, and almost half of the Phokaians were received at Alalie. From the Alalian point of view, the arrival of these refugees may have been perceived as reception of *epoikoi*, while from the point of view of the Phokaians it was a case of *metoikesis* (Demand (1990) 37). The refugees arrived with wives, sons and sacred objects from their home sanctuaries (Hdt. 1.164.3, 166.3).

After a naval battle with the Carthaginians and the Etruscans c.540, in which the Alalians were victorious but suffered severe losses, the city was perhaps dismantled (Hdt. 1.166.3: *ἀνέλαβον [...] καὶ τὴν ἄλλην κτίσιν*), and certainly abandoned (Hdt. 1.166.3: *ἀνέλαβον τὰ τέκνα καὶ τὰς γυναικάς [...] καὶ ἔπειτα ἀπέντες τὴν Κύρρον ἔπλεον ἐς Ῥήγιον*). However, the abandonment was perhaps not complete, as the existence of some archaeological remains dated to C6l (and antedating the foundation(?) of the Etruscan city) would suggest (Jehasse and Jehasse (1982) 255; cf. Domínguez (1985) 376–77). In any case, after the battle, Alalie ceased to be a *polis* and its site was subsequently occupied by an Etruscan city, whose cemetery (C6l–C3m) has been excavated (Jehasse and Jehasse (1973)).

Herodotos 1.166.3 seems to imply the existence of a political body making decisions, but its composition or organisation is unknown. At 1.166.1 he implies the existence of religious precincts (*ἱρά*) at Alalie, some of them perhaps of a substantial nature (temples?—he uses the verb *ἐνιδρύω*); besides, the Phokaian refugees carried with them all the sacred objects, statues and offerings (*τὰ ἀγάλματα [...] καὶ τὰ ἄλλα ἀναθήματα*) taken from their original *hiera* at Phokaia—except those made of bronze and stone and the paintings (Hdt. 1.164.3)—and we may think that they placed these in newly built edifices as soon as they arrived at Alalie; however, they have not been identified. Remains of a city wall have been discovered, of the *agger* type, with a broad *glacis* in

front of it, perhaps dated to C6s (Jehasse and Jehasse (1982) 250–53, (1994) 312–14) and perhaps protecting the Greek city. There are also remains of C6s dwellings constructed in mud-brick (Jehasse and Jehasse (1994) 312) as well as Greek pottery of Archaic date (Jehasse and Jehasse (1982) 251–54).

2. Emporion (Emporites) Map 25. Lat. 42.10, long. 3.10. Size of territory: 2. Type: A:β. The toponym is Ἐμπορίον, τό (Ps.-Skylax 2; Ps.-Skymnos 204) and the city-ethnic is Ἐμποριότης (SEG 37 838 (530–500); Strabo 3.4.8) or Ἐνπορείτης (C4l coins, *infra*). Some scholars have suggested that the original name may have been Pyrene (Hind (1972)) or *Kypsela (Lamboglia (1949), (1974); Oikonomides (1974)) and one of these names (in particular Pyrene) might well have been the name of the first settlement, which was renamed Παλαιὰ πόλις (Strabo 3.4.8) when the (new) city on the mainland was founded; however, there is no evidence for the use of any of these names to refer to Emporion, whose name is presumably attested already in C6l (SEG 38 838; cf. *supra*).

Apart from Ps.-Skylax 2 (Hansen (1997a) 88), the earliest references to Emporion as a *polis* are in Polyb. 3.39.7 and Ps.-Skymnos 202–4 (all in the urban sense). It is described as a *polis* in the urban and political sense by Strabo 3.4.8, a passage which also refers to the *politeuma* and uses *dipolis* about Emporion. If Pyrene at Hdt. 2.33.2 designates the present city, this passage provides an occurrence of *polis* in the territorial sense. It is usually inferred from the toponym that Emporion was an *emporion*. For a discussion of this question, see Hansen (forthcoming). The collective use of the city-ethnic is attested internally in a C6l inscription (SEG 37 838) and on coins (EM, EMΠ, EMΠΟΡ (C5l–C4); EMΠΟΡΙΤΩΝ (C4l–C3); Villaronga (1994) 3–8, 1730) and externally in a commercial document of C5m (SEG 38 1036).

Emporion was founded c.600 (Aquilué *et al.* (1996) 61–62), whether by Massaliote Phokaians (Ps.-Skymnos 203–4), Massaliotes (Ps.-Skylax 2; Strabo 3.4.8) or Phokaians (Livy 26.19, 34.4; cf. Pliny 3.22). Ps.-Skymnos 204–5 includes Emporion among the Greek *poleis* founded by Massalia (καὶ πόλεις Ἑλληνίδες, ἃς Μασσαλιῶται Φωκαεῖς ἀπώκισαν· πρώτη μὲν Ἐμπορίον); Strabo 4.1.5 seems to imply that Emporion was included within the system of fortresses set up by Massalia to protect the coast (*supra* 162–63). However, on present evidence it is not clear how long Emporion remained within that Massaliote system (cf. Gschnitzer (1958) 25–26).

The territory of Emporion stretched into the interior of the country (*mesogaia*), and at least a part of it was called

Ἰουγκάριον πεδίον (Strabo 3.4.9). According to some scholars, the territory comprised 360 km² and may have been bordered by native villages (Plana (1994) 109–16). In one of these the remains of a possible C3 sanctuary of Demeter have been found; it may have replaced an older shrine (Pons (1993)). The existence of a C4 cadaster occupying 15,000 ha has also been proposed (Plana (1994) 169–89). However, these figures seem too high for such a tiny urban centre, and other scholars have suggested a smaller territory of c.3,300 ha: 1,300 ha of arable land and 2,000 ha of *eschatia* (Sanmartí (1993) 92–94). The reference in Strabo 3.4.8 to Rhode (no. 4) as a πολίχνην Ἐμποριτῶν seems to imply that, at least by C1s, Emporion had integrated the territory of Rhode into its own territory.

On the basis of the size of the city (5 ha), it has been supposed that the inhabitants numbered max. 1,500–2,000 (Domínguez (1986) 4; Marcet and Sanmartí (1990) 118–19).

Originally Emporion was divided into separate Greek and non-Greek communities, but at a certain point the two communities merged into one to form a single citizen body of mixed ethnicity (Strabo 3.4.8; Pena (1988) 11–27; Santiago (1994a)). This merger may have taken place c.375, when the second city wall was constructed, thus suppressing an extra-urban settlement (assigned to the natives by its excavator), and situated by the C5 city wall (Sanmartí (1993) 88–89).

The existence of a political community is indicated by the C5–C4 mint (*infra*) and by bricks stamped ΔΗΜ (= δημοσία/δημόσιον) and dated perhaps to C3 (Almagro (1952) no. 35; Pena (1992) 141). The only reference to the political system is found in Strabo 3.4.8, which refers to a πολίτευμα μικτόν of Greek and barbarian νόμμα produced by the merger described *supra*. A C5s lead tablet found at Emporion contains the word (or the ending) νόμος, although its precise meaning cannot be determined (Almagro (1952) no. 21; Pena (1992) 140–41; Santiago (1993) 288–89). The honours owed to Artemis Ephesia were presumably defined by law (Strabo 4.1.4), and in later sources there are references to custom (*mos*) and laws (*leges*; Livy 34.9 (rC2e)). Livy (34.9 (rC3e)) also refers to several magistrates.

The agora of the city is known only in its C2f form (Mar and Ruiz de Arbulo (1993) 160–69). Although Artemis Ephesia was worshipped at Emporion (Strabo 3.4.8), her sanctuary has not yet been identified. A C5s sanctuary consisting of at least an Ionic temple and a double altar has been excavated in the southern part of the city. In C4f the area was reorganised and a new sanctuary constructed, perhaps devoted to Asklepios; the *Palaea polis* has yielded a relief

depicting two sphinxes, almost certainly from a temple (Marcet and Sanmartí (1990) 69). The city had a public water reservoir, dug in C4e, and included within the sacred area placed in the southern part of the city, by the city walls and their southern entrance gate (ibid. (1990) 87). The earliest Greek settlement, in antiquity situated on an island that is now connected to the continent, may have functioned as the acropolis; it was called *Παλαιὰ πόλις* (Strabo 3.4.8).

Strabo 3.4.8 mentions the existence of a city wall at Emporion and sketches the history of its development. The first wall so far known was constructed in C5s in the southern part of the city (Sanmartí and Nolla (1986)); c.375 that wall was dismantled and in the same area a new wall was constructed with an elaborate L-shaped entrance system (Sanmartí *et al.* (1992)); this is certainly the wall mentioned by Livy 34.9. In C3s a *proteichisma* was constructed; however, in C2m all these fortifications were demolished and, reusing the same stones, a new wall was constructed 20 m further out, a wall that is still preserved (Sanmartí *et al.* (1988)). According to Livy 34.9 (rC2e), the defence of the city walls of the *polis* was—at least in times of war—entrusted to one-third of the inhabitants, who were on duty every night.

The oldest remains of dwellings come from the *Palaia polis* and consist of rectangular rooms in mudbrick on stone basements; they date to C6f (Aquilué *et al.* (1996) 57–58, (1999) 217–30). The city on the mainland seems to have reached its maximum extent already in C5s, which makes it difficult to sketch the first stages of its development and layout; in any case, it seems to have been centred on a main street running north–south and crossed at right angles by secondary streets (Marcet and Sanmartí (1990) 106–8).

The patron divinity of Emporion was Artemis Ephesia (Strabo 3.4.8); cults of the Nymphs, Themis and Poseidon are epigraphically attested (Almagro (1952) nos. 9–11, 49), as are cults of Asklepios and Sarapis; in all these cases the evidence is Hellenistic or Roman.

The mint of Emporion possibly began to strike silver coins of the Auriol type in C5f, imitating Massaliote prototypes. From C5m the mint produced minor denominations and was under the influence of Sicily, Mainland Greece and Asia Minor; their weights vary from 0.15/0.25 g to 0.40/0.45 g and 0.90/0.95 g; the coins are anepigraphic. C5l/C4f coins are inscribed with the legend *EM*, *EMII* or *EMITOP* and show influences from Magna Graecia and Athens; the weight is 0.94 g. From C4l Emporion struck a so-called drachm weighing 4.70 g. Types: *obv.* head of a goddess (Artemis?); legend: *EMITOPITΩN* or *ENIOPEITΩN*; *rev.* horse (Villaronga (1997)). It is quite

possible that all these coins were struck on the Phokaian standard (Campo (1992); García-Bellido (1994)), and both the first issues and the drachms seem also to be related to the weights of the Massaliote system (Villaronga (1998); Head, *HN*² 1–2; *SNG Cop. Spain-Gaul* 637–39).

Emporion was perhaps considered to be the coloniser of nearby Rhode (no. 4; Strabo 3.4.8). A very fragmentary C5s lead tablet has the sequence [...δ]κο ἔσκατοικίσαι, meaning something like “where to establish (or found) a city” (Almagro (1952) no. 21; Pena (1992) 140–41; Santiago (1993) 288–89), though it is unclear where and when the eventual foundation was to be planted.

3. Massalia (Massaliotes) Map 15. Lat. 43.28, long. 5.22. Size of territory: 2. Type: A:a. The toponym is *Μασσαλία*, ἡ (Hecat. fr. 55; Thuc.1.13.6) and the city-ethnic *Μασσαλιώτης* (Dem. 32.8; Arist. fr. 560). In the Ionic dialect they are, respectively, *Μασσαλίη* (Hdt. 5.9.15) and *Μασσαλιήτες* (LSAG 288 no. 2 (C5f)).

Massalia is called a *polis Hellenis* in the urban sense by Ps.-Skylax 4 (cf. Ps.-Skymnos 209, perhaps drawing on Timaios (FGrHist 566) fr. 71, though probably not for the term *polis*). It is called *polis* in the political sense by Arist. *Pol.* 1305^b 4–5; *politikos* is used about the constitution at Arist. *Pol.* 1305^b 10, and *politeuma* is found at *Pol.* 1321^a 30–31; there was an Aristotelian *Massalieron politeia* (Arist. fr. 560), and Dem. 32.8 refers to the *politai*.

The collective use of the city-ethnic is attested internally on C5m coins (Brenot (1992)) and externally in Dem. 32.8–9 and Arist. fr. 560. The earliest examples of the external individual use are LSAG 288 no. 2 (C5f) and IG XIV 295 (C4f); see further Robert (1968) and Manganaro (1992)).

There are two different traditions about the foundation of Massalia, and consequently two different dates for the foundation. One tradition places the foundation in 600 (Timaios (FGrHist 566) fr. 7 = 120 years before the battle of Salamis), while the other places it at the time of the fall of Phokaia (no. 859) to the Persians in 546 (Antiochos (FGrHist 555) fr. 8; Isoc. *Archidamus* 84). The archaeological evidence supports the earlier date (Graham (2001) 38), but the existence of two different foundation dates may perhaps suggest a kind of refoundation in C6m, as a consequence of the arrival of refugees from Phokaia after the Persian conquest of Ionia (Gras (1987); Domínguez (1991b) 250–53; Bats (1994); Gras (1995)). All the sources agree on the *metropolis*: Phokaia (Hecat. fr. 55; Thuc. 1.13–14; Arist. fr. 560), though there is no unanimity concerning the oecist(s): it was Euxenos (Arist. fr. 560), or Simos and Protis (Just. *Epit.*

43.3.8–11), or Protis (Plut. *Sol.* 2.7) the son of Euxenos (Arist.); or Kreontiades (Antiochos (*FGrHist* 555) fr. 8); finally, Strabo 4.1.4 stresses the role of the Ephesian woman Aristarche as ἡγέμων τοῦ πλοῦ, whatever that means (Malkin (1990) 51–52). Similarly, there are different foundation myths for the city in Classical sources: marriage of the Greek oecist to the daughter of the native king (Arist. fr. 560 and Just. *Epit.* 43.3.4–12, with some variations); a completely different tradition, including the flight from Phokaia during the Persian conquest, is found in Antiochos (*FGrHist* 555) fr. 8 and Timaios (*FGrHist* 566) fr. 72. Strabo 4.1.4 gives details which may correspond to any of these traditions. Despite the marriage between the Greek oecist and the native king's daughter, which led to the foundation of the city according to Arist. fr. 560, Massalia was always considered a Hellenic and not a mixed *polis* (cf. Ps.-Skylax 4; Livy 37.54.22 (r189)).

The territory is called *Μασσαλιώτις* (Strabo 4.2.3); the toponym may also have been used to denote the territory (cf. Brunel (1945)); it is referred to as ἡ *Μασσαλιωτῶν χώρα* at Arist. *Mir. ausc.* 837^b8 (cf. Ps.-Skylax 4) and is described as planted with olives and vines but poor in grain (Strabo 4.1.5). The territory of Massalia has been the subject of much discussion (Bats (1986) 17–19; Morel (1986)) and it is now supposed that throughout the Archaic and Classical periods Massalia possessed a territory of c.70 km² (Arcelin (1986) 74), territorial expansion taking off only in C3 (Strabo 4.1.5; Bats (1986); Arcelin (1986) 52–75). In any case, there are hardly any archaeological traces of the occupation of the territory (Arcelin (1986) 47). Apart from controlling its territory proper, Massalia seems to have founded, and kept under its sway, a network of coastal cities (Strabo 4.1.5, 9) with the intention of protecting the coast against incursions of inland barbarians. Leaving aside the very problematic cases of the cities in Iberia (Emporion, Rhode, etc.), the beginning of this policy can be dated to C5l, which saw the foundation of Agathe, and its continuation is marked by the foundations of Olbia (C4s), Tauroeis (C3l) and Nikaia (C3l/C2e?), the only cities for which we have acceptable dates (Bats (1986) 27–30). The way in which Massalia controlled these foundations is incompletely known (Gschntzer (1958) 20–26), although in general it seems that the majority (or all) of them may have been dependent “*poleis* founded as fortresses” in the typology of Hansen (1997b) 36 no. 12; however, in no case can *polis* status be proved, and accordingly each city is briefly described in the Introduction above.

If we can trust Justinus' retrospective narrative, Massalia had a *foedus* and *amicitia* with Rome from the time of its

foundation (Just. *Epit.* 43.3.4, 5.3), completed in C4e with the granting to Massalia of *immunitas* and the establishment (or renewal?) of a *foedus aequo iure* (Just. *Epit.* 43.5. 10; see Nenci (1958) 63–97). Massalia sent envoys to Delphi in C4e (Just. *Epit.* 43.5.8).

The armed forces of Massalia, especially the fleet, were deployed on several occasions; thus, a naval defeat of the Carthaginians is reported for the very moment of the foundation (Thuc. 1.13.6; Paus. 10.18.7) as well as for later occasions (Just. *Epit.* 43.5.2; Gras (1987)). On land Massalia waged wars against the natives from the foundation of the city (Just. *Epit.* 43.4.9–11, 5.1) and established a network of fortified places for protection against the native populations (Just. *Epit.* 43.3.13; Strabo 4.1.5, 9 (C4?)); cf. *supra*.

It has been suggested that the total population of the city never exceeded 20,000 inhabitants (Bats (1992) 273). The existence of γένη, such as the *Πρωτιάδαι*, is attested for C4 (Arist. fr. 560).

Massalia had an oligarchic constitution (Arist. *Pol.* 1305^b4, 10, 1320^b18, 1321^a30); the enfranchised citizens are referred to as the *politeuma*, and access to the *politeuma* was by election of those found worthy of membership (Arist. *Pol.* 1321^a29–31). Aristotle also refers to an undated *stasis* in Massalia by which the oligarchy was changed into a constitution that came closer to being a *politeia*, the positive variant of popular rule (*Pol.* 1305^b1–4); perhaps its outcome is the eunomic aristocracy mentioned by Strabo 4.1.5 for his own day (or that of his informant(s)). Some Massiliote laws are referred to by Theophr. fr. 117, Wimmer; Ael. *VH* 2.38.1; and Livy 37.54.22 (r189). These laws were Ionic (νόμοι Ἰωνικοί) and were exhibited in public (Strabo 4.1.5). Val. Max. 2.6.7 mentions the death penalty as having been used since the foundation of the city.

Massalia had a council (interpreted as a *senatus* by Val. Max. 2.6.7) called the Six Hundred (οἱ Ἑξακόσιοι), whose members served for life and were called *τιμούχοι* (*I.Lampsakos* 4.45, 48 (C2e); Strabo 4.1.5); this council was presided over by the Fifteen (οἱ Πεντεκαίδεκα; Strabo 4.1.5; Caesar, *BCiv.* 1.35.1), who were in turn controlled by the Three (οἱ Τρεῖς; Strabo 4.1.5), one of whom was chairman (Strabo 4.1.5) and possibly the eponymous magistrate, although this is not confirmed. There is no solid evidence for the existence of an assembly at Massalia; however, the existence of a *demos* may possibly be implied by the reference to the public exhibition (δημοσίᾳ) of the laws (Strabo 4.1.5), and *IG* XIV 357 (C1?) has sometimes been interpreted to prove the existence of a *demos*, but it is a problematic document: Properzio (1989) 296–97 denies that it alludes to

a Massaliote *demos*, while Clerc (1927) 451 n. 1 considers the inscription a falsum.

In C2, and almost certainly before, the agora of Massalia was situated in a low-lying area between the two main elevations of the city, Saint-Laurent hill and Moulins hill (Gantès (1992) 85). Although it has not been found, Massalia presumably had a temple dedicated to Athena, since Strabo 13.1.41 refers to its *ἔδανον* just as Just. *Epit.* 43.5.6 (rC5?) alludes to its *simulacrum* and to the *porticus* of the temple, situated on the *arx*. The city also possessed a *τερόν* devoted to Apollo Delphinios and a temple (*νεώς*) dedicated to Artemis Ephesia, both on the *ἄκρα* (Strabo 4.1.4). A monumental Ionic C6l capital has been unearthed (Benoit (1954)), as has a set of fifty tiny C5e *naiskoi* with a seated goddess pertaining to two different sanctuaries (Clerc (1927) 227–40); a possible C4e *Thesmophorion* has also been identified (Gantès (1992) 79, 85). The water management system of the city was very elaborate, with cisterns, water reservoirs and drains, some of them dating to C6e (Trouset (1990)). There is an epigraphical reference to a *stadion* (perhaps of Roman date: Benoit (1966) 20); from the foundation of the city the harbour received special attention and many substantial structures related to it have been excavated, the oldest ones dating to C6l (Guéry (1992); Hesnard (1995) 65–78).

Massalia had an acropolis; Strabo 4.1.4 refers to the *πέτρα*, presumably the acropolis, and furthermore refers to the *ἄκρα*, presumably a part within the acropolis. The acropolis was perhaps encircled by a separate wall, different from that around the city proper according to Strabo himself (4.1.4; Tréziny (1994) 128–29, modified in Tréziny (2001) 49). Just. *Epit.* 43.4 implies the existence of walls from at least the second generation of colonists. There are remains of an early (C6l) city wall which already enclosed the area of the later city almost in its entirety; in C4 a new defensive system was built and the previous wall razed to the ground at several points (Tréziny (1994) 125–30, (1995) 44–45, (2001) 45–53).

During C6f Massalia slowly expanded and came to occupy almost 25 ha; in C6m the extent of the city was already more or less similar to that of the later city (c.40 ha (Tréziny (2001) 53)). While some houses and other urban features are known from C6e, the general layout of the city is not fully known, though there is some evidence of C6m grid planning (Tréziny (1995) 50); perhaps the main axis of the city was constituted by the prolongation, inside the city, of the road that entered the city through the eastern gate and led to the agora. In C4f some quarters of the city had a regular plan (Gantès (1992); Moliner (2001) 101–8).

Strabo 4.1.4 seems to imply that the patron divinity was Artemis Ephesia. Also attested is the cult of Athena (Strabo 13.1.41), supposed by some scholars to be the protective divinity of the city (Tréziny (1994) 129–30). Massalia celebrated the *Anthesteria* (referred to by Just. *Epit.* 43.4.6 (rC6) as *Floralia*) and the *Thargelia* (Serv. *ad Aen.* 3.57; Lact. *Plac. comm.* ad Stat. *Theb.* 10.798; IG XIV 2464(?); Salviat (1992) 144–45).

Massalia erected a treasury at Delphi (Diod. 14.93.4 (r396), App. *Ital.* 8.3 (r396; rC4m)), identified with the so-called Aiolian treasure at Marmaria and dated between 540 and 530 (Salviat (1981)). Paus. 10.8.6–7 furthermore mentions a statue of Athena dedicated at Delphi as well as one of Apollo (10.18.7) dedicated to commemorate a naval victory over the Carthaginians; Just. *Epit.* 43.5.8 (rC4e) also refers to the dedication of offerings to Apollo at Delphi.

The mint of Massalia struck silver coins from c.525/520 to 470/460 of the so-called Auriol-type, heavily influenced by contemporary Ionian issues (Furtwängler (1978)). From C5m Massaliote coins became more similar to the coins issued in Magna Graecia and Sicily, and down to C4e we can trace at least seven issues of obols weighing from 0.71 to 0.85 g, with types mainly reminiscent of those found in Sicily. Many of these issues carry the legend *ΜΑΣ*, *ΜΑΣΣ* or even *ΜΑΣΣΑΛΙΩΤΑΝ* (in the Doric dialect; Brenot (1992)). The minting of obols, although progressively of lower weight, continued until C3l (Brenot (1980)). In C4e begins the minting of a new and short-lived coin, a drachm weighing 3.75 g (called a “heavy drachm” to distinguish it from the “light drachm” weighing 2.65 g issued from C3l). Issues of this coin ceased in 360. It shows on the *obv.* Artemis Ephesia and on the *rev.* a lion similar to the lion on the coins of Elea; the legend is *ΜΑΣΣΑΛΙΗΤΩΝ* (this time in Ionic dialect; Brenot (1982)). It has been argued that all these coins were struck on the Phokaian standard, despite the different weights used in the different issues (García-Bellido (1994); *SNG Cop. Spain-Gaul* 708–28).

4. Rhode (Rhodetes) Map 25. Lat. 42.15, long. 23.20. Size of territory: ? Type: B:a. The toponym is *Ῥόδη* (Ps.-Skymnos 204; Steph. Byz. 546.4) or *Ῥόδος* (Strabo 3.4.8, 14.2.10); the city-ethnic is *Ῥοδήτης* (coins, *infra*) or *Ῥοδαῖος* (Steph. Byz. 546.4).

Rhode is called a *polis* in the urban sense by Ps.-Skymnos 202–4. Strabo 3.4.8 describes it as a *polichnion*. The internal collective use of the city-ethnic is attested by C4l coin legends (*infra*).

According to Strabo 14.2.10, Rhode was colonised by Rhodians prior to the foundation of the Olympic Games. Ps.-Skymnos (205–6; cf. Strabo 3.4.8) also alludes to a Rhodian foundation and to later Massaliote occupation (Ps.-Skymnos 203; cf. Strabo 14.2.10). Strabo 3.4.8 states that Rhode belonged to Emporion (no. 2). The sources thus seem to imply a double foundation, first by Rhodes and afterwards by Massalia (Strabo 14.2.10), or Phokaians from Massalia (Ps.-Skymnos 202–6), or, alternatively, by Rhodians and Emporitans (Strabo 3.4.8). The much debated Rhodian foundation must, however, be rejected (Dominguez (1990); Santiago (1994b) 59–63; Graham (2001) 36–37). The short and obscure reference by Strabo 14.2.10 to the causes of the Rhodian foundation of Rhode (*ἐπισωτηρία τῶν ἀνθρώπων*) may possibly be based on a foundation myth, but such a myth must be of a late date (Dominguez (1990)).

The only reference to public enactments is found in Strabo 4.1.4, where he alludes to the enacting by law of the honours owed to Artemis Ephesia. This goddess had a temple in Rhode (Strabo 3.4.8, 4.1.4) and was the patron divinity of the city (Strabo 3.4.8).

Although the site of the Greek city has yielded ceramic evidence dating to C6l(?) and C5 (Martín, Nieto and Nolla (1979) 326–27; Vivó (1996) 112), the earliest levels associated with habitation date from C4e (Puig *et al.* (1994–95) 128). However, the layout of the settlement at this date is almost unknown, since in C3e the city underwent a complete reorganisation which obliterated the previous houses; it has, however, been suggested that the layout was more or less

regular (Puig *et al.* (1996)); the C4e houses had foundations of large stones (Puig *et al.* (1994–95) 128); in C3e, the city was reorganised and enlarged with the construction of a new quarter on a regular plan, with streets crossing each other at right angles; some of the streets discovered so far are 4 m wide (Martín, Nieto and Nolla (1979) 269–311; Vivó (1996); Martín and Puig (2001) 59–60). In C3l a strong city wall was erected and enclosed all of the settlement (Puig *et al.* (1996) 243–44; Puig (1998b) 155–63); in its eastern course the wall perhaps served also to channel the river and to give way to harbour constructions (Puig (1998a) 118).

Rhode was perhaps considered one of the fortresses established by Massalia to protect the coast from barbarians living inland (Strabo 4.1.5); in addition, Strabo describes Rhode as a *πολίχνιον Ἐμφοριτῶν* (3.4.8). Clearly, these classifications must refer to different periods, but it is not known when and how Rhode was integrated into the Massaliote dominion, nor when it came under Emporitan control, though it seems that it came under Emporitan influence only in the Roman period (C3l/C2e).

Rhode apparently struck only a minor series of drachms, weighing 4.70 g, between C4l and C3e. Types: *obv.* head of a goddess, sometimes with a symbol (trident, dolphins); legend: *ΠΟΔΗΤΩΝ*; *rev.* rose, at first seen from above and afterwards from below (Campo (1992) 200; Villaronga (1994) 11–14). The standard used is the Phokaiian (García-Bellido (1994) 126–28) and it seems to be identical to the one used for Massaliote coins (Villaronga (1998); *SNG Cop. Spain–Gaul* 633–36).

SIKELIA

TOBIAS FISCHER-HANSEN, THOMAS HEINE NIELSEN, CARMINE AMPOLO

I. The Region

The name of the island was *Σικελία*, ἡ (Pind. *Pyth.* 1.19; Hdt. 5.46.1; Thuc. 1.12.4, 6.1.2; *IG* I³ 370.f.52 (418/17); *I.Delos* 104.117 (364/3); *IG* IV².1 95.60 (356/5)). The corresponding ethnic is *Σικελιώτης* (Thuc. 3.90.1; Xen. *Hell.* 2.2.24; Pl. *Ep.* 7.327b), which specifically denotes the populations of the Greek *poleis* on the island (Hellan. fr. 79a¹; Thuc. 4.58.1, 7.32.2, 57.11). It is used only externally: collectively it is used by e.g. Thuc. *loc. cit.*, Xen. *Hell.* 2.2.24 and *Corinth* 8.3 23.1 (341); individually, it is used in *IG* I³ 1369 *bis* (epitaph (C5I); cf. *IG* II² 10287–88, 10290 and *Agora* XVII 662, Classical epitaphs), and *IG* II² 69.9 (honorary decree (C4f)). The Greeks were not the only ethnic group inhabiting the island, which was already occupied when they arrived, a fact that is reflected in Classical expositions of the historical development of the nomenclature of the island: the early name was, according to Thuc. 6.2.2, *Τρινακρία*, ἡ, a name reflecting the physical form of the island (cf. Ephor. fr. 137b = Ps.-Skymnos 268; Diod. 5.2.1; Dion. Hal. *Ant. Rom.* 1.22.2; Strabo 6.2.1). This name was replaced by *Σικανία*, ἡ, coined from *Σικανοί*, the earliest historical population, which had been driven from their native Iberia, according to Thuc. 6.2.2 (cf. Hellan. fr. 79a; Hdt. 7.170.1; Diod. 5.2.1; Dion. Hal. *Ant. Rom.* 1.22.2).² *Sikania* itself was replaced by *Sikelia* upon the arrival of invaders from Italy; these were (a) the *Sikeloi*, according to Thuc. 6.2.4 (cf. Antiochos (*FGrHist* 555) fr. 4), and they defeated the *Sikanoi* in battle and gave their name to the island; (b) the *Ausones*, according to Hellan. fr. 79a, whose king *Sikelos* gave his name to the island and the invaders. Two other ethnic groups, the *Elymoi* (Thuc. 6.2.3)

and the *Phoinikes* (Thuc. 6.2.6), also inhabited the island before the Greeks arrived but did not give their name to it. On nomenclature, see further Manni (1981) 44–45 and Sammartano (1998).

Greek colonial communities began to be founded in Sicily in C8s. The earliest Greek colony was Naxos, which was founded by Chalkis (no. 365) in 735/4;³ Syracuse was founded by Corinth (no. 227) in 733/2; Megara was founded by mainland Megara (no. 225) in 728; Gela was founded from Rhodos and Crete in 689/8; and Zankle was founded, by Kyme (no. 57) and Chalkis or by Naxos, c.730.⁴ Such “primary” colonies as these went on to found “secondary” colonies of their own: e.g. Zankle founded Mylai in 716, and Himera in 648; Megara founded Selinous in 651/50 (Diod. 13.59.4; Euseb.) or c.628/7 (Thuc. 6.4.2); Syracuse founded Akrai in 664, Kasmenai in 644/3, and Kamarina c.598; and Gela founded Akragas c.580. The foundation of Greek *poleis*, however, was not exclusively a phenomenon of the Archaic period; thus, Hieron of Syracuse founded Aitna in 476; Tyndaris was founded by Dionysios I of Syracuse in 396; and Tauromenion was a foundation of C4f.

The initial Greek colonies were planted at suitable coastal sites, and not always at virgin sites. Thus, Syracuse superseded an indigenous settlement and may have reduced a native population to serfdom in the process (cf. the *Kyllyrioi* of Hdt. 7.155); Leontinoi and Naxos likewise replaced indigenous settlements, although at Leontinoi there was possibly cohabitation between Greeks and locals, at least for a period (Polyaen. 5.5).⁵ Note also that such phenomena as intermarriage between Greek and indigenous populations may

Luca Soverini, University of Pisa, collaborated with the authors in the compilation of the site databases, contributing valuable references and insights. We are grateful to Dr. Keith Rutter for comments on a draft of the chapter.

¹ = Constantinus Porphyrogenitus, *De thematibus* 2.10, p. 58 Bekker: τῶν δὲ νησιωτῶν οἱ μὲν ἰθαγενεῖς πάλαι Λίγυες ἐξ Ἰταλίας Σικελοὶ λέγονται, οἱ δὲ ἐπὶ γλυδὸς Ἑλληνεῖς εἰσι Σικελιώται.

² *Σικανία*, though most often synonymous with *Sikelia*, may initially have designated the region of the Sikanians only, traditionally settled in the western and central part of the island (cf. Arist. *Mete.* 359^b15 and Hsch. s.v. *Σικανίη*).

³ Recent attempts to discard Euboian colonisation in the West, on the basis of an argued lack of archaeological evidence (cf. e.g. Papadopoulos (2000) 135) are disregarded in this chapter. At Naxos, for instance, the influence of Euboian pottery has been amply demonstrated (Pelagatti (1981) 305–11; Lentini (1990), (1992) 11–14, 25), and evidence such as the spread of the Euboian alphabet to Etruria (Ridgway (1998) 315–16) and the onomastic evidence of the calendars (Trümpy, *Monat.* 39–43) support the literary sources for Euboian colonisation.

⁴ For the details of the foundation dates, see the entries in the Inventory below.

⁵ See the respective entries below.

be indicated by archaeology.⁶ However, the indigenous settlement pattern does not seem to have significantly determined where Greek colonies were founded.

The relationship between Greeks and indigenous populations cannot be treated here, but for some aspects of this problem, see the entries for the indigenous cities below.

According to Thucydides (6.2) and other literary sources, the Sikanians were Iberian fugitives and the first “post-heroic” settlers in Sicily, occupying the western and central part of the island to which they had been forced by later Sikel and other invaders, Morgetes and Ausones, from the mainland who settled primarily in the eastern part of the island (survey of sources: Bérard (1957) 448–58; Anello (1997)). The Elymians who settled in the westernmost part of the island, bordering upon the Phoenician colonies, were Trojan fugitives (literary sources: Manni (1981) 128–30). The cultural division of the island into mainly Elymian, Sikanian and Sikel regions, as in Thucydides’ account, has been seen reflected in corresponding cultural diversities in the archaeological material (Bernabò Brea (1957) *passim*), but this picture is probably too simplistic (Albanese Procelli (1997) and Leighton (1999) 215–68 for presentation of the archaeological evidence).

According to Thuc. 6.2.6, there were Phoenician settlements all over Sicily prior to the arrival of the Greeks; but when the Greeks arrived, the Phoenicians withdrew to Motya, Soloeis and Panormos; the reason was, Thucydides states, that they relied on an Elymian alliance (*ξύμμαχία . . . πύσωνοι τῆ τῶν Ἐλύμων*), and that this area was the closest to Carthage (*ἐντεῦθεν ἐλάχιστον πλοῦν Καρχηδῶν Σικελίας ἀπέχει*). Such a picture is not supported by archaeology, which, on the contrary, has shown that the Phoenicians arrived in Sicily more or less when the Greeks did (Leighton (1999) 225–32). Thus, the Phoenician presence cannot initially have determined the locations of Greek colonies.

The dates of foundation given above are derived primarily from the literary tradition and in particular from Thucydides, but partly also from archaeological evidence,⁷ two types of evidence that generally produce roughly similar dates. But there is obviously a risk of circular argumentation when a chronology of Greek Geometric pottery based upon the colonial dates furnished by the literary tradition is in its turn used to confirm the literary tradition (Burn (1935) 134–35; Bérard (1957) 279; R. Van Compernelle (1992)

776–78). This danger can only be avoided by employing a chronology of Geometric wares established by Near Eastern archaeology or by Near Eastern finds from Greek contexts, such as the scarab with the name of Bocchoris found at Pithekoussai (cf. most recently Hannestad (1996) and Morris (1996)). This is not the place for a detailed discussion of this problem, and three points must suffice.

(1) The study by Bérard, though dated in matters of detail, is still valid as regards its main conclusion: that the chronological *sequence* of the foundation dates as established by archaeological investigations is well in keeping with that established on the basis of the literary tradition (Bérard (1957) 279–99, esp. 299).

(2) A chronology of the foundation dates established solely on the basis of archaeological evidence does seem to confirm the traditional chronology, and a skeleton outline of the earlier foundation dates can be established on the basis of: (i) *Naxos*: ceramic finds from the earliest period of the settlement date to c.740–730, and thus confirm the traditional foundation date of 735/4 (and attest to ties with Euboia: Pelagatti (1981) 304–11; Lentini (1984–85) esp. 836–38, (1993–94) 1009); (ii) *Syracuse*: the archaeological evidence suggests a foundation date in C8s, and C8s habitation remains on Ortygia are similar to contemporary remains from Megara Hyblaia and Naxos (Pelagatti (1982) 126–27); the archaeological evidence is thus compatible with the traditional foundation date of 733;⁸ (iii) *Gela*: the traditional foundation date of Gela is 689/8 (Thuc. 6.4.3; Eusebios gives 691); however, there is archaeological evidence for Greek occupation already by C8l, and mortuary evidence too points to Greek presence in C8l (on both, see entry for Gela); thus, archaeological evidence attests Greek occupation of Gela prior to the traditional date of foundation, and this may suggest that the city was founded in two phases (Fiorentini and De Miro (1983); Fischer-Hansen (1996) 332–34); (iv) *Selinous*: Diod. 13.59.4 dates the foundation of Selinous to 651/50, whereas Thuc. 6.4.2 gives c.628/7. The earlier of these dates is supported by archaeological

⁸ Thuc. 6.3.1 (probably based on Antiochos of Syracuse, *FGrHist* 555); it is often overlooked that the Thucydidean foundation dates for Naxos, Syracuse and the other Sicilian cities, normally based upon the foundation date of Megara Hyblaia, which is independently dated to 728, is inaccurate because the foundation of Leontinoi and Katane was contemporary with the *arrival* of the Megarians in Sicily (Thuc. 6.4.1), not with the *foundation* of Megara, which took place somewhat later, though we do not know by how much (the “factor x” of Beloch; cf. Asheri (1979a) 91); Eusebios has 736 (for a table of the Eusebian colonial dates: Cook (1946) 77–78). On the other hand, Ephor. fr. 137a (= Strabo 6.2.2) maintains that Naxos and Megara were the earliest colonies, while Strabo 6.2.4 adds that Syracuse was founded at about the same time as these two cities (cf. also R. Van Compernelle (1992) 778–79).

⁶ See R. van Compernelle (1983) and Hodos (1997). However, for a critical assessment of the archaeological evidence, see Shepherd (1999).

⁷ See the details in the individual entries.

evidence from the recently excavated Buffa and Manuzza cemeteries (Tusa (1982) 191–94; Rallo (1982); cf. R. Van Compernelle (1992) 777–78), but the difference in chronology may not be significant (however, see Cook (1946) 73 for the view that trading posts may have preceded the colony proper where more than one foundation date has been transmitted); (v) *Himera*: the date of foundation of 648 is inferred from the notice that the city was inhabited for 240 years before its destruction in 408 (Diod. 13.62.4). There is sporadic evidence of a C7m settlement, supporting the traditional date of foundation, on the coastal plain below the upper plateau near the estuary of the river Himera (Vassallo (1997) 85–90).

(3) The chronological divergences found in several of the literary sources rarely amount to more than *c.*25 years, as for instance in the case of Selinous, where the foundation date is reported both as 651/50 and *c.*628, a discrepancy that is hardly significant for early Archaic history (Asheri (1979a) 94) and that is also acceptable in the classification of ceramic styles (Morris (1996) 58). Another caveat is that the different literary “dates of foundation” may possibly refer to different moments in the early history of a colony; accordingly, a rigid chronological framework should be avoided (Gras (1986) 11–13; Morris (1996) 55–57): sites may have been colonised in phases (see above for the example of Gela); foundations may have been the result of a colonial process evolved over a period, as for instance in the case of Megara Hyblaia, where the preliminary settlements at Trotilon and Thapsos failed. Pre-colonial Greek contacts established with indigenous settlements complicate the issue: there is widespread evidence of Greek presence in the colonial regions earlier than the traditional foundation dates.⁹ The chronological framework of these early contacts may depend on a revision of the dating of the “pendent-semicircle skyphoi” (Snodgrass (1994) 5).

In addition to the “historical” accounts of the foundation of colonies, there were mythical traditions incorporating the island into Greek horizons (Bérard (1957) 301–83, 392–97; Giangiulio (1983)). Thus, Thuc. 6.2.3 reports that the *Elymroi* were of Trojan descent, arriving after the Achaian sack of Ilion. Though not as pronounced in Sicily as in the case of Magna Graecia, such myths did sometimes function as charter myths for Greek colonial enterprises (Malkin (1998) 4, 20). Whether there is any direct connection between these heroic traditions and the widespread evidence of Mycenaean contacts with the West (Vagnetti (1991),

(1996) 152–59) remains an open question (Leighton (1999) 184–86). However, whereas Minoan contacts are not so far documented, Mycenaean contacts with Sicily (and South Italy), sporadic from C16 to C15, increased significantly in C14–C13, with Mycenaean presence attested for instance on Thapsos near Syracuse, on Lipari, and at Scoglio del Tonno (Taras) (Vagnetti (1991), (1996) 141–43, 152–53, 168). Late Bronze Age maritime trading posts and the hunt for metal resources and other trade goods determined the routes taken by later Greek expansion westwards. Indeed, trade must have played a paramount role in the early colonisation of the West: the development of the concept of trade, the significance of the historical trade links of Euboian and Phokaian traders, and the commercial aspect of C8–C6 colonisation have been traced in studies by Mele ((1979), (1988)). Commerce was at times closely associated with piracy and trade in slaves (for which see Morel (1984) 143). According to Thuc. 6.4.5, Zankle was founded by pirates from Campanian Kyme (no. 57), and according to Ephor. fr. 137a (= Strabo 6.2.2), Tyrrhenian pirates created difficulties for early Greek commerce in the region of the Straits of Messina. The importance of the trading route through the Straits has been treated on several occasions by Vallet (most recently in Vallet (1988)) and need not detain us here, but the links across the Straits between Zankle and Rhegion (no. 68), between Naxos and Lokroi (no. 59), and between Mylai and Metauros (no. 62), played a significant role in joining together the two coastal territories, creating a cultural and political *koine* (Vallet (1988) 172). Indeed, Rhegion and Zankle/Messana are most often treated together in regional studies.

Although there are obvious geomorphological differences between the individual sites, distinctions between “mercantile colonies” (e.g. Naxos?) and “agricultural colonies” (e.g. Leontinoi and Selinous), are not easily made (see also *infra*). Although most of the Sicilian colonies may have been primarily agrarian, they were located beside natural harbours offering coastal trade, or near river estuaries, providing access to the hinterland.¹⁰

The early Greek foundations seem to have developed quickly into *poleis*, and the very process of colonisation may have been of paramount significance here. Thus the earliest Greek lawgivers, Charondas and Zaleukos, may have been active in the West already from C7m, and these and later legislators from Sicily and South Italy won a certain renown.

⁹ The bibliography is too comprehensive to be cited fully here, but note Graham (1990) 45–52; Gras (1986) 7–8; Leighton (1999) 223–25.

¹⁰ The evidence of coin types is used by Lacroix (1965) 111–29 to demonstrate the importance of rivers and arable land for the location of the individual colonies.

Zaleukos of Lokroi Epizephyrioi is a shadowy figure, but he was known to Ephor. fr. 139 (= Strabo 6.1.8) and Demosthenes (24.139–41; cf. Musti (1976) 48–50, 72–81; Link (1992)); the legislation of Charondas of Katane was also used in other Chalkidian cities in Sicily (Arist. *Pol.* 1274^a23–24) and is attested at Rhegion before the tyranny of Anaxilas (Cordano (1978)).¹¹ In fact, the evidence for urban planning, territorial divisions and political architecture in the early colonies has prompted the suggestion that the early development of the *polis* as an institution took place, or at least was accelerated, in the colonial foundations (cf. e.g. Snodgrass (1977) 33 and (1994) 8–9; Ridgway (1992) 108–9; Polignac (1995) 118–27).

From their early history the Greek territories in Sicily became divided into main zones of influence, based upon the ethnic origin of the foundations (cf. Asheri (1979a) 105–39): a Chalkidian/Ionian zone,¹² and a Dorian one,¹³ although too rigorous a model is hardly tenable, since some foundations were of mixed origin, as borne out by the literary and archaeological evidence.¹⁴ Another issue complicating the question of the ethnic identities of the Greek colonies—this time their “Greek-ness”—is the fact that even if some colonies were planted at previously unoccupied sites (e.g. Naxos), others were certainly planted at sites already occupied by indigenous communities (e.g. Syracuse and Leontinoi); this raises questions of co-existence and reciprocal influences (Asheri (1996) 88–90, 96–101 with refs.). One long-lasting effect of the foundation of Greek colonies is the fact that many communities which were originally not of Greek ethnicity had by the Classical period—due to prolonged interaction, not always peaceful, with the Greek colonies—come to resemble Greek *poleis* to such a degree that they are for all practical purposes indistinguishable from Greek *poleis* “proper”. Such communities are included in the Inventory below as possible *poleis* (type C). Somewhat related to this phenomenon is the fact that sever-

al settlements, whose ancient identity is unknown and which are known exclusively from archaeological evidence, have all the appearance of Greek settlements, and are often indistinguishable from colonies proper (Asheri (1996) 77; cf. Osborne (1998) 264); such settlements may have been *poleis* but are here treated in the List of Pre-Hellenistic Settlements (*infra*).

An important feature of the C6 history of the Greek *poleis* in Sicily is the emergence of powerful dynastic tyrannies that extended their influence outside their *polis* of origin (Seibert (1982–83) 33–54) and were connected with each other by ties of intermarriage.¹⁵ Phalaris and Theron of Akragas expanded Akragantine influence as far north as Himera and subjugated vast tracts of land (see entries for Akragas and Himera). In C5e, Hippokrates of Gela expanded his rule significantly in north-eastern Sicily and made Gela a hegemonic power; however, his successor, Gelon, transferred his seat to Syracuse and proceeded to augment its population by incorporating the populations of several conquered cities as well as mercenaries (see entry for Syracuse). Gelon’s brother, Hieron, was installed as ruler at Gela, and the Deinomenid dynasty continued to rule Syracuse and most of Sicily until the fall of Thrasybulos in 466 (Luraghi (1994) 273–373). In contrast to Magna Graecia, where the Italiote League was created in C5l–C4e, the *poleis* of Sicily were never united in a league or federation, and what political unity there was consisted in the hegemonies of the great tyrants of Syracuse: according to Diod. 11.26.2, Gelon, after his defeat of the Carthaginians at Himera in 480, created a web of *symmachiai*, and his rule may almost be considered a political unification of the Greek part of the island, as may the rule of Dionysios I later. Even after the fall of the Deinomenids, Syracuse continued to play a dominant role in Sicilian history, in particular during the reign of Dionysios I. Tyranny as such continued to be a major characteristic of the Sicilian Greek *poleis* throughout the Classical period (see individual entries).

The Greeks often clashed violently with the Carthaginians. Initially, however, relations between Greeks and Phoenicians seem to have been good, and Selinous and Himera were for long periods at peace with the Phoenician world, exploiting the opportunities for trade and economic development (Tusa (1983) 302–14; Zahrnt (1993) 355–57). The expedition by Pentathlos to western Sicily c.580 (see Lipara (no. 34)) and the C6l adventures of Dorieus (Hdt.

¹¹ C6 fragments of a law code in the Chalkidian script from the settlement of Monte San Mauro (=Euboia?) have been ascribed to the legislation of Charondas (*IGSII* pp. 171–85; *IGDS* no. 15; van Effenterre and Ruzé (1994) I; Cordano (1986b)).

¹² Early Chalkidian/Ionian communities: Euboia, Katane, Leontinoi, Mylai, Naxos, Zankle.

¹³ Early Doric communities: Akragas, Akrai, Gela, Heloron(?), Herakleia Minoa, Kamarina, Kasmenai, Megara, Selinous, Syracuse.

¹⁴ e.g. Himera, which was founded by Ionian Zankle with a group of exiles (the *Myletidai*) from Dorian Syracuse (see entry for Himera). For archaeological evidence of mixed communities at e.g. Naxos, see entry for Naxos and Pelagatti (1981) 302; for Gela, see Fiorentini and De Miro (1983) 73–104 and Panvini (1996) 38–39. Cf. also Osborne (1998) 267–68, arguing for the widespread practice of private enterprise at the early foundations, which is likely to have produced ethnically mixed communities.

¹⁵ For intermarriage among the Emmenids of Akragas and the Deinomenids of Gela and Syracuse, see e.g. Vallet (1980); Luraghi (1994) 260–62. For a useful genealogical table of the two dynasties, see *Neue Pauly* iii (1997) 374.

5.40; cf. Herakleia (no. 21)) inaugurated a long period of intense conflict.¹⁶ Gelon of Syracuse and Theron of Akragas defeated a major Carthaginian invasion at Himera in 480, and C5–C4e is characterised by another serious conflict with Carthage, during which such major Greek *poleis* as Selinous, Himera and Akragas were sacked, and Gela and Kamarina abandoned (cf. Tusa (1979); Bondi (1979); Huss (1985) 100–23). During this conflict, Dionysios I rose to power at Syracuse, and under his aegis a peace treaty was concluded with Carthage which secured the civic rights of Selinous, Himera, Akragas and Gela. However, conflicts continued throughout C4e, with changing outcomes, and resulted in vast programmes of resettlement of the inhabitants of destroyed cities and the settling of mercenaries at cities such as the newly founded Tyndaris (McKechnie (1989) 35–42). Athenian decrees style Dionysios ὁ Σικελίας ἄρχων (IG II² 18.7 (394/3); IG II² 103.19 (369/8)), recognising the fact that he came to rule all of Greek Sicily, which was thus again united under tyrannical rule. Dionysios had interests outside Sicily: he waged war against the Italiote League, he founded colonies along the Adriatic, and as late as 369 he intervened in Greece on behalf of Sparta (no. 345). After the troubled interlude of Dion and Dionysios the Younger, and further conflicts with Carthage, Sicily experienced a significant revival in the 340s, when Timoleon of Corinth put an end to tyrannies, brought in new settlers, relocated citizens from destroyed cities, and refounded e.g. Megara, Gela, Akragas and other cities (Sordi (1961); Talbert (1974) esp. 146–60; Mossé (1999)). Several refoundations were of originally indigenous communities which became “Hellenised” and are described in the Inventory below.

The Inventory below describes forty-seven Greek *poleis* of various origins (Greek colonial foundations, “Hellenised” indigenous communities, Timoleontic refoundations). In addition, there existed in the part of the island under Greek influence¹⁷ the following twenty-nine noteworthy settlements which cannot be shown to have been Greek or “Hellenised” *poleis*.

1. Pre-Hellenistic Settlements not Attested as Poleis

Adryx (Ἄδρυξ) Philistos (*FGrHist* 556) fr. 61 (πόλις Συρακουσίων, but not a verbatim quotation; cf. Steph. Byz. 30.5: πόλις Συρακουσίων). Probably a Hellenised indigenous city within the dominion of Syracuse (no. 47). Location unknown; *Barr. C*.

Agathyrnon (Ἀγάθυρνον) Diod. 5.8.2 (1 mythical times, πόλις); Strabo 6.2.1; Steph. Byz. 11.22 (πόλις). Near Capo d’Orlando (*Barr.*). There are sporadic C5–C3 archaeological remains from the urban site and cemetery (Scibona (1985) 426). It had no mint of its own, but C4 bronze coinage of Tyndaris has *obv.* Apollo, legend: ΤΥΝΔΑΡΙΣ; *rev.* warrior, legend: ΑΓΑΤ (υρνος), which may refer to it and reveal some sort of relationship between the two sites (Lacroix (1965) 47; cf. entry for Tyndaris). *Barr. C*(?).

Akrilla (Ἀκριλλα) Steph. Byz. 63.11 (πόλις Σικελίας οὐ πόρρω Συρακουσίων). The encampment of Hippokrates in the vicinity of Akrilla in 213 (Livy 6.2, 35.4) indicates a location in the hinterland of Kamarina (no. 28), and the city is now most often identified with modern Chiaramonti Gulfi (so *Barr.*), where numerous remains of habitation cover also the C4 Greek period. The proximity of Akrilla to Kamarina and Syracuse (no. 47) suggests a strong degree of Hellenisation (Di Stefano and Marotta D’Agata (1987); Di Vita (1987)). *Barr. AC*.

Assoros (Ἄσσορος) *SEG* 30 1122 (city-ethnic, C4l–C3m); Diod. 14.58.1 (city-ethnic); Steph. Byz. 137.7 (πόλις). Located at modern Assoro (*Barr.*). Assoros was a Sikel community (Diod. 14.58.1, 78.1) and concluded a treaty with Dionysios I in 396 (Diod. 14.78.1); it is mentioned in the Entella inscriptions (Bejor and Morel (1984) 331; *SEG* 30 1122). There is archaeological evidence of Hellenisation from C5 (Morel (1963); Bejor and Morel (1984) 333), but Greek-style coinage begins only in C3l at the earliest (Head, *HN*² 127). *Barr. H*, but *C* according to Diod. 14.58.1, 78.1.

Ergetion (Ἐργέτιον) Philistos (*FGrHist* 556) fr. 10; Ptol. *Geog.* 3.4.7; Polyae. 5.6 (1C5e, πόλις); Steph. Byz. 275.10 (πόλις). Unlocated: the conquest of the city by Hippokrates (*infra*) suggests a location on the borders of the hinterland of Kamarina (no. 28) or of Leontinoi (no. 33), on the slopes of Etna; Manni (1976b) 614–16 opts for the plain of Leontinoi. However, the listing of Ergetion *after* Kamarina and Hybla Heraia (Ragusa?) and *before* Noai in the C3s Delphic list of *theorodokoi* (Manganaro (1964a) 434–35) may indicate a

¹⁶ Note, however, that even so there is evidence for Phoenician presence in the Greek *poleis*, e.g. Syracuse, perhaps in the role of artisans: Morel (1984) and Asheri (1992b) 167.

¹⁷ i.e. Phoenician/Punic sites are not included in the list, even though some were strongly Hellenised or possessed Greek institutions.

location north of Kamarina (cf. Giangiulio (1983) 825 n. 120, (1989) 345–46; Sinatra (1998)). According to Polyæn. 5.6, Hippokrates of Gela conquered Ergetion. *Barr. A.*

Hybla Geleatis (Ἦβλα ἧ Γελεᾶτις)¹⁸ Thuc. 6.62.5; Paus. 5.23.6 (πόλις, κώμη); Plut. *Nic.* 15.3 (πολίχωνιον). According to Thuc. 6.94.3, Hybla Geleatis was located between Kentoripa (no. 31) and Katane (no. 30); according to Paus. 5.23.6, it was a *kome* in the territory of Katane in Roman times. It is normally identified with modern Paternò, but the identification is not certain, though a Latin inscription with a dedication to *Venus Victrix Hyblensis* (*CIL* x.2 7013; Freeman (1891–94) i. 516; Manganaro (1964a) 432–33) was found in the vicinity. At 6.62.5 and 94.3, Thuc. presumably describes Hybla Geleatis as a Sikel community; according to Paus. 5.23.6, it was a barbarian community and housed a cult of more than local significance. For the anti-Douketian stance of Hybla Geleatis, see Diod. 11.88.6; cf. Manganaro (1964a) 432–33; Manni (1974) 66–71; and Giangiulio (1990a). *Barr. C.*

Hybla Heraia (Ἦβλα Ἡραία) Steph. Byz. 645.1 (πόλις); the text was emended by Clüver, whose emendation, though normally accepted, is rejected by Manni (1974) 61–65 and (1976b) 615–16. According to Hdt. 7.155.1, Hippokrates of Gela died at a city (πόλις) named Hybla fighting the Sikels; from the context, this Hybla was in the vicinity of Ragusa, the modern locality most often identified with Hybla Heraia. For the evidence for C6f Greek tombs at Ragusa, see Di Stefano and Marotta D’Agata (1996) 543–44. *Barr. AC.*

Hykkara (Ἦκκαρα) Thuc. 6.62.3 (πόλισμα); Timaios (*FGrHist* 566) fr. 23 = Ath. 327B (πολίχωνιον); Apollodoros (*FGrHist* 244) fr. 8 (πόλις); Diod. 13.6.1 (πολισμάτιον); Steph. Byz. 646.20–21 (φρούριον). Site and location unknown, though possibly to be located at modern Carini (so *Barr.* tentatively). Thuc. 6.62.3 describes it as Sikanian, whereas Timaios and Diod. (*loc. cit.*) describe it as Sikel. It was probably a Sikel city, and the degree of Hellenisation must remain uncertain, since the evidence is tenuous (Bejor (1990)). The city was taken and enslaved by the Athenians in 415 (Thuc. 6.62.3). *Barr. AC.*

¹⁸ Steph. Byz. 644.24–645.4 lists three communities called Hybla: (1) Geleatis/Gereatis (ἧ μικρά); (2) Heraia (ἧ δὲ ἐλάττων); (3) Megareis (ἧ μείζων) = Megara Hyblaia (?), cf. Ps.-Skymnos 277. The text in Stephanus is heavily corrupt; for an emendation offering a better reading, see Jacoby *ad* Philistos (*FGrHist* 556) fr. 20; cf. Manni (1981) 184–85. Archias, victor in Olympia in 364 (and on two other occasions) was from one of the Hyblas (*Olympionikai* no. 422), though which one is unfortunately unknown. For the location of the Hybla that played a role in the foundation of Megara Hyblaia, see Bernabò Brea (1968) 163, arguing for an identification with Pantalica.

Inessa (Ἰνεσσα) Thuc. 3.103.1 (πόλισμα). Sikel (Thuc. 3.103.1: Σικελικόν) site of unknown location west of Katane (no. 30). For its Greek occupation and phase, see Aitna (no. 8). The acropolis of the city was occupied by the Syracusans in 426 (Thuc. 3.103.1). According to Diod. 11.76.3, Gelon erected a temple there in honour of Demeter. The location of Inessa—most often identified with Cività—is still unresolved (Bombaci and Massa (1990) 290–93). *Barr. C.*

Inyx, Inykos (Ἰνυξ, Ἰνυκός) Hdt. 6.23 (πόλις); Pl. *Hp. mai.* 282e; Paus. 7.4.6 (πόλις); cf. Manni (1981) 192–93 and Massa (1990) 303–4. Historically, the city is known only from the imprisonment there of Skythes, *mounarchos* of Zankle, by Hippokrates, and his later escape to Himera, as told in Hdt. 6.23–24. The location of the city is unknown, but on the basis of Herodotos it was probably in the territory of Gela (no. 17; Massa (1990) 304–6). According to Pl. *Hp. mai.* 282e, Inykos was only a *chorion pansmikron*. The city is described as Sikel by Paus. 7.4.6 (cf. Manni (1976a) 186 n. 45). *Barr. C.*

Kakyron (Κάκυρον) *P. Oxy.* 665 = *FGrHist* 577, fr. 1. Uncertain location. Syracusan mercenaries took refuge here after the fall of the Deinomenids (*P. Oxy.* 665 = *FGrHist* 577 fr. 1); Ptol. *Geog.* 3.4.7 locates Kakyron (Müller prints Makyron, but suggests also Maktorion) north-west of Phintias (modern Licata). Kakyron is often identified with the modern site of Monte Saraceno (Adamesteanu (1956); Manni (1981) 151; *Barr.*; see Monte Saraceno, *infra*). *Barr. AC.*

Kale Akte (Καλή Ἀκτή) Hdt. 6.22.2 (proposed site of *polis* foundation). Marina di Caronia. A Sikel site, where the Zanklaians (no. 51) in C5e planned to found an Ionian *polis*. Zankle sent a delegation to Ionia and invited colonists, but the only positive response came from some Milesians (whose *polis* had been enslaved by the Persians) and Samian aristocrats who felt obliged to flee Samos on account of their participation in the Ionian Revolt (Hdt. 6.22). However, the colony never materialised owing to the intervention of Anaxilas of Rhegion (Hdt. 6.23); but c.446 the site was colonised by the Sikel leader Douketios with the assistance of Archonides I of Herbita and possibly Corinth (no. 227), whence Douketios may have set out (Diod. 12.8.2, 29.1; Maddoli (1977–78); Demand (1990) 55–57). Kale Akte is normally located in the vast region of Marina di Caronia, but the exact location of the ancient city is still uncertain (Scibona (1987) 9–12; recent investigations have not clarified the problem (Bonanno (1997–98) 433), although a fortified plateau with traces of a regular urban layout is described by Bonacasa Carra (1974) 111–12, table 6.3. *Barr. C.*

Kamikos (*Καμικός*) Hdt. 7.170 (*πόλις*), Strabo 6.2.6; schol. Pind. *Pyth.* 6.5a (*Σικελική πόλις*). According to Hdt. 7.170.1, Kamikos was in his day a possession of Akragas (no. 9; *πόλιν Καμικόν, τήν κατ' ἐμὲ Ἀκραγαντῖνοι ἐνέμουντο*; cf. Diod. 4.78.2); according to schol. Pind. *Pyth.* 6.5a, it was a Sikel town and was taken by exiles during the reign of Theron (cf. *RE* x. 1836–37; Berve (1967) 135); according to Strabo 6.2.6, it was a barbarian community. It was the legendary seat of Kokalos (Diod. 4.78.2; Strabo 6.2.6). Fischer-Hansen (2002) 134. *Barr. C.*

Maktorion (*Μακτώριον*) Hdt. 7.153.1 (*πόλις*). According to Hdt. 7.153.1, a *polis* located above (i.e. inland from) Gela (no. 17); Steph. Byz. 429.7, citing Philistos (= *FGrHist* 556, fr. 3), reports that it was founded by one Momnon (*Μόμνων*), a name which seems not to be Greek (though the text could be corrupted: Jacoby, *ad loc.*); its ethnic identity was, accordingly, presumably not (originally?) Greek. Its location is uncertain; it is normally identified with Monte Bubbonia (Manni (1976a) 187, (1981) 199; Bejor (1991) 305; *Barr.*, tentatively). *Barr. AC.*

Menai, Menainon (*Μεναί, Μέναινον*) Apollodoros (*FGrHist* 244) fr. 5 = Steph. Byz. 444.12 (*πόλις*); Diod. 11.78.5 (*πόλις*); Ptol. *Geog.* 3.4.7. From Diod. 11.78.5 and 14.78.7, it appears that Menai was situated in the vicinity of Morgantina (no. 37), and it has been identified with modern Mineo (Messina (1992); Holloway (1990) 148; *Barr.*; see also *Noai* below). Menai was founded by the Sikel king Douketios in 459, and in his report of the foundation Diod. 11.78.5 calls it a *polis* (*Μέναινον πόλιν ἔκτισε*), presumably in both the urban and the political sense. Diodorus' brief report leaves the impression of a city founded according to Greek principles, but its ethnic identity must originally have been Sikel, and at 14.78.7 (r396) Diodorus implicitly describes it as Sikel. At the presumed site of Menai (Mineo) are remains of a primitive Sikel Archaic circuit wall (Messina (1992) 147), attesting to activity at the site before Douketios' foundation in 459; a subsequent Hellenised phase is attested by finds from the C4–Hellenistic cemeteries (Messina (1992) 146–47). *Barr. C.*

Menai (*Μένοι*) Diod. 11.88.6. This is the *patris* of Douketios (Diod.) and was relocated to Palike in 453 (Diod.). Presumably not identical with the preceding Menai. Not in *Barr.*, but C (Diod.).

Motyon (*Μόττυον*) Diod. 11.91.4 (*φρούριον*). Uncertain location. Diod. 11.91.4 (r451) describes Motyon as a *phrouri-on* in the territory of Akragas (no. 9). It is not clear whether

it was a permanently settled site or simply a military installation. It was taken by the Sikel leader Douketios in 451, but recaptured the following summer by Akragantine forces (Diod. 11.91.1–4). The route of Douketios into Akragantine territory after the conquest of Aitna-Inessa (Diod. 11.91.1) suggests that Motyon was located in the north-eastern part of Geloan-Akragantine territory; the site of Sabucina, which is strongly fortified and reveals more indigenous traits than sites such as Monte Saraceno and Monte Bubbonia, may be the best candidate. However, the identification remains unresolved (Manni (1976a) 201–2, (1981) 206). *Barr.* = Vassallaggi, AC.

Omphake (*Ὀμφάκη*) Paus. 8.46.2 (*πόλισμα Σικανῶν*); Philistos (*FGrHist* 556) fr. 19 = Steph. Byz. 493.8 (*πόλις*). Uncertain location. According to Paus. 8.46.2 (cf. 9.40.4), Antiphemos, founder of Gela, sacked Omphake, a *polis* *Sikanon*, and took from that city an image made by Daidalos; if historical, the report implies that Omphake was conquered shortly after the foundation of Gela. Omphake was occupied by Syracusan mercenaries after the fall of the Deinomenids in 466/5 (*P Oxy.* 665 = (*FGrHist* 577) fr. 1). Omphake is normally identified with Butera (*supra*) in the foothills inland from Gela (no. 17; Manni (1976a) 185–86; Gargini (1993c) 462–63; Adamesteanu (1994–95); *Barr.*, tentatively). *Barr. AC.*

Palike (*Παλική*) Diod. 11.88.6 (*πόλις*), 90.1 (*πόλις*); Steph. Byz. 496.6 (*πόλις*). Palike was founded by the Sikel leader Douketios in 453 (Diod. 11.88.6) but was soon razed to the ground (*κατεσκάφη*) in unknown circumstances (Diod. 11.90.1; cf. Demand (1990) 55–57). The picture of Palike given by Diod. 11.90.1 is that of a city founded according to Greek customs, with strong walls and the *chora* portioned out in *kleroi*. The Hellenic inspiration seems apparent (cf. Bell (1984–85) 505–6; Demand (1990) 55–57). *Trinakria* has been thought to be an alternative name for Palike, and in that case Palike was destroyed by the Syracusans in 440 (Diod. 12.29.2; cf. Casevitz (1972) 106 *ad* 29.2), but the identification seems uncertain (Manni (1981) 237–38). Palike was situated close to the pan-Sikelian sanctuary of the *Palikoi*. The sanctuary was embellished with colonnades and other public buildings (Diod. 11.89.8 (r453)). The location and identity of the sanctuary near Lake Naftia north-west of Syracuse (no. 47) is confirmed by epigraphic evidence (Gentili (1962–63)). The plateau of Rocchicella above the sanctuary, with remains of Archaic and circuit walls, Classical(?) habitation structures, and Archaic architectural terracottas from a sacred building, is

now identified with the city of Palike (Martin *et al.* (1979) fig. 226; Manni (1981) 213; Di Stefano and Gulletta (1994) 281; Maniscalco and McConnell (1997–98)), which cannot therefore have been founded *ab novo* by Douketios. In *Barr.*, Palike is registered as unlocated but near *Palikon Limne*, cf. *Palicorum Stagna*.

Trinakie (*Τρινακίη*) Diod. 12.29.2 (πόλις). Sikel town of unknown location; for attempts at identification with such towns as Palike, Piakos and Triocala, see Manni (1976*b*) 609–10 and (1981) 237–38. According to Diod. 12.29.2–4, Trinakie was one of the leading Sikel cities in the time of Douketios and was destroyed by Syracuse (no. 47) after Douketios' death. *Barr.* C.

Tyrakinai (*Τυρακίνοι*) Steph. Byz. 642.9 (πόλις); listed in the C3s Delphic catalogue of *theorodokoi* (BCH 45 (1921) col. iv.101), between Heloron (no. 18) and Kamarina (no. 28), but unlocated (so *Barr.*, but see Messina (1991) for a suggested site with Hellenistic remains); the only indication that it existed in the Classical period is IG II² 10467, an epitaph for *Μενίσκη Τυρακίνη* dated “s.IV a.(?)”; Manganaro (1964*a*) 423–24, 433–34; Manni (1981) 240–41. *Barr.* H, but IG II² 10467 attests C if correctly dated to C4.

2. Unidentified Settlements

Butera Situated in the foothills of the Geloan plain c.12 km north of Gela (no. 17), and most often identified with Omphake (Bejor (1985); *infra*). There are no Archaic or Classical urban remains, but there is significant C7e evidence of Greek presence from the cemetery. C7–C6 votive finds and C5 architectural terracottas testify to extra-urban sanctuaries (Bejor (1985) 223). On the basis of the very unusual funeral rites employed in Greek C7 burials—the practice of *akephalia* (burial of the head separately from the body), with parallels only at Gela and Cretan Prinias—Adamesteanu (1994–95) interprets the C7 settlement phase at Butera as Cretan and fully Greek, and identifies it with Omphake, founded at the same time as Gela, but soon taken by that city (cf. Paus. 8.46.3). Fischer-Hansen (2002) 134–35. *Barr.* AC, s.v. Omphake, tentatively identified with Butera.

Monte Bubbonia Situated on the mountain ridge above the river Gela valley, c.20 km north-east of Gela (no. 17). A settlement that occupied a fortified plateau, with a sanctuary on a separately fortified acropolis. The ancient name is unknown; Omphake and Maktorion (so *Barr.*) have been suggested (Pancucci (1980–81) and (1992) with refs.).

Contacts with Gela are attested already by C7s, shortly after the foundation of Gela, and from that period onwards the site became strongly Hellenised: C6 *naiskoi* of Geloan type were erected on the acropolis; an orthogonally planned urban layout has been traced on a lower plateau; tombs at Monte Bubbonia employed Greek colonial burial customs; and tomb gifts were predominantly Greek. A C5f coin hoard (IGCH 2071, cf. p. 308) contains coins of Akragas, Kamarina, Gela, Himera, Leontinoi, Zankle, Messana, Selinous and Syracuse, Akanthos and Athens, and points to a wide commercial network. Fischer-Hansen (2002) 136–43. *Barr.* = Maktorion, AC.

Monte Desusino A hill-top site c.20 km west of Gela (no. 17), securing Geloan influence towards Akragas (no. 9) and the territory of the lower Himera valley. The ancient name is unknown, but the site has been tentatively identified with the *phourion* named Phalarion (Diod. 19.108.2). The impressive 5.5 km-long fortification has an Archaic phase constructed in irregularly sized and irregularly hewn blocks, but also with parts built in a more careful technique, known from the Greek walls at Leontinoi (no. 33). C4 refurbished walls, gates and urban layout are attributed to the period of Timoleon (Adamesteanu (1963) 27–31; Ghizolfi (1992) 332). Foundations on the highest part of the plateau of a major building, oriented east-west, have revealed Greek masonry technique and are attributed to a *naiskos* of Greek type. However, on the evidence of the sporadic finds of C6 Greek pottery and tiles, the Hellenisation of this site may have been rather tenuous in the Archaic period. Fischer-Hansen (2002) 149. *Barr.* = Phalarion? C.

Monte Gibil Gabel A fortified hill-top site 5 km south-west of Caltanissetta which secured the upper Salso valley in the region of Enna, with evidence of at first Geloan and later Akragantine influence. The ancient name is unknown. Remains of formal habitation scattered over more terraces may be primarily Timoleontic, as corroborated by numismatic evidence. However, there are several C6l Greek finds from the plateau and from the cemetery (Orlandini (1962) 99–101; Di Noto (1992); Wilson (1996) 100). A dry-stone circuit wall in indigenous technique is attributed to a C6m Hellenised phase; a later reinforcement is attributed to the period of Timoleon. A small C6e shrine is mixed native and Greek according to its structural details and finds. The indigenous tombs were replaced by Greek-type trench tombs in C6l. The few undisturbed graves have yielded Attic vases and a fragment of a terracotta statuette of Demeter. Fischer-Hansen (2002) 157. *Barr.* AC.

Monte Iudica Sikel settlement on a hill near Castel di Iudica, with sporadic remains of C8–C5 habitation and with some evidence of contacts with the Greek world from the Archaic period (Corretti (1992)); the cemetery is Hellenistic. The site has been tentatively identified with such ancient toponyms as Ergetion, Imachara (no. 26) and Herbita (no. 23; cf. Corretti (1992) 379; Wilson (1996) 75). Recently, Manni (1976b) 615 and (1981) 211 has tentatively proposed an identification with ancient Noai (tentatively followed by Barr.). Fischer-Hansen (2002) 172–73. For Noai, cf. Apollodoros (*FGrHist* 244) fr. 6 = Steph. Byz. 477.21 (πόλις).

Monte San Mauro Situated on a plateau c.25 km north-east of Gela (no. 17) in the border area between the Geloan and Chalkidian zones of influence—a strategic position commanding the upper Gela–Maroglio valley. The site occupies an extensive plateau with habitation areas, sanctuaries and cemeteries distributed over five separate hill-tops and adjacent slopes. The settlement has been identified with Omphake, or Maktorion, or Galeria (no. 16) or simply as a Greek settlement of unknown identity (Spigo (1979), (1986) 20). A recent suggestion identifies the site with Leontinoi's foundation of Euboia (no. 15), and the interpretation of the site as Chalkidian is supported by epigraphic evidence (*infra*). A monumental building has been interpreted as public or “administrative”, an interpretation supported by the finds from the building which include C6e fragments of a law code pertaining, *inter alia*, to homicide, written in the Chalkidian alphabet and tentatively associated with the law-giver Charondas (Cordano (1986b) 41; *IGDS* no. 15). C7–C6 habitation remains reveal some regularity of orientation, and some of the structures are remarkable for their typology (houses of *pastas* type) and for their contents (Lagona (1973) 297; Spigo (1986)). Apart from habitation, the buildings also served as workshops and magazines for the production of *pithoi* and *arulae*, which suggests the presence of a *temenos* of Demeter (Spigo (1979) 31–32). Fischer-Hansen (2002) 143–49. Barr. A, but some of the archaeological remains are C.

Monte Saraceno Settlement on a plateau above the river Salso c.20 km north of Licata (ancient Phintias). The ancient name is unknown; Adamesteanu (1956)—followed by Manni (1981) 151 and Barr.—suggests that it is to be identified with Kakyron (*supra*). In any case, the settlement, indigenous in origin but Hellenised from C7l (Micciché (1989) 31–34), secured Geloan-Akragantine influence in the upper Himera valley (Gargini (1993a)). By C6 Monte

Saraceno was Hellenised: a monumental temple and smaller *naiskoi* were erected on the acropolis (*supra*). From C6 the lower slope was urbanised and there are clear traces of urban planning of a type known from Akragas (no. 9)—probably a reflection of Akragantine expansion in the time of Phalaris (cf. Berve (1967) 130)—with the use of *plateiai*, *stenopoi* and even *ambitus*; urban remains offer richer evidence of Greek housing than Kamarina, Heloron, Kasmenai and Akrai (Calderone (1980–81)). There is evidence of workshop areas inside the habitation zones, but also of smaller *temene* (Calderone (1984–85) 536–38). Fischer-Hansen (2002) 149–52. Barr. = Kakyron?, AC.

Vassallaggi Settlement south-west of Caltanissetta in the Salso valley, c.40 km north of Licata (ancient Phintias). The identity of the site is unknown, but it is often identified with Motyon (so Barr.). The Greek influence in this originally indigenous settlement commenced in C6e (De Miro (1962) 143; cf. Micciché (1989) 56, 183 with refs.), and may be connected with the foundation of Akragas (no. 9) in 588. The increasing Hellenisation should probably be seen against the background of the Akragantine expansion under Phalaris (De Miro (1962); Berve (1967) 130; Luraghi (1994) 254–55). A regular urban layout is attested, with houses raised on terraces, and a single wide *plateia* dividing the habitation area into two sections (De Miro (1980) 723–24). C5m destruction levels have been interpreted as testimony (*ibid.*) that the city was Motyon, which was taken by Douketios in 451 (Diod. 11.91.1). The revitalisation of the site (*ibid.*; cf. Merighi (1963)) would in that case reflect the reconquest of Motyon by Akragas (Diod. 11.91.4). A *temenos* with a *naiskos* and altar is known from the habitation area; the votive remains seem to point to a cult of Demeter and Persephone (De Miro (1962) 143–44; Tusa and De Miro (1983) 246–50). An open space between *temenos* and gate is interpreted as an agora, and the overall urban layout shows similarities with the northern part of the Himera plateau. The tomb finds from the cemetery are primarily Greek (Orlandini (1971); cf. Johnston (1973)). The numismatic evidence from the site has revealed close C5s ties with Akragas (Merighi (1963)). Fischer-Hansen (2002) 153–57. Barr. = Motyon, C, but A is attested by C6e finds (*supra*).

It is clear that the majority of the sites listed here were indigenous communities. Indigenous communities, however, were affected by the presence of Greeks in various ways: a major Greek *polis* might conquer an indigenous community and incorporate it into its territory, as Akragas did in the case of Kamikos; Greeks might destroy indigenous

settlements (Trinakie); indigenous community founders would work with an eye to Greek traditions (Douketios; cf. Rizzo (1970) 58–66); or Greek ways of life might penetrate into indigenous populations (“Hellenisation”). Some of the indigenous communities may well have been city-states—e.g. the foundations of Douketios,—but apart from that there is very little evidence on the status of the sites listed above.

In some cases it cannot be decided whether a settlement was Greek or indigenous; this is true even of settlements referred to by historical writers (e.g. Maktorion), but the difficulties involved in establishing the ethnic identity of a given settlement is nicely illustrated by settlements known from archaeological evidence and not securely identified with an ancient toponym, such as Butera, Monte San Mauro and Monte Saraceno.¹⁹ These sites present a very strong degree of Hellenisation and may possibly have to be identified with Greek colonial foundations whose sites are unknown; e.g. Euboia (no. 15) may perhaps be at Monte San Mauro. However, they may also be the sites of Greek cities not mentioned by the written sources, or they may be indigenous communities, or communities of mixed ethnicity. Furthermore, although indigenous Sicilian settlements are normally fortified by means of earth and stone ramparts (Bonacasa Carra (1974)), several of the sites in question date to C6–C5, a period when these sites were often under Hellenic influence. Special circumstances or pressure of time made it convenient also at Greek sites to employ this technique, for instance at Himera and Kamarina (Bonacasa Carra (1974) 94, 115–18). The characteristic type of Sicilian *naiskoi* erected in Sikel settlements are often indistinguishable from the buildings known from the sanctuaries in the Greek colonies, and Greek cults, above all that of Demeter and Persephone, are widely attested at the indigenous

sites.²⁰ In other words, the interrelations of Greek and indigenous populations are very complex and cannot be approached *simply* in terms of “Hellenisation”.

It should also be noted that Greek influence and expansion were not always quietly accepted by the indigenous populations. In C6, the colonising expedition of Pentathlos of Knidos lost its leader when it supported Selinous in a war against Segesta (cf. Lipara (no. 34)), and the expedition of Dorieus was crushingly defeated by Phoenicians (cf. Herakleia (no. 21)).

A number of the Sikel settlements in the interior listed above reveal a high degree of Hellenisation by the early Classical period, the outcome of cultural change under the influence of the Greek cities on the coast. However, Greek influence, or even domination, crumbling under the pressures of internal strife, led to a C5f Sikel movement aiming at greater political autonomy. Such a movement has been linked to the democratic movements within the Greek cities, for instance at Syracuse, where the democratic faction invited the Sikel cities to support the revolt against Thrasyloulos (Diod. 11.68.1 (r466)).

The Sikel leader Douketios, variously called *hegemon*, *basileus* or *aphegoumenos ton Sikelon* (Diod. 11.76.2, 78.5, 88.6), appears in the sources for the first time in connection with the collaboration between Sikel tribes and the democratic party in Syracuse in 461/60.²¹ After the fall of the Deinomenids and the establishment of democratic rule at Syracuse there followed a period of internal consolidation and, with the help of Sikel tribes led by Douketios, Hieron’s settlers were expelled from Aitna/Katane and the city was resettled with its former inhabitants (Diod. 11.76.1–3). The Sikels had nursed a grudge against the inhabitants of Aitna since their occupation of Sikel land, and this land was now portioned out between themselves and the Syracusans.

However, Sikel territory remained independent of the Greek colonial cities, and Douketios founded a new city, Menainon (Diod. 11.78.5 (r459/8)), near or at Menai, his birthplace (cf. Diod. 11.88.6), somewhere on the inland edge of the plain of Katane. Douketios also distributed land in Greek fashion and extended his authority inland by the capture of Morgantina. Menainon/Menai are unlocated, the latter possibly to be identified with modern Mineo; however, the heartland of Douketian territory seems to have been the region of Caltagirone in central-eastern Sicily.

¹⁹ Settlements such as Monte Bubbonia and Monte Saraceno excavated in the 1950s and 1960s were defined as Greek *poleis* by their investigators, for instance by Adamesteanu: “we now have evidence of the Hellenisation of the interior regions, not only of the coast. These towns are characterised by their sanctuaries as formally Greek, and no longer indigenous settlements backward in their development. We are confronted by real Greek centres, the result of a fusion of indigenous and Hellenic elements—they were *poleis* already in the first half of the fifth century and not just insignificant indigenous settlements” (Adamesteanu (1956) 145). Some of the sites listed above may be connected with the historical cities of Omphake, Maktorion, Kakyron and show that these played a political, an economic and a cultural role not dissimilar to that of the coastal cities. The interpretation of the early investigators has been taken up by later scholars, for instance by Uhlenbrock, who defines the settlements at Monte San Mauro and at Monte Saraceno as anonymous sub-colonies of Gela (Uhlenbrock (1988) 122–23); the term *polis* is used for all the Hellenised Sicilian settlements by Bonacasa Carra (1974) 103; cf. Micciché (1989) *passim*.

²⁰ For exhaustive treatments of these Sicilian sites, see Micciché (1989); Domínguez (1989); and Fischer-Hansen (2002).

²¹ For surveys of the Sikel movement under Douketios, see Rizzo (1970), with Meister (1975); Sjöquist (1973) 50–60; and Consolo Langher (1997) 61–69.

Sikel self-assertion was by C5m strong enough to muster an uprising of the Sikel communities. A league of Sikel cities may have existed before Douketios, but it is attested in the sources for the first time during his rule. The Sikels entered into a Greek-inspired *synteleia* of “homoethnic” cities under the leadership of Douketios in 453 (Diod. 11.88.6), perhaps not merely a military alliance, though this is what Diodorus emphasises, but rather a wider economic and political collaboration (Manni (1976a) 201), and a new capital of the unified Sikels was founded at Palike (Diod. 11.90.1). Douketios modelled his foundations on the Greek *polis*—and cities such as Morgantina, Henna, Longane, Abakainon (for which see the entries below) and other centres listed above struck Greek-inspired autonomous coins from C5m. According to the sources, the *synteleia* excluded the city of Hybla, possibly because it was not considered a Sikel city proper but a city with a significant Greek element (Manni (1976a) 202).

Syracuse and Akragas reacted to the growing influence of the Sikel movement. Douketios had led campaigns against Aitna/Inessa, the Dorian-Sikel settlement which had received the *xenoi* expelled from Aitne/Katane, and later a Sikel anti-Akragantine stance led to the capture of the Akragantine *phrourion* Motyon. The threat to Akragas was averted with the help of Syracuse, which had been drawn into the conflict (Diod. 11.91.1 (r451)).²² A year later the Sikel alliance was defeated at Nomai by the Syracusans and Motyon was regained by the Akragantines; several of the Sikel survivors escaped to scattered forts and Sikel settlements (Diod. 11.91.2–4). Douketios, who had given himself up to the Syracusans, was sent into exile at Corinth (no. 227) (Diod. 11.92). However, with the probable connivance of Syracuse, which wanted to control Sicily’s Tyrrhenian coast, he returned a few years later with a contingent of Greeks to found the city of Kale Akte, in collaboration with Archonides, the ruler of Herbita (Diod. 12.8.2 (r446)). The foundation was seen by Akragas as evidence of Syracusan territorial ambitions and as a breach of the treaty between the two cities. In the ensuing battle, Syracuse defeated Akragas (Diod. 12.8.2–4), but Douketios and the Sikel movement gained little advantage. The death of Douketios in 440 hindered the establishment of new alliances and put an end to the Sikel movement (Diod. 12.29.1). Syracuse successfully stifled Sikel independence and subjugated the Sikel cities; only the city of Trinakie offered resistance (Diod. 12.29.2–4); this city is otherwise unknown and is possibly to be under-

stood as a symbolic name for a Sikel alliance, though it has also been identified with the cities of Palike or Piakos (Manni (1981) 237–38; Loicq-Berger (1967) 212). Heavy tributes were imposed on the Sikel cities subject to Syracuse (Diod. 12.30.1 (r439); Thuc. 6.20.4), but the settlements of the interior retained their independence (Thuc. 6.88.4). There are even traditions of democratic institutions, for instance the *ekklesia* at the indigenous site of Kentoripa (no. 31) (Diod. 13.83.4 (r406)).

The Sikels took the side of Athens during the first Athenian expedition to Sicily in 415 (Thuc. 3.103.1, 4.25.9); for the subsequent alliances of the Sikels and Athens, and for the military help offered by the Sikel cities, see Thuc. 6.45, 62.5, 88.4 and 7.57.11; Archonides of Herbita is specifically called a *philos tois Athenaiois* by Thuc. 7.1.4. Later, during the Carthaginian–Greek conflicts, the Sikels supported the Carthaginians (Diod. 13.59.6 (r409), 14.7.5 (r404)), though some Sikel tribes supported the Greek cities (Diod. 13.86.5). A number of indigenous cities obtained autonomy as an outcome of these conflicts, but most were later resubjugated by the Syracusans under Dionysios I. The Hellenisation of the Sikels gathered further momentum and is finally reflected in the C4 Timoleontic refoundations of Greek cities on several of the originally Sikel sites.

II. The *Poleis*

5. Abakainon (Abakaininos) Map 47. Lat. 38.05, long. 15.05. Size of territory: ? Type: B:β. The toponym is *Ἀβακαίνη, ἡ* (Diod. 14.90.3) or *Ἀβάκαινον, τό* (Diod. 19.65.6; Steph. Byz. 2.11). The city-ethnic is *Ἀβακαϊνός* (C4s coins, *infra*; Diod. 14.78.5; Steph. Byz. 2.15).

Abakainon is called a *polis* in the urban and political senses at Diod. 14.90.3 (r393) and 19.65.6 (r315), and in the urban sense at 14.90.4 (r393). The passage at 14.90.3 describes it as a *polis symmachis* of Magon, and in a later period it was part of the *symmachia* of Agathokles, alongside such *poleis* as Kamarina, Leontinoi, Katane and Messana (Diod. 19.65.6 (r315), 19.110.4 (r311)). The internal collective use of the city-ethnic is found on coins struck c.400 (*infra*), and the external collective use is found in Diod. 19.110.4 (r311).

In 396, Dionysios I deprived Abakainon of a part of its *chora*, which was handed over to his new foundation, Tyndaris (no. 49; Diod. 14.77.5). Abakainon was situated south-east of Tyndaris, at modern Tripi. The ancient city, destroyed by the modern, is poorly known. However, Diodorus’ report (14.90.3) that in 393 Carthaginian troops

²² For an analysis of the conflicts, see Manni (1976a) 201–4.

defeated by Dionysios took refuge in the city (*ἐφύγον εἰς τὴν πόλιν*) suggests that by this date it was fortified. There are sporadic Greek remains from C6, and substantial Greek remains from C4 (Villard (1954)); the investigation of the extensive cemetery north of the city has brought to light also monumental C4 tombs of the type known from Leontinoi (Bacci and Spigo (1997–98)); the city minted a Greek-style coinage from C5m (*infra*).

Abakainon struck silver coins (litra, hemilitron) from c.C5m: *obv.* laureate head, bearded (an indigenous god assimilated to Zeus) or beardless (assimilated to Apollo), or, on later coinage, female head (nymph, or Demeter or Persephone); *rev.* wild boar and acorn, at times a grain of barley or sow and piglet, legend: *ABA*, *ABAK* (above acorn) *IN* (below), *ABAK* (on *obv.*) *AINI* (on *rev.*), *ABAKAININON* (Head, *HN*² 118; Bertino (1975); *SNG Cop. Sicily* 1–6). In C4s, the city struck in bronze: (1) Probably from the time of Timoleon: *obv.* female head; *rev.* forepart of bull, or forepart of man-headed bull, legend: *ABA*, *ABAK*[*AINI*]*NON*, *ABAKAININON* (Head, *HN*² 118; Bertino (1975) 124–26; *SNG Cop. Sicily* 7); (2) c.344–338: *obv.* head of Dioskouros, legend: *ABA*; *rev.* “free horse”, legend: *ABA*; the *obv.* type may indicate influence from the mint of Tyndaris or, more generally, from southern Italy (Bertino (1975) 124–26).

6. Adranon (Adranites) Map 47. Lat. 37.40, long. 14.50. Size of territory: ? Type: B:a. The toponym is *Ἄδρανον*, *τό* (Diod. 14.37.5, 16.68.9; Steph. Byz. 28.1). The city-ethnic is *Ἄδρανίτας* (-ης): C4s coins (*infra*) and Diod. 16.68.9.

Adranon was founded by Dionysios I c.400, and in his report of the foundation Diod. 14.37.5 refers to it as a *polis* (*πόλιν ἔκτισεν*), presumably in both the urban and the political senses; it is called *polis* in the urban sense at Diod. 16.68.9 (r345/4); it is called a *polis mikra* in the urban sense at Plut. *Tim.* 12.2 and *polichnion* at 12.3. The chronological relationship between Adranon and the neighbouring indigenous site of Mendolito (contemporary or successive sites?) is as yet unclarified (Albanese (1991) esp. 548, 552–53).

The internal collective use of the city-ethnic is found on C4s coins (*infra*), and the external collective use in Diod. 16.68.9, 69.3 (r345/4). A *stasis* is mentioned at Plut. *Tim.* 12.2. In 344/3, Timoleon received Adranon into his *symmachia*, and the city presumably provided him with armed forces (Diod. 16.69.3; Plut. *Tim.* 12.6).

There are Greek finds from C6l at Adranon, but the majority of the finds from the habitation area and adjacent cemeteries belong to the Dionysian foundation and date

from C4–C3; the finds suggest a local production of red-figure pottery. The impressive ashlar isodomic double curtain-wall, enclosing an area of about 60 ha, probably dates from the period of Dionysios’ foundation (its gates are mentioned at Plut. *Tim.* 12.6). Votive deposits found within the urban area have revealed a sanctuary of Demeter. Survey of site: Marotta D’Agata and Spigo (1984). Adranos, identified by the Greeks with Hephaisstos and presumably the patron divinity of the city as well as a divinity honoured throughout Sicily, had a temple in the city (Plut. *Tim.* 12.2, 6; *LIMC* 1: 229–30).

Adranon began minting bronze coins under Timoleon: (1) *obv.* Apollo, legend: *ΑΠΟΛΛΩΝ*; *rev.* lyre; (2) *obv.* head of local river-god (Adranos?); *rev.* butting bull, legend: *ΑΔΡΑΝΙΤΑΝ* (Head, *HN*² 118–19; *LIMC* 1: 230; Karlsson (1995) 154–55 with refs.; *SNG Cop. Sicily* 10–12). A single known litra has *obv.* head of nymph; *rev.* bull, fish in exergue, and legends: *ΠΙΑΚΙΝΟΣ* and *ΑΔΡΑΝ*, a joint issue of Piakos (no. 43; possibly at Mendolito), and Adranon suggesting proximity and collaboration between these two communities (Jenkins (1975) 87–92; see also the entry for Piakos).

7. Agyrion (Agyrinaios) Map 47. Lat. 37.40, long. 14.30. Size of territory: ? Type: B:a. The toponym is *Ἀγύριον*, *τό* (Diod. 1.4.4, 14.9.2), *Ἀγουρίον* (Ptol. *Geog.* 3.4.7), or *Ἀγύρινα* (Steph. Byz. 23.19). The city-ethnic is *Ἀγυρναῖος* (Diod. 4.24.1).

Diodorus calls his native city a *polis* in the political sense at 14.9.2 (r404) and 14.95.4 (r392); the urban sense is found in 14.95.5 (r392); *politai* is found at 14.95.5–6. The internal collective use of the city-ethnic is found on C5l and C4 coins (*infra*), and Diodorus uses the collective city-ethnic e.g. at 14.65.5.

At 14.95.4–7 (r392), Diodorus describes Agyrion as ruled by the (Hellenised?) tyrant Agyris, allegedly the most powerful Sicilian ruler after Dionysios I; the city is described as walled (*τοῦ τείχους*, 14.95.6), as having an acropolis (14.95.5) and c.20,000 citizens (*πολίτας οὐκ ἑλάττους δισμυρίων*, 14.95.4), and Agyris as wealthy (*χρημάτων πολλῶν*, 14.95.5). Agyris concluded a *symmachia* with Dionysios I and campaigned with him *pandemei* (14.95.7).

In the time of Timoleon, Agyrion was ruled by the tyrant Apolloniades, who was, however, deposed by Timoleon, whereupon the Agyrians were granted Syracusan citizenship (Diod. 16.82.4; cf. Moggi (1976) 357, who suggests that the population was transferred to Syracuse (no. 47)). Timoleon later settled 10,000 new colonists in Agyrion

territory (ἡ Ἀγυρναία), said to be sizeable (Diod. 16.82.5; the territory (*chora*) is mentioned also at Diod. 14.95.2, from which passage it appears that in C4ε it extended as far as the river Chrysas). In view of Diod. 16.83.3, this was presumably a regular refoundation of Agyrion. It is there reported that the prosperity brought about by Timoleon (cf. R. P. A. Patanè (1992) 77) led to the erection of a splendid theatre, temples, a *bouleuterion*, an agora, a circuit wall with towers, and monumental tombs (Diod. 16.83.3); however, as Lewis (1994) 121 points out, Diodorus puts a suspicious amount of emphasis on his native city. But the appearance of the town in this report is clearly that of a Greek *polis* (cf. Hansen and Fischer-Hansen (1994) 85). Actual urban remains are scanty, and the archaeological evidence for cult sites is tenuous, consisting merely of a few architectural terracottas (Bejor (1984a) 63). The size and location of the theatre is, somewhat hypothetically, reconstructed on the basis of mediaeval documents (R. P. A. Patanè (1992) 77–80). The circuit wall, no longer extant but depicted on an eighteenth-century AD drawing, is dated to C4s on the basis of this evidence (ibid. 80–82).

A bronze coinage of Agyrion, revealing Akragantine influence, is known from possibly as early as C5m (cf. Bejor (1984a) 62), but at least from C5l, the period of the tyrant Agyris: *obv.* eagle with closed wings of Akragantine type; *rev.* wheel, legend: ΑΓΥΡΙΝΑ, ΑΓΥΡΙΝΑΙ, ΑΓΥΡΙΝΑΙΟΝ, ΑΓΥΡΙΝΑΙΩΝ (Head, *HN*² 124; *SNG Cop. Sicily* 126). C4s: *obv.* types: Herakles or Apollo or male head or river-gods; *rev.* leopard and hare or man-headed bull, legend: ΠΑΛΑΓΚΑΙΟΣ; horse, or female figure sacrificing or warrior, with legend on some issues: ΑΓΥΡΙΝ, ΑΓΥΡΙΝΑΙ or ΑΓΥΡΙΝΑΙΩΝ (Head, *HN*² 125; R. P. A. Patanè (1992) 69: from the period of Timoleon's refoundation; *SNG Cop. Sicily* 127–29). During Timoleon's rule Agyrion issued a series of *symmachia* coins: *obv.* head of Zeus or Athena or river-god, legend: ΕΛΕΥΘΕΡΙΟΣ *rev.* fulmen and eagle or club or free horse, legend: ΑΓΥΡΙΝΑΙΩΝ (Head, *HN*² 125; Cutroni Tusa (1980–81) 491; Karlsson (1995) 157, 163).

8. Aitna (Aitnaios) Map 47. Location of Aitna I as Katane, but Aitna I with a larger territory (Diod. 11.49.1), the location and territorial size of Aitna II being unknown. Type: A:α (I), A?:α–β (II). The toponym is Αἴτνα, ἡ (Pind. *Pyth.* 1.60; fr. 105a, Maehler); or Αἴτνη (Diod. 11.49.1; Strabo 6.2.3), though for example Diod. 11.66.4 and 67.7 (r466) calls it Κατάνη. The city-ethnic is Αἴτναῖος (C5f coins, *infra*; Pind. *Nem.* 9.30).

Aitna I Aitna (I) is called a *polis* by Pind. *Pyth.* 1.31 and 61, presumably in the urban as well as the political sense (cf. Hansen (2000) 175–76; cf. Diod. 11.66.4 (r466)). Δάμος is found in Pind. *Pyth.* 1.70. The internal collective use of the city-ethnic is found on coins (*infra*); the external collective use is found in Pind. *Nem.* 9.30. For the individual use of the city-ethnic, see below on the athletic record of Hieron and Chromios.

In 476, Hieron transferred the populations of Katane (no. 30) and Naxos (no. 41) to Leontinoi (no. 33), renamed Katane as *Aitna*, and settled his new foundation with 10,000 *oiketores*: 5,000 from the Peloponnese and 5,000 from Syracuse (no. 47; Diod. 11.49.2; cf. Schaefer (1961) 293); though the report on the relocation of populations refers to both Katane and Naxos, Katane (with parts of adjacent territories) was the site refounded as Aitna: καὶ τὴν μὲν Κατάνην μετωνόμασε Αἴτνην, τὴν δὲ χώραν οὐ μόνον τὴν Καταναίαν ἀλλὰ καὶ πολλὴν τῆς ὁμόρου προσθεῖς κατεκληρούχησε, μυρίους πληρώσας οἰκήτορας. (Cf. Strabo 6.2.3, who focuses exclusively on Katane in his report on the foundation of Aitna.) Deinomenes, Hieron's son, ruled the city as βασιλεὺς (Pind. *Pyth.* 1.60–61). Chromios was installed by Hieron as τῆς Αἴτνης ἐπίτροπος and so presumably was the guardian of Deinomenes while he was still a minor (Schol. Pind. *Nem.* 9; cf. *RE* III. 2454; Puech (1958) 19). Pind. *Pyth.* 1.62 says that Hieron founded the city Ὑλλίδος στάθμιας ἐν νόμοις, presumably indicating that Aitna was intended as a Dorian city.

After Hieron's death in 466, his brother Thrasyboulos enlisted the help of the Aitnaians in his unsuccessful attempt to suppress the uprising of the Syracusans against him (Diod. 11.67.7); at Aitna the rule of Deinomenes survived long enough for him to erect a commemorative monument for Hieron by Onatas at Olympia (Paus. 6.12.1–2, 8.42.8–10), but by 461 Hieron's settlers were expelled after long fighting (πλείοσι μάχαις) with Syracuse as well as with the Sikels under Douketios (Diod. 11.76.3); the original Katanaians returned (Strabo 6.2.3) and a new geopolitical arrangement followed (Diod. 11.76.3: κατεκληρούχησαν τὴν γῆν, i.e. the Sikels and the Syracusans). The Aitnaians retired to Inessa and founded a new Aitna (Strabo 6.2.3), on which see below, *Aitna II*.

With Diod. 11.49.2, scholars see Hieron's foundation as a “plan . . . thoroughly dominated by concern for mercenaries” (Demand (1990) 51), and Thrasyboulos indeed used Aitnaian forces in his power struggle at Syracuse (*supra*). In addition, Timaios (*FGrHist* 566) fr. 142a = schol. Pind. *Nem.* 1.1 and Diod. 11.49.2 stress another, personal, motive of

Hieron's: his wish to become an *ὀκιστής* with heroic honours (cf. Trumpf (1958) 131 and Harrell (2002) 444–47). Hieron did in fact receive heroic honours at Aitna (I) in his capacity as oecist (Diod. 11.66.4); according to Strabo, he was buried at Aitna (I), but his tomb was destroyed by the Katanaians on their return (6.2.3).

The phase of Aitna (I) is not archaeologically distinguishable from that of Katane (no. 30); however, the construction of the theatre (TGR II. 428–30, C5?) may perhaps be attributed to Hieron in the light of the tradition that Aischylos composed and performed *The Women of Aitna* in honour of the newly founded city (Aesch. fr. 25, Mette). C5 votives attest to a sanctuary of Demeter, highly suggestive given the importance of this cult for the Deinomenids (Dunbabin (1984) 64; White (1964)). The cult of Zeus became important at Aitna during the reign of Hieron (cf. Pind. *Pyth* 1.29; *Ol.* 6.96), an importance reflected in the type of a seated Zeus (Aitnaios) found on the coins of the new foundation.

Hieron won victories at Olympia and at Delphi (refs. in *Olympionikai* 221) and was proclaimed a citizen of Aitna (*Αἰτναῖος*) according to schol. Pind. *Nem.* 1.1 = Timaios (FGH Hist 566) fr. 142a, a custom followed by Chromios as well (ibid.). Chromios was victorious at the Nemean chariot race (Pind. *Nem.* 1, date uncertain) and in the same event at Sikyon (no. 228; Pind. *Nem.* 9, in 476 or 474).

Aitna soon struck coins: a single surviving tetradrachm, probably from the time of its foundation (476), has on the *obv.* quadriga with Athena as charioteer and a Nike above, as at Syracuse; *rev.* Zeus enthroned, holding thunderbolt and an eagle-tipped sceptre. A single surviving drachm has *obv.* horseman; *rev.* type similar to the tetradrachm. The *rev.* of both denominations carries the legend *ΑΙΤΝΑΙΟΝ* (Boehrer (1968) 76–79; Kraay (1976) 212). A magnificent tetradrachm with *obv.* head of a Silenos, legend: *ΑΙΤΝΑΙΟΝ*; *rev.* seated Zeus, was issued either by the Aitnaians a few years before 461 or by them as an inauguration issue when they refounded Aitna (II). This second issue also has litrai with *rev.* thunderbolt, legend: *ΑΙΤΝΑ(ΙΟΝ)* (Boehrer (1968) 80–98; Kraay (1976) 212–13; Manganaro (1996b) 308).

Aitna II The Aitnaians were expelled from Aitna (I) in 461, retired to Inessa, a Sikel site 80 stades inland from Katane on Mt. Etna, and refounded their community there, proclaiming Hieron *oikistes* and preserving the name of Aitna (Strabo 6.2.3; Diod. 11.76.3). The location of Aitna II is unknown, although various attempts have been made to identify the site (Bombaci and Massa (1990) 290–93). At its

foundation this new community was presumably a *polis*, as indicated by the proclamation of an oecist (Strabo 6.2.3; cf. also *infra* on coins), but its later history was tumultuous: in 451, Douketios took the city and in this connection Diod. 11.91.1 mentions a person whom he describes as *ὁ ἠγοούμενος αὐτῆς* (sc. *Αἰτνῆς*). Syracusan *hippeis* in conflict with Dionysios I took Aitna in 405 (Diod. 13.113.3), and the site formed the base of opposition to Dionysios (14.7.7, 8.1, 9.5); Dionysios sent *presbeis* urging the exiles who had gathered with the *hippeis* at Aitna to return to Syracuse, but the majority remained at Aitna (Diod. 14.9.6–8). In 403 the settlement (termed *phourion* in this connection) was taken by Dionysios (Diod. 14.14.2). In 396 Dionysios I persuaded the “Campanians living at Katane” to relocate to Aitna, and here it is again described as a *phourion* (Diod. 14.58.2), which is not incompatible with its being a *polis* (cf. Thuc. 8.62.3; Nielsen (2002)), but Dionysios obviously treated it as a dependency. Close connections with Syracuse may have been facilitated by the foundation history of Aitna. On the other hand, Syracusan control over the area of Aitna (II) may have a history going back beyond the original foundation: according to Diod. 11.26.7, Gelon planned to build a temple of Demeter at Aitna, but because of his death it was never completed (Diod. 11.26.7). However, the date (the reign of Gelon) reveals that the “Aitna” in question must have been Inessa (= the later Aitna II) and not Aitna I founded by Hieron only in 476, and so the passage reveals that Gelon held a dominion in the territory of Katane/Aitna II (cf. Freeman (1891–94) ii. 524–25).

If Aitna can be presumed to have remained a *polis* during all these events, its identity as a Hellenic *polis* may be uncertain after the settlement of Campanians at the site: in 396 Himilkon sent ambassadors to “the Campanians in possession of Aitna”, urging the city to cut its ties with Dionysios (Diod. 14.61.4), and Diod. 16.67.4 (r345) again refers to “the Campanians living at Aitna”; however, in 339 Timoleon “destroyed the Campanians at Aitna, having forced them to surrender by siege” (Diod. 16.82.4), and Aitna appears in the C3s list of Delphic *theorodokoi* in Sicily (BCH 45 (1921) 25, col. iv 96; Manganaro (1964a) 420, 432), presumably as a fully Hellenic community.

The *polis* status of C5 Aitna II is to some extent dependent upon the attribution to Aitna II of some litrai and, especially, of one C5m tetradrachm with *obv.* Silenos, legend: *ΑΙΤΝΑΙΟΝ*; *rev.* seated Zeus, cf. Bombaci and Massa (1990) 289 (*supra*). The stylistic affinity between this issue and issues of Naxos (no. 41) and Katane (no. 30) has been seen by some, though perhaps not entirely convincingly, as

evidence of a C5m *sympoliteia* between these cities in the face of Syracusan pressure (Bombaci and Massa (1990) 289). The Campanian mercenaries settled at Aitna II struck Timoleontic *symmachia* bronze coins in 342–339: (1) *obv.* head of Zeus Eleutherios, legend: ΖΕΥΣ ΕΛΕΥΘΕΡΙΟΣ; *rev.* thunderbolt, legend: ΑΙΤΝΑΙΟΝ (Bombaci and Massa (1990) 289; Karlsson (1995) 157; cf. Talbert (1974) 181, 187–88); (2) *obv.* head of Athena or Persephone, legend: ΑΙΤΝΑ[ΩΝ]; *rev.* “free horse” (Bombaci and Massa (1990) 289; *SNG Cop. Sicily* 13; *SNG Cop. Suppl.* 60).

9. Akragas (Akragantinos) Map 47. Lat. 37.20, long. 13.35. Size of territory: 5. Type: A:a. The toponym is Ἀκράγας, ἡ (Pind. *Ol.* 2.6; Thuc. 6.4.4), the city-ethnic is Ἀκραγαντῖνος (Hdt. 7.165; *IGDS* no. 182a).

Akragas is called a *polis* in the urban sense by Empedokles fr. 112.2 (DK): ἀν’ ἄκρα πόλεος (acropolis itself occurs at Diod. 13.84.3 (r406)), by Xen. *Hell.* 2.2.24 (cf. Pind. *Ol.* 2.93 and *Pyth.* 12.1) and by Ps.-Skylax 13 (where it is listed under the heading πόλεις Ἑλληνίδες αἰδε); in the political sense *polis* occurs in Thuc. 6.4.4, 7.46.1. The *politeia* was described by Aristotle (Arist. fr. 479); Empedokles has *patris* (fr. 157.2, DK) and ἄστν (fr. 112.1, DK).

The internal collective use of the city-ethnic is found on C5s coins (*infra*), the internal individual use in Empedokles fr. 157.1, DK. The external collective use is found at Hdt. 7.165 and in *IGDS* nos. 95 and 182 (C5); the external individual use is found in *Hesperia* 43 (1974) 322, no. 3.6 (331–324) and presumably in *IGDS* no. 182b (C5); it is applied also to Empedokles (e.g. Arist. *Cael.* 279^b16).

Akragas was founded by Gela (Thuc. 6.4.4), according to other sources with the participation of a Rhodian contingent (Pind. fr. 105, Bowra; Polyb. 9.27.8), 108 years after the foundation of Gela, i.e. c.580 (Thuc. 6.4.4), 100 years before the Olympic victory of Theron at the 76th Olympiad (476) according to Pindar (*Ol.* 2.166–69 with schol.). The oecists were Aristonoos and Pystilos (Thuc. 6.4.4). Of the two oecists mentioned in the sources, one may have come from Gela, the other from Gela’s *metropolis*, Rhodos (cf. Leschhorn (1984) 52–53; Musti (1992)). The archaeological evidence, above all that from the Montelusa cemetery, is in agreement with the time of foundation given by the literary sources (Waele (1971) 88–97; De Miro (1988b) 240–44). The institutions of Akragas were modelled on those of Gela (Thuc. 6.4.4: νόμιμα τὰ Γελάων).

The foundation of Akragas secured Geloan interests westwards. It is therefore not easy to map Akragantine and

Geloan spheres of influence since sites such as Vassallaggi and Sabucina may have had first a Geloan, later an Akragantine phase. However, territorial ambitions under Phalaris secured territory westwards to the river Halykos and Selinountine territory with the site of Minoa, a city founded by Selinous (Hdt. 5.46.2); a *palladion* taken as spoils from the city of Minoa was dedicated to Athena Lindia by the Akragantines (Lind. Chron. (*FGrHist* 532) fr. 30 = Xenagoras (*FGrHist* 240) fr. 17). A number of *phouria* laid out by Phalaris in Akragantine territory in the Himera valley are listed by Diod. 19.108.1–2 ((rC6); cf. Polyæn. 5.1.3), but the tradition that Phalaris had a *phourion* on the Eknomos hill may be a late fabrication; the site is normally located somewhere in the hills above Licata (Bejor (1989d)). Spoils captured from Kokalos dedicated to Athena Lindia are listed in the Lindian Chronicle ((*FGrHist* 532) fr. 27 = Xenagoras (*FGrHist* 240) fr. 14; survey of sources: Braccesi and De Miro (1992) 8–12). Kamikos, the seat of Kokalos, was somewhere in the Akragantine hinterland (cf. Hdt. 7.170.1, who calls it a *polis* inhabited in his day by Akragantines: πόλιν Καμικόν, τὴν κατ’ ἐμὲ Ἀκραγαντῖνοι ἐνέμοντο; Diod. 4.78.2; De Miro (1962)). Under Theron, Himera came within the Akragantine sphere of influence, and the domination of Akragas in the decade 483–472 is reflected in the crab appearing on the *rev.* of the coins of Himera (Hdt. 7.165; Bonacasa (1992); cf. the entry for Himera). The influence of Akragas over a vast area of central Sicily is inferred also from the circulation of C5 Akragantine bronze coins (Vassallo (1983)). The settlement pattern in the *chora* of Akragas is little known, and only a few suburban sanctuaries are known, among them the sanctuary dedicated to chthonic divinities at Palma di Montechiaro on the coast 20 km south-east of Akragas (Castellana (1994)). There is evidence of a number of C6 *phouria* and C6 Hellenised settlements along the coast between Gela and Akragas (Bejor (1987); Castellana (1994) 302–4). Plut. *Dio* 49.1 mentions a site in Akragantine territory called Νέα πόλις which is, however, unlocated. Diod. 13.81.3 (r406) refers to κτήσεις in the territory when it was evacuated in the face of the Carthaginian threat.

According to Diog. Laert. 8.63, Akragas had a population of 800,000 inhabitants at the time of Empedokles, an obvious exaggeration (Waele (1979)). According to Diod. 11.53.5, 4,000 Akragantines and Himeraians were killed in battle against Hieron in 472, but the number of Akragantines is not specified. At 12.8.4 Diodorus relates that a thousand Akragantines were killed at the battle of Himera in 446. At the time of the Carthaginian conflicts, Akragas had, accord-

ing to Diod. 13.84.4, 90.3, a population of more than 20,000 citizens and with resident foreigners not less than 200,000 inhabitants (cf. Waele (1979)).

The constitutional history of the city was eventful. Within ten years of its foundation, power was seized by Phalaris (c.570–554), who is described as a *τύραννος ἐκ τῶν τιμῶν* by Arist. *Pol.* 1310^b28. His reign was a period of expansion, with several victories over the indigenous population, in particular the victory over the Sikanian stronghold of Uessa (Polyaen. 5.1.4), and the conquest of Minoa; the Akragantine dedication to Athena Lindia of a *palladion* was booty taken from this town (Lind. Chron. (*FGrHist* 532) fr. 30 = Xenagoras (*FGrHist* 240) fr. 30). Phalaris may have extended Akragantine influence to Himera (no. 24), see Arist. *Rh.* 1393^b11ff., who reports that the Himeraians chose him as *στρατηγὸς ἀποκράτωρ*. The rule of Phalaris was followed by those of Alkamenes and Alkandros (Heracl. Lemb. 69). Though there may have been a democracy in existence before the tyranny of Theron (E. W. Robinson (1997) 78–80, based on Diod. 11.48.6–8), tyranny persisted at Akragas during C5f, and Theron (489/8–473/2), variously described as *μούναρχος* (Hdt. 7.165) or *βασιλεύς* (Timaios (*FGrHist* 566) fr. 93), with Gelon defeated the Carthaginians and their ally Terillos at Himera in 480 (Hdt. 7.166; Diod. 11.20–22); Theron's son Thrasydaïos was installed as tyrant in Himera (Diod. 11.48.6). Theron died after a reign of sixteen years and was honoured as a hero (Diod. 11.53.1–2); he was succeeded by Thrasydaïos in Akragas (Timaios (*FGrHist* 566) fr. 93), who for a year exercised power *παρανόμως καὶ τυραννικῶς* (Diod. 11.53.3). The subsequent conflict with Hieron and the fall of Thrasydaïos led to the establishment of a democratic government in 471 (Diod. 11.53.5) and the return to their native country of the *ἀρχαῖοι πολῖται*, who were given back their civic rights (Diod. 11.76.5). Empedokles is reported (by Diog. Laert. 8.66 = Timaios (*FGrHist* 566) fr. 2) to have put an end to an oligarchy “of the 1,000” (*τὸ τῶν χιλίων ἄθροισμα*) which had existed for three years, but refused the offer of *βασιλεία* (Xanthos (*FGrHist* 765) fr. 33; Arist. fr. 865), thereby obtaining a cessation of *stasis* and bringing about political equality (Neanthes (*FGrHist* 84) fr. 28). Exactly when this occurred is uncertain, but E. W. Robinson (1997) 78–80 assumes that it was some years *after* the fall of the tyranny, possibly c.454–442, and if so the city experienced a three-year oligarchic interlude.

Akragas took part in the war against Douketios (Diod. 11.91.3–4 (r451)). The rivalry with Syracuse led to a war which involved allies on both sides and ended in an

Akragantine defeat at Himera, with envoys concluding peace at Syracuse (Diod. 12.8.2–4 (r446), 26.3). The Athenian expedition to Sicily in 422 led to an alliance between Athens (no. 361) and Akragas in 422 (Thuc. 5.4.6); Akragas hindered the passage through its territory of troops allied with Syracuse (no. 47) in 415 (Thuc. 7.32.1) and remained neutral (Thuc. 7.33.2, 58.1); following a *stasis*, citizens friendly to Syracuse were expelled (Thuc. 7.50.1).

In C5l Akragas became involved in the Carthaginian invasion of Sicily. It did not succeed in bringing help to Selinous (no. 44) in 409 (Diod. 13.56.1), but received the survivors (Diod. 13.58.3). In its turn Akragas was besieged and taken by the Carthaginians in 406 (Diod. 13.85–89). The inhabitants took refuge first at Gela (no. 17) and afterwards at Leontinoi (no. 33; Diod. 13.89–90), and the city itself was destroyed by Himilkon (Diod. 13.108.2). The prosperity brought by the reign of Timoleon led to the refoundation of Akragas by Megillos and Pheristos of Hyele (Plut. *Tim.* 35.2; for the problem of an Ionian city refounding a Dorian city, see Talbert (1974) 204–5).

The existence of *archontes*, *boule* and *dikasterion* is attested for C5 (Timaios (*FGrHist* 566) fr. 134 = Diog. Laert. 8.64; cf. Asheri (1992a)). *Strategoï* and the *ekklesia* are attested for 406 (Diod. 87.4–5). The passing of a decree preparing for resistance against Carthage is mentioned in Diod. 13.81.2 (r406).

In 356/5 a citizen of Akragas served as *theorodokos* of Epidauros (no. 348; *IG* IV².1.95.11.91), and c.331–324 one of its citizens was appointed *proxenos* by Athens (no. 361; *Hesperia* 43 (1974) 322, no. 3). Reception of envoys is attested at Diod. 11.68.1 (r466); the sending of envoys is attested in Diod. 12.8.4 (r446).

The city was surrounded on the west by the river Hypsas and on the east by the river Akragas, with their confluence just below the city. Ancient remains at the estuary may attest harbour structures (Waele (1971) 4), and a small coastal trading station (serving as a harbour, cf. *epineion* at Strabo 6.2.5), contemporary with the foundation of Akragas, is inferred from the vast C6e–C5 cemetery on the Montelusa hill near the coast (De Miro (1988b) 240–44; earlier research: Waele (1971) 6).

Akragas lay about 4 km from the coast on a low sloping plateau surrounded on the north, east and south by a ridge of hills, the northernmost of which may have been the acropolis with a temple of Athena, the eastern and southern hills being occupied by other important sanctuaries. The steep slopes created natural defences, in part strengthened by walls raised on the crest of the hills (Polyb. 9.27.3–4). The

C6e circuit wall was built in local limestone in an ashlar technique. Eight or nine gates gave access to the city at natural openings in the ridge of hills (cf. P. Marconi (1929) 32–41, fig. 15). Diod. 13.81.3 refers to *τεῖχος* in reference to 406 when it was decided to evacuate the territory and take refuge behind the fortifications.

The hill of Athena, used as a retreat during the assault of the Carthaginians (Diod. 13.85.4 (r406)), is normally interpreted as the acropolis of the city (Polyb. 9.27.6). Polyb. 9.27.7 locates the temples of Athena and Zeus Atabyrios on the highest point of the city, but whether the Athenaion (probably the sanctuary of Athena Polias) and the temple of Zeus were located on the highest point of the mediaeval city of Girgenti or further south on the “Rupe Atenea” hill is still not clear; also all of the hills in the north and north-east may have constituted a single acropolis (Waele (1971) 217–22).

Akragas presents one of the most impressive examples of Sicilian urban planning. Although the fully excavated *insulae* are mainly of later date, the urban layout of the Archaic and Classical city may be reconstructed as an orthogonally planned city with *plateiai* oriented east–west, and *stenopoi* oriented north–south; investigations in the habitation area west of the Olympieion point to C6s–C5e for the overall urban layout (De Miro (1980) 711–15, (1992) 155). The north-western part of the city had a slightly different orientation. The urban area comprised c.625 ha including the surrounding hills, while the habitation area on the plateau comprised c.140 ha (Hoepfner and Schwandner (1994) 5). C5f witnessed significant building activity at Akragas (see e.g. Diod. 11.25), with several allusions to the high standard of living of the inhabitants (e.g. Heraclid. Pont. fr. 76, Wehrli; Diod. 13.81.4–5).

The *bouleuterion* and the *ekklesiasterion* were situated centrally in the urban layout on the small hill of S. Nicola (De Miro (1988a) 66, fig. 2). The hill was laid out as a sanctuary in C6, but from the C4 became the focus of civic structures, perhaps with a surrounding agora. The C4l *bouleuterion*, replacing C6–C4 temples, was built on the northern part of the hill on an artificial terrace supported by a new, monumental terrace wall which endows the area with some monumentality. The seating capacity was c.300 (De Miro (1985–86)). The *ekklesiasterion* was situated south of the *bouleuterion* on the southern slope of the S. Nicola hill (De Miro (1988a) 66, fig. 2). The *koilon*, covering about 1,250 m², had a seating capacity of c.3,000 (Hansen and Fischer-Hansen (1994) 57 with refs.). The excavators date the structure to C4–C3, though earlier dates have been suggested, such as the period of the refoundation of Akragas by

Timoleon, 339 (cf. Plut. *Tim.* 35.2), or even C5 (Greco and Theodorescu (1983) 45, 79). The open space north-east of the Olympieion sanctuary has tentatively been identified with a lower, mercantile(?) agora (Fiorentini (1990) 17).

Stoas are now known from the early urban history (De Miro (1977) 95–96). The remains of a theatre(?) mentioned by Fazello (sixteenth century AD) is surmised in the S. Nicola area, near the other public buildings, but there are no remains. A C5 fountain house was part of the sanctuary of Demeter below the Rupe Atenea (Siracusano (1983)). Public works begun after the victory at Himera in 480 included underground conduits to carry waste water away from the city constructed by the architect Phaeax. The “swimming-bath”, *kolumbethra*, mentioned by Diodorus, seven stades in circumference, probably fed the water supply of the city (Diod. 11.25.3–4 (r480); cf. also Waele (1971) 52, 113; Wilson (2000) 7).

The sources refer to cults of Zeus, Hera, Apollo, Athena, Demeter, Kore and Hermes (Waele (1971) 185–207). The epithet of the Athena of the sanctuary located on the acropolis (Diod. 13.85.4; Polyb. 9.27.7; *supra*) is uncertain. The Geloan-Rhodian origin of the settlers may suggest Lindia, but in Polyæn. 6.51 we have Polias. A Rhodian origin of the major city cults is corroborated by the Rhodian origin of the cult of Zeus Atabyrios located on the acropolis (Polyb. 9.27.7). According to Polyæn. 5.1.1, a temple was dedicated to Zeus Polieus, but it is most likely the same cult. A cult of Demeter is known from Pind. *Pyth.* 12.1–2 and from Polyæn. 5.1.1 (a *thesmophorion*). The cult statue of Apollo in a suburban Asklepieion (Polyb. 1.18.2) was the work of Myron (Cic. *Verr.* 4.43.93).

A survey of the remains of the urban sanctuaries comprises the following: C5e remains of a Doric temple (temple “E”) partly incorporated in the Christian basilica of S. Maria dei Greci, in the mediaeval city of Girgenti, possibly the temple of Athena Polias (P. Marconi (1929) 77–80; Waele (1971) 110). Rupe Atenea: at S. Biagio, a C5e *naiskos* (temple “C”) dedicated to Demeter (P. Marconi (1929) 66–72; Waele (1971) 199–200; Hinz (1998) 74–79). The row of sanctuaries on the southern crest of the city, from east to west: temple “D”, C5m, cult unknown (P. Marconi (1929) 72–76); temple “F”, C5s, cult unknown (ibid. 80–86); “Tempietto di Villa Aurea”, C6l, cult unknown (ibid. 46); temple “A”, C6l, cult unknown (ibid. 51–57; T. Van Compernelle (1989) 51–54); Olympieion (temple “B”), 480–c.440(?) (Diod. 13.81.1–4; Polyb. 9.27.9; Marconi (1929) 57–66; Bell (1980); T. Van Compernelle (1989) 60–68, (1992) 62–67). Archaic architectural terracottas from east of the Olympieion are taken as

evidence of an Archaic sanctuary in the vicinity, unknown cult (P. Marconi (1929) 46, 155–56). A sanctuary to the west of the Olympieion at gate 5; a C6s temple *in antis* and a “lesche” or *oikos*, from the C5 sanctuary enlarged with a stoa or porticus and other buildings (De Miro (1977) 94–100). Further west, the C5l temple “G”; in the cella, remains were found of an earlier Archaic *naiskos* (P. Marconi (1929) 86–87). Near the sanctuary of the chthonic divinities (Waele (1971) 195–99; Hinz (1998) 79–90): temple “I”, C5m; north of this, remains of two C6 *naiskoi* possibly superseded by temple “I” in C5m. The central part of the city, the S. Nicola hill, was laid out as a sanctuary with at least two temples in the Archaic period; the structure of one was partly reused in a C4e *naiskos*, the cult was possibly that of Demeter (Polacco (1988); Hinz (1998) 90–91). The identification of the C5s suburban sanctuary located between the city and the coast (P. Marconi (1929) 87–93) as that of Asklepios rests upon Polyb. 1.18.2, but must remain uncertain.

The only cemetery of the city itself yet examined in any detail is that of Contrada Pezzino west of the city, dating from the period of the foundation to C5l, and again from C4s (De Miro (1989)). Further cemeteries were dispersed along the roads leading south and east from the city.

Xenokrates won a Pythian victory in 490 (Pind. *Pyth.* 6) and an Isthmian victory in, presumably, 472 (Pind. *Isth.* 2); Exainetos (496), Empedokles (496) and Theron (476) won in the Olympic Games (*Olympionikai* 167, 170, 220), and Exainetos (*Olympionikai* 341, 346) was particularly honoured in 412 when he entered the city in a chariot and was escorted by all the chariots of the Akragantines, 300 chariots each drawn by two white horses (Diod. 13.82.7). According to Pausanias, Akragas set up a bronze group in Olympia to commemorate a C5e(?) defeat of the Phoenicians at Motya (Paus. 5.25.5; cf. LSAG 274), and a statue of Apollo was dedicated at Delphi 475–450: Ἀκραγαντινοὶ τ[ὸ]ν Ἀπόλλωνι (Bousquet (1959) 149–50). For the dedication of the spoils taken at Minoa to Athena Lindia by the Akragantines, see *supra*.

Akragas initiated coinage c.520/510 with an issue of didrachms on the Attic standard: *obv.* eagle standing in profile, legends: ΑΚΡΑΓΑΝΤΟΣ, or, later, ΑΚΡΑ, ΑΚΡΑΓΑΣ (see Brugnone (1978) for the use of the sign Α = alpha); *rev.* crab with, on some later groups, officials’ names or abbreviations. The terminal date of the first issue is a little before 470 (Jenkins (1970) 162–64; C. Boehringer (1984–85) 119–22; *SNG Cop. Sicily* 20–40). The tetradrachm replaced the didrachm as the main denomination c.464: main types as above, legend: ΑΚΡΑΓΑΝΤΟΣ (*SNG Cop.*

Sicily 41–45); also lower denominations based on the litra (*SNG Cop. Sicily* 46–51). Just before its destruction in 406, Akragas struck sophisticated issues, some signed, and some issues now used the city-ethnic as legend: ΑΚΡΑΓΑΝΤΙΝΟΝ (*SNG Cop. Sicily* 53), while ΑΚΡΑΓΑΝΤΙΝΩΝ is found in C4l–C3e. Rare gold issues from the same period (*SNG Cop. Sicily* 52) may reflect minting in response to the need to pay mercenaries (cf. Gela (no. 17)). The first bronze coinage of Akragas, from c.430, was cast shapes (Westermarck (1979); *SNG Cop. Sicily* 61–63); later coins were struck in bronze; types: *obv.* eagle; *rev.* crab, some inscribed ΑΚΡΑΓΑΝΤΙΝΟΝ (Vassallo (1983); Westermarck (1984); *SNG Cop. Sicily* 65–90). The city as refounded by Timoleon c.338 struck *symmachia* coins of the free horse type (Karlsson (1995) 161; *SNG Cop. Sicily* 91–92).

10. Akrai (Akraios) Map 47. Lat. 37.05, long. 14.55. Size of territory: ? Type: C.a. The toponym is Ἀκραί, αἱ (Thuc. 6.5.2; Diod. 23.4.1); Steph. Byz. 62.5 has Ἀκρά; the city-ethnic is Ἀκραίος (*IG XIV* 215.3 (C3)).

The only (implicit) reference to Akrai as a *polis* is in the treaty of 263 between Rome and Syracuse (Diod. 23.4.1), which lists the *poleis* assigned to Hieron II and uses *polis* in the political sense. The internal collective use of the city-ethnic is found in *IG XIV* 215; it is also found as the epithet of Zeus Akraios, if the conjecture by Wilamowitz is accepted (*IG XIV* 203).

Lack of the name of an oecist and of a mint are factors which make the *polis* status of Akrai uncertain and tend to suggest a military settlement protecting the territory of Syracuse (no. 47; Di Vita (1956), (1987)) rather than a *polis*. There are very few sources for the Archaic and Classical periods, and no mention of the city from between the period of its foundation (Thuc. 6.5.2) and the encampment of Dion in its vicinity (Plut. *Dio* 27 (r357)). All in all, the status of Akrai seems uncertain. Thucydides uses the toponym without qualification, implying, perhaps, a *phrourion* controlling Syracusan dominion, though it *may* possibly have been a dependent *polis* founded as a fortress (as has been suggested for Kasmenai (no. 29) by Hansen (1997a) 36).

Akrai was founded by Syracuse (no. 47) in 664 (Thuc. 6.5.2) c.36 km west of Syracuse itself, as the outcome of Syracuse’s policy of subjugating a large part of south-east Sicily (Di Vita (1987)). There is evidence for small nucleated settlements and farmsteads in the hinterland (Curcio (1979) 87–88; Marotta D’Agata *et al.* (1994) 196), but the size of Akraian territory is uncertain, and it was in any case part of the Syracusan dominion. A C4 relief of Demeter and Apollo

from Serra Palazzo, a few kilometres from Akrai, may indicate a suburban sanctuary (Orsi (1920)).

Akrai occupied a plateau west of modern Palazzolo Acreide between the upper reaches of the Tellaro and Anapo valleys. The city was defended by steep slopes and a circuit wall raised on the edge of the plateau. Only short stretches are extant, built as a solid ashlar wall dated to C4f (Bernabò Brea (1956) 21–25, fig. 9). *IG* XIV 217 (Hell.) mentions a *pyla Selinountia* (Pugliese Carratelli in Bernabò Brea (1956) 2; Manganaro (1965) 204–5 supplies an alternative reading). The urban site occupied the central part of the plateau, covering about 35 ha (Bernabò Brea (1956)). Evidence for the early urban history of Akrai is limited, early remains being sparse. The most conspicuous remains are the C3 theatre (Mitens (1988) 84–87) and the C2 *bouleuterion* (Gneisz (1990) 302). However, there are traces of early town planning which may go back to the time of foundation (Voza and Lanza (1994)). The east-west *plateia* spans the whole city from the Syracusan gate in the area of the probable agora, the theatre and *bouleuterion* to the Selinountine gate.

The C6s temple of Aphrodite on a hill above the city has a history going back to C7m (Bernabò Brea (1986); for the attribution: *IG* XIV 206, 208). There is epigraphic evidence for cults of Hera (*IG* XIV 208), Zeus Akraios (*IG* XIV 203: Διός [Ἄγο]ραίου, emended to [Ἄκ]ραίου by Wilamowitz), Artemis (*IG* XIV 217) and Kore (*IG* XIV 217; cf. Hinz (1998) 119). See further Pugliese Carratelli (1956) and Bernabò Brea (1986) 13.

The cemeteries of Akrai are located on the adjoining plateau south of the city, Contrada della Pineta (in use C7–C5) and on the Colle Orbo, located above the city outside the west gate (C7 and C6; Bernabò Brea (1956) 114–17).

11. Alaisa (Alaisinos) Map 47. Lat. 38.00, long. 14.15. Size of territory: ? Type: B:β. The toponym is Ἀλαίσα, ἡ (Diod. 14.16.2, 4). The city-ethnic is Ἀλαισίνος (C4m coins, *infra*; Diod. 23.4.1).

According to Diod. 14.16.2, Alaisa was founded by Archonides of Herbita in 403/2, in order to house veteran mercenaries, a *symmikton ochlon* that the war against Dionysios had brought to the city, as well as poor citizens of Herbita (no. 23) itself; in the report of the foundation, Alaisa is called a *polis* (πόλις ἔκτισεν Ἀλαίσαν), presumably in both the urban and the political sense. Another tradition held that it was a foundation by Himilkon of Carthage (Diod. 14.16.4). In the Roman period, however, the Herbitan origin of the city was considered a disgrace by its citizens (Diod. 14.16.3), and this may explain the variant tradition.

The internal collective use of the city-ethnic is found on C4s coins (*infra*), and the external collective use in Diod. 23.4.1 (r263).

Alaisa was member of Timoleon's *symmachia* (cf. Diod. 16.73.2 (r342/1)), as can be inferred from its minting of Timoleon's *symmachia* coins (*infra*).

Alaisa is identified with Castel di Tusa on the north coast of Sicily, where there are substantial remains of an ancient urban site: habitation structures that reveal an orthogonal layout with an agora; a circuit wall in ashlar technique; a monumental stoa; and remains of two temples, of which one must have been of Apollo (*infra*), all Hellenistic (Scibona (1976b)). The *epiklesis* of Apollo—Archagetas (*infra*)—is testimony to the importance of his cult.

Alaisa struck Greek-style bronze coins from the time of Timoleon's *symmachia* (c.340): *obv.* Apollo, legend: ἈΡΧΑΓΕΤΑΣ; *rev.* torch and stalks of barley, legend: ΣΥΜΜΑΧΙΚΟΝ (*SNG Cop. Sicily* 132); also Zeus Eleutherios type: *obv.* head of Zeus Eleutherios with short hair, legend: ΖΕΥΣ ΕΛΕΥΘΕΡΙΟΣ; *rev.* torch between ears of corn, legend: ΑΛΑΙΣΙΝΩΝ ΣΥΜΜΑΧΙΚΟΝ. Other types depict Apollo (legend: ἈΡΧΑΓΕΤΑΣ) and the nymph Sikelia (legend: ΣΙΚΕΛΙΑ). Lower bronze denominations have *obv.* griffin, *rev.* free horse, legend: ΚΑΙΝΟΝ (*SNG Cop. Sicily* 132–34). See Head, *HN*² 125–26; Talbert (1974) 188–89; Bernabò Brea (1975) 21; Karlsson (1995) 150, 165 n.3 with refs.

12. Alontion (Alontinos) Map 47. Lat. 38.05, long. 14.40. Size of territory: ? Type: C:γ. The toponym is Ἀλοντίον, τό (Dion. Hal. *Ant. Rom.* 1.51.2; Ptol. *Geog.* 3.4.2). The city-ethnic is Ἀλοντίνος (C4e coins, *infra*).

No source calls Alontion a *polis*, but it is included here on account of its C4e coins.

According to legend, Patron of Akarnania, guide of Anchises (Dion. Hal. *Ant. Rom.* 1.51.2; for the Akarnanian origin of Patron, cf. Fromentin (1998) 256 *ad* Dion. Hal. *Ant. Rom.* 1.51.2), settled at Alontion, which would seem to indicate a claim to Greek identity, and by C4e it minted Greek-style coins (*infra*). Alontion has been identified with San Marco d'Alunzio (Bruno (1963) 141–48), in origin a Sikel site, but with some evidence of C4 Hellenisation. The few documented Greek structures are the remains of a (probably Hellenistic) circuit wall built in isodomonic technique and a suburban temple. In addition, coin types suggest cults of Greek divinities (*infra*).

Alontion struck bronze coins from C4e: *obv.* head of Athena; *rev.* cuttlefish, legend: ΑΛΟΝΤΙΝΟΝ. According

to Karlsson (1995) 150, fig. 3, Alontion issued Timoleontic *symmachia* coins with the short-haired Zeus Eleutherios (but no refs. are given, *ibid.* 166 n. 3); Rutter (1997) 168 includes Alontion in his list of C4s Timoleontic *symmachia* coins.

13. Apollonia (Apolloniates) Map 47. Lat. 38.00, long. 14.35. Size of territory: ? Type: C:a? The toponym is Ἀπολλωνία, ἡ (Diod. 16.72.5). The city-ethnic is Ἀπολλωνιάτης (Diod. 16.72.5).

At 16.72.5, Diodorus reports that Apollonia, which with Engyon (no. 14) had been ruled by the tyrant Leptines, had its *autonomia* restored by Timoleon in 342/1; in his brief report of the incident, Diodorus refers to Apollonia as a *polis* in the political sense and uses the collective city-ethnic; it is called a *polis* in the urban sense at Diod. 20.56.4 (r307).

According to Steph. Byz. 106.4–5 (as emended by Clüver), Apollonia was located near Kale Akte and Alontion (i.e. on the north coast of Sicily), and urban remains on the plateau of Monte Vecchio, Commune of S. Fratello, have been identified with Apollonia; the remains testify to circuit walls and habitation structures built in isodomic masonry of local marble (Bernabò Brea (1975) 15; Scibona (1976a)). However, Manni (1981) 145 opts for modern Pollina, pointing out that according to Diod. 16.72.5, Apollonia was near Engyon. According to Diod. 20.56.4, the city was taken by Agathokles in 307 after a short siege, and this suggests that it was fortified by this date.

14. Engyon (Engyinos) Map 47. Lat. 37.45, long. 14.35. Size of territory: ? Type: C:a. The toponym is Ἐγγυον, τό (Diod. 16.72.3; Steph. Byz. 271.13, for which see Meineke *ad loc.*). The city-ethnic is Ἐγγυῖνος (Diod. 16.72.4, 6) and Ἐκγυ[ῖνος]?, cf. *infra*.

Engyon is called a *polis* in the urban and political (cf. *τυραννομένη*) senses at Diod. 16.72.4 (r342/1) in a passage which also uses the collective city-ethnic (cf. 16.72.6). In 342/1, the city was ruled by the tyrant Leptines, who was, however, deposed when Timoleon restored the *autonomia* of Engyon (Diod. 16.72.3–5).

According to Diod. 4.79.7, the famous sanctuary of the *Meteres* at Engyon was of Cretan origin (Manganaro (1996c) 130 n. 13 with refs.), perhaps an indication that Greek identity was claimed for the city (*infra*).

The location of Engyon is uncertain, though we are told that the neighbouring city was Agyrion (no. 7), located 100 stades away (Diod. 4.80.5). Manganaro has, on the basis of Hellenistic inscriptions (φα[τία] Ἐκγυ[ῖνων]?) on bullets found at Troina, suggested this as the site of Engyon, and the

possible attestation of a civic organisation with *phratriai* is of some importance as an indication of Greek identity (Manganaro (1964b), (1996c) 130; *contra* Manni (1976b) 606–7).

At Troina, the archaeological remains of a circuit wall and the evidence from tombs do not antedate C4m; there is no evidence of an original Sikel settlement. However, the identification of Troina with Engyon (accepted by Barr.) cannot be considered absolutely certain (Militello (1961); Bejor (1989a)).

15. Euboia (Euboicus) Map 47. Unlocated. Type: C:a. The toponym is Εὐβοία, ἡ (Callim. *Aet.* II fr. 43.52, Pfeiffer; Ps.-Skymnos 287; cf. Freeman (1891–94) i. 380: “Its name, recording the home-memories of the men of Leontinoi, is the earliest distinct instance of the name of a land being used as the name of a town; for there was a town as well as an island of Naxos, but there was no town of Euboia”); in Hdt. 7.156.3 the city-ethnic is given as Εὐβοεὺς (to which is added ὁ ἐν Σικελίῃ; cf. Camassa (1989a) 391–92: “uno specifico riferimento agli abitanti del centro [i.e. the city of Euboia] e non . . . una designazione dei coloni d’ascendenza euboica in Sicilia”). The site of Euboia is unidentified, but it was presumably located somewhere in the hinterland of Leontinoi (no. 33) where the presence of Chalkidian Greeks is well documented (Procelli (1989)). The city has been tentatively identified with different modern towns and localities (cf. Camassa (1989a) 392), most recently with the site of Monte San Mauro near Caltagirone (Frasca (1997)). Barr. (following Manni (1981)) suggests a location at the ACH site at Licodia Euboia.

The only Classical source to mention Euboia is Hdt. 7.156.3, which reports that Gelon subjected it to the same treatment as Megara, i.e. the *pacheis* received citizenship at Syracuse (no. 47) while the *demos* was sold into slavery; this ought to imply a Euboian population socially differentiated into *pacheis* and *demos*, and since the other communities relocated by Gelon were certainly *poleis*—*viz.* Kamarina (no. 28) and Megara (no. 36)—the presumption is that Euboia was a *polis* as well (cf. Seibert (1979) 226, 228). Strabo 10.1.15 also reports Gelon’s relocation of the city and implies that it meant a change of status for Euboia: it became a Syracusan *phourion*, and the inference is that it was a *polis* prior to that (Εὐβοία . . . ἦν Γέλων ἐξάνεστησε, καὶ ἐγένετο φρούριον Συρακοσίων; cf. the entry for Leontinoi, which became a *phourion* of Syracuse in the later 420s). Euboia is called a *polis* by Ps.-Skymnos 287 in reference to the time of foundation. The external collective use of the city-ethnic is found at Hdt. 7.156.3.

Only two events of Euboian history are known: its foundation and its destruction. It was founded by Leontinoi (no. 33) (Strabo 6.2.6). The date of the foundation is unknown and must be inferred from the context in which the literary sources mention it: Strabo 6.2.6 discusses its foundation together with the foundations of Himera (no. 24), Kallipolis (no. 27) and Selinous (no. 44), which may suggest a C7 date for the foundation; however, Ps.-Skymnos 287–88 treats the foundation alongside that of Mylai, so a C8l date cannot be entirely excluded. Eubolia's existence as a *polis* ended when c.485–483 Gelon sold its *demos* into slavery and relocated the *pachéis* to Syracuse (Hdt. 7.156.3; chronology: Dunbabin (1948) 416); after that it was a Syracusan *phrourion* (Strabo 10.1.15).

16. Galeria (Galarinos) Map 47. Unlocated (Manni (1981) 175–76; Scibona (1989) 536). Type: C:β. The toponym is *Γαλερία* or *Γαλαρία*, ἡ at Diod. 16.67.3, 19.104.1; the city-ethnic is *Γαλαρίνος* (C5m coins, *infra*).

Galeria is called a *polis* in the urban and political senses at Diod. 16.67.3 (r345/4); *politai* are mentioned at Diod. 19.104.1 (r312). The internal collective use of the city-ethnic is found on C5m coins (*infra*). According to Steph. Byz. 196.11, Galeria was a foundation by the Sikel Morgos; it is included here on account of its Greek-inspired coinage (*infra*).

Reception of an embassy is implied by Diod. 16.67.3 (r345/4): Entella sent for help against the Carthaginians, and Galeria responded by sending 1,000 hoplites, who were all killed.

Galeria struck two distinct issues of silver litrai. The earlier issue dates to C5m: *obv.* Zeus seated on throne holding eagle-tipped sceptre, legend: ΣΟΤΕΡ; *rev.* Dionysos standing, holding kantharos and vine, legend: ΓΑΛΑ. The iconography is known from coins of Aitna (no. 8) and Naxos (no. 41), but the style is indigenous. A later issue dates to 430–420 and is known from three specimens: *obv.* Dionysos holding kantharos and thyrsos; *rev.* vine and bunch of grapes, legend: ΓΑΛΑΠΙΝΟΝ (Head, *HN*² 139; Jenkins (1975) 83–85; Marwitz (1982) 56; Cutroni Tusa (1984–85) 290). The type depicting Zeus Soter seems to indicate a Greek cult (Gabrici (1959) 19; Marwitz (1982)).

17. Gela (Geloios, Geloaios) Map 47. Lat. 37.05, long. 14.15. Size of territory: 4 in C7; for the C6–C5e dominion, see below. Type: A:α. The toponym is *Γέλη*, ἡ (Hdt. 7.153.1) or *Γέλα* (*F.Delphes* III.4 452 (c.474); Thuc. 4.58). The uncontracted city-ethnic is *Γελοαῖος* (IGDS no. 132 (550–525)), contracted to *Γελῶος* (Hdt. 7.154.1; Thuc. 7.58.1; IGDS no. 158 (C5e)); the form *Γελαῖος* is found in *SEG* 24 303

(C6–C5), possibly an Ionic form, but see IGDS notes *ad* 132 and Cordiano (1995), who suggests reading *Φελέατας*, i.e. the city-ethnic of Hyele (no. 54), not Gela.

Gela is called *polis* in the political sense by Thuc. 6.4.3, and in the urban sense by Thuc. 6.4.3 and Theopomp. fr. 358. *Polites* occurs at Hdt. 7.155.1 and *astos* at Hdt. 7.156.2. Its *politeia* was described by Aristotle (Arist. fr. 491). A C5 bronze weight is inscribed *δαμοσ<ί>α* (IGDS no. 152). It is called *patris* in Empedokles fr. 156.4 (DK).

The internal collective use of the city-ethnic is found in IGDS no. 153 (C5e) and on C5 coins (*infra*). The external collective use is found in Hdt. 7.156.2 and Thuc. 7.58.1; the external individual use is found in IGDS no. 132 (550–525), *IV*O 142 (c.488) and *IG* II² 8460 (C4e).

Gela was founded 45 years after Syracuse, i.e. in 689/8, by colonists from Rhodos and Crete (Thuc. 6.4.3); according to Hdt. 7.153.1 by Lindians (no. 997) from Rhodos. The oecists were the Rhodian Antiphemos and the Cretan Entimos (Thuc. 6.4.3; cf. the C6–C5 dedication to Antiphemos: IGDS no. 135, indicating a cult of the oecist (Orlandini (1968) 44–46)). The colonists instituted νόμιμα Δωρικά at Gela (Thuc. 6.4.3). Early Geloan expansion into the hinterland may be inferred from the sack of Omphake, a πόλισμα Σικανῶν, by Antiphemos (Paus. 8.46.2 (rC7)); and conflicts between Geloans and the indigenous population are attested in other sources, e.g. Artemon (*FGrHist* 569) fr. 1 and the Lindian Temple Chronicle 25 = Xenagoras (*FGrHist* 240) fr. 12, which mentions an ἀκροθίνιον ἐξ Ἀρμιάτου dedicated to Athena Lindia by the Geloans. It was probably this expansionist policy that led to the foundation of Akragas (no. 9), which was founded 108 years after Gela's own foundation, i.e. c.580 (Thuc. 6.4.4; cf. Pind. *Ol.* 2.93 with schol. 576).

The plateau of Gela dominated the coastal plain and the vast inland lowland. Apparently, the plain was mainly agricultural and without settlements. It was delimited by a row of hills settled with indigenous sites which all came under Geloan influence in C7f, soon after the foundation of Gela. Two of the larger cities were Omphake (perhaps modern Butera: see most recently Adamesteanu (1994–95) 113), subjected by Gela early on (*supra*), and Maktorion (possibly modern Monte Bubbonia: Bejor (1991) 305). The tracts along the valleys of the rivers Salso (ancient Himera), Dessueri and Maroglio (ancient Gela and its tributaries) came under Gela's influence from C6e, as far inland as Caltanisetta (sites of Sabucina; Gibil Gabib) and Caltagirone (site of Monte San Mauro, perhaps a Chalkidian settlement and therefore on the edge of the Geloan area of influence) (Orlandini (1962); see Eubolia (no.

15)). Eastwards the border between Gela and Kamarina (no. 28) was marked by the Dirillo valley, with a rural sanctuary at Feudo Nobile dedicated to chthonic divinities (Canzanella (1989)). Westwards Geloan influence may have reached as far as the river Platani (ancient Halykos), the eastern frontier of Selinous (no. 44). In C7 the immediate hinterland of Gela comprised an area of about 375 km², but the period of Hippokrates and Gelon saw a Geloan dominion comprising large tracts of north-east (Chalkidian) and south-east (Syracusan) Sicily. Philistos (*FGrHist* 556) fr. 5 implies a C6m treaty of *symmachia* between Gela and Kamarina, and possibly between Gela and Syracuse (no. 47).

From c.505, Gela was governed by tyrants, beginning with the rule of Kleandros and Hippokrates, sons of the Olympic victor Pantares (*Olympionikai* 151). Kleandros was tyrant for seven years (Hdt. 7.154.1; Arist. *Pol.* 1316^a37), and after him his brother Hippokrates took over τὴν μουναρχίην, also for seven years (Hdt. 7.155.1; cf. 6.23.3 and Thuc. 6.5.3: *τύραννος*). Hippokrates conducted an aggressive foreign policy both against the indigenous population (Hdt. 7.154.2–3) and against the Greek cities of Kallipolis (no. 27), Naxos (no. 41), Zankle (no. 51) and Leontinoi (no. 33), all of which he “enslaved” (Hdt. 7.154.2). He also managed to defeat the Syracusans in battle and to lay siege to their city, but this conflict was settled through arbitration by Corinth (no. 227) and Korkyra (no. 123) by which Syracuse had to cede Kamarina to Hippokrates (Hdt. 7.154.2–3). Kamarina was then refounded by Gela with Hippokrates as oecist (Thuc. 6.5.3; Philistos (*FGrHist* 556) fr. 15). When Kamarina was destroyed by Gelon in 484, the Geloans refounded it once again c.461 (Thuc. 6.4.3; Diod. 11.76.5); see further Berve (1967) 137–40. Zankle and its ruler Skythes were dependent allies of Hippokrates (Hdt. 7.154.2; see Zankle/Messana (no. 51)).

On Hippokrates’ death, the citizens of Gela attempted to free themselves from tyranny, but Gelon, the former *doryphoros* of Hippokrates, defeated them in battle and took power (Hdt. 7.155.1). When in 485 Gelon became tyrant of Syracuse, he moved his seat as well as “more than half” of the Geloan *astoi* to that city (Hdt. 7.156.2). The government of Gela was entrusted to Gelon’s brother, Hieron (Hdt. 7.156.6), who later inherited the tyranny of Syracuse and was succeeded at Gela by another brother, Polykalos (*F.Delphes* III.4 452: [Γ]έλας . . . ἀ[ν]άσσει[ον]). Tyranny at Gela presumably came to an end in 466/5 (Berve (1967) 141).

In 405 Himilkon besieged, pillaged and destroyed (?) Gela (Diod. 13.108–111.1–2), and after the defeat of Dionysios the peace treaty between Carthage and Syracuse (no. 47)

stipulated that Gela be an *ateichistos* tributary of Carthage (Diod. 13.114.1; *Staatsverträge* 210). Gela was one of the Timoleontic refoundations (Plut. *Tim.* 35.1–2; Talbert (1974) 153–55, 204).

Our sources for the military strength of Gela provide us with scanty information about the size of the *polis*: a contingent of 500 *hippeis* is mentioned by Diod. 13.83.2 (rC5s; cf. Timaios (*FGrHist* 566) fr. 26a). In 415, during the Athenian attack, 200 Geloan cavalry assisted Syracuse (Thuc. 6.67.2), and the same number was sent in 413 (Thuc. 7.33.2). In 414 a small contingent from Gela under the command of Gylippos marched to the support of Syracuse (Thuc. 7.1.5), and in 413 a navy (*nautikon*) of five ships as well as 400 *akonistai* were sent to Syracuse (Thuc. 7.33.1). At the battle of Himera in 406 a contingent from Gela fought at the side of Kamarina (no. 28) and Syracuse (no. 47) (Diod. 13.86.5). A C6–C5 Geloan defeat at the hands of Rhegion (no. 68) is attested by *SEG* 24 303.

Civil war is attested, as in all other major Sicilian *poleis*: an early *stasis* (C7–C6) was resolved without bloodshed by an ancestor of Gelon (Hdt. 7.153.2). Another *stasis*, in which Dionysios I interfered, is mentioned for the year 406: the *demos* rose against the *despoteia* of the *dynatotatoi* and succeeded owing to Dionysios’ assistance; in this connection the *ekklesia* and *psaphismata* are mentioned (Diod. 13.93.2–4; Berger (1992) 23–25).

Diplomatic activities comprise reception of envoys (implied by Diod. 11.68.1 (r466)) as well as sending of envoys (Timaios (*FGrHist* 566) fr. 22 (r424); Diod. 13.93.4 (r406)). In 424, Gela hosted a pan-Sicilian peace congress, which had developed from an *ekecheiria* between Kamarina (no. 28) and Gela (Thuc. 5.58, 65; Timaios (*FGrHist* 566) fr. 22). A Geloan served as Epidaurian *theorodokos* in 356/5 (*IG* IV².1 95.11.83). Another was appointed Samian *proxenos* in C4l (*IG* XII.6 33).

The rulers of C5f Gela displayed their power at the Panhellenic sanctuaries. Gelon was victorious at Olympia in 484 (*Olympionikai* 158; *IvO* 143 and Paus. 6.9.4; Harrell (2002)); and Polykalos was victor at Delphi c.478 (*SEG* 3 396; *LSAG* 266, 275 no. 9; *F.Delphes* III.4 452; cf. Harrell (2002) 460–62). For Gelon’s donations at Delphi: *Syll.*³ 33–34 (cf. Harrell (2002) 453–55). Gela had a *thesauros* at Olympia (Paus. 6.19.15), a richly furnished C6m building, restructured in C5f (Mertens-Horn and Viola (1990) 238–39). Communal consultation of oracles is implied by Diod. 13.108.4, which also attests to an internal communal dedication of a bronze image of Apollo.

The city occupied the east–west-oriented coastal plateau, and during C7–C5 a part of the lowland plain to the north

(Spagnolo (1991)). The easternmost part of the plateau, with C7 sanctuaries, is normally regarded as the acropolis of the city (there is no ancient attestation of the term). The monumental C6 temple was replaced by a C5e temple located further east (Orlandini (1968) 21–25; T. Van Compernelle (1989) 68–69). The major divinity of the sanctuary was Athena, probably Athena Lindia (Fischer-Hansen (1996) 322–27 with refs.). There are clear signs of some continuity of Greek occupation during the C4f and of continuity of cult.

The central part of the plateau was probably the main habitation area in the Archaic and early Classical periods, delimited further to the west by the early cemeteries (Shepherd (1995) 60–70). There is evidence of C8l Greek occupation, a pre-colonial phase apparently supporting the statement by Thuc. 6.4.3 that an area of Gela called Lindioi was occupied before the founding of Gela (for a colonisation of Gela in two phases, see Wentker (1956); Fiorentini and De Miro (1983)). (Mortuary evidence, too, indicates a Greek presence from the end of C8.) Architectural terracottas have revealed a large sanctuary, consisting of at least two monumental temples (Fischer-Hansen (1996) 327–32 with refs.); the identity of the divinity is uncertain; Orlandini (1968) 31 suggests Zeus Atabyrios.

No traces of a circuit wall from the period of foundation have been found so far, though the existence of—presumably early—walls is implied by Thuc. 6.4.3. There are remains of a C6 circuit wall, possibly raised in connection with C6l civic strife (Orlandini (1961) 141–44), or, if in part of later origin, in connection with the threat of the Carthaginians in C5l (De Miro and Fiorentini (1976–77) 434–35). Fortifications in C4l are attested by Diod. 19.107.5 (r317) and 19.110.2–3 (r311).

Little is known of the habitation area on the plateau (Buongiovanni and Canzanella (1990) 13). The Archaic city incorporated the north slope of the plateau and part of the plain below (Spagnolo (1991)). The size of the Classical city, including a part of the lowland plains to the north but excluding the western cemetery and including the eastern sanctuary, was about 200 ha. There is clear evidence of the destruction by the Carthaginians in 405, but also of a re-establishment of the Greek settlement soon after (Fiorentini (2002)). The Timoleontic refoundation of Gela with a new overall urban plan comprised habitation quarters in terraces along the north slope and on part of the upper plateau, incorporating also a new industrial quarter, public baths and the western part of the plateau, enclosed by the impressive circuit walls at Capo Soprano (Buongiovanni and Canzanella (1990) 20–22; Panvini (1996) 100–20).

There is further evidence of urban cults: a sanctuary on the southern slope was dedicated to Hera (Orlandini (1968) 31–33; *IGDS* nos. 137–38), and close by was the *heroon* for the *oikistes* Antiphemos (*supra*). Gela was surrounded by a number of suburban sanctuaries (surveys: Orlandini (1968); Fiorentini (1985)), with paramount importance assigned to sanctuaries for Demeter (Kron (1992); Hinz (1998) 55–69). Other sanctuaries, previously thought to be suburban, are now known to have been located within the northern boundary of the city (Orlandini (1968) pl. 1.5.6; Spagnolo (1991) 69). The stay of Aischylos at Gela surely implies that the city had a theatre in C5m. A C7–C5 building complex located on the coast south-east of the plateau near the estuary of the river Gelas has been interpreted as harbour structures (Fiorentini (1985) 22; Panvini (1996) 54–57).

Gela began minting on the initiative of Gelon, c.490–485. The first issue was of didrachms and tetradrachms on the Attic–Euboian standard, *obv.* naked rider; *rev.* forepart of man-headed bull, legends: *ΓΕΛΑΣ* (Jenkins (1970) 25). A second issue, mostly of tetradrachms, c.480–470, is strongly influenced by the Syracusan mint and has *obv.* four-horse chariot with a flying Nike above; *rev.* forepart of man-faced bull, legends: *ΓΕΛΑ*, *ΓΕΛΑΣ*. Issues with the same *obv.* and *rev.* types, and variants including didrachms and drachms, are known until C5l (*SNG Cop. Sicily* 251–66); drachms have *obv.* legend *ΓΕΛΑΙΟΙΟΝ* (Jenkins (1970) 49). Tetradrachms from c.440–430 have the standard *rev.* type, but a standing female figure crowns the bull's head with a wreath (a local nymph or water-goddess in the role of Nike?); legend: *ΣΟΣΙΠΟΛΙΣ*. The *obv.* type is very similar to *obv.* dies from Himera (Jenkins (1970) 71–72). From c.425 the tetradrachms carry the *obv.* legend *ΓΕΛΑΙΟΝ*; *ΓΕΛΑΙΩ*[..]; *ΓΕΛΑΣ* (*SNG Cop. Sicily* 269–70, 277, 279). Smaller denominations (didrachms and litrai) have as types horseman or head of river-god or Demeter and the legend *ΓΕΛΑΣ* or *ΓΕΛΑΙΩΝ* (*SNG Cop. Sicily* 271–75, 280–81). A gold coinage (dilitron and litra) was issued in C5l, probably to pay the mercenary armies fighting the Carthaginians in 406/5 (Diod. 13.93). The *rev.* of the gold litra has as type head of the deity Sosipolis, legend: *ΣΟΣΙΠΟΛΙΣ* (*SNG Cop. Sicily* 276). Bronze coinage began c.420 (Jenkins (1979); *SNG Cop. Sicily* 282–87). The refoundation of Gela by Timoleon was marked by a new issue of silver litrai; the *obv.* type of a warrior sacrificing a ram is variously interpreted as Antiphemos, the oecist of Gela, or as Timoleon himself in the guise of the oecist of New Gela (Jenkins (1979); *SNG Cop. Sicily* 288).

18. Heloron (Ailoros) Map 47. Lat. 36.50, long. 15.05. Size of territory: ? Type: A:α. The toponym is Ἑλωρον, τό (Ps.-Skylax 13) or Ἑλωρος (BCH 45 (1921) IV.100 (230–210); Steph. Byz. 270.3). The city-ethnic is Αἰλώρος (Diod. 23.4.1) or Ἑλωρίτης (Etyim. Magn. 333.3).

Heloron is explicitly called a *polis* (πόλις Ἑλωρον) in the urban sense in Ps.-Skylax 13, where this phrase is found under the general heading οἰκοῦσι δὲ καὶ Ἕλληνες (which is opposed to οἰδοὶ μὲν βάρβαροι), but apart from that there is no evidence for its status in the Archaic and Classical periods. The evidence for Heloron as a *polis* in the political sense is C3: like Akrai (no. 10), the city is listed in the treaty between Syracuse and Rome of 263 as a *polis* assigned to Hieron II (Diod. 23.4.1 = Staatsverträge no. 479); this may suggest dependence on Syracuse (no. 47) at an earlier date (*infra*). In assessing the *polis* status of Heloron, the fact that it is listed in the Delphic list of *theorodokoi* (230–210) (BCH (1921) IV.100; cf. Manganaro (1964a) 420) may have some retrospective value. According to Ael. NA 12.30, Heloron was once a Συρακοσίων φρούριον. There are no written sources for the foundation of Heloron, and there are no coins. Heloron is here defined as a *polis* type A on the basis of Ps.-Skylax 13, but its *polis* status is uncertain given the proximity of Syracuse; it cannot be excluded that Heloron was an early military outpost in the southern dominion of Syracuse, though it *may* have been a dependent *polis* founded as a fortress (as has been suggested for Kasmenai by Hansen (1997a) 36; cf. Akrai (no. 10) and Kasmenai (no. 29)).

To the west, Heloron's territory bordered upon the territory of Kamarina (no. 28). Heloron was founded on a coastal plateau about 18 km south of Syracuse and c.400 m to the north of the river Tellaro (= ancient Heloros); (morphology of the site: Voza (1978) pl. 37, 1; plan of site: Voza (1980–81) pl. 130). Archaeological evidence points to a foundation in C8l–C7e (Voza (1973a) 117 no. 381; (1978)); so Syracuse secured its interests southwards before founding the secondary colonies of Akrai, Kasmenai and Kamarina (Di Vita (1956)). An abundance of Greek C7–C6m material is known from the site, whereas limited C5 material suggests that this was a period of recession. The city prospered during the period of Timoleon, and above all in the Hellenistic period. The C6 circuit wall was built in a pseudo-isodomonic technique as a double curtain-wall with internal fill (*emplekton*), in all 2.80 m wide (Orsi *et al.* (1966) 310–12). A local limestone was used, as well as odd material, such as a C6 tombstone (IGDS no. 98). The Archaic circuit wall was incorporated in the C4 fortification when the wall was

strengthened and towers were added (Orsi *et al.* (1966) 220–31). The C4 circuit wall is known on the north, west and south of the town, its course following the edge of the habitation plateau; the eastern side facing the sea also seems to have been fortified.

The habitation area comprised about 9 ha. The 1,500 seating capacity of the C4–C2 theatre (*infra*) gives some indication of population size in the late Classical period.

The main routes across the plateau were not laid out in straight lines but in accordance with the uneven terrain—uncommon in Western Greek urban planning (Voza (1980–81) 686–87). Though this road system is known primarily from its Hellenistic phase, there is little doubt that its origin is Archaic. An open space bordered by public buildings on the highest point of the plateau is interpreted as an agora (Voza in *Storia della Sicilia* i. 550, fig. 90). The main urban area in the south-western part of the city was on a grid plan and delimited on the north by a C4m(?) *temenos* (the so-called Asklepieion) of unknown cult (Orsi *et al.* (1966) 287–88, 320). Sparse remains of habitation structures in the southernmost part of the area are of C8l–C7e date and reveal affinities with contemporary architecture from Megara (no. 36) and Syracuse (no. 47; Voza (1978), (1980–81) 685–86). Yet another *temenos* marked the southern limit of the city: a C4s temple dedicated to Demeter (Voza (1973a) 118–19; Hinz (1998) 116–18) and smaller *thesouroi/naiskoi*.

A suburban Demeter sanctuary spanning the Archaic and the Hellenistic periods was located near the coast north of Heloron (Voza (1973a) 123–26; *Storia della Sicilia* i. 548; Hinz (1998) 111–16). The Hellenistic programme of public building included a small C4–C2 theatre outside the southern perimeter of the city (Orsi *et al.* (1966) 232–35, 324–27; Mitens (1988) 89–91). Hesychius refers to an Ἑλώριος ἄγων (s.v.) celebrated at the river Heloros and possibly to be connected with the city.

19. Henna (Hennaios) Map 47. Lat. 37.35, long. 14.15. Size of territory: ? Type: B:β. The toponym is Ἐννα, ἡ (Diod. 14.14.6). The city-ethnic is Ἐνναῖος on C5m coins (*infra*); Ἐνναῖος is found in SEG 30 1123.8 (C4l–C3m; cf. SEG 32 914) and Philistos (FGrHist 556) fr. 5 and Diod. 14.14.7 (r403).

Henna is called a *polis* in the urban sense in SEG 30 1123.13 (C4l–C3m; cf. SEG 32 914) and Diod. 14.14.7–8 (r403). The internal collective use of the city-ethnic is found on C5m coins (*infra*); the external collective use of the city-ethnic is attested in Philistos (FGrHist 556) fr. 5 (rC6m) and in SEG 30 1123.8 (C4l–C3m; cf. SEG 32 914) and Diod. 14.14.7 (r403), and the external individual use in Diod. 14.4.6 (r403).

A C6m alliance with Syracuse is attested by Philistos (*FGrHist* 556) fr. 5. In 403, the city experienced a brief tyranny under Aeimnestos, a citizen of Henna itself who acted at Dionysios I's instigation; shortly after his rise to power, however, Dionysios fomented a *stasis* during which he broke into the city and deposed Aeimnestos (Diod. 14.14.6–8). In C4l–C3m Henna gave assistance to the people of Entella, who had been driven from their city and were received by the Hennans *καὶ πόλι καὶ χῶραι* (*SEG* 30 1123.8–13; cf. *SEG* 32 914). The grateful Entellans after their return granted *isopoliteia* to the people of Enna (*SEG* 30 1123.16 (C4l–C3m); cf. *SEG* 32 914).

According to Steph. Byz. 271.4, Henna was a foundation by Syracuse (no. 47; *κτίσιμα Συρακοσίων*) established in 664. While this may be evidence that a Greek identity was claimed for the city, the historicity of the report is doubtful, as is the suggestion that it derives from Philistos of Syracuse (*FGrHist* 556, fr. 5; Manni (1981) 169). All evidence points to a Sikulan site strongly Hellenised: the archaeological evidence attests to some degree of Hellenisation already from C6e (*pace* Vallet (1962) 42), and the degree of Hellenisation is significant from C5m, when Greek-style coinage is introduced and the cemeteries bear a strong Greek stamp (Fiorentini (1980–81) 599); cf. also the reference to an agora at Diod. 14.14.7 (r403); late sources refer to a theatre (Polyaen. 8.21 (r214); Frontin. *Str.* 4.7.22). Traces of the circuit wall of the acropolis (cf. Polyaen. 8.21) are known; the published drawings suggest a Hellenistic date (Orsi (1931) 384–88; Fiorentini (1980–81) 599; Martorana (1982–83); Bejor and Marotta D'Agata (1989)). The cult of Demeter at Enna was famous; the sources for the cult are mainly literary (Diod. 5.3.1–3; Strabo 6.2.6), whereas the archaeological evidence is tenuous, and the suggested location of the Demeter sanctuary on a rocky spur north of the settlement plateau remains uncertain (Orsi (1931) 379; Hinz (1998) 121–24), though a C3 inscription referring to *Dam[ater]* or *Dam[atriastan]* was found in the vicinity (*IGDS* no. 198).

The strongest evidence of C5m Hellenisation is provided by the minting of silver litrai from perhaps as early as c.450: *obv.* quadriga driven by Demeter holding torch; *rev.* Demeter sacrificing at altar holding torch, legend: *HENNAION*; a variant issue has *obv.* head of Demeter; *rev.* Demeter sacrificing at altar (Gabrici (1959) 12–15; Jenkins (1975); Cammarata (1987)). Henna issued bronze coinage in the period of Timoleon: (1) *obv.* head of Demeter, legend: *ΔΑΜΑΤ* or *ΔΑΜΑΤΗΡ*; *rev.* torch between ears of corn, or head of ox with filleted horns, legend: *ENNA*; (2) *obv.* head of Demeter, legend: *ΔΑΜΑΤΗΡ*; *rev.* goat

before torch of Demeter between ears of corn, legend: *ENNA* (*SNG Cop. Sicily* 234); see Bejor and Marotta D'Agata (1989) 191; Talbert (1974) 181 and Cammarata (1987).

20. Herakleia (1) (Herakleotes) Map 47. Lat. 37.25, long. 13.15. Size of territory: ? Type: B:a. The original name was *Minoa* (*Μινώη*, ἡ (Hdt. 5.46.2), *Μινῶα* (Diod. 4.79.1)); the new, or additional, name *Herakleia* (*Ἡράκλεια*, Polyb. 1.18.2) is commonly assumed to have originated with the seizure of the city by the remnants of the expedition of the Spartan Dorieus (Hdt. 5.46.2; *RE* VIII. 437). The double name, *Herakleia Minoa*, is rare (Polyb. 1.25.9: *Ἡράκλεια ἡ Μινῶα*); *Herakleia* is common (Polyb. 1.18.2; Diod. 19.71.7); but *Minoa* appears as well (Heracl. Lemb. 59; Diod. 16.9.4; Plut. *Dio* 25.11). The city-ethnic is *Ἡρακλεώτης* (Diod. 20.56.3 and possibly *IG XII.6 38* (C4l), on which see *infra*).

Hdt. 5.46.2 calls it an *ἀποικίη* of Selinous (no. 44); the oecist(s) and the date of foundation are unknown, but the date must be post-628 (date of Selinous' foundation). It is called a *polis* only in later sources: in the urban sense at Plut. *Dio* 25.6 (r time of Dion) (cf. *πολισμάτιον* at Plut. *Dio* 25.5), and in the political sense at Diod. 16.9.4 (r357). A description of its constitution was included among the 158 Aristotelian *politeiai* (Heracl. Lemb. 59; Arist. no. 55; Gigon, which uses *polis* in a mythological account of the foundation by Minos of Crete). The external collective use of the city-ethnic is found in Diod. 20.56.3 (r307). *IG XII.6 38* (C4l) is a decree by Samos (no. 864) granting proxeny etc. to *Ἐπινωίδης Ἐδδήμου Ἡρακλεώτης* and a reasonable case can be made that the honorandus originated from the present *Herakleia* (Kebrić (1975), (1977) 3–4; Shipley (1987) 164).

There are very few sources for the Archaic and Classical periods. Nothing is known of the political and institutional life apart from the notice of mythic stamp that Minos imposed Cretan laws on the city (Heracl. Lemb. 59; cf. Perlman (1992)).

Shortly before 500, *Minoa* was captured by those Lakedaimonians who, under the leadership of Euryleon, had survived the ill-fated expedition of Dorieus (Hdt. 5.46.2). The city seems to have been defeated by Akragas in C6l or C5e, Lind. Chron. (*FGrHist* 532) fr. 30 = Xenagoras (*FGrHist* 240) fr. 17 recording a dedication at Lindos by Akragas of a *palladion* taken ἐκ *Μινώϊας*. Though the date of this episode is uncertain, it is most often seen as the aftermath of the occupation of western Sicily by Euryleon and the Spartans (Luraghi (1994) 41, 233–34). During Theron's reign (488–473) *Herakleia* seems to have been a city within

the dominion of Akragas (no. 9), possibly after its conquest by Theron (cf. Diod. 4.79.4 with Fontana (1978)). After the fall of the Deinomenids, the city seems to have been involved in the fighting between the disenfranchised mercenaries, who occupied the city, and the Syracusans, who with the Akragantines eliminated the mercenaries (see *FGrHist* 577 fr. 1). The city must have come into Carthaginian hands by the treaty of 383 between Carthage and Dionysios I (Diod. 15.17.5); when Dion sought refuge in Herakleia in 357, the city was still under Carthaginian dominion (Plut. *Dio* 25.5; Diod. 16.9.4), ruled by an ἄρχων (Plut.) or an ἐπιστάτης (Diod.), but it is described as in Akragantine territory (Diod.). By the treaty of 339 it reverted to the Greek area (Diod. 16.82.3) and was refounded by Timoleon (Talbert (1974) 159–60). In 314 it became Carthaginian once again (Diod. 19.71.7).

Herakleia was founded by Selinous (Hdt. 5.46.2), and the colony may have served to secure the eastern border of Selinous' territory which was threatened by Akragantine expansion during the reign of Phalaris (De Miro (1962) 144–46). The foundation date is uncertain, but the perspective of a powerful Selinous securing its eastern border towards Akragas as well as archaeological evidence (*infra*) suggest a C6m date. However, the city was presumably within the Akragantine dominion already by C6l and at least from C5e (*supra*); Akragas was located only 25 km to the east.

The size and exploitation of the *chora* of Herakleia is little known. An area of c.6 km² has been surveyed, and a C6 farmstead or workshop found c.350 m north of the city (Wilson and Leonard (1980)).

The city was founded on a low coastal promontory (modern Capo Bianco) on the estuary of the river Halykos (modern Platani). On the north side the plateau slopes gently down to the Halykos valley, on the south side erosion has produced vertical cliffs, and part of the habitation area of the Greek city may have been destroyed. A 6 km-long stretch of the circuit wall is preserved on the north-east and west sides facing the river valley and the hinterland; it is unknown whether the cliff facing the sea was fortified. The C5 wall was strengthened, with square towers built in small blocks of sandstone, but superseded by a C4l gypsum ashlar wall with an upper structure of sun-dried brick (Tusa and De Miro (1983) 177–78; De Miro (1994) 480 dates the earliest phase of the circuit wall to C6). At the time of Timoleon's refoundation a new defensive wall was erected within the earlier city, reducing its size by a half (De Miro (1958a)).

There is evidence of C6s occupation, but the early history of the site has not been fully investigated, and the size of the area occupied by the early city is still unknown. (The city did occupy the area of the later Hellenistic town, but probably also, at least in part, the western plateau within the first phase circuit wall—in all c.60–70 ha). The Timoleontic refoundation was laid out as an orthogonally planned city, with east–west-oriented *stenopoi*, north–south-oriented *plateiai*, and the single *insulae* c.32 m wide, like other Timoleontic refoundations (De Miro (1958b), (1980) 716–21). The urban facilities included a C4l theatre (De Miro (1955)).

The Archaic cemetery with fairly numerous tombs from the period 550–500 is located just outside the circuit wall north-east of the city. The cemetery was bisected by a road, and there are indications of social differentiation (De Miro (1965) 10–11; Wilson (1996) 92).

21. Herakleia (2) Map 47. Unlocated site in western Sicily, in the region of Eryx. Type: C:a. The toponym is *Ἡρακλείη, ἡ* (Hdt. 5.43) and *Ἡράκλεια, ἡ* (Diod. 4.23.3). A city-ethnic is not attested.

Following the advice of Antichares of Eleon and the affirmation of the Delphic oracle that he would succeed, Dorieus of Sparta, who was of royal and so Heraklid descent, set out to found a colony in the region of Eryx (Hdt. 5.43), which, according to Antichares, belonged to the descendants of Herakles (Hdt. 5.43; cf. Paus. 3.16.5). However, Dorieus' expeditionary force was severely defeated by an alliance of Phoenicians and Egestans (Hdt. 5.46.1; cf. Diod. 4.23.3 and Paus. 3.16.5). In the aftermath of the disaster Euryleon, the sole survivor of the *synktistai*, and the remnants of the expedition captured Herakleia Minoa (no. 20) and ousted the tyrant Peithagoras of Selinous (Hdt. 4.46.2). Referring to the death of Dorieus as a thing of the past, Herodotos dates the defeat of the expedition prior to c.481/80 (7.158), or to 491/90 as argued by some scholars (Merante (1970a)); the beginning of the expedition is connected with the destruction of Sybaris (no. 70) by Kroton (no. 56) in c.510 (Hdt. 5.45; cf. Merante (1970a), (1970b) 131–33, who argues for an earlier chronology). According to Diod. 4.23.3, Dorieus did in fact succeed in taking back the land of the Herakleidai, and founded a *polis* named Herakleia (ἔκτισε πόλιν *Ἡράκλειαν*) which prospered for a period before being razed to the ground by the Carthaginians. Thus, it cannot be ruled out that a Spartan settlement did exist for a period and was then destroyed by the Phoenicians (cf. Bérard (1957) 260–66; Stauffenberg (1960) esp. 189–98; De Vido (1989)

with further refs.; Asheri (1988) for an analysis of the relationship between Greeks, Phoenicians and Elymians).

22. Herbes(s)os (Herbessinos) Map 47. Unlocated, but presumably at Montagna di Marzo (so *Barr.*). Type: C:γ. The toponym is *Ἑρβήσος*, ὄ (Diod. 20.31.5; Philistos (*FGrHist* 556) fr. 9 = Steph. Byz. 275.6); or *Ἑρβήσος* (Polyb. 1.18.5). The city-ethnic is *Ἑρβησσίνος* (Diod. 14.7.6 (r404); C4s coins, *infra*).

Herbessos is called a *polis* in the urban sense at Diod. 14.7.6 (r404). The internal collective use of the city-ethnic is found on C4s coins (*infra*); the external collective use is found at Diod. 14.7.6 (r404) and 14.78.7 (r396). The latter passage records a peace treaty between Herbessos and Dionysios I.

Herbessos is described as a Sikel community at Diod. 14.7.6 (r404) and 78.7 (r396), but is included here on account of its C4s Greek-style coinage (*infra*). In addition, Greek C6e epigraphic material from Montagna di Marzo, the presumed site of Herbessos, includes votives to Herakles (cf. *IGDS* 166–68).

The location of the city is unknown, though it is possibly to be located at Montagna di Marzo (Bejor (1989b) 280); Diod. 14.7.6 (r404) suggests that it was fortified by C5l. The urban remains from this site are of C6m Sikel walls with C4 reinforcements in ashlar masonry, from the Greek period. There are some traces of urban planning, but whether these are Douketian or Timoleontic is uncertain. However, the majority of the urban remains, as well as the cemeteries, are Hellenistic (Cutroni Tusa and Moreschini (1992)).

Herbessos struck bronze coins from c.325, or a little earlier: *obv.* female head (Sikelia?), legend: *ΕΡΒΗΣΣΙΝΩΝ*; *rev.* forepart of man-headed bull (Head, *HN*² 143; *SNG Cop. Sicily* 292; a Timoleontic coinage: Talbert (1974) 181; Karlsson (1995) 165 n.3 (F); Bejor (1989b) 279 with further refs.).

23. Herbita (Herbitaios) Map 47. Unlocated (cf. C. Boehringer (1981) 100–3; Bejor (1989c)). Type: C:γ. The toponym is *Ἑρβίτα*, ἦ (Ephor. fr. 91 = Steph. Byz. 275.8; Diod. 14.16.1). The city-ethnic is *Ἑρβιταίος* (C4s coins, *infra*; Diod. 14.15.1).

Herbita is called a *polis* in the urban sense at Diod. 14.15.1 and 16.1 (r403). The internal collective use of the city-ethnic is found on C4s coins (*infra*), and the external collective use in Diod. 12.8.2 (r446), 14.15.1 (r403), 14.78.7 (r396) (cf. *SEG* 30 1117 (C4l–C3m)).

Both in 446 and in 403, Herbita was ruled by a man called “Archonides”; Archonides I is described as *δυναστεύων* at

Diod. 12.8.2 (cf. Thuc. 7.1.4, quoted *infra*), and Archonides II as *ἐπιστάτης* at Diod. 14.16.1. However, at Diod. 14.16.1 a peace treaty with Dionysios I is said to have been concluded by ὁ δῆμος ὁ τῶν *Ἑρβιταίων*, and at 14.78.7 agreements are described as concluded between Dionysios and τοὺς *Ἑρβιταίους*. (See also below on colonisation.) *IG* 11² 32 (385/4) is probably a grant of proxeny by Athens (no. 361) to Archonides II, his brother Demon, and their descendants. A C4l–C3m *symmachia* between Herbita and Entella is attested in *SEG* 30 1117.15.

Recently, Greek-style silver and bronze coins of Herbita have come to light; they date from the period of Timoleon (c.350–325), and were found in the region of Gangi. Silver (probably litrai): *obv.* head of Apollo, legend: *HEPBITAI*; *Rev.* Apollo seated on Ionic capital. The smaller bronze denominations carry on *obv.* female head, legend: *HEPBITAIΩΝ*; *rev.* standing youth with spear (C. Boehringer (1981); Bejor (1989c) 284).

Herbita was involved in colonisation on two occasions: in 446, when Archonides I collaborated with Douketios in the foundation of Kale Akte (Diod. 12.8.2), and in 403, when Archonides II founded the city of Alaisa (no. 11), a foundation which eclipsed its mother city to the degree that its inhabitants denied their origin (Diod. 14.16.2–4; see Cataldi (1982); cf. *supra* 190). According to Diod. 14.16.2, Alaisa was founded by Archonides II in order to house veteran mercenaries, a *symmikton ochlon* that the war against Dionysios had driven into the city, as well as poor citizens of Herbita itself; the latter are said to have actively encouraged his plans.

In a passage referring to 446, Diod. 12.8.2 describes Herbita, or at least its ruler Archonides I, as Sikel; and the city may be described as Sikel again at Diod. 14.78.7 (r396). The Greek name *Archonides* of two of its rulers may indicate a pretension to Greek identity (C. Boehringer (1981) 95); but Thuc. 7.1.4 describes Archonides I as τῶν . . . *Σικελῶν βασιλεύων τινῶν*. By C4s, however, the city issued Greek-style coins (*supra*).

24. Himera (Himeraios) Map 47. Lat. 37.55, long. 13.50. Size of territory: 5. Type: A:a. The toponym is *Ἱμέρη*, ἦ (Hdt. 7.165.1) or *Ἱμέρα* (Thuc. 6.62.2; *SEG* 11 1223a (C5f)). The city-ethnic is *Ἱμεραῖος* (C6l coins, *infra*; Thuc. 7.1.3).

Himera is repeatedly described as a Hellenic *polis* (Thuc. 6.62.2; Xen. *Hell.* 1.1.37; Ps.-Skylax 13); it is called a *polis* both in the territorial sense (Thuc. 6.62.2) and in the urban sense (Xen. *Hell.* 1.1.37; Ps.-Skylax 13), and in the urban and political senses combined (Aen. *Tact.* 10.22). The political sense is

found in Diod. 11.48.6 (r476). Paus. 6.4.11 uses *πολιτεία* in a reference to C5e, and the *politeia* was included in the Aristotelian collection of constitutions (fr. 515.1). Thuc. 6.5.1 calls Himera an *ἀποικία*, and it is described as the *patra* of the C6 poet Stesichoros (Test. A26, Davies); cf. *SEG* 29 414.4 (c.450) where [πάτραι] is a possible restoration (cf. *CEG* I 393 for other restorations).

The internal collective use of the city-ethnic is found on C6l coins (*infra*). The external collective use of the city-ethnic is attested by *SEG* 30 1079 (C6m) and Thuc. 7.1.3, 58.2. Individually, the ethnic is often applied to Stesichoros (e.g. Pl. *Phdr.* 244A; *IG* XII.5 444.73.85b (C3f)); see also *AM* 87 (1972) 114–15 no. 6 for a possible Archaic instance of the external individual use. The use is also attested in Pl. *Prt.* 335E.

Himera was founded by Zankle (no. 51) and exiles from Syracuse (no. 47) called *οἱ Μυλητίδαι* (Thuc. 6.5.1; but Strabo 6.2.6 says: *οἱ ἐν Μυλαῖς ἔκτισαν Ζαγκλαῖου*). The oecists were Eukleides, Simos and Sakon (Thuc. 6.5.1; cf. *IGDS* no. 165). The year of foundation, 648, is inferred from the notice that the city was inhabited for 240 years before its destruction in 409 (Diod. 13.62.4). The continued ties with Zankle are revealed by Skythes, ruler of Zankle, who c.493 went to Himera as an exile (Hdt. 6.24), and if the text on a bronze plaque found at Himera is correctly reconstructed by Brugnone (1997) 271–74 as *φυ]λὰ Δανκλαῖα*, this may be taken as evidence of an “ethnic” *phyle* of Zanklaian colonisers at Himera. But the ethnic composition of the city was mixed, the colonisers being mostly Chalkidian, i.e. Ionians, but some Syracusans, i.e. Dorians; and while the local dialect was a corresponding mixture, Chalkidian *νόμιμα* prevailed (Thuc. 6.5.1).

The territory was called *ἡ Ἰμεραία (χώρα)* (Thuc. 3.115.1; Diod. 13.61.4 (r409)). The C5 immediate hinterland with a number of rural settlements, delimited by border fortresses, encompassed c.50 km² (Belvedere (1988) 196–206, (2000)). The territory of Himera stretched over a vast area, estimated at c.700 km², divided to the south from the territories of Gela (no. 17) and Akragas (no. 9) by the Monte Cassero hills, and in the west at the river Thermos from the territory of the Phoenician city of Soloeis. However, within the territory of Himera were scattered indigenous settlements, and the dividing line between the dominions of Himera, Gela and Akragas is not always clear (Vassallo (1996)). *SEG* 30 1079 (C6m) seems to attest to fighting between Himera and *Sikanoi* (cf. Thuc. 3.115.2). For the Archaic and Classical settlement pattern of the Himeraian territory, see Belvedere (1988) 196–206.

According to Diod. 13.62.4, c.3,000 *andres* were captured during the destruction in 409, but it seems impossible to convert this number into a population estimate (cf. the few army figures below). The C5e population has been calculated at 20,000, including a rural population of 10,000, by Asheri (1973), but this figure is probably on the low side, if one takes into account that the size of the urban centre of Himera is now calculated to be c.80 ha (Allegro and Vassallo (1992) 147–48).

Himera was pillaged and destroyed by the Carthaginians in 409; 3,000 surviving men were put to death (*κατέσφαξεν*), women and children were distributed to the victorious enemy and presumably enslaved (Diod. 13.59.4–62.5), and the site was abandoned (Diod. 11.49.4; Strabo 6.2.6), though there is some archaeological and numismatic evidence for re-occupation from c.405 until the defeat of Dionysios I at Kronion in 383/2, when Himera became part of Carthaginian territory for good (Diod. 15.16.3). Later references to Himera must therefore be to the survivors who were settled at Thermai, on the border of Greek and Phoenician spheres of interest (Cic. *Verr.* 2.2.86; cf. Diod. 14.47.6, 56.2).

According to Arist. *Rh.* 1393^b10–22, Phalaris, the tyrant of Akragas c.570–554, was elected *strategos autokrator* by the Himeraians, but the historicity of the report is doubtful (Berve (1967) 130). By C5e, however, the city was certainly ruled by tyrants. The earliest attested tyrant is Terillos (*τύραννος*, Hdt. 7.165) who, expelled by Theron of Akragas, attempted to return as an ally of the Carthaginians, seeking help also from Anaxilaos of Rhegion (Hdt. 7.165). The ensuing battle at Himera in 480 led to the victory of Theron and Gelon (Diod. 11.20.3ff.; cf. Zahrt (1993)). Theron conceded the tyranny of Himera to his son Thrasydaios (Diod. 11.48.6). The Himeraians rebelled against the tyranny of Thrasydaios; Theron, having curbed the insurrection, repopulated Himera with Doric and “other” colonists to whom he granted citizenship (Diod. 11.48.6–49.4). Not until 460 were those who escaped the intervention of Theron able to return to Himera (Diod. 11.76.4). During the Peloponnesian War, Himera remained loyal to Syracuse (no. 47) by not admitting the Athenian fleet in 415 (Thuc. 6.62.2) and by entering into an alliance with Gylippos against the Athenians in 414 (Thuc. 7.1.4; Diod. 13.7.7). One thousand hoplites/light-armed troops, and 100 cavalry joined Gylippos on his march to Syracuse (Thuc. 7.1.5).

A bronze plaque attests to the existence of *φρατρία* at Himera (Brugnone (1997) 274–79) and may also attest to a system of *phylai* (Brugnone (1997) 271–74).

At least three Himerian athletes won Panhellenic victories: Ischyros at Olympia in 516 (*Olympionikai* 137) and Krison thrice at Olympia in C5m (*Olympionikai* 294, 306, 312). Particularly interesting is Ergoteles, who won no fewer than eight Panhellenic victories (two at Olympia (*Olympionikai* 224, 251) and two each at Delphi, Nemea and Isthmia). A Cretan by birth, he was a naturalised Himerian and competed as such (Paus. 6.4.11; cf. Pind. *Ol.* 12 and *SEG* 11 1123a celebrating Olympic success; Phlegon (*FGrHist* 415) fr. 1.13).

Himera was founded on a north–south-oriented oblong hill between the river Torto to the west and the river Himera to the east, commanding the lower Himera valley. The city occupied also the coastal plain below, though whether this comprised a harbour settlement near the estuary is as yet uncertain (Bonacasa (1976) 5–14 for a general description of the site).

A stretch of a presumably Archaic (no precise date) stone and earth rampart is known from the southern edge of the plateau, with a semicircular projection in the south-east corner and a small stretch running northwards defending the east side of the plateau (Bonacasa Carra (1974) 110–11; Bonacasa (1980–81) 85, pl. 117, fig. 2), revealing that habitation covered all of the plateau at least from the Archaic period. A wall of sun-dried bricks along the outer edge of the plateau on the northern side of the sanctuary is with some uncertainty dated to C5e and connected with the Carthaginian conflict of 480. Dividing the upper city from the city on the plain below, the wall may have functioned as a *diateichisma* (Allegro (1991) 71). The walls are mentioned by Diod. 13.59.7–9 in reference to the siege in 409. The upper city occupied about 32 ha, the lower city about 50 ha (Allegro and Vassallo (1992) 145–47).

Corresponding to the traditional date of foundation (648), there is sporadic evidence of a C7m settlement on the coastal plain below the upper plateau near the estuary of the river Himera. The more substantial urban remains on the plateau of Himera are from C7s, suggesting a gradual urban development from plain to plateau (Vassallo (1997) 85–90). Two Archaic urban phases are known. Already the earlier (C7l–C6e) shows features of planning, but it was soon replaced by a new overall urban layout, probably as a result of destructions of the early city and a refoundation c.580–570 (Allegro (1997)). Although the Archaic town plan is impressive in its size and regularity, the remains suggest that even in this second period habitation was concentrated in certain areas: the northern area (near the sanctuary) and the southern area (near the main route to the *chora*). Recent

investigations have given indications of a 6.20 m-wide north–south-oriented *plateia* uniting the main parts of the plateau (Allegro (1988–89) 656).

Theron's repopulation of Himera in 476 (*supra*) resulted in further developments and reorganisation of the city, indicated by changes in the layout of single *insulae* (Belvedere (1976) 580–82; Allegro (1988–89) 657). A redistribution of land may be inferred from C5e epigraphic evidence (Brugnone (1997)).

The lower city had an urban plan from C7s, with later changes which correspond to the phases of the city outlined above (Allegro and Vassallo (1992)). Recently a C5f suburban quarter east of the city has been revealed between the right bank of the river and the Archaic cemetery (*ibid.* 139 n. 40; cf. Diod. 13.75.2 (1408)). The cemetery with tombs from the early history of Himera until c.525 is located near the coast east of the Himera valley (Vassallo (1991), (1993–94)). From C6l and for all of C5 two new cemeteries were in use south of the city and on the plateau west of the city (Di Stefano (1970) 319–21; (1976)); tomb material (amphoras) reveals a wide commercial network (Vassallo *et al.* (1991)).

The north-eastern corner of the plateau is occupied by a sanctuary with remains of four C7s–C5e temples (Bonacasa (1970); Allegro (1991)), probably dedicated to Athena, like the city itself and its *chora* (Diod. 5.3.4). A sanctuary of Demeter with at least two C6–C5 *naiskoi* was located in the north-western quarter of the upper city (*Himera* II. 194–205; Hinz (1998) 166–67). A monumental stone temple, “Temple of Victory”, again presumably dedicated to Athena (Bonacasa (1980) 269), was built in the lower city in C5e (P. Marconi (1931); T. Van Compernelle (1989) 48–51, (1992) 55–58), probably to commemorate the victory over Carthage in 480 (cf. Diod. 11.25.1) or built by Theron in connection with his resettlement of the colony in 476 (cf. P. Marconi (1931) 127 for an earlier Archaic phase). Attested cults include, in addition to that of Athena (Diod. 5.3.4), those of Zeus Soter (C5l; Manni Piraino (1974) 267–69); Herakles (Diod. 5.3.4; Bonacasa (1991)); the nymph Himera (coins; cf. Cic. *Verr.* 2.2.87); Tyche Soteira and Zeus Eleutherios (Pind. *Ol.* 12.1–3).

Himera began minting drachms on the Euboian–Chalkidian standard c.550–540: *obv.* cock; *rev.* incuse square with sunk and raised triangles within a square incuse field (*SNG Cop. Sicily* 294–96, 297 (obol)). Later issues have *rev.* hen in a square incuse field, and there are several variations of the basic type (*SNG Cop. Sicily* 298–301). An early issue has *obv.* legend *HIMEPAION*,

abbreviated on later issues to *HI*, *HIME* (*SNG Cop. Sicily* 301). Other coin legends are names of mint officials, in full or abbreviated: *AY*, *TY*, *TYXON*, *ΣΟΓ*[*ΕΝΕΣ*]. Lower denominations carry related types (Kraay (1984); C. Boehringer (1984–85) 105–8; Molinari (1986)). The first series ends c.484/3 with the expulsion of Terillos; Akragantine control at Himera c.483–470 is reflected in an issue of didrachms on the Attic standard: *obv.* cock, some with legend *HIMEPA*; *rev.* crab (Jenkins (1971); *SNG Cop. Sicily* 302–3, 304 (drachm)). During the subsequent period of Syracusan influence a new coinage was introduced with the principal denomination based upon the Syracusan tetradrachm: *obv.* quadriga, crowned by Nike; *rev.* nymph Himera pours a libation at an altar, at her side a Silenos bathes in a fountain with a spout in the form of a lion's head (*SNG Cop. Sicily* 306). A variant has on the *obv.* biga, legend: *ΠΕΛΟΠΙΣ*; *rev.* figure of nymph named *HIMEPA* (Kraay (1976) 215, pl. 765). This issue may celebrate the victory of Ergoteles at Olympia in 472 or 464, and according to Biocchi (1988) the series may commence as late as 464. A late tetradrachm known from one issue only has *obv.* quadriga galloping, above flying Nike with wreath and tablet with inscription (signature?); *rev.* nymph at altar and Silenos bathing under lion-head spout, legend: *H MEP AION*, probably from very shortly before the 409/8 disaster (C. Boehringer (1989) 34). Lower denominations are litrai: *obv.* forepart of winged, man-headed monster; *rev.* goat-rider; hemidrachms: *obv.* goat-rider, *rev.* Nike holding a phlaston (*SNG Cop. Sicily* 307–11). Bronze coinage was introduced c.420 (Kraay (1979); *SNG Cop. Sicily* 313–19). Coins were minted during the resettlement period c.405–383/2: lower bronze denominations with legend *IME*; C4 issue of silver litrai: *obv.* Herakles; *rev.* palladion, legend: *IMEPAION* (C. Boehringer (1989)). There is some evidence of coinage during the reign of Timoleon; an issue influenced by the Zeus Eleutherios type, after the battle of Krimissos in 342/1: *obv.* Kronos, legend: *ΚΡΟΝΟΣ*; *rev.* eagle and thunderbolt, legend: *IMEPAION* (C. Boehringer (1989) 36). On the evidence of bronze ingots counterstamped with Himeraian mint types, flans, bronze bars and slags, the public mint has been identified with a structure inside the sanctuary in the north-eastern corner of the plateau (Cutroni Tusa (1982a)).

25. Hippana (Hipanatas) Map 47. Lat. 37.40, long. 13.25 (Monte dei Cavalli). Size of territory: ? Type: C:β. The toponym is *Ἴππάνα*, ἡ (Polyb. 1.24.10); Diod. 23.9.5 has *Σιττάνα*, ἡ. The city-ethnic is *Ἴπανάτας* (C5m coins, *infra*).

Hippana is called a *polis* only by later sources such as Polyb. 1.24.10 (r258), who uses *polis* in the urban sense; it is included here on account of its Classical Greek-style coinage (*infra*) and a *kerykeion* inscribed *ΔΑΜΟΣΙΟΝ* and *ΙΠΠΑ*, restored *Ἴππα*[*νατᾶν*] by Manganaro (1997).

Hippana is commonly identified with the site of Monte dei Cavalli in the territory of Himera, but the evidence for this identification is not conclusive. The urban remains are mainly from a C4m–C3m phase, which is interpreted as a Timoleontic refoundation of the originally indigenous settlement. Strongly built circuit walls in ashlar were raised on an acropolis and around the lower habitation plateau, 30 ha in area. There are some remains of public structures, a shrine and a theatre of Greek type. Aerial photography has revealed formal planning on the lower plateau: Mitens (1988) 104; Michelini (1992); Vassallo (1991).

Rare C5m silver litrai (*obv.* eagle on column, legend: *ΙΠΠΑΝΑΤΑΝ*; *rev.* dolphin and scallop) have been attributed to Hippana (Head, *HN*² 147; Manganaro (1997) 127 n. 6, 129); the types, although ultimately based upon types of Akragas, seem to reflect Carthaginian (Motyan) influence (Manganaro (1997) 129). C4m bronze coins are restruck on Punic coins: *obv.* bull, legend: *ΙΠΠΑ* in exergue; *rev.* Astragalos(?) (Manganaro (1997)).

26. *Imachara (Imacharaios) Map 47. Unlocated. *Barr.* tentatively locates Imachara at modern Vaccarra di Nicosia (lat. 37.50, long. 14.20); cf. Cataldi (1990) 243–44. The precise location is unknown, however; a C5 *kerykeion* inscribed *Ἴμαχαράων δαμόσιον* (*IG* XIV 589; *LSAG* 269, 276.23, dating it to 475–450; *IGDS* no. 199, dating it to C5) was found in the region of modern Nissoria, and it may be of relevance that a rich C5–C4, mainly Corinthian coin hoard was found in the same area (*IGCH* 2133; Cataldi (1990) 244). Pelagatti (1964–65) 252 suggests a location at Mendolito on the basis of a Sikulan inscription *iamakaram*(?) found there. Type: C:β.

The toponym **Ἴμαχάρα* is suggested by the city-ethnic (*infra*); Ptol. *Geog.* 3.4.7 lists *Ἴμαχάρα* ἢ *Ἴμυχάρα* among the *poleis mesogeioi tes Sikelias*. The city-ethnic is *Ἴμαχαράϊος* (*IGDS* no. 199 (C5); C4 coins, *infra*).

No source calls Imachara a *polis*, but it is included here on account of (1) its C5 *kerykeion* (*supra*; for a full discussion of this type of evidence from Sicily, see Manganaro (1996c) 141–44; (1997)), and (2) its C4 coins. Both of these attest the internal collective use of the city-ethnic, indicate a high degree of Hellenisation, and suggest *polis* status.

The mint of Imachara is known from two specimens only, both silver litrai: *obv.* head of Hera, legend: *IMAXAPAIΩN*; *rev.* butting bull (Jenkins (1975) 90–92).

27. Kallipolis (Kallipolites) Map 47. Unlocated. Type: A:a. The toponym is *Καλλίπολις* (Strabo 6.2.6). The city-ethnic is *Καλλιπολίτης* (Hdt. 7.154.2).

Kallipolis is implicitly called a *polis* in both the urban and the political senses by Herodotos: at 7.154.2 he mentions Hippokrates' aggression against a number of communities, including Kallipolis; he then goes on to state that, Syracuse excepted, none of the *poleis* mentioned escaped being enslaved by Hippokrates (*οὐδεμία ἀπέφυγε δουλοσύνην πρὸς Ἴπποκράτους*; cf. Hansen (2000) 205). So Kallipolis was a *polis* which Hippokrates c.495 turned into one of his dependencies (Dunbabin (1948) 380–82, 402; Vallet (1978) 119–20). It is described as an *apoikia* by Ps.-Skymnos 286 (cf. *κτίζειν* in Strabo 6.2.6). The external collective use of the city-ethnic is found in Hdt. 7.154.2.

Only two events are known from the history of Kallipolis: its foundation and its “enslavement” by Hippokrates (*supra*). It was founded by Naxos (no. 41; Strabo 6.2.6). The date of the foundation is unknown, but Ps.-Skymnos 286 mentions it alongside Naxos' other foundations (Leontinoi (no. 33), Zankle (no. 51) and Katane (no. 30)), and this may suggest that it was founded contemporaneously with them (i.e. C8!; M. Miller (1970) 35, 86). In Strabo's day it was deserted (6.2.6).

Various sites have been brought forward as candidates for the site of Kallipolis, but it remains unidentified (Camassa (1989b)), though recent finds at San Marco south of Naxos are promising in this connection (Pelagatti (1981) 295 n. 5). In general, the fact that, like Katane and Leontinoi, it was a colony of Naxos suggests a location in the coastal plain south of Naxos or on the slopes of Mt. Etna; in any case, the foundation of Kallipolis should be seen as a part of the Chalkidian occupation of north-eastern Sicily. The siege mentioned by Hdt. 7.154.2 implies that Kallipolis was fortified by C5e.

28. Kamarina (Kamarinaios) Map 47. Lat. 36.50, long. 14.25. Size of territory: 4. Type: A:a. The toponym is *Καμάρινα*, -ης, ἡ (Hdt. 7.154.3, 156.2; Thuc. 6.75.4). The city-ethnic is *Καμαριναῖος* (*IvO* 266.2 (480–475); Hdt. 7.156.2).

In Ps.-Skylax 13, Kamarina is listed as the first toponym after the heading *πόλις Ἑλληνίδες αἶδε*, where *polis* is used in the urban sense; *polis* in the political sense occurs at Pind. *Ol.* 5.4, 20 and Thuc. 3.86.2. *Asty* is found at Hdt.

7.156.2, *astos* in Pind. *Ol.* 5.14, and *politeuma* in Timaios (*FGrHist* 566) fr. 22 (r424).

The internal collective use of the city-ethnic is found on C5 coins (*infra*); the external collective use is found in Hdt. 7.156.2 and Thuc. 7.58.1. The external individual use is found in Diod. 1.68.6 (r528) and *F.Delphes* III.3 202.4 (266). A remarkable example is found in *IvO* 266.2 (480–475), a dedication at Olympia by a Mantinean who became both a *Καμαριναῖος* and a *Συρακόσιος*, and so was probably a citizen of Kamarina who in 484 was made a citizen of Syracuse by Gelon (Hansen (1996) 184 and *infra*).

The territory of Kamarina (Pelagatti (1980–81) pl. 168; Di Stefano (2000) (*chora*), (1984–85) 728, fig. 1 (territory)) is called ἡ γῆ ἡ Καμαριναίων in Thuc. 6.5.3 and ἡ Καμαριναία at Thuc. 6.78.4. It functioned as a buffer zone between the Geloan and Syracusan spheres of influence; Philistos (*FGrHist* 556) fr. 5 suggests that the river Hyrminios (Irminio) formed the border between Syracuse (no. 47) and Kamarina. A number of C6–C4 farmsteads, some with adjacent cemeteries, are known from the lowland plains of the Hypparis (Ippari), the Oanis (Rifriscolaro) and the Hyrminios river valleys. The orientation of farmsteads located in the hinterland coincides with that of the city, and the size of the area allotted to the single farmsteads is divisible by the size of the urban *insulae*, suggesting an organisation of the agricultural area analogous to that of the C5 city (Di Stefano (1993–94) 1378–81; Cordano and Di Stefano (1997) 297–99). Investigations have also shown that a system of roads joined the city with its cemeteries and the farmsteads located in the further hinterland (Pelagatti (1980–81) 723–29; Di Stefano (1984–85) 762–64). On the estuary of the river Hyrminios, at Contrada Maistro c.15 km south-east of Kamarina, a harbour settlement founded contemporaneously with Kamarina may mark the border between the territories of Kamarina and Syracuse. The site, which had a Demeter sanctuary (Cordano (1997)), was abandoned in C6l (Di Stefano (1987b)). To the north-west the river Achates (Dirillo) formed the border with Geloan territory. An important C5l coin hoard (*IGCH* 2095) from the C6–C5 border settlement of Scornavacche (ancient identity unknown) in the Dirillo valley has revealed contacts with the main Greek cities of Sicily. Inland the territory of Kamarina was delimited by the Hyblaian mountains, which constituted the border of the territories of Kasmenai (no. 29) and Akrai (no. 10), and further northwards of Leontinoi (no. 33). The Sikels of the mountainous hinterland were allied with Kamarina during the C6m war with Syracuse (Philistos (*FGrHist* 556) fr. 17). During the Hippokratean

phase (*infra*), Kamarina was apparently forced to break with previous Sikel allies such as the city of Ergetion (Polyaen. 5–6; cf. Philistos (*FGrHist* 556) fr. 10 with Sinatra (1998)) of uncertain location in the Hyblaian hills. However, the impression given by the evidence is that of a network of contacts with the Sikel hinterland, as far north as the foothills of the Hyblaian mountains, a vast area with a number of Sikel sites revealing a strong degree of C6 Hellenisation (Di Stefano (1987*a*), (1988–89) with refs.). The immediate hinterland of Kamarina comprised about 50–70 km², the larger territory (dominion?) about 500 km².

Kamarina was founded by Syracuse (no. 47), 135 years after the foundation of Syracuse itself, i.e. c.598 (Thuc. 6.5.3); the date is confirmed by the archaeological evidence (*infra*). The oecists were Daskon and Menekolos, the former a Syracusan and the latter probably a Corinthian, as suggested by onomastic evidence (Cordano (1987)).

Philistos (*FGrHist* 556) fr. 5 (rC6m) refers to treaties of alliance between Kamarina and Sikels, Gela (no. 17) and other (presumably Greek) communities in a C6m war with Syracuse. According to Thuc. 6.5.3, the Kamarinaians were made *anastatoi* by Syracuse after a revolt (*ἀπόστασις*); this happened c.552–549 (schol. Pind. *Ol.* 5.16), probably in connection with the war attested in Philistos (*FGrHist* 556) fr. 5 in which both Syracuse and Kamarina were assisted by allies. However, the site was apparently not depopulated: not only is Parmenides of Kamarina attested as victor at Olympia in 528 (*Olympionikai* 125), but there is no archaeological evidence of a break in habitation (Lentini (1983) 5–6) or in the use of the Archaic cemetery (Pelagatti (1976–77) 523–26; (1978*b*)); so Kamarina probably continued to exist, possibly as a dependent *polis* of Syracuse (cf. *apostasis* in Thuc. 6.5.3 and the statement by Hdt. 7.154.3: *Συρηκοσίων δὲ ἦν Καμάρινα τὸ ἀρχαῖον*). After the defeat of Syracuse by Hippokrates of Gela in the C5e (492?) battle at Heloros, Kamarina passed, after arbitration by Corinth (no. 227) and Korkyra (no. 123), from Syracuse to Gela (Hdt. 7.154.3), as payment for the release of Syracusan prisoners of war (Thuc. 6.5.3). Hippokrates, acting as oecist himself, refounded the city c.490 (Thuc. 6.5.3; Philistos (*FGrHist* 555) fr. 15; Timaios (*FGrHist* 566) fr. 19). Casevitz (1985) 168, 172–73 shows that the term used by Thucydides to describe Hippokrates' refoundation (= *κατοικίζω*) mainly designates the settling of new inhabitants and may be used for the "colonisation" of a site already inhabited. The term used by Philistos and Timaios (= *συνοικίζω*) implies the participation in the new foundation of various unspecified groups (Cordano (1992) 7). In 484 Gelon destroyed Kamarina (Hdt.

7.156.2; Thuc. 6.5.3) and transferred all Kamarinaians to Syracuse, where they received citizenship (Hdt. 7.156.2); prior to that, Gelon had installed Glaukos of Karystos as his governor in Kamarina, and the occasion for his destruction of the city was presumably its execution of Glaukos (schol. Aeschin. 3.189; Demand (1990) 47–48). Kamarina now probably ceased to exist until its refoundation by Gela in 461; at least, a decrease in the archaeological evidence covering the years 484–461 suggests that the site was uninhabited or only sparsely inhabited in this period (Giudice (1988) esp. 56–57). In 461 (Diod. 11.76.5) Kamarina was refounded by Gela (Thuc. 6.5.3). In 427 this third Kamarina was allied with Leontinoi (no. 33) and Athens (no. 361) against Syracuse (Thuc. 3.86.2, 6.75.3). At the Congress of Gela in 424 it was decided that Kamarina was to receive Morgantina (no. 37) on condition of the payment of *ἀργύριον τακτόν* to Syracuse (Thuc. 4.65.1). This congress had been called on the initiative of Gela (no. 17) and Kamarina after they had ended a mutual war by *ekecheiria* (Thuc. 4.58; Timaios (*FGrHist* 566) fr. 22). In 422 Phaiax "won over" Kamarina to Athens (Thuc. 5.4.6), but the city was allied with Syracuse as well (Thuc. 6.88.2) and eventually sided with her (*infra*). In 405 Kamarina suffered from Carthaginian attacks (Diod. 13.108.3), and Dionysios I forced the inhabitants (*τοὺς ἐκεῖ*) to relocate to Syracuse (Diod. 13.111.3); but the Kamarinaians (with the Geloans) left Syracuse for Leontinoi *τῷ Διονυσίῳ διαφόρως ἔχοντες* (113.4). The 405 peace treaty between Dionysios and Carthage decreed that Kamarina be *ateichistos* and pay tribute to Carthage (Diod. 13.114.1). A Timoleontic reinforcement of the population is reported by Diod. 16.82.7, and the archaeological evidence points to a revival of the city in C4s (Talbert (1974) 149–50; Pelagatti (1976)).

Kamarinaian military forces assisted Syracuse during the conflict with Athens (Thuc. 6.67.2), although the city initially attempted neutrality, allied as it was to both parties (Thuc. 6.88.2); Thuc. 7.33.1 mentions contingents of 500 hoplites, 300 *akontistai* and 300 *toxotai*; a contingent of twenty cavalry is mentioned at Thuc. 6.67.2. In 406 Kamarinaian forces fought with Gela and Syracuse against the Carthaginians at the battle of the river Himera (Diod. 13.86.5), and Menes of Kamarina was commander on this occasion (13.87.5); Kamarinaian forces assisted Dionysios again in 397 (Diod. 14.47.6), and in 357 troops from the city assisted Dion (Diod. 16.9.5; Plut. *Dio* 27.1).

Reception of envoys is attested at Thuc. 6.75.3; sending of envoys is mentioned in Timaios (*FGrHist* 566) fr. 22 (r424).

At the refoundation in 461 a system of civic subdivisions was introduced whereby the citizens were organised into phratries (subdivided into *triakades* (Cordano (1992); Murray (1997))).

Glaukos of Karystos presumably ruled the city as tyrant on behalf of Gelon (Berve (1967) 142). Apart from that, the form of constitution is unknown, though there are glimpses of its working: a death sentence passed by the assembly is recorded in reference to c.484 by schol. Aeschin. 3.189, and a meeting of the assembly (*ξύλλογος*) is attested in Thuc. 6.75.3–4. Thuc. 4.25.7 refers to a faction which allegedly in 425 was ready to betray the city to Syracuse (cf. Thuc. 6.88.1 for the general hostility of Kamarina towards Syracuse).

Parmenides of Kamarina was victorious at Olympia in 528 (Diod. 1.68.6 = *Olympionikai* 125), and so was Psaumis in 456 and 452 (*Olympionikai* 280, 292; cf. Pind. *Ol.* 4–5).

The town of Kamarina was founded on a narrow coastal plateau between the rivers Hypparis and Oanis (for the situation of the city in relation to rivers, see Cordano and Di Stefano (1997)). During the C4s/Timoleontic phase the site comprised a fortified area of not less than 150 ha. There is no evidence of a circuit wall contemporary with the foundation. The C6s circuit wall, with later phases, probably enclosed an area larger than that ascertained for the earliest habitation phase. It was built as a double curtain-wall in a mixture of ashlar and small polygonal techniques with internal fill. Part of the upper structure in sun-dried brick has been found, and there were gates corresponding to the routes westwards to Gela (no. 17), inland, and eastwards to Heloron (no. 18) and Syracuse (no. 47). An outer *proteichisma* wall was raised outside the north wall along the river Hypparis (Pelagatti (1970); Cordano and Di Stefano (1997) 294–96).

Structural remains from the earliest phases of the site have been found above all in the western part of the later city, close to the coast on the promontory proper, near the estuary of the river Hypparis and the harbour. The Archaic remains show an organic layout with an overall alignment of the individual structures and a specific cult area, the Athena Polias sanctuary on the highest part of the plateau. Habitation in the early period consisted of single houses and house plots with open areas. The orientation was respected by the Geloan refoundation of 461 (Pelagatti (1976) 122–25). The C5 city comprised three *plateiai*, whereas the north-eastern part of the city with two further *plateiai* belongs to the C4s/Timoleontic foundation; for the public works of this phase, fortifications and sewers, see Cordano and Di Stefano (1997) 292–97. The part of the city facing the sea and

the port was from early times laid out as public space; the vast area may have been divided into a mercantile agora and a civic-political agora (Pelagatti (1984–85) 683–94; Di Stefano (1993–94) 1367–71). Recent investigations at the mouth of the river Hypparis have uncovered remains of an impressive harbour structure, in part going back to the Archaic period (Di Stefano (1990)).

The major sanctuary of the city, undoubtedly dedicated to Athena, has roots in the Archaic period, but the extant remains of the temple are of C5f (Di Stefano (1984–85) 729–37). Athena was the patron divinity of Kamarina (schol. Pind. *Ol.* 5), and the epithet Poliaochos is used by Pind. *Ol.* 5.10–11. An archive of C5m lead tablets listing citizens and the phratries and *triakades* to which they belonged (Cordano (1992)) was deposited in the temple (Di Stefano (1992)) and demonstrates the importance of Athena. The *rev.* type of litrai issued after the 461 resettlement depicts Athena armed, and the cult statue of Athena Polias may have portrayed her as Athena Promachos (Rutter (1997) 138). Votive terracottas from the site show Athena also as Ergane (Martin *et al.* (1979) 520). C5l coin types depicting the main divinities of the city, Herakles and Athena (Westermarck and Jenkins (1982) 57–8; Westermarck (1998) 376), and personifications of the river-god Hipparis and the nymph Kamarina may also be evidence of cults (Lacroix (1965) 115–16). Apollo Patroos is attested in C5 (Manganaro (1995) 98–103). A suburban sanctuary of Demeter south of the city has yielded a few architectural remains and rich votive deposits. Figurines of the type showing Demeter with a piglet attest to the Thesmophorian aspect of the cult (Giudice *et al.* (1979); cf. Pelagatti (1980–81) 716–18; Hinz (1998) 119–21).

The earliest cemeteries were situated to the north-east (Dieci Salme) and the east (Rifriscolaro) of the city. About 2,000 tombs are known at Rifriscolaro from the period of the first generation of settlers (Pelagatti (1980–81) 719–23). The Classical cemetery belonging to the 461 refoundation was located south-east of the city at Passo Marinaro, where about 8,000 m² have been investigated so far (Di Stefano (1984) 55 n. 1 with refs.; Orsi (1990)).

Coinage began after the refoundation of Kamarina by Hippokrates with an issue of didrachms on the Attic standard: *obv.* helmet on a shield; *rev.* palm-tree flanked by greaves, legend: *KAMAPINAION* or *KAMAPI* (Westermarck and Jenkins (1980)). This issue lasted only to 484, when the city ceased to exist. Kamarina as resettled in 461 by Gela issued a series of silver litrai: *obv.* flying Nike; below, a swan; *rev.* Athena standing and armed, legend: *KAMAPINAION* (-*ΟΣ*); this issue ended c.440 (SNG

Cop. Sicily 158–60). A survey of fractional coins is found in Westermark and Jenkins (1982) 48–52. The next issue dates from c.420, the period of full Syracusan influence: tetradrachms on the Syracusan standard, *obv.* Athena as charioteer; *rev.* head of Herakles in lion-skin (*SNG Cop. Sicily* 161–63; a rare variant has *rev.* head of Herakles: Westermark (1998)). Some dies are signed by engravers. Didrachms have *obv.* head of the river-god Hipparis; *rev.* nymph Kamarina riding a swan (*SNG Cop. Sicily* 164); legend *KAMAPINA*, *KAMAPINAION*. Hemidrachms have *obv.* head of nymph; *rev.* flying Nike with shield (Westermark and Jenkins (1980)). Litrai have *obv.* head of Athena; *rev.* Nike with wreath; the legend *KAMAPINAI*A probably implies *σφραγίς vel sim.*; one rare litra has *rev.* head of Herakles wearing lion-skin (Westermark and Jenkins (1982) 56–57). These issues ended with the banishment of the inhabitants in 405 (Westermark and Jenkins (1980); Cutroni Tusa (1987)). A single gold coin may be from an issue struck as a result of Carthaginian pressure in 405 (Westermark and Jenkins (1980) no. 206; Rutter (1997) 148, 154). Bronze was minted from C5s (*SNG Cop. Sicily* 166–69); a bronze issue of C4s depicts *obv.* Athena with helmet, legend: *KAMAPINAIΩN*; *rev.* free horse prancing (*SNG Cop. Sicily* 170).

29. Kasmenai (Kasmenaios) Map 47. Lat. 37.05, long. 14.50. Size of territory: ? Type: A:a. The toponym is *Κασμένη*, ἡ (Hdt. 7.155.2), *Κασμέναι* (Thuc. 6.5.2). The city-ethnic is *Κασμεναῖος* (Steph. Byz. 364.2).

Kasmenai is called a *polis* in the urban sense at Hdt. 7.155.2. Apart from the entry in Steph. Byz., the city-ethnic is attested only as a conjecture in Philistos (*FGrHist* 556) fr. 5 (Pais (1894) 560–64; recently sustained by Di Vita (1987)), which, if accepted, yields an attestation of the external collective use rC6m.

Kasmenai was founded in 644/3 (Thuc. 6.5.3) by Syracuse (no. 47), probably as a colony, although there is no mention of an oecist. The location and the urban layout (*infra*) point to a military settlement (Di Vita (1990) 350). Kasmenai was a *polis* according to Herodotos, and the site is defined as type A here, but the *polis* status must remain uncertain, though Pais' conjecture of Philistos (*FGrHist* 556) fr. 5 (*supra*) would tend to support *polis* status by providing an instance of the external collective ethnic. Hansen (1997a) 36 classifies Kasmenai as a dependent *polis* of Syracuse, i.e. as a *polis* founded as a fortress. See also Akrai (no. 10) and Heloron (no. 18).

If the conjecture in Philistos (*FGrHist* 556) fr. 5 (*supra*) is correct, Kasmenai was allied with the Syracusans against

Kamarina in C6m. A C5e bronze plaque (*IGDS* no. 219) found near Monte Casale is a grant (*ἐψαφίσαν[το]*) of *ateleia* etc., possibly by Kasmenai (though this is highly uncertain, see *IGDS* no. 219 with refs.). The text refers to *γάμοροι*, and according to Hdt. 7.155.2 the Syracusan *gamoroi* expelled by the *demos* in a civil strife in 491 took refuge at Kasmenai. Cf. Asheri in *CAH* v². 768.

Kasmenai is with near certainty identified as the urban site on the top of Monte Casale c.12 km west of Akrai (Marotta D'Agata and Moreschini (1992)). The settlement was founded on a high plateau (c.70 ha), bounded by steep slopes and with no direct access to a hinterland. Apart from the natural defences the plateau was protected by a sturdy circuit wall 3.4 km long, 3m wide, built in megalithic technique and with at least three square towers along the north side. Its date is uncertain, but the wall is often considered to be contemporary with the foundation, or a little later (Adamesteanu (1986) 110). A double curtain-wall, a *diateichisma*(?), along the south-eastern side of the north-west plateau, the upper terrace and so-called acropolis, may date from C4f, and may therefore be taken as a later reinforcement due to Carthaginian pressure (Martin *et al.* (1979) 531, fig. 73).

The settlement was laid out according to a well-defined plan already in C7s. The urban plan consists of at least forty narrow streets oriented north-north-west to south-south-east, at right angles to the long axis of the plateau and delimiting *insulae* c.25 m wide: an early stage of Western Greek urban planning (Martin *et al.* (1979) 533). The rather simple layout may reflect the function of a fort or garrison defending the territory of Syracuse. Quite apart from the apparent lack of a *chora*, the morphology of the site is unsuitable for a colony proper, and the nature of the votive material from the shrine may also point to a military function (Di Vita (1961); Marotta D'Agata and Moreschini (1992) 291). However, against this it should be noted that "The sheer number of inhabitants, some 7–8,000 altogether, shows that the site must have been a proper town, and that some 2,000 soldiers max. must have been garrisoned in the town *with their families*. Also, no more than ca. 60% of the town has been excavated and the absence of e.g. an agora and public space in general carries no weight as the evidence stands" (Hansen (2000) 198–99). An analysis of aerial photographs of the plateau of Monte Casale also shows that unexcavated areas were part of the urban layout (Martin *et al.* (1979) pl. on p. 528).

The only public architecture known at Kasmenai is the *temenos* with temple located on the western plateau and

aligned with the overall urban layout. The sanctuary was squeezed into a small area otherwise given over to habitation (Voza (1976–77) 561–62). The temple has two phases: an early one c.560 and a later one 525–500 (Ciurcina (1977) 72–73), but the *temenos* has a C71 origin. A votive deposit of hundreds of javelins, swords and arrowheads indicates a cult of a martial divinity (*supra*).

30. Katane (Katanaios) Map 47. Lat. 37.30, long. 15.05. Size of territory: 4. Type: A:a. The toponym is *Κατάνη*, ἡ (Hecat. fr. 73; Thuc. 6.51.3; C5f coins, *infra*) or *Κατάνα* (IG IV².1 95.11.71 (356/5)). The city-ethnic is *Καταναίος* (Thuc. 7.57.11; C5m coins; IG II² 162 (C4f)).

Katane is called a *polis* in the urban sense by Hecat. fr. 73 and Thuc. 6.51.1–2, and in the political sense at Thuc. 7.14.2 and in Arist. *Pol.* 1274^a24, a passage which also refers to the *πολιται*. It is called *patris* by Diod. 11.49.2 (r476) and 11.76.3 (r461).

The internal collective use of the city-ethnic is found on C5m coins (*infra*), and the external use in Thuc. 6.3.3 and IG I³ 291.b.11.15 (415); the external individual use is attested by Arist. *Pol.* 1274^a23 (rC6s) and IG II² 162 (C4f).

The territory is termed *γη* at Thuc. 3.116.1 and *chora* by Diod. 11.49.1 (r476), who names it *Καταναία* (ibid.). It comprised parts of the fertile plains delimited inland by Etna and the Monti Siracusani with the Sikel settlements of Hybla Geleatis, Inessa, Kentoripa (no. 31) and Piakos (no. 43; Manganaro (1996a) 26), in all about 400 km². However, Leontinoi (no. 33), the earlier foundation, may have dominated part of this area, leaving a more limited area for the direct use of Katane. Chalkidian expansion far inland to the south-west of Katane and Leontinoi is revealed by the Chalkidian legal texts found at the settlement of Monte San Mauro (Frasca (1997)). The C6m indigenous centres show a notable degree of Hellenisation, probably evidence of a Chalkidian dominion comprising also the lowland plains of the rivers Simeto, Dittaino (for a *phourion* at M. Turcisi, cf. Procelli (1988–89)) and Trigonía. The *chora* of Katane was bounded to the south by the territory of Leontinoi (cf. Thuc. 6.65.1) and to the north by that of Naxos (no. 41; Procelli (1989) 684–89; Manganaro (1996a) 25, 29). The territory suffered from an eruption of Etna in 426/5 (Thuc. 3.116), and in 415/14 it was ravaged by Syracusan forces (Thuc. 6.75.2).

Katane was founded by “Thoukles and the Chalkidians from Naxos” (Thuc. 6.3.2; cf. Hellan. fr. 82), after these had founded Leontinoi in the fifth year after the foundation of Syracuse (i.e. 729; Thuc. 6.3.2). According to Thuc. 6.3.3, the Katanaians “themselves made Euarchos their oecist” (Leschhorn (1984) 11–13), implying that the city obtained

autonomous status soon after its foundation. Thuc. 6.3.3 possibly implies that the Greeks drove out the Sikel population, and there is tenuous archaeological evidence supporting this (Procelli (1992)).

In 476, Hieron transferred the populations of Katane and Naxos to Leontinoi, renamed Katane as *Aitna* and settled it with 10,000 *oiketores*: 5,000 from the Peloponnese and 5,000 from Syracuse (Diod. 11.49.2); though the report on the relocation of populations refers to both Katane and Naxos, Katane seems to have been the site refounded as Aitna (no. 8.1): *καὶ τὴν μὲν Κατάνην μετωνόμασε Αἴτνην, τὴν δὲ χώραν οὐ μόνον τὴν Καταναίαν ἀλλὰ καὶ πολλὴν τῆς ὀμόρου προσθεῖς κατεκλήρουσεν, μυρίου πληρώσας οἰκῆτορας*. (Cf. Strabo 6.2.3, who focuses exclusively on Katane in his report on the foundation of Aitna.) After Hieron had died in 466, the Katanaians returned in 461 and expelled the Aitnaians (Strabo 6.2.3), according to Diod. 11.76.3 after several battles (*πλείοσι μάχαις*) between the Hieronian settlers and Syracuse as well as the Sikels under Douketios. Cf. further Aitna (no. 8.1). In 403 Dionysios I was able to take possession of Katane through the betrayal of the city by the *strategos* Arkesilaos: the inhabitants were sold into slavery and the city granted to Campanians (Diod. 14.15.1–3), who in their turn were transplanted to Aitna in 396. After that date the demographic history of the city becomes obscure: it is mentioned again in 353 when it was taken by Kallippos, Dion’s murderer (Plut. *Dio* 58.4). In 394, the surviving Katanaians were settled by Rhegion (no. 68) in Mylai (Diod. 14.87.1), but presumably had to scatter across the island when Mylai fell to Dionysios later that year (Diod. 14.87.3).

Katane was presumably among the *Chalkidikai poleis* allied with Leontinoi (no. 33) in its war with Syracuse (no. 47) in 427 and may, with its ally, have sent an embassy to Athens asking for help in 427 (Thuc. 3.86.2–3; cf. Andoc. 3.30 with Albin (1964) 100). Nikias’ letter at Thuc. 7.14.2 mentions Katane as an ally (*ἔϋμμαχος*) of Athens (no. 361) in 414/13 (though Diod. 13.4.2 reports that it was originally in favour of Syracuse); the treaty was concluded (*ἐψηφίσαντο . . . ξυμμαχίαν Ἀθηναίοις*) in 415 at an assembly (*ἐκκλησία*) attended by Athenian *strategoí* and against the wishes of a pro-Syracusan faction (Thuc. 6.50.3–51.2). Cf. IG I³ 291.b.11.15 (415): a payment by Katane to Athens.

IG II² 162 is a C4f grant of Athenian proxeny to two men of Katane. A citizen of Katane served as *theorodokos* of Epidauros (no. 348) in 356/5 (IG IV².1 95.11.71; cf. Manganaro (1996a) 46 n. 81).

There is no evidence for Archaic or C5 tyranny at Katane. According to Arist. *Pol.* 1274^a23, Charondas of Katane

legislated for his own city as well as for other Chalkidian cities. An *ekklesia* is attested for 415 (Thuc. 6.51.2) and a *stratēgos* is mentioned at Diod. 14.15.1 (r403). In 344, the city was ruled by the tyrant Mamerkos/Markos, who initially sided with Timoleon (Diod. 16.69.4) but then joined Carthage only to be betrayed by οἱ σὺν ἀντιφῶ who handed Katane over to Timoleon (Plut. *Tim.* 34).

The urban layout at Katane is virtually unknown. The initial settlement occupied the acropolis above the coastal plain and harbour, today occupied by Piazza Dante and the Convento dei Benedettini; structural remains from this period are scarce, but Protocorinthian material confirms a C8s Greek presence (Rizza (1980–81) 769, pl. 186.1–2, (1981) 316, figs. 4–6), and there are remains of C6 habitation structures (Giudice *et al.* (1979) 139–40). Traces of C8 habitation have been revealed below the acropolis near the ancient coastline (A. Patanè (1993–94) 907), and the size and location of the ancient harbour are reviewed by Lagona (1996). In the later Classical period the habitation area incorporated also the lower plateau, probably with an agora located on the site of the later Roman forum close to the theatre and *odeion*. The theatre where the *ekklesia* met in 415 (Frontin. *Str.* 3.2.6) was located on the southern slopes of the plateau. Remains date mainly from the Roman period, but its size (seating capacity c.7,000) may reflect that of the Greek theatre (Mitens (1988) 100–3; *TGR* ii. 428–30, C5?). The few Greek remains are from C5 (Anti (1947) 125, 128; Bacci (1980–81a)). The adjacent Roman *odeion* may also have had a Greek predecessor, possibly a *bouleuterion* (proximity of theatre and *bouleuterion* is known from other sites; cf. Kolb (1981) 88).

On the southern slope of the acropolis a rich C6–C4 votive deposit has revealed a sanctuary. The cult of the early phase may have been that of Hera, although the evidence is tenuous. The votive terracottas show that from C5 the cult was that of Demeter and Kore, with whom Hieron, as a Deinomenid, had special bonds (Rizza (1960), (1996) 12–13, pl. 1; Hinz (1998) 161–63).

The central area of the Roman city may suggest the approximate extent of the Greek city. To the west this was delimited by the acropolis, to the north by the C6l–C5e cemetery (Orsi (1918)), to the north-east by the river Amenanos, and to the south-east by the sea, in all occupying an area of 75–100 ha (cf. Rizza (1996) 11–12). According to Thuc. 6.51.1 (r415), the city had a circuit wall, destroyed in 403 by Dionysios (Diod. 14.15.2–3).

Katane began striking coins rather late compared with other Sicilian *poleis*, perhaps due to political or economic dependence on Naxos (Manganaro (1996a) 29): minting

started c.461 on the Attic standard (with denominations based on the tetradrachm) at the time of the return of the former inhabitants relocated by Hieron to Leontinoi (for a survey of the coinage, see Manganaro (1996b)). The types are *obv.* man-headed river-god Amenanos crowned by a flying Nike; *rev.* Nike running and holding a wreath or fillet, legends: *KATANE*, *KATANAIION* or, more rarely, *KATANAIOS* (Manganaro (1996b) 307–8; *SNG Cop. Sicily* 174–75). These issues are sometimes thought to pre-date 476 (Head, *HN²* 130, followed by Marotta D'Agata *et al.* (1987) 156), but there is greater consensus for dating them as an inauguration issue, to 461 (Stazio (1978) 191, 194; Manganaro (1996b) 305). After C5m the *obv.* type of the tetradrachms, a quadriga, reveals the influence of Leontinian and Syracusan issues; *rev.* head of Apollo, legend: *KATANAIION*, from C5l *KATANAIION* (Manganaro (1996b) 309; *SNG Cop. Sicily* 176–79). From c.402 tetradrachms were signed by the engravers Herakleides and Euainetos: *obv.* Apollo *en face*; *rev.* quadriga, legend: *KATANAIION* (Manganaro (1996b) 309–10; *SNG Cop. Sicily* 180). Varied issues of lower denominations c.450–402 are based upon drachms and fractions (types: quadriga, head of Amenanos, Silenos, bull) and upon the litrai and fractions (types: Silenos, stylised thunderbolt) (C. Boehringer (1982); Manganaro (1996b) 308, 310–11; *SNG Cop. Sicily* 181–84)). The earliest bronze coinage is dated c.405 (Manganaro (1996b) 311); coins with *rev.* butting bull were probably minted by Mamerkos and the Campanian mercenaries settled at Katane by Dionysios between 403 and 396 (Manganaro (1996b) 312–13; *SNG Cop. Sicily* 184). Timoleontic issues follow in C4m: *obv.* head of nymph; *rev.* man-headed bull, Amenanos (Manganaro (1996b) 313).

A group of C5l hemidrachms, *obv.* head of Apollo, legend: *AEON*; *rev.* butting bull, legend: *KATANAIΩ*, may be evidence of collaboration between Leontinoi and Katane in the face of Syracusan pressure in 404–403 (Manganaro (1996b) 311–12; C. Boehringer (1998) 51), or—perhaps rather—it may be an issue of the Campanian mercenaries settled in Katane by Dionysios I in 403; in that case the legend *AEON* may attest to Leontinian dependence upon Katane (Kraay (1976) 229; Corretti *et al.* (1990) 532).

31. Kentoripa (Kentoripinos) Map 47. Lat. 37.35, long. 14.45. Size of territory: ? Type: C:γ. The toponym is *Κεντόριπα, τὰ* (Thuc. 6.94.3; Polyb. 1.9.4; Strabo 6.2.4) or *Κεντούριπαι, αἱ* (Ptol. *Geog.* 3.4.7). The city-ethnic is *Κεντόριψ* in Thuc. 7.32.1 and *Κεντοριπίνος* on C4 coins (*infra*) and in Diod. 13.83.4, 14.78.7, etc.

Thuc. 6.94.3 calls Kentoripa a πόλισμα Σικελῶν; it is called a *polis* in the urban sense at Diod. 16.82.4 (r339), where the political sense is possibly a connotation. *Politai* is found in Porph. *De vita Pythag.* 21 (rC61) (= Aristox. fr. 17, Wehrli). The internal collective use of the city-ethnic is found on C4 coins (*infra*), and the external collective use in Thuc. 7.32.1, Porph. *De vita Pythag.* 21 (rC61) (= Aristox. fr. 17, Wehrli) and Diod. 13.84.4 (rC51).

Thuc. 6.94.3 describes Kentoripa as a Sikel community; and it is implicitly described as Sikel at Diod. 14.78.7 (r396). A claim or pretension to Greek identity may be implied by the Greek names of its Classical rulers (Damon, Nikodemos; *infra*) and Greek-style coins were issued by the Timoleontic refoundation (*infra*).

At 6.94.3, Thucydides relates how in 414 the Athenians won over Kentoripa by *homologia*, and at 7.32.1 the *Kentoripes* are described as Athenian *symmachoi* in 413. In 396, Damon, the ruler of Kentoripa, made a *syntheke* with Dionysios I (Diod. 14.78.7); this Damon may possibly have been appointed *proxenos* by Athens (no. 361) (*IG* 11² 32 (385/4)). Reception of a *presbeia* from Akragas (no. 9) is attested at Diod. 13.83.4 (rC51). A meeting of the *ekklesia* is attested by Diod. 13.83.4 (rC51).

Porph. *De vita Pythag.* 21 (rC61) (= Aristox. fr. 17, Wehrli) refers to a tyrant by the name of Simichos who renounced his rule upon becoming a Pythagorean. At Diod. 14.78.7 (r396) a Damon is described as δυναστεύων *Κεντοριπίνων*, and at 16.82.4 (r339), a Nikodemos is described as *Κεντοριπίνων τύραννον* and is said to have been ousted from his city by Timoleon, who gave Syracusan citizenship to its freed inhabitants (*ibid.*). The phrase used by Diodorus, *Συρακοσίους ἐποίησε*, suggests to Moggi, *Sin.* 357 that the inhabitants, along with those of Agyrion (no. 7), were transferred to Syracuse; Agyrion was later assigned new citizens (Diod. 16.82.5), and so presumably was Kentoripa, although this is not explicitly stated. A Timoleontic refoundation is, however, reflected in the striking of a new coinage (*infra*) and in craft production of Greek type (R. P. A. Patanè (1992) 69, 73).

The archaeological evidence from the city's Hellenised phase is mainly C4s and Hellenistic, but urban remains are few (Marotta D'Agata and Rizza (1987) esp. 236–38; R. Patanè (1988)).

Bronze litrai were struck briefly under Timoleon after the ousting of Nikodemos in 339/8 (cf. R. P. A. Patanè (1992) 69): *obv.* head of Kore surrounded by dolphins (so-called Euainetos type, taken over from Syracuse); *rev.* leopard, legend: *KENTOPIIINQN* (Head, *HN*² 135; *SNG Cop. Italy* 209).

32. Kephaloïdion (Kephaloïditas) Map 47. Lat. 38.00, long. 14.00. Size of territory: ? Type: C:γ. The toponym is *Κεφαλοΐδιον*, τό (Diod. 14.56.2; C51–C4e coins, *infra*); or *Κεφαλοΐδης* (Archestratos of Gela fr. 35.6, Olson and Sens; Strabo 6.2.5); Ptol. *Geog.* 3.4.3 has *Κεφαλοΐδης*, ἡ *Κεφαλωΐδης*. The city-ethnic is *Κεφαλοΐδῆτας* (C51–C4e coins, *infra*); schol. Theoc. *Id.* 1.118b gives *Κεφαλοΐδιος*.

No source calls Kephaloïdion a *polis* (though *ταύτης* at Diod. 20.56.3 (r307) may mean “this *polis*”; a *chora* is referred to at Diod. 20.77.3 (r306)); it is included here on account of a coinage presumably struck by/in the community and on stylistic grounds dated to C51–C4e (Cutroni Tusa and Tullio (1987) 211). Both silver (drachms, hemidrachms and litrai) and bronze coins were struck: *obv.* head of Herakles; *rev.* butting bull (from C4m replaced by a Pegasos on bronzes). The legends are unusual and difficult to interpret; the following variants are found: (a) *obv.* *ΕΚ ΚΕΦΑΛΟΙΔΙΟΥ*, *rev.* *ΗΡΑΚΛΕΙΩΤΩΝ*; (b) *obv.* *ΚΕΦΑΛΟΙΔΙΤΑΝ*, *rev.* *ΗΡΑΚΛΕΙΩΤΑΝ*; (c) *ΚΕΦΑΛΟΙΔΙΤΑΝ*. While (c) can be interpreted as an ordinary legend of a civic coinage of Kephaloïdion, (a) and (b) seem to involve a foreign group, the *Herakleiotai*, of unknown origin. *Ek Kephaloïdiou* of (a) probably means “based on Kephaloïdion” (Kraay (1979) 29) and suggests that the *Herakleiotai* had been admitted to Kephaloïdion as a group; the double legend of (b), naming both the Kephaloïdians and the Herakleiotans, suggests that the latter had been admitted to citizenship by a block grant but kept their individual identity; this would suggest that Kephaloïdion was a *polis* at the time of the minting of these coins (Head, *HN*² 118; Consolo Langher (1961); Cutroni Tusa and Tullio (1987) 210–11). (Bernabò Brea (1975) 24–29 assigns the issues to a period of autonomy, independent from Carthaginian rule, after the treaty with Himilkon (*infra*); cf. also Jenkins (1975) 92–99 for a downdating of some of the issues to the period of Timoleon.)

Kephaloïdion was originally a settlement located on the confines of Himeraian and Sikel territories. In 396, Himilkon of Carthage concluded a treaty of friendship with Himera and “those settled at the *phrourion* of Kephaloïdion” (τοὺς τὸ *Κεφαλοΐδιον φρούριον κατοικοῦντας*; Diod. 14.56.2). Whether these latter were Greeks is not clear, but they were presumably not Himeraians. At Diod. 14.78.7 (r396) Kephaloïdion is implicitly described as Sikel, but the Greek-style coinage discussed above suggests Hellenisation; it was captured *διὰ προδοσίας* by Dionysios I in 396 (Diod. 14.78.7) and is not met with again before the time of Agathokles (Diod. 20.56.3 (r307), 77.3 (r306)). The archaeological evidence at the site is mainly Hellenistic, but the

massive circuit wall in polygonal technique may go back to C4; the layout of the mediaeval city may in its main lines coincide with that of the ancient city (Cutroni Tusa and Tullio (1987) 211–14).

33. Leontinoi (Leontinos) Map 47. Lat. 37.15, long. 15.00. Size of territory: 4. Type: A:a. The toponym is *Λεοντῖνοι* (IG I³ 54.1; Thuc. 6.3.3). The city-ethnic is *Λεοντῖνος* (Thuc. 3.86.2–3).

Leontinoi is called a *polis* both in the urban sense (Thuc. 5.4.3–4; Hdt. 7.154.2) and in the political sense (Thuc. 3.86.2; Arist. *Pol.* 1316^a35–39). The territorial sense is a connotation at Thuc. 5.4.3, and the political sense is a connotation at Hdt. 7.154.2 (cf. Hansen (2000) 175–76, 205). *Politai* is used at Thuc. 5.4.2, and so is *demos*. The internal collective use of the city-ethnic is attested on C5f coins (*infra*), and the external collective use by Hdt. 7.154.2, Thuc. 5.4.2 and IG I³ 54.18 (C5m). The external individual use of the ethnic is found at Xen. *An.* 2.6.16, Pl. *Ap.* 19E and CEG 2 830.1 (C4f).

Leontinoi was one of the early Chalkidian colonies in Sicily, founded by Chalkidians from Naxos under the leadership of Theokles five years after the foundation of Syracuse (i.e. traditionally 729; Thuc. 6.3.3; cf. Hellan. fr. 82). However, Theokles can hardly have been the oecist of Leontinoi, as well as Naxos (cf. Leschhorn (1984) 12).

Leontinoi is the only primary colony of the Greek West situated inland. According to Strabo 6.2.7, the territory (*γῆ*, Thuc. 5.4.2; *χώρα*, Diod. 5.8.2) of Leontinoi, called *ἡ Λεοντίνη* (Thuc. 5.4.4, 6.65.1) or *τὸ Λεοντίνων/Λεοντίνων πεδῖον* (Theopomp. fr. 225a.60; Diod. 4.24.1), belonged to the Naxians; this must refer to the Naxian origin of Leontinoi. The territory of Leontinoi probably encompassed most of the modern plain of Catania, about 400 km². It is not possible to define a borderline between Katanaian and Leontinian territory. The sources stress the beauty of Leontinoi's *chora* (Diod. 4.24.1) and the importance of grain crops (Diod. 14.58.1 (rC4e)). The north gate of Leontinoi led to the Leontine plain (Polyb. 7.6). The Chalkidian dominion reached far inland along the Simeto and the Dittaino river valleys, possibly as far as Monte San Mauro, Grammichele, Morgantina and Kenturipe (Procelli (1989); see Katane (no. 30)).

The population history of Leontinoi was eventful: according to Thuc. 6.4.1, the group of Megarians led by Lamis who eventually founded Megara (no. 36) for some time lived as citizens (*ξυμπολιτεύειν*) at Leontinoi but were expelled (*ἐκπεσεῖν*). In 476, Hieron of Syracuse transplanted the populations of Naxos (no. 41) and Katane (no. 30) to Leontinoi

(Diod. 11.49.2). After the Congress of Gela in 424, new citizens (*politai*) were enrolled in Leontinoi, and the *demos* contemplated a redistribution of land. The result was civil war, in which *οἱ δυνατοί* summoned the Syracusans. The *demos* was expelled, whereas *οἱ δυνατοί* moved to Syracuse (no. 47), where they obtained citizen rights, although “later” (*ὑστερον*) some returned to the old city (Thuc. 5.4.2–4; cf. Dreher (1986)). Leontinoi ceased to be a *polis*, and its site was turned into a *phourion* of Syracuse (Diod. 12.54.7); the Athenians had the refoundation of Leontinoi as one of their principal alleged motives for undertaking the expedition to Sicily in 415 (Thuc. 6.33.2, 48.1, etc.). In 405/4 Leontinoi was resettled by citizens of Gela (no. 17) and Kamarina (no. 28; Diod. 13.113.4), and the treaty concluded that year between Dionysios I and Carthage stipulated that like, e.g., Gela, the city was to be *autonomos*, and this must have meant the refoundation of the city (Diod. 13.114.1). Two years later (403/2), Dionysios conquered Leontinoi and moved all its inhabitants to Syracuse (Diod. 14.14–15); in 396 Dionysios resettled Leontinoi with, allegedly, 10,000 mercenaries (Diod. 14.78.2). In 339, the population was transplanted to Syracuse by Timoleon (Diod. 16.82.7).

From Thuc. 3.86.2–3 it appears that in 427 Leontinoi had treaties of *symmachia* with “the Chalkidian *poleis*”, Kamarina and Rhegion (no. 68), and that these allies were also allied with Athens (by individual treaties; see ML 63–64 with comm.), and that they were capable of acting as a body (*HCT ad loc.* on *οἱ τῶν Λεοντίνων ξύμμαχοι*). Thuc. 4.24.9 attests to a treaty of *symmachia* between Leontinoi and Naxos in 425. During the reign of Dionysios II, Leontinoi seceded from Syracuse and twice resisted attempts to reconquer the city, the first by Philistos in 356/5 (Diod. 16.16.1), the second in 342/1 by Timoleon (Diod. 16.72.2).

Leontinian *φυγάδες* are mentioned at Thuc. 6.19.1. Several wars fought by Leontinoi are attested: a C6 war with Megara *peri ges horon* is referred to by Polyæn. 5.47.1, and a C5s war with Syracuse by Thuc. 3.86.2. Campaigns are mentioned at, e.g., Thuc. 4.25.10, and a *στράτευμα τῶν Λεοντίνων* at Thuc. 4.25.11. The C7l–C6e tyrant Panaitios served as *polemarchos* (Polyæn. 5.47.1). Leontinoi was conquered by Hippokrates and made a dependency of Gela (Hdt. 7.154.2) c.496/5 (Luraghi (1994) 128–29, 148–50).

Reception of envoys is attested by Diod. 14.14.3; IG I³ 54.4–6 (C5s) names three Leontinian *presbeis*, and Gorgias was sent as an envoy to Athens in 427 (Pl. *Hp. mai.* 282B). A citizen of Leontinoi served as *theorodokos* of Epidauros (no. 348) in 356/5 (IG IV².1 95.11.66).

In the Archaic period Leontinoi was sometimes ruled by a tyrant; two are mentioned by our sources: Panaitios, who in C71 changed the oligarchy (Arist. *Pol.* 1315^b34–37) to tyranny *ek demagogias* (Arist. *Pol.* 1310^b29, 1316^a37; Luraghi (1994) 11–20) and Ainesidamos (Paus. 5.22.7). A C6 *stasis* between the *demos* and the ruling oligarchs is reported by Polyaeus. 5.47.1 and another *stasis* in 424 between the *dynatoi* and the *demos* by Thuc. 5.4.2–3 (Berger (1992) 25–26). Symbouleutic oratory (*en toi demoi*) at Leontinoi is mentioned by Pl. *Hp. mai.* 128A.

The urban layout of Leontinoi is known in some detail from the description given by Polyb. 7.6. The defensive system of the city is among the best preserved in Sicily. The C6 circuit wall enclosed the San Mauro and Metapiccola hills and the central valley with gates at either end (Rizza (1978); for chronology, see Tréziny (1986) 187; for the fortification of the Leontinian acropolises, cf. Diod. 14.58.1 (r396)). The C6e(?) outer ashlar circuit wall of the east and south side of Colle San Mauro crossed the narrow San Mauro valley with a pincer-like gateway (the Syracusan gate of Polybios) and continued along the west and south sides of the Metapiccola plateau. The defences were destroyed by Hippokrates c.496/5, reconstructed and extended in C5m and destroyed in C5l (cf. Diod. 14.14.4; Rizza (1955) 281–88, 346–76; cf. Dreher (1986)). The north gate has been identified in the substantial remains of a C5 ashlar wall in isodomonic technique, and part of the foundation of a round tower was found in the northern outlet of the San Mauro valley (Martin *et al.* (1979) 585; Spigo (1980–81a) 794). The city was walled again in 356/5 (Diod. 16.16.1) and besieged in 342/1 (Diod. 16.72.2). A theatre is attested in C4m (during the reign of Dion) when it housed a meeting of the assembly (Plut. *Dio* 42.8–43.1).

Archaeological evidence (habitation structures and abundant C8–C7 ceramic material) has revealed a first Greek habitation phase on the Colle San Mauro. There are indications of an initial close relationship between Greek and Sikeli settlers (Rizza (1962), (1978)). The C7–C6 settlement phase incorporated also the Metapiccola hill, and the total extent of the two plateaux with the central valley within the C6 circuit wall was about 40 ha. There are remains of terraced houses on the western slope of the Metapiccola hill overlooking the San Mauro valley (corroborating the description given by Polybios). These are mainly Hellenistic, but they have a C7 phase (Rizza (1980–81) 767–68; Spigo (1980–81a) 793–94). According to Thuc. 5.4.4, one district in the city was called Phokaia. Neapolis, another part of the city, was attacked by Timoleon in 342/1 (Diod.

16.72.1), and was perhaps originally an extra-urban settlement founded by Hieron in 476 to house the inhabitants from Katane (no. 30) and Naxos (no. 41) (Diod. 11.49.2). According to Polyb. 7.6, the agora was situated in the central valley, as were the law courts, *dikasteria*; his mention of sanctuaries on the city plateaux is confirmed by the archaeological evidence (Barletta (1983) 38–45). Extensive C5s–C4e cemeteries lay on plateaux north of the city, at some distance from it, whereas tombs, spanning the Archaic and Hellenistic periods, lay just outside the south gate of the city along the road leading to Syracuse (Martin *et al.* (1979) 585–87; Rizza (1982)).

From the evidence of the coins, Artemis or Demeter (cf. Diod. 5.4.2) and Apollo were venerated at Leontinoi. An external collective dedication of a silver *phiale* at Delos is recorded in *I.Delos* 104.93 (366) and *IG* 11² 1643.21 (C4m).

The earliest coinage, based upon the Syracusan–Attic standard, was issued in connection with Hieron's settlement of the inhabitants of Katane and Naxos at Leontinoi in 476 (C. Boehringer (1998) 43–44). This first series of tetradrachms use the Syracusan *lambda* in the legend and reveal strong Syracusan stylistic influence: *obv.* quadriga and Nike; *rev.* lion's head (a pun on the city's name) surrounded by four grains of barley, legend: *AEONTINON* (C. Boehringer (1998) pl. 10.1–5, 7–10, etc.; *SNG Cop. Sicily* 334–37). A second series, from c.466, have similar *obv.* but with a running lion in exergue (as in the Syracusan “Demarateion” coinage); *rev.* female head (Artemis or Demeter), or head of Apollo wearing laurel wreath, legend: *AEON*, *AEONTINON* (*SNG Cop. Sicily* 341–43; C. Boehringer (1998) pls. 10.14–19, 11.30–32). A third series of tetradrachms belong c.450: *obv.* laureate head of Apollo; *rev.* lion head surrounded by barley grains, legend: *AEON*, *AEONTINON*, *AEONTINOΣ* (with Chalkidian *lambda*, cf. Johnston (1975); *SNG Cop. Sicily* 346–52; C. Boehringer (1998) 47, pl. 11.33–37, etc.). Lower denominations carry related types, and on *rev.* of litrai a naked youth (river-god or Apollo) offering a libation at an altar (*SNG Cop. Sicily* 353–57; cf. C. Boehringer (1998) 47–48 for the change in the system of denominations with refs. to plates). The issue of tetradrachms may have continued until c.415 (C. Boehringer (1998) 50–51). For an issue of hemidrachms possibly indicating collaboration between Leontinoi and Katane or Leontinian dependence upon Katane, see entry for Katane. Bronze coins were issued from c.405 (*SNG Cop. Sicily* 358–61; C. Boehringer (1998) 51–52).

Leontinoi founded the colony of Euboea (no. 15) (Strabo 6.2.6) at an unknown site in the Chalkidian hinterland,

perhaps as early as C8l if it was contemporaneous with the foundation of Mylai (no. 38; the two sites are coupled by Ps.-Skymnos 287–88); Euboeia seems to have been a settlement of some importance in C5f, since it was worthy of being relocated by Gelon (Hdt. 7.156.3; Camassa (1989a)).

34. Lipara (Liparaios) Map 47. Lat. 38.30 long. 14.55. Size of territory: 2 (= size of island). Type: A:a. The toponym is *Λιπάρα*, ἡ (SEG 37 414 (C5f)); Antiochos (FGrHist 555) fr. 1; Thuc. 3.88.2; cf. *Λιπάραι* in Polyb. 34.11.19, where the plural “die Stadt Lipara [i.e. in contradistinction to the island] zu bezeichnen scheint, da Polyb. sonst *Λιπάρα* sagt” (Ziegler in RE xiii. 719; cf., however, Diod. 5.7.1 claiming homonymity between island and *polis*); *Μελιγουνίς* is said by later sources to have been an earlier name of *Λιπάρα* (Callim. Hymn. 3.47; Strabo 6.2.10). The city-ethnic is *Λιπαραίος* (C5s coins, *infra*; Thuc. 3.88.2), although *Κνίδιος* (ἐλ *Λιπάραι*) seems to have been used as well (SEG 37 414 (C5f)).

Lipara is called a *polis* in the urban sense by Antiochos (FGrHist 555) fr. 1 = Paus. 10.11.3 (r time of foundation) and Arist. Mete. 367^a6. In later sources Lipara is called a *polis* in the political sense at Polyb. 1.21.5 and in the urban sense at Diod. 14.56.2 (r396). The internal collective use of the city-ethnic is attested by C5s coins (*infra*) and the external collective use in Thuc. 3.88.2, Arist. Mete. 367^a6 and presumably on the C5f Liparan dedication at Delphi (Syll.³ 14 (C6l–C5e) = SEG 34 405, 37 414; cf. BTCGI 9: 101ff). The individual use of the ethnic is found in *F.Delphes* III.4 401 (315) and IG II² 9214 (C3e).

Mythology told of a settlement of the island by Liparos (Diod. 5.7.5), who founded the *polis* and was joined by Aiolos (ibid. and 4.67.4; cf. Hom. Od. 10.1). The historical community was founded by *apoikoi* from Knidos (no. 903; Thuc. 3.88.2; Antiochos (FrGHist 555) fr. 1; Strabo 6.2.10; cf. Hornblower (1991) 496). However, according to Diod. 5.9.2–5, the foundation was the outcome of a joint Knidian-Rhodian expedition to western Sicily under the leadership of Pentathlos of Knidos, in the fiftieth Olympiad, i.e. 580–576. Pentathlos was killed in war supporting Selinous (no. 44) against Segesta, and the leadership of the group was taken over by Gorgos, Thestor and Epithersides; the expedition found at Lipara 500 indigenous inhabitants of Aiolos’ line whom they joined. Antiochos of Syracuse (FGrHist 555, fr. 1 as preserved in Paus. 10.11.3), while agreeing on the leadership of Pentathlos, differs *inter alia* from Diodorus’ account in naming only Knidians as colonisers (as does Thuc. 3.88.2), and in stating that before settling at Lipara the

expedition had founded a *polis* at Cape Lilybaion (Pritchett (1999) 98–100), from which they were expelled by Elymians and Phoenicians. For the role of Knidians in the venture, see also the C5f Delphic dedicatory inscription: *τοὶ Κνίδιοι* [ἐ]λ *Λιπάραι* (*F.Delphes* II.1 142; LSAG 351 n. 1; Syll.³ 14; SEG 37 414; Bernabò Brea and Cavalier (1991) 102–3). According to the Eusebian chronology, the foundation took place in 630/29, but Diodorus’ date is supported by the chronology of the votive material from the urban sanctuary and by mortuary evidence (Bernabò Brea and Cavalier (1991) 137, 150).

Lipara was the centre of habitation among the Aiolian Islands (Thuc. 3.88.2: *οἰκοῦσι δ’ ἐν μιᾷ τῶν νήσων οὐ μεγάλη, καλεῖται δὲ Λιπάρα*), of which there were seven in all (Diod. 5.7.1; Strabo 6.2.10), known also as *αἱ Λιπαραίων νῆσοι* (ibid. and 1.3.10; Polyb. 1.25.4; Diod. 12.54.4, 14.103.2, cf. Syll.³ 14). Lipara itself, measuring 37.5 km², is fertile (cf. *καρπόφορος* at Diod. 5.10.3 and *εὐκαρπος* at Strabo 6.2.10), and there is sporadic evidence of single farmsteads and agricultural activity from C6. However, the area exploited for agricultural purposes was not limited to Lipara but included the other islands (Thuc. 3.88.2; Diod. 5.9.4–5); Diodorus gives a detailed account of the socio-economic development of the community, referring *inter alia* to such institutions as *syssitia*, absence of private property and close community control of the agricultural areas which were publicly owned (ibid. without source reference).

In 427/6 the Liparaians were *symmachoi* of Syracuse (no. 47), and in that year the Athenians and Rhegians ravaged their territory (Thuc. 3.88.1–4; Diod. 12.54.4). According to Diod. 5.9.4, the community maintained a fleet which was manned by a group of citizens devoting themselves specifically to that duty, while the rest were occupied with agriculture. The existence of a fleet may also be inferred from the repeated defeats of Etruscan forces (*infra*). A *strategos* is attested in 393 (Diod. 14.93.4). The Liparaians fought several wars against the Etruscans, at least until the battle of Kyme (474), and they won several victories which were commemorated by monuments at Delphi (Diod. 5.9.5; Strabo 6.2.10; Paus. 10.11.3; cf. Rota (1973) and Colonna (1984)), dedications that may be taken as evidence of extreme wealth on the island (Paus. 10.16.7). At the time of Hieron, but before 474, the Etruscans besieged and captured Lipara (Callim. fr. 93, Pfeiffer; Tzetz. Chil. 8.889–92). In 396 Himilkon occupied the *polis* of Lipara and exacted 30 tal. from the inhabitants (Diod. 14.56.2). In 393 (396 according to Roman chronology) the Liparaian *strategos* Timositheos liberated Roman ambassadors taken prisoner by Liparaian pirates while on

their way to Delphi; for this service the Romans conferred on Timositheos the right of public hospitality (Diod. 14.93).

Lipara's relations with Delphi seem to have been close: consultation of the oracle in the face of the Etruscan threat is attested by Paus. 10.16.7; in C5–C4 the city put up votives and dedicated booty taken from the Etruscans (Diod. 5.9.5; Paus. 10.11.3, 16.75; cf. *Syll.*³ 14; Rota (1973) and Colonna (1984)); a Delphic grant of proxeny to two Liparaians is recorded in *F.Delphes* III.4 401 (315), and Lipara was among the cities visited by the *theoroi* of Delphi in C3s (Manganaro (1964a); *SEG* 22 455, col. 4.117).

The city was founded on a promontory c.65 m above sea level; the “acropolis” of the city (a modern designation) comprised habitation, but there was also a lower city on the western slope of the “acropolis”. The site had two harbours, probably north and south of the promontory (Diod. 5.10.1). The circuit wall built in a polygonal technique and raised c.500 enclosed the acropolis and part of the lower city; however, the exact course is not wholly clarified (Bernabò Brea (1987) 20). In C4f the perimeter of the circuit wall was enlarged to incorporate the C4 expansion of the lower city; the new wall was built in ashlar, isodomic technique as a double curtain-wall with internal fill, 3.80 m wide, strengthened with towers (ibid. 20–23). The most extensive cemetery with c.2,000 tombs lay to the north of the city (Bernabò Brea and Cavalier (1991) 146–54).

No Greek remains of habitation from the Archaic and Classical periods are extant, but early Greek presence is evidenced by votive deposits. The only known public building is the C4 *prytaneion* (Diod. 20.101.2 (r304)). Votive deposits testify to sanctuaries within the urban area (Bernabò Brea and Cavalier (1977) 89–91). Further votive deposits delimited by primitive *peribolos* walls indicate simple *temene*. Sporadic finds of architectural terracottas testify to a temple or *naiskos* (Bernabò Brea and Cavalier (1991) 139). There is evidence of suburban sanctuaries, one probably dedicated to Demeter (Bernabò Brea and Cavalier (1977) 133–35; (1991) 158–59).

A C6m inscription restored *AIO*[*AOY*] (Bernabò Brea and Cavalier (1977) 90) may testify to a cult of this mythical figure (cf. Diod. 20.101.2 (r304) for dedications allegedly set up by Aiolos and kept in the *prytaneion*). A cult of Hephaistos is adduced from C5s coins, easily explained in the light of volcanic activity on the Lipari islands. Coins also testify to a cult of Apollo. A C4–C3 dedication probably attests to a cult of Artemis (Manganaro (1979); Bernabò Brea and Cavalier (1991) 90, 158), and there is epigraphic evidence for a cult of Aphrodite (Bernabò Brea and Cavalier (1991) 90;

cf. 168 for refs. to iconographic testimonies). A cult of Dionysos is sometimes inferred from the abundant New Comedy terracottas (Bernabò Brea and Cavalier (1991) 161–62).

Lipara struck a bronze coinage based upon the litra from C5s (survey in Bernabò Brea and Cavalier (1991) 109–21). The *obv.* depicts a male head with helmet or, more likely, a *pilos* and therefore Hephaistos; *rev.* ship's stern; legend: *ΛΙΠΑΡΑΙΩΝ*; lower denominations lack the stern (*SNG Cop. Sicily* 1084–85). A rare issue of Lipara and Mytistratos with the legends *ΛΙΠ* and *ΜΥ* suggests some agreement or understanding between the two cities, but the nature of this is uncertain (Bernabò Brea and Cavalier (1991) 112–13). A second issue, probably of C4 rather than C5j, based on the litra but of reduced weight, with lower denominations, has *obv.* young, naked seated Hephaistos holding hammer and kantharos; *rev.* dolphin, among variants: head of Apollo(?), *rev.* legend: *ΛΙΠΑΡΑΙΩΝ* (*SNG Cop. Sicily* 1088–96; for the date, see Bernabò Brea and Cavalier (1991) 117–18). Another C4 issue may indicate cultural and political kinship with Taras (Bernabò Brea and Cavalier (1991) 114).

35. *Longane (Longenaios) Map 47. Lat. 38.05, long. 15.10. Size of territory: ? Type: C:β. The forms of the city-ethnic suggest such forms for the toponym as **Λογγάνη* or **Λογγήνη*, but the only attested form is *Λογγώνη*, in Steph. Byz. 418.19, who gives the corresponding ethnic as *Λογγωνάιος*; Steph. cites Philistos (= *FGrHist* 556, fr. 38), but for which detail is unclear. The city-ethnic is *Λογγεναῖος* in *IG* XIV 319 (= *IGDS* no. 200; cf. Hornbostel and Hornbostel (1988) 234), a C5m *kerykeion* inscribed *Λογγεναῖος ἐμὶ δεμόσ(ιος)*; it is *Λογγαναῖος* on C5j coins (*infra*).

On the basis of Polyb. 1.9.7, Longane is located near Mylai (no. 38), and the river Longane (ibid.) may be the river Loitanos of Diod. 22.23. The city has been tentatively identified with the considerable remains of a settlement on Monte Ciappa, above modern Rodi and Milici, where C5 evidence of Hellenisation is found in the form of ashlar technique in the circuit wall, a rectangular building complex outside the walls (perhaps a sanctuary), and, finally, mortuary evidence (Ryolo di Maria (1950–51); Massa (1991); Bernabò Brea and Carettoni (2000)). However, other sites with urban remains have been put forward as candidates for the site (Wilson (1988) 125).

No Archaic or Classical source calls Longane a *polis*, but the *kerykeion* (*supra*) and the Greek-style coins (*infra*) suggest that it was a *polis* and suggest Hellenisation as well.

Longane minted bronze litrai from C5l, a date suggested by the similarity with Geloan coins of c.415–405: *obv.* Herakles wearing lion skin, legend: *ΛΟΓΓΑΝΑΙΟΝ*; *rev.* personification of river-god, Longanos (Jenkins (1975) 99–101; Massa (1991) 250–51). (Manganaro (1984) 36–37 argues for a c.C4m date for this coinage and therefore reads the legend not as an ethnic but as an adjective.) If Longane is correctly located inland somewhere between Milazzo and Tyndaris (no. 49), its coinage is virtually the only coinage in that area.

36. Megara (Megareus) Map 47. Lat. 37.10, long. 15.10. Size of territory: 4. Type: A:a. The toponym is *Μέγαρα*, τὰ (Thuc. 6.49.4, 75.1), or *Μεγαρίς* (Ps.-Skylax 13) (it is unclear what is meant by τὸ *Μεγαρικόν* at Polyæn. 1.27.3 (r483)); this is the simple name which is qualified in different ways to distinguish it from Megara Nisaia (no. 225): Thuc. 6.94.1 has *Μέγαρα τὰ ἐν Σικελίᾳ*, and Theopomp. fr. 70 has *Μέγαρα τῆς Σικελίας*. In addition to the toponym proper, the plural of the city-ethnic may be used to designate the city (in contradistinction to the *community*): Thuc. 6.4.1: *Μεγαρέας ᾤκισαν* (cf. Ziegler in *RE* xv.1. 206; see also *HCT* on Thuc. 6.94.1). According to Ephor. fr. 137a/b (as paraphrased by Strabo 6.2.2 (a) and Ps.-Skymnos 264 (b)), the original name was *Υβλα* (presumably from the Sikel king Hyblon (Thuc. 6.4.1)). The city-ethnic is *Μεγαρεύς* (Hdt. 7.156.2; Philistos (*FGrHist* 556) fr. 5), which is also qualified in different ways to distinguish it from the ethnic of Megara Nisaia: *Μεγαρεύς ὁ ἐν Σικελίῃ* (Hdt. 7.156.2; cf. Pl. *Leg.* 630A); Thuc. 6.4.1: *Μεγαρεύς ὁ Ὑβλαῖος*.

Megara is called a *polis* in the urban sense at Thuc. 6.4.2 and Ps.-Skylax 13; Hdt. 7.156.2 does not explicitly call it a *polis* in the political sense, but that it was so is the obvious implication of the passage, which discusses Megara alongside other communities that were obviously *poleis*. At Thuc. 6.4.3 *metropolis* almost certainly applies to Megara Nisaia (no. 225) (*HCT ad loc.*). Pl. *Leg.* 630A uses *πολίτης* about one of its citizens. The external collective use of the city-ethnic is found in Hdt. 7.156.2, Philistos (*FGrHist* 556) fr. 5 (rC6m) and Pl. *Leg.* 630A.

The name of the territory was presumably *Μεγαρίς* (cf. *IvO* 22. fr. ab.1 (C6l) with Dubois *ad loc.* in *IGDS* p. 34; cf. Diod. 4.78.1 and Steph. Byz. 588.7); it is termed *χώρα* at Thuc. 6.4.2 and γῆ at 6.94.1. It consisted of the coastal lowland on both sides of the city facing the bay of Augusta and was demarcated by the territories of Leontinoi (no. 33) and Syracuse (no. 47), i.e. by the valleys of the river Porcaria (ancient Pantakyas) and the river Anapo (ancient Anapos)

respectively. It measured c.400 km² (Vallet, Villard and Auberson (1983) 149–50; De Angelis (1994) 92–93). According to Steph. Byz. 588.7, Styella was a *phrourion* in the territory of Megara (cf. Steph. Byz. 645.4 citing Philistos (*FGrHist* 556) fr. 20). Styella has been tentatively located on the western confines of Megara's territory (Bernabò Brea (1968) 178–79). In C7l, Megara was involved in war *περὶ γῆς ὀρώων* with Leontinoi; it was fought during the reign of Panaitios of Leontinoi (Polyæn. 5.47; for the C7l date of Panaitios: Luraghi (1994) 11–14).

According to Thuc. 6.4.1–2 Megara was founded by a colonising expedition from Megara Nisaia (no. 225) led by Lamis. The expedition at first settled at Trotilos on the river Pantakyas, whence it moved on to Leontinoi and settled (*ἐξυμπολιτεύειν*) there with the Chalkidians for a while; it was, however, expelled (*ἐκπεσεῖν*) and went on to settle at Thapsos. Here Lamis died; the remnants of the expedition left Thapsos and founded Megara (*Μεγαρεῖς Ὑβλαῖοι*) on land put at their disposal by the Sikel king Hyblon (for an analysis of the textual transmission of the tradition of the Sikels and the foundation of Megara, see Graham (1988)). According to Thucydides the Megarians were driven out by Gelon (in 483) 245 years after the foundation, giving a foundation date of 728, thus later than the foundation of Syracuse. A different tradition was followed by Ephor. fr. 137, whose account is preserved in Strabo 6.2.2 (and Ps.-Skymnos 264–77). According to this tradition, Megara (given the initial name of *Υβλα*) was founded ten generations after τὰ *Τρωικά* by the same expedition, led by Theokles of Athens, which also founded Naxos (no. 41). The Athenian origin here ascribed to Theokles (who was from Euboian Chalkis (no. 365)) undoubtedly reflects later Athenian claims to have played a role in the early colonial enterprises in Sicily (Bérard (1957) 78–79); Theokles' expedition included both Ionians, who founded Naxos, and Dorians (mostly Megarians), who founded Megara, and according to Ps.-Skymnos 276–77 this double foundation was the result of *stasis* (along ethnic lines?) among the colonisers. According to Strabo 6.2.4, the foundations of Megara, Naxos and Syracuse were roughly contemporary, but a group of Dorians who had left the group settling at Megara were picked up by Archias and joined his group of colonists in founding Syracuse; so in this tradition the foundation of Megara preceded that of Syracuse (*ibid.*; cf. Ps.-Skymnos 276–77). Archaeological evidence has revealed Greek presence at Megara from C8m (Villard and Vallet (1964) 15–32) and therefore contemporary with the earliest Greek presence at Syracuse (Pelagatti (1978c) 130–33); the

evidence for C8m Greek contacts in the hinterland of Megara at Villamundo is not necessarily associated with the foundation of the colony (Voza (1973*b*)).

A C6m treaty of *symmachia* with Syracuse is attested by Philistos (*FGrHist* 556) fr. 5, and Megarian troops assisted Syracuse in a war against Kamarina. In C5e Megara initiated a war *against* Syracuse (Hdt. 7.156.2) but with disastrous results: Megara was unable to withstand a siege by Gelon, partly because of *stasis* (Polyaen. 1.27.3), and c.483 the city had to accept terms whereby the *demos* was sold into slavery whereas the *pachees* were relocated to Syracuse and received citizenship there (Hdt. 7.156.2); Megara ceased to exist as a *polis*, its site lay abandoned in 415 (Thuc. 6.49.4), and the territory was held by Syracuse (Thuc. 6.94.1). The city must have been refounded by Timoleon c.338; admittedly, Megara is not specifically mentioned as a Timoleonite refoundation, but archaeology proves a refoundation, which must be related to Timoleon's programme of refoundations (Talbert (1974) 149).

We know next to nothing of the type of constitution at Megara. A C6 *stasis* may be hypothesised as causing the expulsion of citizens received as exiles at Selinous (*IvO* 22; *IGDS* no. 28). One Diognetos was ἄρχων when the city was attacked by Gelon in 483 (Polyaen. 1.27.3). The term αἰσιμνάτας in *IvO* 22 (C6l) refers to a magistracy attested also in Megara Nisaia (no. 225) and other Megarian colonies (cf. Dubois on *IGDS* no. 28 fr.b.5–6 with refs.); however, from the context it is not discernible whether the reference is to Selinous (no. 44) or to Megara. For the office in general, see Asheri (1979*b*) 490. *IvO* 22 mentions a *halia* ([*hα*]λία διαίτες[ε]); Arena (1989) no. 52 fr. h.4; Asheri (1979*b*)), but again it is uncertain whether the reference is to Megara and whether ἄλία should be interpreted as an *ekklesia* or as a special court (Asheri (1979*b*) 490). *IGDS* no. 20 is a *lex sacra* of C6e.

The evidence for cults is meagre: a dedication to *heroes theoi* (Arena (1989) no. 78) and an uncertain C3 dedication to Aphrodite (Manni Piraino (1975) 150). Apart from this there is the indirect evidence of a C6f sacrificial law set up by one Pasaratos, or for a local, otherwise unknown, hero Pasaratos (*SEG* 26 1084 = *IGDS* no. 20; cf. Sartori (1980–81) 267). Cf. also Manni (1975) 190–91 and Vallet (1991) 515 for numismatic evidence of doubtful provenance.

Megara was founded on a flat coastal plateau of c.81 ha, previously uninhabited. Only a small part of the total area of habitation has been investigated. Soon after the foundation the urban area was laid out with habitation, public spaces and main lines of communication, respected by the later C7

urban phase, when the city was organised according to major and minor transversal axes with *insulae* organised in five districts laid out around a central agora (Vallet *et al.* (1976)). The five districts may mirror different contingents among the early settlers, reflecting the five *komai* of the *metropolis* Megara Nisaia (Strabo 8.6.22; cf. Vallet *et al.* (1983) 145–46); or they may simply be the successors of early scattered habitation areas, each with public spaces and sanctuaries (Polignac (1999) 227), superseded in C7l by a centralised urban layout implying standardised modules for the habitation lots (Tréziny (1999)). The earliest habitation remains are C8l houses of a type known also at Syracuse and Naxos. Yet a habitation area has been investigated on the southern plateau, c.500 m south of the main urban area. Remains of a gate and a C7m double-faced circuit wall in rough stones with internal fill, strengthened on the outside by a trench, have been laid bare. C8 habitation, a C7 potters' workshop and a sanctuary of C7f–C6 reveal the impressive extent of the early colony: a settlement measuring c.60 ha (Broise *et al.* (1983); Gras (1984–85); Tréziny (1999) 176–79). On the assumption that about half of this area was urbanised, the C7 population has been estimated at c.2,000 (De Angelis (1994) 97–99), probably a much too pessimistic assessment (Hansen (1997*b*) 74 n. 153). The C7m circuit wall was replaced in C6s by a well-built ashlar wall, of which a stretch is preserved on the northern side of the city and landwards by stretches of a long curving wall, in all c.1,500 m, with semicircular towers on the outside (Vallet *et al.* (1983) 97–101).

The C6 building near the agora, unconvincingly identified as a *prytaneion* (Vallet *et al.* (1983) 62–69; cf. S. G. Miller (1978) 229–30), is undoubtedly a public structure; another monumental structure from c.640 on the south side of the agora is also furnished with banquet rooms and may have had a public function (Vallet *et al.* (1983) 77–81; Kiderlen (1995) 14–17, 215). C7s stoas lined the agora on its north and east sides.

A number of sacred buildings were located adjacent to, or in the vicinity of, the agora: a two-cella *heroon* facing the agora may have housed a cult of the oecist Lamis (Vallet *et al.* (1976) 209–11, (1983) 62). Two C7s *naiskoi*, one with an internal row of columns but both without peristasis, delimited the agora on its south side (Vallet *et al.* (1983) 48–49, 69–70); small single-cella temples, *naiskoi*, are known from various locations in the vicinity of the agora (Vallet *et al.* (1983) 44, 62; Polignac (1999) 215). The C6e Doric temple located on the central part of the plateau (Orsi (1921) 153–76; Villard and Vallet (1954) 13–24) and C6 temples on the sea front

reveal a belt of sanctuaries encircling the habitation area (Polignac (1999) 216–20; for sanctuaries and cults, see also Hinz (1998) 141–43). The Timoleontic foundation occupied primarily the north-eastern corner of the Archaic city and was later restricted to an area of 12 ha by the C3l fortification erected before the final destruction of the city by Marcellus in 213 (Livy 24.34.2). Timoleon's city followed, with modifications, the layout of the Archaic city, the agora was re-established, and sanctuaries and a stoa were erected in the vicinity (Vallet *et al.* (1983) 168–74).

The Archaic cemeteries were located to the north, west and south of the city: the graves are mainly of C7–C6 with very few C8 graves. A social elite is indicated by rich, monumental cella tombs (Shepherd (1995) 56–60 with refs.), and social differentiation is also attested by Herodotos' distinction between the *demos* and *hoi pachees* (7.156.2).

Megara did not issue coins during its Archaic existence, and the attribution of a silver litra inscribed *ΜΕΓΑ* to the Timoleontic refoundation (Head, *HN*² 151) is far from universally accepted (Vallet (1991) 515 with refs.).

Megara was the *metropolis* of Selinous (no. 44), founded in 649 according to Diod. 13.59.4, or in 628 according to Thuc. 6.4.2.

Messana (Messanios) See below 51. **Zankle**.

37. Morgantina (Morgantinos) Map 47. Lat. 37.25, long. 14.30. Size of territory: ? Type: C:β. The toponym is *Μοργαντίνη, ἡ* (Thuc. 4.65.1; 36.5.7); *Μοργαντῖνα, ἡ* (C5m coins, *infra*; Diod. 11.78.5); or *Μοργαντῖνον* (Diod. 14.78.7); Strabo 6.1.6 has *Μοργάντιον, τό*. The city-ethnic is *Μοργαντῖνος* (C4s coins, *infra*).

Morgantina is called a *polis* in the urban sense at Diod. 11.78.5 (r459), where the political sense may be a connotation. The internal collective use of the city-ethnic is found on C4 coins.

Most scholars have identified Morgantina with the Archaic, Classical and Hellenistic town investigated on the c.3 km-long Serra Orlando ridge, near Aidone (an identification based mainly upon numismatic evidence: Dubois, *IDGS* pp. 226–27). The Classical and Hellenistic city occupied the lower ridge, whereas the Archaic town was situated on the Cittadella hill which rises to the east, and which, in itself, consists of an upper acropolis and two lower plateaux.

Morgantina was originally a non-Greek community (Tsakirgis (1995) 125; Antonaccio (1997) 168–70), and at Diod. 14.78.7 (r396) it is implicitly described as Sikel. The Archaic settlement of Morgantina has revealed Greek contacts primarily from the mid-sixth century. The Cittadella

and adjacent areas have yielded valuable evidence of sanctuaries and *naiskoi* of Greek type. Foundations of a mid-sixth-century *hekatompedon* have been excavated on the upper plateau and a rich harvest of architectural terracottas found on the lower plateaux are evidence of a *naiskos* in this part of the Archaic settlement too (Barletta (1983) 49–67; Antonaccio (1997)). A fortification wall was added to the already considerable natural defences of the site in C5e, possibly in response to the expedition of Hippokrates of Gela (Sjöquist (1973) 45–46; cf. Hdt. 7.154).

The cemeteries, situated on the slopes of the Cittadella hill, have revealed clear evidence of Greek contacts and acculturation from the Archaic period (Lyons (1996)). However, tomb typology suggests continuity of Sikel culture, albeit with some Hellenisation of tomb architecture and typology, and Archaic Morgantina may not have been a mono-ethnic community (Lyons (1996); see also Antonaccio (1997)). Architectural terracottas and other remains of buildings attest to important C6m–C6l religious structures, some in Greek style (Barletta (1983) 49–67; for sanctuaries, see Hinz (1998) 124–34). A survey of the archaeological evidence, with bibliography, is found in Tsakirgis (1995); cf. also Antonaccio (1997). By c.460, Greek-style coinage was introduced with types that attest to Greek cults (*infra*). Moreover, a *kylix* of c.460 carries an inscription (*SEG* 38 949) indicating the existence of Greek-style civic subdivisions (*eikades*).

The C5e destruction phase of Morgantina is most often linked to the activities of Hippokrates of Gela in north-eastern Sicily. When captured and refounded by Douketios in 459/8, it became an *axiologos polis* according to Diod. 11.78.5. The new settlement on Serra Orlando was a city founded according to Greek customs: a formal urban layout with *plateiai* and *stenopoi* has its origin in this period, though the rich evidence for public buildings dates primarily to the Hellenistic period (Bell (1988) 314–16; Tsakirgis (1995) 126–27). The acts of foundation and the terminology employed by Diodorus in connection with Douketios' foundations in the period 459–458 are similar to those known from Greek colonial foundations: the presence of an *oikistes*, the planning of an urban centre, and the division of the *chora* into lots (cf. Rizzo (1970) 58–66; Bell (1984–85) 505–6; (1988) 320–21).

The peace concluded between the Sicilian cities at the Congress of Gela in 424 implies that Morgantina had been within the sphere of influence of Syracuse prior to 424 (Thuc. 4.65.1); but by the Peace, Syracuse (no. 44) handed over Morgantina to Kamarina (no. 28) in return for a speci-

fied payment (*ἀργύριον τακτόν*). Morgantina is next listed among the cities taken by Dionysios I during his campaign against the Sikels in 396 (Diod. 14.78.7), and later the city is mentioned in connection with the war between Magon and Dionysios I (Diod. 14.95.2).

Morgantina issued an unusually rich coinage which has been divided into the following main groups by Erim (in Buttrey *et al.* (1989) 3–67): (1) silver litrai from c.465–450, stylistically related to contemporary litrai of Gela: *obv.* bearded head wearing *taenia* (an unidentified local divinity); *rev.* ear of grain, legend: *MOPΓANTINA* (retrograde, *gamma* and *rho* written in early forms); (2) c.370–350: tetradrachms of Syracusan type with legend *MOPΓANTINΩN* in exergue on *rev.*, known in two specimens only; (3) silver litrai, three issues, 344–317: (a) 1¼ litra: *obv.* head of Athena in triple-crested helmet, *en face*, legend: *MOPΓANTINΩN*; *rev.* Nike seated on rock (*rev.* type reveals stylistic affinities with coins of Terina), legend as on *obv.*: *SNG Cop. Sicily* 471); (b) litra: *obv.* female head in profile (Persephone or Artemis, or long-haired Apollo?), legend: *MOPΓANTINΩN*; *rev.* horseman in chlamys thrusting spear (*SNG Cop. Sicily* 472); (c) a rare issue known from two specimens, a variant of (3a) above; (4) bronze coinage, 330–317: (a) *obv.* head of Athena in Attic helmet, legend: *MOPΓANTINΩN*; *rev.* lion devouring head of stag (*SNG Cop. Sicily* 473–74); (b) *obv.* head of *Sikelia*(?) or male divinity; *rev.* eagle standing on snake, legend: *MOPΓ, MOPΓAN* (*SNG Cop. Sicily* 475); (c) *obv.* head of Apollo(?), legend: *ΛΑΒΟΣ*; *rev.* tripod, legend: *MOPΓAN*. The latter issues are probably Timoleonitic (Erim in Buttrey *et al.* (1989) 14–29; Karlsson (1995) 155, 166 n. 3(J)).

38. Mylai (Mylaios) Map 47. Lat. 38.15, long 15.15. Size of territory: 2. Type: A:a. The toponym is *Μυλαί, αἱ* (Hecat. fr. 79 = Steph. Byz. 461.6; Thuc. 3.90.2). The city-ethnic is *Μυλαῖος* (*SEG* 24 313–14 (C5e); Diod. 12.59.5).

Mylai is described as a πόλις ‘Ἑλληνὶς . . . καὶ λιμὴν in Ps.-Skylax 13 (cf. Hansen (2000) 198); it is also called a *polis* in the urban sense at Diod. 14.87.3 (r394) and by Ps.-Skymnos 288 (r time of foundation). The external collective use of the city-ethnic is found in *SEG* 24 313–14 (C5e) and in Diod. 12.54.4 (r427).

Even so, Mylai is often thought not to have been been a *polis* but simply a fortified outpost (*phrourion*) of Zankle/Messana (no. 51; Ziegler in *RE* XVI: 1042; Bernabò Brea and Cavalier (1992) 118; Dubois in *IGDS ad* no. 5). Certainly, relations between Mylai and Zankle/Messana seem to have been close. (a) Mylai was founded by Zankle (Ps.-Skymnos 287; cf. Strabo 6.2.6) in 716 (Euseb. *Chron. sub*

Ol. 16.1). (b) Thuc. 3.90.2 describes it as *Μυλαί αἱ Μεσσηνίων* and states that *ἔτχον δύο φυλαί ἐν ταῖς Μυλαῖς τῶν Μεσσηνίων φρουρούσαι*. (c) The term *phrourion* is applied to the site in Diod. 12.54.5 *bis* (r427) and 19.65.3 (r315). Finally (d), Theophr. *Hist. pl.* 8.2.8 uses the phrase *ἐν Σικελία τῆς Μεσσηνίας ἐν ταῖς καλουμέναις Μύλαις*, which seems to indicate that Mylai was conceived of as situated in the territory of Messana (so Ziegler in *RE* XVI. 1042).

However, the following should be noted. *Re* (a), the report on the foundation does not state the purpose of the foundation and there is no compelling *a priori* reason why Mylai should not have been planned as an ordinary colony and thus as a *polis*; but even if it is assumed that it was planned as a military outpost, the examples of Kasmenai (no. 29) and Akrai (no. 10) indicate that this need not militate against its being a *polis* (cf. Hansen (1997a) 36), although then presumably a dependent *polis*. Much more importantly, our earliest sources on Mylai are two dedications of spoils by Messana (no. 51) at Olympia that are inscribed *ΜΕΣΣΕΝΙΟΙ ΜΥΛΑΙΟΝ* (*SEG* 24 313–14 (C5e)); this of course indicates military confrontation(s) between Mylai and Messana and that “Mylai, at least before being defeated, had been a self-governing community and undoubtedly a *polis*” (Hansen (2000) 198); see also below on colonisation. *Re* (b+c), the application of the term *phrourion* does not exclude *polis* status for Mylai (cf. Thuc. 8.62.3 describing the uncontroversial *polis* of Sestos (no. 672) as a *phrourion*), and in fact Diodorus varies between *phrourion* (12.54.5, 19.65.3) and *polis* (14.87.3). The fact that Mylai in 426 was garrisoned by Messanian forces indicates close military collaboration and suggests again that Mylai was a dependency of Messana, as does Thucydides’ phrase *Μυλαί αἱ Μεσσηνίων*. Describing the events of 426, however, Diod. 12.54.2 classifies the inhabitants of Mylai as *Μυλαῖοι* not as *Μεσσηνιοί*, and this indicates that it was a community with an identity of its own, distinct from that of Messana. *Re* (d), the fact that Mylai may have been conceived of as situated in Messanian territory does not mean that it cannot have been a *polis*, since small *poleis* situated inside the territory of larger *poleis* are a well-attested phenomenon (Hansen (1997a) 31). If Mylai was thus situated, this may help to explain Thucydides’ statement (6.62.2) that Himera (no. 24) was the *only* Greek *polis* on the Tyrrhenian coast of Sicily (a statement which in any case may refer primarily to north-western Sicily), since a dependent *polis* inside the territory of another *polis* may have counted as a *polis* only in internal matters (Hansen (1995) 73–74). To conclude, the Messanian dedications at Olympia indicate

that Mylai was a *polis* in C5e, and Ps.-Skylax that it was still a *polis* in C4; it seems to have been a dependent *polis* of Zankle/Messana, and it is conceivable that its political status may have been subject to change (Hansen (2000) 198).

Although presumably situated in the territory of Zankle/Messana (*supra*), the existence of a separate name—ἡ *Μυλαίτις χώρα* (Polyb. 1.23.7) or τὸ *Μυλαίων πεδῖον* (Polyb. 1.9.7)—indicates that at least by C3m, and presumably before, Mylai had its own territory (Hansen (2000) 198). The size of Mylai's territory is uncertain, but the fertile coastal plain east and west of the city comprises about 75 km². The border with Zankle may have been defined by the famous sanctuary of Artemis Phakelitis located somewhere east of Mylai (Saporetti (1979); Bernabò Brea and Cavalier (1992) 116; cf. also the entry for Zankle). To the west, Mylai bordered upon the territory of Tyndaris from 396 (cf. Strabo 6.1.2), and to the south-west upon the territory of the indigenous city of Longane.

In 427 the Athenians occupied Mylai, forcing upon it an alliance against Messana (Thuc. 3.90.3: ἡνάγκασαν ὁμολογίᾳ). In 394 the Rhegians settled at Mylai those Naxians and Katanaians who had survived Dionysios I's *exandrapodismos* of their cities in 403 (Diod. 14.87.1). Later the same year the city was captured by Messana, and the Naxians (and presumably the Katanaians) were allowed to leave *hypospondoi* (Diod. 14.87.3).

The town of Mylai was situated on a high promontory, the acropolis (mentioned at Thuc. 3.90.3) crowning the 6.5 km-long alluvial peninsula joining it to the inland plain. The settlement was founded on an indigenous site. The original Greek settlement seems to have occupied only the upper plateau, though in a later period habitation may have progressed to the slopes below, closer to the sea and the harbour known from the sources (Ps.-Skylax 13). There are no structural traces of the Archaic or Classical city, nor of the defences mentioned by Thuc. 3.90.3 (ἐρύματα, cf. the *poliorkia* at Diod. 12.54.4 (r427)). Mylai was still fortified in C4l (Diod. 19.65.3 (r315)). The cemetery located along the principal route across the isthmus took over the site of the indigenous, Bronze Age settlement. The earliest tombs are of C8l, thus confirming the Eusebian date (716) for the foundation; this cemetery continued in use also in the late Archaic period (Bernabò Brea and Cavalier (1959), (1992)).

According to Strabo, “the Zanklaians in Mylai” founded Himera (6.2.6: τὴν Ἰμέραν οἱ ἐν Μυλαίς ἔκτισαν Ζαγκλαῖοι (r648)). If this means that Mylai was the *metropolis* of Himera (no. 24), it will support the suggestion that Mylai itself was a *polis* in the Archaic period.

39. Mytistratos (Mytiseratinos) Map 47. Lat. 37.35, long. 14.00. Size of territory: ? Type: C:β. The toponym is transmitted as *Μυτισεράτος* in Philistos (*FGrHist* 556) fr. 39 = Steph. Byz. 465.12; Polyb. 1.24.11 has *Μυτίστρατον*, τός, and Diod. 23.9.4 *Μυτίστρατος*, ἡ (Diod. 23.9.4). The city-ethnic is given as *Μυτισερατῖνος* by Steph. Byz. 444.13; Steph. explicitly cites Philistos (= *FGrHist* 556) fr. 39 for this form, but presumably wrongly; cf. Jacoby's app. crit. *ad loc.*

Mytistratos is called a *polis* (in the urban sense) only by Diod. 23.9.4 (r258), but it is included here on account of the Greek-style coinage (*infra*).

Mytistratos is, on numismatic evidence, identified with Monte Castellazzo di Marinopoli. The few C6–C5 and C4 urban remains, including a circuit wall built in an ashlar technique, are classified as Greek; the later phase with evidence of formal layout is probably Timoleontic (Fiorentini (1992) 303–4). The main settlement was destroyed in C3f, but habitation continued on an adjoining terrace. Tombs of the investigated cemetery are dated to C4s (Fiorentini (1992) 302–5).

Three series of C4 bronze coins are attributed to Mytistratos, the first two probably Timoleontic: (1) *obv.* head of Hephaistos, legend: *ΜΥΤΙ*; *rev.* free horse; (2) *obv.* head of Hephaistos; *rev.* wreath and pellets, legend: *ΜΥ* (retrograde). A coin of the latter series carries the legends *ΛΙΠΑ* (*sc.* Lipara (no. 34); retrograde) and *ΜΥ* on *rev.*, and is evidence of C4m collaboration between the two cities (cf. entry for Lipara). The third issue (C4s): *obv.* head of Hephaistos; *rev.* flowers, legend: *ΜΥΤ* (Fiorentini (1992) 301; Karlsson (1995) 165, 166).

40. Nakone (Nakonaïos) Map 47. Unlocated (Tegon (1993) 159–61). Type: C:β. The toponym is *Νακόνη*, ἡ (Steph. Byz. 468.3 = Philistos (*FGrHist* 556) fr. 26). The city-ethnic is *Νακωναῖος* (C5l coins, *infra*) or *Νακωναῖος* (C4s coins, *infra*; *SEG* 30 1119.5 (C4–C3m)).

No Archaic or Classical source calls Nakona a *polis*, but it is included here on account of its Classical Greek-style coinage (*infra*) and *SEG* 30 1119 (C4–C3), a Greek decree of Nakona attesting to the existence of a citizen body (*politai*: l.8), a *boule* (l.3), and an assembly (*halia*: l.3), etc.; the decree concerns measures taken to restore civic order after a period of *diaphora* (l.10); cf. *SEG* 32 914 pp. 257–58. The internal collective use of the city-ethnic is found on Classical coins (*infra*) as well as in *SEG* 30 1119.5.

Nakone minted two series of bronze coins from C5l (Head, *HN*² 159): (1) *obv.* head of nymph, legend: *ΝΑΚΟΝΑΙΟΝ*; *rev.* Dionysos seated on ass and holding

kantharos (*SNG Cop. Sicily, Suppl.* 71); lower denomination: *rev.* goat; C4s issues in a period of Campanian occupation have been associated with Timoleon and his *symmachia*: (2a) *obv.* head of Demeter or Persephone, legend: *KAMITANQN*; *rev.* free horse, legend: *NAKONAIQN*; (2b) similar but *rev.* Pegasos (Cutroni Tusa (1970) 256–57; Tegon (1993) 158–59).

41. Naxos (Naxios) Map 47. Lat. 37.50, long. 15.15. Size of territory: 4. Type: A:a. The toponym is *Nάξος, ἡ* (Thuc. 4.25.7, 6.3.1; *LDelos* 380.85 (rC5); cf. Rutherford (1998) 83). The city-ethnic is *Nάχιος* (coins *c.*525, *infra*), or *Nάξιος* (coins *c.*430, *infra*; Hdt. 7.154.2; Thuc. 7.57.11).

Naxos is called a *polis* in the urban sense at Thuc. 4.25.8, 9 and 6.3.1, 50.3, and it is listed, with Tauromenion, as a *polis Hellenis* by Ps.-Skylax 13, although presumably it no longer existed by the time this treatise was compiled (cf. Flensted-Jensen and Hansen (1996) 137); *polis* in the political sense is found at Thuc. 7.14.2, and the urban and political senses are combined at Hdt. 7.154.2 (cf. Hansen (2000) 205). *Patris* is found at Diod. 11.49.2 (r476).

The internal collective use of the city-ethnic is found on coins from *c.*525 (*infra*); the external collective use is found in Hdt. 7.154.2 and Thuc. 6.50.3 and *IG XI.2* 245b4 (rC5; cf. Rutherford (1998) 82–83). Externally and individually the ethnic is applied to the oecist Theokles (*Suda* s.v. *ἐλεγείνειν*: *Θεοκλήης Νάξιος*; cf. Bérard (1957) 77 n. 1) and to the Olympionikes Teisandros (Pind. fr. 23, Maehler).

The name of the territory is unknown; it is termed *γη* at Thuc. 4.25.8. Its extent is not fully known. However, Naxian influence penetrated above all southwards across the Santa Venera and Alcantara river valleys, as borne out by the foundation of the colonies at Leontinoi (no. 33), Katane (no. 30) and Kallipolis (no. 27). The site of Kallipolis is unknown, but the listing of the city with Katane and Leontinoi suggests a location either in the coastal plain south of Naxos or on the slopes of Mt. Etna (see Kallipolis (no. 27)). The rich C6–C4 votive deposit from the Demeter and Kore sanctuary in the otherwise unknown secondary settlement at Francavilla *c.*4 km inland along the Akesines (modern Alcantara) river valley has revealed Naxian penetration north-westwards (Spigo (1989); Spigo and Rizzo (1993–94); Hinz (1998) 156–58). To the north the territory bordered upon that of Messana, by whose infantry and navy Naxos was attacked in 425 (Thuc. 4.25.7). Naxos may have had a sanctuary or a secondary settlement also on the higher area of the later foundation of Tauromenion (no. 48) (Bacci (1980–81b) 742, (1984–85) 722–23); according to Diod. 14.88.1, the original

colonists had expelled the native population from the site of Tauromenion.

Naxos was the earliest Greek colony in Sicily (for the sources for its history, see Cordano (1984–85)). It was founded by settlers from Chalkis (no. 365) on Euboea one year before the foundation of Syracuse, i.e. traditionally 735/4 (Thuc. 6.3.1; cf. Diod. 14.88.1), and the traditional date (as well as ties with Euboea) is confirmed by ceramic finds from the earliest period of settlement, 740–730 (Pelagatti (1981) 304–11; Lentini (1993–94) 1009). The oecist was Theokles (Thuc. 6.3.1). The primary status of Naxos is borne out by the tradition that the *theoroi* of the Sicilian colonies offered sacrifice in the sanctuary of Apollo Archegetes at Naxos before setting sail from Sicily (Thuc. 6.3.1). Ephor. fr. 132 (cf. Ps.-Skymnos 273–74) describes the oecist Theokles as an *Athenian*, but that undoubtedly reflects later Athenian claims to have played a role in the early colonial enterprises in Sicily (Bérard (1957) 78–79). Later sources mention Ionian and Megarian participation (Ephor. fr. 137). Some of the settlers may have come from Cycladic Naxos (cf. Hellan. fr. 82). The Cycladic origin of some of the settlers is supported by the similarity between the coin types used by Sicilian Naxos and by Cycladic Naxos, above all the prominence of Dionysos (Leschhorn (1984) 10 n. 7). In addition, the lettering of the Enyò inscription from the Scalià sanctuary matches that used in Cycladic Naxos (Guarducci (1985)).

Naxos was subdued by Hippokrates of Gela, who took the city after a siege (Hdt. 7.154). In 476, Hieron of Syracuse transplanted the population of Naxos (and Katane) to Leontinoi, where they were presumably granted citizenship (Diod. 11.49.2), and it seems that he settled new colonists at Naxos (Diod. 11.49.2: *ιδίους οἰκήτορας ἀπέστειλεν*, though the interest here seems to centre on Katane; but see *infra*). The expatriated Naxians presumably returned after Hieron's death, as did the Katanaians (Diod. 11.76.3; Asheri (1980)).

According to Thuc. 3.86.2, the *Chalkidikai poleis* to which Naxos belonged were *symmachoi* of Leontinoi in its conflict with Syracuse in 427, and the allies seem to have acted as a single body on an embassy to Athens (no. 361) (*HCT ad loc.*); Leontinoi is specifically named alongside *ἄλλοι Ἕλληνες ξύμμαχοι* at Thuc. 4.25.9 in reference to Messana's attack on Naxos in 425. During the Athenian attack on Syracuse, Naxos was allied with Athens (Thuc. 7.14.2), and at the battle of Epipolai at Syracuse in 414 *hippeis* from Naxos supported the Athenians (Thuc. 6.98.1; cf. 7.57.11).

In 403 Naxos was betrayed by one of its own citizens, Prokles, described as *ὁ τῶν Νάξιων ἀφηγούμενος*, and so

presumably a military commander. He surrendered Naxos to Dionysios I, who subjected the city to an *exandrapodismos* from which it never recovered; the *chora* of the city was handed over to the Sikels (Diod. 14.15.2–3). A C5 *genos* of the *Amphikleidai* organising Naxian *theoriai* to Delos is argued by Rutherford (1998). Naxian survivors were settled at Mylai (no. 38) during the conflict between Dionysios, Rhegion (no. 68) and Messana (no. 51) in 394 (Diod. 14.87.3; cf. McKechnie (1989) 37), but had to find new homes after the Messanians took Mylai (*ibid.*). In 358 the Naxians were finally settled at Tauromenion (no. 48) by Andromachos (Diod. 16.7.1); Tauromenion had been a site in Naxian territory (*supra*), but was constituted as a Greek *polis* only in C4f. Andromachos himself was its leading citizen when Timoleon arrived in Sicily (Diod. 16.68.8; Plut. *Tim.* 10.6–8); Marcellin, *Vita Thucydidis* 27 describes him as exercising *monarchia*. See further the entry for Tauromenion. Naxos itself, however, may not have been completely abandoned: C3 habitation and cult activity is attested there (Pelagatti (1976–77) 544–45, (1980–81) 706).

So far, the only evidence of civic subdivisions at Naxos consists of inscriptions on two clay bullets with *patronymika*, implying citizen groups possibly matching a system of *phylai* or *phratriai*. The chronology of the inscriptions, of C5e and C5l, indicates continuity of this civic organisation from before until after the period of Hieron (Cordano (1988)).

The cult of Dionysos was of major importance at Naxos, as shown by the coin types (Cutroni Tusa (1984–85) 296–97) and the number of Silenos antefixes (Pelagatti (1977) 50–55). A C7l *cippus* carries a dedication to a warrior-goddess Enyò (Guarducci (1985)), and other evidence points to a cult of the armed Athena (Lentini (1993–94) 1016–17).

Teisandros of Naxos was victorious four times at the Olympic Games (*Olympionikai* 94 (572) with refs.) and achieved the same number of Pythian victories (Paus. 6.13.8).

The town of Naxos was founded on a low coastal peninsula, Capo Schisò, and material from the initial C8l habitation phase extend over an area of c.10 ha (Pelagatti (1981) 295–97; survey in Pelagatti (1993); bibliography in Lentini (1998) 99–100). The earliest evidence of urban layout is of C7, with main street axes linking the central part of the city westwards with sanctuaries, eastwards with the harbour, and northwards with a *kerameikos* (Pelagatti (1981) 297–302). The exceptional character of habitation near the harbour reveals social differentiation (Lentini (1984–85) 815–21).

Though a stretch of a Bronze Age fortification laid bare in the Archaic city near the coast (“Castello area”) may have been reutilised by the first Greek settlers (Lentini (2001) 7), Naxos was apparently not fortified before C6m or C6l, probably as a result of the threat posed by the expansion of Gela (no. 17) in north-eastern Sicily (Naxos eventually had to accept Geloan hegemony (Hdt. 7.154.2)). The walls, built in polygonal masonry with the use of local black lava basalt rock, are preserved on three sides: along the river Santa Venera and along the two coastlines of the peninsula; northwards the course remains to be clarified. Gates protected by towers were located in alignment with streets of the C7 city which covered an area of c.35 ha. The earliest, C7l, polygonal *temenos* wall of the sanctuary south of the city may have functioned also as a dyke along the river Santa Severa (Pelagatti (1964); (1972); Gras (1998)). Thuc. 4.25.8 attests to the existence of fortifications in 425 (Flensted-Jensen (1995) 128); the fortifications were destroyed (*κατασκάπτειν*) by Dionysios in 403 (Diod. 14.15.2).

The conquest of the city by Hippokrates in 493 (Hdt. 7.154) has left no clear traces in the archaeological record, apart from its possible reflection in a C5e structural phase of the circuit wall (Lentini (1984–85) 813).

It is not entirely clear from Diod. 11.49.1–2 whether he meant to imply the settlement of a new population at Naxos after the deportation of the inhabitants by Hieron in 476, but the archaeological evidence attests to replanning and resettlement. The Hieronian city was laid out in accordance with a unitary, strictly orthogonal system with narrow *insulae* and with a new orientation (Pelagatti (1976–77) 537–43; Belvedere (1987) with refs.; Lentini (1998) 72–86). Rectangular bases found at the crossing of *plateia* and *stenopoi* have been interpreted as *horoi* marking the confines of city districts (Pelagatti (1977) 44–46) or as altars (Spagnolo (1991) 66 n. 78). For the archaeological evidence for the destruction in 403 and the C4e history of Naxos, see Lentini (2002).

An agora is with near certainty identified near the ancient harbour in the north-eastern corner of the city (Lentini (1993–94) 1010–12); for harbour installations, see Pelagatti (1976–77) 538, Lentini (1993–94) 1009, and Blackman (1997–98).

A C7l sanctuary in the south-west corner of the city, near the estuary of the river Santa Venera, at first within the urban area, was superseded by a C6s *hekatompodon* outside the city wall. Altars, bases for votive *stelai*, and ovens for ceramic production go back to the early phase of the sanctuary. The identification of the cult as that of Aphrodite, as yet

uncertain, rests upon the testimony of App. *B. Civ.* 5.109, but the river Onobalas mentioned by Appian is normally taken to be the river Serina or Selina near Taormina and not the river Santa Venera (cf. Ziegler, *RE* xv1.2. 2078; Valenza Mele (1977) 504–5). Other interpretations: a Heraion, though with no clear evidence (*pace* *ibid.* 505–6); sanctuary of Apollo Archegetes (Guarducci (1985)), but this was situated outside the city according to Thuc. 6.3.1; cf. *HCT ad loc.* A location for the Apollo sanctuary near the harbour on the north side of the peninsula, closer to the C8 phase city, seems most logical (Pelagatti (1978*a*) 138; Valenza Mele (1977) 505), a location also supported by App. *B. Civ.* 5.109, which situates the altar of Apollo north of the city near an anchorage. At least four C7–C4 small urban shrines were located within the Archaic and Classical city (Pelagatti (1977) 46–48, (1981) 301, (1984–85) 680–83). The cults of these are uncertain. An important suburban sanctuary extended over a vast area west of the city across the river Santa Venera (Lentini (1993–94) 1012–25, (1998) 87–96). There are remains of two shrines, altars and votive deposits (prime period: C6m). The two shrines were protected by *peribolos* walls or embankments. The architectural terracottas, of local production, indicate richly decorated buildings.

The C8l–C5f cemetery was situated north of the city (Pelagatti (1980–81) 697–701; Lentini (1986)). The C5 cemetery is located west of the city, on the other side of the river Santa Venera, south-west of the sanctuary (Pelagatti (1976–77) 544).

Naxos minted coins from c.525 on the Chalkidian–Euboian standard (Cahn (1944)). The main denomination is the drachm, the smaller denomination the obol (litrai) (C. Boehringer (1984–85) 113–16): *obv.* head of Dionysos; *rev.* bunch of grapes, legend on both denominations: the ethnic *NAXION* (*SNG Cop. Sicily* 485). This issue most likely terminated in 493, when the city was taken by Hippokrates. In 461, when the expatriated Naxians (presumably) returned from Leontinoi, a new coin type was commissioned: a magnificent tetradrachm on the Syracusan–Attic standard; *obv.* head of Dionysos; *rev.* squatting Silenos, legend: *NAXION* (Head, *HN*² 160; Kraay (1976) pl. 44.756); lower denominations are drachms and litrai inscribed *NAXI*, *NAXION* (*SNG Cop. Sicily* 486–92). New issues in 430 carry similar types, legend: *NAXION*, *NAEION*, *NAEION* (Head, *HN*² 160; *SNG Cop. Sicily* 493). The last issue of 403 has *obv.* Apollo or Silenos, legend: *NEOΠΙΟΛΙ*; *rev.* river-god Assinos on the smaller denominations (Head, *HN*² 160–61; *SNG Cop. Sicily* 495–96). Bronze coinage was introduced c.410 (Rutter (1997) 152).

Naxos became the *metropolis* of Leontinoi (no. 33) and Katane (no. 30) shortly after its own foundation (Thuc. 6.3.3); other sources list also Kallipolis (no. 27; Strabo 6.2.6) and even Zankle (no. 51; Ps.-Skymnos 286).

42. Petra (Petrinos) Map 47. Unlocated (cf. Bejor (1982) 825–26, 830–31; Guletta (1994) 495–96; Gargini (1997)). Type: C:γ. The toponym is Πέτρα (Ptol. *Geog.* 3.4.7). The city-ethnic is Πετρῖνος (C4s coins, *infra*; SEG 30 1121.19 (C4l–C3m); Diod. 23.18.5). Diod. 23.18.5 (r254) describes the *Petrinoi* as in possession of an urban centre, implicitly described as a *polis*. Petra merits inclusion here on account of its C4s Greek-style coins, restruck on litrai of Dionysos I: *obv.* bearded short-haired male head (Zeus?), legend: ΠΙΕΤΡΙΝΩΝ; *rev.* seated Aphrodite playing with dove (Robinson (1948); Cutroni Tusa (1982*b*) 843–44; Karlsson (1995) 166 n. 3(L)).

43. Piakos (Piakinos) Map 47. Unlocated, but possibly to be identified with Mendolito, near Adranon (Jenkins (1975) 90; Manni (1981) 219; see also entry for Adranon (no. 6)). Type: C:γ. The toponym is Πιακός (Steph. Byz. 522.1). The city-ethnic is Πιακῖνος (C5s coins, *infra*). No literary source apart from Steph. Byz. mentions Piakos, which is included here on account of its Greek-style coinage, consisting of C5s bronze coins, fractions of litra: *obv.* head of river-god; *rev.* dog attacking deer, on smaller denominations simply a dog; *obv.* legend: ΠΙΑΚΙΝ or ΠΙΑΚ (Head, *HN*² 164; Jenkins (1975) 87–92; Manganaro (1984) 34). A silver litra of c.400 is inscribed with the names of both Piakos and Adranon (no. 6), suggesting proximity and collaboration between these two communities: *obv.* head of nymph, legend: ΠΙΑΚΙΝΟΣ; *rev.* butting bull and fish in exergue, legend: ΑΔΡΑΝ (Jenkins (1962), (1975) 90, 92).

44. Selinous (Selinousios) Map 47. Lat. 37.35, long. 12.50. Size of territory: 5. Type: A:a. The toponym is Σελινόεις, ἦ (*IvO* 22.9 (C6l)); Σελινοῦς (Hdt. 5.46.2; Thuc. 6.4.2). The city-ethnic is Σελινόντιος (C6l coins; *IGDS* no. 78 (c.450)); Σελινοῦντιος (Thuc. 7.58.1); Σελινοῦσιος (Hdt. 5.46.2; Xen. *Hell.* 1.2.10); or Σελινύσιος (*CID* II 4.1.46 (361/60)).

Selinous is called a *polis* in the urban sense by Xen. *Hell.* 1.1.37 and is listed by Ps.-Skylax 13 under the heading πόλεις Ἑλληνίδες αἰθε; it is referred to as a *polis* in the political sense at Thuc. 6.20.2–3 and 6.48.1. A C6l legal text from Olympia dealing with exiles from Megara (no. 36; *IvO* 22; *IGDS* no. 28) in fr. f.3 refers to ἁ πό[λι]ς; according to Asheri (1979*b*), the inscription records a treaty between the *polis* of Selinous and a group of exiles from Megara; however, the fragmentary state of the inscription does not allow us to

determine whether the reference is to Megara or to Selinous. A C5m *lex sacra* refers to τὰ *ἡιὰρὰ τὰ δαμόσια* (A.18) and τῶι βρομῶι τῶι δαμασίῳι (B.10; Jameson *et al.* (1993)).

The internal collective use of the city-ethnic is attested on C5m coins (*infra*) and in IGDS no. 78 (c.450; Arena (1989) no. 53); the external collective use is attested in Diod. 5.9.2 (rC6f), Hdt. 5.46.2, Thuc. 6.20.4 and Xen. *Hell.* 1.2.10. The external individual use is found in IGDS no. 67 (C6l), IG XII.5 444.65.79b (C3f (rC5l)), and *F.Delphes* III.1 391.2 (c.360).

According to Thuc. 6.4.2, Selinous was founded 100 years after the foundation of its *metropolis* Megara, i.e. c.628/7. The oecist Pammilos was possibly from the original mother city, Megara Nisaia (no. 225), although the text is ambiguous (cf. *HCT ad loc.* and Casevitz (1985) 105, 109 n. 27), and a Megara Hyblaian origin cannot be excluded. Diod. 13.59.4 supports the Eusebian date for the foundation of Selinous: 242 years before its destruction in 409/8, i.e. c.651/50 (source: Bérard (1957) 244–46). Diodorus' date is consistent with the chronology of the recently excavated Buffa and Manuzza cemeteries (Tusa (1982) 191–94; Rallo (1982)).

Selinous was the westernmost Greek colony on the south coast of Sicily, founded on the confines of Phoenician and Elymian territories. The size of Selinous' territory varied, and borders changed (see La Genière (1978)). The C7l immediate hinterland may have comprised 300–400 km². A sanctuary of Herakles near the Hellenised Elymian settlement at Monte Castellazzo di Poggioreale, c.30 km north of Selinous, is deduced from the C6e dedication to Herakles by one Aristylos in the Selinountian alphabet and in Doric dialect (IGDS no. 84; Falsone (1992) 307–8); stone quarries in the catchment area of Selinous served the early building programmes in the sanctuaries of the colony (Peschlow-Bindokat (1990)). With the foundation of Minoa in C6f/m (*infra*) the area within Selinountian influence may have encompassed c.1,200–1,800 km², and there is clear evidence of Selinountine architects at work by C6 in the Contrada Mango sanctuary at Segesta (Tusa (1961); de La Genière (1978)). The original, indigenous settlement of Monte Adranone, situated on the western border of Selinountine territory, c.30 km north-west of Selinous, resettled by Selinountines in C6m, served as a fortified outpost until C5l (Fiorentini (1995)). The site is perhaps the *kome* Adranon mentioned by Diod. (23.4.2) in connection with the Punic wars, not to be confused with the Adranon (no. 6) founded by Dionysios.

After initial peaceful co-existence (Tusa (1983) 302–14; Zahrnt (1993) 355–57), a long history of conflicts with the

non-Greek populations can be traced: an alliance of Selinous and a colonising expedition led by Pentathlos of Knidos (c.580–576) was defeated by the Elymians (Diod. 5.9.2–3), and conflicts between Greeks, Elymians and Phoenicians are also reflected in the failed expedition of Dorieus in 510 (Hdt. 5.46.1), if not already by the C6 inscription commemorating Aristogeiton, who fell at Motya (IGDS no. 73; Mafoda (1995)). In 480, however, Selinous was the only Greek city of Sicily supporting Carthage against Theron of Akragas and Gelon of Syracuse (Diod. 11.21.4–5, 13.55.1). In 466, Selinous assisted Syracuse in expelling the tyrant Thrasybulos (Diod. 11.68.1). A victory of uncertain date is mentioned in the 460–409 inscription (IGDS no. 78) from temple “G” (*infra*) revealing conflicts c.C5m with Elymians and/or Phoenicians. Not all relations with the non-Greek populations were hostile, however, and there may have been *epigamia* between Selinous and Segesta (Thuc. 6.1.2 with *HCT*).

In 416 the conflict with Segesta (*supra*) led Selinous to ally itself with Syracuse (Thuc. 6.6.2), and accordingly it supported Syracuse in its war with Athens (Thuc. 6.65.1, 67.2, 7.58.1; cf. Diod. 13.4.2 (r415)). The territorial disputes between Segesta and Selinous in 416 (Thuc. 6.6.2; Diod. 12.82.3) and 410 (Diod. 13.43.1–4) ultimately led to the destruction of Selinous in 409 by Carthage (Diod. 13.55–57), when the houses were burnt or torn down, 16,000 were killed, 5,000 taken prisoners, and 2,600 escaped to Akragas (no. 9; Diod. 13.57.6–58.3). The city was recaptured and fortified by Hermokrates, who also laid waste the territories of Motya and Panormos (Diod. 13.62.3–5 (r409)). As an outcome of adversities suffered by the Carthaginians, Himilcar was forced to sign a peace treaty with Dionysios I in 405, in which, however, it was stipulated that Selinous (and several other cities) were to be unfortified and pay tribute to Carthage (Diod. 13.114.1; *Staatsverträge* no. 210). Yet conflicts between the Greek cities and Carthage continued, and Dionysios, with Selinous and Himera (no. 24), attacked Motya in 397 (Diod. 14.47.7), which implies that, in addition to the eastern Sicilian cities, Himera and Selinous had also come within Dionysios' hegemony. A second peace treaty of 392 was in most matters similar to that of 405 (Diod. 14.96.3; *Staatsverträge* no. 233). It seems, however, that Selinous (and the other cities subjected to Carthage by the previous treaty) were now handed over to Dionysios I (see Stylianou (1998) 207). In a peace treaty of c.374 Selinous, its territory, and Akragas were again ceded to the Carthaginians (Diod. 15.17.5 with Stylianou (1998) *ad loc.*; *Staatsverträge* no. 261). Selinous was recaptured by Dionysios in 368, but an

armistice was agreed and the old borders were re-established (Diod. 15.73.2–4), and when Dion visited Herakleia Minoa (west of Selinous) in 357, this city was controlled by Carthage (Diod. 16.9.4). In the 339 treaty between Timoleon and Carthage, Selinous was left within the Carthaginian sphere of interest (Diod. 16.82.3; *Staatsverträge* no. 344; cf. Talbert (1974) 83–85), and this was confirmed by the treaty between Agathokles and Carthage in 314 (Diod. 19.71.7).

A few scattered sources shed some light on the military strength of Selinous and the size of its population. A contingent of hoplites from Selinous fought alongside the Syracusans in 415 (Thuc. 6.67.2); later, Selinountine *psiloi* and *hippeis* marched to Syracuse under the command of Gylippos (Thuc. 7.1.3–5; cf. Diod. 13.4.7 (r414)); *hippeis* are mentioned also in Diod. 11.21.4 (r480). A navy is implied by Thucydides' reference to two *nees* . . . *Selinountiai* at 8.26.1 (cf. Xen. *Hell.* 1.2.8 for another two). In reference to 410, Diod. 13.44.3 describes Selinous as a *polis polyandrousa*, and a hint of the C5l size of population is found in the figures of 16,000 inhabitants killed and 5,000 captives taken by the Carthaginians in 409 (Diod. 13.57.6); this had already been preceded by the loss of 1,000 men in an ambush (Diod. 13.44.4 (r410)). Even so, 2,600 escaped to Akragas (Diod. 13.58.3). A full mobilisation of forces is mentioned in Diod. 14.47.7 (r397).

Diplomatic activities include the reception of envoys (Diod. 11.68.1 (r466)) as well as the sending of envoys (Diod. 11.21.4 (r480), *bibliaphoroi*, cf. 13.54.3 (r409), 13.43.7, 44.4 (r409)). *F.Delphes* III.1 391 (c.360–355) is a grant of various privileges by Delphi (no. 177) to a man of Selinous. A grant of *politeia* to Selinountians by Ephesos (no. 844) is recorded by Xen. *Hell.* 1.2.10; it was prompted by the destruction of the city.

What we know about the constitution indicates that Selinous was mostly governed by tyrants, at least in the Archaic period. Tyranny is attested in connection with the C6l expedition of Dorieus, whose *συγκτίστης* Euryleon liberated the Selinountians from the *mounarchos* Pythagoras but went on to assume monarchical power himself (Hdt. 5.46.2; cf. Luraghi (1994) 54–55; Mafoda (1995)). An earlier tyranny at Selinous (C6m or C6f) may be suggested by the anecdote of “Theron, son of Miltiades” assuming tyrannical power by a stratagem (Polyaen. 1.28.2; full discussion: Luraghi (1994) 52–54). The *αἰσιμνάτας* of *IvO* 22 (IGDS no. 28 (C6l)) refers to a magistracy attested also in Megara Nisaia (no. 225) and other Megarian colonies (Dubois *ad* IGDS no. 28 fr.b.5–6 with refs.); however, the

context does not make clear whether the reference is to Selinous or to Megara (for the office in general, see Asheri (1979b) 490). The text may mention a *halia*: *χα]λία διαίτεσ[ε* (see Arena (1989) no. 52 fr. h.4; Asheri (1979b)). Whether this Selinountine(?) *halia* should be interpreted as an *ekklesia* or a special court is uncertain; Asheri opts for an *ad hoc* tribunal (Asheri (1979b) 490). Two C5 public enactments are preserved: a *lex sacra* of C5m (Jameson *et al.* (1993)) and IGDS no. 78 = IG XIV 268 (C5m/s), which lists Selinountine divinities and incorporates a decree. A *metoikos* at Selinous is mentioned by Callim. fr. 201 (Pfeiffer) *Dieg.* IX.15–16 (referring to the period before Timaios wrote, cf. *FGrHist* 566, fr. 148). A C6–C5 dedicatory inscription attests the existence of a *πατριά* whose members are given as two groups of women (Lazzarini no. 880e; cf. Jameson *et al.* (1993) 90); it is not clear whether this was a public or a private institution.

A C5f dedication by the citizens of Selinous and the metopes of Temple C testify to the Selinountian pantheon in which the principal divinity seems to be Zeus (IG XIV 268; SEG 38 960; SEG 43 628; IGDS no. 78; see also Jameson *et al.* (1993)).

Selinous had a *thesauros* at Olympia (Paus. 6.19.11 (rC5)). The foundation of the building has with some probability been identified, and C5e architectural terracottas have with some uncertainty been associated with it (Mertens-Horn and Viola (1990) 240).

The town of Selinous was founded on a vast plateau, c.1.3 km long, oriented roughly north–south between the ancient river Selinous, from which the city took its name (Douris (*FGrHist* 76) fr. 59), to the west, and the river Cotone to the east. The site comprises three hills separated by the river valleys, the city occupying the central plateau, while the two lateral plateaux, the Gaggera to the west and the Marinella to the east, were dedicated to sanctuaries (Martin *et al.* (1979) 637–53; cf. Parisi Presicce (1984) fig. 2 and 127–32 for topographical surveys). The southern plateau, facing the coast and often regarded as the acropolis of the city, owes its acropolis-like appearance to an artificial accentuation of the morphology of the site due to C4l and C3l defensive structures (Di Vita (1980)).

C7m/s habitation remains on the northern, Manuzza plateau (Rallo (1976–1977), (1984)) and on the “acropolis” (Fourmont (1984–85)) have revealed an overall coherence in the urbanisation of the two areas. Unusually, a cemetery is situated within the urban area on the Manuzza. A large part of the “acropolis” was laid out as a *temenos* from C7. There is also coherence between the three major plateaux of the site

from C7: the Manuzza plateau and “acropolis”, the Marinella plateau east of the river Hypsas with a C7 shrine (Gullini (1993)), and the Gaggera plateau west of the river Selinous with the Malophoros sanctuary and the C71 *megaron* (Romeo (1989) 40, no. 64). The main east–west axis on the “acropolis” joined the estuaries of the two rivers and the harbours of Selinous, the eastern harbour possibly military, the western harbour possibly commercial.

In the second urban phase, from c.C6e, the habitation area and urban layout encompassed also the east and west slopes of the central plateau with parts of the confining valleys (de La Genière and Rougetet (1985); Mertens (1999) 188–90). Habitation on the northernmost part of the Manuzza plateau was laid out on a different orientation to that employed on the “acropolis” and on the southern part of Manuzza plateau, and an agora at the junction of these separate urban districts is similar to the location of the agora at Megara (Mertens (1999) 190–93). Rallo (1976–77) 731 has suggested that the differences in orientation could reflect different populations, and a Corinthian ethnic group has been deduced from epigraphic and tomb evidence (cf. de La Genière (1977) 257; *IGDS* nos. 72 and 79). The C6–C5 urban area comprised about 100 ha (Mertens (1989) fig. 4, (1999) fig. on p. 188).

A theatre, possibly serving as the meeting place for the assembly, is mentioned in Callim. fr. 201, Pfeiffer, *Dieg.* ix.22–23 (referring to the period before Timaios wrote, cf. *FGrHist* 566, fr. 148).

So far none of the defensive walls of the “acropolis” can be dated earlier than the C5l Hermokratean structures of 409, when the Syracusan exiles seized Selinous for a short period in connection with the Carthaginian war (Diod. 13.63.3–4; *ibid.* 185–86). By contrast, the outer circuit wall and gates in the Hypsas valley, marking the eastern limit of the city, are of C6f and C5e (Mertens (1989) 138–39). A circuit wall across the Manuzza plain was probably raised by Hermokrates in 409 (*ibid.* 139–43). The sophisticated fortification and gate system on the north side of the acropolis, comparable with the Euryalos fortification at Syracuse, may in its final phase be the work of Agathokles during his short occupation of Selinous in 307 (Diod. 20.56.3; cf. Lawrence (1979) 295; Mertens (1989) 110–31, 151).

The central and south-eastern part of the “acropolis” was from early on occupied by at least two *temene* (Gabrici (1929)); the south *temenos* with two parallel temples of C5f, “O” and “A” (divinities unknown). The central *temenos* has traces of simple C7l–C6e *naiskoi*. There is no structural evidence for a major C6 peripteral temple, but architectural

terraccottas are taken as evidence for one. As part of the C6f regular urban plan, the sanctuary was enclosed by *peribolos* walls from 580 to 560 (Østby (1995)). A large artificial terrace supported by a huge, stepped retaining wall of ashlar masonry on the east slope of the acropolis, dated prior to C6m, permitted an enlargement of the *temenos* and the erection of new buildings: temple “C” (date controversial: before C6m or c.530–520) replaced the earlier, conjectural temple, with an altar to the east and a monumental stoa on top of the retaining wall marking the east side of the *temenos* (Di Vita (1967), (1984)). Architectural fragments and sculpture reused in the later fortifications are from an otherwise unknown sanctuary, possibly near the agora (Mertens (1999)). The *temenos* was enlarged in C5e to make room for the monumental temple “D”.

On the basis of epigraphic evidence, above all the inscription (*IGDS* no. 78) from temple “G” (*infra*), temple “C”, with its predecessor, is attributed to Apollo (Bejor (1977) 449; *IGDS* no. 51). The dedicatees of the c.480–450 temples “A”, “O” and “D” are more uncertain. Three monumental temples, “E”, “F” and “G”, were aligned on the Marinella hill east of the Hypsas valley (Berve and Gruben (1963) 426–32; Gullini (1993)). Temple “G” (C6l, not completed) is among the most monumental of antiquity; the inscription from the *adyton* mentions a victory, a number of divinities, and a dedication to these in gold to the value of 60 tal. put up $\epsilon\lambda\varsigma \tau\omicron \delta \text{ Ἀπολλόνιον}$ (Calder (1963), (1964); *IGDS* no. 78). The occasion of the victory is unknown, but historical and epigraphical evidence dates the inscription between 460 and 409 (Calder (1963) 54–62). The temple is often interpreted as the *Apolloneion* mentioned in the inscription, but the evidence is inconclusive, and the identification of the temple as an *Olympieion* has won support (Tusa (1967); Bejor (1977); *infra*). The cult of the C6m temple “F” is unknown, but the closed *peristasis* may indicate a mystery cult, e.g. of Dionysos or Demeter. Temple “E”, of C7l–C5m, has been identified as a Heraion (*IGDS* no. 56).

At least four sanctuaries were located on the Gaggera hill west of the river Selinous (Gabrici (1927); Tusa *et al.* (1984–85) 574–81). The major sanctuary of Demeter Malophoros (*IGDS* no. 54), located near the coast and harbour, had an initial phase in C7l–C6e and a monumental aspect established by C6s with a temple, a monumental altar and a *peribolos* wall, later embellished with a C5l *propylon*. The votive material is immensely rich (Gabrici (1927); recent surveys: Dewailly (1992) 1–36 and Hinz (1998) 144–52). The cult of the adjacent C6m *temenos* was that of Hekate (*IGDS* no. 55). To the north, a sanctuary of Zeus

Melichios bordered on that of Demeter (Gabrici (1927) 91–107; Tusa (1977)), with a cult that is characterised by a number of C6s–C5 crude and simple stone *stelai* carrying votive inscriptions (earliest C6m: *IGDS* nos. 45, 50; Jameson *et al.* (1993) 89–107, 132–36) and by later *defixiones* (*IGDS* nos. 35, 39, 40). To the south, a *peribolos* wall, parallel to that of the Demeter sanctuary, enclosed yet another *temenos* and temple of uncertain cult (Parisi Presicce (1984) 21–24). A C6 temple “M” marks the north end of the row of sanctuaries (Sguaitammati (1993)).

The inscription from temple “G” (*IGDS* no. 78) mentions Zeus, Phobos, Herakles, Apollo, Poseidon, the Tyndaridai, Athena, (Demeter) Malophoros and Pasikrateia (Persephone?). The second part of the dedication, the decree, mentions an *Apolloneion* and Zeus (Calder (1963); *IGDS* no. 78). A cult of Zeus Agoraios is revealed by the episode of Euryleon seeking refuge at the altar of Zeus Agoraios (Hdt. 5.46.2). Coin types suggest cults of Artemis and Apollo, and the river-gods Selinous and Hypsas.

The earliest cemetery is the one situated in the south-east of the Manuzza plateau dating from before C7m and in use throughout C7, the early material reflecting the Megarian origin of Selinous (Rallo (1982)). Contemporaneously and in subsequent periods cemeteries were laid out on the hills surrounding the urban site: C7m on the Buffa hills north-east of the Manuzza plateau (Tusa (1982) 196–202); C6e and C5, mainly inhumation tombs, some cremation and a few child *enchytrismos* burials on the Gaggera hills west of the Manuzza plateau, and C7s tombs on the Galera hills north of the Manuzza plateau (Vallet and Villard (1958)).

Selinous was one of the first Sicilian cities to issue coins, c.540–530: staters probably initially on the Corinthian standard but at the end of the Archaic phase on the Attic. Types: *obv.* celery leaf (*σέλινον*); *rev.* patterned punch-mark in incuse square (*SNG Cop. Sicily* 591–93; *SNG Cop. Suppl.* 73). Later issues have *rev.* celery leaf in incuse square, legend: *ΣΕΛΙ* with variations (*SNG Cop. Sicily* 594). Three smaller fractions carry *rev.* celery leaf, or flower, or pellets (Cutroni Tusa (1975); C. Boehringer (1984–85) 116–19; *SNG Cop. Sicily* 595–96). A unique drachm carries the unabbreviated city-ethnic as legend (Cutroni Tusa (1988–89) 370–71). Confirmation of Corinthian influence on early Sicilian coinage and imports of bullion from the Aegean area is given by a C6l coin and bullion hoard found near Selinous (*ibid.* (1988–89) 397–98). Minting of Syracuse-inspired tetradrachms began c.450: *obv.* sacred chariot with Apollo and Artemis, legend: *ΣΕΛΙΝΟΝΤΙΟΝ*; *rev.* naked youth, the river-god Selinous, offering a libation at an altar in a

sanctuary, l. below cock, on r. celery leaf and statue of bull, legend: *ΣΕΛΙΝΟΣ* (*SNG Cop. Sicily* 597). The types of the lower denomination (didrachms) are: *obv.* Herakles fighting Cretan bull, legend: *ΣΕΛΙΝΟΝΤΙΟΝ*; *rev.* river-god Hypsas, legend: *ΗΥΨΑΣ* (*SNG Cop. Sicily* 601); on smaller denominations, *obv.* nymph seated on rock (*SNG Cop. Sicily* 602–3). The issues continue with variants until 409 (*SNG Cop. Sicily* 604–6). Bronze coinage was issued at least from c.420 (Price (1979); Rutter (1997) 142); however, an issue of cast coins may go back to 450–440 (Cutroni Tusa (1997–98) 646–47).

Selinous founded the colony of (Herakleia) Minoa (no. 20) (Hdt. 5.46.2) on the estuary of the river Platani c.C6f/m to secure its eastern territory against Akragantine expansion, but after the short-lived rule of Euryleon, the colony was taken by Akragas (no. 9); during Theron’s reign (488–473) it seems to have been a city within Akragantine dominion, possibly after conquest by Theron (cf. Diod. 4.79.4 with Fontana (1978); see further Herakleia (no. 20)).

45. (Sileraioi) Map 47. Unlocated (cf. Manni (1981) 225). Type: C:γ. The *Sileraioi* are known exclusively from their rare C4s Greek-style bronze coinage: *obv.* forepart of man-headed bull, legend: *ΣΙΛΕΡΑΙΩΝ* (retrograde); *rev.* naked warrior, legend: *ΣΙΛ* (retrograde) (Head, *HN*² 169–70; Talbert (1974) 181; *SNG Cop. Sicily* 607).

46. (Stielanaioi) Map 47. Lat. 37.10, long. 14.55: the location is, however, uncertain, and Bernabò Brea (1968) 178–82 argues for a location in the hinterland of Megara Hyblaia. Size of territory: ? Type: C:γ.

The *Stielanaioi* struck coins from c.460 onwards; they may have been based at the *Στύελλα* of Steph. Byz. 588.7, but see Manni (1974) 64 and (1981) 227, who points out that a form such as **Στυελάνη* is to be expected on the basis of the ethnic *Stielanaios*. The *Stielanaioi* are included here on account of their Greek-style coinage: this coinage began with an issue of silver litrai c.460: *obv.* forepart of man-headed bull, legend: *ΣΤΙΕΛΑΝΑΙΟ(Ν)* (retrograde); *rev.* male figure (river-god?) sacrificing at altar. Later issues (drachms and lower denominations): *obv.* male head laureate (river-god or, perhaps more likely, Apollo); *rev.* forepart of man-headed bull, legend: *ΣΤΙΑ* (Head, *HN*² 171; Bernabò Brea (1975) 49–51; Holloway (1975) 142–43; Manganaro (1984) 35–36; survey of find-places: Cutroni Tusa (1997–98) 630; cf. *AION* 42 (1995) pl. 26, fig. 2). The types reveal strong influence from the contemporary mints of Katane and Leontinoi. The *Stielanaioi* are considered a Greek community by Mirone (1928), followed by Ziegler

(1940), founded C5e in the hinterland of Katane (no. 30) and Leontinoi (no. 33) in the aftermath of the Deinomenid aggression against these cities.

47. Syrakousai (Syrakosios) Map 47. Lat. 37.05, long. 15.15. Size of territory: 5. Type: A:a. The toponym is *Συράκουσ(σ)αι, αἱ* (Hecat. fr. 74; Thuc. 5.4.3; *IG* I^v.195.1.39 (356/5)) or *Συρήκουσαι* (Hdt. 7.156.1); Pind. *Ol.* 6.6 and Bacchyl. *Ep.* 5.104 have *Συρακόσσαι*; *Συράκοσαι* is found at Pind. *Pyth.* 2.1. The city-ethnic is *Συρακόσιος* (C5 coins, *infra*; Thuc. 3.103.1; *IGDS* no. 94 (474)) and *Συρηκόσιος* (Hdt. 7.155.2). Also spelled *Συραρόσιος* (C6l–C5e coins, *infra*; *IGDS* no. 93 (c.480); cf. *IG* v.1 217 (C5e): [*Συρ*]α*Ρ*ο*σ*ί*ο*ν).

Syracuse is called a *polis* both in the urban sense (Hdt. 7.155.2; Thuc. 6.65.3; Ps.-Skylax 13) and in the political sense (Hdt. 7.154.2; Thuc. 6.36.2 and Xen. *Hell.* 1.1.28). Its *politeia* was described by Aristotle (Arist. fr. 602.1). *Politeuesthai* is found at Arist. *Pol.* 1312^b9, *politēs* at Arist. *Pol.* 1303^a38, *politeuma* at Arist. *Pol.* 1303^b26, *damosios* at *SEG* 38 368 (c.475), and *demos* at Thuc. 6.35.1. *Astói* referring to the citizens is found at Pind. *Pyth.* 3.71 and *asty* referring to the city occurs in *AG* 13.15 (C4e). For *Patris*, see Thuc. 6.68.8; 69.3 and Isoc. 3.23.

The internal collective use of the city-ethnic is attested on coins from C6l onwards (*infra*); the external collective use is found in *IvO* 661 (C6), *IGDS* no. 89 (485–470), Hdt. 3.125.2 and Thuc. 3.103.1. The external individual use is attested in *Egypt-Delta* I 694/511 (C6–C5), *IvO* 266 (c.480), Thuc. 4.58, *IG* II² 101.2 (372/1) and *CID* II 4.1.40 (360).

Syracuse was founded by Archias, a Heraklid from Corinth (no. 227; Thuc. 6.3.2; cf. Strabo 8.6.22). According to Strabo 6.2.4 and Ps.-Skymnos 279–82 the founders included a group of Dorians who had come to found Megara (no. 36) but fell out with the other colonists and then joined the Corinthian founders of Syracuse. The exact date of the foundation, as well as its date relative to those of the other early colonies in Sicily, is much debated: according to Thuc. 6.3.1 (probably based on Antiochos of Syracuse), the city was founded only a year after Naxos, the earliest of the Sicilian colonies. On the other hand, Ephor. fr. 137a (*apud* Strabo 6.2.2) stated that Naxos (no. 41) and Megara (no. 36) were the earliest colonies, and the unemended text of Strabo 6.2.4 presupposes that Megara was founded shortly before Syracuse. Thuc. 6.3.2 gives the foundation date as 733/2 (supported by Eusebios, cf. Bérard (1957) 120 with refs.). However, a date c.C8m is indicated by Marmor Parium (*FGrHist* 239) A 31, which places Archias seven generations after Temenos and the return of the Herakleidai.

The name of the territory was *ἡ Συρακοσία* (Thuc. 6.52.2); it is termed *γῆ* at Thuc. 7.42.6 and *χώρα* at 6.45. After its foundation, Syracuse quickly expanded its territory; by C8l it extended as far to the south-west as Heloron (no. 18), a Syracusan colony founded in C8l–C7e; by 664 it extended inland as far as Akrai (no. 10), a colony founded in that year (Thuc. 6.5.2); by C7s it had expanded further westwards to Kasmenai (no. 29), a colony founded in 644 (Thuc. 6.5.3). To the north, Thapsos formed the border with Megara (no. 36); Kamarina (no. 28) was founded in 598 on the border between the areas of influence of Syracuse and Gela (Di Vita (1956), (1987)). Heloron, Akrai and Kasmenai were possibly constituted as dependent *poleis* in the territory of Syracuse (see the respective entries); Kamarina was also in one way or another dependent on Syracuse. Herodotos reports that Kamarina of old belonged to Syracuse (7.154.3), and Thucydides refers to a C6m *apostasis* from Syracuse by Kamarina (6.5.3). The C7–C6 Syracusan dominion comprised an area of about 3,000–3,500 km². During the C5f rule of the Deinomenidai, Syracuse incorporated or exercised influence over the territories of Kamarina, Megara, Leontinoi and Naxos; by 440 all native communities were ruled by Syracuse (Diod. 12.29.2–4); after Dionysios I's peace with Carthage in 392, Syracuse ruled over all of central and eastern Sicily (Karlsson (1992) map 2.a), and over parts of South Italy including Rhegion (no. 68) and southern Calabria.

The size of the population is unknown, and it must have been subject to constant changes due to the many relocations carried out during the Classical period. The known incorporations of foreign groups into the Syracusan citizen body are the following: (1) Gelon transplanted and granted Syracusan citizenship to (a) all the Kamarinaians, (b) half of the Geloans, (c) the *pachees* of Megara, (d) the *pachees* of the city of Euboia (Hdt. 7.156.2–3); (e) he also granted citizenship to more than 10,000 mercenaries (Diod. 11.72.3). (2) After the congress in Gela in 424, the *dynatoi* of Leontinoi were relocated to Syracuse and were granted citizenship (Thuc. 5.4.2; cf. Xen. *Hell.* 2.3.5). (3) Dionysios I enlarged the citizen body by enrolling (a) *eleutheromenoi* as *neopolitai* (Diod. 14.7.4); (b) the inhabitants of Leontinoi, who were granted citizenship (Diod. 14.15.4); (c) the inhabitants of Italian Kaulonia, who were granted citizenship and *ateleia* for five years (Diod. 14.106.3); (d) the inhabitants of Italian Hipponion (though it is not specified at Diod. 14.107.2 that these received citizenship). (4) Timoleon (a) made the people of Agyrion (and possibly Kentoripa) citizens of Syracuse (Diod. 16.82.4); (b) relocated the population of Leontinoi to

Syracuse (and presumably granted them citizenship, though this is not specified at Diod. 16.82.7); (c) settled 5,000 new colonists (Diod. 16.82.3; cf. Plut. *Tim.* 23); and (d) later several myriads more (40,000 according to Diod. 16.82.5; perhaps 60,000 according to Athanis (*FGrHist* 562) fr. 2; cf. Talbert (1974) 30). In the Classical period, Syracuse was the largest city of Sicily (Hecat. fr. 74; Thuc. 7.58.4), in extent second only to Akragas, for which city Diod. 13.84.3 (r406) gives the figure of 20,000 citizens. Drögemüller (1969) 100 suggests an urban population of 40,000–45,000 for Syracuse, a guesstimate which may be a little on the high side in view of the size of the C5 habitation area, c.150 ha (*infra*). It is impossible to estimate the number of citizens from the few hints given by Thucydides about the size of the Syracusan army in 415 (6.67.2: *πανδημεί*, number of cavalry given as 1,200).

Treaties of C6m with Megara, Enna (Kasmenai? cf. the entry for Kasmenai) and presumably Gela are strongly implied by Philistos (*FGrHist* 556) fr. 5, who refers to a war between Syracuse and Kamarina and their allies. In 492 a treaty with Hippokrates of Gela after his defeat of the Syracusans came about through arbitration by Corinth (no. 227) and Korkyra (no. 123) (Hdt. 7.154.3; cf. Thuc. 6.5.3). Gelon's victory at Himera induced nearly all the cities of Sicily to recognise his power and to enter into a *symmachia* with him (Diod. 11.26.2). Syracuse was a party to the pan-Sicilian agreement concluded at the Congress of Gela in 424 by which it ceded Morgantina (no. 37) to Kamarina (no. 28) in return for a specified payment (Thuc. 4.65.1). During the war with Leontinoi (no. 33) in the 420s, Syracuse had treaties of *symmachia* with the Dorian cities of Sicily (except for Kamarina) and with Italian Lokroi (no. 59; Thuc. 3.86.2–3) and Lipara (no. 34) (Thuc. 3.88.3), and it ruled a number of Sikel communities *kata kratos* (103.1), receiving *aparche* from them (Thuc. 6.20.4).

Numerous Syracusan exiles are on record; the earliest are the Myletidai mentioned at Thuc. 6.5.1 who joined the Zanklaians (no. 51) in founding Himera (no. 24) in 648. Exiles are attested under Deinomenid rule (Diod. 11.67.5), and in C5m several sentences of exile were decreed by *petalismos* (Diod. 11.87.4 (rC5m)). Exiles collaborated with the Athenians during their attack (Thuc. 6.64.1). A collective sentence of exile was passed on the *strategoï* after the battle of Kyzikos (Xen. *Hell.* 1.1.27). In 406 a general recall of exiles was voted by the assembly (Diod. 13.92.4–7).

The city waged numerous wars; the earliest known is the C6m war with its colony Kamarina in which both were supported by allies (Philistos (*FGrHist* 556) fr. 5). Apart from the military victories of the Deinomenidai, the most spec-

tacular triumph was that of the democracy which, eventually joined by all Sicilian *poleis* except Akragas (no. 9) (Thuc. 7.33, 58), defeated the invading Athenians (Thuc. 6–7). The Deinomenidai raised huge armies, but these can hardly have been recruited from Syracuse alone, and Deinomenid employment of mercenaries was extensive (Parke (1933) 10–13); in 480 Gelon raised 50,000 foot and 5,000 horse (Diod. 11.21); Thrasyboulos raised 15,000 soldiers (Diod. 11.67.7 (r466)) and controlled a navy (Diod. 11.68.3 (r466)). But even during Deinomenid rule there are references to civic forces proper (Diod. 11.67.5: *politikai dynameis*). In 471, 2,000 Syracusans fell in battle against Akragas (Diod. 11.53.5).

In 439, the democracy had 100 triremes constructed (Diod. 12.30.1), and Thucydides twice refers to eighty ships in action (7.22.1, 38.1). *Trierarchoi* are attested at Xen. *Hell.* 1.1.28 (cf. *IG* II² 105.37 (368/7)), naval commanders at Thuc. 7.25.1, and a *nauarchos* at Diod. 11.88.4 (r453). Navies are mentioned also at e.g. Thuc. 7.52.1 (seventy-six ships); Xen. *Hell.* 1.2.10 (twenty-five ships), and Diod. 13.13.1 (r413) (seventy-four ships). Hoplites are mentioned at Thuc. 6.67.2, (*pandemei*, but no figure); a corps of 600 *epilektoi* is attested for 461 (Diod. 11.76.2; cf. Thuc. 6.96.3 for 600 *logades* hoplites) and 3,000 *stratiotai epilektoi* are attested for 409 (Diod. 13.59.1). *Akontistai* are attested at Thuc. 6.67.2 and *psiloi* at 6.52.2, 7.78.3. *Hippeis* are mentioned at e.g. Thuc. 6.67.2, where they are said to number not less than 1,200. The democracy too hired mercenaries (Thuc. 7.48.5). During the democracy the board of *strategoï* had fifteen members (five from each tribe?), but during the Athenian invasion it was reduced to three *strategoï autokratores* (Thuc. 6.73.1), perhaps one from each tribe. *Strategoï* are referred to also at e.g. Thuc. 6.40.2; Xen. *Hell.* 1.1.27; *IG* II² 105.36 (368/7); and Diod. 11.91.2 (r451). Dionysios I in 405 raised 30,000 foot, 1,000 horse and 50 ships (Diod. 13.109.2).

Sending of envoys is attested at Diod. 11.68.1 (r466), Thuc. 4.58 (Congress of Gela), 73.2, 75.2; reception of envoys is attested at Diod. 12.8.4 (446) and 13.44.4 (r410). A grant of proxeny by Delphi (no. 177) to a citizen of Syracuse is recorded by *F.Delphes* III.1 437 (331/30); *IG* II² 101 (373/2) is an honorific decree for a citizen of Syracuse by Athens (no. 361). The inhabitants of Antandros (no. 767) decreed honorific citizenship to the citizens of Syracuse in recognition of military help (Xen. *Hell.* 1.1.26). For block grants of Syracusan citizenship, see above. A citizen of Syracuse served as *theorodokos* of Epidauros (no. 348) in 356/5 (*IG* IV².1 95.1.39; cf. II.61).

The constitution of Syracuse is known almost exclusively from literary sources, and the only relevant inscriptions are

a few dedications found in Olympia and Delphi (*infra*). Hippias of Rhegion (*FGrHist* 554) fr. 4 refers to a *Pollis Argeiois* describing him as having been king (*ἐβασίλευσε*) of Syracuse, presumably before C5 (Carlier (1984) 467; he is described as *tyrannos* in Arist. fr. 602.1). However, the original constitution of the city was an aristocracy of *Gamoroí* (Marmor Parium (*FGrHist* 239) 36 (rC7l–C6e)); cf. also *IGDS* no. 219 with Dubois' comm.; Diod. 8.11), who ruled both the *demos* (Hdt. 7.155.2) and a serf population called the *Kyllyrioi* (*ibid.* and Arist. fr. 603). In C5e the *Gamoroí* were expelled by the *demos* and retired to the Syracusan colony of Kasmenai (no. 29), whence they were brought back by Gelon, to whom the *demos* handed over both itself and the *polis* (see E. W. Robinson (1997) 120–22 with Arist. *Pol.* 1302^b31–32 for democracy at Syracuse at this stage). Gelon moved his seat from Gela (no. 17) to Syracuse, and from that point the city was ruled by the tyrant dynasty of the Deinomenidai: Gelon (485–478/7; see Berve (1967) 142–47), Hieron (478–466; see Berve (1967) 147–52), and Thrasyboulos (466/5). The assembly is attested during Gelon's reign (Diod. 11.26.6). The tyranny was brought to an end in 466/5, when the Syracusans revolted against Thrasyboulos (Arist. *Pol.* 1312^a10–16) and expelled him in collaboration with forces from Gela (no. 17), Akragas (no. 9), Selinous (no. 44) and Himera (no. 24) (Diod. 11.67.5–68.5); Arist. *Pol.* 1312^a10–11 suggests that the Deinomenidai may have been weakened by internal rivalry. Democracy was now reintroduced (Arist. *Pol.* 1316^a32–33; Diod. 11.68.6), and at least some of the population relocations carried out by Gelon were reversed (Diod. 11.76.3–5; Strabo 6.2.3). The assembly (*ekklesia*) passed a decree (*epsephisanto*) to the effect that only *archaioi politai* were entitled to hold office (Diod. 11.72.2). Seven thousand of the mercenaries enfranchised by Gelon were thus excluded from office (Diod. 11.73.1), though they remained citizens (Arist. *Pol.* 1303^b1); this led to civil war (*ibid.*), which the mercenaries lost (Diod. 11.76.2; cf. Arist. *Pol.* 1303^a38ff). A *koinon dogma* by all the *poleis* of Sicily then reversed all population relocations of C5f and assigned Messina (no. 51) to the mercenaries (Diod. 11.76.5 (r460)). The democracy lasted until the tyranny of Dionysios I (for the democracy in this period, see Rutter (2000)); during the democracy, the working of the assembly is attested (Thuc. 6.32.3, 72.1; Diod. 11.72, 92.2; cf. Thuc. 6.35. 2 for a *demou prostates* and Diod. 11.92.2 (r451) for a hint of the procedure of *probouleusis* (Rutter (2000) 145)), and foreign policy was among its responsibilities (Thuc. 7.2.1); magistracies were originally filled by election (Diod. 11.73.1); Thuc. 6.38.5 suggests that a

law specified a minimum age for office holding. The procedure of *petalismos* was instituted in imitation of Athenian ostracism to prevent the appearance of new tyrants; it led to several banishments, but had to be revoked because it alienated the upper class (Diod. 11.86–87; Rutter (2000) 146–48). After the victory over Athens the *demos* assumed still greater power (Arist. *Pol.* 1304^a27–29: *ὁ δῆμος ... ἐκ πολιτείας εἰς δημοκρατίαν μετέβαλε*). An important revision of the legislative code took place in this period (412/11) according to Diodorus: a commission of *nomothetai* presided over by Diokles drew up the so-called Laws of Diokles (13.35); one reform changed the procedure for appointing magistrates from election to sortition (13.34.6). Tyranny returned to Syracuse with Dionysios I, who ruled the city from his appointment as *strategos autokrator* in 406 (Diod. 13.95.1) to his death in 367 (see further Caven (1990)). Dionysios presumably carried out a *γῆς ἀναδασμός* to consolidate his grip on power (Diod. 14.7.4–5 (r404)). *IG* 11² 105.35–37 (368/7) suggests that in formal terms the democratic constitution remained in existence during Dionysios' reign (cf. Arist. *Oec.* 1349^a14, 26, 34 for the *ekklesia* during his reign). After his death several tyrants were in power until the intervention of Timoleon in 344 put an end to a period of unrest and reintroduced democracy (see Talbert (1974)). By the later C4 the city was ruled by “the oligarchy of the Six Hundred” until tyranny returned once more with Agathokles (see Wickert in *RE*² iv.2. 1518–23).

Syracuse experienced perhaps more *staseis* than any other Greek *polis*: Berger (1992) 34–49 studies nineteen cases from the Archaic period down to the age of Timoleon. One *stasis* occurred prior to the foundation of Himera in 648: Thuc. 6.5.1 mentions that a group of *phygades* from Syracuse *στάσει νικηθέντες* joined the Zanklaians in founding Himera (Berger (1992) 34). Another *stasis* occurred “in ancient times” and developed from a conflict between office-holders into a conflict involving all citizens; it led to a change in the constitution (Arist. *Pol.* 1303^b20–26; cf. Berger (1992) 35). Plut. *Mor.* 825C, relating this event, mentions a *βουλή* convened to solve the political differences.

One of the earliest known public enactments is a law regulating funerary expenses which is attested during Gelon's reign (Diod. 11.38.2). A death sentence and execution are recorded by Diod. 11.91.2 (r451); confiscation of property of convicts is attested by Diod. 13.93.2 (r406).

An eponymous *epipolos* is attested from the time of Timoleon onwards (Diod. 16.70.6 (r344)). Arist. *Pol.* 1303^b23 has a general reference to *archai* “in ancient times”; the *boule* is attested in the same period (by Plut. *Mor.* 825C (*supra*))

and is mentioned in *IG* II² 105.36 (368/7). Thucydides provides some general references to officials (7.73.3: οἱ ἐν τέλει ὄντες; 7.73.4: οἱ ἄρχοντες); and Diod. 11.92.2 (r451) has a general reference to *archontes* convening the assembly (cf. 13.91.4 (r406)). *IG* II² 105.35 (368/7) also provides a general reference to *archontes*.

A system of *phylai* is attested by Thuc. 6.100.1; it served *inter alia* as the basis for the army organisation (cf. Plut. *Nic.* 14.6). The number of *strategoí* indicates that there were three *phylai*; they were presumably the traditional Dorian set of Hylleis, Dymanes and Pamphyloi (Jones, *POAG* 173–76). A roster of all Syracusan citizens as organised into their *phylai* was stored in the Olympieion (Plut. *Nic.* 14.6 (r415), see 229).

Eisphora is attested during the reign of Dionysios I (Arist. *Pol.* 1313^b26ff, *Oec.* 1349^b6); tribute received from subjected natives is attested in Thuc. 6.20.4. According to Diod. 14.46.1 (r398), a sizeable body of Carthaginians lived in Syracuse as free non-citizens.

The splendidly celebrated Panhellenic victories of Hieron (*Olympionikai* 221, 234, 246; Pind. *Ol.* 1, *Pyth.* 1–3; Bacchyl. *Ep.* 3–5; cf. Harrell (2002)) were not the only victories won by Syracusans; see *Olympionikai* 51 (648), 219 (476), 248 (468), and 334 (420). In C5f, Astylos of Kroton was proclaimed a *Syrakosios* at several of his Olympic victories (*Olympionikai* 186–87), and Diod. 11.1.2 describes him as such. Dikon of Kaulonia must have been among the Kaulonians relocated to Syracuse by Dionysios I (*supra*); he was proclaimed a *Syrakosios* at his subsequent victories (*Olympionikai* 388–89) and is described as such by Diod. 15.14.1 (cf. Stylianos (1998) *ad loc.*). For a C4l victor in the Arkadian *Lykaia*, see *IGV.2* 550.20.

The principal divinities of Syracuse seem to have been Apollo, Artemis, Athena and Zeus (Olympios), to all of whom temples were erected in the Archaic period (*infra*).

All preserved communal dedications are of C5. *IG* v.1 217 is presumably a C5f dedication by Syracuse at Sparta (no. 345). Whereas Gelon dedicated spoils from the battle of Himera (480) at Delphi in his own name (ML 28 = *IGDS* no. 93; cf. Diod. 11.26.7; for the structure: Krumeich (1991)), spoils from the victory at Kyme in 474 were dedicated jointly at Olympia by *Ἡιάρων ὁ Δειωμένεος καὶ τοὶ Συρακόσιοι* (ML 29 = *IGDS* no. 94; cf. *Horos* 1 (1983) 59; Yalouris (1980) 14–15; O. Hansen (1990); Harrell (2002)). A treasury was built at Olympia from the spoils of Himera (Paus. 6.19.7: ὁ Καρχηδονίων θησαυρός; for the structural remains: Mallwitz (1956–58)); in it were housed offerings by, presumably, “Gelon and the Syracusans” (*ibid.*). For a

dedication at Olympia by the Syracusans of spoils taken from Akragas, see *IGDS* no. 95; Yalouris (1980) 16; and *SEG* 11 1212a (cf. *SEG* 15 252). A herald’s staff was also dedicated at Olympia (*SEG* 38 368 (c.475)). At Delphi a treasury was constructed from the spoils taken from the defeated Athenians (Paus. 10.11.5). For attempts to identify both an Archaic and a Classical treasury of the Syracusans in the architectural remains at Delphi, see Partida (2000) 77–80, 135–46.

The town was founded on the island of Ortygia, an ideal site with harbours on either side: in the east the Lakkios, the Small Harbour, in the west the Great Harbour (for a geomorphological survey of settlement and territory, see Mirisola and Polacco (1996)). Traces of Sikel habitation confirm the tradition that the first Greek settlers ousted the original inhabitants (Thuc. 6.3.2; cf. Martin *et al.* (1979) 655–57; Frasca (1983)).

Archaeological evidence confirms a C8s foundation date, and C8 habitation remains on Ortygia are similar to contemporary remains from Megara and Naxos. A north–south artery, joining the major sanctuaries, and with orthogonally laid out *stenopoi*, has an early origin (Pelagatti (1982) 135–38; Voza (1984–85) 669–72, (1993–94) 1283–87). The city expanded on to the mainland, the coastal plain of Achradina, from C8 (Voza (1976–77) 551–53), and from C7l–C6e a narrow isthmus may have joined Ortygia with its hinterland (cf. Strabo 1.3.18; Kapitän (1967–68)). The main east–west *plateia* of the Achradina originated in the C8–C7 as a route linking Ortygia with the Fusco cemetery. There is C5–C4 evidence of orthogonal town planning (Voza (1976–77) 551–61, (1980–81) 681–82). Ortygia and the inner Achradina comprised an area of c.50 ha.

The C4 extension of the city northwards—obliterating the C7–C4 cemeteries and joining the areas of the Achradina and Neapolis—is probably to be connected with the Timoleontic settlement of new colonists (Diod. 16.82.3). The periphery of the city was taken up with public buildings, and the outskirts of the Neapolis by theatres. Tyche, located to the east, with the sanctuary of Tyche and the upper plateau of Epipolai, were not urbanised; however, from the time of the conflict with Athens, the size of the city was about 150 ha, and in the Hellenistic period as much as 200 ha.

The island of Ortygia and the coastal plain of Achradina were probably fortified during the Archaic period (implied by the mention of a siege by Hippokrates of Gela in the 490s (Hdt. 7.154.2) and by the mention of walls during the revolt against Thrasyboulos in 465 (Diod. 11.67.8; see also 11.73.1)); however, the archaeological evidence is poor (Drögemüller

(1969) 47–48, 55–56). From the reign of Dionysios I, Ortygia served as a strongly fortified palace of the tyrants (Diod. 14.7.2–4; cf. Hansen and Fischer-Hansen (1994) 29; for remains of a circuit wall, see Martin *et al.* (1979) 666; Karlsson (1992) 22–23), a palace later razed to the ground by Timoleon (Diod. 16.70.4).

The plateau of Epipolai was probably not fortified before forts were laid out there by the Athenians, and the various counter walls and cross walls were raised by the Syracusans during the war of 414/13 (Thuc. 6.99–100, 7.4–7). Dionysios I fortified Epipolai, first along the northern scarp (Diod. 14.18.2–8 (r401)), later along the southern scarp; it was a circuit wall running for c.9 km, and according to Diod. 15.13.5 the “greatest possessed by a Greek city” (Winter (1971) 314–15; Karlsson (1992) 21, fig. 1, 23–38, 71). The west gate and the Euryalos fort were probably begun by Dionysios, but the fully developed system of bastions and ditches belong to the time of Timoleon, with the final complex from C3m (Winter (1963); Lawrence (1979) 295–99).

The Archaic agora has with some uncertainty been located west of the Athenaion (modern Piazza del Duomo) (Pelagatti (1982) 136–37). A Classical (and Roman) agora is normally taken for granted in the southern part of the Achradina (modern Piazza Marconi/Foro Siracusano), but the evidence is inconclusive (Bernabò Brea (1947); Martin *et al.* (1979) 675).

The island of Ortygia was the seat of at least three major sanctuaries: (a) in the north, the sanctuary of Apollo, with a C6e Doric temple (Cultera (1951); Barletta (1983) 72–78), with a history going back to C8; (b) the so-called C6l Ionic temple is located on the elevated central part of the island (G. V. Gentili (1967); Barletta (1983) 86–90); it is uncertain to whom the temple was dedicated (G. V. Gentili (1967) 80 suggests Artemis); it was not completed, perhaps as a result of a revision of building programmes by the Deinomenidai, who initiated instead the construction of the adjacent Athenaion; (c) the Doric temple of c.480–470, now incorporated into the Renaissance cathedral, probably built by Gelon to replace earlier structures (Orsi (1919); T. Van Compernelle (1989) 45–48, (1992) 51–55). It is normally taken for granted that this is the temple dedicated to Athena (Cic. *Verr.* 2.4.124–25), and according to Gras (1990) the two temples mentioned in Gelon’s treaty with the Carthaginians (Diod. 11.26.2) were temples of Athena in Syracuse and in Himera. Remains from the *temenos* include traces of a stepped altar, parapet and architectural fragments in Ionic style (Barletta (1983) 78–86). Investigations have recently revealed a monumental entrance to the *temenos* and

evidence of a C7l–C6e *naiskos*(?), altar and votive pits south of the Athenaion (Voza (1993–94) 1286–87). A sanctuary of *Olympian Earth* was located on the tip of Ortygia (Ath. 462B).

Large quantities of C5l–C4e votive deposits (Martin *et al.* (1979) 680–86; Hinz (1998) 102–7) found in the mainland Achradina district (modern Piazza Victoria) provide evidence of a sanctuary of Demeter and Persephone, perhaps the one embellished with two temples by Gelon after the victory at Himera in 480 (Diod. 11.26.7), located in the suburbs (*proasteion*) and destroyed by the Carthaginians in 396 (Diod. 14.70.4). A C4 graffito with a dedication to Artemis Pheraia points to a cult also of Artemis in this sanctuary (Voza (1973c) 106–7). A *proasteion* is not compatible with a location so near the city centre according to Polacco (1986) 23 n. 6, who suggests that the Demeter sanctuary should rather be located west of the city near the Olympieion. An Apollo sanctuary was located near the theatre in the Temenites, a locality on the outskirts of Achradina (Thuc. 6.75.1, 7.75.1; for history and terminology: Droegemüller (1969) 48 n. 36, 56–57). The sanctuary is now tentatively identified with the remains of an Archaic temple laid out on a terrace above the theatre (Voza (1993–94) 1289–90).

After the fall of the tyranny, the Syracusans raised a statue of Zeus Eleutherios and founded an annual festival of *eleutheria* (Diod. 11.72.2 with Barrett (1973) 30 n. 20; for a survey of other festivals, see Trojani in Polacco and Anti (1981) 26–29). The major suburban cult was that of Zeus Olympios west of the river Anapos (Diod. 10.28.1 (r491)). The extant remains are those of a C6m gigantic Doric temple, with evidence of a C7 predecessor (Orsi (1903); Lissi (1958)). A neighbouring hamlet, Polichene at Thuc. 7.4.6 but Polichne at Diod. 13.7.6, was fortified by the Athenians in 414. A suburban Artemis sanctuary was located on the north-east outskirts of the Epipolai plateau, at the Hexapylon gate leading northwards to Megara and Katane (Orsi (1900)).

Two Greek theatres are known at Syracuse. (1) The larger is situated on the outskirts of the Neapolis district, the Temenites, on the slope of the Epipolai. In its main construction phase, the period of Hieron II (271–216), it had a seating capacity of 14,000–17,000; earlier Archaic or Classical phases have not been demonstrated convincingly (Polacco and Anti (1981); Polacco (1990)). However, literary sources attest to an earlier phase of this theatre at least from C5e, and at least from C4m it was built of stone (Trojani in Polacco and Anti (1981) 41–43 with refs.). A C5s architect by the name of Damokopos was associated with the building of

the theatre (cf. Eust. *Od.* 3.68), and Aischylos produced the *Women of Aitna* for Hieron in 476 (see Trojani in Polacco and Anti (1981) 34–36 with refs.). A theatre is mentioned by Diod. 13.94.1 (r406), and was used as *ekklesiasterion* in 336 (Plut. *Tim.* 34.3, 38.3). (2) About 100 m to the west, rock cuttings from a rectangular structure are evidence of a *theatron* with rectangular seating and a *cavea* with a diameter of 27.5 m; its seating capacity was about 1,000. Its chronology is uncertain, though possibly C61–C5e (G. V. Gentili (1952); Drögemüller (1969) 48–49); according to Bernabò Brea (1967) 99, the interpretation of the rectangular structure as a predecessor of the large theatre is quite uncertain, and it cannot be excluded that this building served as the meeting place for smaller political bodies or even as a *bouleuterion* (Ginouvés (1972) 61–62; Kolb (1981) 92). A prison is attested in Diod. 11.86.5 (rC5m) and in Plut. *Dio* 57.3 (Hansen (2002) 36–37).

The earliest, Fusco, cemetery laid out east of the city was later followed by an arc of cemeteries lying around the city from there to Tyche in the west. The Archaic cemeteries in the outer Achradina district were taken over by habitation when the Classical city expanded, pushing the Hellenistic cemeteries further out. (For a survey with bibliography: Lanza (1989); add Voza (1993–94) 1292; Shepherd (1995) 52–56; see also Frederiksen (1999)).

Minting began about 510/500 (C. Boehringer (1984–85) 122–24) with coins on the Euboic–Attic standard and the tetradrachm as the main denomination: *obv.* quadriga, legend: *ΣΥΡΑΦΟΣΙΩΝ* or *ΣΥΡΑ*; *rev.* an incuse mill-sail design with a female head, probably the nymph Arethusa, in the centre (*SNG Cop. Sicily* 614; standard corpus of Syracusan coins until c.425; E. Boehringer (1929); recent survey: Rutter (1997) 114–16, 121–29). The lower denomination is a didrachm with *obv.* rider and side-horse; *rev.* similar to the tetradrachm issue (C. Boehringer (1984–85) pl. 13.8–9). A new issue was probably introduced by Gelon c.480 with basically the same types though more developed in design: the charioteer crowned by a Nike, and Arethusa on the *rev.* occupying the whole field and surrounded by four dolphins, legend: *ΣΥΡΑΦΙ/ΚΟΣΙΩΝ* (Rutter (1997) 124 fig. 121; *SNG Cop. Sicily* 617–18; *SNG Cop. Suppl.* 74; C5f chronology, followed here: Rutter (1998)). Lower denominations (didrachms and drachms): *obv.* horseman; *rev.* Arethusa (*SNG Cop. Sicily* 615–16). The next phase, from shortly before 470, saw a rich issue of tetradrachms with the now canonical types; types of the lower denominations: drachms, *obv.* horseman, *rev.* Arethusa; obols, *obv.* Arethusa, *rev.* four-spoked wheel (with *ΣΥΡΑ* between the spokes);

litrai, *obv.* Arethusa, legend: *ΣΥΡΑ*, *rev.* Cuttlefish (*SNG Cop. Sicily* 620–34). This issue culminated in a series of tetradrachms and an innovative issue of decadrachms, now dated 470–c.466 and no longer connected with the 480 victory of Gelon at Himera in 480: *obv.* as above but with lion in exergue, *rev.* Arethusa wearing wreath, legend: *ΣΥΡΑΚΟΣΙΩΝ* (Rutter (1993), (1998) pl. 67.3–4). From c.460 the *obv.* type carried *ketos* in exergue (*SNG Cop. Sicily* 635–51). The Attic weight standard and the *obv.* design came to exert great influence on the coinages of the neighbouring cities of Gela, Katane and Leontinoi (Kraay (1976) 210–11; Rutter (1998)).

By C5l, tetradrachms with the canonical types in a free style were produced by workshops at times operating with engravers who signed their dies (Rutter (1997) 144–46; *SNG Cop. Sicily* 666). One issue of the die-cutter Kimon has two letters on the *obv.*: *ΣΩ*, possibly a reference to a cult of Arethusa Soteira (Cahn (1993)). C5l also saw large issues of smaller denominations; of special interest are drachms with *rev.* type showing the legendary Sikanian hero Leukaspis (*SNG Cop. Sicily* 665, 673). Before 400 the standard legend becomes *ΣΥΡΑΚΟΣΙΩΝ* (Head, *HN*² 175; *SNG Cop. Sicily* 674, 681, etc.). Bronze and gold issues belong to the end of C5 and should be seen in the light of first the Athenian and later the Carthaginian invasions under Dionysios I, with high denominations in silver, decadrachms signed by engravers (C. Boehringer (1993); Rutter (1997) 146–47, 154–58; bronzes: Morcom (1998); *SNG Cop. Sicily* 683–700, 720–22). 100-litrai electrum coins were minted by Dionysios I and II: *obv.* Apollo; *rev.* Artemis, legend: *ΣΩΤΕΙΡΑ*; smaller denominations were minted as well (*SNG Cop. Sicily* 701–10). Under Timoleon the Corinthian connection is underlined by Corinthian-type pegasi minted at Syracuse (*SNG Cop. Sicily* 711–12); later the Zeus Eleutherios and the free horse types become common for the cities under Timoleon's hegemony (Talbert (1974) 182–90; Karlsson (1995); *SNG Cop. Sicily* 725).

Syracuse founded several colonies. The earliest was Heloron (no. 18), founded in C8l–C7e. Akrai (no. 10) was founded in 664, and Kasmenai (no. 29) in 644 (Thuc. 6.5.2). Kamarina (no. 28) was founded c.598 (Thuc. 6.5.3), and within a few decades waged war on its *metropolis* (Philistos (*FGrHist* 556) fr. 5). The tyrant Hieron founded the city of Aitna (no. 8) in 476 (Diod. 11.49.1–2); and Dionysios I founded Adranon (no. 6) (Diod. 14.37.5 (r399)), probably Adria (no. 75), possibly Ankon (no. 76), certainly Issa (no. 81); cf. Stylianou (1998) *ad* 13.4–5 at p. 196, Lissos (no. 82) (Diod. 15.13.4 (r c.385); see Stylianou (1998) *ad loc.*), and

Tyndaris (no. 49). Tauromenion (no. 48) too may possibly be a Dionysian foundation.

48. Tauromenion (Tauromenitas) Map 47. Lat. 37.50, long. 15.15. Size of territory: ? Type: [A];β. The toponym is *Ταυρομένιον, τό* (Timaios (*FGrHist* 566) fr. 33; Theophr. fr. 165); or *Ταυρομενία, ἡ* (Diod. 22.7.4). The city-ethnic is *Ταυρομενίτας* (*I.Delos* 103.60 (372–367); C4 coins, *infra*; Diod. 16.7.1 (r358)); or *Ταυρομένιος* (Diod. 16.68.8 (r344)). See further Ziegler (1934) 28.

Ps.-Skylax 13 lists Tauromenion under the heading *πόλεις Ἑλληνίδες αἰῶε*, side by side with Naxos (no. 41), although the two cities did not exist contemporaneously; this presumably means that the text has been compiled from sources of different dates. Diod. 14.59.3 calls it a *polis* in the urban sense, but the reference is to the year 396, at which time the site was not yet a Greek city (see below on the foundation). As a Hellenic community it is called a *polis* in the urban sense at Diod. 16.7.1 (r358) and in the political sense at Diod. 16.68.8 (r344).

The internal collective use of the city-ethnic is found on C4 coins (*infra*); the external collective use is found in *I.Delos* 103.60 (372–367; cf. *IG* II² 1638B.43), Diod. 16.68.9 and Plut. *Tim.* 11.4 (r344); the external individual use is found in Diod. 16.7.1 (r358), and is often applied to the historian Timaios (cf. *FGrHist* 566, tt. 1, 4e, 5, 13); see also *IdiCos* ED 52A.13 (C3).

Tauromenion became a Greek *polis* in C4f. At 16.7.1, Diodorus describes what would appear to be the foundation: in 358 Andromachos, the father of the historian Timaios, gathered the remnants of the Naxians whose city had been destroyed by Dionysios I in 403 (Diod. 14.15.2–3), had them settled on the Monte Tauro above the abandoned site of Naxos, and named the place Tauromenion. The city soon became populous and wealthy. There is reason to believe, however, that this was *not* the point at which the Greek *polis* of Tauromenion originally came into being: not only is Andromachos described as *Tauromenites* at this very point, but, much more importantly, a communal dedication by the *Tauromenitai* at Delos is listed in Delian inventories which antedate by several years the event described by Diodorus: see *I.Delos* 101.40 (372–367), 103.60 with Rutherford (1998) 83, and this indicates that the *polis* existed prior to the enfranchisement of the Naxians and prior to 364 (*ibid.*). Nor was the site created *ab novo* in 358, at least not according to Diodorus himself, who gives the following information on Tauromenion prior to 358: in 403, upon his destruction of Naxos, Dionysios handed its *chora* over to the

neighbouring Sikels (14.15.3); in 396 the Carthaginian Himilkon induced the Sikels to create a fortified centre on the Monte Tauro, a site which they named *Tauromenion* (but see Bennet (1977) 85) and which Diodorus describes by the term *polis* (14.57.2); in 394/3 Dionysios attempted without success to take the Sikel *polis* of Tauromenion by siege (14.87.4–88.4); however, by the treaty in 392 between Dionysios and Carthage, Tauromenion was assigned to Dionysios, who proceeded to expel most of the Sikels and settle selected mercenaries at the site (14.96.4). If this Dionysian settlement of mercenaries was not in fact the foundation of the Greek *polis* (it may have struck coins, *infra*), then the *polis* must have come into being after this event and before the inscribing of the Delian inventories c.374–367. The reason why Diodorus seems to think of the settlement of Naxians at Tauromenion in 358 as the *foundation* of the city may be that he drew his information from Timaios, the son of Andromachos, who may have described the event “in maiorem gloriam patris” (so Ziegler (1934) 30; cf. Bennet (1977) 86–87; Timaios was reputedly partial to his father, see Marcellin. *Vita Thucydidis* 27). So as a Greek *polis* Tauromenion was a C4f foundation; however, there is some archaeological evidence of C7 Greek presence at the site; Ps.-Skymnos 289 lists Tauromenion, with Himera (no. 24), among the Chalkidian foundations, thus implying an early date, but this is most probably an error. Strabo 6.2.3 lists Tauromenion as a city founded by the Zanklaians of Hybla; the passage is confused, but may be explained on the assumption that Zanklaians (= Messanians) who had been ousted from Messana in 396 by Himilkon (Diod. 14.58.3) took refuge in Aitnaian Hybla (although there is no direct evidence for this), and later participated in the foundation of Tauromenion (Strabo 6.2.3; cf. Consolo Langher (1996c) 542 for this suggestion). For a survey of research and interpretations, see Ziegler (1934), Bennet (1977) 84, and Consolo Langher (1996c).

The size of the territory is unknown. It may have remained Sikel although under Greek suzerainty (Diod. 14.96.4; cf. Consolo Langher (1996c) 538 n. 6). By C4l there were a number of *phrouria* in the territory (Polyaen. 5.3.6; cf. Steph. Byz. 168.15).

Not much is known about the institutions and political structure of C4 Tauromenion. When Timoleon arrived at Tauromenion, its leading citizen was Andromachos: Diod. 16.68.8 describes him as *ὁ τῆς πόλεως ἡγούμενος*, and Plut. *Tim.* 10.6–8 as *ὁ τὴν πόλιν ἔχων καὶ δυναστεύων*; Marcellin. *Vita Thucydidis* 27 describes him as exercising *monarchia*; he may, then, have been a tyrant (so Talbert

(1974) 114–15) and if so, his enfranchisement of the Naxians (*supra*) joins the long list of tyrannical population transfers in Sicilian history. Plut. *Tim.* 10.7 says that he led the *politai νομιμῶς καὶ δικαίως*, but if the ultimate source for that statement is Timaios, its reliability is questionable; it is at least possible that some Tauromenitai left the city in opposition to Andromachos (cf. Jacoby's comm. *ad* Timaios (*FGrHist* 566) fr. 33). The existence of a civic army is suggested by Diod. 16.7.9 (r344), and reception of envoys is attested by Plut. *Tim.* 11.2 (r344). An external communal dedication at Delos is attested by *I.Delos* 103.60 (372–367).

The site of the Sikel, later Greek city of Tauromenion north of Naxos, and originally in the *chora* of this city (it had been conquered by force at the foundation of Naxos; cf. Diod. 14.88.1), was well chosen: it is an easily defensible site on the Monte Tauro, 200–300 m above sea level.

The urban remains are mainly Hellenistic and Roman. The Greek city was undoubtedly fortified: remains of a circuit wall are extant near the agora (cf. also Freeman (1891–94) iv. 109–10). The settlement was fortified already during the Sikel C4e phase according to Diod. 14.87.4–88.4. The settlement comprises c.65 ha, excluding the upper part of Monte Tauro above the city (perhaps a fortified acropolis). C7–C5l Greek presence has been revealed by sherds found in the area of the agora, spanning the period from the early history of Naxos until its destruction by Dionysios in 403 (Bacci (1980–81b) 742, (1997)). C6 architectural fragments of Naxian type attest to an extra-urban sanctuary in the territory of Naxos (Bacci (1984–85) 722–23), situated within the later city in what was to become the agora of Tauromenion on the plateau west of the theatre. Epigraphic and architectural evidence, and similarities with the theatre at Syracuse, point to a C3e Greek origin for the famous Roman theatre (Polacco (1982) 438–40). Tauromenion may have had a C4 overall urban scheme of habitation and public structures laid out on terraces along the slopes of Monte Tauro (Bacci (1997)).

A rare silver dilitron with Naxian types: *obv.* laureate head of Apollo (Archagetes); *rev.* squatting Silenos; legend: *NEOΠΟΛΙ[ΤΩΝ]* (Cahn (1944) 146 no. 149), has been attributed to the mercenaries of Dionysios' 392 settlement, although the issue may have been made only after the death of Dionysios (S. Calderone (1956); followed by Consolo Langher (1996c) 538–39). A large bronze coinage in three denominations was struck in the reign of Andromachos c.357–344. Types: *obv.* head of Apollo Archagetes laureate, legend: *ΑΡΧΑΓΕΤΑΣ*; *rev.* bull walking or galloping, at times man-headed, or bull-head protome, legend:

TAYPOME, TAYPOMENITAN, with variations (*SNG Cop. Sicily* 916–20). The type and legend of Apollo Archagetes (cf. App. *B Civ.* 5.12.109) testify to Tauromenion's ambition to be the heir of Naxos (for the period of Timoleon, see Brugnone (1980) 279). The type of Apollo, influenced by a type known from earlier issues of the Chalkidic cities, is crucial testimony to the importance of the Tauromenian mint (Consolo Langher (1996c) 550–55). The issues of the Timoleon period (345–338) were a *symmachia* coinage with two groups of hemilitra: *obv.* head of Apollo laureate, legend: *ΑΡΧΑΓΕΤΑ(Σ)* or head of Zeus Eleutherios; *rev.* lyre, tripod, galloping bull or bunch of grapes, legend: *TAYPOMENITAN* (Consolo Langher (1996c) 555–67; cf. also Karlsson (1995); *SNG Cop. Sicily* 921–26).

49. Tyndaris (Tyndarites) Map 47. Lat. 38.10, long. 15.05. Size of territory: ? Type: B.a. The toponym is *Τυνδαρίς*, ἡ (*BCH* 45 (1921) iv.93 (230–210); Strabo 6.2.1), or *Τυνδάριον* (Ptol. *Geog.* 3.4.2). The city-ethnic is *Τυνδαρίτης* (*IGUR* II 823 (Hell.); Diod. 13.69.3) or *Τυνδάριος* (Diod. 23.5 (r263/2)).

Tyndaris is called a *polis* in connection with its foundation in 396 in Diod. 14.78.5, a passage which presumably uses *polis* primarily in the urban sense although the presence of the terms *πολιτεύεσθαι* and *πολιτογραφούντες* indicates that the term may carry the political sense as well (cf. Hansen (2000) 175–76). According to the text, the community *πολλοὺς πολιτογραφούντες* quickly grew to number more than 5,000: this implies grants of citizenship and registration of citizens, and thus shows that Tyndaris was a *polis*; the city furthermore struck coins in C4m (*infra*), concluded a treaty of *symmachia* with Timoleon (Diod. 16.69.3, a passage which also mentions armed forces of the city) and had a Delphic *theorodokos* in C3s (*BCH* 45 (1921) iv.93 (230–210)). The internal collective use of the city-ethnic is found on C4m coins (*infra*); the external collective use is found in Diod. 16.69.3 (r344); and the external individual use is found in *IGUR* II 823 (Hell.).

Tyndaris was founded as a fortress by Dionysios I in 396 (Diod. 14.78.5; cf. Consolo Langher (1996b)) on the coast c.60 km west of Messina (no. 51). The city was populated with 600 Peloponnesian Messenians expelled from Zakynthos (no. 141) and Naupaktos (no. 165; Asheri (1983)). Territory for the new community was taken from that of the city of Abakainon (no. 5; Diod. 14.78.5), and the defeat of Magon at Abakainon by Dionysios finally secured the territory of Tyndaris (Diod. 14.90.4). The Messenians named their city

Tyndaris after the cult of the *Tyndaridai*. By admission of new settlers shortly after the foundation the population of Tyndaris grew to more than 5,000 (Diod. 14.78.6).

The territory bordered inland upon that of Abakainon; to the east it was delimited by the territory of Mylai, and further inland by the Sikel site of Longane. The territory may have comprised some hundreds of km², but that is difficult to ascertain. A close relationship with the neighbouring site of Agathyrnon is suggested by C4l (C3 according to Consolo Langher (1965)) bronze coinage with types *obv.* head of Apollo, legend: *TYNΔAPIΣ*; *rev.* armed warrior, legend: *ΑΓΑΘΥΡΝΟΣ* (the eponym of Agathyrnon; cf. Diod. 5.8.2); however, the coins may be a reference to annexation of Agathyrnian territory by Tyndaris, rather than testimony of an alliance (Consolo Langher (1965) 82 n. 66; Lacroix (1965) 46–47).

The city was built in a strong military position on the top of a rocky promontory with precipitous cliffs facing seawards and with access only from the east. The town was located on a narrow plateau with three *plateiai* oriented north-east–south-west laid out on three levels along the length of the plateau, orthogonally crossed by *stenopoi*. The size of the city was about 14 ha. The extant remains are Roman, but there are traces of a Timoleontic C4m phase, and the origin of the town plan probably goes back to the time of its foundation (Bernabò Brea and Cavalier (1965)). A circuit wall was erected inland along the south-east and south-west sides of the city. The first wall, going back to the Dionysian foundation, was built in rough stones faced with plaster and strengthened at intervals with pilasters built in ashlar. In C3e(?) the wall was replaced by a 4.5 m-wide double curtain-wall built in ashlar with internal fill strengthened with a number of square towers and a deep pincer-shaped gate (Säflund (1937) 412–17; Barreca (1959)). A stretch of the wall descending obliquely north-west protected access to the harbour below the city (Barreca (1957)).

An agora was probably located on the south-east side of the habitation area in the region of the later Roman *forum*. No buildings of the Greek phase are extant, but near the *forum* a theatre with its back to the circuit wall and facing the upper, principal *plateia* has a Greek phase dating to c.300; the *koilon* had a diameter of 76 m and a seating capacity of c.3,000 (Bernabò Brea (1964–65)).

A cult of the Dioskouroi, the *Tyndaridai*, is not explicitly attested, but coin types give clear evidence that such a cult was of major importance (Ziegler (1943) 1785; Consolo Langher (1965) 66). A second, Timoleontic, series of coins have as type a head of Apollo (Consolo Langher (1965) 81). A

Zeus cult is attested by C3 bronze coin types depicting a statue of Zeus, possibly the Messenian Zeus Ithomatas (Ziegler (1943) 1785). Athena, Poseidon, Dionysos and Kore(?) are shown on C3 coin types (*ibid.*), and Artemis Eupraxia on a C2 dedicatory relief (Fischer-Hansen (1992) no. 12).

Tyndaris struck bronze coins in C4m, consisting of hemilitra with fractions, trias and uncia: pre-Timoleontic: *obv.* female head (Helen), legend: *TYNΔAPIΣ*; *rev.* rider/Dioskouros (Consolo Langher (1965), (1996b) 581; *SNG Cop. Sicily* 948). Second issue (Consolo Langher (1965), (1996b) 584; *SNG Cop. Sicily* 949): *obv.* head of Apollo, legends: *TYNΔAPIΔΟΣ*, *TYNΔΑΡΙΤΑΝ*; *rev.* cock, or horse's head, or free horse (for the "Free Horse", Timoleontic *symmachia* coinage, see Karlsson (1995) and Consolo Langher (1997) 183–85, 188).

50. (Tyrrhenoi) Map 47. Unlocated. Type: C:γ. The *Tyrrhenoi* are known exclusively from their C4s Greek-style bronze coinage: *obv.* head of Athena wearing Attic helmet, legend: *TYPPH*; *rev.* standing armed Athena (Head, *HN*² 190; Cutroni Tusa (1970) 264–65). The coins, whose types reveal Athenian influence, are restruck on C4s Syracusan issues. They may belong to an anti-Syracusan ethnic group, perhaps Tyrrhenian mercenaries fighting Timoleon (cf. Diod. 16.82.2 (r339/8); Cutroni Tusa (1970) 266). A settlement site of the *Tyrrhenoi* has tentatively been identified with sporadic habitation remains at modern Alimena in the territory of Himera (no. 24) (Bejor (1984b) with refs.); other proposals include a location in the region of Syracuse–Aitna (Cutroni Tusa (1970) 266).

51. Zankle (Zanklaïos)/Messana (Messanios) Map 47. Lat. 38.10, long. 15.35. Size of territory: 4. Type: A:a. The toponym is, for *Zankle*, *Δάνκλε* (*SEG* 11 1180.8 (C6); coins of C6l, *infra*) or *Ζάγκλη, ἡ* (Hecat. fr. 72; Hdt. 7.164.1). The city-ethnic is *Δανκλαίος* (*IGDS* no. 2 (C5e); coin c.461, *infra*) or *Ζαγκλαίος* (Hdt. 6.22.2). For *Messana*, the toponym is *Μεσσάνα* (*IG* 1v².1 95.11.78 (C4m); *Μεσσήνη, ἡ* (Hdt. 7.164.1); or *Μεσήνη* (Polyaen. 5.2.18). The city-ethnic is *Μεσσήνιος* (*SEG* 28 431); *Μεσήνιος* (Polyaen. 5.2.18); *Μεσσένιος, Μεσσάνιος* (coins, *infra*).

Zankle is called a *polis* in the urban sense at Hdt. 6.23.3 and 7.164.1, and in the urban and political senses combined at Hdt. 7.154.2 (Hansen (2000) 205); it is called *patris* at Diod. 11.76.5 (r460). *Messana* is called a *polis* in the urban sense at Thuc. 4.25.10–11 and in the political sense at Thuc. 6.4.6; it is called *patris* at Diod. 14.50.5 (r399).

The city-ethnic of *Zankle* is found in the internal collective use on C5f coins (*infra*) and in the external collective use

in *IGDS* no. 2 (C5e), Hdt. 6.22.2 and Antiochos of Syracuse (*FGHHist* 555) fr. 9; the external individual use is found in Paus. 5.25.11 (rC61); the city-ethnic of *Messana* is found in the internal collective use on C5 coins (*infra*) and in the external collective use in *IGDS* nos. 4–5 (488–485) and Thuc. 5.5.1; the external individual use is found in *SEG* 28 431 (c.467–450) and Diod. 14.40.4 (r399).

According to Thuc. 6.4.5, Zankle was originally settled by pirates from the Chalkidian colony of Kyme (no. 57), possibly implying some early pre-colonial phase (see Antonelli (1996) for a full discussion). At a later date a number of Chalkidian and other Euboian settlers joined the settlement, the oecists being Perieres from Kyme and Krataimenes from Chalkis (Thuc. 6.4.5; Callim. *Aet.* 11 fr. 43.58–59, Pfeiffer, with Ehlers (1933)). The implication may be that Zankle was founded in two stages: at first the settlement served merely to secure Kymaïan-Chalkidian trading interests; later, with the participation of oecists, it was founded as a *polis*. According to Ps.-Skymnos 283–86 (possibly drawing on Ephor. fr. 137a; cf. Strabo 6.2.2–3), however, Zankle was founded by Naxos (no. 41) as a sub-colony at the same time as Katane (no. 30) and Leontinoi (no. 33), i.e. c.735–730. The date seems to be confirmed by the archaeological evidence (Bacci (1978); Scibona (1986) 448) and also by the Zanklaian participation in the foundation of Rhegion (no. 68) c.730.

The foundation of Mylai (no. 38) in C81 as a secondary colony of Zankle (Euseb. *Chron.* 90bH) testifies to a Zanklaian area of influence along the north coast of Sicily. In 648, Zanklaians and Syracusan exiles, the so-called *Myletidai*, founded Himera (no. 24) in western Sicily (Thuc. 6.5.1; Diod. 13.62.4). The continued ties with Himera are revealed by the fact that Skythes, the king of Zankle in C5e, went there as an exile (Hdt. 6.24.1). New Zanklaian settlers at Himera in the same period may be deduced from the mention of a [φύ]λα Δανκλαία in a bronze plaque from Himera (Brugnone (1997) 271–72 *et passim*). To the south the territory of Naxos formed a natural border (Thuc. 4.25.7)—all in all a *chora* of quite vast dimensions. (For the confines of Zanklaian territory and that of Longane, see Massa (1991) 253.) Its name was *Μεσσηνία* (Theophr. *Hist. pl.* 8.2.8), and by C4e it was apparently dotted with fortified *phrouria* (Diod. 14.57.5–6). It is called γῆ by Thuc. 6.4.5, χώρα ἐνδαίμων in Paus. 4.23.6, and Hdt. 6.23.5 has a reference to οἱ ἄγροί. Its borders are mentioned at Diod. 14.40.4 (r399).

The change of name from Zankle to Messana occurred c.488/7 and was the result of tumultuous events: at the time of the Ionian Revolt, Zankle had sent messengers to Ionia and

invited settlers to participate in the foundation of an Ionian *polis* at Kale Akte (Hdt. 6.22.2; cf. C. Marconi (1994)). A number of Samian aristocrats wanted to flee Samos on account of their role in the Ionian Revolt; they accepted the invitation and arrived at Lokroi Epizephyrioi (no. 59) at a time when the Zanklaian forces were laying siege to a Sikel town; the Rhegian tyrant Anaxilas persuaded the Samians to capture the undefended town of Zankle, which they did (Hdt. 6.23.2–3). The Zanklaians called upon their ally, Hippokrates, the tyrant of Gela (at this time Zankle was presumably a subordinate ally of Hippokrates, who had defeated the city in an earlier war, cf. Hdt. 7.154.2); Hippokrates arrived with an army and deposed Skythes, the ruler of Zankle (called *basileus* (Hdt. 6.23.1) or *mounarchos* (Hdt. 6.23.4); cf. Carlier (1984) 469–70). Hippokrates then negotiated with the Samians and betrayed the Zanklaians to them in return for “half of all the moveable property and slaves in the town, and everything in the open country” (Hdt. 6.23.5). He enslaved the greater part of the betrayed Zanklaians, but turned the 300 “leading men among them” over to the Samians (6.23.6). Later, Anaxilas of Rhegion drove out the Samians, founded a city of mixed ethnicity, and changed the name to *Messana* after his own original homeland (Thuc. 6.4.6).

The treaty of 405 between Dionysios and Carthage stipulated that Messana be *autonomos* (Diod. 13.114.1; *Staatsverträge* no. 210). In 399 the Messanian army deserted their generals in a war against Dionysios because the *demos* had not ratified the campaign (Diod. 14.40 5; Costabile (1978)). In 396 Himilkon captured Messana, which was now allied with Dionysios (Diod. 14.57), but in 395 the city was repopulated by Dionysios, who settled 1,000 Lokrians, 4,000 Medmaians and 600 Peloponnesian Messenians (who were, however, quickly relocated to Tyndaris), and the city became practically a Syracusan colony, above all of military stamp (Diod. 14.78.5). The pro-Dionysian faction, however, was expelled again in 394 (Diod. 14.88.5).

Monarchy is attested at Zankle in the time of Skythes (*supra*), who, however, seems to have been a subordinate of Hippokrates of Gela (*supra*). Diod. 11.48.2 (r476) describes Anaxilas as being at his death tyrant of both Rhegion and Zankle (cf. Berve (1967) 156). In 461, “the Rhegians with the Zanklaians” expelled the sons of Anaxilas and liberated their cities (Diod. 11.76.5). The *koinon dogma* agreed upon by the Sicilian cities after the fall of the tyranny at Syracuse stipulated that all the mercenaries installed by tyrants in the cities of the island were to settle ἐν τῇ *Μεσσηνίᾳ* (Diod. 11.76.5; cf. *CAH²* v. 157; Freeman (1891–94) ii. 316–17). A *stasis* broke

out in 424–422 during which one party called in help from Lokroi; the Lokrians sent some *epoikoi* who were later driven out (Thuc. 5.5.1). Another *stasis* is mentioned for the year 415 (Thuc. 6.74.1); cf. Polyae. 5.2.18. Ethnic animosities seem to have played a role in these *staseis* (Berger (1992) 54–55). In 337, Timoleon deposed the tyrant Hippon (Plut. *Tim.* 34.3).

IGDS no. 2.9, C6 = SEG 11 1180) reads [τοῖς] συνμά[χ]-, and the inscription presumably recorded or referred to a treaty of *symmachia* between Zankle and one or more unknown partner(s). In 426 Messana entered into a *symmachia* with Athens (Thuc. 3.90.4). The alliance was short-lived, and the next year Syracusans and Lokrians occupied Messana, which had revolted from Athens (Thuc. 4.1.1).

A Messanian army and navy are mentioned at Thuc. 4.25.7; Diod. 14.40.4 (r399) mentions an army of 4,000 foot and 400 horse, in addition to thirty triremes. The organisation of the army was probably based on a system of *phylai*, since at 3.90.2 Thucydides says that there were δύο φυλαὶ ἐν ταῖς Μυλαῖς τῶν Μεσσηνίων φρουροῦσαι. Commanders (*strategoî*) are mentioned at Diod. 14.40.5 (r399).

Olympic victories were achieved by Leontiskos in 456 and 452 (*Olympionikai* 271, 285) and by Symmachos in 428 (*Olympionikai* 325). A C6 communal Zanklaian dedication of spoils at Olympia is found as SEG 11 1180.9, 1205 and 15 246 (= IGDS no. 2); Messanian dedications are attested by SEG 24 313–14 (C5e). In communal mourning the Messenians dedicated a bronze statue at Olympia to commemorate a chorus of boys who drowned on their way to a festival at Rhegion (Paus. 5.25.2–5 (rC5m); Cordano (1980); Pritchett (1999) 252–54). In 356/5, a citizen of Messana served as Epidaurian *theorodokos* (IG IV².1 95.II.78).

Zankle was founded near the narrowest point of the Straits c.10 km south of Cape Pelorus on a low coastal plateau facing a natural, sickle-shaped harbour from which the city took its Sikel name (Thuc. 6.4.5). The ancient city has suffered heavily from the later urban history of the site and from numerous earthquakes and landslides: the Archaic and Classical remains are often 4–5 m below the present surface. The settlement lay along the inner harbour and upon the sickle-shaped peninsula that enclosed the harbour. The main area of habitation seems to have been the area west and south of the harbour, stretching c.1 km inland from the coast in an area confined to the south by the river Cammaro and to the north-east by the harbour—in all c.50–60 ha (Vallet (1958) 113–16, pl. I; Scibona (1986)). No remains of the Archaic or Classical circuit wall are known (for *poliorkiai*, see Hdt. 7.154.2 (490s); Plut. *Tim.* 34.3 (r337); cf. Diod.

14.56.4, 57.3, 58.3, 78.5 and 87.1 attesting the existence of fortifications in the 390s). During C5 the size of the habitation area may have been somewhat restricted compared to the Archaic city; the C5 cemetery is located inside the area of the Archaic city, though this may simply indicate a change in location of habitation area (Scibona (1986) 450, 453). There is some evidence of an overall orthogonal plan from the early period of the settlement (Bernabò Brea (1972–73) 176–77; Scibona (1986) 449–52). The harbour is known from early coin types, some of which seem to show it equipped inside with buildings or wharves. Several kilns attest to an extensive industrial quarter inside the urban area (Bacci (1995) 640). A theatre is mentioned by Plut. *Tim.* 34.4. (r337); the same passage refers to schools (*didaskaleia*).

On the outermost part of the sickle-shaped peninsula was a sanctuary; the cult is unknown, but the finds show that its history goes back to the period of foundation (Orsi (1929) 38–46). This is the main archaeological testimony of cult from the city itself, apart from the C5 votive relief from a sanctuary(?) dedicated to the chthonic divinities (Orsi (1912)). For extra-urban sanctuaries, there is the tradition of the Poseidon sanctuary on Cape Pelorus (Diod. 4.85.5–6 (r time of foundation)). The striding Zeus shown on the *obv.* of the single known tetradrachm from an issue struck probably in 461 commemorating the liberation from tyranny may refer to the cult of Eleutheria (cf. *infra*).

Coinage began c.525 with drachms based upon the Euboian standard, with as lower denominations obols and onkiai (C. Boehringer (1984–85) 108–19). The first issue is known in four series, lasting to the conquest of Zankle by Hippokrates. The *obv.* type, a dolphin within a sickle-shaped harbour, refers to the name and setting of the city (Belloni (1977)), legends: ΔANK, ΔANKΛ, ΔANKΛΕ; *rev.* incuse squares with shell in centre (*SNG Cop. Sicily* 387–88). An example with incuse repetition of the obverse is a unique example of the incuse fabric of Magna Graecia used in Sicily (C. Boehringer (1984–85) 109, pl. 11.3).

The Samian occupation 494/3–489/8 is reflected in tetradrachms struck on the Euboian–Attic standard, the *obv.* with a frontal lion scalp, the *rev.* with a prow of a ship (the *samaina*), and on some a retrograde letter of the sequence A to E. Each letter probably represented one year's coinage, and the letter sequence therefore corresponds to the five years of Samian occupation. Of the lower denominations the diobols carry the additional symbol of a helmet on the *rev.* (Barron (1966) 40–43; *SNG Cop. Suppl.* 68).

The first issues of Anaxilas' regime, spanning the period 488–480, were tetradrachms struck on the Euboian–Attic

standard with *obv.* lion's head facing; *rev.* forepart of calf, legend: *MEΣΣENION* (Caccamo Caltabiano (1993) 17–31). From 480 Anaxilas struck tetradrachms with *obv.* biga of mules; *rev.* running hare, in commemoration of his victory at Olympia, legend: *MEΣΣENION*; this becomes the canonical C5 type, with smaller denominations—mainly litrai and its fractions (ibid. 31ff; *SNG Cop. Sicily* 389–90).

The fall of the tyranny in 461 allowed for a short period the re-establishment of the Zanklaian faction, which struck a commemorative issue known from a unique tetradrachm: *obv.* Zeus at altar hurling thunderbolt; *rev.* dolphin, shell, legend: *ΔANKΛAIION*; litrai have the legend *ΔAN* (Caccamo Caltabiano (1993) 63–66, 238; cf. also Lacroix (1965) 24–25). These were soon followed by Messanian issues. The legend of the reverse changed the earlier Ionic spelling to Doric *MEΣΣANION* or *MEΣΣANIΩN*

*c.*450 (*SNG Cop. Sicily* 393–94). Later issues use the four-stroke *sigma* instead of the rounded Chalkidian letter (Caccamo Caltabiano (1993) 68–69; *SNG Cop. Sicily* 396–97). The rare issue of a gold coinage *c.*455 may reflect the demands of a military campaign (Stazio (1988) 506–7; Caccamo Caltabiano (1993) 73–75). An issue from *c.*425 carries on the *obv.* the personification of the city (a female charioteer) and the legend *MEΣΣANA* (Caccamo Caltabiano (1993) 101–3; *SNG Cop. Sicily* 399–406). Bronze coinage with related types and the legend *MEΣ(Σ)* began *c.*425 (Caccamo Caltabiano (1993) 111–14; *SNG Cop. Sicily* 417–19).

Zankle founded Mylai (no. 38) in 716, presumably as a dependent *polis* (*supra*); in collaboration with Syracusan exiles, it founded Himera (no. 24) in 648; and it also participated in the foundation of Rhegion (no. 68) *c.*730.

- c.*450 (*SNG Cop. Sicily* 393–94). Later issues use the four-stroke *sigma* instead of the rounded Chalkidian letter (Caccamo Caltabiano (1993) 68–69; *SNG Cop. Sicily* 396–97). The rare issue of a gold coinage *c.*455 may reflect the demands of a military campaign (Stazio (1988) 506–7; Caccamo Caltabiano (1993) 73–75). An issue from *c.*425 carries on the *obv.* the personification of the city (a female charioteer) and the legend *MEΣΣANA* (Caccamo Caltabiano (1993) 101–3; *SNG Cop. Sicily* 399–406). Bronze coinage with related types and the legend *MEΣ(Σ)* began *c.*425 (Caccamo Caltabiano (1993) 111–14; *SNG Cop. Sicily* 417–19).
- Zankle founded Mylai (no. 38) in 716, presumably as a dependent *polis* (*supra*); in collaboration with Syracusan exiles, it founded Himera (no. 24) in 648; and it also participated in the foundation of Rhegion (no. 68) *c.*730.

ITALIA AND KAMPANIA

TOBIAS FISCHER-HANSEN, THOMAS HEINE NIELSEN, CARMINE AMPOLO

I. The Region

In antiquity, two different names were used to designate (most of) the area under consideration in this chapter: *Italia* and *Megale Hellas*. Neither of them, however, regularly included the Greek communities (Kyme, Neapolis and Pithekoussai) in Kampania (ἡ *Καμπανία* (Ps.-Skylax 10)) which are included here as well. Whereas *Italia* was certainly used in the Classical period, *Megale Hellas* may be a post-Classical formation.

(i) *Italia* The usual toponym is Ἰταλία (-ίη), ἡ (IG IV².1 95.1.46 (359); IG II² 10438 (C4); Hdt. 6.127.1; Arist. *Pol.* 1274^a24). The name seems to designate, primarily, the Greek cities in South Italy and their territories; similarly, the ethnic Ἰταλιώτης designates the Greek inhabitants of these cities (Hdt. 4.15.2; Plin., *Ep.* 7.327B; Arist. *Rh.* 1398^b15; Thuc. 6.44.3, 7.57.11).¹ This ethnic is used almost exclusively externally and collectively (preceding refs.), but a single instance of the external individual use is found in the epitaph IG II² 8942 (365–340).

The definition and delimitation of *Italia* has been and still is a controversial issue, especially among Italian scholars (cf. Ronconi (1997); Musti (1996) with further refs.). By the Hellenistic and Roman periods, *Italia* comprised all of Italy from the tip of the toe as far north as the Alps, including even Massalia (no. 3) (Polyb. 2.14). A detailed discussion of the gradual expansion of the concept of *Italia* is omitted here,² and the following account focuses on the Classical period. It is based on contemporary sources, and it excludes Hellenistic and Roman sources unless they can be shown to be quotations or reliable paraphrases of Classical authors.

Luca Soverini, University of Pisa, collaborated with the authors in the compilation of the site databases, contributing valuable references and insights. The authors would like to thank Dr. Keith Rutter for commenting on a draft of this text.

¹ Cf. Herennius Philo, *De diversis verborum significationibus* 98.1: Ἰταλοὶ καὶ Ἰταλιώται διαφέρει. Ἰταλοὶ γὰρ εἰσιν οἱ ἐξ ἀρχῆς χώρων οἰκίσαντες. Ἰταλιώται δὲ ὅσοι τῶν Ἑλλήνων ἐπόκησαν μετὰ ταῦτα.

² For surveys, see Lepore (1988); Musti (1996); Ameruso (1996).

It is impossible to say anything about Hekataios' conception of *Italia*. Citing Hekataios (Ἐκαταῖος *Εὐρώπη*), Steph. Byz. applies the classification πόλις Ἰταλίας to Capua (fr. 62), Medma (fr. 81), Lokroi (fr. 83), Kaulonia (fr. 84) and Krotalla (fr. 85), and *Kaprie[ne]* is called a νῆσος Ἰταλίας (fr. 63).³ Whereas Stephanos undoubtedly found the toponyms (Medma, etc.; cf. fr. 80) in Hekataios' work, we have no guarantee that the site classification πόλις Ἰταλίας stems from Hekataios as well (Hansen (1997a) 17–18). In Steph. Byz. there are close to 100 occurrences of πόλις Ἰταλίας, and it is used with reference to, e.g., Rome (548.11), Spina (584.12) and Genoa (202.19). Now, considering what we know about the concept of *Italia* in, e.g., Antiochos and Herodotos (*infra*), it is most unlikely that Hekataios would classify Capua as a πόλις Ἰταλίας (fr. 62) and Capri as a νῆσος Ἰταλίας (fr. 63), although explanations for this usage, based upon political and archaeological evidence, have been put forward (Ronconi (1997) 111). It follows that πόλις Ἰταλίας in fr. 62–63, and consequently in fr. 81, 83–85 too, must be Stephanos' own classification of the toponyms he found in Hekataios' work. It follows that we have no information whatsoever about the extent of *Italia* according to Hekataios. We do not even know whether he used the toponym Ἰταλία at all.

In the *Περὶ Ἰταλίας* of Antiochos of Syracuse (*FGrHist* 555, fr. 2–5, 9, 12), the ancient name of *Italia* is said to have been *Oinotria*, the region only later taking its name from the eponymous hero *Italos* (fr. 2). The *Italia* of Antiochos extended across the peninsula from the river Laos to Metapontion (fr. 3), thus excluding, e.g., Taras and its hinterland, Iapygia (fr. 3, 12; see Prontera (1986) 307–9 fig. 4). On the other hand, Soph. fr. 598 (Radt = Pearson fr. 598) as transmitted in Dion. Hal. *Ant. Rom.* 1.12.2 seems to include Taras in *Italia*, since *Italia* is there said to stretch ἀπ' ἄκρας Ἰαπυγίας μέχρι πορθμοῦ Σικελικοῦ. See further Lepore (1988) 134–37.

³ In fr. 80 Ἰταλίας has been restored by Meineke.

For Herodotos, *Italia* seems to have covered the Greek colonial region from Kroton (5.43) via Sybaris, Siris (1.145, 5.43, 6.127.1, 8.62) and Metapontion (4.15.1) as far as, and including, Taras (1.24.7, 3.136.1), i.e. to the border between Greek and Iapygian territory, without a precise indication of the geographical limits. For Herodotos the northern boundary of *Oinotria* was in the region of Hyele (1.167), and perhaps as far north as the river Sele (as in Strabo 6.1.1), as argued by Ronconi ((1988–89), (1997) 116), though this is less certain.

In Thucydides, *Italia* signifies the coastal region from the promontory of Rhegion (4.24.4) to Iapygia (7.33.4), settled with Greek colonies, of which the following are mentioned as being Italian: Rhegion (3.86.2, 5, 4.24.4, 6.44.2), Lokroi (3.86.2, 5.5.1, 6.44.2, 7.25.3, 8.91.2), Kaulonia (7.25.2), Thourioi (6.104.1–2, 7.57.11), Metapontion (7.33.4, 57.11) and Taras (6.44.2, 6.104.1, 8.91.2); in addition, at 6.104.2 (on which see *HCT ad loc.*), Terina is implicitly described as in *Italia*.

Another historical account of the concept of *Italia* is found in Strabo 5.1.1, where *Italia* (= *Oinotria*) is said originally to have comprised the area from the straits to the Gulf of Taranto in the east and as far as Poseidonia to the north. The sources for this concept are not given by Strabo, but they will have been of C5 and C4 (Musti (1996) 38; Ronconi (1997) 116–18).

(ii) *Megale Hellas* The meaning of the expression ἡ Μεγάλη Ἑλλάς is likewise controversial;⁴ in view of the cultural level and the economic and political strength of the Greek colonies of South Italy in the Archaic period, the designation could have been coined in C71 or C6e, but there is no direct evidence for so early a use of the expression, the first occurrence being in Polybios (*infra*).

The area covered by the designation is uncertain, and different definitions are found in different ancient authors. According to Ps.-Skymnos 304ff, Μεγάλη Ἑλλάς comprised South Italy south of a line joining Terina to Taras (cf. Steph. Byz. 617.5–6; Musti (1988) 83). In Athenaios (523E) it is used synonymously with Ἰταλία about all the Greek settlements in South Italy. For Pliny (*HN* 3.95), *Magna Graecia* comprised only the region around Lokroi Epizephyrioi and Taras, whereas in Servius (*ad Aen.* 1.569) it extended as far north as Kyme. In the course of time the Latin translation *Magna Graecia* came to be used by the Roman authors,

much as in scholarship today, to designate the region of the Greek colonies in South Italy (Livy 31.7.11).

According to Strabo 6.1.2, *Megale Hellas* comprised not only the Gulf of Taranto, the coast as far as the straits and an unspecified part of the interior, but also Sicily. Strabo is the only author to include Sicily in *Megale Hellas*, and his Σικελία is therefore often explained either as a later gloss or as an extension of the designated area by a local, patriotic author—such as Timaios or Antiochos—or as evidence of a gradual chronological extension of the concept to comprise first *Italia* and then *Sikelia*. However, the concept of *Megale Hellas* is of little or no importance in Strabo, who hardly makes use of it. For a rather strained interpretation of Strabo 6.1.2 that avoids subsuming Sicily under *Megale Hellas*, see Maddoli (1981) 16–19.⁵ The question must remain open.⁶

Finally, in a Strabonian context, the concept of *Megale Hellas* comprised also various non-Greek *ethne* in so far as they were Hellenised (Ameruso (1996) 42–45, 92–97).

The earliest extant use of *Megale Hellas* is found in Polybios, in an account of an anti-Pythagorean incident of C61–C5m (Polyb. 2.39.1; cf. Maddoli (1981) 10, 91). The use of the expression by Athenaios (523E) in connection with the history of Siris may, with Polybios, support a C6 origin (Maddoli (1981) 28). On the other hand, there is no support for the common assumption that the expression was used in a C6 context by Timaios (*FGrHist* 566, fr. 13); the fragment is found in a schol. Pl. *Phdr.* 279C which quotes Timaios *verbatim*; however, ἡ Μεγάλη Ἑλλάς introduces the quotation *without being part of it* (cf. Cantarella (1967) 16 n. 23; Musti (1988) 80, 88, 91; Ameruso (1996) 13–21).

The prevalent explanations of the expression tend to assume that it existed in the Archaic and Classical periods, an assumption for which the evidence is weak (*supra*). It has been seen as relating to the growth, the increase (*auxesis*) in power and in cultural and economic importance of South Italy after the Greek foundations.⁷ More generally, it has been explained by the wealth and power of the area (cf. Strabo 6.1.2 and Ath. 523E, connecting it with the great size

⁵ Maddoli suggests reading Strabo as referring to two correlative units, *Megale Hellas* and Sicily, two objects of the verb ἀφῆρηντο. The idea put forward by Momigliano (1929)—that the *extension* of *Megale Hellas* to comprise Sicily goes back to Antiochos and is accordingly *earlier* than its *restriction* to the Greek part of South Italy—has not won adherence; cf. Cantarella (1967) 13 n. 8 and Maddoli (1981).

⁶ Musti (1988) 72–3; Cazzaniga (1971). A survey of the debate is found in Ameruso (1996) 37–46, cf. *ibid.* 96–97.

⁷ Maddoli (1981) 22–27, referring to Strabo 6.1.2 and with discussion of the terms ἀξέανεσθαι, ἀξέθηθῆναι; for criticism, see Musti (1988) 63–65.

⁴ See Mustilli (1964) 36; Cantarella (1967); Maddoli (1981); Mele (1981); and Musti (1988); a *Forschungsberichte* is found in Ameruso (1996) 3–11.

of the population), possibly in comparison with Greece proper, as stressed by some modern scholars (cf. Musti (1988) 82, 84–85). The designation *maior Graecia* is employed by Livy (31.7.11) and does seem to imply some comparison with Greece itself; also, the contrast between the rich Achaian colonies and their poor *metropoleis* in Peloponnesian Achaia should not be overlooked. However, according to Cantarella (1967) 16–19, *Megale Hellas* was used in an absolute sense, and not comparatively: in fact, *Megale Hellas* was used about Greece itself by Euripides (*Med.* 440; *Tro.* 1115), and *Hellas* about western Greece by Pindar (*Pyth.* 1.75), and so there is no apparent difference in meaning between the two expressions (*Hellas/Megale Hellas*) during C5 (Cantarella (1967) 16–17).

Some scholars, again assuming an Archaic origin for the expression, have tied the concept of a western *Megale Hellas* to the spread of Pythagorean customs and philosophy.⁸ According to Calderone (1975) 45–46, a concept of *Megale Hellas* based upon the extent of Pythagoreanism would explain Strabo's inclusion of Sicily, which is not attested in other sources. Cantarella (1967) adds a further dimension: a religious connotation—a sort of “*Graeca sacra*”.

To conclude: even if it is correctly transmitted, the isolated passage in Strabo is not enough to show that *Μεγάλη Ἑλλάς* was ever a common designation of what we today call “the Western Greeks”. Furthermore, the sources we have indicate that the concept of *Megale Hellas* took shape only after the Classical period, and grew in importance from C21 onwards. In Archaic and Classical sources innumerable attestations show that *Italia* was the predominant designation of that part of the coast of South Italy which was inhabited by Greek settlers. If the designation *Μεγάλη Ἑλλάς* was coined in C6 in, e.g., Pythagorean circles, it did not catch on until much later and should be regarded as insignificant in the Archaic and Classical periods.

The Inventory below describes three Greek *poleis* situated in Kampania: Kyme, Neapolis and Pithekoussai. The region of Kampania probably took its name from the important city of Capua (cf. Polyb. 3.91.2–4, 118.3) or from the *campus*: the fertile coastal plain (cf. Diod. 12.31.1; Plin. *HN* 3.63). In Roman times, the region extended from Sinuessa in the north to the Gulf of Naples and the Sorrento peninsula in the south, but the cities of Kampania listed by Strabo 5.4.3–11 and Ptol. *Geog.* 3.1.6 are of little relevance in the present context. The name *Kampania* occurs for the first time at

Ps.-Skylax 10, where the Greek cities of Kyme, Neapolis and Pithekoussai are listed as *poleis Hellenides*, presumably reflecting a pre-Samnite situation. According to Diod. 12.31.1 (1438), the *ethnos* of the *Kampanoi* was formed in C5, but the ethnic identity of the *Campani* is more uncertain (Frederiksen (1984) 134–57; Cerchiai (1995) 187–94). Rutter attributes the C51 coins of the *Kampanoi* (Rutter, *HN*³ p. 64) to the inhabitants of Capua, arguing that the *ethnos* of the Kampanians in Diodorus (*loc. cit.*) means the people of Capua and its neighbourhood, *Kampania* only later acquiring its wider geographical connotation (Rutter (1979) 81–83).

Earlier sources attributed the two (related) Oscan *ethne* of the Ausonians and the Opikians to the areas which later constituted *Kampania* (cf. Steph. Byz. 479.15: *Νόλα, πόλις Ἀδσόνων* = Hecat. fr. 61). Whether these were one and the same people or two different *ethne* is discussed by Strabo 5.4.3, with reference to (i) Antiochos (*FGrHist* 555, fr. 7), who considered them one and the same; (ii) Arist. *Pol.* 1329^a19–20, who probably followed Antiochos; and (iii) Polyb. 34.11.5–7, who believed they were distinct. Kyme was founded in Opikia, according to Thuc. 6.4.5 (cf. also Dion. Hal. *Ant. Rom.* 1.53.3), and in Ps.-Skylax (15) the Opikians constitute one of the Samnite subgroups (for the term *Opici*, see Dubuisson (1983)). The Ausonians too were most likely a distinct entity, to be identified with the Latin *Aurunci* (Festus, *De verborum significatione* 18M; cf. Livy 2.16.8; Dion. Hal. *Ant. Rom.* 6.32.1).

Inside the areas outlined above, Greek communities begin to appear c.750–725, the earliest being Kyme and Pithekoussai in Kampania, founded from Euboia at this date.⁹ In C81 Achaians founded Sybaris (725–700) and Kroton (c.709/8),¹⁰ Spartans founded Taras (c.706), and Chalkidians Rhegion.¹¹ In C7e Lokroi Epizephyrioi was founded by Lokrians; c.660 Siris was founded, possibly by Ionians from Kolophon (no. 848); and c.630 Metapontion was founded by Achaians who responded to an invitation from Sybaris; and Thourioi was founded in the later 440s by an Athenian-led Panhellenic expedition. Such “primary”

⁹ Recent attempts to discard or downplay Euboian colonisation in the West, on the basis of argued lack of archaeological evidence (cf., e.g., Papadopoulos (2000) 135) are disregarded in this chapter. At Naxos, for instance, the influence of Euboian pottery has been amply demonstrated (Pelagatti (1981) 305–11; Lentini (1990); (1992) 11–14, 25), and evidence such as the spread of the Euboian alphabet to Etruria (Ridgway (1998a) 315–16) and the evidence of the calendars (Trümper, *Monat.* 39–43) support the literary sources for Euboian colonisation.

¹⁰ The earliest Greek finds from Sybaris and Kroton are, apparently, East Greek rather than Peloponnesian (Ridgway (2002) 137).

¹¹ For the details of the foundation dates, see the entries in the Inventory *infra*.

⁸ Ciaceri (1927) i.188–90; Mele (1981); Maddoli (1981) 11; Musti (1988) 88–89, 91 with refs. to, above all, Iambl. *VP* 29–30; 166; Cic. *De or.* 2.154, 3.139, etc.

colonies as these went on to found “secondary” colonies of their own: Lokroi founded Hipponion and Medma (in C7); Kroton founded Kaulonia (presumably in C7s) and Terina (*ante* 460); Kyme founded Neapolis (*c.*470); Sybaris founded Laos (*ante* 510) and Poseidonia (*c.*600); Pandosia was founded by Sybaris or Kroton (contemporary with the foundation of Metapontion), and Pyxous was a foundation by Mikythos, the ruler of Rhegion and Messana (*c.*471). Herakleia, the last Greek foundation in *Italia*, was founded in 433/2 as a joint enterprise by Taras and Thourioi, and replaced Siris, whose inhabitants were expelled. Finally, colonists from other parts of the western Mediterranean founded secondary colonies in *Italia*: in C7, Zankle is reported to have founded Metauros in Bruttium, and Hyele was founded by Phokaians who had left Alalia on Corsica shortly after the battle of Alalia *c.*540–535.

The dates of foundation given in the previous section are derived partly from the literary tradition, partly from archaeological investigations,¹² two types of evidence that generally produce roughly similar dates. Obviously, there is a risk of circular argument when a chronology of Greek Geometric pottery based upon the colonial dates furnished by the literary tradition is in its turn used to confirm the literary tradition (Burn (1935) 134–35; Bérard (1957) 279; Van Compernelle (1992) 776–78). This danger can only be avoided by employing a chronology of Geometric wares based on Near Eastern archaeology or on Near Eastern finds from South Italy, such as the scarab with the name of Bocchoris found at Pithekoussai (cf. most recently Hannestad (1996) and Morris (1996)). This is not the place for a detailed discussion of this problem, and three points must suffice.

(1) The study by Bérard, though dated in matters of detail, is still valid as regards its overall conclusion: that the chronological *sequence* of the foundation dates, established by archaeological investigations, is well in keeping with that established on the basis of literary traditions (Bérard (1957) 279–99, esp. 299). The recent study of the foundation chronology of Lokroi Epizephyrioi by Van Compernelle (1992) merely confirms this conclusion.

(2) The establishment of a chronology based solely upon archaeological data such as the Bocchoris scarab found in Pithekoussai and the Near Eastern contexts of Greek Geometric pottery (although these are still somewhat uncertain, cf. Hannestad (1996) 44–49) do seem to confirm the traditional chronology, and a skeleton outline of the earlier foundation dates can be established on the basis of (i)

Pithekoussai: founded 750–740 (most recent discussions in Neeft (1994) 150 n. 9 “*c.*740”; Coldstream (1995); d’Agostino (1999a) 56–58); (ii) *Kyme*: the archaeological evidence indicates Greek settlers at Kyme from *c.*750–725, thus suggesting a first settlement phase contemporary with the settlement of Pithekoussai (d’Agostino (1999a) 54); (iii) *Taras*: founded in C8l, according to the literary tradition (706 according to Eusebios; cf. Antiochos (*FGrHist* 555) fr. 13; Ephor. fr. 216; Arist. *Pol.* 1306^b27–31; cf. Van Compernelle (1992) 774). The archaeological evidence confirms the traditional foundation chronology (Lo Porto (1970) 357–58; De Juliis (1983) 429; Boschung (1994) 177); (iv) *Lokroi Epizephyrioi*: according to Strabo 6.1.7, the foundation took place a little after the foundation of Kroton (trad. 709/8) and Syracuse (trad. 734/3); according to Polyb. 12.6b.9, at the time of the First Messenian War (*c.*735–717); according to Eusebios, at the time of the Olympiad 25.1 or 26.4 (679/8 or 673/2). A foundation in the first decades of C7 is now confirmed by the archaeological evidence (Van Compernelle (1992) 779–80).

(3) The chronological divergences found in several of the literary sources rarely amount to more than *c.*25 years, for instance in the figures given for the foundation of Kroton, founded 709/8 (contemporary with the foundation of Sybaris) according to Eusebios, but contemporary with the foundation of Syracuse (734/3) according to Antiochos, a discrepancy that is hardly significant for early Archaic history (Asheri (1979) 94), and that is also acceptable in the classification of ceramic styles (Morris (1996) 58).

Another caveat is that the different literary “dates of foundation” may possibly refer to different moments in the process of colonisation of the different colonies; accordingly, a rigid chronological framework should be avoided (Gras (1986) 11–13; Morris (1996) 55–57): sites may have been colonised in phases, as were Gela (no. 17) and Siris (no. 69); foundations may have been the result of colonial processes evolving over longer periods of time, as in the case of Sicilian Megara Hyblaia (with the preliminary failed settlements at Trotilon and Thapsos), Taras (with a first settlement of Satyrion) and Lokroi (with a tradition for early settlers at Cape Zephyrion); see the respective entries *infra*. Pre-colonial Greek contacts with indigenous communities further complicate the issue: there is evidence of Greek presence in the colonial regions prior to the traditional foundation dates.¹³ The chronological framework of these early

¹³ The bibliography is too comprehensive to be cited fully here, but note Graham (1990) 45–52; de La Genière (1983) 258–61; D’Andria (1990) 282–84; Guzzo (1988) 152–65.

¹² See the details in the individual entries.

contacts may depend on a revision of the dating of the “pendent-semicircle skyphoi” (Snodgrass (1994) 5).

Alongside the “historical” accounts of the foundation of colonies, there existed traditions of heroic foundations and foundation myths that served to legitimise or ennoble the colonial foundations, by projecting the history of the Greek cities back in time into the Heroic Age of the Trojan War and traditions of the *nostoi* (Bérard (1957) 301–83), or to the more distant period of the Argonauts (ibid. 392–97) and to the exploits of Herakles, the latter obviously evidence of later, mainly Dorian colonial propaganda (Giangiulio (1983)). There are traditions connected with the foundations of Diomedes in Daunia (Musti (1984); see also introduction to the Adriatic region in this volume); the foundation of Metapontion was ascribed to Nestor (Bérard (1957) 325); one of the early foundation phases of Siris was considered to be Trojan (Ronconi (1974–75); Moscati Castelnuovo (1989) 47–56); Philoktetes and Epeios were connected with foundations of settlements such as Lagaria and Petelia in the regions of Kroton and Sybaris, and Philoktetes died at Krimisa according to the same traditions (Musti (1991);angiulio (1991a)); the Athenian Menestheus was held to be the *oikistes* of Skyllation, certainly an example of later Athenian self-assertion.¹⁴

Whether there is any direct connection between these heroic traditions and the widespread evidence of Mycenaean contacts with the West (Vagnetti (1992), (1996) 152–59) remains an open question (Leighton (1999) 184–86). However, whereas Minoan contacts are not so far documented, Mycenaean contacts with South Italy (and Sicily), sporadic from C16 to C15, increased significantly in C14–C13 with a Mycenaean presence attested, for instance, at Scoglio del Tonno (Taras), on Lipari, and at Thapsos near Syracuse (Vagnetti (1991), (1996) 141–43, 152–53, 168). The late Bronze Age maritime trading posts and the hunt for metal resources and other trade goods were pioneering activities for the later western Greek expansion. Indeed, trade must have played a paramount role in the early colonisation of the West: the development of the concept of trade, the significance of the historical trade links of Euboian and Phokaian traders, and the commercial aspect of C8–C6 colonisation have been traced in studies by Mele ((1979), (1988)).

Metal resources such as iron played an important role from early times, as already mentioned, and did so again

later, when Pithekoussai presumably acted as an intermediary in this trade (Ridgway (1992) 109–10). Timber also became an important commodity: it could be obtained from several regions, but the Sila mountains in Bruttium were a particularly important supplier (Meiggs (1982) 462–66). Commerce was at times closely associated with piracy and trade in slaves (for which see Morel (1984) 143). According to Thuc. 6.4.5, Zankle was founded by pirates from Kampanian Kyme, and according to Ephor. fr. 137a (= Strabo 6.2.2), Tyrrhenian pirates had created difficulties for early Greek commerce in the region of the straits. The importance of the trading route through the Straits of Messina has been discussed on several occasions by Vallet (most recently in Vallet (1988)) and need not detain us here, but the links across the straits between Zankle and Rhegion, between Naxos and Lokroi, and between Mylai and Metauros played a significant role as well in joining together the two coastal territories and creating a cultural and political *koine* (Vallet (1988) 172). Indeed, Rhegion and Zankle/Messana are most often treated together in regional studies.

Although there are obvious geomorphological differences between the sites of the various colonies, e.g. between Metapontion and Hyele, the traditional division of colonies into “trading colonies” (Hyele) and “agricultural colonies” or “population colonies” (Metapontion) is no longer tenable: workshops played a major role in Metapontion (see entry and Fischer-Hansen (2000) 101–2 with refs.), and Hyele did have a *chora* (see entry); even Pithekoussai has in recent years been shown to have had a large population and a *chora* (see entry). The commercial and maritime activities of the “agricultural colonies” are revealed by their location near the coast, often near rivers offering harbour facilities and access to the hinterland populated by indigenous peoples favourable to trading contacts, as well as by the lack of evidence of a monopoly over contacts with their *metropoleis*: imported Corinthian, East Greek and Attic pottery is found at the same sites.

The formation of extensive dominions *inter alia* by the foundation of secondary settlements is a central element in the Archaic history of the powerful Italiote *poleis* of Sybaris, Kroton, Lokroi and, to a lesser extent, Metapontion. Sybaris, for example, founded at least Laos and Poseidonia, and seems to have controlled an area of some 3,000 km² (Ampolo (1992) 247); according to Strabo 6.1.13, the city ruled four neighbouring *ethne* and had twenty-five *poleis hypokeoi*. One of these dependencies of Sybaris was the *Serdaioi*, whether it was an *ethnos* or a *polis hypokeos*.

¹⁴ For full discussions and lists of “Gründungsmythen”, see Prinz (1979) 138–65 and Leschhorn (1984) 360–86; for the importance of oecists in numismatic iconography, cf. e.g. Lacroix (1965) esp. 75–100 and Guarducci, *EG* ii. 660–61.

C.550–525, this community concluded a treaty of friendship “for ever” with Sybaris and its allies (ML 10), and this seems to indicate that a hegemonic league was one of the mechanisms employed by Sybaris to control its dominion. The dependencies seem to have persisted as individual political communities. To the *Serdaioi*, for instance, has been ascribed a series of C61 coins: the silver coinage, of which only eight or nine specimens are known, is on the Achaian standard: *obv.* Dionysos standing with kantharos and vine, legends ΣΕΡ/ΣΕΡΔ; *rev.* grapes. An obol has *obv.* bearded head; *rev.* legend ΣΕΡ (Rutter, *HN*³ 1717–20). The issue is connected with South Italy, because the weight standard is Achaian and the letter *san* is used for *sigma*, but the double-relief fabric differs from the Achaian incuse fabric which was normal at the time (Rutter, *HN*³ pp. 3–4; and *infra*). However, a date in C5e, i.e. after the treaty ML 10 and the fall of Sybaris, might explain the fabric.¹⁵ Most scholars now attribute the series to the *Serdaioi* of the treaty, and the location of the mint in South Italy is confirmed by a specimen from a coin hoard found in Calabria composed of otherwise exclusively South Italian issues (*IGCH* 1887; Rutter, *HN*³ p. 142). The *Serdaioi* probably resided somewhere on the Tyrrhenian coast in the hinterland of Laos and Skidros; for recent discussions, see E. Greco (1990) and Ampolo (1992) 245–53 with refs.

Strabo’s report (6.1.13) that Sybaris ruled four neighbouring *ethne* suggests that Sybaris in its heyday controlled non-Greek communities. Other Greek colonies, however, faced difficulties in their relations with the indigenous populations. The early history of Taras, for example, is characterised by conflicts with the Daunians and Messapians,¹⁶ and several armed clashes are on record (see Taras (no. 71)). In general, the literary tradition depicts the initial contacts between Greeks and indigenous populations as ranging from enmity and conflict to peaceful co-existence; and at Pithekoussai there is archaeological evidence for inter-marriage with indigenous women.¹⁷

However, the process of colonisation did have profound effects on the indigenous settlement pattern: settlements disappeared or moved to locations further inland as the

colonising process led to Greek occupation of large tracts of land, control of which was also marked by the establishment of extra-urban sanctuaries. Indigenous cities within the dominion of the larger Greek foundations developed into what can best be classified as “satellite cities”.¹⁸

The early Greek foundations seem to have developed rapidly into *poleis*, and the very process of colonisation may have been of paramount significance here (Hansen (2000) 147–48). Thus, the earliest Greek lawgivers, Charondas and Zaleukos, may have been active in the West already from C7m, and these (and later) legislators from Sicily and South Italy won a certain renown. Zaleukos of Lokroi Epizephyrioi is a shadowy figure, but he was known to Ephor. fr. 139 (= Strabo 6.1.8) and Demosthenes (24.139–41; cf. Musti (1976) 48–50, 72–81; Link (1992)); the legislation of Charondas of Katane was used also in other Chalkidian cities in Sicily (Arist. *Pol.* 1274^a23–24) and is attested at Rhegion before the tyranny of Anaxilas (Cordano (1978)). In fact, the evidence for urban planning, territorial divisions and political architecture in the early colonies has prompted the suggestion that the early development of the *polis* as an institution took place, or at least was accelerated, in the colonial foundations (cf. e.g. Snodgrass (1977) 33, (1994) 8–9; Ridgway (1992) 108–9; Polignac (1995) 118–27).

In terms of interaction, political unity was a development of C5l in *Italia*. Prior to the formation of the Italiote League in C5l, the larger *poleis* struggled with each other for influence. During C6, Lokroi and its ally Rhegion defeated Kroton at the battle of Sagra (Strabo 6.1.10); Siris, though allied to Lokroi, was sacked by an alliance of Metapontion, Kroton and Sybaris (Just. *Epit.* 20.1.10); and c.510 Sybaris itself was severely defeated by Kroton (see Sybaris (no. 70)). It is doubtful whether the alliance comprising Kroton, Metapontion and Sybaris—all three Achaian foundations—represents political unity based on shared Achaian ethnicity, since it is unknown how long the alliance existed and since such shared identity, if it did exist, did not prevent the sack of Sybaris by Kroton. C5 is characterised by a series of hegemonies by the major *poleis*: first by Kroton, later by Lokroi, and finally by Taras. Pythagoreanism has been seen as a movement linking the Greek colonies of the area, though internal unrest and *stasis* also kept them apart.

¹⁵ Select bibliography: Cahn (1978); Zancani Montuoro (1980); Guarducci (1982); Ampolo (1992) 247–53; E. Greco (1990); Arnold-Biucchi (1993).

¹⁶ See Introduction to the Adriatic 321–25.

¹⁷ For the relationships between indigenous women and the colonists, see Van Compernelle (1983), who discusses the evidence in relation to the different types of colony. Even in Syracuse, normally taken to be a foundation where the indigenous population was oppressed or expelled, there is evidence of local influence on the burial rites of the Greek colonists (Leighton (1999) 235–37); a too simplistic picture should be avoided, since the evidence is often ambiguous: de La Genière (1983) 257; Morel (1984) 124–35; Asheri (1996) esp. 88–92, 96–98.

¹⁸ De La Genière (1983) 261–69 citing evidence mainly from Calabria-Basilicata; Polignac (1995) esp. 89–127. See also the descriptions of the territories/dominions of the individual *poleis* in the Inventory below. For the indigenous peoples of eastern Apulia and Calabria, the Daunians, Peuketians and Messapians and the few Greek settlements in these territories, see the Introduction to the Adriatic.

However, in C5l federalism appeared. A league of the Achaian colonies Sybaris (no. 70.V), Kroton (no. 56) and Kaulonia (no. 55) was set up c.430–420, or at least some time before 417, reportedly in imitation of a league of the Achaian *metropoleis* (Polyb. 2.39.6; for full discussion, see De Sensi Sestito (1984a) 90–93 and (1994) 197–205; Lombardo (1987)). This league had a common seat in the sanctuary of Zeus Homarios, which has, however, not yet been identified with certainty; see De Sensi Sestito (1982b), (1984b); Osanna (1989); later, it developed into a league comprising all the Italiote Greek cities. The emergence of the Italiote League was caused by the pressure which Samnite-Oskan peoples brought to bear on the Greek *poleis*: Kyme was conquered in 421, Poseidonia c.410, and Laos and Skidros c.390.¹⁹ Samnite-Oskan invasions caused Leukanian pressure further south, with incursions into Thourian territory (Diod. 14.101.1 (r390)). It should be noted that instances of C5m federalism are attested among the indigenous peoples of Central and South Italy, for instance among the Kampanians in control of several of the Greek cities on the Tyrrhenian coast (Frederiksen (1984) 137–38) and among the Brettians during C4m (Lombardo (1996) 209–15).

The policies of Dionysios I in South Italy, his ambition to control the straits and his imperialistic designs in the Adriatic, contributed to the renewal of the Italiote League in 393 (Diod. 14.91.1), with the inclusion of Thourioi (Diod. 14.101.1) and probably also of Rhegion (cf. Diod. 14.100.1; cf. Vallet (1958) 379; Lombardo (1987) 60) and Hipponion (Lombardo (1989) 438). But in spite of this, Kaulonia and Hipponion succumbed to Dionysios' aggression, as did for a period Kroton and Rhegion, whereas the position of Lokroi, an ally of Dionysios, was strengthened (cf. Diod. 14.40, 44, 78, 87, 90, and 91.1 for the *symmachia* of 393).²⁰ The Italiote League was defeated by Dionysios at the river Eleporos in 389, and although some of the major *poleis* preserved their independence, the smaller *poleis* of Kaulonia and Hipponion were razed to the ground (Diod. 14.104–7 (r389/8)). However, continued Dionysian aggression was interspersed with Carthaginian involvement on the side of the Italiote cities, and a refoundation of the Italiote League in 383 may be implied by Diod. 15.15.2, with a restoration of Hipponion shortly afterwards (Diod. 15.24.1; cf. Stylianou (1998) 203). After the conquest of Kroton by Dionysios in 379 (Dion. Hal. *Ant. Rom.* 20.7.3), Taras took over the leader-

ship of the Italiote League, though the seat of the league was placed in Herakleia (De Sensi Sestito (1994) 211–16). Taras, under the leadership of Archytas, may have entered into an alliance with Syracuse, securing its own influence over Herakleia and Metapontion and its dominant role in the Italiote League (Brauer (1986) 43–59).

In C4m the Leukanians conquered several Italiote cities and large tracts of the region (Diod. 14.101–5, 15.5; Dion. Hal. *Ant. Rom.* 20.7.3), but recent research has revealed a picture of co-existence between Leukanians and Greeks, as evidenced for instance by the C4 settlement of Laos,²¹ and Oskans were peacefully admitted to Neapolis, where they shared citizenship with the Greek communities (cf. Frederiksen (1984) 139–40).

The Inventory below describes twenty-three *poleis* situated in Kampania (Kyme, Neapolis and Pithekoussai) and in Italia as outlined above. In addition, there existed in the area under consideration the following Archaic/Classical settlements/communities which cannot be shown to have been *poleis*.²²

1. Pre-Hellenistic Settlements not Attested as Poleis

AMI (...) (*AMI* (...)) Some scholars read the second letter as a sigma). This otherwise unknown community is attested by five C6l incuse coins (four staters and one drachm) on the Achaian standard. The type is the Sybarite bull looking back, with, on the staters only, a locust in full above, legends written retrograde on *obv.* and *rev.*: *AMI* (or *AEI*?); Parise (1972) 104; Gorini (1975) 13, 115; Parise (1984); Rutter, *HN*³ 1356–7. The type suggests that *Ami* (...) was, prior to 510, a community within Sybaris' dominion (see Sybaris (no. 70.I)). However, only one coin has a certain provenance: a specimen in *IGCH* 1889, found at "Cittanuova 45 km north-east of Reggio"; for the coinage as testimony of a Sybarite dominion, see Parise (1984) 253, (1988) 307–8; and Guzzo (1981) 49. The legends have been seen as tenuous evidence for a site, "Amina" or "Aminaia", situated in Poseidonian–Sybarite territory, and reflecting the presence of the *Aminaioi*, a people of Thessalian origin mentioned by

²¹ See the entry for Laos in the Inventory below, and cf. Tréziny (1983) for the difficulty of distinguishing Greek and non-Greek sites.

²² Brentesion is treated in the Inventory of the Adriatic (no. 78), and the following nine Messapian and Daunian settlements are found in the Introduction to the Adriatic chapter: Egnatia, Elpiai, Hydrous, Hyria, Hyrion, Kallipolis and Rhodiai, and the two unnamed foundations planned by Dionysios the Younger. For introductory remarks on the Adriatic region and the types of non-*polis* sites there, see also the Introduction to the Sicilian Inventory.

¹⁹ For a survey, see Frederiksen (1984) 136–42; cf. also Asheri (1996) 90–91 for the concept of "decolonisation", and Purcell (1994) 395 for co-existence. Cf. Larsen (1968) 95–97.

²⁰ For a full discussion, see De Sensi Sestito (1984a) 103–21 and (1994) 205–11.

Arist. fr. 505); cf. Bérard (1957) 397 n. 1 and Ampolo (1992) 237; for a full discussion of the coinage and the various interpretations of it, see Parra (1984). *Barr.* 46, A.

Dikaiarcheia (*Δικαιάρχεια*) Polyb. 3.91.4 (*polis* by implication; *Δικαιαρχίται*); Strabo 5.4.6 (*πόλις*, to which is added: *ἦν δὲ πρότερον μὲν ἐπίνειον Κυμαίων*; later it became an *emporion megiston*, *ibid.*; cf. Diod. 5.13.2). It was originally a secondary settlement (*epineion*) of Kyme (no. 57; Strabo 5.4.6), but later became a Samian foundation (Steph. Byz. 533.19; *κτίσμα Σαμίων ἦτις καὶ Δικαιάρχεια*; Euseb. (Hieron. 104 Helm *ad* Ol. LXII 2): *Samii Dicaearchian condiderunt quam nunc Puteolos vocant*; cf. Hegesandros, *FHG* IV p. 421, fr. 44 *apud* Ath. 14.656C), possibly founded by fugitives from Polykrates, i.e. c.535–524 (Mitchell (1975) 87 n. 57); the name “Dikaiarcheia” is often taken to be that of the Samian foundation (Bérard (1957) 55). In 421, Dikaiarcheia presumably, like Kyme, fell under Samnite–Oskan control (Diod. 12.76.4; Livy 4.44.2). The site of Dikaiarcheia is a small knoll overlooking the bay of Baiae; it is well protected on three sides and has a sheltered harbour below in the Gulf of Naples. A few Greek sherds are tenuous evidence of Greek presence before the establishment of the Samian foundation c.531–528 (De Franciscis (1971); Zevi (1993b)). There are no structural remains from Greek Dikaiarcheia, though some problematical evidence suggests C5 terracing and the existence of a circuit wall; the Augustan temple may have had a pre-Roman Greek phase (C5 or C3); see De Franciscis (1971). *Barr.* 44, AC.

Kerilloi (*Κηρίλλοι*) Strabo 6.1.4. According to Strabo, near Laos (no. 58); possibly a harbour controlled by Laos, see E. Greco (1986) 128. It has been identified with modern Cirilla (Roman Cerilli). A Sybarite origin is implied by von Stauffenberg (1963) 69. *Barr.* 46, H, but an earlier origin could be argued.

Krimissa (*Κρίμισσα*) Lycoph. *Alex.* 911 (*βραχύπολις*); schol. Lycoph. *Alex.* 911 (*πόλις*); Strabo 6.1.3; Steph. Byz. 385.1 (*πόλις*); cf. Giangiulio (1987) and (1991a) for sources. Strabo mentions a *palaia Krimissa* founded by Philoktetes, but goes on to cite Apollodoros for the information that Philoktetes colonised the promontory (*ἄκρα*) of Krimissa. According to Steph. Byz. 385.1–2, Krimissa was a *polis Italias* near Kroton (no. 56) and Thourioi (no. 74); the precise location, however, is unknown. A conjoining of the *akra* (Apollodoros *apud* Strabo) and the “sacred Krimissa” mentioned in connection with the foundation of Kroton by Myskellos (Diod. 8.17) has prompted the identification of

Krimissa with the sanctuary of Apollo Alaios at the promontory Cirò (Punta Alice). However, the city proper may rather have been located in the vicinity of the sanctuary (at modern Cirò Marina?; cf. Giangiulio (1987)). A bronze plaque dated c.475 and “found near Krimissa” is dated by reference to an eponymous *demiourgos* (Arena (1996) no. 53 = LSAG 261.30), but it is unclear in which community he held office. *Barr.* 46, AC.

Krotalla (*Κρόταλλα*) Hecat. fr. 85; Steph. Byz. 386.18 (*πόλις*); unknown from other sources. Not in *Barr.*

Lagaria (*Λαγαρία*) Strabo 6.1.14 (*φρούριον*). According to legend, Lagaria was founded by Phokians led by the hero Epeios (Strabo 6.1.14). It was located “after” (*μετά*) Thourioi (no. 74), according to Strabo (*loc. cit.*; cf. Bérard (1957) 336–39). The site of Lagaria has not been identified with any certainty, but various suggestions include Amendolara (*supra*; de La Genière (1990), (1991b)) and S. Maria d’Anglona, in the territory of Siris (no. 69) (Osanna (1992) 94). *Barr.* 46, AC.

Lametinoi (*Λαμητῖνοι*) Hecat. fr. 80 (toponym only); Steph. Byz. 409.9 (*πόλις*). According to Steph. Byz. 409.9–11 as emended by Meineke, Lametinoi took its name from the river Lametos near Kroton (no. 56); the precise location is uncertain, however, and various locations have been suggested in the Lamentine Plain (the Lamentine Gulf was opposite that of Skyllation: Arist. *Pol.* 1329^b12–13; Strabo 6.1.4; cf. Spadea (1990b)). An inscribed bronze plaque (*IGSII* no. 21, “non ante IV.um saec. a Ch. n.”) found near S. Eufemia Lamezia, is normally attributed to Terina (no. 73; see *IGSII* and Spadea (1979); see also the entry for Terina). *Barr.* 46, A.

Makalla (*Μάκαλλα*) Arist. *Mir. ausc.* 107; Lycoph. *Alex.* 927; Steph. Byz. 427.4 (*πόλις*); *Etym. Magn.* 574.19 (*πόλις*); schol. Thuc. 1.12.2, Hude (*πόλις*); cf. Giangiulio (1991b) 293. A legendary foundation by Philoktetes, Makalla has not been identified with any certainty, but it was probably located, with the other Philoktetan sites, somewhere between Kroton (no. 56) and Sybaris (no. 70) (Bérard (1957) 344–46; Giangiulio (1991b) with refs.). Musti (1991) has argued that the (mainly) C4(?) traditions of heroic foundations in Magna Graecia, e.g. those of Philoktetes, most often refer to partly Hellenised indigenous sites (cf. Lagaria, *supra*). *Barr.* 46, AC.

Molpa, see **Palinouros** (*infra*).

Palinouros (*Παλίνουρος*) and **Molpa** (*Μόλ(πα)*) Palinouros is known primarily as the location of the death of

Palinouros, the pilot of Aeneas (Strabo 6.1.1). Dion. Hal. *Ant. Rom.* 1.53.2 refers to a *limen ho Palinouros*, but this need not imply an urban settlement, and the tradition is, in any case, late and mythical. At the indigenous settlement investigated at Tempa della Guardia mortuary evidence has revealed some Hellenisation and contacts with the Greek world. The settlement was abandoned in C5e, but a sanctuary continued in use until C3 and finds of coins of Hyele (no. 64) suggest that the area became part of the territory of Hyele (E. Greco (1975) 100–8). A coinage on the Achaian standard and in the incuse fabric, inscribed with the retrograde abbreviations ΠΑΑ and ΜΟΑ on *obv.* and *rev.* respectively (*infra*) has been attributed to Pal(inouros)—either to the indigenous settlement at Tempa della Guardia or to an as yet unidentified Greek settlement on the promontory, and even to the promontory as such (E. Greco (1975) 94–99, (1987*b*); Mafettone (1994) esp. 284–87)—and to a city Mol(pa, -pe), identified with Città di Molpa, a rocky plateau south of the river Lambro (ancient river Melpes, cf. Plin. *HN* 3.72), to the south of the Palinouros peninsula. On the plateau a few indigenous habitation remains have been found, but there are no Greek remains. The ΠΑΑ–ΜΟΑ coins are known only in three specimens: *obv.* and *rev.* type is a wild boar, the two known staters have legends ΠΑΑ–ΜΟΑ (*supra*); the single known drachm has the legend ΠΑΑ on *obv.* in exergue, while the *rev.* is anepigraphic (Gorini (1975) 13, 117–18; Giacosa (1994); Rutter, *HN*³ 1105–6). On the basis of fabric and standard, the coins are normally connected with the coinage of Sybaris, and the two communities are thought to have been part of Sybaris' dominion (Parise (1988) 308–9; cf. Sybaris (no. 70.I)), though a dependence upon Siris has been argued by other scholars on account of the Ionic style of the wild boar (Neutsch (1980) 164; cf. Parise (1972) 106 n. 57; E. Greco (1975) 96–97). Palinouros: *Barr.* 46, AC; Molpa: *Barr.* 46, A.

Parthenope (Παρθενόπη) Strabo 14.2.10; Steph. Byz. 504.7 (πόλις). According to legend as transmitted by Strabo (14.2.10) and Steph. Byz. 504.6–7, Parthenope was a Rhodian foundation (Bérard (1957) 63–64). The more consistent tradition is that Parthenope was either an *apoikia* or, like Dikaiarcheia (*supra*), an *epineion* of Kyme (no. 57), and that the site was later destroyed by its *metropolis* (Lutatius *apud* Serv. *ad* Verg. *G.* 4.563 (= fr. 7, Peter); Bérard (1957) 56; Raviola (1990)). Parthenope became the district of *Palaiopolis* when Kyme founded neighbouring Neapolis (no. 63) in C5, and by C4s the two distinct, neighbouring urban nuclei—(Parthenope =) Palaiopolis and Neapolis—

formed one political community (Livy 8.22.5) by the name of Neapolis, which suggests that Neapolis absorbed the earlier site (see the entry for Neapolis, *infra*). However, the sources do seem to suggest an early, autonomous settlement of Parthenope (Raviola (1990) 59–60). The settlement was maritime and the location on a promontory just south of ancient Neapolis, present-day Pizzofalcone on the Gulf of Naples, offered no *chora* or only a very limited one. The settlement site (c.25 ha) was situated on the extreme spur, with steep slopes on three sides and with a saddle joining it to its hinterland and its cemetery. The tombs are mainly cist-slab tombs dated 675–550. Of special interest is the presence of Italo-Corinthian vases of a type known from Kyme and Pithekoussai (Frederiksen (1984) 85–87, 90–95; De Caro (1974), (1985)). Part of a C6 circuit wall (i.e. of the pre-Neapolis phase) located between the hill of Parthenope and the coast is taken as evidence of a fortified harbour or perhaps even of a protected harbour settlement (Napoli (1967) 380–83). The cult of the eponymous siren Parthenope (Dionys. *Per.* 357) was of early origin; the ancient sources locate it by the sea near the river Sebeto (see Canciani (1994)). The cult was later taken over by Neapolis, where the siren Parthenope is represented on C5s coins (Rutter (1979) 44–45; for games held in her honour, cf. Strabo 5.4.7). *Barr.* 44, AC.

Petelia (Πετηλία) Strabo 6.1.3 (μητρόπολις τῶν Λευκανῶν; cf. Lasserre *ad loc.*); *BCH* 45 (1921) col. iv.86; Steph. Byz. 519.15 (πόλις). One of the legendary foundations of Philoktetes situated somewhere between Kroton (no. 56) and Sybaris (no. 70) and the *metropolis* of the Leukanians, according to Strabo 6.1.3. The city is now identified with modern Strongoli (for the site: Osanna (1992) 198). A c.475 inscription from this site carries a text dated by reference to an eponymous *demiourgos* (*SEG* 4 74; *LSAG* 261.28; Arena (1996) no. 51); since there is limited evidence for independent communities in this region, the text suggests a close relationship with Kroton (Giangiulio (1989) 44–45). The sources for the mythical foundation of Petelia are late (Bérard (1957) 344; Intrieri (1989)), and the site may have had a primarily Leukanian C4 history. *Barr.* 46, C.

Plateeis (Πλατεεῖς) In Ps.-Skylax 12, the chapter on Leukania, the sixth toponym listed after the heading πόλις ἐστὶν αὐδὲ ἰς Πλατεεῖς. The text may be corrupt (Müller, *ad loc.*; Bérard (1957) 148 n. 4); however,angiulio (1996) finds confirmation of a settlement with the name of Plateeis in the episode recorded in Iambl. *VP* 261 of a flight of a group of *epeboi* εἰς Πλατείας (cf.angiulio (1996) 39). Not in *Barr.*

Skidros (Σκίδρος) Hdt. 6.21.1; Steph. Byz. 575.1 (πόλις); Steph. Byz. 575.1–2 cites the C4s–C3e historian Lykos of Rhegion for the ethnic Σκιδρανός (= *FGrHist* 570, fr. 2). According to Hdt. 6.21.1, Sybarite refugees settled at Skidros (and Laos) after 510. The location of Skidros is unknown, but it was in the dominion of Sybaris (no. 70.I), probably on the Tyrrhenian coast in the vicinity of Pyxous and Laos. Various identifications have been suggested, principally Belvedere Marittimo, originally put forward by Bérard ((1957) 146–47); however, the evidence is tenuous (Luppino (1985)). Other propositions (such as San Nicola Arcella, a small harbour c.3 km north of Laos (no. 58)) are discussed and rejected by Di Vasto (1992). E. Greco (1992a) 473–77 suggests Sapri near Pyxous, a location tentatively followed by *Barr.* 46. Skidros may have been either an indigenous settlement with settlers from Sybaris after 510 or a town or a military installation (cf. Bérard (1957) 146) with mainly Greek inhabitants. *Barr.* 46, A.

Skyllation (Σκυλλήτιον, Σκυλάκιον) Diod. 13.3.5 (τ415); Strabo 6.1.10 (πόλις); Ptol. *Geog.* 3.1.10 (πόλις); Steph. Byz. 579.7 (πόλις); the curious description of Skyllation as a πόλις Σικελίας by Steph. Byz., though he cites Eudoxos of Knidos (fr. 320, Lasserre), is attributed to Steph. Byz. himself by Lasserre *ad loc.* Legend attributed the foundation of Skyllation to Athenians returning from Troy (Strabo 6.1.10; cf. Plin. *HN* 3.95 and Solin. 2.10). Historically, Skyllation was probably founded in the Archaic period, on the route of Krotoniate interests on the Ionian side of the peninsula: black-figured sherds from the site (Spadea (1989) 70 fig. 1) and the tradition of a heroic foundation may reflect a history going back into the Archaic period. In the Classical period, it was a Krotoniate possession, but was handed over to Lokroi (no. 59) by Dionysios I (Strabo 6.1.10). A survey of the site is found in Arslan (1969–70): archaeological evidence for Greek Skyllation is very scarce, and there are no structural remains. Sporadic finds of Attic red-figured sherds indicate a settlement of c.16 ha (Spadea (1989) 69–71). A cult of Athena Skyllatia has been conjectured on the basis of the perhaps corrupt Athena Skyletria in the *Alexandra* of Lykophron (852–55). The name of *Scolacium Minervium* assumed by the Roman foundation of Scolacium also seems to confirm an earlier Greek cult of Athena Skyllatia (Giannelli (1963) 176–78; architectural terracotta: Orlandini (1977)). A series of anepigraphic bronze coins of C4s has, on the basis of its *rev.* type and provenance, been attributed to Skyllation: *obv.* young male head; *rev.* Skylla swimming left, rarely Σ (or Μ) (Visonà (1990); Rutter, *HN*³ 2565); *SNG Cop. Italy* 1992–93). *Barr.* 46, C.

SO (. . .) (ΣΟ (. . .)) This Archaic community is known only from a rare C61 silver coinage struck on the Euboic standard, but employing the Achaian incuse fabric. The type is the Sybarite bull looking back, with legend ΣΟ retrograde on *obv.* (Gorini (1975) 12, 115–16; Parise (1972) 105 n. 55 for specimens, one with the known provenance of Roggliano; Rutter, *HN*³ 1728). The issue has been connected with a hypothetical Archaic site “Sontia”, thought of as the main city of the Leukanian Sontini (Plin. *HN* 3.98). The coinage may attest a settlement within the dominion of Sybaris (no. 70.I; cf. *AMI* (. . .), *supra*), but the weight standard employed points to other interpretations, such as an issue struck with special regard to Sybarite, Etruscan or Rhegian border trade (E. Greco (1990) 43 n. 19; Parise (1988) 308). Not in *Barr.*, but cf. *Barr.* 45 Sontini, R.

2. Unidentified Settlements

Amendolara A settlement on the hill of S. Nicola halfway between Sybaris (no. 70) and Siris (no. 69). The indigenous site was strongly Hellenised by C7–C6, as attested by material finds, sanctuary (?), habitation structures and urban planning; it may have been a dependent settlement of Sybaris and it was apparently destroyed along with Sybaris in 510. Amendolara has been tentatively identified with Lagaria (*supra*; cf. de La Genière (1984); Osanna (1992) 132–34, 163–64). *Barr.* 46, A.

Incoronata A settlement on the hill of Incoronata in southern Basilicata, above the river Basento, c.7 km west of Metapontion (no. 61), on the border between Sirite and Metapontine territory. Habitation and other structures, as well as rich finds of Greek ceramics, point to a Greek settlement of some importance from c.700. Earlier finds attest contacts with the Greek world from c.750. The settlement phase came to an end c.630, probably as a result of the foundation of Metapontion. The site is normally taken to be an unknown “emporion” on the confines of Greek colonial territory (that of Siris (no. 69)) and the indigenous hinterland. Also, Incoronata has been tentatively identified with settlements known from the written sources, such as Lagaria (*supra*). Greek graffiti and stylistic affinities of the ceramics point to an East Greek origin of the settlers. See Orlandini (1986b); De Siena (1990); Lombardo and Giannotta (1990). *Barr.* 45, A.

Some of these settlements/communities may indeed have been *poleis*: e.g. Skyllation may have struck coins. On the other hand, the ethnic identity of the communities listed is

not always obvious. On the status of the communities which were not *poleis* we are poorly informed.

II. The *Poleis*

52. Herakleia (Herakleios) Map 45. Lat. 40.15, long. 16.40. Size of territory: 4. Type: A. The city may initially have been called by another name (Antiochos (*FGrHist* 555) fr. 11), but the only known toponym is *Ἡράκλεια*, ἡ (Antiochos (*FGrHist*) fr. 11 *apud* Strabo 6.1.14; *IG* XIV 645.II.2 (C41)); or *Ἡρακλέα* (*IG* XIV 645 II.32 (C41)); Ps.-Skylax 14 has *Ἡράκλειον*. The city-ethnic is *Ἡράκλειος* (C4 coins, *infra*; *IG* XIV 645.I.11 (C41)), also spelled *Ἡράκληιος* (C4 coins, *infra*). Only after the Classical period does *Ἡρακλεώτης* appear (*BE* (1964) no. 247 (C1); Diod. 13.3.4 (r415); Strabo 6.1.14), but *Ἡράκλειος* is none the less often qualified by *ἀπ' Ἰταλίας* to distinguish it from the ethnics of other cities of the same name (*CID* II 6.B.2 (c.358); *BCH* 23 (1899) 501 nos. 16–17 (both C4)).

Herakleia is called a *polis* in the urban sense at *IG* XIV 645.I.64 (C41) and implicitly at Ps.-Skylax 14, where Herakleion is the first toponym listed after the heading *πόλεις εἰσὶν αἰδε* (cf. Diod. 12.36.4 (r433/2)); it is called a *polis* in the political sense at *IG* XIV 645.I.2, I.95 (C41), etc. *Damosis* found at *IG* XIV 645.I.119 (C41). The internal collective use of the city-ethnic is found on C4 coins (*infra*) and at *IG* XIV 645.I.11 (C41); the external collective use is found in *CID* II 6.B.2 (c.358) and Diod. 13.3.4 (r415); the external individual use is found in *BCH* 23 (1899) 501–2 nos. 16–17 (C4) and *BCH* 63 (1939–41) 150 (C4). *Patris* is found in *Anthologia Lyrica Graeca* 1 p. 11, Diehl.

Herakleia was a joint foundation of Taras (no. 71) and Thourioi (no. 74): after a war for influence in the Siritis (Antiochos (*FGrHist*) fr. 11; cf. *IvO* 254–56 (c.440) and Diod. 12.23.2 (r444)) these two cities made an agreement to found a joint colony (Antiochos *loc. cit.* = *Staatsverträge* 158). According to Antiochos (*loc. cit.*), however, the city was founded in the name of Taras (*τὴν ἀποικίαν κριθῆναι Ταραντίνων*), and confirmation of Tarantine predominance may be seen in the fact that Herakleia's eponymous official was an ephor (*IG* XIV 645.I.1 (C41); *SEG* 30 1162–70 (C41–C3e); cf. also *IG* XIV 645.I.146 (C41) for the term *ῥῆτραί* = laws). Diod. 12.36.4 dates the foundation to 433/2 and treats it as a purely Tarantine enterprise (as does Strabo 6.1.14; cf. 6.3.4 (r330s), where Herakleia is described as “in Tarantine territory” and a war between Taras and the Messapians *περὶ*

Ἡρακλείας is mentioned). According to Diodorus (*loc. cit.*), the city was founded at the site of Siris (no. 69), whose inhabitants were deported. According to Antiochos (*FGrHist* 555) fr. 11, “Herakleia” was not the original name: the city was thus named only after having changed its location (*Ἡράκλειαν δ' ὕστερον κληθῆναι, μεταβαλοῦσαν καὶ τοῦνομα καὶ τὸν τόπον*), and a combination of Diodorus and Antiochos would suggest that the city was originally founded as Siris at the site of Siris, but later relocated and then named Herakleia. Such a reconstruction is not, however, supported by the archaeological evidence, which clearly shows Herakleia to have occupied the site of Siris (*infra*). According to Strabo 6.1.14, Siris served as the *epineion* of Herakleia, but the reference is not to the historical Siris but to the legendary *polis Troike* of the same name.

In the *chora*, traces of land division have been examined by Guy (1995). Sacred land belonging to Dionysos and Athena Polias is attested by *IG* XVI 645.I, II (C41) respectively. These *Tabulae Heracleenses* (C41) deal with the recovery and the measuring of the fields belonging to the two divinities, probably from the time of the foundation in 433/2 (Sartori (1967) 37–76). To the north along the river Cavone (ancient Akalandros) the territory of Herakleia bordered upon Metapontine territory, the western border being constituted by the natural strongpoint of the hills of Anglona with the settlement of Santa Maria d'Anglona. This originally indigenous site with a history of C7–C6 Hellenisation (see Siris (no. 69)) has revealed sporadic C51 settlement remains and a C4 sanctuary of Demeter and Artemis (Rüdiger (1969); Osanna (1992) 98, 109–10 no. 10). A city (*polis*) of Pandosia is mentioned by Plut. *Pyrrh.* 16.5 in connection with Pyrrhos' encampment near Herakleia in 280 and at *IG* XIV 645.12, 54, 64, etc.). This Pandosia is now commonly identified with the settlement of Anglona (Sartori (1967) 28 n. 52, 95; E. Greco (1992b) 34, 37; *Barr.* 45). Other C5–C4 sanctuaries are known in the *chora* (Bini (1989); Osanna (1992) 97–105). Farmsteads seem to have been concentrated mainly along the valley of the river Sinni (ancient Siris) and to a lesser degree in the valley of the river Agri. In C4e a line of border fortifications was laid out along south-western hills bordering upon Leukanian territory. Harbour settlements near the estuary of the river Sinni are inferred from cemeteries. To the south the territory of Herakleia was delimited by rural sites in the valley of the Torrente S. Nicola. In total the territory comprised about 350 km² (overall view: Osanna (1992) 97–114).

Herakleia was a member of the Italiote League (*Staatsverträge* 230), and in C4 the city became the seat of

the League, which had previously been centred on Kroton (no. 56; Polyb. 2.39.5–6). Alexander the Molossian transferred the seat to Thourioi (no. 74) (Strabo 6.3.4); he also reconquered the city from the Leukanians, who must then have taken it (Livy 8.24.4 (r326)).

Several citizens of Herakleia were appointed *proxenoi* by Delphi (no. 177) in C4: *BCH* 23 (1899) 501 no. 16, 502 no. 17, and *BCH* 63 (1939–41) 150; the latter two were appointed *theorodokoi* as well.

A system of civic subdivisions, involving two different kinds of groupings, is attested for C4l by *IG* XIV 645; see further Jones, *POAG* 162–64 with refs. A tyranny at Herakleia is mentioned by Phainias fr. 16, Wehrli, but its historicity is doubtful since the story associated with it is located in Metapontion (no. 61) by other sources (Berve (1967) 610–11).

IG XIV 645.1.49–50 (C4l) refers to legal proceedings initiated by the *δρισταί* against private citizens who had encroached upon sacred land. The inscription (e.g. at 1.55) distinguishes between *ηιαρά* and *Φιδία* land. The following officials are attested: an eponymous *ephoros* (*IG* XIV 645.1.1 (C4l); *SEG* 30 1162–70 (C4l–C3e)); an annual board of two *πολιανόμοι* (*IG* XIV 645.1.96–97, 1.104, 1.164–65 (C4l)); an annual board of *σιταγέρται* in charge of a public granary (*IG* XIV 645.1.102 (C4l)); two boards of *δρισταί* (*IG* XIV 645.1.2 (C4l)) presumably elected (*hairēthentes*: *IG* XIV 645.1.9 (C4l)) *ad hoc*; a *grammateus* (*IG* XIV 645.1.188 (C4l)). The assembly = *ἀλία*, is mentioned at *IG* XIV 645.1.12, 11.9–10 (C4l), and qualified as *κατάκλητος* “specially summoned” (Sartori (1953) 96; Ghinatti (1996) 87). The work carried out by the *δρισταί* and recorded by *IG* XIV 645 (C4l) was decreed by the *katakletos alia* (1.12). Two month names (*Ἀπελλαῖος*, *Πάναμος*) are attested by *IG* XIV 645.1.2, 101 (C4l). The onomastics of *IG* XIV 645 indicate that non-Greeks had been absorbed into the citizenry (Lomas (2000) 178–79).

The city was situated on the low and narrow east–west-oriented plateau (modern Policoro), between the estuaries of the rivers Akiris and Siris, the site of the C8 foundation of Siris (no. 69). The evidence suggests some measure of occupation of the Policoro plateau from the Siris phase to the C5 foundation of Herakleia (Hänsel (1973) 491; Adamesteanu (1985a) 63).

Herakleia occupied two main areas of habitation: an upper city and a lower plateau to the south, divided from the upper city by a depression occupied already from the Archaic period by sanctuaries. A C5 ashlar circuit wall has been revealed on the south and south-east side of the “acropolis”; on the northern side of the plateau, and sporad-

ically along its southern side, implying a primary habitation of the plateau. A subsequent phase comprising the lower city was previously seen as a result of the growing importance of Herakleia in C4e as head of the Italiote League (Adamesteanu (1985b) 98). Recently an overall, contemporary 433/2 occupation of the whole site has been argued, comprising an urban area of c.140 ha (Giardino (1998) 192–93). Habitation on the central part of the upper plateau was laid out on both sides of the east–west *plateia* which crossed the middle of the plateau. The area has been interpreted as a *kerameikos* with workshops inserted into the domestic structures, and in use from C5 to early third century AD. The interpretation of the urban layout of the lower city is based upon aerial photography; this has revealed a plan of at least eight *plateia*; although the orientation is generally east–west, it is different from that of the upper city. The lower city is protected on its southern, eastern and western sides by C4–C3 ashlar circuit walls, strengthened with towers and an outer ditch. The slope and valley between the upper and lower plateau were reserved for sanctuaries and areas of public use, such as the agora, lying outside the urban plans of the upper and lower city (Neutsch (1967) 110–50; Hänsel (1973); Adamesteanu (1985b); Giardini (1992), (1998)). Cult had continued uninterrupted in the sanctuary of Demeter from the Siris phase through C5 to C4, when structures were laid out on a system of terraces, an architectural sophistication reflecting the status of Herakleia as head of the Italiote League (Pianu (1989); for the cult: Neutsch (1967) 134–36, (1980) 158–65; Sartori (1980); Hinz (1998) 187–93). The sanctuary housed also the cults of Artemis Soteira (Neutsch (1967) 134), and Artemis Bendis was venerated in her role as divinity of *asylia* (Pianu (1989) 108; Curti (1989) 28–29). Other votive material indicates a cult of Athena, attested also by the coin types (*infra*); Athena Polias is attested at *IG* XIV 645.11.5 (C4l). The central area of the valley was occupied by the sanctuary of the “Archaic Temple”, of uncertain cult, which was enlarged in C5–C3 to comprise various religious buildings, treasuries, a *hestiaterion*(?), as well as a vast public space interpreted as the agora (Pianu (1991)). The sacred lands of Athena and Dionysos attested by the *Tabulae* probably occupied the area north of the city, since this area has been shown to have been unoccupied. The cemeteries were located to the east, south and west of the city; rites were mainly inhumation in cist-slab tombs, and some graves are rich in tomb gifts reflecting the city’s ceramic production (Degrassi (1967); *Da Leukania a Lucania* 151–97). Cults of Hestia and Aphrodite are attested by *IG* XIV 646 (C4–C3).

Herakleia minted silver coins from the time of its foundation on the Achaian–Thourian standard, but with the Tarantine system of denominations (Van Keuren (1994)). The first series, c.432–420, were diobols: *obv.* head of Herakles, or Athena in Attic helmet; *rev.* lion, legend *HE* (*SNG Cop. Italy* 1098–1100), or Herakles strangling lion, legend: *HE*, *hEPAKAEIΩN*, *hHPAKAEIΩN* (Van Keuren (1994) nos. 23–40; Rutter, *HN*³ 1358–60). Staters were issued c.430–400(?): *obv.* head of Athena, helmet decorated with olive wreath; *rev.* Herakles seated on a rock pouring a libation, legend *HPAKAHIΩN*, sometimes retrograde (Van Keuren (1994) no. 1; Rutter, *HN*³ 1362). Later series of staters and diobols c.420–C4l have types: *obv.* head of Athena wearing Attic helmet, decorated with hippocamp or Skylla, on one die the legend *AΘANΑΣ*; *rev.* Herakles standing or kneeling, fighting the Nemean lion (Rutter, *HN*³ 1363ff; *SNG Cop. Italy* 1101–4, 1115–32). The dies of some issues are signed *APIΣΤΟΧΕΝΟΣ*, a die-engraver also known from Metapontion (Rutter, *HN*³ 1373). From c.334 a new issue of diobols and staters, possibly related to Alexander the Molossian (Van Keuren (1994) 28–29, 32), have *rev.* Herakles standing, holding club and lion skin (Rutter, *HN*³ 1381, 1383; *SNG Cop. Italy* 1105–14). The types with Herakles are obviously connected with his cult in a city named after him, and on the reverse of the early staters he may be pouring a libation in the role of *oikistes* (Rutter (1997) 47). A single issue of gold (quarter-stater) of C3e has been attributed to Herakleia (Van Keuren (1994) no. 124; Rutter, *HN*³ 1421); bronze coinage was introduced in C4 (Rutter, *HN*³ 1436ff; *SNG Cop. Italy* 1133–43). Herakleian and Tarantine C4l–C3 silver fractions have similar types and suggest federal production.

A communal donation towards the rebuilding of the Delphic temple is recorded by *CID* II 6.B.2 (c.358).

53. Hipponion (Hipponieus) Map 46. Lat. 38.40, long. 16.05. Size of territory: 3. Type: [A]. The toponym is *Εἰπώνιον*, τό (Archestratos fr. 35.8, Olson and Sens). The corresponding city-ethnic is found as *Ἐιπωνιεύς* in *SEG* 11 1211 (525–500), and C4 coins (*infra*) use the form *Εἰπωνιεύς* (abbreviated as *FEIII* on the earliest C4 coins: *RE* viii.A. 2005; Lombardo (1989) 452); Ps.-Skylax 12 and Douris (*FGrHist* 76) fr. 19 have *Ἴππώνιον* for the toponym (*Ἴππώνειον* is found at App. *B Civ.* 5.91). The corresponding city-ethnic *Ἴππωνιεύς* is found at Dion. Hal. *Ant. Rom.* 20.7.3 (r388) and *F.Delphes* III.1 179 (C4l–C3e); at Thuc. 5.5.3 the MSS have *Ἴτωναίᾶς*, which is commonly and probably correctly emended to *Ἴππωνάᾶς* or *Ἴππωνιάᾶς* (cf.

Hornblower (1996) 434–35; Lombardo (1989) 452); but Steph. Byz. 342.10 does mention an *Ἴτῶνη . . . Ἰταλίας* (which may, however, be identical with Hipponion: *RE* viii.A. 2004–5; *contra* Lombardo (1989) 452). Finally, Diod. 15.24.1 (r379) has *Ἴππωνιάτης*, and *Ἴππωνεῖτης* is found in *SEG* 2 635 (Hell.).

Hipponion is one of ten toponyms listed at Ps.-Skylax 12 after the heading *πόλεις εἰσὶν Ἑλληνίδες αἰθε*, where *polis* is used in the urban sense (cf. Douris (*FGrHist* 76) fr. 19 and Diod. 14.107.2 (r388)); Thuc. 5.5.3 calls the Hipponieis *apoikoi* of the Lokrians. The internal collective use of the city-ethnic is attested on C4 coins (*infra*); the external collective use is attested by *SEG* 11 1211 (525–500), probably by Thuc. 5.5.3 (*supra*) and by Dion. Hal. *Ant. Rom.* 20.7.3 (r388) and Diod. 15.24.1 (r379); the external individual use is found in *F.Delphes* III.1 176 (C4l–C3e), which describes a man as *Λοκρὸς ἐκ τῶν Ἐπι[ζε]φυρίων Ἴππωνιεύς* (*infra*).

Hipponion was a colony founded by Lokroi (no. 59) (Thuc. 5.5.3; cf. Ps.-Skymnos 308 and Strabo 6.1.5). Archaeological evidence points to a foundation in C7l (*infra*). The scanty evidence shows very varied relations between Hipponion and its *metropolis*: (a) *SEG* 11 1211 (525–500), a joint dedication by Hipponion, Medma (no. 60) (also a Lokrian colony), and Lokroi (cf. Lombardo (1989) 429) at Olympia of spoils taken from Kroton (no. 56), implies a military alliance between colony and mother city, but has nothing on its origin or duration (Hornblower (1996) 434–35), and nothing about the political status of Hipponion *vis-à-vis* Lokroi (Lombardo (1989) 428–31); (b) Thuc. 5.5.3 attests to a war between Lokroi and Hipponion and Medma but gives no explanation of the issues involved (see further Lombardo (1989) 431–40); (c) *F.Delphes* III.1 176 (C4l–C3e) is a Delphic grant of proxeny etc. to a man described as *Λοκρὸς ἐκ τῶν Ἐπι[ζε]φυρίων Ἴππωνιεύς*; this unique combination of city-ethnics presumably indicates some kind of political interdependence between the two communities (Graham (1964) 94; Savalli (1989) 467), but (*pace* Graham (1964) 94–95) this evidence can hardly be retrojected into the Archaic and Classical periods (cf. Hornblower (1996) 434–35).

Evidence from cemeteries and sanctuaries points to a C7l foundation date for Hipponion (*infra*), confirmed by Greek influence in local, indigenous tombs—for instance at Torre Galli (Arslan (1986) esp. 1031–32, 1042, 1052–54; Lombardo (1989) 424 n. 29). Evidence of Greek presence in the territory of Hipponion comes primarily from the area between the city and the coast, where ceramic evidence indicates Greek presence from C6 (see also the entry for Medma). The

coastal *chora* of Hipponion was consolidated by C5: the evidence is a coastal sanctuary (dedicated to Persephone?) and C5–C4 remains of, presumably, agricultural and maritime structures (Ianelli (1989); Givigliano (1989) 745–46). The coastal plain, between Nicotera and the river Angitula, covers about 120 km², but the territory of Hipponion would have comprised about 200 km² if the valleys south of the city were part of the territory. Agathokles of Syracuse built an *epineion* (Strabo 6.1.5), and remains of this have been identified on the coast below Hipponion between the rivers S. Anna and Trainiti at Castello Bivona and Porto Salvo (Lena (1989) 601–7). The route between Hipponion and the coast was consolidated by C5, with an extra-urban sanctuary near the coast at Castello Bivona (Givigliano (1989) 748–51).

Hipponion may have been a member of the Italiote League (Lombardo (1989) 438). An alliance of Hipponion with Lokroi (cf. Lombardo (1989) 429) and, presumably, Medma in C6l is implied by *SEG* 11 1211 (525–500), a joint dedication by these three cities of spoils taken from Kroton. Thucydides' phrasing at 5.5.3 (ὁ πρὸς Ἰππωνιῶν καὶ Μεδμαίων πόλεμος) suggests that Hipponion and Medma were allies in the war against Lokroi c.422.

In 388 Hipponion was conquered by Dionysios I of Syracuse, who relocated the inhabitants to Syracuse (no. 47), razed the city, and handed over its territory to the Lokrians (Diod. 14.107.2; cf. Dion. Hal. *Ant. Rom.* 20.7.3). Apparently, not *all* Hipponiis were relocated; at least, when describing the refoundation of the city at 15.24.1 (r379), Diodorus states that the Carthaginians restored the city to the "Hipponiates in exile", and these may have been exiled when Dionysios took the city; Diodorus' phrasing leaves open the possibility that exiles other than Hipponiis were settled in the refounded city (Lombardo (1989) 439). In 356, the city was subdued by the Brettians (Diod. 16.15.2); but any long-lasting Brettian possession of the city is hardly to be assumed (cf. Lombardo (1989) 440–43).

F. Delphes III.1 176 (C4l–C3e) is a grant of proxeny etc. by Delphi (no. 177) to a man described as Λοκρός ἐκ τῶν Ἐπιζέφυριων Ἰππωνιεύς (*supra*).

Hipponion was founded on a steep-sided plateau c.500 m above sea level. There are no traces of the Greek urban layout or habitation structures, which have all been obliterated by the mediaeval city. However, the extant remains of the c.6 km-long circuit wall and the morphology of the site indicate a fortified area of about 80 ha; the urbanised area, presumably about the size of the mediaeval city, comprised about 40 ha (Aumüller (1994) 248 fig. 1). The city probably had an urban layout similar to that of other Greek colonies, with

open unoccupied spaces (Ianelli and Givigliano (1989) 677–81). The circuit wall has four structural phases (Aumüller (1994); Ianelli (2000a)): the first phase ("A"), C6s–C5f, had foundations roughly constructed of boulders, possibly supporting a brick superstructure. The second phase ("B"), C5s–C4f, is an ashlar wall with rectangular towers, unusually placed inside the curtain-wall. The destruction and later enlargement of this phase is possibly connected with destruction by Dionysios I in 388 and the later Carthagian-sponsored refoundation of the city. Later phases are connected with the incursions of the Brettians and possibly with the wars of Agathokles. The eastern part of the city, the Cofino plateau, though not urbanised, was fortified from the early history of the city, but may have been separated from the central area by a transverse wall, a sort of *diateichisma*, at a later date (Aumüller (1994) fig. 1 "a–a" and "b–b"; cf. also Ianelli and Givigliano (1989) 672–77, 679 pl. 53). The sanctuaries are, primarily, situated along the east and north edge of the plateau, a system of "*sacra cintura*" known, for instance, from Akragas and Lokroi (Parra (1996b), (2000)): to the north on the top of "Belvedere-Telegrafo" is a C6m *temenos* with *naiskoi* and a monumental, C6l peripteral Doric temple; to the east is the *temenos* "Contorno del Castello"; a C5l–C4e Ionic temple is located on the Cofino plateau; c.150 north-west of temple are remains of a small *temenos* with votive deposits and *naiskos*(?) and a *via sacra* (Quilici (1990)). The evidence for the cults is above all C5f *pinakes* of Lokrian type with Persephone–Kore iconography (cf. Strabo 6.1.5), though one type is unique, with an Aphrodite iconography not known from the Lokroi *pinakes* (Parra (1989) 559–65, (1996b) 142–43; Hinz (1998) 211–12). C4 figurines indicate a Demeter cult (Ianelli (1996c) 147). A very rich votive deposit in "località Scrimbia" covers the period c.570–C5 and testifies to a wealthy aristocracy (Sabbione (1996); Hinz (1998) 212). Cults of Zeus, Athena and Hermes seem to be indicated by the coin types (*infra*), as does one of a local nymph Pandina. The C7–C6 cemeteries were located on the western outskirts of city, originally outside the circuit walls, perhaps later within (Arslan (1986); M. D'Andria (1989); Ianelli (2000b)).

Like its *metropolis* Lokroi, and the other Lokrian sub-colony of Medma, Hipponion did not issue coins until C4m, when it initiated a bronze coinage. The first phase is dated before the Brettian conquest in 356 or after, on the basis of Brettian influence on letters in the legend *F EI* or *F E III* (cf. Lombardo (1989) 441–43, who argues for periods of Hipponian autonomy in C4s–C3e). *Obv.* head of Hermes;

rev. eagle, or amphora or *kerykeion* (Rutter, *HN³* 2243–54; *SNG Cop. Italy* 1829–30). Later issues have *obv.* head of Zeus, or Apollo, with *rev.* types similar to those of the earlier issues; legend: *ΕΙΠΙΩΝΙΕΩΝ* (Rutter, *HN³* 2246ff; *SNG Cop. Italy* 1831–34). One issue depicts a goddess Pandina (possibly influenced by Terina: Rutter (1997) 78), legend: *ΠΑΝΔΙΝΑ* (Rutter, *HN³* 2251; *SNG Cop. Italy* 1834). A small issue of staters on the Corinthian standard has been attributed to Hipponion on the basis of the *kerykeion* symbol on the *rev.* (Rutter, *HN³* 2242).

54. Hyele (Hyeletes)/Elea (Eleates) Map 46. Lat. 40.10, long. 15.10. Size of territory: 2. Type: A. The earliest form of the toponym is ‘*Υέλη, ἦ* (possibly on C5f coins, cf. Masson, *REG* 108 (1995) 231; Hdt. 1.167.3; cf. Antiochos (*FGrHist* 555) fr. 8 *apud* Strabo 6.1.1). The corresponding city-ethnic is ‘*Υελήτης* (C5 coins, *infra*). This form is replaced in the Classical period by ‘*Ελέα, ἦ* (Antiochos (*FGrHist* 555) fr. 8 *apud* Strabo 6.1.1; Pl. *Soph.* 216A; Ps.-Skylax 12). The corresponding city-ethnic is ‘*Ελεάτης* (*IG* IV².1 258 (C4); Arist. *Rh.* 1400^b7), also spelled *Φελεάτας* (*BE* (1987) no. 758 (C4)) and possibly in *SEG* 24 303 (C6–C5) as re-interpreted by G. Cordiano (1995a).

Hyele is called a *polis* in the urban sense at Hdt. 1.167.3 (where Rosén’s conjecture *ἐκτίσαντο* is preferable to *ἐκτῆσαντο*); and “Elea” is one of ten toponyms listed at Ps.-Skylax 12 after the heading *πόλεις εἰσὶν Ἑλληνίδες αἷδε*, where *polis* is used in the urban sense. *Polites* is found in Speusippos fr. 3. The internal collective use of the city-ethnic is found on C5 coins (*infra*); the external collective use is found in Arist. *Rh.* 1400^b7 and possibly in *SEG* 24 303 (C6–C5) as reinterpreted by G. Cordiano (1995a); and the external individual use is found at *IG* IV².1 258 (C4) and *BE* (1987) no. 758 (C4).

Hyele was founded by Phokaians (= Alalians (no. 1)) who had abandoned the Phokaiian colony of Alalia on Corsica shortly after the battle of Alalia (c.540–535) in which they had defeated Etruscan and Carthaginian forces but suffered severe losses themselves (Hdt. 1.166–67); according to Ps.-Skymnos 250, a contingent from Massalia (no. 3) participated in the foundation. The site on which the city was founded was uninhabited before the arrival of the Hellenes (Bencivenga Trillmich (1990) 365).

The territory of Hyele was delimited by the hills of Mt. Gelbison and Mt. Cavallara and the Classical fortresses located there, such as that of Moio della Civitella (E. Greco and Schnapp (1986); Bencivenga Trillmich (1990) 366–67 fig. 367). The earlier contention that Hyele had no *chora*

(Pugliese Carratelli (1970b) 12–14) has been abandoned (cf. for instance Morel (1988) 438–40); Gras (1985) 422–23 calculates the arable hinterland of Hyele as c.13 km², suggesting that a large part of the *chora*, above all the wooded slopes of the inland hills, was exploited for timber. E. Greco and Schnapp (1983) 382–83 suggest that the territory within a distance of 4–5 km of Hyele was suitable for farming. The largest territorial extension, as bounded by Poseidonian territory to the north, and at the Palinuro peninsula, delimiting the territory of Pyxous (no. 67) on the south, is c.400–500 km²; however, the degree of Hyele’s control over this larger area is uncertain; Strabo 6.1.1 hints at armed conflicts with Poseidonia (no. 66) and the Leukanians, but supplies no date. No sanctuaries or second-order settlements are known in the territory (Bencivenga Trillmich (1990) 366).

According to Strabo 6.1.1, the offshore islands of the Oinotrides offered good anchoring places, while the estuaries of the rivers Alento and Fiumarella north and south of the acropolis also offered harbour facilities (cf. Johannowsky (1982) 234). Apart from these mercantile aspects the city has all the appearances of a “population-colony” with a *chora* (cf. Morel (1988) 438–40, 461).

Attempts have been made to estimate the size of Hyele’s population at the time of its foundation from the number of Phokaiian ships that survived the battle at Alalia: twenty *pentekonteres* according to Hdt. 1.166.2. A crew of eighty with families gives a figure of between 240 and 320 per ship, in all c.4,800–6,400 persons (Gras (1985) 421–22); other calculations have reached a similar figure of c.6,000 (Johannowsky (1982) 225). However, it is important to bear in mind that the limited agricultural resources were not the sole means of support for the population, which had important commercial contacts as well (Morel (1982); Gras (1985) 421–25); cf. also the remarks by Strabo 6.1.1 on the city’s reliance on the sea.

Hyele was member of the Italiote League against Dionysios in 387 (Polyaen. 6.11). A squadron of twelve triremes is attested in Polyaen. 6.11 (r389). Two citizens of Hyele were involved in the Timoleontic refoundation of Akragas (no. 9) (Plut. *Tim.* 35.2).

There are few sources for the political organisation of Hyele; but a C5f tyranny is reported by Diod. 10.18.1–2 and Diog. Laert. 9.26. Parmenides was allegedly the legislator at Hyele, his native city, and each year the *archai* had to exact an oath from the *politai* to the effect that they would observe the laws of Parmenides (Plut. *Mor.* 1126A/B; Diog. Laert. 9.23; Talamo (1989)). The earliest preserved public enactment is a 242 *asylia* decree for Kos (*IGDGG* no. 59).

Hyele was founded on a coastal plateau, more prominent in antiquity when the coastline reached further inland on both sides of the promontory. The city comprised four main zones (overview: Krinzinger (1994)): (a) the acropolis, at first used for habitation and later the site of Hyele's main cults; (b) the western slope of the acropolis, "Weststadt", divided from the main urban zone (c) by the north-south circuit wall ("Krinzinger-wall-B"), and protected on the north by "wall-A"; (c) the main urban zone in the southern plain, "Südstadt" ("Unterstadt") and Vignale ("Oststadt"), protected westwards by "wall-C", northwards by "wall-A", and southwards towards the coast by "wall-E"; (d) a smaller zone on the north slope, "Nordstadt", protected by a separate circuit wall, "wall-D" (Krinzinger (1979), (1986)). The whole site was fortified c.520 shortly after the foundation, but obviously not fully urbanised, thus offering plenty of space for farming and husbandry. The division of the city into quarters by *diateichismata* walls goes back to the early history of the site, suggesting some sort of social division or a division based upon different functions such as habitation, commerce or workshops (survey of research: Gassner and Sokolicek (2000) 95-97). The circuit wall follows the crest of the hill from the acropolis to the top of Casteluccio, whence it turns southwards to incorporate a large part of the southern plain to the coast. The walls run for c.4 km and enclose an area of c.64 ha, comprising the "Nordstadt"; but during the early history of the site the habitation area was probably confined to the acropolis and the adjacent hill, and covered c.9 ha. The walls were of sun-dried brick upon a foundation of local sandstone in polygonal masonry. The C5e witnessed a monumentalisation of the early structure, with the use of accurate ashlar masonry and with towers raised at intervals of about 40-60 m, the upper structures still in sun-dried bricks, with a C5 course that comprised also the "Unterstadt" (Gassner and Sokolicek (2000)). A third phase in C4-C3 saw various repairs and reinforcements (Krinzinger (1979), (1986)). The Archaic habitation, or "polygonal phase", is known above all from the acropolis and its southern slope. The urban aspect is irregular, but there is some evidence of orthogonal planning, with a *plateia* along the south flank of the acropolis, cutting obliquely into the hill, and houses laid out on terraces on both sides of short *stenopoi*. On the acropolis the streets were laid out not orthogonally but in accordance with the morphology of the terrain. The lower wall structures are in local sandstone in a polygonal technique, whereas the upper structures are in sun-dried brick; there is evidence of a water supply and drainage (*Velia* iii; Krinzinger and Gassner

(1997)). A large residential building, perhaps a ruler's house from C6l, was located further along the crest of the hill (Bencivenga Trillmich 1983). The lower city, "Südstadt", was also extensively occupied from the Archaic period, and there is evidence of urban planning from the C6l-C5e phase (Krinzinger (1992-93) 29-37). The Vignale zone in the lower city reveals urban organisation and orthogonal layout of the *per strigast* type from C5m (Krinzinger (1992-93); Krinzinger *et al.* (1999)). The morphology of the site may have favoured a system of habitation on terraces, a system of urbanisation well known in the Ionian cities, such as Ephesos and others.

The *cavea* structure under the C3 and later Roman theatre has, without substantial evidence, been interpreted as the remains of a *bouleuterion* of c.470-460 (Bencivenga Trillmich (1994) 93-94). A Greek phase of the Roman theatre is perhaps evidenced by a C5e polygonal *analema* wall (*ibid.* 90-92). In a later phase the *cavea* may have had a wooden covering, *ikria* (*ibid.* 89-90, 92-93). The Archaic habitation structures on the acropolis gave way to a monumental *temenos* probably already by the late Archaic period (for a survey of the archaeological evidence for sanctuaries at Hyele, see Hinz (1998) 180 n. 1046). A large quasi-isodomic terrace wall ("Ionic-Lemnian technique") gave space for a C5e Ionic temple, probably of Athena Polias (Bencivenga Trillmich (1990) 371 n. 26; Miranda (1982)). The terrace north-east of the temple with the sanctuary of Poseidon Asphaleios (Guarducci (1966) 280-82) is part of this reorganisation of the acropolis. The foundations of a C6 cult building on the western extremity of the acropolis in conjunction with votive material and inscriptions are all taken as evidence of a cult of Hera going back to the foundation of the city (Tocco Sciarelli (1997) 228-29). Another sanctuary, situated further along on the crest north-east of the acropolis, with an open paved space with stoas on three sides, is attributed to Poseidon Asphaleios by a C4m inscription (Guarducci (1966) 280-82). A well-built ashlar *temenos* wall and steps of access on the north slope belong to a C5 sanctuary of Zeus, identified by a C5m cippus (Krinzinger (1994) 37, 54 n. 52 "Zeus Agoraios"; LSAG 464 E); Miranda takes the Zeus inscriptions from the "Altar-terrasse" as evidence of a Zeus Polieus cult (Miranda (1982) 171-72; cf. IGDGG no. 53). The C5 cemetery was possibly laid out on the top of Castelluccio (Bencivenga Trillmich (1990) 369-70), but the evidence is meagre. Early excavation maps indicate a cemetery outside the south wall ("section E"), between the city and coast.

Hyele began minting silver coins on the Phokaian standard in C6s, with issues of drachms, diobols and, possibly, obols and eighth-obols (Williams (1992)); *obv.* forepart of a

lion devouring its prey; *rev.* an incuse pattern. No legends name the mint, but the attribution to Hyele rests on both provenance and *obv.* type (Rutter, *HN*³ 1259–63; *SNG Cop. Italy* 1521–22). The so-called auriol-class of diobols are less certainly attributed to Hyele (Rutter (1997) 33; cf. *IGCH* 2352). A new series from c.465 consists of didrachms on the Italic–Tarantine standard (Rutter, *HN*³ p. 118): *obv.* lion roaring, *rev.* head of the nymph Hyele; legend: *YEAH* (cf. Masson, *REG* 108 (1995) 231), *YEAHTEΩN*, *YEAHTΩN*, at times retrograde, at first on *obv.* in exergue, later on *rev.* (Rutter, *HN*³ 1264; *SNG Cop. Italy* 1523–26); later types: *obv.* female head; *rev.* lion (*SNG Cop. Italy* 1527–28). Lower denominations from c.465: drachms, diobols and obols: *obv.* head of the nymph Hyele, the dies of the drachms marked with a letter in an alphabetical sequence; *rev.* owl; legend: *YEAH* (Rutter, *HN*³ 1265–67; *SNG Cop. Italy* 1529–34). After C5m, didrachms of a more advanced style were introduced: *obv.* Athena wearing richly ornamented Attic helmet similar to the type at Thourioi; *rev.* lion seizing stag; legends as above (Rutter, *HN*³ 1270; *SNG Cop. Italy* 1535–37); the drachms, diobols and obols have the same types as before. This series too has letters in an alphabetical sequence. Various silver issues were continued from C4e into Cl: *rev.* lion crouching (Rutter, *HN*³ 1277ff; *SNG Cop. Italy* 1538–92); sophisticated dies depict the head of Athena *en face* and with the signature perhaps of the engravers (*SNG Cop. Italy* 1560); the *obv.* type sometimes depicts Athena in Phrygian helmet (Rutter, *HN*³ 1291, 1295). Bronze coinage was introduced in C5s: *obv.* head of nymph, or of Herakles; *rev.* owl (Rutter, *HN*³ 1320–21; *SNG Cop. Italy* 1554–55). Later bronze types: *obv.* head of Herakles, or Athena, or Zeus; *rev.* lion, or owl, or tripod; legends as above (Liberio Mangieri (1986) 116–23; Rutter, *HN*³ 1325ff; *SNG Cop. Italy* 1593–1611). The late silver and bronze issues indicate cults of Athena, Apollo, Zeus and Herakles in addition to that of the nymph Hyele (Breglia (1966); Ebner (1978); Williams (1992)).

55. Kaulonia (Kauloniatas) Map 46. Lat. 38.25, long. 16.35. Size of territory: 3. Type: [A]. The toponym is *Καυλωνία*, ἡ (Ps.-Skylax 13); an earlier form was *Ἀύλωνία* (Hecat. fr. 84; Strabo 6.1.10; cf. Ps.-Skymnos 320–22 and Steph. Byz. 147.8–10; cf. also the legend *AYΛ* on a C5e coin (*infra*)). The city-ethnic is *Καυλωνιάτας* (C5–C4e coins; Polyb. 2.39.6 (rC5)); *AYΛ* on a C5e coin (*infra*) may abbreviate an earlier **Ἀύλωνιάτας*.

Kaulonia is the second toponym listed at Ps.-Skylax 13 after the heading *πόλεις ἐὶςὼν αἰδέε*, where *polis* is used in

the urban sense, cf. Diod. 14.103.3; Ps.-Skymnos 320 (r foundation) calls it *apoikia*. The internal collective use of the city-ethnic is found on C5 coins (*infra*); the external collective use is found in Iambl. *VP* 262 and Polyb. 2.39.6 (both rC5). For the external individual use of the city-ethnic, see Paus. 6.3.11, commenting on the C4f athlete Dikon of Kaulonia.

Kaulonia was an Achaian foundation (Strabo 6.1.10; Paus. 6.3.12); it was founded by Kroton (no. 56) (Ps.-Skymnos 318–19; Steph. Byz. 147.9–10). The *oikistes* was Typhon from Aigion (Paus. 6.3.12; Morgan and Hall (1996) 209). Serv. *ad Aen.* 3.553 describes it as a colony of Lokroi (no. 59). The existence of a C6e circuit wall (Tréziny (1989) 129) points to a foundation in C7s, though Greek finds go back to C8l (Tréziny (1988) 205).

The name of the territory was *Καυλωνιάτις* (Thuc. 7.25.2). The territory of Kaulonia functioned as a buffer zone between Lokroi and Kroton. The border between Lokrian and Kaulonian territory was probably formed by the river Sagra (Giangiulio (1989) 221–24, 251–52), whereas the border between Krotoniate and Kaulonian territory must remain more uncertain, perhaps to be located somewhere in the region of Skyllation, in which case the territory would measure c.200 km². There is some archaeological evidence for an ancient harbour near the estuary of the river Assi (Ianelli, Mariottini and Lena (1993)). C6m–C5m architectural fragments of about six roofs found on the hill of Passoliera c.1 km to the south of Kaulonia testify to an important extra-urban sanctuary (Barello (1995) 65–86).

A federation of Kaulonia, Kroton (no. 56) and, presumably, Sybaris on the Traeis (no. 70.V) was established at some uncertain date in C5 with the foundation of a federal sanctuary of Zeus Homarios (Polyb. 2.39.6; Walbank, *HCP ad loc.* and (2000) 24). The location of the federal sanctuary of Zeus Homarios is uncertain, but the sanctuary of Punta Stilo is one of the more convincing suggestions (*infra*). The find of a heavy limestone cover from a container in the sanctuary has been taken as evidence of a treasury or archive similar to that known from Lokroi (Ianelli (1992a)). In C5s, Kaulonia was, with Taras (no. 71) and Metapontion (no. 61), involved in arbitration between Kroton and returning exiles (Iambl. *VP* 262).

In 389 Kaulonia was besieged and taken by Dionysios I of Syracuse (Diod. 14.103ff), in spite of help from Kroton and from the Italiote League. The citizens of Kaulonia were relocated to Syracuse (no. 47), granted citizenship and exempted from taxes for five years (Diod. 14.106.3); the city was razed to the ground, and the territory handed over to Lokroi

(no. 59; Diod. 14.106.2). This may perhaps explain the tradition of a Kaulonia of the Lokrians (Steph. Byz. 369.19), and the tradition (in Serv. *Aen.* 3.553) that Kaulonia was a foundation of Lokroi. A refoundation c.357 by Dionysios II of Syracuse may be inferred from Diod. 16.10.2, 11.3; cf. Plut. *Dion.* 26.7. The C4m-s circuit wall also implies a refoundation (*infra*).

The Pythagoreans probably played a political role during C6l-C5f, but the evidence is not very good (Dicaearchus fr. 34, Wehrli: Pythagoras in Kaulonia; Imbl. *VP* 267: list of Pythagoreans in Kaulonia). Nothing else is known about the political organisation, unless one accepts the attribution to Kaulonia of a C5e inscription (*IGSII* 20 = *SEG* 4 71) testifying to civic subdivisions (Jones, *POAG* 168) and to the existence of an eponymous *damiorgos*; its provenance, however, remains uncertain (Arena (1996) no. 52).

Kaulonia was founded on sloping terrain facing the sea (survey of evidence: Ianelli (1992b)). There is little archaeological evidence for the Archaic or Classical city, but it extended inside the area of the later circuit wall, possibly in three separate areas, with an early settlement on the Faro di Punta Stilo and a C6 settlement extending as far north as "Colle A" and southwards on the Piazzatta hill; the different areas of habitation may each have had their own orientations, but the evidence is uncertain (Orsi (1914); Tréziny (1989) 156). The well-preserved circuit wall postdates the 389 destruction and is of C4m or C4s (Tréziny (1989) 155-57). C6 and C5 phases have been investigated inside tracts of the later wall. The C6 circuit wall probably had the same northern and western (though not including Orsi's "Neapolis occidentale") extension as the Hellenistic city. To the south it remains uncertain whether Orsi's "Neapolis meridionale" was part of the Archaic city. The Archaic walls therefore delimited an area of either 35-36 ha or 45-46 ha, the latter figure being the extent of the Hellenistic city. Eastwards, facing the sea, there is evidence of a C5 (and C6?) circuit wall (Tréziny (1989), esp. 129-32, 156-57). The city was refounded after the 389 destruction, and the remains of urban structures are mainly C4m (Ianelli and Rizzi (1985)). Apart from the Classical temple and its Archaic predecessor, there are remains of numerous smaller *naiskoi* and *thesauroi* in the vast *temenos* at Punta Stilo below the city on the coast (Barello (1995)). The identity of the deity honoured there is uncertain. The main coin type suggests that the chief divinity of Kaulonia was Apollo (Lacroix (1965) 159-61), possibly with the epithet Daphnephoros (Caccamo Caltabiano (1990)), but see Giannelli (1963) 179-82 and Kraay (1976) 68-69. An alternative suggestion is a cult of Zeus Homarios

established by the Achaian League of Kaulonia, Kroton and Sybaris perhaps already in C5s (Torelli (1988) 593); Osanna (1989) interprets the rectangular theatre-like structure in the *temenos* as the seat of the Achaian League, though this should perhaps rather be looked for in neutral territory (Giannelli (1963) 182-83). Substantial walls, votives and architectural terracottas on the hill of the Faro di Punta Stilo inside the urban area belong to a major C6 sanctuary, possibly the earliest of Kaulonia (Barello (1995) 19-29). The cemeteries were located outside the circuit wall, north-west of the city (Orsi (1914)).

Dikon of Kaulonia was a successful athlete who won victories at all four Panhellenic festivals (Paus. 6.3.11). At his earlier victories he was proclaimed a Kaulonian (*Olympionikai* 379 (392)), but he was probably among the Kaulonians relocated to Syracuse by Dionysios I (*supra*), and he was proclaimed a *Syrakosios* at his subsequent victories (*Olympionikai* 388-89) and is described as such by Diod. 15.14.1 (r384) (cf. Stylianou (1998) *ad loc.*).

Kaulonia struck an incuse silver coinage from c.525, on the Achaian standard (Kraay (1960), (1978); Rutter, *HN*³ 2035ff), according to some scholars possibly from as late as 510 (Montani Pertosa (1993)). Initially, only staters were struck, but smaller denominations were issued in the late incuse phase. The type (on which see Rutter (1997) 30-31) is a striding, naked Apollo (*supra*) with a branch in his raised right hand, and on his outstretched left arm a small running naked figure holding a similar branch in each hand; in a field a stag. Legends are the abbreviated ethnic, often retrograde, *KAYΛ*, *KAYΛIO* (Rutter, *HN*³ 2035-43; *SNG Cop. Italy* 1698-1702). A single triobol die carries the earlier form of the name *AYΛ* (Kraay (1976) 169; Rutter, *HN*³ 2041). A double-relief coinage was introduced 480-475, with the same *obv.* type as on the incuse coinage; *rev.* stag; legends: *KAYΛ*, *KAYΛΩNIATAΣ*, *KAYΛONIATAN*; the double-relief coinage carries a complex system of letters or symbols (Rutter, *HN*³ 2044ff; *SNG Cop. Italy* 1703-32). Similar types appear on some smaller denominations (Rutter, *HN*³ 2060ff). Bronze coinage was issued from C5s: *obv.* head of horned river-god (the Sagra?); *rev.* stag (Rutter, *HN*³ 2069). Kaulonian coinage comes to an end with the conquest by Dionysios I in 389/8.

56. Kroton (Krotoniatas) Map 46. Lat. 39.05, long. 17.05. Size of territory: 4 (dominion: 5, *infra*). Type: A. The toponym is *Κρότων*, ἡ (Hdt. 3.131; *IG* IV².1 95.42 (356/5)). The city-ethnic is *Κροτωνιάτας* (*LSAG* 104.22 = *SEG* 40 426 (510-470)), sometimes spelled *ῤροτωνιάτας* (*SEG* 11 1211

(525–500); coins, *infra*), *Κροτωνιάτης* (Thuc. 7.35.2; Arist. fr. 600.1), or *Κροτωνιήτης* (Hdt. 3.137.1).

Kroton is called a *polis* in the urban and political senses combined at Hdt. 3.137.3, and in Hdt. 8.46.1 it is subsumed under the heading *polis*, where *polis* occurs in the political sense (Hdt. 8.42.1, 49.1); Kroton is the third toponym listed at Ps.-Skylax 13 after the heading *πόλεις εἰσὶν αὖτε*, where *polis* is used in the urban sense. The Aristotelian collection of *politeiai* seems to have included a *Κροτωνιατῶν πολιτεία* (Heracl. Lemb. 68; Arist. fr. 523, Gigon).

The internal collective use of the city-ethnic is found on coins from C51 (*infra*); the external collective use is attested in a C61–C5e Delphic inscription (LSAG 104.22 = SEG 40 426), and in SEG 11 1211 (C5), Hdt. 3.137.2 and Thuc. 7.35.2. The external individual use of the city-ethnic is attested in Hdt. 3.125.1, 5.47.1; CID II 51.111.9 (339); Arist. *Gen. an.* 752^b.25.

Kroton was an Achaian foundation (Hdt. 8.47; Peloponnesian in Ps.-Skymnos 328; Spartan participation (Paus. 3.3.1) is a tradition probably no older than the victory over Sybaris and the expedition of Dorieus (C61)). The colony was founded in 709/8 (Dion. Hal. *Ant. Rom.* 2.59.3; Jer. *Chron.* also gives Ol. 17.3, and the foundation is here treated as contemporary with that of Sybaris, as in other sources, e.g. Strabo 6.2.4, cf. 6.1.12; the Armenian Eusebios gives Ol. 17.4, i.e. 708/7). A date not long after the foundation of Syracuse (733) is implied by Antiochos' statement that the oecist Myskellos of Rhypes in Achaia (cf. Hippys (*FGrHist* 554) fr. 1) received support from Archias the oecist of Syracuse (*FGrHist* 555, fr. 10). See also Giangiulio (1989) 134–48 for a reappraisal of the Delphic traditions and Myskellos. The verse oracles relating to Myskellos (Diod. fr. 8.17; Antiochos and Hippys (*loc. cit. supra*)) are not genuine but “quasi-historical” according to Fontenrose (1978) Q28–30, Q139–140. However, Delphi probably did play an important role in the foundation: the Delphic tripod is depicted already on the earliest Krotoniate coinage (*infra*). Herakles is named as the mythical founder on C55 coin legends (Lacroix (1965) 76–79 pl. 5.7–8; cf. Diod. 4.24.7 and Heracl. Lemb. 68). Cf. further Morgan and Hall (1996) 206–8.

The name of the territory is ἡ *Κροτωνιήτης γῆ* at Hdt. 5.45, or simply ἡ *Κροτωνιάτις* (Thuc. 7.35.1; Alkimos (*FGrHist* 560) fr. 2). To the north-east the river Hylia (modern Fiumenica?) formed the border with the territory of Sybaris (no. 70)/Thourioi (no. 74) (Thuc. 7.35.2). The Lakinian promontory and the rivers Aisaros and Krimisa may mark the limits of the early territory. Later the *chora* of Kroton was delimited to the north by the sanctuary of

Apollo Alaios, to the south by that of Hera Lakinia, and inland by the adjoining hills (Giangiulio (1989) 215–32). In a 1984 survey 238 settlements and single farmsteads were recorded; by 450–350 the territory measured about 270 km² (Carter and D'Annibale (1984); Carter *et al.* (1990)).

The tradition of Philoktetes (Apollodorus (*FGrHist* 244) fr. 167 = Strabo 6.1.3), and that of the Krotoniate possession of the bow of Herakles (*Mir. ausc.* 840^a.20), may reflect Krotoniate expansion or ambitions on the confines of Sybarite territory (Mele (1983a) 36–39) or in regard to the indigenous populations (Giangiulio (1991a) 49–53). The expansion of Kroton is indicated by the foundation of two colonies in C7: Kaulonia (no. 55) on the Ionian Sea (Ps.-Skymnos 318–22), comprising also the territory of Skyllation; and Terina (no. 73) on the Tyrrhenian Sea (Ps.-Skymnos 306–7). The territorial ambition of Kroton towards the south-west was blocked at the river Sagra, theatre of the C6m war between Kroton and Lokroi (no. 59) (Strabo 6.1.10) in which Kroton was surprisingly defeated. The maximum territorial expansion of Kroton was attained after the victory over Sybaris c.510, and for this period a Krotoniate dominion is attested by coins with two ethnics: in addition to that of Kroton, those of Sybaris (no. 70) (*ΦΡΟ-ΣΥ*), Pandosia (no. 64) (*ΦΡΟ-ΠΑΝΔΟ*) and Temesa (no. 72) (*ΦΡΟ-ΤΕ*); cf. also coins inscribed *ΣΥ-ΛΑΦ* (*infra*). As shown by Parise, this numismatic evidence points not to an alliance but to a dominion controlled by Kroton (Parise (1982); cf. Stazio (1983b) 967–70). Kroton may have treated the cities in the dominion as dependencies, since there is evidence of a Krotoniate governor (*exarchos*) at Sybaris (Iambl. *VP* 74; Minar (1942) 70). In C5, Kroton opposed the refoundation of Sybaris (Diod. 11.90.4, 12.10.2, cf. 11.3) and waged war against Thourioi (no. 74) with the help of the Pythagoreans returning from exile (Polyb. 2.39.4; Iambl. *VP* 264). In C5s, however, its dominion disintegrated (Kahrstedt (1918) 185; *RE* xi. 2024–25).

A number of important sanctuaries were located in the territory: that of Hera Lakinia on the promontory c.10 km to the south of Kroton had a C6 origin and had developed into a pan-Italiote sanctuary by C51. The Classical temple was a major structure of unparalleled splendour in Magna Graecia (Orsi (1911b); Spadea (1996)). The other major sanctuary in the territory, at Cirò (Punta Alice), is probably that of Apollo Alaios founded by Philoktetes (Lycoph. *Alex.* 920; dedication of the bow of Herakles, *Mir. ausc.* 840^a.20); it secured the territorial interests of Kroton southwards (Maddoli (1983) 336; Musti (1991) 25–27). Inland sanctuaries in the *chora* of Kroton have been found at Giammigliano

and at S. Anna (Spadea (1983) 137–38; Osanna (1992) 177–79). In 413, the city denied an Athenian army passage through the territory (Thuc. 7.35.2). Control of the territory may also be implied by Hdt. 5.45.2 mentioning a presumably public grant of land to Kallias of Elis. A C6l exile is attested in Hdt. 5.47.1; cf. Dion. Hal. *Ant. Rom.* 20.1.7 for C5e exiles. A C5s recall of exiles is reported in Iambl. *VP* 263.

The military forces of Kroton at the C6 battle on the river Sagra reputedly numbered 130,000 or 120,000 men (Strabo 6.1.10; Just. *Epit.* 20.3.4–5) and 100,000 men in 510 (Diod. 12.9.5). These, obviously, are unreliable figures, but it seems correct that, after the victory over Sybaris, Kroton had the largest population of the Greek cities in Italy (cf. Diod. 14.103.4 (r389)); 10,000 citizens, the estimate of Beloch (1922) iii.1 306–7, may be correct.

Kroton was of Achaian origin, but relations with homeland Achaia are almost invisible in our sources (Morgan and Hall (1996) 211–14). By C6m the Achaian cities of Italy seem to have formed an alliance, e.g. in the war against Siris (no. 69), which was defeated by Kroton (no. 56), Metapontion (no. 61) and Sybaris (no. 70.I) (Just. *Epit.* 20.2.4). In C5l, Kroton with Kaulonia (no. 55) and Sybaris on the Traeis (no. 70.V) organised the first Italiote League (Polyb. 2.39.5–6; Walbank (2000) 23–24), later enlarged or refounded in opposition to Dionysios I of Syracuse and the Leukanians (Diod. 14.91.1 (r393), describing it as a *symmachia* with a *synedrion*, cf. 101.1; *Staatsverträge* 230). However, Dionysios' victory on the river Eleporos in 389 was followed by a twelve-year period of dependency on the tyrant of Syracuse (Dion. Hal. *Ant. Rom.* 20.7).

In 356/5, a citizen of Kroton served as *theorodokos* of Epidauros (no. 348) (*IG* iv².1 95.42; *IG* ii² 406 (C4s) is possibly a fragment of a grant of proxeny for a Krotoniate. Reception of envoys is attested in Diod. 12.9.3 (rC6l). Sending of envoys is reported in Phylarchos (*FGrHist* 81) fr. 45 (rC6l) and Iambl. *VP* 263 (rC5s).

The constitution of Kroton is known only from late sources of doubtful value, principally Iamblichos' *De Vita Pythagorica* of the third to fourth century AD. It was aristocratic/oligarchic until C5m (Iambl. *VP* 255), from C6l to C5m seemingly under strong Pythagorean influence (Minar (1942) 1–71), though both democratic and tyrannical interludes are recorded. A *gerousia* with its *archeion* as well as *archontes* are attested for C6l (Dicaearchus fr. 33, Wehrli; Timaeus (*FGrHist* 566) fr. 44; cf. Iambl. *VP* 126: *archeion* of the 1,000), but such constitutional details are all that is known (Minar (1942) 8), though it may be inferred from the democratic revolution of C6l (*infra*) that, e.g., access to

offices was denied the *demos*. A meeting of the *ekklesia* is attested for C6l (Diod. 12.9.4); the *synkletos*, which in connection with this meeting is distinguished from the *demos* (ibid.), may possibly be identical with either the *gerousia* or with the “1,000”, a body attested in Iambl. *VP* 45, 126 (rC6l). For the interpretation of the 1,000 as the original Archaic assembly, see Sartori (1953) 116 and Ghinatti (1996) 82–86. Another possibility is that the 1,000 were a/the council (Val. Max. 8.12.15. *Ext.* 1; cf. Minar (1942) 8). Democracy was introduced in C6l (Robinson (1997) 76) (shortly after the victory over Sybaris, since one of the causes of the revolution reported by Iambl. *VP* 255 was dissatisfaction with the arrangements proposed for the conquered Sybarite land) after a violent uprising against the Pythagoreans (Iambl. *VP* 257–62); the initial demands for reform included popular access to magistracies and assemblies, and *euthynai* of officials by representatives chosen by lot *ἐκ πάντων* (ibid. 257); some of these constitutional demands may have been met (Minar (1942) 56). After the final democratic victory there followed sentences of exile, a redistribution of land and a cancellation of debts (Iambl. *VP* 262), though these measures have been thought to have occurred only in C5m (Minar (1942) 57–60); see also Robinson (1997) 76–77, who accepts the whole account as referring to C6l. A tyrant, Kleinias, is with some uncertainty dated to C5e (Minar (1942) 72; Luraghi (1994) 72–75). All that is known of him is that he secured his tyranny with the aid of exiles (presumably non-Krotoniate) and slaves, and proceeded to execute and exile the *epiphanestatoi*; he may also have brought other *poleis* under his sway (Dion. Hal. *Ant. Rom.* 20.7.1); his revolt seems to have been against a reconstituted oligarchy (cf. *epiphanestatoi*), though it is not known how it replaced the C6l democracy (Berger (1992) 20). A *prytanis* is attested in C5e (Ath. 522C); the office of *strategos* is attested as well (Kratinos fr. 223, Kock). Oligarchs were in power again in C5m, when the Pythagoreans were overthrown, but the constitutional history after Kleinias is obscure (Minar (1942) 73ff).

Kroton was founded on a coastal plain, delimited on one side by the Castello hill, the acropolis of the ancient city. There is no clear evidence of a pre-Greek indigenous settlement (Sabbione (1982) 251, 259), but according to Ephor. fr. 140 it had been inhabited by Iapygians. A C4–C2 circuit wall is known from various locations along the hills delimiting the urban centre. The morphology of the Collina del Castello and the S. Lucia hills suggests a coherent fortification system similar to Euryalos at Syracuse. The C4 evidence suggests a continuous circuit (cf. the siege of 317 reported in Diod.

19.3.3), the river Aisaros being fortified along the banks or/and with chains across the river, in all 13 km in length (cf. Livy 24.3.1). The fortified area comprised c.620 ha (cf. Diod. 21.4 (r295)); Livy 23.30.7 refers to an *arx*, probably the acropolis comprising the S. Lucia hills (Spadea (1983) 158–61).

The evidence suggests that the Greek colonists settled simultaneously over the whole of the later urbanised area, from the acropolis near the coast to the north circuit wall, i.e. including the area north of the river Aisaros. The character of the urban layout in the different zones suggests an initial settlement pattern organised in several *kleroi* (Spadea (1983) 124–27; Lattanzi (1988) 554). The earliest urban organisation with a regular layout has a C7–C6e origin. There are indications that Kroton was provided with a new town plan after Dionysios' defeat of the Italiote League at the river Eleporos in 389, but the alterations relative to earlier grid systems are unclear (Spadea (1983) 152–54). The harbour mentioned by Strabo (6.1.12) may have been located on the estuary of either the river Aisaros or the river Neaitos. According to Diod. 12.9.3, Sybarite exiles sought refuge at altars in the agora c.510 (cf. Hdt. 3.137.1).

The archaeological evidence for urban sanctuaries is limited to the C6 Hera Eleutheria(?) sanctuary “Vigna Nuova” on the outskirts of the city (Spadea (1983) 144–50) bridging *polis* and *chora* (Lattanzi (1981) 224–25). Other urban sanctuaries, however, are indicated by sporadic finds of C7–C6 architectural terracottas (Spadea (1983) 136–37). A cult of Zeus Soter is inferred from coin legends (*infra*), and the seat of the Achaian League in the sanctuary of Zeus Homarios has tentatively been located in the sanctuary of Hera Lakinia (De Sensi Sestito (1982b)). A festival at Kroton with monetary prizes is mentioned in Timaios (*FGrHist* 566) 45 (rC6l); cf., however, Ath. 522A with Dunbabin (1948) 370.

Remains of an ashlar structure in the area of the Nuova Vigna is interpreted as part of a theatre of uncertain date (Cristofani (1970) 269), but structural remains of a theatre have not been substantiated (Todisco (1990) 149–51). A theatre used for public games is mentioned by Iambl. *VP* 126 (rC5?). Kroton's major cemetery on the Carrara hill, delimiting the city on its eastern side, goes back to C8l. The house of the athlete Astylos who had himself proclaimed as a Syracusan after victories at Olympia was on that account turned into a prison (Paus. 6.13.1 (r480s); Hansen (2002) 36–37).

Attested cults include those of Hera Lakinia (*LSAG* 261 no. 21 (C6s); Diod. 13.3.4), with an important festival (*Mir. ausc.* 96), Apollo (*Mir. ausc.* 109; Iambl. *VP* 261; cf. also coinage, *infra*), the Muses (Iambl. *VP* 264), Demeter

(Timaeus (*FGrHist* 566) fr. 131) and Zeus Meilichios (*SEG* 17 42 (C6–C5)).

Participation in the games at Olympia is attested from 672 to 480. Kroton was famous for its athletes (Strabo 6.1.12), who achieved an amazing number of victories (cf. Miller (2000) 286–87; Mann (2001) 164–91), of which twenty-six are mentioned in our sources (*Olympionikai* 38, 87, 90, 92, 100, 104, 109, 115, 122, 126, 129, 133, 135, 139, 145, 148, 153, 166, 172, 178, 179, 186, 187, 196, 197, 198). Astylos, however, the winner of various races in 484 and 480, was on both occasions proclaimed a *Syrakosios* (cf. Mann (2001) 188–89, 246–48). One of the most famous Krotoniate athletes, Phayllos, never achieved an Olympic victory, but was a triple *Pythionikes* prior to 480 (Hdt. 8.47 (twice in the pentathlon and once in running; Paus. 10.9.2); cf. *RE* xix.2. 1903–4).

Architectural fragments of Krotoniate type from Olympia and Delphi may testify to Krotoniate *thesouroi* (Heiden (1990) 44; Mertens-Horn and Viola (1990) 244–45). *LSAG* 104.22 = *SEG* 40 426 (510–470) is an external communal dedication to Pythian Apollo, presumably of spoils taken from Sybaris. *SEG* 11 1211 (C5), on the other hand, is a dedication at Olympia of spoils taken from Kroton and dedicated by the Hipponians (no. 53), the Medmaians (no. 60) and the Lokrians (no. 59) (cf. Lombardo (1989) 429). C5s Krotoniate publication of a public document at Delphi is attested at Iambl. *VP* 263. Communal consultation of the Delphic oracle is reported by Just. *Epit.* 20.2.5, 3.1–3 (rC6s).

Kroton minted an incuse coinage on the Achaian standard from c.530, mainly staters and drachms. The principal type, and sole type initially, is the Delphic tripod, legend: φPO , φPOT , $\varphi POTO$, $\varphi POTON$ (Stazio (1983a) 369–74; Parise (1990b); Rutter, *HN*³ 2075–94, 2100–6; *SNG Cop. Italy* 1735–64). The tripod refers to the importance of the cult of the Pythian Apollo, alluded to more specifically on C5l types (*infra*). For Apollo Pythios at Kroton: Iambl. *VP*, 28.9–10, 35.261, discussed by Maddoli (1983) 336. A variant type with a flying eagle on the *rev.* (Stazio (1983a) 375–77; Rutter, *HN*³ 2095, 2108; *SNG Cop. Italy* 1765–69) is either an “alliance” or “dominion” coin (unknown alliance city; Kraay (1976) 168 suggests Hipponion) or a reference to Zeus at Kroton or to special ties between Kroton and Olympia—an interpretation perhaps supported by later issues with a seated eagle on a column (*infra*) (Stazio (1983a) 375–76). The dominion issues (*supra*; Rutter, *HN*³ p. 168) all have the Krotoniate tripod on the *obv.*, with legend φPO whereas the *rev.* type varies: Sybaris (no. 70.II): bull standing r. looking back, legend: ΣY (Rutter, *HN*³ 2098); Pandosia (no. 64): bull standing r. looking back (relief in incuse square), legend:

ΠΑΝΔΟ (Rutter, *HN*³ 2097); Temesa (no. 72): tripod, legend: *TE* also C5 stater, double relief, *obv.* tripod, legend: *TE*; *rev.* helmet, legend *ϕPO* (Gorini (1975) 26–27; Rutter, *HN*³ 2080 with refs.; *SNG Cop. Italy* 1828).

Smaller denominations (triobols, diobols and obols) in double relief were minted from C61 and through the C5; *obv.* tripod; *rev.* a variety of types known from other mints: Pegasos, cuttlefish, hare, cock, crab and wheel (Stazio (1983a) 377–80; Rutter, *HN*³ 2125ff; *SNG Cop. Italy* 1785–94). The issue is explained as denominations used to make up the weight of Krotoniate staters to that of coins minted on other standards, or as politically motivated issues (Stazio (1983a) 381–84; Rutter, *HN*³ p. 170).

The full transition from an incuse to a double-relief coinage took place c.435, at first with the tripod on both *obv.* and *rev.* (Rutter, *HN*³ 2113–19; *SNG Cop. Italy* 1770–72), the *obv.* type later replaced by other types: an eagle seated on an Ionic capital (Stazio (1983a) 384–85; Rutter, *HN*³ 2141; *SNG Cop. Italy* 1775–81); Herakles seated and the legend *OIKISTΑΣ* claiming Herakles as founder of the city (cf. Diod. 4.24.7; Stazio (1983a) 385; Rutter, *HN*³ 2139; *SNG Cop. Italy* 1773–74). The cult of the Pythian Apollo is alluded to in types with Apollo shooting arrows at the Python (Lacroix (1965) 158–61; Rutter, *HN*³ 2140; *SNG Cop. Italy* 1773). By C51 the *ϕ* is replaced by *K* and *O* by *Ω*, with legends *KPO*, *KPOT*, *KPOTON*, *KPOTΩNIATAN*, *KPOTΩNIATAΣ*.

Types on the later issues include *obv.* head of Hera Lakinia, *rev.* seated Herakles (Rutter, *HN*³ 2159; *SNG Cop. Italy* 1800–4), both types reflecting the importance of Kroton in the Italiote League (Stazio (1983a) 390–94). A C4e type with the infant Herakles strangling snakes was also adopted by a number of cities in Asia Minor, reflecting a monetary league or a common use of “Greek fighting Barbarian” symbolism (Stazio (1983a) 391–92; Rutter, *HN*³ 2157; *SNG Cop. Italy* 1804–5). Bronze coinage was introduced c.400 (Stazio (1983a) 394–95; Rutter, *HN*³ 2202ff; *SNG Cop. Italy* 1821–27).

Kroton was the *metropolis* of Kaulonia (no. 55) (Ps.-Skymnos 318–19), founded in C7s, and of Terina (no. 73) (Ps.-Skymnos 306–7), founded at the latest c.460.

57. Kyme (Kymaios) Map 44. Lat. 40.50, long. 14.05. Size of territory: 4. Type: A. The toponym is *Κύμη*, *ῆ* (Thuc. 6.4.5), spelled *Κύμε* on C5f coins (*infra*); the Doric form is *Κύμα* (ML 29 (474)); it is qualified by *τῆς Ἰταλίας* at Diod. 11.51.1 (r474). The city-ethnic is *Κυμαῖος* (C5f coins, *infra*; Diod. 11.51.2 (r474)).

Kyme is called a *polis* in the political sense at Thuc. 6.4.5 (cf. Dion. Hal. *Ant. Rom.* 7.6.4 (rC61)), and it called *polis Hellenis* in the urban sense at Ps.-Skylax 10 (cf. Dion. Hal. *Ant. Rom.* 7.4.1 (rC61); Diod. 12.76.4 (r421)). The internal collective use of the city-ethnic is attested on C5 coins (*infra*). The external collective use is found in Dion. Hal. *Ant. Rom.* 7.4.3 (rC61), Diod. 11.51.2 (r474) and 12.76.4 (r421). The external individual use is found in Paus. 10.12.8 (rHell.).

Kyme was the earliest of the Greek colonies in Italy and Sicily (Strabo 5.4.4). The archaeological evidence indicates Greek settlers at Kyme from c.750–725, which is contemporary with the earliest Greek evidence from Pithekoussai, thus suggesting a first settlement phase contemporary with that site (d’Agostino (1999a) 54, (1999b) 207–11). The city was founded by Euboian Chalkis (no. 365) (Thuc. 6.4.5: *Χαλκιδικὴ πόλις*) or by Chalkis and Eretria (no. 370) (Dion. Hal. *Ant. Rom.* 7.3). According to Strabo 5.4.4, there were two groups of settlers: one led by Hippokles from Euboian Kyme, and one led by Megasthenes from Chalkis.

Kyme’s hinterland was fertile, but the city was a maritime settlement (Dion. Hal. *Ant. Rom.* 7.3.2 (r524/3)). There is a tradition of harbour stations in Kymaian territory, such as Dikaiarcheia, which may have been an *epineion Kymaion* during its early history (Strabo 5.4.6 (rC8–C7?)); however, at this site mineral extraction may also have played a role (cf. Mele (1979) 43–45; and Dikaiarcheia in the list of non-*polis* sites, *supra*). Kymaian territory extended southwards to the site of Parthenope, perhaps originally one of the *epineia* of Kyme (Strabo 5.4.7; cf. Parthenope in the list of non-*polis* sites, *supra*). Neapolis (no. 63) was probably founded as a C5 colony of Kyme. Kymaian territory extended northwards to the river Klanios, the border between the Greek and Etruscan areas of influence (Dion. Hal. *Ant. Rom.* 7.3.3 (r524/3)). The territory comprised c.280 km² (Frederiksen (1984) 68–69 map 2). There is little evidence of sanctuaries in Kymaian territory; however, the Demeter sanctuary on the north-west plateau of Neapolis predates the foundation of this city and may perhaps be taken as evidence of a rural sanctuary in Kymaian territory (E. Greco (1987a) 488–89), and traditions about the travels of Herakles point to rural sanctuaries dedicated to this hero. The cultural influence of Greek Kyme in the Italic regions should not be underestimated, a salient point being the Euboic-Kymaian origin of the Etruscan alphabet. The *political* influence of Kyme in Central Italy was considerable already in C61, as indicated by the embassy sent by Aricia to Kyme asking for help against the Etruscans (Dion. Hal. *Ant. Rom.* 7.5.1).

Numerous military confrontations with non-Greek populations are on record (cf. Mele (1987)): in 524, the city defeated an invading force of Etruscans, Umbrians and Daunians (Dion. Hal. *Ant. Rom.* 7.3); in 504, Kyme successfully supported Aricia and defeated Etruscan forces (Dion. Hal. *Ant. Rom.* 7.5); in 474, Kyme in alliance with Hieron of Syracuse defeated Etruscans in a great naval battle off Kyme (Diod. 11.51; cf. ML 29); and in 421, Kyme fell to the Samnites, who subjected the city to an *exandrapodismos* and resettled it themselves (Diod. 12.76.4), while surviving Kymaians fled to Neapolis (Dion. Hal. *Ant. Rom.* 15.6.5; Lomas (2000) 178).

An alliance with Aricia is attested by Dion. Hal. *Ant. Rom.* 7.5.2 (rC6l). An alliance with Hieron of Syracuse is attested by Diod. 11.51.1, and this alliance defeated Etruscan forces in the great naval battle at Kyme in 474 (Diod. 11.51.2 (r474); cf. ML 29).

Kyme was conquered by Campanians in 421, but although the city was subjected to *exandrapodismos* and resettled with Campanians, Greek culture survived (Diod. 12.76.4; Strabo 5.4.4), and Ps.-Skylax 10 lists Kyme as a *polis Hellenis*.

Exiles during the tyranny of Aristodamos are mentioned at Dion. Hal. *Ant. Rom.* 7.10.4. Sending of envoys is attested at Diod. 11.51.1 (r c.474); reception of envoys is attested at Dion. Hal. *Ant. Rom.* 7.5.1 (rC6l).

According to Dion. Hal. *Ant. Rom.* 7.3.4, Kyme in C6l, during the conflicts with the Etruscans, raised an army of 4,500 foot and 600 horse; the city also possessed a navy at this time (ibid., cf. 7.5.3 for a navy amounting to ten ships). A *hipparches* is mentioned at Dion. Hal. *Ant. Rom.* 7.4.4 (rC6l). A *strategos* is mentioned by Dion. Hal. *Ant. Rom.* 7.5.2 (rC6l).

Information on the C6l constitution and political institutions is found in the account by Dionysios of Halikarnassos of the tyranny of Aristodamos (504–490); this account is influenced by stereotypical perceptions of tyranny (Berve (1967) 160), and it is uncertain to what degree the information on the political organisation of Kyme found in it is historical. With that caveat, it may be noted that according to Dion. Hal. *Ant. Rom.* 7.4.4, Kyme before the rise of Aristodamos was an aristocracy (described as an oligarchy at 7.6.4; Ghinatti (1996) 120–22). Dion. Hal. *Ant. Rom.* 7.4.4–5 refers to a *boule* (cf. 7.5.2), and a *bouleuterion* is mentioned at 7.7.3. The citizen body is depicted as divided into *οἱ δυνατοί* and *ὁ δῆμος* which was *οὐ πολλῶν τιῶν κύριος* (7.4.4–5). At Dion. Hal. *Ant. Rom.* 7.7.3 is a general reference to *οἱ ἐν τέλει*. After the C6l victory over the Etruscans, Aristodamos emerged as *prostates tou demou* (Dion. Hal. *Ant. Rom.* 7.4.5) by *demagogia*, and this implies the existence

of an assembly (cf. 7.5.2 and *ἐκκλησία* at 7.7.5). After a successful command in war against the Etruscans in support of Aricia (7.5–7), Aristodamos launched a *coup d'état* and took power as tyrant, and, according to Dion. Hal. *Ant. Rom.* 7.8.1, carried out a *γῆς ἀναδασμὸς καὶ χρεῶν ἀφαισις* etc. as a stereotypical tyrant. After the overthrow of Aristodamos, the *patrios politeia* was restored (Dion. Hal. *Ant. Rom.* 7.11.4).

Death sentences passed by the C6 aristocracy/oligarchy are mentioned in Dion. Hal. *Ant. Rom.* 7.7.4 (rC6l).

Kyme occupied a high, isolated plateau in the Phlegraian Fields north of Cape Misenum. The settlement was founded on the saddle between the acropolis near the coast and Monte Grillo inland. The Greeks replaced an indigenous settlement, though it is uncertain whether they did so directly or after some hiatus (d'Agostino (1999a) 61). The acropolis and the settlement plateau were fortified from at least C6m, and possibly already from C6e, by a circuit wall built in isodomic ashlar, a double curtain-wall with internal fill (Pagano (1993); d'Agostino (1999b) 208–9). Seawards and eastwards along the Monte Grillo the walls exploited the natural steep slopes; to north and south the plateau was accessible from the hinterland and the wall was strengthened and provided with fortified gates, and probably also with an external ditch along the stretch facing Capuan and Etruscan territories (d'Agostino (1999a) 54; Fratta (2002) 61). The walls enclosed an area of c.80 ha, including the acropolis and part of the Monte Grillo which has revealed some traces of habitation in the Archaic period (Fratta (2002) 68).

There are few urban remains from the Greek period, but it is likely that the agora preceded the Roman *forum* and that the Roman road system followed an earlier Greek system. There is also some evidence of a *diateichisma* wall dividing the western and eastern city quarters (D'Onofrio (2002) 136–40). From the description of Aristodamos' homecoming after the victory at Aricia in 504 (Dion. Hal. *Ant. Rom.* 7.7.1) it is apparent that Kyme had at least two harbours. These were probably located below the acropolis, but any evidence has been obliterated by the Roman harbour structures, by silting and by bradyseisms (Paget (1968) 152–59; Morhauge *et al.* (2002)). Kyme had other harbour facilities in the bay of Misenum (Dion. Hal. *Ant. Rom.* 7.3.2 (r524/3)).

Part of the substructures of the Roman "Temple of Zeus" on the acropolis is from a C5m monumental Greek temple (Burelli and Valenza Mele (1989) 19). The sanctuary of Apollo (Paus. 8.24.5) was located on the lower terrace of the acropolis (cf., however, Clark (1977) 483 n. 8); the only Greek

remains are those of the C5 stereobate of a peripteral temple (Frederiksen (1984) 75). On the south-eastern slope of the acropolis the subterranean galleries, “Cave of the Sibyl”, is at least in part C6–C5, but the function of the structure (an oracular cult, a heroon or tomb) is uncertain (Clark (1977) 484, fig. 1). The only identified sanctuary on the city plateau is an Archaic shrine in the outermost south-western corner of the city, inside the circuit wall, probably a C7 Heraion (Valenza Mele (1977) 500, 524; Pagano (1993) fig. 1.2; Fratta (2002) 49, 69). The epigraphic evidence for a Hera cult at Kyme goes back to c.650; she was possibly an oracular divinity with precedence over Apollo (*IGDGG* no. 14; cf. no. 15).

The cemeteries are of the utmost importance for the study of Kymaian history (Gábrici (1913)). They define the limits of the city from the C8, occupying quite an extensive area already from this period, and with single tombs, among the most ancient, found up to 3 km from the city without evidence of smaller Greek satellite settlements. Rich, aristocratic C8I–C7e tombs show close similarities with aristocratic tombs in Eretria, thus revealing close ties between the two cities in a period not long after the foundation of Kyme (Albore-Livadie (1979)).

Kyme began striking coins c.475. Three weight standards were employed in the early coinage of Kyme, the earliest issues being drachms on the Chalkidian (a single specimen is known) and didrachms on the Euboic–Attic standard (Rutter (1979) 15–16, 91; Rutter, *HN*³ p. 66). The Attic standard most likely derived from Syracuse and may reflect the alliance with Hieron and the establishment of a Syracusan garrison on Pithekoussai in C5f (cf. Strabo 5.4.9; Rutter (1979) 93). Types: *obv.* lion’s scalp flanked on either side by boar’s heads; *rev.* mussel shell; legends: *KYME*, *KYMAION* (Rutter (1979) 9–10; Rutter, *HN*³ 513–14). Shortly after the initial coinage, Kyme adopted the Phokaian standard from Hyele; the same types were employed in the different issues. The heraldic motif was probably an allusion to the temple of Apollo where the Kymaians kept the teeth of the Erymanthian boar killed by Herakles (Paus. 8.24.5; Lacroix (1965) 142–46; Rutter (1979) 9–10; Rutter, *HN*³ 515). The type was revived on C5I issues. The lion’s scalp is above all known as a Samian type and may reflect Samian participation in the settlement at Dikaiarcheia in C6I (see Dikaiarcheia in the list of non-*polis* sites, *supra*). To the same early period are attributed two gold issues: *obv.* female head, or helmet; *rev.* on both, mussel shell (Rutter (1979) 17–18; Rutter, *HN*³ 511–12). Later issues of didrachms: *obv.* lion’s scalp and boar’s heads; *rev.* female head, perhaps a nymph personifying the city (Rutter (1979) 11; Rutter, *HN*³ 520; *SNG*

Cop. Italy 357). Smaller denominations are drachms and obols. The rendering of some *rev.* types reveals Syracusan artistic influence. The most consistent issue has as *obv.* type the female head (Rutter, *HN*³ 521, 528, *SNG Cop. Italy* 358–68). An *obv.* type of Athena with Corinthian helmet is modelled on Corinthian types and must also reflect Syracusan influence (Rutter (1979) 11, 94–95; Rutter, *HN*³ 524; *SNG Cop. Italy* 369). Nearly all series have a mussel shell as *rev.* type, though with different secondary motifs such as a crab—of special interest as evidence of Himeran–Akragantine influence or even of an otherwise unknown alliance (Rutter (1979) 12, 92; Rutter, *HN*³ 524); *rev.* legends: *KYME* or *KYMAION*. After the Samnite occupation of Kyme, c.430–420, the mint was closed and minting for Kyme and other Kampanian cities was transferred to Neapolis, where coins continued to be struck in the name of Kyme (Rutter (1979) 8–41, 91–96).

A public festival is attested for C6I in Dion. Hal. *Ant. Rom.* 7.11.3. The numismatic evidence (*supra*) suggests cults of Athena, Herakles and Apollo, and possibly the nymph Kyme. Communal oracle consultation in C5e is implied by Ps.-Skymnos 243.

According to Thuc. 6.4.5, *leistai* from Kyme were the original settlers of Zankle (no. 51). Neapolis (no. 63) was probably a C5 foundation of Kyme (Strabo 5.4.7).

58. Laos (La(w)inos) Map 46. Lat. 39.45, long. 15.50. Size of territory: 2 (?). Type: [A]. The toponym is *Λᾶος* (Hdt. 6.21.1; Strabo 6.1.1; Ps.-Skylax 12 (emended, *infra*)). The city-ethnic is *Λαῖνός* or *Λαῖνός* (C6I coins, *infra*).

In Ps.-Skylax 12, under the heading πόλεις Ἑλληνίδες αἰῶε, the text [Ἐλαὰ Θουρίων ἀποικία] has been emended to read: Ἐλέα, Λᾶος Θουρίων ἀποικία; if the emendation is accepted, Laos is here classified as a *polis* type [A] in the urban sense as well as an *apoikia*. After the defeat of Sybaris by Kroton in 510 but before 494 (Hdt. 6.21.1), refugee Sybarites settled at Laos (a Sybarite colony: Strabo 6.1.1 and *infra*), being τῆς πόλιος ἀπεστερημένοι; whether this implies *polis* status for Laos is uncertain. *Polis* in the urban sense is found in Diod. 14.101.3 (r390). The internal collective use of the city-ethnic is found on C4I bronze coins (*infra*); earlier legends employ the nominative singular of the city-ethnic (Guarducci, *EG* II: 618).

Laos was a colony of Sybaris (no. 70.I) (Strabo 6.1.1; see further below on coinage) and refugee Sybarites settled there (and at Skidros) after the Krotoniate defeat of Sybaris in 510 (Hdt. 6.21.1). If correctly emended, Ps.-Skylax 12 (*supra*) describes Laos as a colony of Thourioi (no. 74); the

text may confuse Thourioi with Sybaris, or it may refer to a C5s refoundation of Laos by Thourioi or more generally to Thourian influence at Laos. The date of foundation is unknown; the *terminus ante quem* for the existence of the Greek community is c.510, when it commenced minting (*infra*). Prior to 510, Laos may have been an Oinotrian community dependent upon Sybaris and subsequently, from C6l to C5f, a mixed Oinotrian-Greek settlement.

The size of the territory of C6 Laos amounted to c.100 km² when calculated on the basis of the deserted indigenous settlements and of Sybarite influence in the territory from Orsomarso to Grisolia (bordering on the territory of Kerilloi) and including some of the territory on the right bank of the river Lao (E. Greco (1995a)).

Diod. 14.101.3 (r390) seems to describe Laos as a Leukanian settlement, and so Laos may have been conquered by the Leukanians in C5l. The city, however, seems not to have lost its Greek identity completely, and the C4 Leukanian town was mixed Greek and non-Greek (E. Greco and Schnapp (1989) 45–46); if correctly emended, Ps.-Skylax 12 (*supra*) lists Laos under the heading *poleis Hellenides*, and the city issued C4s bronze coins inscribed *ΛΑΙΝΩΝ* and with both Greek and Leukanian magistrates' names (*infra*).

The site of the Archaic city is unknown, but it is here taken for granted that Archaic-C5 Laos was located in the vicinity (E. Greco and Schnapp (1989) 49–51) of C4 Leukanian Laos (*infra*). According to Strabo 6.1.1, Laos was a river and a *polis* a short distance from Hylee on the Tyrrhenian coast, but this reference may be to the C4 site, even though Strabo describes it as a colony of Sybaris (cf. E. Greco and Schnapp (1989) 51; Caruso (1977)). C4 Laos has been identified with the settlement on the hill of S. Maria del Cedro, c.3 km to the south of the estuary of the river Lao (E. Greco (1995a); E. Greco, Luppino and Schnapp (1989)). The desertion of the C6 indigenous settlements in the hinterland of Laos was probably the result of Sybarite expansion, and the “heroon of Drakon” (Strabo 6.1.1) may reflect Greek control over the territory, though the source is late (E. Greco and Schnapp (1989); E. Greco (1995a) 71–73). The urban site excavated on the Marcellina hill has *not* (yet) revealed remains earlier than C4s (E. Greco and Schnapp (1989) 51), and so the history of the Greek city is known primarily from the literary sources and from the numismatic evidence. Diod. 14.101.3 (r390) suggests that Laos was fortified.

Laos initiated coinage c.510 with issues of incuse staters, drachms and triobols on the Achaian standard (Rutter, *HN*³ p. 176); the types were based upon the Sybarite bull type with

some variations: *obv.* man-headed bull looking back (river personification), legend: *ΛΑΦΙ*, *rev.* same type but incuse, and *obv.* legend completed by *ΝΟΞ* (retr.), i.e. *ΛαΦίως* (the city-ethnic (Guarducci, *EG* ii. 618) and not the locality Laino, as suggested by Zancani Montuoro (1949); Sternberg (1973); Gorini (1975) 13; Rutter, *HN*³ 2270–72; *SNG Cop. Italy* 1145). Double-relief staters and triobols dating to c.475–450 have *obv.* man-headed bull looking back and acorn in exergue, legend: *ΛΑΙ*; *rev.* similar but no acorn (Sternberg (1973); Rutter, *HN*³ 2275–76; *SNG Cop. Italy* 1146–49); an issue of triobols and smaller issues carries acorn as *rev.* type (Rutter, *HN*³ 2278–81). The acorn is a type on the triobols of Sybaris (no. 70.III); see further Rutter (1997) 43 for connections between the coinages of Sybaris and Laos. An issue of drachms and triobols is dated after 453: *obv.* man-faced bull, legend *ΛΑΙ*, *rev.* similar (Rutter, *HN*³ 2286–88). These types cease in C5m—that is, c.50 years before the Leukanian occupation. A punch with the type of Sybaris has been found at Laos (unpublished). In C4l, Laos, now a mixed Leukanian–Greek community, issued bronze coins inscribed *ΛΑ*, *ΛΑΙΝΩΝ* and with magistrates names (Cantilena (1989); Rutter, *HN*³ 2289ff; *SNG Cop. Italy* 1150–51, 1155–57).

A series of C6l double-relief staters have types: *obv.* Krotoniate tripod and legend *ΣΥ*; *rev.* bull looking back, legend *ΛΑΙ* (Gorini (1975) 26; Rutter, *HN*³ 2273). These are attributed by Kraay to Sybaris (no. 70.II), the Krotoniate tripod revealing the status of Sybaris (no. 70.II) as within the political sphere of Kroton though partly maintaining its own influence on Laos (Kraay (1958) 35; Parise (1982) 106–7; cf. Cantilena (1989) 32, who sustains the attribution to Laos). An issue of diobols (Rutter, *HN*³ 2284–85) may be an “alliance coinage” reflecting Laos’ participation in the refounding of Sybaris (no. 70.III) in 453.

59. Lokroi (Lokros) Map 46. Lat. 38.15, long. 16.15. Size of territory: 3 (cf. *infra*). Type: A. The toponym is *Λοκροί, οί* (Hdt. 6.23.1; Thuc. 6.44.2; *IG* IV².1 95.41 (356/5); Ps.-Skylax 13), qualified by (*οί*) *Ἐπιζεφύριοι* at Hdt. 6.23.1, possibly by Hecat. fr. 83 *apud* Steph. Byz. 419.3, and by Thuc. 7.1.1; at Pl. *Tim.* 20A, *Λοκρίς* is possibly the toponym (so *RE* vii.2. 1304). The city-ethnic is *Λοκρός* (*IvO* 144.1 (c.472); Thuc. 4.1.2; Pl. *Leg.* 638B), qualified by *Ζεφύριος* at Pind. *Ol.* 10.13, 11.15; by *ἀπὸ Ζεφυρίου* in *IvO* 144 (472); and by *οί Ἐπιζεφύριοι* at Arist. *Pol.* 1274^a22. On onomastics, see further Niutta (1977) 257–58.

Lokroi is called a *polis* in the political sense at Pind. *Ol.* 10.13, 98; Pl. *Tim.* 20A, *Leg.* 638B; Dem. 24.139, and *I.Locri* 1.1,

etc. (C4m–C3m); and in the urban sense at Thuc. 7.35.2 and Ps.-Skylax 13, where Lokroi is the first toponym listed after the heading *πόλεις εἰσὶν αἷδε*. A *Λοκρῶν πολιτεία* was included in the Aristotelian collection of 158 *politeia* (fr. 547–48, Rose; Heracl. Lemb. 60); *πολιτεύεσθαι* is found in Arist. *Pol.* 1273^b31, 1274^a22. *Patris* is found in *SEG* 29 951 (C4; *CEG* II 835).

The internal collective use of the city-ethnic is found on C4s coins (*infra*) and in *I.Locri* 9.5 (C4m–C3m); the external collective use is found in *SEG* II 1211 (525–500), cf. Lombardo (1989) 429; *SEG* 24 304–5 (C6–C5), 311–12 (c.480s); Thuc. 3.115.6, 4.1.2; Arist. *Pol.* 1274^a22, 1307^a38. The external individual use is found in *IvO* 144.1, 3 (c.472); *IG* II² 3052 (328/7) and Timaios (*FGrHist* 566) fr. 43.

Lokroi was founded by Lokrians, but already in antiquity it was debated whether the founders had been West or East Lokrians (Ephor. fr. 138 *apud* Strabo 6.1.7; Ps.-Skymnos 312–16). The colonists first settled at Cape Zephyrion (modern Capo Bruzzano), but a few years later they moved to a permanent site at the “hill of Epopis” with the co-operation of Syracusans and possibly of others (Strabo 6.1.7); the passage in Strabo is corrupt, and it is uncertain whether he named others as participating in the relocation; however, Tarentines may have participated, and Pausanias’ statement (3.3.1) that Lokroi was a Lakedaimonian foundation may be a reflection of (alleged) Tarantine participation (cf. Sourvinou-Inwood (1974) 189; Van Compernelle (1992) 762–63; see further Bérard (1957) 199–209 and Niutta (1977) 260–61). According to Strabo 6.1.7, the foundation took place a little after the foundation of Kroton (710) and Syracuse (733), and according to Polyb. 12.6b.9 at the time of the First Messenian War (c.735–717); according to Eusebios at the time of Olympiad 25.1 or 26.4 (679/8 or 673/2). A foundation in the first decades of C7 is now confirmed by archaeological evidence (survey: Sabbione (1982) 277–93). Perhaps as early as C6m a foundation legend modelled upon that of Taras was in existence; it is discussed by Sourvinou-Inwood (1974).

The name of the territory was *ἡ Λοκρίς* (Thuc. 3.99, 103.3). The southern border between the territories of Lokroi and Rhegion (no. 68) was marked by the river Halex (modern Galati) (Strabo 6.1.9; according to Paus. 6.6.4 by the river Kaikinos; cf. Costabile (1992) 166–68). The river Sagra, theatre of the C6 battle between Lokroi and Kroton (no. 56) (Strabo 6.1.10), separated Lokrian from Kaulonian territory; the Sagra is identified with the modern river Allaro near Kaulonia (no. 55) or with the modern river Torbido near Gioiosa Ionica (Osanna (1992) 214, 222 n. 47).

The *chora* of Lokroi comprised at first only the c.110 km² coastal plain within the line of foothills of the Sila mountains, although for the moment there is a lack of agrarian structures from the Archaic period that might be associated with Lokroi (Sabbione (1982) 293–97; Osanna (1992) 205–7). Lokrian territory soon extended to the borders of Rhegion and Kaulonia, and by C71–C6e Lokrian dominion extended to the Ionian Sea, where Medma (no. 60), Metauros (no. 62) and Hipponion (no. 53) were founded (Musti (1976) 108–20; Cordiano (1995b) 88–91; and the respective entries). In 389 Dionysios I of Syracuse handed over to Lokroi the territory of Kaulonia, whose inhabitants had been relocated to Syracuse (no. 47; Diod. 14.106.3); in 388 the inhabitants of Hipponion were relocated to Syracuse, and its territory handed over to Lokroi (Diod. 14.107.2); Skyllation was also handed over to Lokroi (Strabo 6.1.10), and Medma may also have been given to Lokroi (*RE* xiii.2. 1333). Hipponion was lost again in 379 (Diod. 15.24); and Kaulonia seems to have been refounded c.357 by Dionysios II of Syracuse, as may be inferred from Diod. 16.10.2 and 11.3 (cf. Plut. *Dio* 26.7). A C4m war with the Leukanians is reported in Just. *Epit.* 31.3.3. A *kome* in Lokrian territory is very likely referred to in *FGrHist* 577, fr. 2.10 (r427/6). A *peripolion*, i.e. military fortress in the territory, is mentioned in Thuc. 3.99.

A C6 alliance with Siris (no. 69) is reported by Just. *Epit.* 20.2.10, and a C6 alliance with Rhegion (no. 68) by Strabo 6.1.10. An alliance with Syracuse is attested by Thuc. 3.86.2. A treaty was concluded with Athens (no. 361) in 422 (Thuc. 5.5.2–3); a treaty with Sparta (no. 345) in 411 is indicated by Thuc. 8.91.1, which attests to Lokrian naval forces serving with the Peloponnesians. After the congress of Gela in 424, Lokroi sent *epoikoi* to Sicilian Messana (no. 51), which was experiencing a *stasis* at that point, one faction inviting the Lokrians; the *epoikoi* were, however, soon expelled, but during their residence Messana was dependent on Lokroi (Thuc. 5.5.1). In 396, 1,000 Lokrians were relocated by Dionysios I of Syracuse to Sicilian Messana (Diod. 14.78.5).

The existence of a Lokrian navy is attested by Thuc. 4.1.2 (ten ships), 8.91.1, and Diod. 12.54.4 (r427) (five ships). A contingent of 300 soldiers is mentioned at Thuc. 3.103.3. Late sources report 15,000 (Just. *Epit.* 20.3.4) or 10,000 (Strabo 6.1.10) Lokrian troops as having fought in the C6 battle at the Sagra. *Polemarchoi* are attested in the Lokroi Tables (*I.Locri* 21.5 (C4m–C3m)).

Sending of envoys is attested in Diod. 8.32.1 (rC6); reception of envoys is attested in Diod. 14.44.6 (r398). *F.Delphes* III.1 176 (prior to 280) is a grant of proxeny etc. by Delphi (no. 177) to a man described as *Λοκρὸς ἐκ τῶν*

Ἐπι[ξε]φυρίων Ἴππωνιεύς (on which see further Hipponion (no. 53)). A citizen of Lokroi served as Epidaurian *theorodokos* in 356/5 (IG IV².1 95.41).

A system of three *phylai*, each subdivided into ten or eleven demes, is attested by the C4m–C3m Lokrian Tables (Jones, *POAG* 168–69). This system was used to fill boards of officials comprising three members (Jones, *POAG* 169); the eponymous magistracy rotated among the *phylai* (Jones, *POAG* 170). The existence of *phatrai* is implied by the existence of a magistrate styled *φάταρχος* (De Franciscis (1972) *tab.* 22; Costabile (1992) 212).

The constitution of Lokroi prior to the tyranny of Dionysios II (*infra*) is described as an aristocracy in Arist. *Pol.* 1307^a34ff. According to Polyb. 12.5.6–7, nobility was conditional upon being a descendant of the women who had belonged to the “100 houses” of the founding Lokrians. In addition to some unspecified *archontes*, Polyb. 12.16.6 mentions the office of *κοσμόπολις*, who seems to have been the chief magistrate at the time referred to (Walbank, *HCP ad loc.*); at Polyb. 12.16.10 is a reference to the “1,000”, presumably the council (Walbank, *HCP ad loc.*) or the assembly; since *βωλά* was the name of the council in C4s (*infra*) and *δάμος* that of the assembly in democratic Lokroi (*infra*), Polybios’ information presumably refers to the aristocratic constitution. A *gerousia* seems to be indicated by Porph. *Vita Pythagorae* 56 (rC6l), but see *RE* xiii.2. 1347. A differentiated system of officials for this period is indicated by Pl. *Tim.* 20A. *Nomophylakes* are attested in Stob. 4.2.19. In 356, when Dionysios II was expelled from Syracuse, he found refuge in Lokroi (Just. *Epit.* 21.2.9); in 352 he became tyrant and ruled Lokroi for six years (Just. *Epit.* 21.3.9; *RE* xiii.2. 1335). In 346, the Locrians expelled Dionysios, and a severe *stasis* broke out, which led to the establishment of a more democratic constitution (Arist. *Pol.* 1307^a38; Strabo 6.1.8; Berger (1992) 27), which is reflected in the Lokrian Tables (*infra*), e.g. in the formula *ἔδοξε τῶι βωλῶι καὶ τῶι δάμωι* (*I.Locri* 4.7, etc. (C4m–C3m)).

Ephor. fr. 138 (cf. Strabo 6.1.8) states that tradition held the Lokrians to have been the earliest community to employ written laws. The reference is to the code of Zaleukos, who was *nomothetes* at Lokroi according to Arist. *Pol.* 1274^a22 (cf. Iambl. *VP* 130, 172) and whose activity is dated to not long after the foundation of the city (Gagarin (1986) 129–30 n. 27). Civic turmoil is reported to have preceded the legal code of Zaleukos (Arist. fr. 555; Gagarin (1986) 58–59). A law, presumably of C4 (cf. *νόμος ἐστὶ*), regulated the conditions under which landed property could be alienated (Arist. *Pol.* 1266^b19–21).

After the constitutional reforms of the 340s, the eponymous official was an *archon* (see *SEG* 30 1172; *I.Locri* 1.1, etc. (C4m–C3m)). A *βωλά* is mentioned in *I.Locri* 1.2, etc. (C4m–C3m). The following boards of officials are attested (all C4m–C3m): *ἐπισκευαστῆρες* (*I.Locri* 21.2), *ἐπιστάται* (*I.Locri* 3.13), *ἱερομνάμονες* (*I.Locri* 2.1), *λογιστῆρες* (*I.Locri* 32.7), *πρόβωλοι* (*I.Locri* 2.3), *πρόδικοι* (*I.Locri* 2.5) and *τοιχοποιοί* (*I.Locri* 3.8). A *φάταρχος* is mentioned in *I.Locri* 8.6 and a *θευκόλος* in *I.Locri* 21.6 (both C4m–C3m). Whether the *βασιλεύς* mentioned in *I.Locri* 1.2, etc. (C4m–C3m) was a civic magistracy is unresolved (*SEG* 45 1443). Decrees of the assembly are referred to in *I.Locri* 2.7, 9, 10, etc. (C4m–C3m). A probouleutic procedure is indicated by the formula *δόγματι βωλῶς καὶ δάμω* (*I.Locri* 2.7, 9, 10, etc. (C4m–C3m)) or *ἔδοξε τῶι βωλῶι καὶ τῶι δάμωι* (*I.Locri* 4.7, etc. (C4m–C3m)).

The literary tradition mentions a first settlement of Lokrians at Cape Zephyrion, but as yet there is no archaeological evidence for such a settlement (Van Compernelle (1992)). After a few years the colonists relocated to the historical site of Lokroi, with evidence of Greek settlers from c.700, which fits Strabo’s chronology (6.1.7) but is earlier than the Eusebian foundation date (Van Compernelle (1992)). According to Foti (1976) 358 there is evidence of indigenous “cohabitation” with the Greek settlers, reflecting the tradition of a period of peaceful co-existence found in Polyb. 12.5.10 (Sabbione (1982) 277–98). Lokroi was not, therefore, founded on virgin soil, but on the site of an indigenous community (*RE* xiii.2. 1310); C8l contacts between the indigenous population and Greeks are attested by ceramic evidence (Sabbione (1982) 279). The city was founded on the slopes of a mountain ridge, the hill of Epopis according to Strabo 6.1.7, with three peaks Mannella, Abbadessa and Castellace (Foti (1976) pl. 27; survey of site: Costamagna and Sabbione (1990)), incorporating the coastal plain between the Portigliola and Ficareto river valleys. It must have had harbour facilities, now possibly identified on the Ficareto estuary (*infra*).

The 7 km circuit wall (overall plan in Costabile (1992) 36, pl. 13) encircled a vast area of c.240 ha, of which the area south of the “Dromos” comprises c.80 ha. The upper part of the city, though enclosed by the circuit wall, is morphologically irregular and not readily accessible for habitation. The extant wall is mainly Hellenistic, but stretches of it use earlier, C6 elements in their structure, particularly in the areas of Centocamere and of the Marasà sanctuary (Barra Bagnasco (2000) 11–12, 30); lengths of isodomic structure are dated to C5m–C4m, whereas the curtain-wall in ashlar strengthened

with towers is dated to C_{4m}–C_{3e} (Foti (1976) 346–49; cf. De Franciscis (1972) 163–69 on *pyrgopoiia* in the Lokrian Tables). A siege is reported for C_{4m} by Strabo 6.1.8. The vast area encircled by the circuit wall was never fully urbanised. The main zones of habitation comprised the two main urban complexes on the lower plain inside the city wall and the habitation area “Caruso” in the upper part of the city, where the theatre was also located—possibly in the vicinity of an (unidentified) agora (*infra*). The “Dromos”, a road of ancient origin apparently preserving the ancient name, divided the city into an upper and a lower part. Extensive habitation areas have been excavated south of the “Dromos”: to the west, the so-called Centocamere with several *insulae* and a regular, orthogonal layout, and to the east, the *insulae* near the Marasà sanctuary. The evidence points to a C_{5e} origin, and to two later, C₃ phases (for the extensive excavations of the lower city, see Barra Bagnasca (1977), (1989*a, b, c*)). Habitation extended up the slopes north of the “Dromos” (Osanna (1992) 218, fig. 16). The orientation of the *insulae* (lengthwise following the slope, the short side facing the sea) facilitated drainage.

To the south and nearer the coast—separated from the habitation area of Centocamere by a 14 m-wide *plateia*—*insulae* of irregular shape and various systems of drainage, basins and kilns have revealed an industrial and artisan quarter, primarily of C₄ (Barra Bagnasco (1976) 380–82, pl. 35: H₁–H₃, 403–4). This area between the city wall and the *plateia* of the city to the north seems not to have been occupied in the Archaic period, apart from single stoas and the monumental gate; a mercantile agora related to the sea and harbour was situated here in this period (Osanna (1992) 215).

The chronological framework of the development of urbanisation is not very clear, but there is testimony of a C_{6m} orthogonal urban organisation of the area between the theatre and the sea, and of the monumentalisation of the sanctuaries of Stoà ad U (*infra*), Marasà Sud, Marasà and Marafioti, a culminating point of urban development—reflected also in the territorial expansion in this period (Barra Bagnasco (1996*a*); Parra (1998) 314).

The C₆ circuit wall separated the habitation area from the coast, but gates—with monumental drainage conduits—sanctuaries and harbour facilities (cf. Thuc. 6.44.2; 7.25.2) outside the city wall were all part of an early, integrated urban layout (Barra Bagnasco (2000)).

The richly decorated house and a votive deposit located outside the sanctuary of Aphrodite of Marasà Sud has been interpreted as a *hestiaterion* or a *prytaneion* (Barra Bagnasco

(1996*a*) 57; cf. however, Barra Bagnasco (1996*b*) 28–29 identifying it as a sanctuary of Adonis-Aphrodite). The theatre, situated in the upper part of the city, was built originally in C_{4m}, but since it was rebuilt in later periods, its seating capacity of c.4,500 can only tentatively be assumed for the original phase (Parra (1977–78), (1998)). It may have served democratic assemblies as well (Costabile (1992) 322 n. 11).

Several sanctuaries were scattered across the upper parts of the city and in the lowland areas, primarily in the vicinity of the circuit wall (surveys: Torelli (1976); Zuntz (1971) 158–73). The “Casa Marafioti” Doric temple of 540–530, with remains limited to parts of the foundation and foundation trenches (Orsi (1911*a*) 27–41, 49–62), was situated inside the circuit wall on a spur near the theatre and agora(?), and was part of a larger *temenos* overlooking the lower city (for an agora(?), theatre and *temenos*: Parra (1998) 311–12); the dedicatee of the sanctuary has been identified as Zeus Olympios (which is not accepted unanimously) on the basis of the Olympieion archive found in the vicinity (De Franciscis (1972); SEG 29 950; Costabile (1992)). Votive deposits found near the theatre attest to cults of Athena, Artemis, Persephone, Dionysos and a local hero (Parra (1998) 315–17). The sanctuary of Persephone, and of Demeter and Aphrodite(?), at Mannella, probably “the most famous Persephone sanctuary in Italy” mentioned by Diodorus (23.4.3 (r205)), is located north of the city, outside the city wall in the Mannella valley (see Torelli (1976) 158 n. 16 with refs.; Hinz (1998) 203–6). The sanctuary is above all known from the votive *pinakes* with the cultic representations of the rape of Persephone, *Hieros Gamos*, sacrificial scenes, etc. (Prückner (1968); Sabbione (1996)). An Athena sanctuary with a simple *naiskos* of uncertain date lies inside the circuit wall at the top of the Mannella hill, which may have formed the acropolis of the city (Orsi (1909) 323; (1911*a*) 62). The location could indicate a sanctuary of Athena Polias, but the votive terracottas show Athena primarily as a Promachos. The monumental C₅ Ionic temple, placed within a larger *temenos* in the Marasà area in the lower city, can be traced back to C₇ (De Franciscis (1979); Gullini (1976) 411–36). It has without strong evidence been attributed to Aphrodite (Prückner (1968) 12), but the possible origin of the Ludovisi throne in the sanctuary may support this identification. In the area of the Centocamere, south of the circuit wall, a series of *oikoi* were laid out so as to form a U-shaped structure (conventionally called Stoà ad U); they formed a single sacred structure, built in C_{7e} with two short wings which were prolonged and enlarged in C_{6m}, on either side of a central space. In the open space inside the wings of the stoa

371 *bothroi* with remains of sacred meals and some votive material indicate cult activity; C4 graffiti suggest that the sanctuary was dedicated to Aphrodite (Torelli (1976) 147–56; cf. Musti (1976) 65–70). A bronze phiale from the Olympieion sanctuary with a dedication to Aphrodite may refer to this or to the Marasà sanctuary (Costabile (1992) 97–101, 113). Twenty single square rooms laid out along the south side of the circuit wall, with yet another complex further to the south, are probably part of this extensive C4 sanctuary complex (Barra Bagnasco (1976) 379–80, pl. 35, “S1–S2”). An extra-mural sanctuary with remains of a C6l–C5 cult building north-east of the Stoà ad U and south of the circuit wall (Barra Bagnasco (1990*b*), (1996*b*) 28–30) is attributed to Aphrodite on the basis of dedicatory graffiti and a C5f votive inscription (Barra Bagnasco and Pugliese Carratelli (1990)), and the cult is therefore to be seen in conjunction with the Stoà ad U and the Marasà sanctuary. Votive deposits discovered outside the city by the main route to the eastern cemetery attest a C5–C4 cult of Zeus (Barra Bagnasco (1996*c*)) and a sanctuary of Demeter, probably a Thesmophorion, delimited by a *temenos* wall outside the south-eastern corner of the city wall was in use from C6s (Grattarola (1994); Milanesio (1996); Hinz (1998) 206–8).

The cemeteries are located mainly in the middle and lower plain encircling the city at the localities of Vallone di Canale, Contrada Lucifero (with 1,676 tombs, primarily C6: Orsi (1909) 319, (1913)), Monaci (with Greek material from C8l–C7e); Parapezza and Tribona (Foti (1976) 359–61; Osanna (1992)).

The patron divinity was presumably Athena, who appeared to Zaleukos in a dream to give him his laws (Arist. fr. 555). A local calendar is attested by the Lokrian Tables, which name twelve months and attest to an intercalary month (see Niutta (1977) 266).

Communal oracle consultation is reported by Arist. fr. 555 and Aristox. fr. 117, Wehrli. Several citizens of Lokroi won Olympic victories: Euthykses in 488 (*Olympionikai* 180 (pentathlon)), Euthymos in 484, 476 and 472 (*Olympionikai* 191, 214, 227 (boxing)), Hagesidamos in 476 (*Olympionikai* 218 (boys' boxing)) and Keton in 448 (*Olympionikai* 297 (pentathlon)). Eunomos won a Pythian victory in a musical contest (Timaeus (*FGrHist* 566) fr. 43). A communal dedication of 525–500 (cf. Lombardo (1989) 429) with Hipponion (no. 53) and Medma (no. 60) at Olympia commemorates a victory over Kroton (no. 56) (*SEG* 11 1211). Paus. 6.19.6 mentions an Archaic communal dedication of a boxwood image of Apollo, possibly in commemoration of the battle of the Sagra (*LSAG* 286). De La Genière suggests that the archi-

tectural remains of the so-called “Monoptoros of the Sikyonians” at Delphi are the remains of a Lokrian treasury (de La Genière (1986); Griffin (1982) 108 too is very doubtful about the traditional attribution of this building to Sikyon). The evidence, mainly iconographic, for a Western Greek origin of this treasury is strong, though the Lokrian candidature must remain hypothetical.

Lokroi did not strike its own coins until C4; the start of minting is dated with some uncertainty to 375–350 (survey of Lokrian mint: Pozzi Paolini (1976)). Staters and drachms with Corinthian types and on the Corinthian standard were issued from before C4m to C3e, revealing strong ties with eastern Sicily: *obv.* Pegasos; *rev.* head of Athena in Corinthian helmet, legends: *Α, ΑΟ, ΑΟΚ, ΑΟΚΡΩΝ* (Pozzi Paolini (1976) 221–33; Rutter, *HN*³ 2336ff; *SNG Cop. Italy* 1868–70). A contemporary issue of staters on an Italic standard has *obv.* head of Zeus, legend: *ΖΕΥΣ*; *rev.* seated Eirene, legend: *ΕΙΡΕΝΕ* (Pozzi Paolini (1976) 242–47; Rutter, *HN*³ 2310); this was followed *c.*C4m by an issue of staters with *obv.* head of Zeus with unkempt hair and beard, legend: *ΑΟΚΡΩΝ*; *rev.* eagle devouring hare, both types with many variants (Pozzi Paolini (1976) 247–52; Rutter, *HN*³ 2311ff; *SNG Cop. Italy* 1858–59, 1861–62). Later issues have *obv.* eagle devouring hare; *rev.* thunderbolt with different symbols and legend: *ΑΟΚΡΩΝ* (Pozzi Paolini (1976) 255–61; Rutter, *HN*³ 2318; *SNG Cop. Italy* 1865–66). Lower denominations are triobols, diobols and obols (Pozzi Paolini (1976) 267–73; Rutter, *HN*³ 2329ff; *SNG Cop. Italy* 1860). The Lokrian Zeus type may reflect the Syracusan Zeus Eleutherios (*supra*; cf. also Cutroni Tusa (1993–94) 478–79 for Lokrian–Syracusan contacts). At the time of Alexander the Molossian or Pyrrhos, Lokroi also issued a gold coinage, denomination one-tenth of a gold stater on the Attic standard: *obv.* head of eagle, legend: *ΑΟ*; *rev.* winged thunderbolt (Pozzi Paolini (1976) 279–84; Rutter, *HN*³ 2345; *SNG Cop. Italy* 1857).

A unique tetradrachm on the Euboic–Attic standard has *obv.* biga of mules driven by a charioteer crowned by Nike, legend: *ΑΟ*; *rev.* running hare. It has been interpreted as a Messanian–Lokrian alliance coinage of 425 (cf. Thuc. 5.5.1), but see Pozzi Paolini (1976) 218–20 for typological and technical anomalies.

Bronze coinage commenced *c.*350; C4s types show mainly Zeus and Athena, C3e also Persephone, Apollo and Herakles (Pozzi Paolini (1976) 284–96; Rutter, *HN*³ 2353ff; *SNG Cop. Italy* 1871–98).

Lokroi was the *metropolis* of Hipponion (no. 53) and Medma (no. 60) (Thuc. 5.5.3; cf. Hornblower (1996) 434–35);

the former founded in C7l, the latter in C7 (see further the entries for these two cities). According to Steph. Byz. 437.3, Metauros (no. 62) was also a Lokrian foundation; see further the entry for this city.

60. Medma (Medmaios) Map 46. Lat. 38.30, long. 16.00. Size of territory: 2. Type: [A]. The toponym is *Μέδμη, ἡ* in Hecat. fr. 81 *apud* Steph. Byz. 440.5; Ps.-Skylax 12 and C4 coins (*infra*) have *Μέσμα*; Ps.-Skymnos has *Μέδμα* and Strabo 6.1.5 has *Μέδαμα, ἡ*. The city-ethnic is *Μεδμαῖος* in SEG 11 1211 (525–500) and presumably at Thuc. 5.5.3, where the MSS give *Μελαῖοι*, which is commonly and probably correctly emended to *Μεδμαῖοι* (Hornblower (1996) 434–35); *Μεσμαῖος* is found on C4 coins (*infra*).

Mesma is one of ten toponyms listed at Ps.-Skylax 12 after the heading *πόλεις εἰσὶν Ἑλληνίδες αἰδε*, where *polis* is used in the urban sense. Thuc. 5.5.3 describes the Medmaians as *apoikoi* of Lokroi Epizephyrioi. The internal collective use of the city-ethnic is found on C4 coins (*infra*); the external collective use is found in SEG 11 1211 (525–500), Thuc. 5.5.3 (*supra*), and Diod. 14.78.5 (r396). The external individual use has been restored in Hermodorus, *De Platone* fr. C.III.35, Lasserre (rC4–C3) (cf. Steph. Byz. 440.7 with Settis (1965) 131; Philippos of Opous (*FGrHist* 1011) fr. 1; Test. 5 and fr. 15b, Lasserre).

Medma was a foundation of Lokroi (no. 59; Thuc. 5.5.3; Ps.-Skymnos 308; Strabo 6.1.5), bordering on Lokroi itself (Thuc. 5.5.3, *supra*). Archaeological evidence points to a foundation in C7 (Paoletti (1981b) 147). The scanty evidence shows very varied relations with the *metropolis*: (a) SEG 11 1211 (525–500) is a dedication by Hipponion (no. 53), also a Lokrian colony, Medma and Lokroi (cf. Lombardo (1989) 429) of spoils taken from Kroton (no. 56) and thus a testimony to an alliance between colony and *metropolis*; (b) Thuc. 5.5.3 (*supra*) attests to a war between Lokroi and its two neighbouring colonies Medma and Hipponion c.422. See further Hipponion (no. 53).

The foundation of Medma (and Hipponion) was the result of Lokrian expansion across the Aspromonte through the Métramo valley to gain access to the Tyrrhenian Sea by circumventing Rhegion (no. 68) and Messana (no. 51) at the straits (Bérard (1957) 209–10; Settis (1965) 121–22). As a result of Lokrian expansion, the Chalkidian (Zanklaian) site of Metauros on the Tyrrhenian coast near Medma came under Lokrian influence or even occupation (see Metauros (no. 62)). For the chronology of the Lokrian expansion there is useful evidence from local indigenous sites, such as that from Torre Galli, where the cemetery reveals Greek influ-

ence C7l–C6m, which probably coincides with the foundation of Medma and Hipponion (Guzzo (1982b) 250). Studies in the hinterland of Medma have revealed Greek influence from C7l (Cantarelli (1974–75) 34–37). The *chora* of Medma was the Rosarno valley and the lower slopes of the Aspromonte, the crest of these hills dividing Medma from Lokrian territory; in all, the territory measured c.100 km². According to Strabo 6.1.5, Medma had a harbour named *Emporion*, the location of which is uncertain (Settis (1989)), though some locate it at Nicotera (cf. Pontrandolfo (1993)).

An alliance between Lokroi (cf. Lombardo (1989) 429), Hipponion and Medma is attested by SEG 11 1211 (525–500), a joint dedication by these cities at Olympia of spoils taken from Kroton (Settis (1965) 122). Some kind of treaty with or dependency upon Kroton is probably indicated by C5e Krotoniate coinage with the legend *ME* (Settis (1965) 123 and Gorini (1985); rejected by Moltrasio (1972–73) 175; cf. *infra*). Thucydides' phrasing at 5.5.3 (*supra*): *ὁ πρὸς Ἰππωνιάς καὶ Μεδμαίους πόλεμος*, suggests that Hipponion and Medma were allies in the war against Lokroi c.422.

In 396, Dionysios I of Syracuse relocated 4,000 Medmaians to Sicilian Messana (no. 51; Diod. 14.78.5); if this is correct (and it was disputed by, for example, Beloch (1923) iii.2 190), it probably meant a depopulation of Medma, but depopulation is not supported by the archaeological evidence (Paoletti (1981b) 150). When the populations of Kaulonia (no. 55) and Hipponion (no. 53) were relocated to Sicily in 389 (Diod. 14.106.3, 107.2), Dionysios handed over their territories to Lokroi (no. 59), and it is not impossible that the same happened in the case of Medma (*RE* xii.2. 1333). The figure of 4,000 is the only indication of the order of size of the Medmaian population, and if it is historical, it probably refers to the entire population (Settis (1965) 125).

The settlement of Medma was located on the site of present-day Rosarno and has therefore been accessible to sporadic investigations only. The ancient site joined a larger plateau by a narrow, easily defensible isthmus. The larger plateau had an extent of about 130–140 ha, but the urbanised area in its western part comprised only about 30–35 ha (surveys: Paoletti (1981a) 47–54 fig. 8; (2001)). There are traces of habitation from the Archaic and Hellenistic periods, with evidence of C5s urban layout joining habitation areas and sanctuaries (Sabbione (1981a); Paoletti and Parra (1985)). The C4 remains conflict with the passage in Diodorus describing the C4e deportation of the inhabitants of Medma to Messana by Dionysios I (Diod. 14.78.5; cf. Paoletti (1981b)

150), at least if this passage is taken to indicate complete depopulation.

The sanctuaries seem to have been situated on the outskirts of the habitation area (Iannelli (1996)). Most of the archaeological evidence is from votive deposits and not from structural remains (Orsi (1913); Paoletti (1996c); Hinz (1998) 209–10). The votive terracottas are associated above all with the C5f cult of Kore and Persephone. Finds also emphasise the importance of Athena Promachos and possibly Athena Hippiia (Orsi (1913) 100–7; Agostino (1996)). The Athena Promachos could indicate a *poliad* cult. On the north-eastern edge of the plateau (zone “S. Anna”) outside the urban centre, C6–C4 votive deposits are evidence of a *temenos* with a cult of Athena, revealed by figurines of Athena enthroned, and also of Athena Hippiia as shown by several horse figurines (Parra (1996a); Hinz (1998) 210). C3–C2 epigraphical evidence attests a cult of Demeter (Cygielman (1980)).

A C5–C4 cemetery has been investigated on the confining plateau (Lattanzi (1988) 591–92).

Medma began striking coins in C4f, contemporaneously with the *metropolis* Lokroi Epizephyrioi (no. 59). However, an earlier coinage was issued as an ally or dependency of Kroton, probably as early as C5e, as is indicated by two Krotoniate series of staters carrying the legend *ME*: the first series has *obv.* eagle standing on Ionic capital, legend φ PO; *rev.* tripod, corn-grain, legend φ POT and in exergue *ME* (Gorini (1985) 130–31); the second series, more uncertainly interpreted as a Medmaian–Krotoniate coinage, has *obv.* head of Hera Lakinia; *rev.* seated Herakles holding cup, legends: *KPOTΩNIATAΣ* and *ME* (Gorini (1985) 131); for the historical context of this coinage, see Gorini (1985) 128–33; however, for the rejection of such an alliance coinage, see Rutter, *HN*³, p. 168. Staters of Corinthian type were issued under the influence of Syracuse and Dionysios I from C4m; two types have been documented: (1) *obv.* winged Pegasus and monogram of the letters *ME*; *rev.* helmeted head of Athena (Gorini (1985) 133; Rutter, *HN*³ 2424; *SNG Cop. Italy* 1899); (2) *obv.* winged Pegasus; *rev.* head of Athena and letter M (Gorini (1985) 133; Rutter, *HN*³ 2425). Bronze coinage was issued from C4e, the *obvs.* depicting heads of Apollo and Persephone (?) and the *revs.* the nymph Mesma or Pan, with various similar types; the *obv.* or *rev.* carries the legend *MEΣΜΑΙΩΝ* (Gorini (1985) 136–38; Rutter, *HN*³ 2426ff; *SNG Cop. Italy* 1900–1), while some *obvs.* are inscribed *MEΣΜΑ*, possibly a reference to the eponymous nymph (Guarducci, *EG* ii. 626).

In 525–500, Medma, with Hipponion (no. 53) and Lokroi (no. 59) (cf. Lombardo (1989) 429), dedicated at Olympia spoils taken from Kroton (no. 56) (*SEG* 11 1211).

61. Metapontion (Metapontinos) Map 45. Lat. 40.25, long. 16.50. Size of territory: 4. Type: A. The toponym is *Μεταπόντιον*, τό (Bacchyl. 11.116, Maehler; Hdt. 4.15.1; Antiochos (*FGrHist* 555) fr. 12; C5l coins, *infra*); Antiochos (*FGrHist* 555) fr. 12 gives *Μέταβον* as an earlier name. The city-ethnic is *Μεταποντινός* (Hdt. 4.15.1–3; Thuc. 7.33.5).

Metapontion is called a *polis* in primarily the territorial sense, with the urban sense as a connotation (Antiochos (*FGrHist* 555) fr. 12). It is listed as a *polis* in the urban sense at Ps.-Skylax 14, where Metapontion is the second toponym listed after the heading *πόλεις εἰδὸν αἰδε*. At Bacchyl. 11.114, Mähler, *polis* presumably refers to legendary times (*infra*). *Asty* is found in Bacchyl. 11.12, Maehler. The internal collective use of the city-ethnic is attested abbreviated as *METAΠONTIN* on C6s coins (Rutter (1997) 28); the external collective use is attested in Hdt. 4.15.2–3 and Thuc. 7.33.5; and the external individual use in *IG* 1³ 1007 (500–475), *Syll.*³ 25 (C5m) and Arist. *Metaph.* 984^a7.

Metapontion was, according to Antiochos (*FGrHist* 555) fr. 12, founded by Achaiaans (cf. Ps.-Skymnos 326ff) who had been sent for by the Achaian Sybarites (no. 70.I) who wanted support against Taras (no. 71). Euseb. *Chron. Arm.* under *Ol.* 1 dates the foundation to 733/2, but the archaeological evidence suggests a foundation c.630 (*infra*). The foundation legend was that the site had previously been occupied by a Greek city founded by Nestor and the Pylians on their return from Troy but later destroyed by the Samnitai (Strabo 6.1.15); in, e.g., Bacchyl. *Ep.* 11.114, Mähler, *Achaioi* should probably be understood in the Homeric sense as referring to this mythical foundation (Pugliese Carratelli (1973) 51). According to Ephor. fr. 141, the oecist was Daulios, the tyrant of Krisa; according to Strabo 6.1.15, it was Leukippos of Achaia, and this seems to have been the epicchoric tradition, since his head is on some C4s coins (Head, *HN*² 78; Rutter, *HN*³ 1552–53, etc.). The historicity of this tradition, however, is rendered suspect by Dion. Hal. *Ant. Rom.* 19.3, where the trick by which Leukippos obtained the site for his foundation is associated with Kallipolis (Morgan and Hall (1996) 211; see also Mele (1996)).

The territory is termed *χώρη* at Hdt. 4.15.2; Strabo 6.1.4 names it ἡ *Μεταποντινή*, possibly deriving the name from Antiochos (*FGrHist* 555, fr. 3a); it is the area confined by the valleys of the rivers Cavone and Bradano, calculated to comprise about 200 km². The limit of the *chora* was inland about

13 km from Metapontion at the border fortress at Cozzo Presepe (Osanna (1992) 54, 82). The area of influence may have been more extensive from C6m (Osanna (1992) 53–54), when the territory of Siris (no. 69) was taken over by the Achaian alliance of Metapontion (no. 61), Sybaris (no. 70.I) and Kroton (no. 56) (Just. *Epit.* 20.2.4). The *chora* of Metapontion is above all known for the agrarian land division and scattered farmsteads, in evidence from C6s to C4, over an area of c.20,000 ha (Carter (1990), (1993), (2000)). Sanctuaries are attested in the *chora* of Metapontion from C7m-I. An Artemision (?) is documented at San Biagio (cf. votives and Bacchyl. 11.117, Mähler; Arena (1996) no. 64). A sanctuary of Hera, epigraphically attested (Arena (1996) no. 75), on the border of Tarantine territory has votive material going back to C7m; the temple (“Tavola Palatine”) is dated c.530. From C6 a number of spring sanctuaries were spread regularly across the territory, probably spaced according to the land division of the *chora*. The most important are at Incoronata, San Biagio and Pantanello (Osanna (1992) 40, 50, 54). The outermost border sanctuary at the site of Cozzo Presepe was monumentalised C5 (Carter (1994)).

A war (possibly C5m: Morgan and Hall (1996) 210) with Taras (no. 71) concerning control of territory is attested by Antiochos (*FGrHist* 555) fr. 12.

On the basis of the seating capacity of the *ekklesiasterion* (*infra*), the total population of the *polis* may tentatively be estimated at max. 40,000, of whom some 12,500 could be accommodated in the town itself (Carter (1990) 406 with n. 2).

Metapontion may have been a member of the Italiote League (*Staatsverträge* 230). An alliance with Sybaris (no. 70.I) and Kroton (no. 56) in a C6f war against Siris (no. 69) is reported by Just. *Epit.* 20.2.3–4. In C5s, Metapontion was, with Taras (no. 71) and Kaulonia (no. 55), involved in arbitration between Kroton and returning exiles (Iambl. *VP* 262). A treaty of *symmachia* with Athens (no. 361) is attested in Thuc. 7.33.5. Naval forces and *akontistai* are attested at Thuc. 7.33.5.

Reception of envoys in C4f is attested in Polyæn. 5.2.22. Two citizens of Metapontion are listed as *proxenoi* of the Aitolian Confederacy in *IG IX² 1.17.A.11.74–75* (c.260–230). A citizen of Metapontion served as *theorodokos* of Epidauros (no. 348) in 356/5 (*IG IV² 1.95.49*).

Sources for the political organisation of Metapontion are scanty, though there is some tenuous evidence of a tyranny by Archelaos at Metapontion in the Archaic period (Berve (1967) 610–11; Luraghi (1994) 76 with refs.; for archaeological evidence possibly supporting the tradition of Archelaos’ murder, see De Siena (1999) 234–35). An aristocratic or

oligarchic regime at Metapontion may perhaps be inferred from the story that Pythagoras took refuge at Metapontion, where he died (Aristox. fr. 18, Wehrli). According to Thuc. 7.57.11, the Metapontines supported Athens against Syracuse in 413 because internal conflicts (*stasiotikoi kairoi*) left them no other choice (cf. *HCT ad loc.*); this may mean that in 413 democrats were in the ascendancy (Berger (1992) 28), and democracy may also be implied by the *symmachia* with Athens mentioned at Thuc. 7.34.4. For a possible attestation of an eponymous official (rendered in Oscan as *med-dix*) in C4e, see Tagliamonte (1994) 167–68. A board of officials called *ἀκοαστήρες* is mentioned in Hesych. s.v. A private dedication of C4–C3e describes the female dedicator as [–]α Πωγ. Θέαντω, where Πωγ. is interpreted as an “abbreviation of a deme or phyle, referring to the father of the dedicator Θέαντος” (*SEG* 38 997 *comm.*).

Metapontion was founded on a low plateau near the coast between the rivers Basento and Bradano. C7e evidence has revealed a mixed pre-colonial Greek (Ionic?) and indigenous settlement(s) (cf. De Siena (1986)), whereas the Achaian foundation can be dated to c.630 (Adamesteanu (1982) 309–13). A C6m circuit wall with extensive use of sun-dried brick was raised on the edge of the settlement plateau enclosing an area of 140–45 ha. C5 saw some restructuring, and C4–C3 a strengthening with use of ashlar and reused blocks from older buildings, and a systematisation of drainage canals and city gates (Adamesteanu (1973b) 156–68). A sizeable agora (cf. Hdt. 4.15.4), delimiting the southern side of the large *temenos*, was part of the urban layout from its earliest phase. The main public monument is the *ekklesiasterion*/theatre, with a history spanning C7–C3. The seating capacity of the C5e structure has been calculated at about 7,500–8,000 (Mertens and De Siena (1982)). The interpretation of the structure as an *ekklesiasterion* is supported by the related, circular meeting places in Akragas and in Poseidonia (Hansen and Fischer-Hansen (1994) 65–67). The monumental size and the apparently excessive seating capacity imply a use also outside the purely political sphere (Mertens (1982); Carter (1994) 182). The *ekklesiasterion* was replaced C4–C3 by a theatre with a seating capacity of c.6,500 (Paus. 6.19.12; Mertens and De Siena (1982)). A Zeus Agoraios cult is attested by a C6f inscribed stele found near the theatre (Adamesteanu (1979)); the inscription may refer to the function of the *ekklesiasterion* and not to the agora as such, according to E. Greco (1995b) 89–90). Other sanctuaries are evidenced by walled enclosures, the larger with two altars, perhaps the sanctuary of Apollo mentioned by Herodotos (4.15); C5 coins depicting Apollo testify to the

importance of his cult (Stazio (1973) 83–84). For the *manti-neion* of Apollo, cf. Theopomp. fr. 248.

There is numismatic evidence of athletic games at Metapontion: the first C5m series of Metapontine double-relief issues has as *rev.* type a standing figure of Acheloos, naked and pouring a libation, accompanied by the legend *AXEΛOIO AEΘAION* (*infra*).

The major urban *temenos* between the agora and the habitation area was laid out on vast dimensions at the time of foundation or shortly after; later it comprised four major temples and several minor temples or shrines; by C4 it was delimited from the agora by a fence-like structure, from the *kerameikos* by a drainage canal, and from the habitation zone by a stoa-like building (Mertens (1985)). It was dedicated to Athena (Adamesteanu (1976) 163); an Archaic cippus has the epiklesis [*Hy*]g[i][e]ias or [*Ai*]g[i][d]ias (Arena (1996) no. 68; see Graf (1981) 171, suggesting a cult of Athena Polias). To Apollo Lykeios was dedicated the C6e “Peripteral temple A1”, whence comes rich C6e votive material (Adamesteanu (1970); Arena (1996) nos. 56, 57, 58). For Apollo Lykeios Nikaios, possibly referring to a victory over Siris (no. 69) in 530, see Adamesteanu (1970) 319 and Arena (1996) no. 60. Stones shaped as anchors may reflect a cult of Apollo Archegetes (Adamesteanu (1974) 28). It is not known to which deity the C6m “Peripteral temple B1” was dedicated (Adamesteanu (1970) 319–20; Graf (1981) 170–71, 174 n. 61). The temple was reconstructed c.540 (= “Peripteral temple B2”; Adamesteanu (1974) 27; Mertens (1985) 658). The “Peripteral temple A2” was constructed c.540, but the dedicatee deity is unknown. “*Oikos C2*” c.500 replaces an earlier shrine. C6l–C5e witnessed a monumentalisation of the sanctuary with the C5f “Temple D” (Mertens (1985) 661–63), where the cult is again unknown. In addition to Apollo, votives and various inscriptions mention Athena, Hera, Aphrodite, Artemis and Hermes (cf. Graf (1981) 171), and a C5 cult of Demeter is possibly attested as well (Hinz (1998) 217). For urban cults add Zeus Agoraios: Adamesteanu (1979); Arena (1996) no. 59 (C6f). For the Διὸς Ἀγλαῖο cippus and the reading “Zeus Aglaios”, cf. Bottini (1989) 565–66. C5 coin types and votive deposits add further evidence of the cult of Apollo, Apollo Karneios, Demeter, Zeus Ammon, Athena, Hermes, Dionysos and Herakles (Stazio (1973) 84–86), but also of a number of lesser divinities and, in C4s, the cult of the hero/*oikistes* Leukippos (Lacroix (1965) 85–89). Further epigraphic evidence: C5 sherds with graffiti naming Athene (Hygieia?) (Arena (1996) no. 68 (C5f)); Aphrodite (Arena (1996) nos. 73 (C6l) and 74 (C5e)); for an inscription naming Hermes, see Adamesteanu (1975a) 252.

Monumental drains delimiting the agora, *kerameikos* and *temenos* are probably C4; however, the morphology of the terrain presupposes a system of drainage at least from the C6m (cf. Adamesteanu (1975a) 247–48, 251–52). The overall layout and the delimitation of public spaces were in place by C7s, but the basic elements of the orthogonal town plan are C6m. The degree of development of the individual *insulae* is not clarified, but a gradual development, as known from most other sites, is probable (Adamesteanu (1973) 168–77, (1982) 309–11; Mertens (1982) 104–7). The *kerameikos* dates back to C6m (F. D’Andria (1975)). About 325 burials have been investigated at Pantanello, c.3 km north of the city. C6e Greek burials, probably those of the first settlers in the *chora*, took over the originally indigenous burial place; from C6l the number of burials increased significantly, and the cemetery continued in use until C4 (Prohaszka (1995); Carter (1998) 167ff, 236ff). The Crucina cemetery, just outside the city wall, contained about 600 burials, including early, monumental chamber tombs, possibly also that of the tyrant Antileon (Carter (1998) 8, 26; De Siena (1999) 233–35; for the topography of the cemeteries of Metapontion, see Lo Porto (1966) 183–231).

Communal consultation of the Delphic oracle is attested by Hdt. 4.15.3. Bacchyl. 11, Mähler, celebrates a Pythian victory by Alexidamos in boys’ wrestling. Metapontion had a treasury at Olympia (Paus. 6.19.11; cf. Polemo fr. 20, Pr.). Architectural remains at Olympia and at Delphi have been attributed to Metapontian *thesouroi* (Mertens-Horn and Viola (1990) 245–46). An image of Zeus was dedicated by the people of Metapontion at Olympia (Paus. 5.22.5) but cannot be dated. The famous golden harvest dedicated by the Pylian founders at Delphi according to Strabo 6.1.15 (cf. Courby (1927) 268; Lacroix (1965) 154–58) has been taken as evidence of a Metapontine communal dedication (Vatin (1991) 55–56, whose readings, however, must be treated with great caution).

The coinage of Metapontion began c.550, with silver staters in the incuse fabric on the Achaian standard; the type is an ear of barley, though some issues carry secondary symbols such as a grasshopper or a dolphin, and on later issues: ram’s head, mule’s head and lizard. Legends are *MET*, *META*, *METAI* at times retrograde (Rutter, *HN*³ 1459; *SNG Cop. Italy* 1158–73; for the mint, see Stazio (1973); Noe and Johnston (1984); Johnston (1990)). The staters were struck in three phases on broad, medium and dumpy flans; smaller denominations were struck in a complex system which provides transitional issues between incuse and double-relief fabrics: drachms, triobols, diobols, obols and a

quarter-stater: types: *obv.* and *rev.* barley grain, sometimes with *revs.* ox-head, or head of man-faced bull (Rutter, *HN*³ 1487, 1492; *SNG Cop. Italy* 1174–81, *Suppl.* 42). Double-relief coinage was introduced c.C5m; staters: *obv.* ear of barley; *rev.* five barley grains forming a star, legends: *META*, *METAI* on *obv.* and *rev.* respectively (Rutter, *HN*³ 1490; *SNG Cop. Italy* 1182), followed by issues with *obv.* types and legends as above, but with divinities as *rev.* types (cf. Stazio (1973) 80–85 for interpretations of these): (a) river-god Acheloos, legend *AXEΛOIO AEΘAION* (Noe and Johnston (1984) 56–57, 90; Rutter, *HN*³ 1491; *SNG Cop. Italy* 1183 (late)); (b) Apollo holding branch and bow (Rutter, *HN*³ 1496; *SNG Cop. Italy* 1185); (c) Herakles with club over shoulder (Rutter, *HN*³ 1495; *SNG Cop. Italy* 1184), or Herakles sacrificing at altar (Rutter, *HN*³ 1494; Noe and Johnston (1984) no. 312). Diobols have *obv.* as above, *rev.* head of Acheloos (Rutter, *HN*³ 1492; *SNG Cop. Suppl.* 42). A new C5l issue of staters has as *obv.* types heads of divinities (Rutter, *HN*³ 1505ff): Apollo Karneios (or Hermes Parammon or Zeus Ammon), Apollo, Zeus (at times with epithet *EΛEYΘEPIOΣ*), Dionysos, Demeter, and personifications such as Homonoia, Nike, Hygieia and Soteria identified by epithets; *rev.* ear of barley, legends as above and *METAIONTION*, *METAIONTINON* (*SNG Cop. Italy* 1186–1207; Noe and Johnston (1984) nos. 481, 495, 523–24 for full toponym and ethnic). Some dies were signed, some unusually with the name Aristoxenos in full (Stazio (1973) 87; Noe and Johnston (1984) 62–65). Lower denominations C5l have *obv.* ear of barley; *rev.* crescents and pellets (Rutter, *HN*³ 1498–99; *SNG Cop. Italy* 1230); later, from last quarter of C4 *obvs.* with divinities as above (Rutter, *HN*³ 1594ff; *SNG Cop. Italy* 1231–38). Bronze coins were introduced C5s (Johnston (1989)): *obv.* tripod, legend: *META*; *rev.* ear of barley (Rutter, *HN*³ 1637; *SNG Cop. Italy* 1250, 1270); C4f issues have *obv.* Hermes sacrificing over thymia-terion; *rev.* ear of barley, legend *ME* and an unusual identification of denomination, *OBOΛIOΣ* (Rutter, *HN*³ 1639; *SNG Cop. Italy* 1242); also bronze coins with *obv.* head of Nike or Demeter, *rev.* ear of barley and ithyphallic herm (Rutter, *HN*³ 1641; *SNG Cop. Italy* 1243). In C4m more silver issues were struck, depicting heads of divinities and personifications as above (Johnston (1990); Rutter, *HN*³ 1554ff; *SNG Cop. Italy* 1218–29). A reference to the origin of the city is found in an issue of staters and gold coinage with the head of Leukippos (Lacroix (1965) 85–86; Stazio (1973) 89–91; Rutter, *HN*³ 1552; *SNG Cop. Italy* 1208–17). Gold tetrobols were struck from c.340–330, perhaps at the time of Alexander the Molossian to pay mercenaries: *obv.* head of

Leukippos, or of Nike, legend *METAION* (Stazio (1973) 91–92; Johnston (1990) 41–45; Rutter, *HN*³ 1629; *SNG Cop. Suppl.* 43).

62. Metauros (Mataurinos) Map 46. Lat. 38.25, long. 15.55. Size of territory: 1. Type: C. The toponym is *Μέταυρος* (Strabo 6.1.5) or *Μάταυρος* (Steph. Byz. 437.3). The city-ethnic is *Ματαυρίνος* (Steph. Byz. 437.4).

No Archaic or Classical source calls Metauros a *polis*. It is included here as a type C on account of Steph. Byz. 437.4, which describes the C6 poet Stesichoros as a native of Metauros: *Στησίχορος Εὐφύμιου παῖς Ματαυρίνος γένος, ὁ τῶν μελῶν ποιήτης*. Stephanos does not provide a source reference, but the fact that Stesichoros was normally considered a Himeriaian (cf. Stesichoros TA33, 35–36, Davies) tends to suggest that he drew this information from a written account and not from memory. If this source really described Stesichoros by the city-ethnic of Metauros (see Musti (1976)), then the city *may* have been a *polis* in C6 since such use of the city-ethnic often indicates that the site to whose toponym the ethnic is related was a *polis* (Hansen (1996) 182–87), especially in external contexts as in this case.

Metauros was a foundation either of Zankle (no. 51) (Solin. 2.11) or of Lokroi (no. 59; Steph. Byz. 437.3). As indicated above, the political status of Metauros is highly uncertain, and it is not clear whether we should envisage a river-harbour settlement in Lokrian territory or a *polis*, at least for a period, founded by Zankle and later subject to Lokroi. The prevailing interpretation takes Metauros to be an originally Chalkidian, i.e. Zanklean, foundation later occupied by Lokroi, at about the time when that city founded Hipponion (no. 53) and Medma (no. 60), i.e. C7s (De Franciscis (1960); Settis (1965) 116–17; Musti (1976) 88–89). The archaeological evidence (*infra*) suggests a Greek settlement rather than a Hellenised non-Greek site.

The river Metauros delimited the territory of Rhegion (no. 68) and Metauros, which may have been founded by Zankle (and Rhegion?, *infra*) in opposition to Lokrian expansion, later becoming part of Lokrian territory (*supra*). The territory of Metauros is delimited to the south by the Petracce (river Metauros) and to the north by the territory of Medma. There is indirect evidence of an extra-urban sanctuary 500 m to the south-east of the city (Orsi (1902), (1923)). Sporadic finds of *arulae* c.1 km to the south may indicate another extra-urban sanctuary, though habitation or a cemetery cannot be ruled out (Sabbione and Soverini (1950) 145). Architectural terracottas of a Greek temple have been reported near Gioia Tauro (Gagliardi (1958)).

The settlement of Metauros occupied a flat plateau, c.1 km from the coast and c.2 km to the north of the river Metauros. The extent of the settlement is unknown: it may have comprised the area of the plateau only, or part of the terrace below as well, but a conservative estimate is that the settlement comprised about 60 ha. De Franciscis (1960) 59 suggested that the settlement was located on the plain and that the upper plateau was the acropolis of the city; however, the few remains in the lower city are Roman.

The settlement was delimited northwards and south-eastwards by cemeteries, where a large number of tombs have yielded useful evidence of the cultural connections of Metauros: the C7f–C6 tombs contained mixed Greek and indigenous grave goods indicating a mixed population; the Greek wares reveal ties with the Chalkidian cities of Zankle and Rhegion and above all with Mylai, but overall a wide commercial network is revealed by the tomb material (De Franciscis (1960); Sabbione (1981*b*), (1986)). Later, Greek acculturation was total, and a period of Lokrian influence is revealed by Lokrian and Medmean coroplastic finds and a change in funeral rites (Sabbione (1987); Cordiano (1995*b*) 91 n. 29). Burials cease C6l, and very few tombs are known from C5. Such evidence may point to a termination of settlement C5l–C4e, perhaps due to Leukanian pressure.

63. Neapolis (Neapolites) Map 44. Lat. 40.50, long. 14.15. Size of territory: 1 or 2 Type: A. The toponym is *Νεήπολις* (C5 coin, *infra*) or *Νεάπολις* (Ps.-Skylax 10; Strabo 5.4.7), *ἡ* (Dion. Hal. 15.6.2 (rC4s)). The city-ethnic, always on coins, is *Νεοπολίτες*, *Νεοπολίτης*, *Νεοπολίτας*, *Νηοπολίτας*, *Νευπολίτης*, *Νουπολίτης*, or *Νειοπολίτης*: see Head, *HN*² 39; Rutter (1979) 142–58. *Νεαπολίτης* is found in Diod. 16.18.1 (r356) and Dion. Hal. *Ant. Rom.* 15.5–6 (rC4s).

Neapolis is called a *polis* in the urban sense (Ps.-Skylax 10), whereas the sources for *polis* used in the political sense are late (*SEG* 12 378.6 (242); Dion. Hal. *Ant. Rom.* 15.5.1, 6.5 (rC4s)). The internal collective use of the city-ethnic is found on C5l coins (Rutter, *HN*³ 557); the external collective use is found in Timaios (*FGrHist* 566) fr. 98 and Dion. Hal. *Ant. Rom.* 15.6.4 (rC4s); and the external individual use in Diod. 16.18.1 (r356).

Neapolis was founded c.470 on the initiative of Kyme (no. 57; Ps.-Skymnos 242–43; cf. Strabo 5.4.7); the date is based on the chronology of Syracusan involvement in Kymaia history and upon evidence from the Castel Capuano cemetery (Frederiksen (1984) 94, 101–7; Valenza Mele (1993) 197–98). The city was subsequently settled also by Chalkidians (no. 365), Pithekoussaians (no. 65) and

Athenians (no. 361), taking its name “Neapolis” only at this time (Strabo 5.4.7; cf. Lomas (2000) 174). Euboian involvement in the foundation, via Kyme or Chalkis, is supported by evidence from the calendar (Trümpy, *Monat.* 42–43). Exactly how these later arrivals merged with the earlier Kymaia foundation is uncertain (Raviola (1991) 20–23). Neapolis had a C7 predecessor, Parthenope, but the relationship between the two settlements is not wholly clarified. Parthenope (*Παρθενόπη*: Strabo 14.2.10; ethnic *Παρθνεοπαῖος*: Steph. Byz. 504.7) is called a *polis* in a late source (Steph. Byz. 504.6), but its *polis* status is highly uncertain. Parthenope was probably originally an *epineion* of Kyme, comparable with the settlement of Dikaiarcheia (see entry in list of non-*polis* sites *supra*). The identification of Parthenope on the hill of Pizzofalcone, adjoining the later settlement of Neapolis, is based upon evidence from its cemetery with tombs dating to 675–550, implying that Parthenope became the district of Palaiopolis when Kyme founded neighbouring Neapolis in C5f, with an as yet unexplained hiatus in the chronology of the early and later settlement (cf. Raviola (1990) 19). The more consistent tradition is that Parthenope was either an *apoikia* or an *epineion* of Kyme, and that the site was later destroyed by its *metropolis* (Lutatius *apud* Serv. auct. *ad Verg.* G. 4.563 = fr. 7, Peter; sources: Bérard (1957) 56; Raviola (1990)); but the sources also seem to suggest that the settlement was autonomous during its early history and not just an early stage of the later Neapolis (summary of evidence: Raviola (1990) 59–60). By C4s the two distinct, neighbouring urban nuclei, Parthenope (= Palaiopolis) and Neapolis, formed one political community (Livy 8.22.5), suggesting the absorption of the earlier site by the later settlement of Neapolis (cf. Lomas (2000) 174; see further Parthenope in list of non-*polis* sites *supra*).

Neapolis was founded within the Kymaia dominion (cf. Strabo 5.4.7). Its territory was not extensive: c.20 km² (Lepore (1967) 142, 146–48). The city was a maritime settlement and had a narrow *chora* bounded by a number of Oscan sites situated not far inland (Polyb. 3.91.4). The city was separated from its hinterland by the river Clanis. Apart from the uncertain evidence of a sanctuary of Athena at Sorrento (Surrento) (Strabo 5.4.8), perhaps reflected in the numismatic evidence (Rutter (1979) 94–95), extra-urban or suburban sanctuaries are not attested. The Demeter sanctuary of the “Convento di S. Gaudioso” within the urban area of Neapolis had an Archaic pre-foundation phase and is therefore interpreted as situated in the *chora* of Kyme prior to the foundation of Neapolis, perhaps demarcating the

southern limit of the territory of Kyme (E. Greco (1985a) 188–89). At some point after the Hieronian *teichos* on Pithekoussai had been abandoned, Neapolis assumed control of the island (Strabo 5.4.9).

Neapolis may have obtained some understanding with Rome as a bulwark against Dionysios of Syracuse (Timaios (*FGrHist* 566) fr. 32; but see Jacoby, comm. *ad loc.*); in 327 the city entered into a *foedus aequum* with Rome (Livy 8.26.6; *Staatsverträge* 410). An alliance with the Samnites in C4s is attested by Dion. Hal. *Ant. Rom.* 15.5.2. A navy is attested for C4s (Dion. Hal. *Ant. Rom.* 15.6.3).

Reception of envoys is attested in Dion. Hal. *Ant. Rom.* 15.5.1, 2 (rC4s). The *presbeis* sent by Taras to Neapolis in C4s were *proxenoi* of Neapolis according to Dion. Hal. *Ant. Rom.* 15.5.2.

Neapolis received refugees from Kyme when that city fell to the Samnites in 421, according to Dion. Hal. *Ant. Rom.* 15.6.4; it is not clear from the text whether the Kymaians were granted citizenship, and the coins struck by the Neapolitan mint *in the name of Kyme* (Rutter (1979) 96) may indicate that Kymaian identity remained alive at Neapolis (cf. Dion. Hal. *Ant. Rom.* 15.6.4, reporting the existence of a group of Kymaians at Neapolis c.327; cf. Lomas (2000) 178). At an unknown date (C4?), Neapolis, after a *stasis*, received some Kampanians as *synoikoi*; obviously these were granted citizenship, since they were entitled to hold the office of *demarchos* (Strabo 5.4.7; cf. Livy 8.21ff; Lomas (2000) 177–78).

Neapolis experienced a *stasis*, presumably in C4 (Strabo 5.4.7). The office of *demarchos*, at first given only to Greeks, but later to non-Greeks absorbed into the citizenry as well (Strabo 5.4.7; cf. Lomas (2000) 177–78), may indicate a democratic constitution. A *boule*, an *ekklesia* and the procedure of *probouleusis* are attested for C4s by Dion. Hal. *Ant. Rom.* 15.6.1–3 (cf. Ghinatti (1996) 103–6).

Neapolis was founded on a sloping coastal plateau, where bradyseism has caused changes to the coastline and hindered an identification of the ancient harbour site. The plateau was fortified by a circuit wall c.3.8 km long and enclosing an area of c.75 ha; it is a C4 double curtain-wall in ashlar with internal fill, but stretches built in another type of tufa rock and in a different technique go back to the period of foundation c.470 (Napoli (1959) 31–40; Fratta (2002) 68–69). One isolated stretch may testify to a *diateichisma* wall rather than a C4 enlargement of the urban area. The location of the gates of the Greek city is based upon the main territorial routes, the mediaeval gates of Naples and upon the location of the cemeteries (E. Greco (1985a) 191–99).

The layout of the ancient city is clearly mirrored in the city plan of the mediaeval city, one of the most spectacular

examples of the survival of an ancient street plan, with three east–west *plateiai* and about twenty north–south *stenopoi* clearly revealing the orthogonal urban layout (Castagnoli (1956) 36–37). The use of long narrow *insulae* is very similar to the town plans of C5 Himera (no. 24) and Naxos (no. 41) and therefore possibly contemporary with the foundation, or slightly later. To judge from the evidence provided by the street plan as preserved in the mediaeval city, most of the area inside the circuit wall was urbanised; there are, however, no structural remains of habitation, but on the basis of better-known sites, E. Greco (1985a) 199–216 estimates two rows of ten houses per *insula*, with seven or eight inhabitants per house, and hence an urban population of 1,000–8,000 inhabitants. The elevated north-western part of the city formed an acropolis-like area which fell outside the regular urban layout and was very likely destined for sanctuaries, as indicated by votive deposits (E. Greco (1985a)).

The remains of monumental Roman structures in the upper part of the city adjoining the “acropolis” provide strong evidence for the location of an upper, probably political agora, and a lower, probably mercantile agora (E. Greco (1985a) 208, (1985b)); the Roman theatre of the lower agora (*forum*) probably had a Greek predecessor, but there is no archaeological evidence (Johannowsky (1985)). There is evidence of *ephebeia* and *gymnasia* in the Hellenistic period (Strabo 5.4.7).

Rich votive deposits from the area of S. Aniello, mainly C5–C4 in date and of a type ascribed to Demeter and the chthonic divinities, indicate a major sanctuary with a history going back to a pre-foundation phase situated in the north-western “acropolis” area of the city (Borriello and De Simone (1985)). A number of literary sources, albeit late, attest the importance of the Demeter cult at Neapolis (Stat. *Silv.* 3.5.79, 4.8.45–47; Cic. *Balb.* 55). A cult of the Siren Parthenope, the eponymous nymph of Parthenope (on which see the Introduction, *supra*), is attested in late sources only, but a cult of her father, Acheloos, is indirectly attested by representation of the river-god on C5 coins (Rutter (1979) 44–45 for sources). According to Timaios (*FGrHist* 566) fr. 98, the Athenian *nauarchos* Diotimos played an important role as instigator of a torch race in honour of the Siren Parthenope at Neapolis (Frederiksen (1984) 104–6; Raviola (1991) 24–27; for an overall survey of sources, see Valenza Mele (1993) 168, 171).

The four known cemeteries were situated along the cardinal east, north, west and south/south-west radial roads, with inhumation, cist-slab tombs and tile tombs dating to

C5–C4, replaced in C4l by cremation tombs (Borriello *et al.* (1985) 228–31). The evidence from the cemetery of Castel Capuano confirms the foundation date, with burials from c.470 (*ibid.* 232–74).

The coinage of Neapolis has been exhaustively treated by K. Rutter, who divides it into four main periods between 450 and 385 (Rutter (1979) 42–59). Minting began c.450 (*ibid.* 46) or c.470 at the time of foundation (Cantilena (1985); Valenza Mele (1993) 172). The earliest coinage is represented by a single specimen of a didrachm on the Euboian standard: *obv.* head of Parthenope in profile; *rev.* forepart of bearded man-faced bull, Acheloos, father of Parthenope; legend: *NEHΠOΛIΣ* (Rutter (1979) 46, 142; Rutter, *HN*³ 545). There are stylistic affinities with the coins of Gela (the *rev.* type) and Syracuse (the *obv.* type). C.450 commenced a more regular issue of didrachms, obols and minor fractions on the Phokaian standard (Rutter (1979) 46). The head of Parthenope, normally shown in profile, at times in three-quarter view (Rutter (1979) 52; Rutter, *HN*³ 546, 552, 563; *SNG Cop. Italy* 385), continues as the most frequent *obv.* type until the city ceased to coin c.385. The *rev.* has a river-god, either the local stream Sebethis or Sebethos (named on an obol (Rutter, *HN*³ 558)), or perhaps rather Acheloos attested in local myths (Rutter (1979) 43–45), here represented as a walking bull, at first as in nature, later with a human face or head, at times accompanied by a female figure, probably Nike, flying above and crowning the bull with a garland (an allusion to games held in honour of Parthenope?: Rutter (1979) 45). The *rev.* has legend *NEHΠOΛITHΣ*, *NEHΠOΛITEΣ* or variations, for which see the onomastic section above (*SNG Cop. Italy* 386–94). One issue carries the ktetic *NEOΠOΛITIKON* on the *obv.* (cf. Guarducci, *EG* ii. 623; Rutter (1979) 47; Rutter, *HN*³ 546). From c.420 some issues have on the *obv.* a helmeted head of Athena of Corinthian inspiration (Rutter, *HN*³ 554; *SNG Cop. Italy* 382–83), not easily explained in C5s Neapolis, but according to K. Rutter possibly reflecting Diotimos' visit there mentioned by Timaios (*FGrHist* (566) fr. 98; cf. Rutter (1979) 45, 95; Frederiksen (1984) 104–5; for Athenian settlers at Neapolis, see *supra*). Most obols have *obv.* head of Athena, at times wearing Attic helmet; *rev.* mussel shell, on early issues, later forepart of man-faced bull, legend *NEOΠOΛITEΩN* and abbreviations thereof (Rutter (1979) 50–51, 58; Rutter, *HN*³ 548, 555; *SNG Cop. Italy* 384). Neapolis minted coins for the Campanian Samnite communities: Kyme c.420–380, Capua c.415–400, Hyria 405–385, Nola 400–380, Allifae 400–395, and for the Fistelians 405–400 and the Fenserni 400–390 (Rutter (1979)).

64. Pandosia (Pandosinos) Map 46. Unlocated (see further Ciaceri (1928)ii. 158–60; Storti (1994) 331–32); probably near Cosentia in the upper Krathis valley, by the river Acheron (Strabo 6.1.5; coins, *infra*); not to be confused with Pandosia in the territory of Herakleia (no. 52). Size of territory: ? Type: [A]. The toponym is *Πανδοσία*, ἡ (Ps.-Skylax 12; Strabo 6.1.5) or *Πανδοσίη* (Dodonian oracle *apud* Steph. Byz. 499.19). The city-ethnic is *Πανδοσίως* (Classical coins, *infra*; *IG VII* 2225B.54 (C2f)).

Pandosia is one of ten toponyms listed at Ps.-Skylax 12 after the heading *πόλεις εἰσὶν Ἑλληνίδες αἰῶς*, where *polis* is used in the urban sense. The internal collective use of the city-ethnic is found (as *ΠΑΝΔΟΣΙΝ*) on Classical coins (*infra*). The external individual use is found in *IG VII* 2225B.54 (C2f).

Ps.-Skymnos 326–29 describes Pandosia (with Kroton (no. 56), Thourioi (no. 74) and Metapontion (no. 61)) as an Achaian foundation. Numismatic evidence (*infra*) suggests that the city was a dependency of Sybaris (no. 70) and later of Kroton (cf. Mazzarino (1963) 69; Storti (1994) 332 with refs.). According to Eusebios (Helm 181; Schöne 78), the foundation of Pandosia was contemporary with that of Metapontion: *Ol.* 1.4 = 773; it is not, however, clear whether the reference is to this Pandosia or the one near Herakleia (*RE* xviii. 551; Storti (1994) 332). In any case, the Eusebian date for Metapontion is unreliable. According to Strabo 6.1.5, tradition held that Pandosia was once the royal seat of the Oinotrians.

By c.500 Pandosia with Kroton struck staters on the Achaian standard and with the incuse technique: *obv.* tripod, legend *ῬΠΟ*; *rev.* bull of Sybarite type within incuse square, legend: *ΠΑΝΔΟ* (Gorini (1975) 27; Parise (1982) 105–6, 114; Stazio (1983b) 967–69; Rutter, *HN*³ 2097). The legends and the *obv.* type suggest dependency upon Kroton, but the *rev.* type depicting the Sybarite bull suggests earlier dependence upon Sybaris (*RE* xviii. 552; Giangiulio (1989) 233 n. 67). By C5s Pandosia was striking staters of its own in double relief: *obv.* head of nymph Pandosia, legend: *ΠΑΝΔΟΣΙΑ*; *rev.* naked youth offering libation, personification of river Krathis, legend: *ΚΡΑΘΙΣ* (Rutter, *HN*³ 2449). C.400, staters and thirds depict *obv.* head of Hera Lakinia; *rev.* seated, naked Pan with dog, in front herm with *kerykeion* affixed, legend: *ΠΑΝΔΟΣΙ*, *ΠΑΝΔΟΣΙΝ*, in field mint-mark *Φ*, similar to mint-marks known from Hyele, Neapolis, Thourioi and other mints (Rutter, *HN*³ 2450–52).

65. Pithekoussai (Pithekoussaios) Map 44. Lat. 40.45, long. 13.55. Size of territory: 1. Type: A. The toponym is

Πιθηκοῦσ(σ)α, ἡ (Pherecydes (*FGrHist* 3) fr. 54; Ps.-Skylax 10; Ptol. *Geog.* 3.1.69); Πιθηκοῦσ(σ)αι, αἱ (*Mir. ausc.* 833a; Strabo 5.4.9). For the change between singular (denoting the main island) and plural (denoting the archipelago), see Coretti and Soverini (1990) 327. The city-ethnic is Πιθηκουσσαῖος (Strabo 5.4.7 (rC5?)).

Pithekoussai is called a *polis* in the urban sense at Ps.-Skylax 10, and the external collective use of the city-ethnic is found in Strabo 5.4.7 (rC5?). However, Pithekoussai has often been denied the status of a *polis* and described as an *emporion*, i.e. trading station (see Hansen 4 (1997b) 99 n. 9; most recent discussion: Boffa (1998)). Bartoloni and Cordano (1978) denied *polis* status to Pithekoussai because: (a) the site is not described as an *apoikia* and no oecist is named; (b) there is no evidence for a political organisation of the community; (c) there is no evidence of social stratification; (d) though predominantly Greek, the population was of mixed ethnicity. While some of these points, such as the mixed ethnic identity of the population, are irrefutable (Buchner (1978); Ridgway (1992) 111–18, (1998b), (2000) 183–85), others are to a large degree based on absence of evidence, and recent archaeological investigations suggest that the community may not have been exclusively a trading station; for a recent review of the status of Pithekoussai, see Ridgway (2000) 185–86. The following should be noted:

(1) Some kind of political organisation and social stratification is in fact suggested by Strabo's report (5.4.9) of a *stasis*.

(2) As Ridgway (1992) 50–51 and d'Agostino (1999b) 213–17 point out, the mortuary evidence does actually indicate some social stratification.

(3) A territory seems *not* to be absent: there is sporadic evidence of C8–C7 Greek presence over much of the island, which suggests that Pithekoussai had a *chora* and that the settlement aimed at some agricultural self-sufficiency. The extent of arable land has been estimated at c.10–20 km² (De Caro (1994)). At Punta Chiarito on a promontory on the south coast, c.12 km from the acropolis of Pithekoussai, two LGI–LGII farmsteads, abandoned c.680, were succeeded in C7s by a Greek settlement proper, probably destroyed in C6f by a natural catastrophe (Gialanella (1994)). So even if Pithekoussai may have been primarily a commercial settlement, that cannot be considered to be its only role (see also d'Agostino (1999b) 218–20).

(4) The urban characteristics of Pithekoussai are no different from other C8 western Greek settlements (for an overall topographical plan, see Buchner and Ridgway (1993) Carta topografica): Pithekoussai was situated on the island

of the same name (Ps.-Skylax 10) in the Gulf of Naples facing Kyme and Cape Misenum. The settlement was founded on the promontory of Monte di Vico on the north-west coast of the island, a site defended by natural steep slopes on all sides, and with bays forming natural harbours on both sides. The plateau, relatively flat, formed a habitation area of about 6 ha. Although no habitation structures are extant, sherds found over most of the surface of the plateau testify to extensive C8 habitation (Buchner (1975) 63–64). There is some evidence of pre-colonial trading contacts (Ridgway (1992) 107–8; cf. d'Agostino (1999a) 56–58), but the archaeological data from the “Gosetti-Akropolis dump” and from the Mazzola excavation date the foundation to c.750 (Neeft (1994) 150 n. 9 (“c.740”); Coldstream (1995); d'Agostino (1999a) 56–58). Surface finds on the Monte di Vico plateau also give evidence of habitation from C6 to C4, and C6–C4 architectural terracottas are, with the foundation structures of a temple, testimony of sanctuaries (Coretti and Soverini (1990) 336–37; Ridgway (1992) 37–39, 86–87).

The finds from the plateau and from the “Gosetta dump”, and from the workshop quarter of Mazzola (*infra*), seem to indicate some interruption, or at least regression, in the habitation of the site c.700–600, seen by some as evidence of Kymaian domination in this period (d'Agostino and Soteriou (1998) 368).

The principal habitation site was on the Monte di Vico, but during the early history of the settlement, habitation also extended along the ridge of Mezzavia and Mazzola, where noteworthy workshops have been excavated (Buchner (1975); Ridgway (1992) 91–101). The whole area of Pithekoussai, including the Valle di S. Montano with cemeteries, and the lowland plain, with the probable harbour, between Monte di Vico and the ridge of Mezzavia, comprises about 75 ha (Buchner (1975) 66). Within the first generations after the foundation the population may have risen to 5,000–10,000 (Ridgway (1992) 101–3). Morris (1996) 57 suggests a minimum population of 4,000–5,000. A vast cemetery occupies the Valle di S. Montano south and south-west of the Monte di Vico, where the c.1,300 C8–C7 cremation and inhumation tombs investigated correspond to about one-tenth of the estimated extent of the cemetery (Buchner and Ridgway (1993)). In terms of wealth, the cemetery is similar to those known from most other Greek settlements in the West (Buchner (1982); Ridgway (1992) 50–51; Neeft (1994) 154). The single find of greatest interest is probably the late Geometric “Nestor's cup” (C. F. Russo (1993); Vos (1993)), the earliest (C8s) attestation of the *symposion* (Murray (1984)). The C5 tombs are few and poor (Buchner and Ridgway (1993)).

In the lower city, a sanctuary, possibly a Heraion, is likewise attested by C7l–C6e architectural terracottas from Pastola, between the Mazzola ridge and the sea, west of the acropolis (d'Agostino (1994–95) 86–91). A rich C7e votive deposit from the same area has been taken as evidence of a *heroon* on the assumption that a tomb found there was part of the same complex as the deposit (d'Agostino (1994–95)).

At the very least, this evidence suggests that the political status of Pithekoussai must remain an open question.

Little is known of the history of Pithekoussai. According to Strabo 5.4.9, Pithekoussai was founded by Eretrians (no. 370) and Chalkidians (no. 365); Livy 8.22.6 (cf. Mele (1979) 32) names only Chalkidians. Apart from this, no account of the foundation survives. The settlers found the site unoccupied (Buchner (1975) 64), but mixed marriages—evidenced by, e.g., fibula typology—may have occurred in a later phase, c.C8l (Buchner (1975) 77–80; Coldstream (1993)). According to Livy (*loc. cit.*), the Chalkidians moved on to Kyme (no. 57); however, in the account of the foundation of Kyme by Dionysios of Halikarnassos, Pithekoussai does not appear as a first stage or halting place for the Chalkidian and Eretrian founders of Kyme (*Ant. Rom.* 7.3.1). According to Strabo 5.4.7, Pithekoussaians participated, with Athenians and Chalkidians, in a resettling of Neapolis at an unspecified date. Hieron of Syracuse constructed a *teichos* on the island, but the personnel had to abandon it because of seismic activity (Strabo 5.4.9). The island was then taken over by Neapolis, who lost it in an unspecified war (*ibid.*).

66. Poseidonia (Poseidoniatas) Map 45. Lat. 40.25, long. 15.00. Size of territory: 4. Type: A. The toponym is *Ποσειδανία*, ἡ (ML 10.6–7 (550–525)); *Ποσειδωνία* (Ps.-Skylax 12; Strabo 6.4.13); or *Ποσειδωνιάς*, ἡ (Ps.-Skymnos 248). The city-ethnic is *Ποσειδανιάτας* (C5f coins, *infra*); *Ποσειδωνιάτης* (Aristox. fr. 124, Wehrli), or *Ποσειδωνιήτης* (Hdt. 1.167.4).

Poseidonia is one of ten toponyms listed at Ps.-Skylax 12 after the heading *πόλεις εἰσὶν Ἑλληνίδες αἰθε*, where *polis* is used in the urban sense, and it is called a *polis* in the political sense in ML 10.7 (550–525). The internal collective use of the city-ethnic is found on C5f coins (*infra*); the external collective use is found in Aristox. fr. 124, Wehrli, and Strabo 6.1.3 (rC5l–C4e); the external individual use is found in Iambl. *VP* 239 and 267 (rC6l–C5m), Diod. 11.65.1 and Dion. Hal. *Ant. Rom.* 9.56.1 (r468).

Poseidonia was founded by Sybaris (no. 70.I) (Ps.-Skymnos 249; cf. Strabo 6.1.1). According to Solin. 2.10, the city was founded by unspecified Dorians; if historical, these

Dorians may have been Troizenians (no. 357), since, according to Arist. *Pol.* 1303^a30, Troizenians had participated in the foundation of Sybaris itself (cf. Steph. Byz. 639.9, where Steph. associates the toponym *Troizen* with Italy and cites Charax = *FGrHist* 103, fr. 61). The literary tradition offers only a *terminus ante quem* for the foundation, *viz.* c.530, provided by Herodotos, who at 1.167.4 refers to the city as in existence when Hyele (no. 54) was founded (c.540–535). Archaeological evidence suggests a foundation date of c.600 (E. Greco (1981a); *Poseidonia* ii. 73 n. 7). At Strabo 6.1.1 an initial Sybarite settlement distinct from the later city is mentioned and described as a *teichos*; the location and status of this *teichos* is still unsolved (Greco (1979); Tréziny (1992); Junker (1993) 2–3).

Suburban sanctuaries of Demeter(?) 3–4 km to the east of Poseidonia and of Artemis(?) (cf. Diod. 4.22.3.) reflect the C6e expansion of the city's influence (E. Greco (1987a) 480–81). The C6–C5 *chora* of Poseidonia was delimited to the north by the river Sele and the important sanctuary of Hera (*infra*), to the east by the foothills bordering the coastal plain, and to the south by the sanctuary of Poseidon(?) at Agropoli (Fiammenghi (1985a)). Other important extra-urban sanctuaries of Demeter and Hera are known at S. Nicola di Albanella (Cipriani (1989); Cipriani and Ardovino (1989–90); Hinz (1998) 176–80) and at Fonte, 14 km from Poseidonia (E. Greco (1979) 19). Greek and indigenous graves respectively mark the boundary of Poseidonian territory c.14 km to the east of the city. There is evidence of an Archaic Greek rural settlement near the Heraion at the Foce del Sele and of harbour installations on the estuary of the river Sele. The C6–C5 territory of Poseidonia comprised about 200 km² (E. Greco (1979); Greco, Stazio and Vallet (1987)).

The most important of the extra-urban sanctuaries was the Heraion located on the left bank of the river Sele (ancient Silaris) close to the estuary, on the northern border of Poseidonian territory (Strabo 6.1.1; Solin. 2.7). The evidence suggests that the foundation of the Heraion was contemporary with the foundation of Poseidonia (Tocco Sciarelli *et al.* (1989) 67–90). On the sanctuary, see Zancani Montuoro and Zanotti-Bianco (1951–54); Parise Badoni (1989); de La Genière (1997b). The cult of Demeter is attested at several sanctuaries in the *chora* (Cipriani and Ardovino (1989–90)).

In ML 10.7, a treaty of *symmachia* between Sybaris (no. 70.I) with allies and the Serdaioi, Poseidonia is listed as *proxenos* of the agreement; Poseidonia itself here appears to be outside the Sybarite alliance, and its function as *proxenos* is

not easy to interpret (ML *ad loc.*); however, the inscription attests the ability of Poseidonia to conduct foreign policy and to enter into interstate relations. According to Strabo 6.1.3, Poseidonia had a number of *symmachoi* in C5l–C4e when the city was defeated by the Leukanians. A war of uncertain date with Hyele (no. 54) is attested in Strabo 6.1.1.

Poseidonia was conquered by the Leukanians in C5l–C4e, probably after the fall of Kyme (E. Greco (1992b) 249). During C4s the Greek identity of the community was effaced, and the Greek language was no longer spoken (Aristox. fr. 124, Wehrli), but though the Poseidoniatai are described as “wholly barbarianized” (Aristox. fr. 124, Wehrli), the persistence of at least one ancient Greek religious festival is reported (*ibid.*; cf. Ampolo (1989–90)); in Ps.-Skylax 12 Poseidonia is listed as a *polis Hellenis* and Greek-style coinage persisted (*infra*), and Lomas (2000) 178 questions whether Poseidonia was in fact barbarianized “to the extent that Aristoxenus would have us believe”.

The only evidence for the internal political life at Poseidonia is the C5m *ekklesiasterion* (*infra*) with its implication of an assembly. A C6l–480 bronze *olpe* from a tomb in the area of the city (Arena (1996) no. 32) is inscribed with four Greek names, each of which is preceded by two letters ($\pi\alpha$, $\beta\nu$, $\delta\nu$ bis); “the letters preceding the names are sigla identifying the bearers as members of some civic subdivision, whether a phyle, demos or otherwise” (SEG 43 855 *comm.*).

Poseidonia was founded on an irregular limestone plateau, later bounded by a circuit wall, running for 4,750 m and mainly of C4l Leukanian and Roman date (Schläger (1962); Blum (1987)). There are, however, remains of a Greek circuit wall inside the later walls, east of the south gate (Schläger (1962) 22), and the Greek city probably did have a circuit wall, at least contemporary with the building of the large temples, as indicated by the fact that the north and south gates were laid out in accordance with the orientation of the temples. The extent of the C6–C5 habitation area, estimated at c.125 ha, is indicated by several large cemeteries (E. Greco (1979) 12–13; Pontrandolfo (1987)) and sanctuaries situated along the edge of the urban area (Greco, Stazio and Vallet (1987); Pedley *et al.* (1993)).

Although the orthogonal urban layout with narrow *insulae* and the use of *plateiai* and *stenopoi* is of Roman date, it was probably Greek in origin, as suggested by the very similar evidence from Metapontion (no. 61), also an Achaian colony (Castagnoli (1956) 39–44; Schläger (1965) 188–97; E. Greco and Theodorescu (1990) 87). The main divisions of the city were formed by a broad central, civic belt: the agora

and the two large *temene*, dividing the habitation area into two main zones. The public space constituted about 25 per cent of the area inside the walls (E. Greco and Theodorescu (1994) 236). There is no certain evidence of the extent of the C6 habitation, but it probably comprised c.70 ha of the urban area. The political function of the agora is revealed by an *ekklesiasterion* and a *heroon*. The C5m–C4 circular *ekklesiasterion* had a seating capacity of 1,000–1,700 (E. Greco and Theodorescu (1983) 34–49, 79–81; Hansen and Fischer-Hansen (1994) 69–72). A *heroon*, or cenotaph, has been recognised in the sunken limestone chamber containing rich grave goods and in C4 surrounded by a *peribolos* wall (Sestieri (1955a); E. Greco and Theodorescu (1983) 25–33, 74–79). The location of the structure suggests a political cult, possibly that of the *oikistes*. The small ante-temple located west of the *ekklesiasterion* possibly housed a *poliad* cult; the altar in the *ekklesiasterion* lies on the axis of this temple, thus suggesting some overall planning (E. Greco and Theodorescu (1983) 65 fig. 8 “T”).

The major divinity of the southern *temenos* was Hera. The main temple was the C6m “*Basilica*” (Heraion I), a Heraion according to the epigraphic evidence (Guarducci (1952); LSAG 252, 260 no. 3; SEG 29 982; Arena (1996) no. 19). Apart from her warrior aspect, she was also *kourotrophos* (Ardovino (1986) 107, 113). There were other cults (survey of cults: Ardovino (1986)): Hera Hippias: G. Greco (1992) 254–55; Hera and Zeus: Stern (1980); but Hera, the patron deity, enthroned and holding a phiale is the commonest type of votive. The second major temple was the “Temple of Poseidon” (Heraion II) (c.460–450), normally identified as a Heraion, though Torelli (1987) 60–62 suggests Apollo Hiattos (Cipriani (1997) 221–22 suggests Zeus). There were several other structures in the sanctuary already from the Archaic period, e.g. a C6l temple located on the northern edge of the *temenos* (Bertarelli Sestieri (1987–88) 107–8 pl. 2). Votive finds indicate cults of Athena, Aphrodite and Artemis in addition to that of Hera and *kourotrophoi*, and a number of anatomical votives and the type of “infant in swaddling clothes” suggest a healing divinity or a Meter (Bertarelli Sestieri (1989)). The stele (a *horos*?) of Chiron (C6e) suggests a “precinct of Chiron” (LSAG 252, 259 no. 2; Arena (1996) no. 50.25). A precinct of Zeus Xenios is inferred from a (lost) inscription (Cipriani (1997) 223; Arena (1996) no. 23), and several smaller temples, as well as various altars and votive deposits add to the furnishings of the sanctuary (Sestieri (1955b), (1956); Bertarelli Sestieri (1987–88); Cipriani (1997) 215–16; cf. also Mertens (1993) 93 n. 868: architectural remains from at least eight different Archaic roofs). The row

of altars, various votive deposits, and *horoi* east of the two large temples indicate the eastern limit of the sanctuary (Bertarelli Sestieri (1987–88) 94–95, 114). There is C6(?) evidence of a Demeter sanctuary on the southern confines of the Heraion (Cipriani and Ardivino (1989–90) 346 with refs.), and the Demeter cult is attested in various locations of Poseidonia (Cipriani (1997) 222–23; Hinz (1998) 171–76). Finally there are epigraphic attestations of various cults: of *Pais*, as an epiclesis of Hera (?), of Athena, Zeus Xenios, Chiron (if not a personal name), and of the nymphs (Ardivino (1980); Arena (1996) no. 51). A cult of Poseidon must have played an important role in the city, as we can infer from the city's name and from the coin type depicting a striding Poseidon. There is evidence of a Herakles cult in the Leukanian period, but for the Greek period the evidence is uncertain, though there are many references to Herakles myths in the architectural sculptures of the Heraion del Sele (see Cipriani (1997) 223–24, stressing the *polis* aspect of Herakles cults). In the northern sanctuary there is one major temple, a C6l–C5e “Temple of Demeter” (Krauss (1959)), and a cult of Athena is inferred from votive material (Sestieri (1955*b*) 40). A C6f *sacellum* located to the south of the major temple is the earliest identified temple at Poseidonia, known only from its architectural terracottas (Mertens (1993) 93, 127). An Aphrodite shrine was probably situated to the north of the Athena temple (Sestieri (1955*b*) 40), and a C6e *naiskos* lay between the Athenaion and the agora (*Poseidonia* ii. 64). The cult of Poseidon must have been important in the first settlement (at Agropolis?; cf. schol. Lycoph. *Alex.* 724) but is not attested in the major settlement except on the coins (*infra*). Important Greek cemeteries occupied extensive areas to the north, south-east and south of the city (Mello and Libero Mangieri (1996) 332–33, 335–37).

Parmenides of Poseidonia won both the *stadion* and the *diaulos* at Olympia in 468 (*Olympionikai* 235–36).

Poseidonia began minting silver coins c.530–525 with issues in the Achaian incuse fabric, although the weight system used was the “Phocaeen–Phoenician” standard, as at Hyele (see Taliercio Mensitieri (1987)). Drachms, obols and hemiobols were struck in addition to staters (Rutter, *HN*³ 1107ff). The type depicts a striding Poseidon, a trident in his raised right hand; legends: ΠΟΣ, ΠΟΣΕΙ, ΠΟΣΕΙΔΑΝΙ (Gorini (1975) 30–32; Rutter, *HN*³ 1107; *SNG Cop. Italy* 1271–76, 1294–96). Some coins carry the additional legend ΦΙΣΣ, the meaning of which is disputed (Rutter, *HN*³ *ad* 1108). The suggestion that it refers to Is, oecist of Sybaris, has won some acceptance (Guarducci, *EG* ii. 661),

though it cannot be excluded that the legend refers to an unknown locality implying some sort of league membership (Gorini (1975) 208). The minting of incuse staters stopped c.510–500, perhaps as a result of the destruction of Sybaris, and until c.470 the city struck only minor denominations (Rutter (1997) 57). C.470 Poseidonia introduced a double-relief coinage employing the Achaian weight standard, possibly influenced by refugees from Sybaris (no. 70.II) (Kraay (1967) 133; Rutter (1997) 42). Types depict *obv.* Poseidon striding; *rev.* bull standing; legend: ΠΟΣ, ΠΟΣΕ, ΠΟΣΕΙ, ΠΟΣΕΙΔΑΝΙ, ΠΟΣΕΙΔΑΝΙΑΤΑΝ (Rutter, *HN*³ 1114; *SNG Cop. Italy* 1277–93, 1297–1308). Denominations included staters, drachms, diobols, obols, hemiobols and possibly octobols (Rutter, *HN*³ 116ff). The additional legend ΣΕΙΛΑ on one issue may refer to the river Seilaros/Silaris (?) or, perhaps more plausibly, may read ΜΕΤΥΛ, a name and a possible reference to an otherwise undocumented *oikistes* (Guarducci, *EG* ii. 698–99; Rutter, *HN*³ 1114). Bronze coinage with types of the double-relief silver coinage and continued use of the city-ethnic for the legend (ΠΟΣΕΙ, ΠΟΣΕΙΔ, ΠΟΣΕΙΔΑΝΙΑΤΑΝ) starts c.420 (Grunauer (1973) 38; Rutter, *HN*³ 115iff; *SNG Cop. Italy* 1309–23). To the later C5 belongs a gold triobol inscribed ΠΟΣ (Rutter, *HN*³ 1115). The Leukanian conquest did not mean the end of the coinage (Rutter (1997) 76–77).

67. Pyxous Map 46. Lat. 40.05, long. 15.30. Size of territory: ? Type: B. The toponym is Πυξοῦς, -οῦντος (Diod. 11.59.4 (r c.471); Strabo 6.1.1; Steph. Byz. 540.11: there described as a *polis Sikeliás*, but mistaken Sicilian locations are not uncommon in Stephanos, cf. Bencivenga Trillmich (1988) 725 n. 60. C6s coins inscribed ΠΥΞΟΕΣ (Libero Mangieri (1981); Rutter, *HN*³ p. 143) may belong to this city, and the legend may be the uncontracted toponym (so Head, *HN*² 83–84; but see further Rutter, *HN*³ p. 143). Πύξις in Steph. Byz. 540.8, possibly derived from Hekataios, may refer to Pyxous or, more likely, to another site (it is described as ἐν μεσογαίῃ τῶν Οἰνώτρων). A city-ethnic is not attested apart from the entries in Steph. Byz. (540.8, 10).

No Archaic or Classical source calls Pyxous a *polis*, but it is included as a type B here on account of the following evidence: (a) Diod. 11.59.4, where it is reported that it was founded as a *polis* in 471/o by Mikythos, the tyrant of Rhegion (no. 68) and Zankle/Messana (no. 51); it may have been founded as a military outpost (Johannowsky (1992)), but the classification suggested by Diodorus may well be correct; (b) the C6s incuse coins (staters and a single specimen of a third-stater) on the Achaian standard depicting the

Sybarite bull and inscribed *obv.* ΣΙΠΙ, ΣΙΠΙΝΟΣ, *rev.* ΠΥΞ, ΠΥΞΟΕΣ (Gorini (1975) 9; Rutter, *HN*³ 1722, 1727; *SNG Cop. Italy* 1387; *SNG Cop. Suppl.* 53). These coins may have been struck by Pyxous under the aegis of Sybaris (cf. Parise (1972) 102–4) and another community, presumably Siris (no. 69) or a community, Sirinos(?), in the vicinity of Pyxous (no. 67). The issue has been subdivided into either four series (Liberio Mangieri (1981)) or two series (Sternberg (1980); cf. also Moscati Castelnovo (1989) 94–100; Rutter, *HN*³ p. 143). If the coins were so minted, it follows that Pyxous existed prior to Mikythos' foundation of the site, and that the community was able to enter into close relations with Siris(?) and Sybaris (no. 70), of which latter it may have been a dependency. What is less clear, however, is whether Pyxous can be considered a *Hellenic* community prior to Mikythos' foundation.

If Pyxous as founded by Mikythos was indeed a *polis*, it may have been a failure, for Strabo 6.1.1 reports that it was left by the settlers *πλὴν ὀλίγων* though he does not specify a date for the depopulation; Pyxous does not appear in Ps.-Skylax, pointing to C4m as a *terminus ante quem*. The C5m indigenous settlement at Roccagloriosa 7 km from Pyxous (Gualtieri (1993)) has been interpreted as a Leukanian replacement of Pyxous. According to Cordiano (1995a), a new reading of the Olympia inscription *SEG* 24 103, previously thought to refer to a conflict between Rhegion and Gela, should rather be taken as evidence of conflicts between Hyele and Rhegion, perhaps brought about by Rhegian expansion and the foundation of Pyxous by Mikythos. The extent of Pyxous' territory is uncertain; prior to the defeat of Sybaris by Kroton, Pyxous would hardly have been autonomous, but rather part of the dominion of Sybaris; as founded by Mikythos, it may have been a dependency of Rhegion.

The site of ancient Pyxous is almost certainly to be identified with Roman Buxentum, mediaeval and present-day Policastro, located on a knoll on the left bank of the river Policastro on the Gulf of Laos (*Talaos Kolpos*) (Bencivenga Trillmich (1988) fig. 1). Recent excavations have revealed two phases of the circuit wall of the Greek settlement incorporated in the mediaeval walls: a C5f phase constructed in ashlar with upper structures in sun-dried brick and a C4l phase in a polygonal technique. The walls enclosed an area of about 11 ha, of which perhaps only about 6 ha was used for habitation. There are no other structural remains from the Greek phase; there is evidence of cult activity in the form of fragments of C5–C4 votive figurines. The C5f phase corresponds well with the tradition of the foundation of Pyxous by

Mikythos. However, if Bencivenga Trillmich (1988) is right in maintaining that there is no material of an earlier period, the site did not have an earlier indigenous or Greek history and cannot therefore have issued the C6l coins discussed above (for a different view, see Johannowsky (1992)).

68. Rhegion (Rheginos) Map 46. Lat. 38.05, long. 15.40. Size of territory: 5. Type: A. The toponym is *Ῥέγιον* (C5 coins, *infra*); *Ῥήγιον, τό* (Hdt. 1.167.3; Thuc. 4.1.3; *IG* I³ 1178.4 (433/2)). The city-ethnic is *Ῥεγίνος* (*SEG* 48 1252 (c.550–500); C6l coins, *infra*; ML 63 (433/2)); *Ῥηγίνος* (Hdt. 7.170.3; Thuc. 6.46.2).

Rhegion is called a *polis* both in the political sense (Thuc. 3.86.2, 6.44.2–3; Arist. *Pol.* 1316^a38) and in the urban sense (Thuc. 6.44.3, Ps.-Skylax 12; Heracl. Lemb. 55). The Aristotelian collection of 158 *politeiai* included a *Ῥηγίνων πολιτεία* (Heracl. Lemb. 55; Arist. fr. 585, Gigon); *ἄστρος* is found at Hdt. 7.170.3; *πάτρα* (= *patris*) is found in *IG* I³ 1178.2 (433/2; cf. *CEG* 1 12; ML 63).

The internal collective use of the city-ethnic is found on coins from C6l (*infra*). The external collective use is attested in *SEG* 11 1205 (c.500), *SEG* 24 303–5 (C6–C5), ML 63.12 (433/2), Hdt. 7.170.3 and Thuc. 6.44.3; the external individual use is found in *SEG* 48 1252 (c.550–500), *CEG* 1 388 (c.450–425), Arist. *Pol.* 1274^b23 and Timaios (*FGrHist* 566) fr. 43.

Rhegion was a colony of Chalkis (no. 365) (Thuc. 6.44.3; Ps.-Skymnos 311–12; Diod. 14.40.1; Strabo 6.1.6), and Euboian involvement in the foundation is supported by calendar evidence (Trümpy, *Monat.* 43–44); Peloponnesian Messenians also participated in the foundation according to Antiochos (*FGrHist* 555) fr. 9 and Heracl. Lemb. 55. According to Antiochos (*FGrHist* 555) fr. 9, the Zanklaians (no. 51) sent for the colonists and appointed the *oikistes* Antimnestos. The participation of Messenian refugees from the First Messenian War dates the foundation to C8s (*CAH*² iii.3, 323–24). According to Dion. Hal. *Ant. Rom.* 19.2, the city was founded by Artimedes of Chalkis. By the Classical period there existed a well-developed foundation myth (Antiochos (*FGrHist* 555) fr. 9; Heracl. Lemb. 55).

On the Ionian coast along the river Halex (cf. Cordiano (1995b)) Rhegion was bounded by the territory of Lokroi (no. 59), and on the Tyrrhenian coast by the river Petrace and the territory of Metauros (no. 62) (Costamagna (1986) 479–84 fig. 1). The territory is termed *γη* at Thuc. 4.24.2; its name was *ἡ Ῥηγίνη* (Thuc. 7.35.2). The site of Rhegion is perhaps the only site with agricultural resources on the southern Aspromonte, and these were exploited from C7;

the walled site of Serro di Tavola is interpreted as a C6s *phrourion* in control of inland routes and the Tyrrhenian coast (Costamagna (1986) 495–502; Cordiano (1995b) 83–88, 104–7). An extra-urban cult of Herakles is attested by a C5f inscription from Castellace, south of Metauros (*IGDGG* no. 41; Givigliano (1987) 95; Cordiano (1995b) 103–4); evidence of a Demeter cult at Grufò Saline Ioniche is offered by a C5s inscription (*IGDGG* no. 42; for Demeter in Rhegian territory, see Hinz (1998) 169–70). An estimate of the size of the territory is still largely based upon the evidence presented by Vallet (1958) 133–37, who estimated it at c.1,000–1,300 km² (cf. Cordiano (1995b)). The influence of Rhegion extended over a much larger area, as shown by the foundation of Pyxous (no. 67) c.476–465 (Diod. 11.59.4; Strabo 6.1.1) and the pressure on Lokrian territorial aspirations (cf. Cordiano (1995b) esp. 92–94).

Rhegion was presumably a member of the Italiote League (*Staatsverträge* 230). The city was allied to Lokroi (no. 59) at the battle of Sagra in C6 (Strabo 6.1.10), but war between it and Lokroi is attested during the reign of Anaxilas (schol. Pind. *Pyth.* 1.99a, 2.36c, Drachmann). An alliance with Taras (no. 71) in 473 is implied by Hdt. 7.170.3, who reports that 3,000 Rhegians fell in a battle fought by the Rhegians and the Tarantines against Iapygians (cf. Diod. 11.52.3–4, who calls the Rhegians *symmachoi* of Taras). *IGDGG* no. 38 (c.450) is a *kerykeion* inscribed *PELINON*; ML 63 (= *Staatsverträge* 162) is a 433/2 renewal of an alliance with Athens (no. 361) originally concluded in the 440s; in 415, however, the city refrained from supporting the Athenian effort against Syracuse (Thuc. 6.44.3, 46.2; Diod. 13.3.5), though it did make a payment to Athens (*IG* 1³ 291.b.11.19 (c.415)). A *symmachia* with Leontinoi (no. 33) in 427 is attested by Thuc. 3.86.3. A peace treaty with Dionysios I of Syracuse was concluded in 399 (Diod. 14.40.7; cf. 14.90.7) and in 389 (Diod. 14.107.4) when the city had to surrender its navy, pay 300 tal., and turn over 100 hostages to Dionysios. Rhegion was taken and destroyed by Dionysios I of Syracuse in 387 (Diod. 14.111–12), who sold off as slaves those inhabitants who were not able to raise a ransom of one silver *mina*. The city was refounded by his son Dionysios II, and a part of the city was for a short period called by the name of Phoibia (Strabo 6.1.6). The independence of Rhegion was restored by Leptines and Kallipos of Syracuse in 351 (Diod. 16.45.9).

In C5s, Rhegion experienced a period of *stasis* (Thuc. 4.1.3), and there were Rhegian *phygades* at Lokroi urging that city to invade Rhegian territory (Thuc. 4.1.3).

According to Hdt. 7.170.3, Rhegion lost 3,000 men in battle against the Iapygians in 473 (cf. Diod. 11.52.3–4). An army

of 6,000 foot, 600 horse and fifty triremes was deployed in 399 (Diod. 14.40.3). In 427 and 425, Rhegian naval forces assisted the Athenian operations in the west (Diod. 12.54.4; Thuc. 4.25.2). In C4e, Rhegion possessed a navy comprising seventy triremes (Diod. 14.107.4; cf. 14.8.2; 14.40.3), but the city was stripped of its navy by Dionysios I in 389 (Diod. 14.106.3). Appointment of *strategoï* is mentioned at Diod. 14.40.3 (r399) (cf. 14.87.1 (r394)), and 14.108.4 (r388) indicates that such appointments were made by election.

Sending of envoys is attested by Thuc. 3.86.3 (cf. ML 63.1) and by Diod. 14.40.7 (r399), 106.2 (r389). Reception of envoys is attested in Diod. 14.8.2 (r404) and 44.4–6 (r398). Diplomatic activity is further attested by the C5m *kerykeion* (*supra*). Two or more citizens are listed as *proxenoi* of Tenos (no. 525) in *IG* XII Suppl. 313.7 (C3m). According to Arist. *Pol.* 1274^b23, Androdamos of Rhegion at an unknown date (Zahrnt (1971) 16 n. 27) served the Thraceward Chalkidians as *nomothetes*. A citizen of Rhegion served as *theorodokos* of Epidauros (no. 348) in 356/5 (*IG* IV².1 95.47).

The constitution preceding the tyranny of Anaxilas is described as an oligarchy at Arist. *Pol.* 1316^a35ff. It is presumably this constitution that is referred to in Heracl. Lemb. 55; it is described as an aristocracy employing the laws of Charondas and administered by 1,000 men *αἰρετοὶ ἀπὸ τμημάτων*. According to Antiochos (*FGrHist* 555) fr. 9, the Rhegian *ἡγεμόνες* (= the 1,000?) were all of Messenian *genos* in this period. In 494 the constitution changed “from oligarchy to the tyranny of Anaxilas” (Arist. *Pol.* 1316^a37f). Anaxilas conquered Zankle (no. 51) and changed its name to Messana (Hdt. 6.23.2; Thuc. 6.4.6); he was then tyrant of both Rhegion and Zankle/Messana (Diod. 11.48.2; Berve (1967) 156): Rhegion was governed by his son Leophron while he himself ruled Zankle/Messana (schol. Pind. *Pyth.* 2.38). After the battle of Himera in 480 he concluded a treaty with Gelon and was left in possession of Messana (schol. Pind. *Pyth.* 1.112). At the death of Anaxilas in 476 Mikythos succeeded to the tyranny (Diod. 11.48.2) both at Rhegion and Zankle/Messana (Diod. 11.59.4). In 465 the sons of Anaxilas took over power from Mikythos, but they were soon expelled and Rhegion was “liberated” (Diod. 11.76.5 (r461)). C5s Rhegion went through a period of *stasis* culminating in 425 (Thuc. 4.1.3; Berger (1992) 29–30). Four *nomothetai* are mentioned in Iambl. *VP* 172 (cf. 130 referring to them as composers of a *politeia* (r c.C5m); Minar (1942) 48, 85). A meeting of the *ekklesia* is attested for 398 by Diod. 14.44.5 (cf. Arist. *Oec.* 1349^b18; Ael. *VH* 5.20) and again for 345/4 (Diod. 16.68.5); for a survey of *strategoï* and assemblies in C4f, see Costabile (1978).

Rhegion was founded on a narrow sloping plateau near the sea between the river Calopinace (ancient Apsias) and the river Annunciata. It was one of the early Chalkidian foundations, probably founded shortly after Naxos and Zankle (730–720) as corroborated by C8I and C7 ceramic finds, structural evidence being absent (Sabbione (1981*b*) 275–81; cf. also Spadea (1987)).

The harbour was located on the estuary of the ancient Apsias, outside the urban area (Vallet (1958) 130–31; Martorano (1985) 234–36). Spadea suggests a harbour location on the estuary of the Fumara dell'Annunciata, below the city and near the recent urban investigations at the Lido (Spadea (1986) 461–62).

The urban layout is largely unknown, apart from the remains of a few public buildings, the location of sanctuaries, and the circuit wall. The course of the early fortification remains uncertain, though part of a C6–C5(?) dried brick wall is preserved (Guzzo (1982*b*) fig. at p. 129). Significant stretches of a C4 double curtain-wall are preserved along the coast and inland along the Aspromonte hills (refs.: Guzzo (1982*b*) fig. at p. 130; Tréziny (1986) 192 n. 64). It is uncertain whether the wall is earlier or later than the alleged destruction of the city by Dionysios I in 387 (cf. Diod. 14.111–12); fortifications are attested by Diodorus before (14.90.5 (r393)) and after (16.45.9 (r350)) the destruction. The area within the C4 circuit wall comprised about 70 ha, obviously less during the Archaic period if part of the Aspropomonte hills were outside the fortified area.

Evidence of public architecture is mostly late. In connection with the *ekklesia* held by the Rhegians in 344, on the occasion of Timoleon's visit, a *bema* is mentioned (Diod. 16.68.4–5; Plut. *Tim.* 10.1–4; Costabile (1978) 45–49). Part of a C4 *koilon* situated on the upper slopes of the city belong to a theatre or an *ekklesiasterion*; the diameter of the structure, c.50 m, gives a seating capacity of about 1,500–1,600. Martorano (1985) interprets the structure as an *ekklesiasterion* on the basis of size and features perhaps not compatible with a theatre proper, and P. Orsi (1922) has interpreted the remains as an *odeion*, but these interpretations are uncertain (Todisco (1990) 137–41; Hansen and Fischer-Hansen (1994) 72–74).

Little is known of Rhegion's major sanctuaries. The importance of Apollo at Rhegion is reflected in the foundation myth of the city (Lacroix (1965); Costabile (1979)) and in the name "Phoibia" given to a quarter in the city (*supra*). The oldest explicit evidence of a temple of Apollo, however, is a C1I honorary decree (*ILS* 5471). The location is unknown, but it was possibly in the lower part of the city

(Vallet (1958) 123–24, 250–51; cf. Sabbione (1981*b*) 278). A sanctuary, possibly for the chthonic divinities, was located close to the theatre and proves the public character of the whole area (Vallet (1958) 121–23). A C5 graffito refers to Zeus Keraunos (Mosino (1995)). According to Thuc. 6.44.3, Artemis had a sanctuary outside the city by the coast (see further Vallet (1958) 79, 130–31). There are remains of yet another suburban temple, "de la Marina" (Vallet (1958) 124 pl. II.3 (number left out but temple indicated to the southwest of Hellenistic cemetery no. 10)). So far no Archaic tombs have been located, all tomb evidence being C4–Hellenistic (Spadea (1986)).

Communal oracle consultation is reported by Aristox. fr. 117, Wehrli. Anaxilas was victorious in the mule race in 480 at Olympia (*Olympionikai* 208) and the cithara-player Ariston participated in the Pythian Games (Timaeus (*FGrHist* 566) fr. 43). Rhegion possibly made a communal dedication at Delphi shortly after the abolition of tyranny in 461 (*IGDGG* no. 37; cf. also 38: a *kerykeion* possibly also connected with the abolition of tyranny). At Olympia dedications of weapons commemorate C6–C5 victories over Lokroi (no. 59) and Gela (no. 17) (Yalouris (1980) 15; *OIBer* viii. 102 pl. 48.1; pls. 36, 38; *SEG* 24 304–5; *IGDGG* nos. 33–34).

Rhegion commenced its coinage c.510 with a small issue of drachms on the Euboic standard and in the incuse technique; the type depicts a man-faced bull (probably the river-god of the river Apsias), above a locust; the *obv.* legend *PETINON* (retr.) is in the Chalkidian script (C. Boehringer (1984–85) 111–12; Rutter, *HN*³ 2468). The next issue, struck c.494 at the beginning of the reign of Anaxilas, consists of staters and drachms on the Euboic standard, in double relief, similar to Messanian issues and like them inspired by Samian types: *obv.* lion mask facing; *rev.* calf's head and legend *PETINON* (retr.) (Caccamo Caltabiano (1993) 17–18, 25–26; Rutter, *HN*³ 2469; *SNG Cop. Italy* 1923). Lower denominations have the same *obv.* type, *rev.* *PEΓ* in dotted circle (Caccamo Caltabiano (1993) 26–27). A small issue of tetradrachms on the Attic standard, with types as above, were struck c.485–480 (Caccamo Caltabiano (1993) 28). C.480, still during the reign of Anaxilas, Rhegion and Messina simultaneously struck tetradrachms and fractions on the Attic standard: *obv.* mule biga; *rev.* running hare and, on Rhegian coins, the legend *PETINON* (retr.); lower denominations have *obv.* running hare, *rev.* legend *PEΓ* in dotted circle (Caccamo Caltabiano (1993) 53–56; Rutter, *HN*³ 2472ff; *SNG Cop. Italy* 1924–27). The abolition of tyrannical rule at Rhegion in 461 led to a new coinage from c.C5m: tetradrachms and drachms with *obv.* lion mask as above; *rev.*

seated male figure surrounded by a wreath, probably the oecist Iokastos, legendary founder of the city; legend: *PEFINON*, on later issues *PHFINOΣ* (Lacroix (1965) 44–45; Stazio (1978) 195–96; Rutter, *HN*³ 2477ff, 2488ff; *SNG Cop. Italy* 1928–30, 1932 (obol)). The revival of coinage at Rhegion has been connected with the appearance of overstruck Athenian tetradrachms in this city and at Messana, reflecting Athenian influence in South Italy and the foundation of Thourioi in 444 (Kraay (1976) 219). The *rev.* type was changed *c.*420 to a head of Apollo, legends *PHFINOΣ*, *PHFINON*, *PHFINΩN* (Rutter, *HN*³ 2494; *SNG Cop. Italy* 1933–34). A later issue with *obv.* head of Apollo; *rev.* lion mask (Rutter, *HN*³ 2501; *SNG Cop. Italy* 1945–52) is attributed to 356–351 and the refoundation of Rhegion by Dionysios II, see *supra* (Kraay (1976) 22). Bronze coinage, with types similar to the silver, was introduced in C5s (Caccamo Caltabiano (1979); Rutter, *HN*³ 2513ff; *SNG Cop. Italy* 1939–40).

Rhegion was the *metropolis* of Pyxous, founded in 476–465 by Mikythos (Diod. 11.59; Strabo 6.1.1; see further the entry for Pyxous).

69. Siris (Sirites) Map 46. Lat. 40.15, long. 16.40. The location indicated by *Barr.* (lat. 40.10, long. 16.40) is not followed here. *Barr.* locates Siris *c.*5 km south of Herakleia Leukania in accordance with one literary tradition which suggests separate locations for the two sites (*infra*). However, in our entries for Siris and Herakleia Leukania we locate both communities on the plateau of modern Policoro, a location suggested by the archaeological evidence and at present widely accepted. Size of territory: ? Type: A. The toponym is *Σίρις*, ἡ (*SEG* 19 618 (C6–C5); Hdt. 8.62.2); on the name *Πολιεῖον* (*Mir. ausc.* 106; Strabo 6.1.14; Steph. Byz. 531.12), see *infra*. *Σ(ε)ιρίτις*, which properly denotes the territory, is sometimes used almost as a toponym (Antiochos (*FGrHist* 555) fr. 12; Strabo 6.1.14). The city-ethnic is *Σιρίτης* (Hdt. 6.127.1); *Σιρίνιος* of the C6 coin legends may also be the city-ethnic (*infra*); Steph. Byz. 572.12 lists this as a form of the ethnic.

Antiochos (*FGrHist* 555) fr. 12 should probably be emended to read *δυεῖν οὐσῶν πόλεων, τοῦ Μεταποντίου . . . <τῆς δὲ Σιρίτιδος>*; if accepted, the text calls Siris a *polis* in, primarily, the territorial sense, with the urban sense as a connotation. The external collective use of the city-ethnic is found in Timaios (*FGrHist* 566) fr. 51 (rC7) *apud* Ath. 12.232C; the external individual use is found in Hdt. 6.127.1 (rC6f). Siris is implicitly described as *patre* (= *patris*) in Hdt. 6.127.1–4.

The literary tradition presents a number of traditions on the origin, foundation and early history of Siris; the evidence is quite confusing and difficult to correlate with the archaeological evidence (see e.g. Lombardo (1986); Sacchi (1990); Osborne (1998) 265–67). A synthesis yields the following picture.

According to Strabo 6.1.14, Ionians fleeing from Lydian rule conquered a non-Greek (Chonian) *polis* and changed the name from Siris to Polieion (cf. *Mir. ausc.* 106; Steph. Byz. 531.11, 572.10; *Etym. Magn.* 680.11), a name that is, however, not often found in the sources relating to the Greek city. Strabo does not specify who these Ionians were or the date of their capture of Siris; but Ath. 12.523C (= Arist. fr. 601) and Timaeus (= *FGrHist* 566, fr. 51) identifies them as from Kolophon (no. 848), and since Gyges (*c.*680–645) is known to have conquered Kolophon (Hdt. 1.14.4), a synchronisation of the capture of Kolophon and the foundation of Polieion would produce a foundation date of *c.*660 (Ronconi (1980); Lombardo (1986) 63–64). The historicity of this tradition of a Kolophonian foundation was rejected by Beloch (1894) 606–7, but is accepted by Demand (1990) 31–33; a C6e–m loom weight inscribed in the Ionian alphabet may possibly support an Ionian presence at Siris (*LSAG* 286). The foundation date of *c.*660 implied by the synchronisation with Gyges' capture of Kolophon does not square well with the archaeological evidence, which points to a foundation date of C8l–C7e. Strabo's report (6.1.14) that Siris was a Rhodian foundation is unique.

According to Antiochos (*FGrHist* 555) fr. 12, Sybaris (no. 70.I) invited Achaian colonists to settle in Italy to create a buffer against Taras (no. 71); two sites were at the disposal of the settlers, Metapontion and Siris, and the Sybarites advised settling Metapontion since the new community would then *also* control Siris. This seems to imply that Siris lay empty or was controlled by Sybaris; Just. *Epit.* 20.2.4 reports that an alliance of Metapontion (no. 61), Sybaris (70.I) and Kroton (no. 56) conquered Siris, and this would seem the probable occasion after which Sybaris could control Siris; this conquest is usually dated to C6f (Giangiulio (1989) 249–50; Sacchi (1990) 151) and archaeological evidence confirms a *c.*C6m destruction of Siris (Adamesteanu (1975*b*) 527). But Metapontion seems to have been founded *c.*630 (see the entry for Metapontion), and in any case the city can hardly have participated in the war that provided the preconditions for its own foundation. This combination of the evidence, then, runs into difficulties. Furthermore, Siris seems to have existed and minted coins in C6l (*infra*),

and with legends in Achaian script. According to Just. *Epit.* 20.2.10, Siris was allied to Lokroi (no. 59) during the conflict with Metapontion, Sybaris and Kroton.

Though Hdt. 8.62.1 may imply that Siris was unoccupied in C5e, it does seem to have been occupied when Taras (no. 71) and Thourioi (no. 74) fought for control of the site shortly after the foundation of Thourioi; the war was ended by a mutual agreement between the two cities to found a joint colony (Antiochos (*FGrHist* 555) fr. 11; *Staatsverträge* 158). Diod. 12.36.4 dates the foundation of this colony to 433/2, and he reports that it was founded at the site of Siris, whose inhabitants were deported. According to Antiochos (*FGrHist* 555) fr. 11, “Herakleia” was not the original name of the colony: the city was thus named only after having changed its initial location. A combination of Diodorus and Antiochos would suggest that the city was originally founded as Siris on the site of Siris, but later relocated and then named Herakleia; such a reconstruction is not, however, supported by the archaeological evidence, which clearly shows Herakleia to have occupied the site identified with Siris (see further the entry for Herakleia). According to Strabo 6.1.14, Siris served as the *epineion* of Herakleia, but the reference here is not to the historical Greek Siris, but to a legendary Siris, a *polis Troike*, of which there are no archaeological remains. So, by the 430s Siris had been replaced by Herakleia (no. 52).

The territory is called $\Sigma(\epsilon)\rho\acute{\iota}\tau\iota\varsigma$ (Antiochos (*FGrHist* 555) fr. 3; Arist. *Pol.* 1329^b21). The sources refer to a foundation near the river Siris, but there is no archaeological evidence for such a site, and Siris is therefore normally identified with the settlement on the hill of Policoro (*infra*). The archaeological evidence indicates Greek settlers on the plateau of Policoro from C8l, and the Kolophonian settlers (*supra*) therefore had Greek predecessors. Greek presence in the Siritis from the C8s has been documented at other sites also, most importantly at Inoronata c.18 km to the north of Siris. Inoronata had a cultural appearance very similar to that of Siris, and the site is therefore interpreted as an *emporion* of this city, located on the northern border of Sirite territory (Orlandini (1986a), (1986b)); it was destroyed by Metapontion (no. 61) at the time of the foundation of that city c.630 (Osanna (1992) 40–42; Sacchi (1990) esp. 146–59). Ionian influence was curtailed by the foundation of Metapontion and so confined within the valley of the river Cavone from C7s. The northern border of Siris’ territory centred upon the Hellenised indigenous settlement at Termitito (Osanna (1992) 94). The *chora* of Siris extended along the coast and somewhat inland along the Sinni and

Agri river valleys, as attested by the border sites of S. Maria d’Anglona and Piano Sollazzo, which are Hellenised from C7s, but the influence of Siris undoubtedly reached the Tyrrhenian coast (Osanna (1992) 92–96, 109–10). To the south the territory was bounded by the Siris valley and beyond that by Sybarite territory. There is no evidence of sanctuaries in the territory of Siris prior to the foundation of Herakleia (Osanna (1992) 96).

The C8l–C7e settlement founded on the narrow, coastal east–west oriented plateau (c.1,700 × 100/150 m), modern Policoro, is here identified with Siris. The easternmost part of the plateau was fortified on its west side by a ditch and forms an acropolis (Hänsel (1973) 401–4 fig. 1, 429–41, 443–46, 461–63). Remains of C7–C6 mudbrick circuit walls along the edge of the Policoro plateau (Hänsel (1973) 429–43, 492; Adamesteanu (1980b) 82–85) show that habitation, although concentrated in separate areas, covered most of the plateau. The sporadic structural remains on the plateau (Adamesteanu and Dilthey (1978) 521–25 fig. 12) and ashlar foundations of two large structures (temples?) on the acropolis date from c.700 (Adamesteanu (1980b) 76–78). There are traces of habitation and workshops also outside and south of the plateau; the location of several cemeteries seems to indicate separate nuclei of habitation areas (Tagliente (1986a), (1986b)). The archaeological evidence confirms a destruction c.C6m (= the Achaian conquest of Just. *Epit.* 20.3.4?), but there are also some signs of continuous settlement (Adamesteanu (1975b) 527). The vast C5 public area, an agora(?), on the southern slope above the sanctuary of the “Archaic Temple”, may have had an Archaic origin. Sanctuaries were located at springs rising on the southern slope of the plateau. The sanctuary of Demeter identified by C5–C4 epigraphic evidence (Neutsch (1967) 134–36, (1980)) originated in C8l–C7e (Adamesteanu (1980b) 78 n. 24, 86–87 with refs.; (1982) 301, 303 fig. 2; for scepticism on the evidence, see Hinz (1998) 193–94). The divinity of the C6e “Archaic Temple” to the west of the Demeter sanctuary is unknown; cult was practised from C7m (Adamesteanu (1974) 97, (1980b) 87–88; Mertens-Horn and Viola (1990) 249–50). Further west, yet another sanctuary with remains of two or three C6l *naiskoi* and votive material testify to the overall public character of the southern slope of the plateau. The cult is uncertain, though a votive *pinax* found on the site with a representation of Apollo and Herakles may point to these divinities (Neutsch (1980) 153–54). Fragments of late Archaic architectural terracottas found above in the western area of the plateau have been taken as evidence of one or more *naiskoi*

(Adamesteanu and Dilthey (1978) 525 fig. 53; Adamesteanu (1980*b*) 88–89). The major urban cult was that of Athena Ilias, presumably the patron divinity (*Mir. ausc.* 106; Strabo 6.1.14). Other evidence of cult includes a C61–C5e bronze plaque listing objects, in Achaian script, belonging to the sanctuary, *epi Siri* and *epi dromo*, of a female divinity which is with some uncertainty identified as Hera, Athena or Demeter (Guarducci (1958) 52, 57–58; C6s; LSAG 287: c.475; Guarducci, *EGi.* 117–18). Circumstantial evidence suggests a cult of Artemis Bendis (Hänsel (1973) 457). The Archaic cemeteries are found on the outermost western part of the plateau, with evidence of burials inside the circuit wall (Adamesteanu (1975*b*) 526–27, (1980*a*)), but mainly in an extensive area to the west of the plateau (Contrade Cerchiarito, Schirone and Madonelle) (Adamesteanu (1974) 111–16). Such separate well-defined cemeteries point to separate nuclei of settlement. The funerary road, later the continuation of the *plataia* of Herakleia, was originally an important artery of the territory, also leading to the *chora* of Dionysos known from C4 but possibly of more ancient origin (see the entry for Herakleia Leukania).

An architectural fragment from Olympia has been taken as evidence of a treasury of Siris (Mertens-Horn and Viola (1990) 242).

Siris may have minted coins. An issue of C6s incuse staters on the Achaian standard carry the Sybarite type of a bull looking back and double legends in the Achaian alphabet: *obv.* ΣΙΡΙΝΟΣ (retr.), *rev.* ΠΥΞΟΕΣ or ΠΥΞ (Gorini (1975) 9, 95–98; Sternberg (1980); Rutter, *HN*³ 1722; *SNG Cop. Italy* 1387; *SNG Cop. Suppl.* 53). A single third-stater with *obv.* legend ΣΙΡΙ is attested (Sternberg (1980) 127, 139; Moscati Castelnovo (1989) 94 n. 7; Rutter, *HN*³ 1727). The interpretation of these coins is uncertain. The legend ΣΙΡΙΝΟΣ is either a city-ethnic of Siris or a toponym (Sirinios; see Pyxous (no. 67)). If it is the city-ethnic of Siris, the coinage may be a joint issue of Siris and Pyxous, though it is a problem that the two sites are situated far apart, or of Siris and some otherwise unknown locality near Siris (cf. Gallo (1996) 97–100). The initial issue is normally dated c.550–540 (Moscati Castelnovo (1989) 94–100; Sternberg (1980) unconvincingly interprets the early Siris coinage as a prototype for Sybaris' coinage and dates it 560–550). The Sybarite bull type dates the issue to after the destruction of Siris by Sybaris *et al.* (*supra*), and the coinage therefore represents a Siris within Sybaris' dominion, rather than an issue of an independent city (cf. Parise (1972) 102–4; Guzzo (1989) 41, 46). The coinage has been divided into four series (Libero Mangieri (1981) or into two series (Sternberg

(1980)) terminating c.510 contemporary with the fall of Sybaris.

70. Sybaris (Sybaritas) Map 46. Lat. 39.45, long. 16.30. Size of territory: 5. Type: A. The toponym is Σύβαρις, ἡ (Hdt. 5.44.1; Ar. *Vesp.* 1435). The city-ethnic is Συβαρίτας (ML 10 (550–525); C5l coin, *infra*), in the Ionic dialect Συβαρίτης (Hdt. 6.127.1).

Sybaris I. Sybaris is called a *polis* in the urban sense at Hdt. 5.45.1 and Theophr. *Hist. pl.* 1.9.5, and in the political sense at Hdt. 6.21.1 and at Arist. *Pol.* 1303^a26, 29, where Sybaris is the first of eight examples listed under the heading *polis*. The Aristotelian collection of *politeiai* seems to have included a Συβαριτών πολιτεία (132, Gigon = fr. 583, Rose). It is called an ἀποικία at Ps.-Skymnos 340. The internal collective use of the city-ethnic is attested on coins from C6l, once in nom. sing. (*infra*). The external collective use is found in ML 10 (550–525); Hdt. 5.44.2; Antiochos (*FGrHist* 555) fr. 12; and Arist. *Pol.* 1303^a32. The external individual use is found at Hdt. 5.47.1 (rC6s) and 6.127.1 (rC6f) and IG 11² 2326.4 = SEG 32 217 (C3, r616). Sybaris is implicitly described as *patre* (= *patris*) in Hdt. 6.127.1–4.

Sybaris was founded in the last quarter of C8 (721/20: Ps.-Skymnos 360; or 709/8: Euseb. *Chron.* 91b Helm), a date confirmed by archaeological evidence (Guzzo (1982*a*)). It was commonly regarded as an Achaian foundation (Antiochos (*FGrHist* 555) fr. 12; Ps.-Skymnos 340), but Arist. *Pol.* 1303^a29 describes it as a joint foundation of Troizenians (no. 367) and Achaians. Solin. 2.10 describes it as founded by Troizenians and Sagaris, the son of the Lokrian Aias; Ant. Lib. *Met.* 8.7 describes it as a Lokrian foundation, but this Lokrian tradition is presumably simple aetiology, entirely without historical value (Papathomopoulos *ad* Ant. Lib. 8.7). The oecist is reported to have been Is of Helike (Strabo 6.1.12; Pugliese Carratelli (1972–73) 17; Morgan and Hall (1996) 204; Bugno (1999)).

Greek finds show that the *chora* of Sybaris extended as far as the valleys of the rivers Krathis and Sybaris (modern Coscile). Northwards the settlement of Amendolara (= Lagaria according to de La Genière (1991*b*)) delimits the Sybarite and Sirite areas of influence, southwards the border between Sybarite and Krotoniate areas of influence is unclear (Guzzo (1982*a*)). There is archaeological evidence, as early as C8, of Sybarite influence far inland along the routes offering shortcuts to the Tyrrhenian coast (survey in de La Genière (1978) 344–54), and the defeat of Sybaris by Kroton (no. 56) in 510 is reflected in the abandonment of

sites on the Tyrrhenian coast, e.g. at Petrosa di Scalea (cf. E. Greco (1990) 47, 51–52). An important Athena sanctuary (cf. *CEG* 394; C5s graffito: Arena (1996) no. 28.9) with C7 temples was located in the hinterland of Sybaris on the plateau of Timpone della Motta (Francavilla Marittima; de La Genière (1989); R. Russo (1996); Maaskant Kleibrink (2000); Ridgway (2002) 135–36), the site of an earlier indigenous settlement identified by some as Lagaria (cf. Strabo 6.1.14). There is evidence of a rural sanctuary of Hera further inland en route for Laos, mentioned on the inscribed axe found at S. Sosti (Arena (1996) no. 36.15; cf. Steph. Byz. 589.14 with discussion by Lucca (1994)).

The heyday of Sybaris was the Archaic period down to 510, the date of its crushing defeat at the hands of the Krotoniates. In the C6f war against Siris (no. 69), Sybaris was allied with Kroton (no. 56) and Metapontion (no. 61) (Just. *Epit.* 20.2.3–4). By C6m at the latest Sybaris had come to control a vast dominion (comprising, according to the inflated report by Strabo 6.1.13, four neighbouring *ethne* and twenty-five *poleis hypekooi*; cf. Ampolo (1992) 246 with refs.); in extent, the dominion of Sybaris may have been as large as c.3,000 km² (Ampolo (1992) 247). At least one of the mechanisms employed by Sybaris to control its dependencies was a hegemonic *symmachia*: ML 10 (550–525) shows the city as the leader of an alliance including the Serdaioi and other unspecified *symmachoi*. Apparently some of the cities and communities in the dominion of Sybaris issued coins, while others did not; this may perhaps be a reflection of differences in degree of dependency. Numismatic evidence suggests that Laos (no. 58), Temesa (no. 72) and the unidentified settlements or communities of Ami[-] and the So[-] were also subordinate to Sybaris (Parise (1984) 253, (1988) 307–9; cf. also Rutter (1997) 22–27 and the list of pre-Hellenistic settlements *supra*). According to Diod. 12.9.2 (rC6), Sybaris granted citizenship to many foreigners, and this may possibly be connected with the control of the dominion (Rutter (1970) 171). The city was also active as coloniser, founding Laos (no. 58) prior to 510 and Poseidonia (no. 66) c.600; see also Skidros in the list of non-*polis* sites *supra*.

The large figures reported for the number of citizens (100,000 *astoi*: Ps.-Skymnos 341; 300,000 *politai*: Diod. 10.23, 12.9.2) or armed forces (300,000 men: Diod. 10.23 and Strabo 6.1.13; 50,000 horse: Ath. 519C = Timaeus (*FGrHist* 566) fr. 50), although obviously legendary, may all the same indicate a very populous city; the size of the urban area (c.500 ha, *infra*) confirms that Sybaris was indeed a large city.

The city was founded on a row of coastal dunes parallel to the coast between the rivers Krathis and Sybaris. It had a perimeter of 50 stades (c.9–10 km) according to Strabo 6.1.13, possibly implying a circuit wall though there is no archaeological evidence of such a wall. However, recent investigations indicate that the extent of the city was about 500 ha. Most of the urban remains lie under 4 m-deep alluvial deposits, not, however, unequivocally to be connected with Kroton's destruction of Sybaris (Strabo 6.1.13). However, the destruction of 510 is archaeologically attested and revealed by destroyed and flooded strata (Guzzo (1976) 51, (1997) 379). Only about 5 ha (1 per cent of the presumed urban area!) has been investigated by excavations. The earliest Greek material confirms a foundation in C8l (Guzzo (1982a)) but the structural remains are later, and it is uncertain whether the first phase comprised one large settlement or a plurality of smaller nucleated settlements (Guzzo (1982a) 241, 243). The C7–C6 remains came to light in two zones, “Parco di Cavallo” and “Stombi”, c.1,800 m apart, and revealed some consistent orientation though the overall urban layout of the city is uncertain (Carando (1999)). An industrial quarter is evidenced by kilns (Various authors (1972), (1973), (1988–89)). Architectural fragments from “Parco di Cavallo” testify to a major C6s temple (a Heraion?), and there is further evidence of a monumental rectangular C6 building, probably with a public purpose (Zancani Montuoro (1972–73a); Various authors (1988–89) 27–28).

There is little evidence for cults: Zeus and Apollo are listed as *proxenoi* (“guarantors”) of the *symmachia* treaty ML 10 (550–525). Dorieus, who had supported Kroton against Sybaris (Hdt. 5.44–45), founded a sanctuary with a temple for Athena Krathia (Hdt. 5.45) after the defeat of Sybaris by Kroton, and votive material from “Stombi” possibly refers to Athena (Zancani Montuoro (1972–73a) 67); further evidence for Athena in *CEG* 394 (600–550). A number of sources refer to the cult of Hera at Sybaris (Ael. *VH* 3.43; Ath. 518C; cf. also Torelli (1988) 594), and c.C6m structural remains have been attributed to a Heraion (*supra*). Whether the later Thourian cults of Zeus, Athena, Aphrodite, Dionysos and Herakles (see entry for Thourioi) were in vogue in Sybaris is unknown (cf. Zancani Montuoro (1972–73a) 57). A festival with large monetary prizes is hinted at by Ath. 522D.

Two citizens of Sybaris achieved Olympic victories: Philytas in 616 (*Olympionikai* 71 (boys' boxing)) and Kleomrotos in C6f (*CEG* 394 (event unknown)), and it seems that already by C6f Sybaris rewarded its victors handsomely (Mann (2001) 69–70, discussing *CEG* 394 (6f)). The Sybarites seem to have had treasuries at Olympia (Paus.

6.19.9; Mertens-Horn and Viola (1990) 240–46) and at Delphi (Strabo 9.3.8) with rich dedications (Ath. 605A–B). For attempts to identify a C6m treasury of the Sybarites in the architectural remains at Delphi, see Partida (2000) 261–63. In C6m, the city published a public document at Olympia (ML 10). Communal consultation of the Delphic oracle is reported by Ael. *VH* 3.43 (rC6s).

For the possible existence of a system of civic subdivisions, see Jones, *POAG* 164–65. Little is known of the constitution prior to 510; an early *stasis* is attested in Arist. *Pol.* 1303^a25–31: it seems to have been rooted in ethnic differences and ended with the expulsion of the Troizenians by the Achaians. In general, the information relating to the king/tyrant Telys and his rise to power suggests that prior to his reign Sybaris was an oligarchy, and the importance of the aristocracy is attested by the participation of Smindyrides of Sybaris in the competition for the hand of the daughter of the tyrant Kleisthenes of Sikyon (Hdt. 6.127; Diod. 8.19). Telys is described as *basileus* at Hdt. 5.44.1, as *tyrannos* at Hdt. 5.44.2; cf. Carlier (1984) 470, and his rule as a *tyrannis* at Heraclid. Pont. fr. 49, Wehrli. Diod. 12.9.2 describes him as having risen to power as a *demagogos*, e.g. by having persuaded the Sybarites to exile 500 of the *euporotatoi* citizens and confiscate their property. The exiles found refuge at Kroton (no. 56), and Telys sent an embassy demanding the extradition of the exiles on threat of war (Diod. 12.9.3). The Krotoniates opted for war, and in the ensuing battle in 510 they won a decisive victory (Diod. 12.9.5–6), killed off the larger part of the Sybarite army and went on to sack the city (Hdt. 6.21; Diod. 12.10.1). Thus Sybarite power was eliminated and the phase of Sybarite history often referred to as “Sybaris I” came to an end.

Sybaris II. However, the defeat did not mean the annihilation of Sybaris. Some citizens escaped to the Sybarite colonies of Laos (no. 58) and Skidros (Hdt. 6.21.1), but other survivors must have remained, as appears from several pieces of evidence: (1) incuse coins inscribed with the abbreviated ethnics of both Kroton and Sybaris (ϜΡΟ-ΣΥ) indicate that Sybaris passed into dependency on Kroton (see §2a in the numismatic section *infra* and the entry for Kroton); and this is confirmed by (2), the report that the Krotoniates appointed a governor at Sybaris (Iambl. *VP* 74; Minar (1942) 74; Rutter (1970) 169); (3) when besieged by the Krotoniates in 467, the Sybarites called on Hieron of Syracuse for help (Diod. 11.48.4). This implies a (fortified) settlement at the site of Sybaris (Rutter (1970) 174), the ability to conduct foreign policy, and an (unsuccessful) attempt to obtain some

independence from Krotoniate hegemony. There is, thus, no doubt that a *polis* of Sybaris continued to exist, but it was now a dependent *polis* of Kroton (cf. Kahrstedt (1918) 181–82). To this “Sybaris II” have been attributed the coins described in §2b of the numismatic section *infra*.

The size or status of Sybarite territory in this period is unknown. The earlier dominion of Sybaris was dissolved, and cities like Temesa (no. 72) and Laos (no. 58) were now probably dependencies of Kroton (no. 56) as revealed by the second issue of Sybaris, Kroton and Laos mentioned in §2a of the numismatic section *infra*. Iambl. *VP* 255 (rC6l) seems to indicate that at least some Sybarite land was appropriated by Kroton (Rutter (1970) 169).

Dorieus founded a sanctuary of Athena Krathia after the defeat of Sybaris by Kroton (Hdt. 5.45) and the cult probably continued during C5. The importance of the Athena sanctuary on the plateau of Timpone della Motta (Francavilla Marittima) remained undiminished during the C5 (de La Genière (1989) 494–95).

For “Sybaris II”, as well as for the following phases of the city, the archaeological evidence is limited. The destruction of “Sybaris I” is documented (*supra*), but there is continuity of life throughout C5, although the finds from and structures attributable to C5e are few. Attribution of single strata or structural remains to the different phases outlined above and below is not possible as the finds most often have a longer lifespan than that allowed for the individual phases of Sybarite history (Guzzo (1976) 51–52).

Sybaris III. According to Diod. 11.90.3–4 and 12.10.2, fifty-eight years after the 510 catastrophe (i.e. in 453) a Thessalian or a man named Thessalos (11.90.3) or, more unlikely, Thessalians, refounded (12.10.3) the city (ἐξ ἀρχῆς ᾤκισε τὴν Σύβαριν: 11.90.3; συνώκισαν: 12.10.2). However, after a while (five years?) the Sybarites were driven out by the Krotoniates (12.10.2, cf. 11.90.4), and sent *presbeis* to Sparta (no. 345) and Athens (no. 361) requesting assistance and reinforcements in their attempt to return (Diod. 12.10.3–4). This phase, “Sybaris III”, from c.453 to the initial stages of the foundation of Thourioi (no. 74), is probably reflected in a new series of double-relief coins (cf. §3 in the numismatic section *infra*).

Sybaris IV. During the first phase of the process which eventually led to the foundation of Thourioi in 446/5, Sybaris was reinforced by Athenians and Peloponnesians (Diod. 12.10.4) and seems indeed still to have been called, and located at, Sybaris (coins; cf. *RE* iv². 1008; Rutter (1973) 163). The community was strongly dominated by Sybarites,

and a period of serious *stasis* was caused by the claims of the original Sybarites to privileges in the political, cultic and economic spheres of life; the Sybarites, however, were put to death almost to the last man or expelled, thus paving the way for the foundation of Thourioi proper (Diod. 12.11.1–4; cf. Arist. *Pol.* 1303^a31–33 and Strabo 6.1.13). To this initial “Sybarite” phase of Thourioi = “Sybaris IV” have been attributed the coins described in §4 of the numismatic section *infra*.

V. *Sybaris on the Traeis*. The Sybarites expelled from Thourioi (no. 74) in 446/5 (cf. “Sybaris IV”, *supra*), settled by the river Traeis according to Diod. 12.22.1 (this settlement remains unlocated). According to Strabo 6.1.14, one tradition (τινές) said that Sybaris on the Teuthras (emended to Traeis by Meineke) was founded by Rhodians. This tradition may reflect a Rhodian settlement, otherwise unknown, in the region where the Sybarites later settled, or, more likely, the tradition is mistaken (Walbank (2000) 24). To Sybaris on the Traeis are ascribed the coins described in §5 of the numismatic section *infra*. According to Polyb. 2.39.6, Sybaris combined with Kroton (no. 56) and Kaulonia (no. 55) to form an Achaian confederation in imitation of the homeland Achaians. The date of this confederation, and thus of the Sybaris participating in it, is uncertain, but the date is probably C5s, and the reference would then be to Sybaris on the Traeis (Walbank, *HCP ad loc.* and (2000) 24; Mele (1983a) 86 n. 546; Giangiulio (1989) 177 n. 52, 197). If the alliance dates to 430–420, this is the best evidence for *polis* status of Sybaris on the Traeis, apart from its coins. In any case, the city was soon (after χρόνον τινά: Diod. 12.22.1) destroyed by the Brettians and thus Sybaris came to a final end (*ibid.*).

Sybaris seems to have struck coins in all its different phases and manifestations.

§1. *Coins of Sybaris I*. Coins on the Achaian standard were struck from c.540, possibly as the earliest of the Achaian incuse coinages of South Italy. At first only staters were minted, but gradually lower denominations with the same type were also struck (drachms, triobols and obols). The type shows a bull facing left with head turned back, normally interpreted as a river divinity. Legends: ΣΥ, ΣΥΒ, ΣΥΒΑ, ΣΥΒΑΡΙΤΑΣ (Guarducci, *EG* i. 112, ii. 618; Gorini (1975) 10–11; Rutter, *HN*³ 1729–39; *SNG Cop. Italy* 1388–93). Sybaris I struck coins in some quantity, coins which circulated from the Ionian to the Tyrrhenian coast. Alongside this coinage are found other series in the same incuse fabric, on the Achaian standard and with the same

type (bull looking back), but with legends referring to cities other than Sybaris itself: Siris (no. 69) or Sirinos/Pyxous (no. 67), and two unknown sites named Ami- and So- (Euboic standard). An issue of incuse staters and drachms on the Achaian standard, though with the type of a boar and the retrograde legends ΠΑΑ (*obv.*) and ΜΟΑ (*rev.*), thought to have been made at some settlement of Palinouros and/or Molpa, has also been placed within the Sybarite sphere of influence (Parise (1972) esp. 102–11; Gorini (1975) 9, 12–13). These issues are interpreted as having been struck under a C6s hegemony or dominion of Sybaris, rather than as an alliance coinage (see the entries for these sites in Inventory and in list of non-*polis* sites *supra*).

§2. *Coins of Sybaris II*. (a) Incuse coins (staters and triobols) with *obv.* Krotoniate tripod, legend: ϚΡΟ; *rev.* Sybarite bull, legend: ΣΥ, as well as staters and triobols with *obv.* Krotoniate tripod with ΣΥ r. and octopus l.; *rev.* Sybarite bull, legend: ΛΑΙ (for Laos (no. 58)) in exergue (Gorini (1975) 26.1; Rutter, *HN*³ p. 145) can be ascribed to an early phase of Sybaris II (C6l) when the city was subordinate to Kroton (no. 56). (b) To this Sybaris may also belong incuse staters similar to, but stylistically more advanced than, those of §1, as well as triobols with *obv.* standing bull, legend: ΣΥ; *rev.* amphora incuse; and obols with *obv.* bull; *rev.* acorn incuse (Kraay (1958) 15–16; Gorini (1975) 12.10–11, dated to 530–510; Rutter, *HN*³ 1740–43; *SNG Cop. Italy* 1394–95 (triobols)).

§3. *Coins of Sybaris III*. This phase, “Sybaris III”, from c.453 to the foundation of Thourioi (no. 74), is probably reflected in a new series of double-relief coins issued under Poseidonian influence. Staters: *obv.* striding Poseidon; *rev.* bull facing right, legend: ΣΥΒ (Rutter, *HN*³ 1743). Triobols and obols: *obv.* striding Poseidon; *rev.* bird (Rutter, *HN*³ 1744–45; *SNG Cop. Italy* 1397). In this period Sybaris also issued coins jointly with Poseidonia (no. 66) and Laos (no. 58). Poseidonia and Sybaris III: triobols with *obv.* Poseidon, legend: ΣΥ; *rev.* bull facing right, legend: ΠΙΟΣ (Rutter, *HN*³ 1746–49; *SNG Cop. Italy* 1399–1401). Laos and Sybaris III: diobols with *obv.* bull, legend: ethnic of Laos; *rev.* two circles (as on diobols of Laos proper), legend: ΣΥΒΑ or Σ and Λ, for Laos (Rutter, *HN*³ 2284). Some triobols of Laos: *obv.* bull; *rev.* acorn (cf. §2b), legend: ΣΥ on the *obv.* (Rutter, *HN*³ 2282; *SNG Cop. Italy* 1398).

§4. *Coins of Sybaris IV*. To the initial phase of the Sybarite–Athenian settlement of Thourioi = Sybaris IV have been ascribed two issues with the ethnic ΣΥΒΑΡΙ and ΣΥΒΑ in the Ionic alphabet, and types *obv.* helmeted head of Athena (a reference to the Athenian involvement in the

foundation?); *rev.* (first series) bull looking back in the style of Sybaris I (Rutter, *HN*³ 1750; *SNG Cop. Italy* 1402–4); *rev.* (second series) bull with lowered head butting, in the exergue a fish—a symbol not found on earlier Sybarite coinage (Rutter, *HN*³ 1753; Rutter (1989) 251; Bugno (1997)).

§5. *Coins of Sybaris on the Traeis.* A late coinage in the incuse technique: staters with the bull type and the *obv.* legends: in exergue ΣΥ retrograde and in field BAP (Kraay (1958) 29–32; Gorini (1975) 12.12, 105), is assigned to Sybaris on the Traeis, as is a triobol of c.400: *obv.* horseman; *rev.* standing bull, legend: ΣΥΒΑΡΙΤΩΝ (Rutter, *HN*³ 1754–56).

71. Taras (Tarantinos) Map 45. Lat. 40.30, long. 17.15. Size of territory: 4 (C5). Type: A. The toponym is Τάρας (C61–C4 coins, *infra*; Hdt. 1.24.1; *IG IV*^{2.1} 95.43 (356/5)), ὀ (Thuc. 6.104.2) or ἦ (Strabo 6.3.3). The city-ethnic is Ταραντίνος (C51–C4 coins, *infra*; Hdt. 7.130.3; Antiochos (*FGrHist* 555) fr. 11).

Taras is called a *polis* in the urban sense by Antiochos (*FGrHist* 555) fr. 13, and implicitly at Ps.-Skylax 14 where Taras is the third toponym listed after the heading πόλεις εἰςὸν αἰθε; in the political sense it is called a *polis* in Thuc. 6.44.2; Pl. *Leg.* 637B; Theopomp. fr. 233; and *SGDI* 1567/4620 (C41–C3e). A Ταραντίνων πολιτεία (Heracl. Lemb. 57; Arist. fr. 607, Gigon) was included among the 158 Aristotelian *politeiai*; *politeuesthai* is found at *Pol.* 1320^b14. *Demos* (*ho Tarantinon*) is found in Arist. *Pol.* 1320^b13 and Theopomp. fr. 100, and *demosios* in Theopomp. fr. 233. It is called πάτριη (= *patris*) in *AG* 7.715.1 and *patris* in *CEG* II 833 (C51–C4e).

The internal collective use of the city-ethnic is attested on C51 coins (*infra*); the external collective use is found in Lazzarini (1976) nos. 971–72 (500–475); *IvO* 254–56 (c.440); Hdt. 3.136.2; Antiochos (*FGrHist* 555) fr. 12; and Theopomp. fr. 233. The external individual use is found in *IG XII.9* 187A (= ML 82 (c.411)) and *IG XII.9* 187B (C4e).

Taras was a colony of Sparta (no. 345; Antiochos (*FGrHist* 555) fr. 13; Ephor. fr. 216; Pl. *Leg.* 637B; Arist. *Pol.* 1306^b31; cf. Cartledge (1979) 123–24 and Malkin (1994) 128 with n. 68) founded in C81 (706 according to Euseb. *Chron.* 91, Helm; cf. Van Compernelle (1992) 774). By the late Archaic (Nafissi (1999) 246, 255) and Classical periods there existed a full legendary account of the foundation (*loc. cit.*): Taras was founded by the so-called *Partheniai* (*loc. cit.*), a group of Spartan citizens (ἐκ τῶν ὁμοίων, Arist.) who had become *atimoi* (Antiochos) and attempted revolution (Arist.). The *oikistes* was Phalanthos (Antiochos). The city owed its name

to the hero Taras, eponym also of the river Taras (Antiochos); see Lo Porto (1964) 178–84; Moscati Castelnuovo (1991); Malkin (1994) 115–42; Nafissi (1999) 251–58. The foundation of Taras is connected with that of Satyrion, mentioned in the oracle to Phalanthos (Diod. 8.21.3) and probably earlier than Taras. Satyrion is identified with settlement remains at Saturo on the coast c.12 km to the south-east of Taras, where Lakonians occupied the Iapygian site a few years before settling at Taras (Lo Porto (1964)). Satyrion probably continued as a trading station serving Taras.

The name of the territory was ἡ Ταραντίνη (Antiochos (*FGrHist* 555) fr. 3 *apud* Strabo 6.1.4); it bordered on the territory of Brentesion (no. 78) (Strabo 6.3.6). It was soon occupied by sanctuaries, which seem to have delimited the *chora*, and by several small Greek(?) settlements, at times fortified, and cemeteries situated in the hills surrounding the plain of Taras (Corchiaro (1981); E. Greco (1995b) 87); however, none of these settlements is with certainty identified as Tarantine (Lamboley (1996) 6), and in any case they were soon eclipsed by Taras itself (E. Greco (1981b); Nenci (1987) 198 (Cavallino)). From C7 to C4m the *chora* gradually expanded towards the north-east and south-east, and grew from c.350 km² to c.1,000 km² (Alessio and Guzzo (1989–90); Osanna (1992) 11–16). Early warfare against Metapontion (no. 61) for control or expansion of the territory seems implied by Strabo 6.1.15. In the Classical period Taras fought several wars against both Greek and non-Greek communities, presumably for territorial control: in 473, the city was severely defeated by the Iapygians (Diod. 11.52.3–4; cf. Hdt. 7.170.3–4); C5f victories over the Messapioi and the Peuketioi were commemorated at Delphi (Lazzarini (1976) no. 971; cf. Paus. 10.10.6: Messapioi; Lazzarini (1976) no. 972; cf. Paus. 10.13.10: Peuketioi). Dedications of spoils taken from Thourioi (no. 74) were made at Olympia c.440 (*IvO* 254–56 = ML 57); Antiochos (*FGrHist* 555) fr. 11 explicitly states that the latter war was fought for control of the Siritis. The war was ended by an agreement to found a joint colony which developed into Herakleia (no. 52) (*ibid.* = *Staatsverträge* 158). In C4, the city under Archytas had close ties with Dionysios II of Syracuse, securing Syracusan influence in the Adriatic (Pl. *Ep.* 7.339D; Dem. 61.46; Brauer (1986) 43–59). Also in C4, Taras fought the Messapioi (Iambl. *VP* 197), and the Leukanians (Diod. 16.61.4 (r356); cf. Diod. 16.62.4, 88.3). Such wars induced the city to seek help from Sparta (no. 345) in 340 (Sparta sent Archidamos: Theopomp. fr. 232; Diod. 16.62.4, 63.1) and from Alexander I of Epeiros in 334–330 (Strabo 6.3.4; Just.

Epit. 12.2.1, 23.1.15). Conflicts with the local population may have been a feature of Tarantine life right from the beginning, for the city itself presumably took over the site of a pre-existing non-Greek community (Lo Porto (1970) 356).

During the period of democratic rule in C4 Taras was very powerful, and its military forces comprised the largest fleet of Magna Graecia (naval forces are attested already by Thuc. 8.91.2). Allegedly, Taras could muster 30,000 infantry, 3,000 cavalry and 1,000 *hipparchoi* (Strabo 6.3.4) in the age of Archytas. Diodorus has 20,000 infantry and 2,000 cavalry (20.104.2 (r303)) as the citizen troops mobilised by Kleonymos in 303. And Taras was known as the most populous of the cities of Magna Graecia (Ps.-Skymnos 330). If the army figures are of the right order of magnitude, Taras, at its peak in C4, must have had a citizen population of over 100,000 plus an unknown number of foreigners and slaves (on the basis of these army figures, Wuilleumier (1939) 173–74 calculates a C4m citizen population of 240,000 and a C4l one of 155,000; Beloch (1886) 302 suggests 60,000 for C3l). The large extent of the C5–C4 city, c.530 ha, may support a high population figure, though the intramural area included the cemetery (Polyb. 8.28.7).

In C5l–C4e, Taras was presumably a member of the Italiote League (*Staatsverträge* 230). A treaty of *symmachia* with Rhegion (no. 68) is attested for 473 by Diod. 11.52.3 (cf. Hdt. 7.170.3). Some kind of treaty (*συμβήναι*) between Taras and Thourioi (no. 74) concerning a joint colony is implied by Antiochos (*FGrHist* 555) fr. 12 = *Staatsverträge* 158, and Taras seems to have been the senior partner in this collaboration (*τὴν ἀποικίαν κριθῆναι Ταραντίνων*). Thuc. 8.91.2 refers to Tarantine naval forces supporting Sparta against Athens, thus implying a treaty with Sparta. The arrangement with Sparta which led to the expedition of Archidamos in 344 is described as a *symmachia* by Theopomp. fr. 232 and Diod. 16.62.4, 63.1.

A board of *strategoï* is attested down to C3e (Zonar. 8.2); their number is unknown (Urso (1998) 1–10). Diog. Laert. 8.79 (rC4m) refers to a law stipulating that the office of *strategos* could not be held in two consecutive years. However, Archytas exceptionally served continuously (from 367 or from 356) for six (Ael. *VH* 7.14) or seven years (Aristox. fr. 48, Wehrli; cf. Strabo 6.3.4; only *Suda*, s.v. Ἀρχύτας, describes him as *στρατηγὸς αὐτοκράτωρ*, but it is uncertain whether this refers to an office of the Italiote League or an extraordinary office of the city as attested for C3e (Zonar. 8.2: 281)). Plut. *Quaest. Graec.* 42 (= Theophr. fr. 133, Wimmer) describes a meeting of the assembly at which a *strategos*

refused to recognise the outcome of a vote taken by show of hands, but it is unclear whether he was relying on the constitutional powers of the office to do so. *Strategoï* were appointed by election (Ael. *VH* 7.14).

An exile is mentioned at Hdt. 3.138.1. Reception of envoys in C4m is attested in Aristox. fr. 50, Wehrli, and implied by Hdt. 3.138.2 (rC6l); sending of envoys is attested in Theopomp. fr. 232 and Diod. 16.62.4 (r346/5). Citizens of Taras were appointed *proxenoï* by Eretria (no. 370) c.411 (*IG* XII.9 187A = ML 82) and C4e (*IG* XII.9 187B), by Athens (no. 361) in C4m (*IG* II² 248), and by Delphi (no. 177) in C4l (*F.Delphes* III.1 135). Two citizens served as *theorodokoi* of Epidauros (no. 348) in 356/5 (*IG* IV².1 95.44).

A C4l–C3e inscription may suggest the existence of some system of civic subdivisions (Jones, *POAG* 161). At 3.126.2 Herodotos refers to a *τῶν Ταραντίνων βασιλεύς*; if by *basileus* Herodotos means *tyrannos* (the two terms are sometimes interchangeable, cf. 5.44.1 and 44.2; Luraghi (1994) 76–77), Taras may have experienced a tyranny in C6l. However, since Taras was a Spartan colony, the existence of some kind of formal monarchy is not impossible (Malkin (1994) 132 with n. 87; add: Phot. s.v. ῥήτρα; Nafissi (1999) 251). Democracy was introduced shortly after the Persian Wars (Arist. *Pol.* 1303^a5); prior to that the constitution was a *politeia*, presumably favouring the *gnorimoi*, since Aristotle reports that the change of constitution was occasioned by heavy losses among the *gnorimoi* in a war against the Iapygians. At *Pol.* 1291^b23, too, Aristotle presumably classifies Taras as a democracy, and at *Pol.* 1320^b11–14 Taras is again classified as a democracy combining democratic sortition and oligarchic election in the selection of magistrates: all *archai* were *dittai*, and on each board some positions were filled by lot and others by election; or, alternatively, some magistracies were filled by election, others by sortition. Strabo 6.3.4 refers to C4 Taras as a democracy. No *stasis* proper is on record (Berger (1992) 53), but the foundation legend included a *stasis* immediately after the foundation (Just. *Epit.* 3.4.11) in which, among others, the oecist was exiled (Malkin (1994) 129–30).

Arist. *Pol.* 1320^b11ff refers to a plurality of boards of magistrates. The existence of *ephoroi* at the *metropolis* Sparta as well as the C5s Tarantine colony Herakleia (*IG* XIV 645.1.1 (C4l); *SEG* 30 1162–70 (C4l–C3e)) may suggest the existence of this office at Archaic and Classical Taras as well, but it is attested only from C3e (*SEG* 40 901), when the office was eponymous. The *ρήτροφύλακες* (*Etym. Magn.* s.v. ῥήτρα) were probably charged with the custody of the laws. The interpretation of the numerous monograms found on C4

coins is disputed: they may be names of *ephoroi* (Brunetti (1960) 48–50), monetary magistrates or artists, or of chief civic magistrates (Rutter, *HN*³ pp. 95–96). A *prytanis* and an *ἐπιστατ[...]* are attested by C4–C2 epigraphic evidence (Viola (1894) 61.3). The assembly was named *ἀλία* (i.e. *ἀλία*: Hesychius s.v.).

The almost triangular Tarentine peninsula terminates in the isthmus, the *akropolis* according to Strabo 6.3.1. The lagoon, Mare Piccolo, with the inner harbour was reached by the natural waterway to the west of the isthmus, the *stomatos limenos* of Strabo 6.3.1 (the artificial canal between the acropolis-isthmus and the eastern hinterland was cut in C15 AD, and the modern island status of the isthmus is not ancient). The acropolis, a low plateau measuring c.16 ha (Lo Porto (1970) 362) surrounded by steep slopes, may have been strengthened with an ashlar circuit wall in C6 (ibid. 359; Strabo 6.3.1 seems to imply that the whole city, including the acropolis, was fortified). The isthmus was the site of the earliest Greek settlement and the early sanctuaries; the archaeological evidence confirms the traditional C8l date for the foundation (Lo Porto (1970) 357–58; De Juliis (1983) 429; Boschung (1994) 177). No structural remains of the early habitation phases are extant, but the evidence from Ortygia (Syracuse) suggests a C6 origin for the east–west *plateia* with orthogonally joined *stenopoi* in accordance with a *per strigas* urban system (Lo Porto (1970) 361–62).

The early settlement had extended as far as the nearest part of the adjoining eastern plateau at least by C5, and Strabo 6.3.1 locates the agora immediately to the east below the acropolis in the narrow space delimited to the west by the Archaic cemetery. From C5s the urban area measured c.530 ha (E. Greco (1981b) 150–51); a c.10 km-long circuit wall built in 450–430 incorporated the new urban extension and the Archaic cemeteries, with two long straight walls constructed as a double ashlar wall, joining the Mare Piccolo and the Mare Grande (Lo Porto (1970) 362–64). Sporadic evidence makes it possible to reconstruct a Hippodamian urban plan, probably contemporary with that of Thourioi (444/3; E. Greco (1981b) 157); new cemeteries and public spaces were laid out inside the C5 circuit (for the Archaic and later cemeteries: Moreschini (1988); Lippolis (1994b)).

The eastern and western ends of the acropolis were laid out as sanctuaries from the early history of the colony: the east was the location of the C6e “Temple of Poseidon”, the earliest known monumental stone temple in Magna Graecia (Filippi (1976)). The divinity to whom the temple was dedicated is, however, uncertain: Stazio (1967) 306–7 suggests Persephone, but Lippolis (1982) 90 Hera. To the west an ash-

lar foundation has been taken to be part of the stereobate of a temple of monumental size (Lo Porto (1970) 376; but see Lippolis (1982) 84–86). Sanctuaries were laid out outside the acropolis on the eastern plateau, along the Mare Piccolo where there is some evidence of C6 cult (Lippolis (1982) 117ff). The whole coastal zone seems to have been laid out as a vast sanctuary with several *heroa* between the harbour and the cemeteries which have produced C6 evidence of funeral and foundation cults (Jacobone (1988)).

The inner harbour, the Mare Piccolo, was famous in antiquity (Strabo 6.3.1; Polyb. 10.1); it was the only natural harbour in the Gulf of Taranto and the basis for Taras’ economy and wealth. Ashlar walls of uncertain date are interpreted as piers (Lippolis (1982) 98). A harbour (*limen*) called Hydrous is mentioned by Ps.-Skylax 14. Fishermen were, according to Arist. *Pol.* 1291^b23, very numerous at Taras. Significant socio-economic differentiations are implied by Arist. *Pol.* 1320^b10, where it is reported that the *aporoï* were allowed the use of private property in order to win their favour for the constitution.

There is only sparse evidence of public buildings: a stepped structure near the agora has been interpreted as a *bouleuterion* or as a theatre (Todisco (1990) 149). A theatre near the agora was used for a C3l reception of Roman ambassadors (Dion. Hal. 19.5.8; Polyb. 8.30.7 (r213); cf. Todisco (1990) 146–49). A *prytaneion* is attested c.360 (Ath. 700D; Miller (1978) no. 434).

A cult of, among others, the Atreidai is attested at Arist. *Mir. ausc.* 840^a6–7 (Malkin (1994) 57–60; for a survey of Tarantine cults: Pugliese Carratelli (1970a); Hinz (1998) 182–87). A tomb of (Apollo) Hyakinthos is mentioned at Polyb. 8.28.2, and Hyakinthos may be depicted on coins (*infra*). A cult of Dionysos may be inferred from C5e numismatic evidence (*infra*); cf. Pl. *Leg.* 637B. A cult of the Dioskouroi may be inferred from numismatic evidence (*infra*; Wuilleumier (1939) 519–22). A cult of Zeus Eleutherios is referred to in Hesych. s.v. *Ἐλευθέριος Ζεὺς*. *Anth. Pal.* 6.129 (Leonidas of Taras) concerns a dedication to Athena Koryphasia(?), of spoils taken from the Leukanians. However, the occasion is uncertain (C3e?), and it is not certain that Athena Koryphasia was worshipped in Taras (Gow-Page, *HE* 2 (xxxiv) 344–45). The evidence for other cults is uncertain: Aphrodite Basilis (Osanna (1990)); Persephone (extra-urban sanctuary: Wuilleumier (1939) 396); Apollo Alaios (C4 inscription on marble *louterion*: Buononato (1960)); hero cults of Phalanthos and Taras (Lacroix (1965) 89–100; Leschhorn (1984) 31–41). Public sacrifices accompanied by *demosiāi hestiaseis* are mentioned

by Theopomp. fr. 233. A festival of Dionysos is attested by Pl. *Leg.* 637B.

Communal consultation of the oracle at Dodona is attested in *SGDI* 1567/4620 (C4l–C3e). *Syll.*³ 295 (C4) attests a grant of *promanteia* by Delphi (no. 177) to the Tarantines (Roux (1990)). From 520 to 336, Tarantine athletes won several Olympic victories (*Olympionikai* 130–31, 212, 230, 238, 307, 397, 436, 457). In 500–475, a monument commemorating a victory over the Messapioi was dedicated at Delphi (Lazzarini (1976) no. 971; cf. Paus. 10.10.6; Beschi (1982) 232), and in the same period one commemorating a victory over the Peuketioi was dedicated, also at Delphi (Lazzarini (1976) no. 972; cf. Paus. 10.13.10; Beschi (1982) 236). Dedications of spoils taken from Thourioi (no. 74) were made at Olympia c.440 (*IvO* 254–56 = ML 57). At Delphi architectural terracottas have been taken as evidence of a Tarantine treasury (Le Roy (1967) 70–87).

Taras initiated silver coinage about 520–510 (Cahn (1968)) or slightly later (Westermarck (1979) 291; Rutter, *HN*³ p. 92) in the incuse technique on the Achaean standard with *nomoi* divided into thirds as at Metapontion (for surveys of Tarantine coinage with refs., see Stazio (1970); Fischer-Bossert (1999); Rutter, *HN*³ pp. 92–93). The earliest *obv.* type shows a kneeling youth holding lyre and flower, presumably Hyakinthos or Eros; legend: *TAPΑΣ* (Rutter, *HN*³ 824; *SNG Cop. Italy* 766). The subsequent main *obv.* type of the *nomoi* depicts a dolphin rider (Taras or Phalanthos); legend: *TAPΑΣ* (Rutter, *HN*³ 826; *SNG Cop. Italy* 765). Double-relief coins were minted from C5e: *obv.* dolphin rider; *rev.* various types (e.g. hippocamp, four-spoked wheel, or female head); legends: *TAPΑΣ*, *TAP* (Westermarck (1979); Rutter, *HN*³ 827, 833, 838; *SNG Cop. Italy* 767–78). These were accompanied by fractions of the *nomos*: third-, sixth-, tenth- (= litra), twentieth- (= hemilitra), and sixth-litra with a variety of *obv.* and *rev.* types (dolphin, shell, wheel or hippocamp: Rutter, *HN*³ 828ff; *SNG Cop. Italy* 783–86). A unique stater in Naples has *rev.* seated male figure holding a kantharos and distaff, probably the hero Taras, normally referred to as the “oecist” type but here revealing a connection with the cult of Dionysos (Cahn (1968) 71–72; Rutter, *HN*³ 843), legend: *TAPΑΣ*; *rev.* dolphin rider, legend: *TAPΑΣ*. From C5m the types of the *nomoi* are *obv.* dolphin rider, legend: *TAPΑΣ/TAPANTINΩΝ*; *rev.* seated male figure, the “oecist” (Rutter, *HN*³ 844; *SNG Cop. Italy* 779–82); half-*nomoi* (drachms) have *obv.* hippocamp; *rev.* female head (Rutter, *HN*³ 839; *SNG Cop. Italy* 787–88). From C5s a horseman becomes the normal *obv.* type; *rev.* dolphin rider, legend: *TAPANTINΩΝ*. These are the

main types throughout C4 with some variants (Rutter, *HN*³ 847ff, 868ff; *SNG Cop. Italy* 797–829); *obv.* types have two riders, the Dioskouroi (Rutter, *HN*³ 898; *SNG Cop. Italy* 830); new fractions appeared in C4 (Rutter, *HN*³ 907ff). In C4s the city struck in gold on the Attic standard on more than one occasion, usually with *obv.* type: head of Hera; *rev.* young Taras appealing to seated Poseidon (stater), dolphin rider (half-stater), infant Taras with wool and distaff (sixth-stater), kantharos (twelfth-stater; Rutter, *HN*³ 901–4); time of Alexander the Molossian: stater with usual *obv.*, *rev.* horseman, in field sometimes thunderbolt; twentieth-stater with *obv.* Helios; *rev.* thunderbolt (Rutter, *HN*³ 905–6; *SNG Cop. Italy* 831–34). Bronze coins were minted only in C3 (Rutter, *HN*³ p. 106).

Taras was the founder of Herakleia (no. 52), which was originally a joint colony of Taras and Thourioi (no. 74) (Antiochos (*FGrHist* 555) fr. 12). The foundation of Herakleia involved the displacement of the previous inhabitants of Siris (no. 69; Diod. 12.36.4 (r433)).

72. Temesa (Temesaios) Map 46. Lat. 39.05, long. 16.10. Size of territory: ?. Type: B:β. The toponym is *Τεμέσεια*, ἡ (Polyb. 13.10.3); *Τεμέση*, ἡ (Strabo 6.1.5; Steph. Byz. 615.1); *Τεμέσ(σ)α*, ἡ (Lycoph. *Alex.* 1067; Paus. 6.6.7); attractive, but still uncertain, is the identification with Homeric *Τεμέση* (Hom. *Od.* 1.184; Biraschi (1982)). Steph. Byz. 615.2 gives the city-ethnic as *Τεμεσαῖος* and this form is found in Callim. *Aet.* fr. 85.10, Pfeiffer, and may be abbreviated as *TE* and *TEM* on C6–C5 coins (*infra*) unless the legends abbreviate the toponym. For the location of Temesa, still not resolved, at Casalina di S. Sosti or further southwards at Fiumefreddo Bruzio, see Massaro (1982) 22 with refs. Recently sporadic archaeological evidence has been investigated on the fertile plain of Campora S. Giovanni near the coast in the Savuto valley, but the evidence is inconclusive, though the cultural assemblage is indeed C6s–C5f Greek (De Sensi Sestito and Valentini (1990) esp. 137–42). Spadea (followed by Barr.) argues for a location at the Piano della Tirena, where the urban remains include parts of a circuit wall and habitation. However, these are mainly C4 and therefore belong primarily to the Oscan-Brettian-Hellenistic period (Spadea (1990a)), leaving the location of the Archaic city still unresolved (E. Greco (1986) 129–30, with reference also to the analogous case of Laos).

Temesa is called *polis* only by late sources (Strabo 6.1.5; Steph. Byz. 615.1; Paus. 6.6.11); however, its C6–C5 coinage (*infra*) suggests that it was a *polis* in the Archaic and Classical

periods, albeit probably mostly a dependency of larger *poleis* (*infra*).

According to Strabo 6.1.5, Temesa was a foundation of the Ausonians, and the settlement accordingly was originally not Greek but indigenous. A later Greek or Hellenising phase is, however, suggested by the tradition of heroic colonisation by Aitolians led by Thoas, who in their turn were later ousted by Brettians (Strabo 6.1.5). This tradition may be connected with the activities of Alexander the Molossian in South Italy (Biraschi (1982) 36–37). Other Greek traditions are that of Polites, a companion of Odysseus, who had a *heroon* near Temesa (Strabo 6.1.5; cf. Mele (1983*b*)), and that of the Olympic victor Euthymos of Lokroi who fought this Polites when the Lokrians had captured the city (Strabo 6.1.5; cf. Paus. 6.6.4–11 for a variant of the myth, referring also to a painting depicting personifications of the young Sybaris and of the *polis* of Temesa). Greek identity is suggested also by the Greek-style coinage (*infra*). All these elements suggest that Temesa was an Oinotrian city (schol. Hom. *Od.* 1.184), strongly Hellenised, prior to 510 within the dominion of Sybaris (no. 70.I) and after 510 in the dominion of Kroton (no. 56), and from c.480, some time after the Medmean, Hipponian and Lokrian defeat of Kroton, in the dominion of Lokroi (no. 59).

The territories of Temesa and Terina (at S. Eufemia Vetere(?), cf. Terina (no. 73)) were adjacent (Strabo 6.1.5); Temesa is often located in the area of the estuary of the river Savuto, ancient Sabutus (*supra*). Sybaris controlled the valleys of the rivers Krathis and Sabutus and the access to the Tyrrhenian Sea, and so Temesa may have been within Sybaris' dominion. After Kroton's victory over Sybaris, Temesa seems to have become a part of Kroton's dominion, as indicated by its coinage (*infra*). It was later held by Lokroi, as suggested by the traditions associated with Euthymos (*supra*); numismatic evidence dates Lokrian control to C5m (*infra*), whereas dates based upon written evidence point rather to c.480, in which case it was followed by a new period of Krotoniate influence (see De Sensi Sestito (1982a) for a full discussion).

Temesa with Kroton struck silver coins on the Achaian standard. Initially, i.e. C6l, it was an incuse coinage with the tripod of Kroton and legends in the Achaian script: *TE* (sometimes retrograde) and *ϚPO*, one issue with the *rev.* type: flying eagle, contemporary with the "dominion-coinage" of Kroton (see the entry for Kroton, *infra*; Stazio (1982) 96–99; Parise (1982) 107–10, (1990a); Rutter, *HN*³ p. 167); dumpy flan incuse issues (similar type and legend) of c.480 are also known (Stazio (1982) 98). From C5m Temesa

struck double-relief staters: *obv.* tripod of Kroton; *rev.* Corinthian helmet, the emblem of Temesa, legend: *TE* or *TEM* on *obv.* and *rev.* (Stazio (1982) 94–95, 99; Rutter, *HN*³ 2566; *SNG Cop. Italy* 1828). A Krotoniate C5s issue of double-relief staters has *obv.* tripod, legend *ϚPO*, *rev.* Corinthian helmet, legend *TE*; lower denominations are without *TE*, but the *rev.* type ensures their attribution to this group (Stazio (1982) 96; Rutter, *HN*³ 2122–24). The affiliation of Temesa to Kroton is clear and the evidence suggests that Temesa was part of the Krotoniate dominion from C6l, though from C5m less dependent upon Kroton, as possibly reflected in the tradition of Lokrian influence (*supra*; Prontera (1982) 42, 47; De Sensi Sestito and Valentini (1990)).

73. Terina (Terinaios) Map 46. Lat. 38.55, long. 16.15. Still unlocated (Spadea (1979); cf. Spadea (1990a)) though most often located at S. Eufemia Lamezia (thus *Barr.* with query). Size of territory: ? Type: [A]. The toponym is *Τέρινα* (*IG* iv².1 95.45 (356/5); Ps.-Skylax 12), or *Τέρπεινα* (Lycoph. *Alex.* 726; Ps.-Skymnos 306). The city-ethnic is *Τερπειναῖος* (C5l coins, *infra*; *IG* ii² 10438 (C4m)) or *Τερπειναῖος* ([Plut.] *X orat.* 845C (rC4s)).

Terina is one of ten toponyms listed at Ps.-Skylax 12 after the heading *πόλεις εἰσὶν Ἑλληνίδες αὐτῆς*, where *polis* is used in the urban sense (cf. Polyæn. 2.10.1 (rC5s); Diod. 16.15.2 (r356/5)). The internal collective use of the city-ethnic is found on C5 coins (*infra*); the external collective use is found in Polyæn. 2.10.1 (rC5s); the external individual use is found in *IG* ii² 10438 (C4m) and [Plut.] *X orat.* 845C (rC4s).

Terina was founded by Kroton (no. 56) (Ps.-Skymnos 306–7; Phlegon (*FGrHist* 257) fr. 31); the date of foundation is unknown, and the *terminus ante quem* is c.460, the date at which the city began issuing coins (Rutter (1997) 61). Terina may have been founded after the Krotoniate defeat of Sybaris c.510 (De Sensi Sestito (1985) 199–200); if the foundation was earlier, it probably antedated the C7–C6f Lokrian foundations of Hipponion (no. 53) and Medma (no. 60) (Spadea (1979); Giangiulio (1989) 233–38). After c.510, Sybaritan influence in the area was replaced by Krotoniate influence, as demonstrated by coin hoards (De Sensi Sestito (1985)).

A war with Thourioi (no. 74) is attested a few years after 444/3 (Polyæn. 2.10.1). Terina was besieged and taken by the Brettians in 356 (Diod. 16.15.2), and the city became a Brettian community, surviving the conquest of Alexander the Molossian c.325 (Livy 8.24.4).

A citizen of Terina served as *theorodokos* of Epidauros (no. 348) in 356/5 (*IG* iv².1 95.45). An inscribed bronze plaque (of C4 or later) found near S. Eufemia Lamezia has been tentatively attributed to Terina (*IGSII* no. 21); in l. 10 it mentions a *πρύτανις*, an office known also from Kroton (Ath. 522C (rC5e)). The same inscription possibly attests the existence of a system of civic subdivisions of a territorial disposition (Jones, *POAG* 167–68). Terina was presumably fortified in 356/5 when it was besieged by the Brettians (*ἐκπολιορκεῖν*: Diod. 16.15.2).

C5–C4 (*infra*) coins attest to cults of the eponymous nymph and Nike, who seem to have become assimilated (Lacroix (1965) 126; Rutter (1997) 61–62). A cult of the local nymph Pandina may be indicated by C4 bronze issues, perhaps reflecting the influence of Hipponion (Giannelli (1963) 171–74).

In all probability, a citizen of Terina was victorious at Olympia in 392: the victor's full name has been corrupted, but Africanus gives *Τερνιῶλιος* as his first name, and the victor was thus probably from Terina (see *Olympionikai* 376).

Terina commenced minting c.460; c.460–440 there are three main issues of staters and fractions on the Achaian standard: (a) staters: *obv.* head of river-nymph Terina, legend: *TEPINA*; *rev.* standing wingless Nike holding branch, legend: *NIKA*, within an olive wreath (Holloway and Jenkins (1983) no. 1; Rutter, *HN*³ 2567); (b) staters: *obv.* as above, but later style; *rev.* standing winged Nike with branch and wreath (Holloway and Jenkins (1983) nos. 2–3; Rutter, *HN*³ 2568); (c) staters: similar types, but Nike on *rev.* has raised arms (Holloway and Jenkins (1983) no. 4; Rutter, *HN*³ 2569; *SNG Cop. Italy* 1994). Smaller denominations are drachms: *obv.* as above, legend *TEPEI*; *rev.* winged Nike standing facing; diobols have legend *TEPE* cruciform on *rev.* (Holloway and Jenkins (1983) nos. 6–8; Rutter, *HN*³ 2571–73). By C5l and C4f types are *obv.* head of Terina; *rev.* winged Nike seated on amphora, cippus or four-legged seat in various attitudes and holding various attributes (ball, bird, *kerykeion*), on some issues a phiale with which she pours a libation or draws water from a fountain—a merging of the river-nymph Terina and Nike. From c.440, legend *TEPINAION*; on C4f issues legend *TEPINAIΩN*, and, on some issues, *rev.* *TEPINA* (Holloway and Jenkins (1983) 10–93; Rutter, *HN*³ 2574ff, 2627ff; *SNG Cop. Italy* 1995–2013; *SNG Cop. Suppl.* 58). Smaller fractions are drachms, triobols, diobols and obols, with similar types and legends: *TE*, *TEPE*, *TEPI* (Holloway and Jenkins (1983) 25–29, 70; Rutter, *HN*³ 2631–32, 2634–42; *SNG Cop. Italy* 2014–27). Bronze coinage was introduced C4l (Holloway

and Jenkins (1983) nos. 119–28; Rutter, *HN*³ 2644ff), with similar types (*SNG Cop. Italy* 2032–34), or with *rev.* crab, or hare, or hippocamp (*SNG Cop. Italy* 2035–41); other types: *obv.* lion mask; *rev.* head of Apollo (*SNG Cop. Suppl.* 59); one issue has *obv.* head of goddess Pandina, legend: *ΠΑΝΔΙΝΑ*, shared with coins of Hipponion; *rev.* winged seated Nike (Holloway and Jenkins (1983) no. 125; Rutter, *HN*³ 2650).

74. Thourioi (Thourios) Map 46. Lat. 39.45, long. 16.30. Size of territory: 3/4. Type: A. The toponym is *Θούριοι*, *οἱ* (Thuc. 6.61.6; Pl. *Euthydemus* 271C; *IG* iv².1 95.1.43 (356/5)); Thuc. 6.104.2 may use *Θουρία* as the name of the city (in contradistinction to the territory for which it is the usual Thucydidean name) and so may Ps.-Skylax 13 (but see Tod (1953) for a full discussion of the toponym); Diod. 12.10.6 (r446) has *Θούριον* besides his usual *Θούριοι*, which he uses in nine passages (e.g. 12.9.1; cf. *Mir. ausc.* 846^b33). The city-ethnic is *Θούριος* (Thuc. 6.104.3; C5 coins, *infra*; *IG* ii² 8895 (C4m); cf. Tod (1953) 202).

Thourioi is called a *polis* in the urban sense at Ps.-Skylax 13, and at Arist. *Pol.* 1303^a26, 31 Thourioi is the second of eight examples listed under the heading *polis*. *Politeia* is found in the sense of “citizenship” at Thuc. 6.104.2, and in the sense of “constitution” at Arist. *Pol.* 1307^a30 and 1307^b7; *politeuein* is found at Xen. *Hell.* 1.5.19. A C5s bronze *kerykeion* found at Brindisi is inscribed *δαμόσιον Θουρίων, δαμόσιον Βρενδεσίνων* (*IG* xiv 672). It is called *πάτριη* (= *patris*) in the epitaph of Herodotos transmitted in Steph. Byz. 315.16–316.2.

The internal collective use of the city-ethnic is found on coins from the 440s onwards (*infra*); the external collective use is found in *IvO* 254–56 (= ML 57 (c.440): Tarantine dedications of spoils taken from Thourioi; cf. Antiochos (*FGrHist* 555) fr. 11); Thuc. 7.33.6; Pl. *Leg.* 636B; and Arist. *Pol.* 1307^b6; and the external individual use is found in Xen. *An.* 5.1.2, *IG* ii² 8895 (C4m), *CID* ii 23.8 (341/0) and *ILindos* 2.C.38 (C1 rC5).

The foundation of Thourioi was the outcome of a process which began with an appeal in 446 by refugee Sybarites (Diod. 11.90.3–4) to Sparta (no. 345) and Athens (no. 361) for assistance and reinforcement in their attempt to re-create their city and community in the face of Krotoniate opposition (Diod. 12.10.3; for the sources of Diodorus, see Rutter (1973) and De Sensi Sestito (1976); see also Sybaris (no. 70.IV)). This request was granted by the Athenians, who sent ten ships, partly manned by Peloponnesians (Diod. 12.10.4; Ehrenberg (1965) 301). This expedition may have

been led by the Athenians Lampon and Xenokrates (Diod. 12.10.4), but most scholars (cf. *infra*) refer their participation to the 444/3 foundation of Thourioi proper (*infra*). In this initial phase of the foundation of Thourioi, Sybaris was reinforced by Athenians and Peloponnesians (Diod. 12.10.4), and seems indeed still to have been called, and located at, Sybaris (coins; cf. *RE* iv². 1008; Rutter (1973) 163). The community was strongly dominated by Sybarites. However, their claims to privileges in political, cultic and economic spheres of life resulted in a serious *stasis*, and they were put to death almost to the last man or expelled, thus paving the way for the foundation of Thourioi proper (Diod. 12.11.1–4; cf. Arist. *Pol.* 1303^a31–33). These events probably occurred in 445/4 (Diod. 12.22.1). The foundation proper of Thourioi followed in 444/3 (in the archonship of Praxiteles: Ps.-Plut. *X orat.* 835D; cf. Dion. Hal. *Lys.* 1.2). According to Diod. 12.11.3, the victors of the *stasis* themselves sent to Hellas for new settlers; Ps.-Plut. *X orat.* 835D seems to think that Athens was in charge of the foundation, whereas Dion. Hal. *Lys.* 1.2 says that the colonists were sent by Ἀθηναῖοι τε καὶ ἡ ἄλλη ‘Ελλάς. Diodorus’ description of the initial system of *phylai* (*infra*) confirms that settlers had a wide variety of origins (12.11.3; cf. 12.35.1: ἐκ πολλῶν πόλεων; on Athens’ role in the foundation, see Rutter (1973) 164–67, arguing that it has been exaggerated). It was, presumably, this second group of colonists from the mainland that was led by Lampon and Xenokrates (cf. Kagan (1969) 158; De Sensi Sestito (1984a) 81), though Diod. 12.10.4 is then guilty of confusion unless these men led both expeditions. Lampon is named as the *oikistes* by Plut. *Mor.* 812D, though other sources describe him as a *mantis* or *exegetes* (see refs. in Kagan (1969) 168 n. 36) performing only a temporary task (see Graham (1964) 36–37; Leschhorn (1984) 132–33; and Malkin (1987) 254–57). The identity of the oecist was, in fact, a matter of dispute which in 434 led to a *stasis* that was solved by reference to the Delphic oracle, which declared that Apollo himself should be recognised as the oecist (Diod. 12.35.3).

The name of the territory was ἡ Θουρία (Thuc. 6.61.7) or Θουρίας γῆ (Thuc. 7.35.1); it is termed *χώρα* at Arist. *Pol.* 1307^a29ff. Almost immediately after its foundation the city engaged in extensive warfare, presumably to secure control of a sizeable territory. The Spartan exile Kleandridas became a citizen of Thourioi (Thuc. 6.104.2) and led campaigns against Terina (no. 73) (Polyaen. 2.10.1), and this may attest to territorial ambitions on the Tyrrhenian coast. Kleandridas also led Thourian forces against the Leukanians (Polyaen. 2.10.2) and was likewise the commander in a war

against Taras (no. 71) (Diod. 12.23.2 (r444)) in which both cities struggled for influence in the Siritis (Antiochos (*FGrHist* 555) fr. 11). Dedications by Taras at Olympia c.440 of spoils taken from Thourioi (*IvO* 254–56 = ML 57) attest to some Tarantine success, and the territorial conflict was finally ended c.434 by an agreement to found a joint colony, though in the name of Taras (Antiochos, *loc. cit.*); the colony developed into the city of Herakleia (no. 52). Iambl. *VP* 264 attests to C5s hostilities between Thourioi and Kroton (cf. Guzzo (1986) 201), but according to Diod. 12.11.3 Thourioi established *philia* with Kroton, presumably not long after the foundation.

Smaller agricultural settlements, some in the form of single villas, are above all known from the C4–C3 territory (Osanna (1992) 148–49; Guzzo (1997) 379). The border between Thourian and Leukanian/Brettian territory is not very clear; the southern Brettian site at Castiglione di Paludi is interpreted as a Brettian military installation (Osanna (1992) 146–49; De Sensi Sestito (1992) 350–53). The border was marked by a row of Thourian *phrouria*, such as the one at Torre Mordillo, where a lead seal carrying the inscription ΘΟΥ[-] has been found (Colburn (1977) 478, 521), and the one at Sierra Castello (Guzzo (1986) 203). One *phrouria* is known by name: Lagaria, located somewhere inland μετὰ Θουρίους (Strabo 6.1.14), as yet not identified with certainty but sometimes identified with the settlement at Amendolara (cf. de La Genière (1991b)). *Phrouroi*, presumably the personnel manning these installations, are referred to by Arist. *Pol.* 1307^b9. Nothing is known of the size of the population, the only available figures being army numbers (*infra*).

Thourioi was a member of the Italiote League (Diod. 14.91.1 (r393) and 101.1 (r390); *Staatsverträge* 230). Some kind of treaty with Kroton (no. 56) soon after the foundation is implied by Diod. 12.11.3. The C5s bronze *kerykeion* inscribed *δαμόσιον Θουρίων, δαμόσιον Βρενδεσίων* and found at Brindisi (*IG* xiv 672) may also testify to some formalised collaboration between the two communities, possibly during the conflict between Taras and Thourioi in the period prior to the foundation of Herakleia in 434 (Antiochos (*FGrHist* 555) fr. 11; De Simone (1956)). This conflict itself was also ended by a treaty (Antiochos (*FGrHist* 555) fr. 11 = *Staatsverträge* 158). According to Thuc. 7.33.6, Athens (no. 361) in 413 negotiated for a full alliance with Thourioi; whether a treaty was concluded is unclear, but Thourioi did assist the Athenian effort against Syracuse (no. 47) (Thuc. 7.35.1, 57.11; cf. Diod. 13.11.1 (r413)). However, after the Athenian defeat at Syracuse, Thourioi is found assisting Sparta (no. 345) with naval forces

(Thuc. 8.35.1, 61.2; Xen. *Hell.* 1.5.9), which implies a treaty. In 389 the city suffered a severe defeat by the Leukanians but managed to conclude peace via the mediation of Leptines of Syracuse (Diod. 14.101.1–102.3). A little after 379, Dionysios I sent a navy against Thourioi without success (Ael. *VH* 12.61 with Jacquemin (1979)). Collaboration with Corinthian forces sent out to reinforce Timoleon is attested at Plut. *Tim.* 16.2. In 356 the city was subdued by the Brettians (Diod. 16.15.2; cf. Plut. *Tim.* 16.2).

In 413, Thourioi assisted the Athenian attack on Syracuse with 700 hoplites and 300 *akontistai* (Thuc. 7.35.1). Naval forces (ten ships) are attested at Thuc. 8.35.1, commanded by Dorieus *tritōs autos* (cf. Thuc. 8.61.2 and Xen. *Hell.* 1.5.19). A contingent of 14,000 *pezoi* and c.1,000 horse is recorded by Diod. 14.101.2 (r390). A board of *stratēgoi* was elected by the assembly (τὸν δῆμον . . . χειροτονήσοντα); a law stipulated a five-year period between *stratēgiai*; but the law was repealed, and this started off a process by which the constitution developed into a *dynasteia* of the young reformers (Arist. *Pol.* 1307^b6–19). Plato may allude to this event at *Leg.* 636B, where he describes *gymnasia* and *sysitia* as breeding grounds of young citizens inclined to revolution. The Spartan exile Kleandridas became a citizen of Thourioi (Thuc. 6.104.2; Plut. *Per.* 22.3) and served as *strategos* in wars against Taras (Strabo 6.1.14), Terina and the Leukanians (Polyaen. 2.10.1–2).

Reception of envoys is recorded by Thuc. 6.104.2 and sending of envoys at Diod. 14.101.2 (r390). *F. Delphes* III.4 388 (325–300) may possibly be a grant by Delphi (no. 177) of proxeny, etc. to a man of Thourioi. A man of Thourioi was granted hereditary citizenship and other honours by Zeleia (no. 764) in the Propontis c.330–300 (*AM* 9 (1884) 58–60 no. 3 = Michel 531). *Theorodokoi* of Epidauros (no. 348) at Thourioi are attested by *IG* IV².1 95.II.43, 52 (C4m).

A system of *phylai* was established soon after the foundation, in which the citizens were enrolled on the basis of their origin; the ten *phylai* were named: Arkas, Achais, Eleia, Boiotia, Amphiktyonis, Doris, Ias, Athenais, Eubois and Nesiotis (Diod. 12.11.3; see Jones, *POAG* 165–67).

According to Diod. 12.11.3–4, Thourioi was founded as a democracy, and the city's law code was drawn up by Charondas of Thourioi (apparently a namesake of the famous legislator of the Archaic period, *pace* Mühl, *Klio* 22 (1929) 439), but Heraclid. Pont. tells us that it was Protagoras of Abdera who wrote the laws (fr. 150, Wehrli = Diog. Laert. 9.8.50). It has been suggested that he based his laws on those of Charondas and Zaleukos (De Sensi Sestito (1984a) 82). Several *staseis* are recorded (Berger (1992) 33–34); one involved the identity of the oecist (Diod. 12.35.3 (r434)) and

in another anti-Athenians were defeated and exiled (Thuc. 7.33.5–6; Berger (1992) 33). In 413, however, after the Athenian defeat at Syracuse, 300 pro-Athenians were exiled, one of them Lysias (Dion. Hal. *Lys.* 1; Plut. *Mor.* 835E). Aristotle refers to two further *staseis*, both perhaps posterior to 413: the first (*Pol.* 1307^a27–33) is given as an example of change from oligarchy in the direction of democracy: the passage testifies to the existence of a property qualification for office holding (*archai*); the qualification was lowered and the number of magistracies (*archeia*) increased after pressure from the *demos*; the chronological reference is uncertain (De Sensi Sestito (1992) 344ff: 440s; Berger (1992) 33–34: c.413). The city seems to have attempted control of land ownership, even among its own citizens; but large landholdings were acquired unconstitutionally by the *gnorimoi* and had to be given up by the owners after a *stasis* (Arist. *Pol.* 1307^a29–33; Jacquemin (1979)).

The second passage (*Pol.* 1307^b6–19) describes a process by which the constitution developed (from a democracy?) into a *dynasteia* of young military leaders (*supra*); the chronological reference is again uncertain. The passage testifies to the existence of *symboloi*: they seem to have been entrusted with general supervision of the constitution; the passage also refers to *archontes* in general.

Thourioi was situated on part of the site of Archaic Sybaris (no. 70.I), and the assertion by Diod. 12.10.3 (cf. Strabo 6.1.13) that the city was moved to another site is not convincing in view of the archaeological evidence. According to Diod. 12.10.6 (rC5s), the city had a circuit wall, not archaeologically attested so far. The city was laid out with four *plateiai* and three *stenopoi*, named respectively Herakleia, Aphrodisia, Olympias, Dionysias, and Heroa, Thuria, Thurina (Diod. 12.10.7; Castagnoli (1971); for the textual problems, see Vallet (1976) 1030–32; Lapini (1997)). Hippodamos is called Thourian in some traditions, and the town plan of Thourioi has been attributed to him, though the tradition is ambiguous (see e.g. E. Greco (1997)). Whether the streets named by Diodorus correspond to twelve city quarters distributed to the tribes, also listed by Diodorus (*supra*), is doubtful (Vallet (1976) 1027–28), but the overall orthogonal urban layout as described by Diodorus has found confirmation in the archaeological evidence: the C5l–C4f city plan was orthogonal, and the sporadic remains of habitation are oriented according to the urban layout (*infra*; cf. E. Greco (1997) 437–38; recent investigation of Hippodamian layout: E. Greco and Luppino (1999)). The technique of construction of the sparse habitation remains is rather similar to that of Archaic Sybaris (Guzzo (1988–89) 20–23, 87, 178, 240–48, 290–304, 365). There

are overall traces of a levelling of the remains of the Sybarite phase in preparation for the foundation of Thourioi (*ibid.* 23). An east–west-oriented *plateia*, going back to the time of foundation (*ibid.* 20), terminated near the coast in C4(?) harbour structures of uncertain use (Zancani Montuoro (1972–73*b*)). Remains of public architecture are meagre, and the extant structures are mainly ascribable to Roman Copia. The agora is mentioned at Theophr. fr. 97, but the tradition that Herodotos was buried there is rejected outright by Jacoby (*RE* suppl. ii. 214), although there can be no doubt that Herodotos was a citizen of Thourioi (*Arist. Rh.* 1409^a28) and probably moved to Thourioi in 444/3 (*Plut. Mor.* 604F).

A cult of Athena may be inferred from coin types (*infra*). A cult of Boreas was instituted by decree in C4f (*Ael. VH* 12.61) after this divinity had wrecked a navy of Dionysios I on its way to Thourioi; Boreas was voted citizenship, and an annual festival instituted (Jacquemin (1979)). The cults of Sybaris and Thourioi are not always easily separated (cf. Giannelli (1963) 101–16). The cult of Hera is documented for Sybaris (see Sybaris (no. 70.I)) and may have continued in Thourioi, though the coin type of Hera Lakinia (*infra*) probably has no connection with the Sybarite cult of Hera (cf. Giannelli (1963) 103). C3 numismatic evidence may suggest at least C3 cults of Apollo, Demeter and Artemis (*SNG Cop. Italy* 1507–10, 1513–18). A cult of Apollo is also suggested by the tradition of Apollo as the *oikistes* (*supra*; and cf. Giannelli (1963) 105). The division of Thourioi into quarters by streets named after Herakles, Aphrodite, the Olympian Zeus and Dionysos (*Diod.* 12.10.7) may indicate cults of these divinities. A cult of Diomedes at Thourioi is attested at Polemon, *FGH* III 122 no. 23.

Communal consultation of the Delphic oracle is recorded in *Diod.* 12.35.3 (r434). *Syll.*³ 295 (C4) is a Delphic decree

confirming an earlier grant of *promanteia* to Thourioi (Roux (1990); Gauthier, *BE* (1991) 486–87 no. 306). A grant by an individual Thourian towards the rebuilding of the Delphic temple is recorded in *CID* II 23.8 (341/40).

Damon of Thourioi was victorious at Olympia in 376 (*Olympionikai* 403: *stadion* race) and in 372 (*Olympionikai* 407: *stadion*). The Rhodian exile Dorieus won several Panhellenic victories also at Nemea, Isthmia and Delphi (*Syll.*³ 82; *Olympionikai* 322); he was a Thourian citizen (*Xen. Hell.* 1.5.19) and participated at Olympia, etc. as a Thourian (*Paus.* 6.7.4), as did his relative Peisidoros (*ibid.*; *Olympionikai* 356); cf. Pugliese Carratelli (1972–73) 29.

Thourioi struck coins in silver from c.440 on the Achaian standard; denominations: distaters, staters and triobols (Rutter (1979) 44–45; Rutter, *HN*³ p. 146). Thourioi took over the types of Sybaris (no. 70.IV) with some changes: *obv.* head of Athena wearing Attic helmet, reflecting Athenian influence; *rev.* bull, derived from Sybaris but with butting head, or, later, charging, and with fish in exergue. Legend on *rev.* ΘΟΥΡΙΩΝ; some issues have initials or symbols of magistrates or names of die-engravers (Rutter, *HN*³ 177off; *SNG Cop. Italy* 1405–30, 1432–63 (distaters, staters); 1470–88 (triobols)). The exceptionally abundant issues of distaters and staters suggests that Thourioi had ample stocks of silver, perhaps in the form of bullion brought from Athens (Kraay (1976) 184–85). One specimen has *obv.* head of Hera Lakinia, a Kampanian type and a unique example of die sharing by a Kampanian mint and a Thourian mint (Rutter (1979) 60–61; Rutter, *HN*³ 1796; *SNG Cop. Italy* 1431). Bronzes were issued early and nearly contemporary with the silver coinage, employing the same types (Rutter, *HN*³ 1903ff; *SNG Cop. Italy* 1494–1506).

THE ADRIATIC

JOHN WILKES, TOBIAS FISCHER-HANSEN

I. The Region

The long arm of the Adriatic Sea extends for c.800 km northwards with an average breadth of 175 km. In the south at its narrowest point the Straits of Otranto are 75 km wide, while further north the screen of islands along the east (Dalmatian) shore reduces the width of open space to c.150 km. The east coast is rocky with long sections of steep cliffs, but it has many inlets and bays, while on the west the Italian shore is low and generally devoid of safe anchorages. In the north the delta of the river Po, whose silting has advanced the coast several miles since antiquity (cf. already Strabo 5.1.7), is flanked by marshy lagoons. The peninsula of Istria separates the Gulfs of Rijeka (Fiume) from those of Venice and Trieste, whose depth nowhere exceeds 25 fathoms. Rainfall is heavy in the north-east (up to c.1,500 mm) and further south along the coast of Montenegro and northern Albania. The north-east wind (Bora) in winter and sudden squalls in other seasons were the main hazards to Adriatic navigation, well known in the Greek world. The ancient name was *Adrias* (*infra*). In C5 it may have denoted only the northern part, but by C4 the northern limit of Epeiros at Cape Linguetta marked the boundary between the Ionian and Adriatic Seas. The Adriatic may take its name from the river (cf. Beaumont (1936) 204) or from the city of Adria (no. 75), perhaps more widely believed today (Colonna (1974) 13 n. 42; Braccisi (1977) 65). In Hdt. 4.33, 5.9.3, Adria is the area north of the Eridanos, whereas the Ionian Sea is all of the Adriatic (in the modern sense), from the Keraunian mountains to the uppermost Adriatic: Ἰόνιος κόλπος (Hdt. 6.127.2, 7.20.2); and the uppermost Adriatic is designated ἐν τοῦ Ἰονίου κόλπου μυχῶς at Strabo 7.5.9. In Hecat. fr. 90 (= Steph. Byz. 28.14–29.5) the *kolpos Adrias* seems closely knit with the river Adria and the city Adria (for further analyses, see Braccisi (1977) 64–66; Vattuone (2000) esp. 14, 36–37).

There were close and reciprocal cultural contacts across the Adriatic between the neighbouring regions of Apulia and southern Illyria from the prehistoric and through the historic periods. The tradition of Cretan settlers in the lower Adriatic seems to reflect contacts between Iapygia and Illyria (Strabo 6.3.2; Hellan. fr. 79; cf. analysis by Nenci (1978) 50–58 with sources), and even a common origin of Iapygian and Illyrian tribes is widely acknowledged (ibid. 51). Daunian pottery is found northwards along the western Adriatic coast in Picenum and as far north as the Po delta, in Istria and along the eastern Adriatic coast of modern Slovenia, Bosnia and Croatia. Bronzes and other objects from the various Balkan cultures are widely represented in finds from the Salento peninsula and at Otranto, and a C8–C6 “cultural *koinē*” has been suggested for the eastern and western Adriatic (cf. also Colonna (1974) 16 n. 60; D’Andria (1982) 110–14; Landolfi (1987)); even the Illyrian and Messapian languages are to some extent similar (Wilkes (1992) 68–69). There is evidence of local Illyrian red-figured vase production as early as C4, which has been seen as an offshoot of the better-known Loukanian red-figured vase production (D’Andria (1990); survey of C4 contacts across the Adriatic: D’Andria (2002)). It should also be noted that Illyrian pottery and metal wares are widely found in Apulia and also further afield in the Greek world (D’Andria (1984)).

According to Hdt. 4.49, Illyria extended from Epeiros to Venetia, whereas Illyris occupied a more restricted region according to Ps.-Skylax 22. (For the political geography of the eastern Adriatic as it was known to the C4 Greek world, with an analysis of the relevant passages in Ps.-Skymnos and Ps.-Skylax, see Wilkes (1992) 91–104.) Greek pottery from indigenous tombs and the type of architecture employed in the settlement fortifications show the penetration of Greek influence into the Illyrian hinterland. A survey of early contacts with the Greek world, from before the C7 colonisation and later through the C6 and C5, with an account of the settlement pattern and urban development of the single Illyrian sites is found in Ceka (1983) and Wilkes (1992). The Greek colonisers at Apollonia and Epidamnus

found developed proto-urban societies in the territory chosen for their foundations, and the colonies in the Adriatic were for this reason few in number and in any case limited to the coastal zones (Wilkes (1992)).

The first Greek records of the area and its indigenous peoples appear to have been compiled in C6 (names of local peoples survive from the works of Hekataios of Miletos (fr. 86–97)), and one poet of C7 (Alcm. fr. 172) already knew of the Adriatic (V)eneti. None of the early writers specifies a historical Greek presence north of Epidamnos (no. 79) before the end of C6, but there seems little doubt there was such a presence, whether of established traders or colonisers. The contemporary historical record commences with Herodotos, while Thucydides furnishes much detail about the affairs of Epidamnos, including the role of the Illyrian Taulantii in their internal conflicts.

In the south-western Adriatic, Iapygia (comprising the Salentine peninsula and, in some sources, the Gargano) was traditionally subdivided into the territory of the Daunians in the north, that of the Peuketians in the centre, and that of the Messapians in the south.

According to Hdt. 4.99, Iapygia comprised the Salentine peninsula from Leuca in the south to a line between Brentesion (no. 78) and Taras (no. 71) in the north. According to Thuc. 7.170, the Messapians were an Iapygian tribe. Messapian culture, as revealed by the diffusion of the Messapian language, is also represented further north in Peuketia and Daunia. For Ps.-Skylax 14, Iapygia comprised also the Greek cities of Herakleia (no. 52), Metapontion (no. 61) and Taras (no. 71); analysis of the ancient sources: Nenci (1978) 43–50; Lamboley (1996) 304–6.

Iapygia was wide open to Greek influence from across the Ionian Sea, but its urbanised settlements formed a bulwark against Greek foundations, of which there are only few examples, see *infra*. Daunians participated on the side of the Etruscans in the 524/3 conflict with Kyme (no. 57) (Dion. Hal. *Ant. Rom.* 7.3–4), and the strength of the C5e Messapian settlements is attested by their defeat of Taras in 473 and the subsequent Iapygian expedition as far as Rhegion (no. 68). Though the outcome of this—the conquest of Rhegion, according to Diod. 11.52—may have been exaggerated in the sources, it does at least reflect the military strength of some Messapian cities.

According to Strabo 6.3.5, the Peuketians and Daunians had the same origin as the Iapygians, though epigraphy has shown a strong Oscan element in Daunian culture. The region of Daunia and Peuketia is also without Greek colonies—apart from the uncertain example of Hyria in the

Gargano. However, Greek influence is documented by the cult of Diomedes at Argrippa and at other sites. But even so, the Peuketians are seen as quite different from the Oinotrians, who were more in contact with the Greek colonies of Siris (no. 69) and Metapontion (no. 61) (cf. Hecat. fr. 89 and later sources; Lamboley (1996) 305–6). The mid-Adriatic region of the Pikenoi (Picenum) and the Ombrikans (Umbria) has in recent years seen a spate of research revealing the extent of Greek contacts. The earliest evidence of Attic imports at Numana and at other sites in the Picene region dates to c.520–510, and is therefore somewhat later than that known at the Padanian sites of Spina (no. 85) and Adria (no. 75). The region functioned as a commercial intermediary between Greece and Etruria, and the Celtic regions in the north (Landolfi (1987), (2000)).

The Adriatic coast of Italy from Apulia to Picenum and Umbria is with few exceptions not so well provided with natural harbours as the coast of Illyria and Epeiros (cf. Strabo 7.5.10). Apart from the good harbours of Ankon and Numana, there is evidence of other ports of call along the mid-Adriatic coast at Santa Marina di Focara, at Pisaurum and at Ariminum, where finds of Greek pottery confirm visits and coastal trade, probably to be seen in the perspective of the Greek trade with Spina and Adria (Luni (1982) esp. 68–75, (1995)). The sites of Spina and Adria in Etruria Padana are discussed in the site entries.

Etruscan thalassocracy in the Adriatic, undoubtedly weakened by Hieron's victory at Kyme in 474 (Diod. 11.51), may have been on the wane already earlier as a result of Greek expansion in Magna Graecia and the defeat of the Etruscan and Daunian alliance at Kyme in 523/2 (Dion. Hal. *Ant. Rom.* 7.2). The Adriatic became wide open to Greek trade from C6s, perhaps no less intense than that of the Tyrrhenian coast, as shown by pottery and other Greek products from the indigenous settlements in the hinterland, see *supra*. Whether to define the status of these settlements, and above all that of Spina and Adria, which provide the most evidence, as trading stations—*emporía* rather than as fully-fledged foundations, *apoikiai* or *poleis*—may in the future be answered only by a close analysis of the political and social organisation (cf. entries).

There are no grounds for the notion, advanced from time to time, that Greeks of Archaic and Classical times were repelled from penetrating the Adriatic by the climate or by the hostility of the inhabitants. From the time when Phokaian navigators first explored it (Hdt. 1.163), the Adriatic was as much open to Greek seafarers as it was in a later age to the Venetians, who, relying on ships of basically

similar design, controlled it for centuries. Nor does it seem that organised piracy was a significant deterrent before C4. The Illyrian power of Agron and Teuta, which arose in C3s, was reputedly the first organised threat to Adriatic shipping to come from that quarter (Polyb. 2.2.4). Native hostility to the Greek settlement on Pharos (no. 84) in C4e (Diod. 15.14.2) appears to have been a local quarrel, and not a symptom of general hostility to the Greek presence in the area (later the two groups were to unite against Roman and Italian settlers). Etruscan expansion towards the Po in C6 might have proved as hostile to Greek activity on the eastern shore of Italy as it had on the west, but the volume of commerce which appears to have passed through Spina seems to negate this, while the other local groups (Piceni, Umbri and Veneti) offered the prospect of stable relationships.

Several hero cults connected with the aftermath of the Trojan War recall early voyages of exploration. That of Diomedes is centred on his burial on the Tremitic islands (*Insulae Diomedaeae*) north of Monte Gargano, which over the ages has been the landfall for many approaching Italy from the south-east. His cult is found also at many places in central and southern Italy but was concentrated among the Peuketioi in northern Apulia; it also appears on the east coast at Melaina Korkyra (no. 83), and in central Dalmatia the promontory between Split and Šibenik (Cape Ploča¹) bore his name. He was also worshipped among the Umbrians at Spina and Adria, and further north among the (V)eneti near the source of the river Timavus deep in the Gulf of Trieste.

The tale of the exploits of Diomedes, playing the role of oecist at various sites in Daunia (Fantasia (1972) 115–19) and at Adria and Spina, and the diffusion of his cult along the eastern and western Adriatic coast (Strabo 5.1.8–9, 6.3.9), with a temple in his honour at Ankon (no. 76), has been attributed to the influence of Syracuse (no. 47). The C4 foundations of Dionysios I corresponded in large measure to those of Diomedes, reflecting a wish to legitimise the Adriatic ambitions of the Syracusan dynast (Braccesi (1977); Briquel (1987); Coppola (1988)). But the cult of Diomedes in the Adriatic has a history going back to the late C6. The dedicatory graffiti to Diomedes and, probably, to Athena on C6–C5 Attic sherds from the island of Palagruža in the Adriatic between the Gargano and the coast of Croatia have recently revealed a sanctuary of Diomedes; this has with near certainty identified the islands as the *nesoi Diomedeiai*, where the hero had his tomb (Strabo 6.3.9; Plin. *HN* 3.151).

The graffiti are valuable evidence for a Greek trade route along the lower Illyrian coast, across the middle Adriatic and along the western Adriatic to Spina (no. 85) and Adria (no. 75); Kirigin and Čače (1998); Colonna (1998)).

A healing cult associated with Podalirius at Monte S. Angelo at the southern end of Gargano (Strabo's Drion) was already known in C4. Its oracular or divinatory role may have passed to a shrine of a local Daunian hero later identified with the seer Kalchas on the same hill.

On the east shore the legend of Kadmos the Phoenician, who with his queen Harmonia migrated from Thebes to rule the Illyrian Enchelei around Lake Ohrid, was at least as old as C5. He was credited with founding *Lychnidos* (Ohrid) and *Bouthoe* (Budva) on the coast of Montenegro. He was also linked with northern Epeiros, and further north with a local serpent cult at a place named Epidaurum (Cavtat near Dubrovnik). The tale of Phaethon, son of Helios, whose misadventure with the horses of the solar chariot caused Zeus to destroy him with a thunderbolt, ended with his fall into the river Eridanos, where his grieving sisters were transformed into amber-dropping trees. An identification with the river Po had already been made in C6, while the name of Hesiod's Elektrides (Amber Islands) which lay at its mouth was later attached to islands in the Quarnero (modern Cres and Lošinj). The story that the elderly and wise Trojan Antenor brought the leaderless Eneti from Paphlagonia to a home at the head of the Adriatic (he was later identified as founder of Patavium) was current in C5e. Though he appears also at Melaina Korkyra (no. 83), the whole notion is likely to be a fiction based on a coincidence between the names of the Eneti of Asia Minor and the Adriatic Veneti.²

By C4s some islands in the Quarnero had been named Apsyrtides after Apsyrtos, the ill-fated brother of Jason of the Argonauts. The fantastic tale of their return voyage by a branch of the Danube (Danuvius) which flowed into the head of the Adriatic, described by Apollonios Rhodios, can only be explained by the coincidence of the names Istria and Ister, the Greek name for the lower Danube, though the notion of a Danube–Adriatic passage appears to have been current in C5. Similar coincidences can explain the alleged Colchian foundation of Olkinioj (Ulcinj) on the coast of Montenegro and their settlement further south at Orikos in the Bay of Vlora. Colchians are also credited with the foundation of Pola near the southern tip of Istria. There is no reason to doubt the assumption that all Greek contact with

¹ For remains of a sanctuary here, see Dujmušić (2002).

² For the tradition of Aineias at Melaina Korkyra, see Vanotti (2002).

the Adriatic was by sea from the south.³ Tales of overland contacts, though often repeated, have a consistently fantastic quality. One might explain the tale, repeated by Strabo 7.5.9, that pottery from Thasos (no. 526) and Chios (no. 840) could be found in the bed of the river Neretva as one of the miracles of rivers in the limestone karst of Dalmatia, which suddenly disappear underground and resurface on the other side of a mountain range. In the same category must be placed a story that ships sailing in the Black Sea were visible from a mountain near the Adriatic at a gap in which there was a market where the goods of Lesbos, Thasos and Chios coming from the direction of the Black Sea could be exchanged for the amphorae of Korkyra coming from the Adriatic (Arist. *Mir. ausc.* 104). Like the fantasy of a passage into the Adriatic from the Danube, the stories were perhaps based on the strange behaviour of rivers, coincidences of names, and the equations of Greek and local myths. More intriguing is Herodotos' story of the offerings to Delian Apollo by the Hyperboreans (4.33). Wrapped in wheat-straw these were passed into Skythia and then through a succession of different peoples, which seems an authentic echo of the mechanics of prehistoric trade. Their journey continued westward as far as the Adriatic, where they first came into Greek hands at Dodona in Epeiros. One interpretation is that the offerings were pieces of amber which had travelled the well-established route between the Baltic and the head of the Adriatic, but the embellishment of the tale arose from a wish to demonstrate that the fame of Delos had spread even beyond the limits of the known world.

Tales of Kadmos the Phoenician in the Adriatic have from time to time encouraged notions of a Phoenician presence, but evidence to support this has proved hard to find, and the first historical record of a Greek is the tradition of Cretans in Iapygia preserved by Herodotos, while Hydrous (Otranto), described as a *λιμὴν . . . ἐπὶ τῷ τοῦ Ἰδρύου ἢ τῷ τοῦ Ἰονίου κόλπου στόματι* in C4 by Ps.-Skylax 14, also had a Cretan foundation legend, though no similar traditions are attached to Barion (Bari) (Andreassi and Cataldi (1984)) or nearby Neapolis (Menchelli *et al.* (1996)), both of which later struck coins with Greek legends. The first fully documented Greek presence is that of the Eretrians of Euboia, who had preceded the Corinthians on Melaina Korkyra, where they had enjoyed better relations with the local inhabitants, and also established a settlement on the island of Orikos in the Gulf of Vlora (= *Vlora* above?), which controlled several routes to the interior.

The mineral wealth of the region is often taken as the economic reason behind the Syracusan C4 expansion into the upper Adriatic, but the evidence is not unequivocal. The passage in Strabo 7.7.8 referring to the silver mines of Damastion is often used as evidence of mineral riches, but these may not be so relevant for Illyria.⁴ The coinage of Damastion (May (1939)), bullion rather than commercial according to Schwabacher (1943), reveals kinship with the coinage of the cities of Chalkidike, e.g. Olynthos (no. 588), rather than with that of Corinth (no. 227) and Illyria (most recently Ceka (1994b)). Bitumen, timber (Meiggs (1982) 355–56) and slaves were probably the merchandise traded.

In spite of their earlier hostility, Corinthians along with other Dorians collaborated with Korkyra (no. 123) in the foundation of Epidamnos (no. 79) in 627, a city known later as Dyrrhachion, where the main incentive may have been a closer access to the sources of Illyrian silver. The vigorous contests between factions linked with local peoples suggest a community that comprised a significant element of wealth based on commerce with the hinterland, which was partly under the control of a civic official. The settlement later known as Apollonia (no. 77) was founded by Corinthians around the end of C7 and, like Epidamnos, was a point of departure for several routes inland and was also to receive additional settlers from Mainland Greece (historical surveys: Salmon (1984) 270–80; De Fidio (1994)). Famed for its rich pastures, the territorial expansion of Apollonia is implied in the dedication at Olympia of spoils from the destruction of the Euboian-Lokrian settlement at Thronion. During C6 Corinthian products begin to appear around the northern Adriatic but not in the quantity of Attic products in the following century. In C7 the Rhodians, already active in the colonisation of Sicily, joined with Kos in a settlement of Elpiai on the coast of northern Apulia, but there is no indication that it ever flourished or contributed significantly to any links with the local Daunians, who were evidently less receptive than their Messapian neighbours to the south. A late tradition attributes its foundation to Diomedes, along with Kanousion and Arpi, for which it served as a port, and a similar tradition existed for Sipous or Sipontion near Manfredonia, whose name was said to derive from the Greek word for cuttlefish (*sepia*). Hyria in Calabria was reputedly settled by Cretans returning from Sicily, while Hyrion (Uria) on the coast north of Gargano struck coins with a Greek legend, though only in C3. The harbour of

³ Evidence of shipwrecks from C5 is reviewed by Petrić (2002).

⁴ For Damastion, the sources of silver and the significance of the C5 hoard from Hollm in Albania, see Cabanes (2002).

Brentesion (Brindisi (no. 78)) was never exploited before Roman times. Though doubtless known to Greek sailors (one tradition makes it a Cretan foundation, another attributes it to Aitolians under Diomedes) and also serving as occasional refuge to Tarentine exiles, the settlement at Brentesion, although remaining mainly in the hands of the Messapians, became somewhat assimilated to a Greek *polis* (see no. 78).

In C8 Corinth, under the leadership of the Bakchiadai, initiated trading contacts in the lower Adriatic region attested by finds from Brentesion and Hydrous. There is testimony of Euboian and Corinthian imports from C8 and C7f in the settlements of the central Salentine—at Cavallino, Vaste, but above all at Hydrous; for a survey of Greek finds from the Salentine peninsula: D'Andria (1982), esp. 115–16 for C8 Corinthian material, (1984); Various authors (1994).

The first Greek settlement in Dalmatia apparently took place on Melaina Korkyra early in C6 when, in alliance against Periander of Corinth, Knidos (no. 903) with the support of Korkyra (no. 123) sent a colony to the island which they named in honour of their ally.

Greek imports to Etruscan settlements north of the Apennines, notably Felsina, began in C6 and probably reached there by way of Numana, perhaps at the same time that Sicilian exiles occupied the harbour at Ankon on the north side of Mt. Cornero in C4e. Further north lay the Veneti, with their distinctive culture, while to the south of the Etruscans in the Po valley dwelt the Umbrians and Piceni, whose principal settlements lay inland. They appear to have made little use of the harbour at Ankon, while their other settlements at Numana, Ariminum, Pisaurum and Ravenna never amounted to much. Strabo 5.1.7 records a settlement of Thessalians at Ravenna, perhaps attracted by the horses and rich soil of the region, but in spite of assistance from the Umbrians, the venture failed, perhaps because of hostility from the Etruscans.

A large volume of Greek goods reached the port of Spina (no. 85) and the Po valley, probably to the exclusion of any other area.⁵ A dedication of spoils in its treasury at Delphi may derive from a successful elimination of a local competitor in open warfare. Silting from the Po was a constant threat to the city, but more damaging was the collapse of Etruscan power north of the Apennines in the face of the advancing Gauls.

According to Strabo 8.6.16, Aiginetans founded a colony *en ombrikois*, probably archaeologically attested in Adria

(no. 75). Adria was a slightly later foundation and was never to match Spina in the volume of its commerce; yet it was to enjoy a longer history probably because of its superior location for longer distance trading in tin and similar products with northern and western Europe.

In Dalmatia the Knidian venture on Melaina Korkyra may have failed, but by C4e two colonies had become established in the islands of Pharos (Hvar (no. 84)) and Issa (Vis, (no. 81)), both of which survived until the Roman conquest. In 385 Dionysios of Syracuse assisted the Parians to establish a settlement on Pharos, having already sent a colony to the Adriatic and founded “a city called Lissos” (no. 82) (Diod. 15.13.4). In the following year, after the native Illyrians had summoned help from the mainland against the Parians, the commander of Lissos came with a force of triremes and inflicted heavy losses on the Illyrians in their lighter ships. The place from which Dionysios’ fleet came could be the later Illyrian fortress of Lissos (Lezhe) at the mouth of the river Drin in northern Albania, which has an impressive circuit of late Hellenistic masonry fortifications, but is more likely to be in fact the other Greek colony in the area, Issa (Vis) on the island of the same name and known from other evidence to be a Syracusan foundation. Issa was the more successful of the two, later establishing settlements on Melaina Korkyra at Lumbarda, perhaps in C3, and on the mainland among the Illyrians at Epetion (Stobreč) and Tragourion (Trogir)⁶ which still existed in C2.

Dionysios I further secured his Syracusan Adriatic empire with new foundations in the eastern Adriatic at Ankon (no. 76), Spina (no. 85) and Adria (no. 75); the somewhat ambiguous term “Dionysios’ Adriatic empire” is widely employed in modern scholarship.

Pharos (no. 84) later fell under Illyrian control, while Issa (no. 81) maintained an independence which ended only when, according to one tradition, it persuaded the Romans to cross the Adriatic and crush the Illyrian power of Agron and Teuta. The first surviving Greek account of the Adriatic is the *Periplus* of c.330, attributed to Skylax of Karyanda, which contains some material of much earlier date (15–27). In addition to the names of native peoples and places, including several “cities” of the Liburnians in the north-east Adriatic and those of the main Greek settlements, the text records the Greek names for several of the lesser islands (Elektrides, Apsyrtai, Mentorides, Proterius, Kratea, Olunta, Melite and Elaphites).

⁵ Greek imports in Istria and Kvarner are surveyed by Mihovilić (2002).

⁶ For archaeological evidence for Greek settlement, including walls and votives, see Kovačić (2002) and Babić (2002).

1. Pre-Hellenistic Settlements not Attested as Poleis

Bouthoe (*Βουθόη, Βουθοίη*) Ps.-Skylax 24–25 (ἐμ-πόριον?); *Etym. Magn.* 207.11 (πόλις τῆς Ἰλλυριδος); Steph. Byz. 219.19 (πόλις Ἰλλυριδος). The few Greek remains are primarily from the Hellenistic-Roman cemetery (Papović and Popović Ljubiša (1996)). *Barr.* 49, C.

Elpiai (Ἐλπία) Strabo 14.2.10; Steph. Byz. 269.15 (πόλις ἐν Δαυνίοις, κτίσμα Ῥοδίων). Lycoph. *Alex.* 1129 (πόλις). Possibly a joint Rhodian and Koan colony which disappeared in face of Daunian hostilities (Tinè Bertocchi (1989); Lamboley (1996) 21–32). *Barr.* 45, AC.

Hydrous (Ἵδροῦς, Ἵδρῶεις) Ps.-Skylax 14 (λιμὴν), 27 (πόλις ἐν τῇ Ἰαπυγίᾳ); Steph. Byz. 62.3 (Ἰαπυγίας πόλις), 646.13 (πόλις Ἰταλίας); Strabo 6.3.5 (πολίχνη); Paus. 6.19.9. Allegedly founded by Cretans guided by Biennos (Steph. Byz. 169.3–4). Though Hellenised to some extent, it was principally an indigenous site, and almost all remains are Roman (D'Andria and Moerschini (1994); Lamboley (1996) 207–13). *Barr.* 45, AC.

Hyria (Ἵρία; Ἵρίη) Hdt. 7.170.2 (πόλις); a Iapygian–Messapian *polis* allegedly founded by the Cretans under Minos (Hdt. 7.170.2; cf. D'Andria (1993); Lamboley (1996) 120–35). *Barr.* 45, AC.

Kallipolis (Καλλίπολις) Dion. Hal. *Ant. Rom.* 19.3 (ἐπίκειον). Allegedly an *apoikia* of Leukippos, but no Greek remains have been found (Lamboley (1996) 243–45). *Barr.* 45, AC.

Pellion (Πέλλιον; *Pelion*) Arr. *Anab.* 1.5.5 (πόλις); Livy 31.40.4 (*urbs*). Pellion was a city in the Dassaretis (Hammond and Walbank (1988) 41 n. 1; Ceka (1990) fig. 1.20; Wilkes (1992) 123–24). Bosworth (1980) 68–70 argues that Arrian's Pellion is Pella. *Barr.* 49, H, but C must be added, if the identity between Πέλλιον and *Pelion* is accepted.

Rhodiai (Ῥοδία) Strabo 6.3.5 (πόλις Ἑλληνίς); Ptol. 3.1.67. A Messapian city partly Hellenised by C4 (Ciongoli (1990); Lamboley (1996) 171–81). *Barr.* 45, AC.

Thronion (Θρόνιον) *CEG* 390 (C5m) = *I.Apoll.* 303; Paus. 5.22.3 (πόλισμα (rC5m)). Unlocated but situated somewhere in the Abantis region, south-south-east of Apollonia, probably near Amantia (Hammond (1967) 384–85, 493–95, 523; Ceka (1990) 217; Cabanes (1995) 32). *Barr.* 49, C.

Planned but unlocated Athenian colony An Athenian decree of 325/4 lists ships and equipment for a colony (*apoikia*) in the Adriatic (*IG* 1² 1629.165–271 = Tod 200). The location of the planned colony is unknown and a matter of conjecture—somewhere in the vicinity of Adria (no. 75) and Spina (no. 85), where Athens had strong C5 trade contacts, or on the coast of Apulia in the southern Adriatic. Possibly the settlement was never realised, though the use of the term *epoikoi* (224–25) may indicate that a foundation was indeed carried out (Braccesi (1977) 296–300); the term has even been taken to indicate a strengthening of an already existing *emporion* (Fantasia (1972) 137). The site-classification used in the decree is “naval station” (220: ναύσταθμον).

The oecist was Miltiades of Lakiadai, probably a descendant of the younger Miltiades. The foundation was planned as a protection (*φυλακή*) against Tyrrhenian pirates—by *Tyrrhenoi* are probably meant Etruscans, though other meanings cannot be excluded (Braccesi (1977) 287–96). For the historical significance of the decree, see Vallet (1950); Fantasia (1972) 136–39; Braccesi (1977) 300–6; Leschhorn (1984) 186–88.

Two foundations by Dionysios the Younger Two colonies in Apulia founded by Dionysios II in 359/8 are mentioned by Diod. 16.5.3, but without any information about their names and locations. The purpose was protection against Illyrian pirates, and the foundations were most likely on the coast. The sites are unknown, but conjectures have been put forward, such as Hydrous, Istros, Neapolis and others (survey in Uggeri (2002) 312–13).

II. The Poleis

75. Adria Map. 40. Lat. 45.05, long. 12.05. Size of territory: ? Type: C:β. The toponym is Ἀδρία, ἡ (Hecat. fr. 90; Strabo 5.1.8, MSS) or Ἀτρία (Strabo 5.1.8; Steph. Byz. 143.16). The only source for a city-ethnic is Steph. Byz. 29.3–4. Hsch. s.v. Ἀδριανοί refers to the Celtic tribes living along the coastline of the Adriatic. Adria is called a *polis* in the urban sense by Strabo, once illustrious, but in his own times a *polismation* (5.1.8 (rC5–C4)); in Hecat. fr. 90 we have no guarantee that the classification of Adria as a *polis* stems from Hekataios.

Adria was possibly a C6l foundation of Aigina (no. 358), as indicated by some of the C5f dedicatory graffiti in the Aiginetan alphabet from the site, combined with Strabo 8.6.16: ἀποίκους δ' ἔστειλαν Αἰγυνῆται εἰς . . . Ὀμβρικούς (Colonna (1974); Dubois, *IGDGG* pp. 181–87);

however, a graffito in the Ionic alphabet is also known from the site (Johnston (1979)). The foundation myths are linked with the local dynast Adrios, son of Ionios (Theopomp. fr. 128) or with Diomedes (Steph. Byz. 143.16, see *supra* 000). In C4f Adria was, apparently, refounded by Dionysios I (Theopomp. fr. 128; Tzetzes *ad Lycophr.* 631; *Etym. Magn.* 18.54–57). According to Just. *Epit.* 20.1.9, Adria was a Greek foundation (*Graeca urbs*); whereas the city was founded by the Etruscans according to Plutarch and other Roman sources (Plut. *Cam.* 16; Livy 5.33.7; Plin. *HN* 3.120).

Adria rose alongside an ancient branch of the river Po (between the Adige and the Po), in the territory of the Henetikians (Venetians) (implicitly Strabo 5.1.7), today about 25 km from the coast of the Adriatic Sea, which took its name from the city (Strabo 5.1.8; cf. also 7.5.9), if not from the river Adria (Steph. Byz. 28.14–15). If the conjecture of an Aiginetan foundation (*supra*) is valid, Adria lay in the territory of the Ombriakians (Umbrians). However, the borderline between Venetian and Umbrian territory is rather fluid (cf. Colonna (1974) 11–12) and, according to Steph. Byz. 143.16, Adria was situated in Tyrrhenia.

There are no extant urban Greek remains, though there are vestiges of housing structures in wood, as known from Venetian palafittic habitation structures. Attic sherds from the settlement area attest contact with the Greek world already from C6f, culminating in C5–C4, but decreasing in the course of C4 (Colonna (1974) 5; Giangiulio (1984) 44), and there is no archaeological evidence of a c.385 foundation by Dionysios I. By C4m Adria fell victim to invasions by the Gauls (Ps.-Skylax 18.2, see Colonna (1974) 11–12; Peretti (1979) 201–2).

Dedicatory graffiti to Apollo (*IGDGG* no. 70) and Eris(?) (*IGDGG* no. 72) have revealed a Greek sanctuary, no other language being represented among the finds (Colonna (1974) 8–10). The archaeological evidence, including the nomenclature of the graffiti, suggests that C4 Syracusan settlers at Adria were anticipated by settlers from Aigina.

Evidence of public works is scarce; the *philistina fossa* of Plin. *HN* 3.16.120–21 has tentatively been interpreted as a canal or drainage system built by Philistos the Syracusan sent into exile by Dionysios I, with his residence at Adria(?). The evidence is tenuous, and Philistos may have been exiled in the Adriatic generally speaking or at Epeiros (Wikén (1937) 144–45; cf. Fogolari and Scarfi (1970) 36 n. 23). Extensive cemeteries east, south and south-west of the settlement are mainly C4 and Roman. Tombs from the Archaic period are so far rarely attested (Giangiulio (1984) 43).

As for the Late Classical period, it should be noted that the

tradition found in Just. *Epit.* 20.1.9: *Adria . . . Graeca urbs*, reflects the undoubted presence of Greeks at Adria, and the Greek foundation myth according to which Adria was founded by Diomedes (*supra*) may reflect a C4 attempt to legitimise Syracuse's Adriatic empire (Briquel (1987) 257–59).

Most likely we have to do with a Greek trading station in Etruscan-Venetian territory—the pre-Roman finds have revealed very strong ties with Etruscan culture; from C4s the site was occupied by the Gauls.

76. Ankon (Ankonites) Map 42. Lat. 43.35, long. 13.30. Size of territory: ? Type: A:β, see *infra*. The toponym is Ἀγκών, ὀ (Ps.-Skylax 16; Strabo 6.3.10). The city-ethnic is Ἀγκωνείτης (*I.Dyrrh.* 20 (C2–C1)) or Ἀγκωνίτης (*SGDI* 2612.3; Steph. Byz. 18.17–18, quoting Artemidoros). Ankon is called a *polis* in the urban sense by Ps.-Skylax 16 and described retrospectively as a πόλις Ἑλληνίς by Strabo 5.4.2 (r387). The internal and collective use of the city-ethnic is probably attested in abbreviated form on some C3–C2 bronze coins (*ATKΩN*, *SNG Cop. Italy* 82–83). The external and individual use is found in a Delphic proxy decree of 167 (*SGDI* 2612.3).

According to Strabo 5.4.2, Ankon was colonised c.387 by Syracusan refugees who had fled from Dionysios I, but the city may have been part of Dionysios' Adriatic empire, and he may have been responsible for the settlement (Woodhead (1970) 511–12; Braccesi (1977) 220–22). According to Plin. *HN* 3.111, Ankon was, with Numana, a foundation of the Sikeloi, and according to Catullus (36.13) and Juvenal (4.40), the city was a Doric foundation. Strabo 5.4.2 locates Ankon in Pikenian territory, Ps.-Skylax 16 among the Umbrians. Braccesi and others seem to hold that Ankon was a Greek trading post, possibly strengthened during the reign of Dionysios I and his expansion into the Adriatic, but not a colonial foundation with a well-defined urban layout (Braccesi (1977) 220–23, 246); cf. Spina (no. 85) and Adria (no. 75).

The C7 indigenous settlement rose on a coastal, bow-shaped promontory which enclosed a harbour (Strabo 5.4.2; settlement history: Luni (1995) 193–96 fig. 4). The settlement consisted of an acropolis with a sanctuary and, below, a town comprising both a public area and a habitation area—at least in Roman times. There are remains of a C4 circuit wall fortifying the acropolis (Sebastiani (1983)). The urban remains are mainly Roman, but there are sporadic finds of Greek sherds, mainly Attic of C6–C5. The remains of a Greek temple on the acropolis have been dated to the period

of Dionysios I, c.380–370, or to the period of Agathokles, 316–289 (Bacchielli (1985); D'Andria (2002) 120–22). The sources suggest a temple dedicated to Aphrodite, perhaps Euploia. But by analogy with various Dorian/Corinthian Aphrodite sanctuaries, Cordano (1993) prefers Aphrodite Akraia; cf. Juvenal (4.40) and Catullus (36.16.13) and the obverse type of the C3s–C2 coins (*SNG Cop. Italy* 82–83). It has recently been suggested that the Syracusan (Dionysian) settlement was located on the neighbouring hill of Montagnolo (*EAA sec. suppl.* 1971–94.1 (1994) 224).

77. Apollonia (Apolloniates) Map 49. Lat. 40.45, long. 19.30. Size of territory: probably 5. Type: A:a. The toponym is Ἀπολλωνία, ἡ (Hdt. 9.92–93; *I.Apoll.* 303 = *CEG* 390 (C5m)). The city-ethnic is Ἀπολλωνιάτης (Hdt. 9.92.2; *CID* II 4.1.18 (360)). Apollonia is called a *polis* both in the urban sense (Hdt. 9.93.1, 94.2; Ps.-Skylax 26) and in the political sense (Arist. *Pol.* 1290^b11–12). In the accounts of the Delphic *naoroioi*, Apollonia is listed under the heading πόλεις καὶ ἰδιῶται (*CID* II 4.1.14, II.1–22 (360)). The citizens are described as *astoi* in Hdt. 9.93–94. The collective use of the ethnic is attested externally in the dedication on a victory memorial set up by the Apolloniates at Olympia (*CEG* 390 = *I.Apoll.* 303), also cited by Paus. 5.22.3 (cf. *infra*), and in *CEG* 809 = *I.Apoll.* 307 (C4m). The individual use of the ethnic is attested externally in literary sources (Hdt. 9.92.2) and in inscriptions (*F.Delphes* III.1 4.3 = *I.Apoll.* 304 (C4f); *IG* II² 350.10 = *SEG* 35 77 (C4s)).

According to Thuc. 1.26.2, Apollonia was founded by Corinthians (no. 227) only (cf. Braccesi (1977) 92 n. 4), and according to Plut. *Mor.* 552E the contingent was led by Periander, which suggests a date of c.600 for the foundation. According to a variant tradition, a contingent of 200 Corinthians was led by one Gylax, after whom the city was named Gylakeia (Steph. Byz. 105.22, 214.9–10; cf. *Γυλάκειον πεδίον* in a second century AD inscription from Apollonia, *I.Apoll.* 213). Alternatively, Ps.-Skymnos 439–40 and Strabo 7.5.8 claim that Apollonia was founded by colonists from Corinth and Korkyra (no. 123) (*I.Dyrrh.* 29). In *Pol.* 1303^a25–28, 36–38, Aristotle adduces Apollonia as an (undated) example of *stasis* caused by the arrival of new colonists. The foundation myth told by the Apolloniates was that their city had been founded by Apollo (*CEG* 390 = *I.Apoll.* 303 = Paus. 5.22.3; cf. coins of the Roman period (Head, *HN*² 314)).

The tradition mentioning Periander indicates that the foundation took place during his reign, although his personal involvement remains uncertain (cf. Berve (1967) 21; Salmon

(1984) 211; foundation chronology c.600: Van Compernelle (1953); Ducat (1962) 174–78). The foundation of Apollonia and Epidamnos (no. 79) probably reflects Corinthian expansion in the Adriatic after the subjugation of Korkyra (Salmon (1984) 222–24) and Corinthian trade attracted by the mineral wealth of the region (Braccesi (1977) 98–103).

The lack of Protocorinthian pottery confirms a foundation date of c.600 (Mano (1983) 232–34; *Apollonia d'Illyrie* iv. 855). The population was Hellenic, and the colonists from Corinth and Korkyra were reinforced by most of the inhabitants of Dyspontion (no. 250) near Olympia, who are said to have fled to Epidamnos and Apollonia after the destruction of their city c.570 (Strabo 8.3.32; Ducat (1962) 175–76).

The growth and territorial aspirations of Apollonia may have led to conflict with neighbouring settlements, such as the C5m war with Thronion in the Abantis attested in the inscription from Olympia (also cited by Paus. 5.22.3) which commemorates spoils taken from Thronion by the Apolloniates (*I.Apoll.* 303 (C5m); cf. Hammond (1967) 493–95). Paus. 5.22.4 records that spoils were also given to the Corinthians. For Apollonia's dominance over Thronion and Byllis (no. 92), see Hammond (1967) 523. In the conflict between Corinth and Korkyra in 435 Apollonia sided with Corinth (Thuc. 1.26.2; see Salmon (1984) 274–80). In C4m the Apolloniates are listed in the Corinthian inscription commemorating Timoleon's victory over Carthage at the river Krimissos in 344 (*CEG* 809 = *I.Apoll.* 307; see Talbert (1974) 76–77).

The constitution was organised democratically, but offices of state were restricted to the descendants of the original colonists, who constituted a minority of the citizens (Arist. *Pol.* 1290^b11–14). This peculiar form of democracy may have been preceded by an oligarchy which was overturned because the ruling oligarchs embezzled public money (Arist. *Pol.* 1305^b39–40 with 1306^a6–9). However, the chronology is uncertain, and the sequence of constitutions may have been the opposite (cf. Aubonnet in the Budé edn., p. 161 n. 5). The *polis* was famous for its good laws (*εὐνομοστάτη*, Strabo 7.5.8), and is reputed to have practised expulsion of foreigners (*xenelasia*) on the Spartan model (Ael. *VH*13.15). There is a C4s Delphic proxeny decree for a citizen of Apollonia (*I.Apoll.* 310), and an Apolloniate is granted *isopoliteia* in the Molossian kingdom by a federal decree of c.343–331 (*I.Apoll.* 308). Apollonia figures in the C4s Argive list of *theorodokoi* as one of the most northerly cities of the itinerary (*SEG* 23 189.1.14 = *I.Apoll.* 309). Communal oracle consultations at Dodona and Delphi are reported in an anecdote told at Hdt. 9.93–95; cf. Fontenrose

(1978) Q161. Meneptolemos of Apollonia was victorious in the boys' race c.504–500 (Paus. 6.14.13; *Olympionikai* 162).

The colony was founded near the coast, ἐν τῷ Ἰωνίῳ κόλπῳ (Hdt. 9.92.2), in the land of the Taulantioi (Ps.-Skylax 26), and now lies between the estuaries of the river Seman (ancient Apsos) and the river Vjosë (ancient Aous) at modern Pojani in southern Albania (morphology and site plan: *Apollonia d'Illyrie* i. 523–26 fig. 3). The name of the territory was ἡ Ἀπολλωνία χώρα (Hdt. 9.93.1, 94.2). Coin finds show that C4 Apollonia had contacts over a wide territory, perhaps as extensive as modern Albania (Mano (1976) fig. 3). There are traces of indigenous settlements and ancient routes in the territory (Praschniker (1922–24) fig. 2), remains of a C4 Doric temple of unknown cult at Stylassi c.800 m south of the city, no longer extant (Praschniker (1922–24) 40–42 fig. 14; *I.Dyrrh.* 14), and some indications of a river harbour on the Aous (Praschniker (1922–24) 55–57).

Most of the urban remains are Hellenistic or Roman, and are dispersed along the crest and on the slopes of the range of hills on which the city was founded. A C6? ashlar circuit wall fortified the acropolis and upper settlement area (c.20 ha). The lower city (c.110 ha) was protected by an extensive C4–C3 ashlar and brick circuit wall, furnished with a number of gates (Koch (1989) 218–20; *Apollonia d'Illyrie* ii. 763–78; *Apollonia d'Illyrie* iii. 977–85; *Apollonia d'Illyrie* iv. 857–60); the city withstood sieges in C4l (Diod. 19.70.7 (r314); 81.1 (r312)). A C6s Doric hexastyle temple was raised on the southern peak of the acropolis; fragments of a C6 sculptural frieze reveal Ionic traits. The cult was that of Apollo (*I.Apoll.* 315.51) and possibly Artemis (*Apollonia d'Illyrie* i. 529). Public buildings below the acropolis consist of a C4s urban temple (*Apollonia d'Illyrie* iii. 976), a C3m theatre seating c.8,000 (Isler, *TGR* i. 227), C4–C3 stoas and a C3 nymphaeum (Strabo 9.3.16; see Koch (1989) 222–25), and various structures probably from the time of Dionysios I (Lamboley (2002)). There are vestiges of an urban layout dating to 450–380, with a street grid of 61 m × 61 m and streets 5.95–6.30 m wide (Koch (1989) 218–19).

The cemeteries were laid out in the Kryegyata valley east of the city: C7l–C5 tumuli and sarcophagi, C4–C3 chamber tombs, C3–C1 cremation tombs (Ceka (1994a); *Apollonia d'Illyrie* iv. 854–56). Tomb gifts and rites were similar to those at Epidamnos and Korkyra (Mano (1983) 232).

The major cult was probably that of Apollo, as indicated by the foundation myth (*supra*) as well as the name of the city. Also, the Apolloniatans dedicated summer crops fashioned in gold to the Delphic Apollo (Plut. *Mor.* 402A). Other communal cults are Helios (Hdt. 9.93) and Artemis, also fre-

quently invoked (*I.Apoll.* 1, 33). C3l inscriptions with dedications to Artemis Limnatis and Artemis Proscopa show the importance of her cult (cf. Cabanes (1986) 152–55, and coin evidence).

The calendar month Haliotropios (*I.Apoll.* 315.2) and Psydreos (*I.Apoll.* 387 (C4l)) are known also from Ambrakia, Bouthrotos, Dodona, Epidamnos and Korkyra, and suggest a Corinthian origin for the calendar (Hadzis (1994); Trümpy, *Monat.* 155–59).

Apollonia struck silver coins c.450–350. Denominations: stater (didrachms), tridrachms and drachms. Korkyraian types: *obv.* cow suckling calf; *rev.* stellate squares; legend: ΑΠ (SNG Cop. *Illyricum* 370). Bronze coins were struck from C4l. Types: *obv.* lyre; *rev.* obelisk of Apollo; legend: ΑΠΟΛΛΩΝΟΣ (Lacroix (1965) 155). From C4m staters on the Corinthian standard and with Corinthian types and legend: ΑΠΟΛΑ (Kraay (1976) 126).

78. Brentesion (Brendesinos) Map. 45. Lat. 40.40, long. 18.00. Size of territory: ? Type: C;β. The toponym is *Βρεντέσιον*, τό (Hdt. 4.99.5) or *Βρεντήσιον* (*Etym. Magn.* 212.23). The city-ethnic is *Βρενδεσίνος* (*IG* XIV 672 (C5m)) or *Βρεντέσιος* (Heracl. Lemb. 56) or *Βρεντέσινος* (Polyb. 10.1.8–9; Strabo 6.3.6). Brentesion is called a *polis* in late sources only, in Polyb. 10.1.9 referring to the Roman colony of C3m and retrospectively in Strabo 6.3.6 referring to the mythical period. Strabo describes Brentesion as a barbarian city in territory opposed to that of the Tarantines and with a Messapian name. However, its status as a Greek or at least partly Hellenised *polis* of the Classical period is indicated by a C5m *kerykeion* inscribed *δαμόσιον Θουρίων. δαμόσιον Βρενδεσίνων* (*IG* XIV 672 = Jeffery, *LSAG* 284 no. 13, pl. 54), perhaps a testimony of an alliance between Brentesion and Thourioi (De Simone (1956); Greco (1993) 302). Though not explicitly mentioned in the sources, Brentesion must have played a leading role in the Iapygian wars with Taras (no. 71) and Rhegion (no. 68) (Hdt. 7.170.3; Diod. 11.52 (r473)). The importance of its use as a port is attested in Hdt. 4.99.5, where we find the term *limen. πόλις βασιλευομένη* at Strabo 6.3.6 concerns the mythical period but may refer to the Messapian kingships (C5). A *boule* of the Brendesioi is known from a late source (Roman), but it is of some importance because it refers to a Greek philosopher (*IG* XIV 674; Ghinatti (1996) 120). The foundation story of Brentesion has Cretan elements (Strabo 6.3.6), as has the origin of the Iapygians (Hdt. 7.170.2; Antiochos (*FGrHist* 555) fr. 6), perhaps an indication of early Hellenisation. According to Strabo 6.3.6, Phalanthos of Taras settled in Brentesion when

he had been exiled from Taras, a tradition perhaps reflecting early contacts between the Greek colony and Iapygia (Fantasia (1972) 119–20).

The epigraphic evidence is mainly Messapian, the Greek inscriptions being primarily from the Roman period. Archaeological remains are mainly Hellenistic (Cataldi (1985); Lamboley (1996) 58–79).

79. Epidamnos (Epidamnios)/**Dyrrhachion** (Dyrrachinos) Map 49. Lat. 41.20, long. 19.25. Size of territory: ? Type: A:a. The toponym is *Ἐπίδαμνος*, ἡ (Thuc. 1.2.1; *SEG* 43 335 (C6s)). The city-ethnic is *Ἐπιδάμνιος* (Hdt. 6.127.2; *IG* II² 350.9 (331/0), 3052.2 (328/7)). The later toponym, *Δυρράχιον* (Strabo 7.5.8), is first attested in the C3l Delphic list of *theorodokoi* (*BCH* 45 (1921) iv.57), whereas the corresponding city-ethnic, *Δυρ(ρ)άχωνος*, is attested on coins as early as C5m (*infra*). Epidamnos is called a *polis* in the urban sense (Thuc. 1.24.1; Ps.-Skylax 26), in the territorial sense (Thuc. 1.24.5–6), and in the political sense (Thuc. 1.25.1). In Arist. *Pol.* 1304^a13–14, Epidamnos is one of six communities subsumed under the heading *polis* (1303^b32). The collective use of the city-ethnic is attested internally on coins (*infra*) and externally in Thuc. 1.24.1. For the individual and external use, see *Ἀμφύμνηστος Ἐπιστρόφου Ἐπιδάμνιος*, one of the suitors of Agariste of Sikyon (Hdt. 6.127.2 (r c.580)), and the Attic citizenship decree for a named Epidamnian (*IG* II² 350 = *SEG* 35 77 (C4s)). It is implicitly described as *patre* (= *patris*) in Hdt. 6.127.1–4.

Epidamnos was founded in either 627 or 625 (Hieron. Chron. 97b, Helm) by Korkyraians (no. 123) (Thuc. 1.24.1; Ps.-Skymnos 435–36) assisted by some Corinthians (no. 227) and other Dorians (Thuc. 1.24.2). The oecist was *Φαλῖος Ἐρατοκλείδου Κορίνθιος*, a descendant of Herakles, and he was summoned from Korkyra's *metropolis* in accordance with ancestral traditions (Thuc. 1.24.2). Epidamnos and Apollonia (no. 77) were the only true C7 colonies in the Adriatic, the outcome of Corinthian expansion and trade attracted by the mineral wealth of the region (Braccusi (1977) 98–103). In c.570 inhabitants from the destroyed Eleian city of Dyspontion (no. 250) migrated to Epidamnos and Apollonia (Strabo 8.3.32; for the chronology: Ducat (1962) 175–76). The city was strong and populous (Thuc. 1.24.3), but civil strife over many years (*στασιάσαντες*) and wars with the neighbouring indigenous towns left it weak. Internal strife led ultimately to the conflicts between Epidamnos, Korkyra and Corinth. C.437 the *demos* expelled the aristocratic faction (*οἱ δυνατοί*), which then concluded an alliance with the neighbouring peoples and with

Korkyra. In 435 Epidamnos sent envoys (*presbeis*) to Korkyra pleading mediation, but this was rejected (Thuc. 1.24.5–7). Following the advice of Delphi, the Epidamnians gave up their colony to Corinth, a garrison of Corinthians was sent to the aid of Epidamnos, and the Epidamnians were reinforced by new colonists of Corinthians, Leukadians (no. 126) and Ambrakiots (no. 113) (Thuc. 1.25), who obtained equal rights with the other citizens (Thuc. 1.27.1). The result was a siege of the city by the Korkyraians and the exiled Epidamnians (Thuc. 1.26.5). The war between Corinth and Korkyra led to the defeat of the Corinthian fleet, the conquest of Epidamnos in 434, and the reintroduction of an “aristocratic” constitution (for the “Kerkyraika” (Thuc. 1.24–55), see Hornblower (1991) 66–97; Salmon (1984) 282–85; for the *stasis*, see Gehrke, *Stasis* 60–62).

There are few sources for the later history of Epidamnos and Apollonia (no. 77), but in the C4s Illyrian kings came to play a major part. Epidamnos was given over to Glaukias, king of the Illyrians, by the Korkyraians in 313 (Diod. 19.78.1), and Illyrian dynasts may have been in power before this if coin legends naming Monoun, *basileos*, are C4s and refer to the father of Glaukias, as argued by Ceka (1972) 25–27.

The constitution was originally a narrow oligarchy which was changed piecemeal into a more moderate form of oligarchy (Arist. *Pol.* 1301^b14–15): the phylarchs were replaced by a council (*boule*); among the full citizens (*politeuma*) the magistrates were under obligation to attend the assembly (*heliaia*); and the single *archon* was another oligarchic element of the constitution (Arist. *Pol.* 1301^b21–25). After a *stasis* probably in 437, the oligarchic constitution was changed into a democracy: the people (*demos*) exiled the members of the ruling class (*hoi dynatoi*, Thuc. 1.24.5), and citizens hitherto excluded from the *politeia* were apparently enfranchised (Arist. *Pol.* 1304^a13–17). But in 433 the Epidamnian democrats had to surrender the city to the besieging Korkyraians on the following terms: the new colonists were sold into slavery, the Corinthian garrison was imprisoned (Thuc. 1.29.5), and the exiles were restored to Epidamnos (Diod. 12.30.5). As a result, the constitution was changed once again: one supreme official (*arche*) was in charge of the (financial) administration (Arist. *Pol.* 1287^a4–8), and another official, called *poletes*, was in charge of all trade between Epidamnos and its barbarian neighbours (Plut. *Mor.* 297F). Artisans employed on public works were public slaves (Arist. *Pol.* 1267^b16–19).

Epidamnos was situated in Illyris, in the territory of the Taulantioi, an Illyrian tribe (*ethnos*, Thuc. 1.24.1), on the coast at modern Durrës in central Albania.

The town was founded on an isthmus (Thuc. 1.26), according to some later sources the name of the peninsula was Dyrrhachion (Eratosthenes *apud* Steph. Byz. 244.10–11; cf. Strabo 7.5.8), whereas according to App. *B Civ.* 2.39 Dyrrachion was the name of the harbour, Epidamnos the name of the upper city. According to Paus. 6.10.8, there was a short distance between the two cities. However, there is no archaeological evidence for separate settlements. The few Greek remains lie beneath the Roman, mediaeval and modern city, but they confirm a foundation date of c.625 (Hidri (1987)); see also D'Andria (1990) 285 for noteworthy early Archaic finds and also now Davis, et al. (2003). There are architectural remains of two C6I sanctuaries situated on the outskirts of the modern city, but the location in relation to the ancient city is unknown (Korkuti (1994) 403). A fortification wall is implicitly attested for the 430s by Thuc. 1.26.5.

A cult of Herakles is deduced from a C6–C5 relief of Herakles with votive inscription (*I.Dyrrh.* 1); a C4–C3 inscription mentions Asklepios (*I.Dyrrh.* 2); and a C4–C3 inscription the *theoi megaloi* (*I.Dyrrh.* 3 (restored)). Coins offer evidence of cults of Herakles and Zeus (*infra*). According to Paus. 6.19.8, the Epidamnians dedicated a treasury at Olympia, now identified in foundation III of the Treasury Terrace. C6s roof fragments have been assigned to the building (Mallwitz (1972) 165–71; Mertens-Horn and Viola (1990) 239–40). Kleosthenes, son of Pontis, from Epidamnos, was victor in the chariot race at Olympia in 516 (Paus. 6.10.6; *Olympionikai* 141).

The names of the months Haliotropios (*I.Magnesia* 46.3 = Rigsby no. 96), Apellaios, Machaneus and Panamos (*I.Dyrrh.* 580, 582–83) suggest a Corinthian origin for the calendar (Hadzis (1994): Trümpy, *Monat.* 161).

Dyrrhachion struck coins (1) c.450–350, staters with Korkyraian types: *obv.* cow suckling calf; *rev.* stellate squares; legend: ΔΥΡ, or Δ (*SNG Cop. Illyricum* 421–28); (2) c.350–229, staters on the Corinthian standard and with Corinthian types: *obv.* Pegasus; *rev.* Athena, behind club; legend: ΔΥΡΑΧΙΝΩΝ, ΔΥΡ, Δ (*SNG Cop. Illyricum* 429–32); (3) c.300–200, drachms with Corinthian types: *obv.* head of Herakles; *rev.* Pegasus; legend as *supra* (*SNG Cop.* 433–42) (Ceka (1972) 22, 57–66). An otherwise unknown C4s Illyrian dynast, Monoun, struck tridrachms of Korkyraian type with the legend ΒΑΣΙΛΕΩ ΜΟΝΟΥΝΙΟΥ ΔΥΡ (Ceka (1972) 23–27; *SNG Cop. Illyricum* 528). (4) Bronze coins were struck from C4I: *obv.* head of Dodonaian Zeus; *rev.* tripod; legend: ΔΥΡ, and magistrates' names (*SNG Cop. Illyricum* 501–23; Ceka (1972) dates to C4). Three silver staters (*obv.* head of Athena, *rev.* Pegasus, legend: Ε or Ε and

ϙ) struck in C5 and probably prior to the Peloponnesian War may represent the earliest coins of the city (using the name *Epidamnos*) presumably struck in collaboration with Corinth (no. 227). Kraay (1976) 84 no. 248; Miraj (2002).

80. Herakleia (Herakleiotēs) Map 20. Unlocated. Type A:a. The toponym is 'Ηρακλεία, ἡ (Ps.-Skylax 22). The city-ethnic is attested in the collective and internal sense on C4 coins: ΗΡΑΚΛΕΙΟΤΑΝ (*infra*). Herakleia is called a *polis Hellenis* in the urban sense at Ps.-Skylax 22. Its status as a *polis* in the political sense is indicated by the C4 mint (*infra*).

Herakleia had a harbour (*limen*, Ps.-Skylax 22), but its location has not been established satisfactorily. Its origin is unknown, though most scholars take it to be one of the Adriatic foundations of Dionysios I (see coin evidence below). Herakleia is usually located on the island of Pharos, where most of the coins have been found (Brunšmid (1898) 54; Dukat and Mirnik (1976) 181–82. For a recent survey of coin distribution, see Kirigin (1990) 294–95). Attempts to identify Herakleia with various sites in the eastern Adriatic, such as the Knidian foundation on Korkyra Melaina, are unconvincing (Braccesi (1977) 106–8).

Herakleia struck bronze coins in C4 on the Syracusan standard. Types: (1) *obv.* Herakles; *rev.* bow and club; legend: ΗΡΑ or ΗΡΑΚ or ΗΡΑΚΛ or ΗΡΑΚΛΕ (Brunšmid (1898) 1–15; *SNG Cop. Illyricum* 535–37), and in one case ΗΡΑΚΛΕΙΟΤΑΝ (Dukat and Mirnik (1976) 181). (2) C4(?), *obv.* female head; *rev.* dolphin; legend: ΗΡΑ (Brunšmid (1898) 16).

81. Issa (Issaios) Map 20, island. Lat. 43.05, long. 16.05; city not indicated on map. Size of territory: 3. Type: A:a. The toponym Ἴσσα, ἡ is used about both the island and the city (Ps.-Skylax 23). At Diod. 15.13.4, *contra* e.g. Stylianou (1998) 193–95, one should reject Ἴσσαν as a plausible emendation of MS Λισσόν or Λίσσον. For the emendation of 15.14.2, see *infra*. The city-ethnic is Ἴσσαιος (*Syll.*³ 141.2 (C4–C3)). Issa is called a πόλις Ἑλληνίς in the urban sense by Ps.-Skylax 23. That Issa was a *polis* in the political sense too is indicated by its mint (*infra*) and the colonisation decree of c.300 (*infra*). The collective and internal use of the city-ethnic is attested in the colonisation decree (*Syll.*³ 141.2) and on C3 bronze coins (*infra*).

According to Ps.-Skymnos 413–14, Issa was a Syracusan foundation (*apoikia*), and this tradition is confirmed by some of the names of the c.250 Issaian colonists sent to Melaina Korkyra (no. 83) (*SEG* 40 511, 43 348). Issa is normally believed to have been founded by Dionysios I in connection with his

establishment of colonies in the Adriatic (Diod. 15.13.1–5 (r385); see esp. Braccesi (1977) 230–32; Stylianos (1998) 196), although there is no unequivocal literary or archaeological evidence for this (cf. Beaumont (1936) 202; and see *infra*), and archaeological evidence indicates a settlement of Greeks prior to Dionysios' interference (Sanader (2002)), just as sporadic finds of Archaic Greek pottery from Issa and Pharos attest earlier contacts with the Greek world; also, the hero Ionios, though first attested on C4 coins from Issa (*infra*), may have had an earlier cult on the island of Issa (Braccesi (1977) 75–76, 229 n. 106).

Issa served as a naval station when Dionysios' governor (*eparchos*) of Issa in 384 engaged in a naval battle against the Illyrians in support of the Knidian colony of Pharos (Diod. 15.14.2, where Ἰσση is a plausible conjecture for MSS *Λισσῶ* or *Λισση* or *Λύση* (Vial (Budé), followed by Fraser (1993) 169 and Stylianos (1998) 197; the emendation is rejected by Woodhead (1970) 508 n. 1 and Braccesi (1977) 227–32; however, the distance makes it unlikely that Dionysios' ships came from Lissos). The presence of a Syracusan *eparchos* at Issa indicates that the colony was a dependent *polis*.

The main source for the political organisation of Issa is a colonisation decree of c.300–250 (*Syll.*³ 141 = *Staatsverträge* 451), passed by the *demos* (l. 3: ἐδοξε τῷ δήμῳ). The eponymous official is a *hieromnamon* (l. 1), and the Issaians sent as colonists to Melaina Korkyra are divided into the three Doric tribes: Dymanes, Hylleis and Pamphyloi (18ff). The decree was passed in the month of Machaneus (1), also attested in the Korkyraian calendar (Trümpy, *Monat.* 161). The decree was previously connected with Dionysios I's activities in the northern Adriatic and dated c.385 (*Syll.*³ 141), but has later been downdated to c.300 (Fraser (1993) 170ff; C4–C3 in *LGNP* 3) or C3f (Rendić-Miočević (1965); Woodhead (1970) 508–10; cf. *SEG* 43 348).

Issa is situated at modern Vis on the north side of the island off the coast of ancient Dalmatia, on a slope on the west side of a large bay, one of the largest natural ports of Dalmatia. The immediate hinterland covers about 1,000 ha, but Issa probably controlled the entire island, a territory of about 140 km². Possible evidence for Greek land division is identified by Zaninović (2002). Greek finds go back to the Archaic period, though the nature of the finds is uncertain (Kirigin (1990) 303, 310). There are few urban remains of the C4 Greek city. The C4 circuit wall, built in ashlar technique, may have had an Archaic predecessor (*ibid.* (1990) 303). The C4 wall enclosed an area of c.9.8 ha. There are traces of a street grid and habitation structures (Zaninović (1976a); Kirigin (1990); Cambi (2002) 49–55). The known cemetery

is Hellenistic (Kirigin (1990) 303). The present archaeological record indicates that there was no Greek settlement before c.330 (Kirigin (1990) 310; cf. Visonà (1995) 56–57), but “Only approximately 10% of the city of Issa is said to have been explored thus far” (Visonà (1995) 57 n. 10), and the archaeological record is not necessarily incompatible with a foundation date in the reign of Dionysios I.

Issa struck bronze coins from C4f (Gorini (1993)) or C4s (Visonà (1995); Mandinić and Visonà (2002)): (1) according to Gorini (1993), overstrikes on Dionysian issues; according to Visonà (1995), rather c.330–320 transitional issues to Issa's civic issues. Types: *obv.* head of Ionios; *rev.* dolphin; legend: *IONIO(Σ)* (*SNG Cop. Illyricum* 538–39); (2) C3, various types. Legend: *IΣ*, on some *IΣΣA* (*SNG Cop. Illyricum* 540–44; Dukat and Mirnik (1976) 183–84).

82. Lissos (Lissates) Map. 49. Lat. 41.45, long. 19.35. Size of territory: ? Type: C:β. The toponym is *Λίσσος*, ἡ (Diod. 15.13.4; on 14.2, see *supra*; App. *Ill.* 21) or *ὄ* (Polyb. 2.12.3). The collective and internal form of the city-ethnic is attested on C2 coins (*SNG Cop. Illyricum* 524: *ΛΙΣΣΑΤΑΝ*). Lissos is called a *polis* in the urban sense by Diod. 15.13.4 (rC4e).

Lissos was founded shortly before 385 by Dionysios I (Diod. 15.13.4; following Vial (Budé), Stylianos (1998) 194 defends the MS reading *Λισσόν* against the emendation Ἰσσαν, preferred by e.g. Beloch (1922) 118 n. 2).

Lissos was founded on the steep slope of a hill, modern Lezha, on the south bank of the river Drin, near its estuary (anc. Drilo) (May (1946) 54–56), a site already occupied by Illyrian settlers (Prendi and Zheku (1972)). The site of Akrolissos, listed by Strabo 7.5.8 as a *polis* apart, is normally identified as the fortress lying above Lissos on the height of Mali Selbuemit, an interpretation indicated by Polyb. 8.13.1, who describes this as a fortress separated from the city itself (for the topography of Lissos and Akrolissos, see Praschniker and Schober (1919)).

Extensive circuit walls are from different phases: a C4 phase comprised only an upper acropolis of c.2.3 ha. Walls in ashlar blocks, strengthened with square towers, were raised down the slope of the hill to the river Drin in C3–C2; with a perimeter of 2,150 m they enclosed a lower settlement area of c.22 ha (Prendi and Zheku (1972); Fraser (1993) 169 n. 17). *Diateichisma* walls divided the city into zones, perhaps based upon different functions. The city had a harbour on the river bank (Koch (1989) 140–43; Ceka (1990) 222–23 fig. 11). The urban features are rather similar to those of local Illyrian sites, but the south-west gateway is very sophisticated and

shows characteristics of Syracusan (Dionysian) C4 military architecture. Although the archaeological remains, including the circuit wall, are now dated mainly to the Hellenistic period, it cannot be precluded that Lissos was a Dionysian foundation on a smaller scale (Stylianou (1998) 194).

83. Melaina Korkyra (Korkyraios) Map 20. Lat. 43.00, long. 17.00. Size of territory: 4 (c.300 km²). Type: A:a. The toponym *Μέλαινα Κόρκυρα, ἡ* (Ps.-Skymnos 428; Strabo 7.5.5.) is used for both the island and the city (Strabo 7.5.5). The city-ethnic *Κόρκυραῖος* is attested on C3 coins (*infra*). The colony is referred to as a *polis* in the urban sense in the colonisation decree passed by the Issaians (no. 81; *Syll.*³ 141.4, 9, 17) and in some late sources (Strabo 7.5.5; Plin. *HN* 3.152: *oppidum*). That it was a *polis* in the political sense too is indicated by the C3 coins (*infra*).

According to Ps.-Skymnos 428, Strabo 7.5.5 and Plin. *HN* 3.152, Melaina Korkyra was a Knidian colony. But a C4–C3 decree passed by the Issaians and found in modern Lumbarda (probably = ancient Melaina Korkyra) lays down regulations for an *ab novo* colonisation by Issaians (*Syll.*³ 141). Some historians assume that there were two colonies on the island, the first one founded by Knidians in perhaps C6 (Beaumont (1936) 174)—unlocated, but perhaps situated at Vela Luka on the west coast—and the other founded by Issaians—situated at modern Lumbarda on the east coast—see (Braccesi (1977) 104–6; Kirigin (1990) 293). A preferable reconstruction seems to be that the original Knidian settlement had died out before the new Issaian foundation, and that the Issaians were resettling a place already occupied in the past by the Greeks (Graham (1964) 43). Note, however, that Melaina Korkyra was still referred to as a Knidian colony in the Roman period.

The foundation by Issaians is attested in the inscription found on Korčula (Korkyra Melaina) near modern Lumbarda (*Syll.*³ 141; *SEG* 17 312, 19 435, 40 511, 43 348 = Lombardo (1993) *passim* with rich bibliography; Lombardo (2002)) now dated to C3f (Woodhead (1970) 508–9 following Rendić-Miočević (1983) 192) or C4–C3 (Fraser (1993) 170ff and *LGPN* 3), see also Braccesi (1977) 311–12. The decree may have been a treaty between Issa and the otherwise unknown Illyrian dynasts Pyllos and Dazos, allowing the foundation of a colony on their territory (*Staatsverträge* 451). Or Pyllos and Dazos, being either Issaians or Illyrians, were the oecists of the colony (Braccesi (1977) 310). The Issaian foundation may have been located at Lumbarda, where the inscription was found, in eastern Korčula; for archaeological remains and discussion of the

colony's location, see Radić and Bass (2002). There are a few urban remains and a C3 cemetery in the vicinity (Braccesi (1977) 309–16; Kirigin (1990) 311). On the walls (*Syll.*³ 141.4–5, 17), see Maier (1959–61) 204–6. The settlers were Dorians, and the three Dorian tribes Hylleis, Dymanes and Pamphyloi are named in the inscription (l.18). Onomastic studies indicate that the Issaian colonisers came originally from Syracuse (no. 47) (Fraser (1993)), but there was an Illyrian element too (Woodhead (1970) 510). The inscription throws valuable light on the distribution of land in the city and in the *chora* of the colony (Asheri (1971)). For possible traces of land division, see Zaninović (2002).

A rare series of C4 bronze coins were struck by the Korkyraians of Melaina Korkyra, whether the Knidian foundation or the Issaian is not clear. Types: *obv.* Apollo; *rev.* ear of corn; legend: *KOPKYPAIQN* (Brunšmid (1898) 69 listing specimens, one with legend *KOPKY* (Dukat and Mirnik (1976) 182)). For the uncertain evidence of a C4 bronze coinage with *obv.* male head; *rev.* “Knidian lion”, no legend and no attested provenance from Korčula—but attested from the island of Issa (Kirigin (1990) 293).

84. Pharos (Pharios) Map 20. Lat. 43.15, long. 16.35. Size of territory: 1. Type: A:a. The toponym *Φάρος, ἡ* is used for both the island and the *polis* (Ps.-Skylax 23). *Φάρος, ὁ* is attested only once (Polyb. 5.108.7). According to Strabo 7.5.5, the toponym was originally *Πάρος*. The city-ethnic is *Φάριος* (C4 coins, *infra*). Pharos is called a *πόλις* ‘*Ἑλληνίς* in the urban sense by Ps.-Skylax 23. The political sense is attested in a funerary epigram of C4–C3 (*SEG* 31 604.1 = *CEG* 662). The collective and internal use of the city-ethnic is attested on the C4 coins (*infra*). For the individual and external use, see *Δημήτριος ὁ Φάριος* (Polyb. 2.65.5 (r222)).

Pharos was a colony (*apoikia*) founded by Paros (no. 509) in 385 with the assistance of Dionysios I of Syracuse according to Diod. 15.13.4, 14.1–2, whereas only Paros is mentioned as the founder by Ephor. fr. 89, by Ps.-Skymnos 426–27, and by Strabo 7.5.5. Two decrees of C3l, one passed by the *polis* of Pharos, the other by the *polis* of Paros, refer to Pharos as a colony of Paros (*SEG* 23 489a11–16, 29–30; for the date: *SEG* 43 349). Archaeological evidence suggests the possibility that the colony of 385 was preceded by “pre-colonial” Greek settlement (Gaffney *et al.* (2002)).

Pharos, modern Stari Grad, lies innermost in a narrow bay on the north side of the island of Pharos (modern Hvar). The fertile hinterland (plain of Jelsa), c.20 km², is cut off from the rest of the island by a mountain range; the

easternmost part of the plain was retained under Illyrian control (Kirigin (1990) 296 fig. 3, 301–2). The *chora* shows traces of a land division, with 1,000 × 200 m lots, which may go back to the Greek period (cf. Hellenistic(?) *horos* stone: Brunšmid (1898) 20.5; Cambi (2002) 56–57; Slapšak (2002)). The Greek settlers found the site occupied by Illyrians (pre-Greek defences: Kirigin (1990) 299; cf. Diod. 15.14.1), and an armed conflict between the Illyrians and the colonists was won by the colonists only because the Syracusan commander in, probably, Issa (no. 81) sent a squadron (Diod. 15.14.1–2; see, Stylianou (1998) 193–97, and *supra* 332).

There are few urban remains; the size of the Greek city is estimated to comprise between 1.5 ha and 6 ha (Kirigin (1990) 299; Cambi (2002) 56–57). According to Diodorus, the Parian settlers fortified their city (Diod. 15.14.1), and there are traces of circuit walls in “Cyclopean” and in masonry technique (Zaninović (1976*b*); Cambi (2002) 56, 70); for remains of walls and for local pottery, see Jeličić-Radonić (2002) and Kirigin *et al.* (2002).

Pharos struck a rich series of coins from C4 (Head, *HN*² 318; Dukat and Mirnik (1976) 182–83). Silver types: *obv.* Zeus; *rev.* goat or serpent; legend: ΦAP or ΦAPI (Brunšmid (1898) 41–46). Bronze, in four denominations: (1) Types as above. Legend: ΦA or $\Phi API \Omega N$ (*SNG Cop. Illyricum* 545–46). (2) Types: *obv.* Persephone; *rev.* goat; legend: ΦA (*SNG Cop. Illyricum* 547–48). (3) Types: *obv.* Dionysos; *rev.* kantharos; legend: ΦA (*SNG Cop. Illyricum* 549–50). Coin finds reveal a wide commercial network from Makedonia to Sicily (Kirigin (1990) 301). A series of overstrikes carrying the legend ΔI or ΔIM have been attributed to an otherwise unknown *polis* of Dimos, but the type was most likely issued by a Pharian magistrate or ruler (Dukat and Mirnik (1976) 182; Rendić-Miočević (1983) 193).

85. Spina (Spinites) Map. 40. Lat. 44.40, long. 12.05. Size of territory: ? Type: A:β. The toponym is $\Sigma\pi\acute{\iota}\nu\alpha$, ἡ (Eudoxus fr. 358, Lasserre; Strabo 5.1.7). No matter whether one accepts Müller’s insertion of the toponym < $\Sigma\pi\acute{\iota}\nu\alpha$ > in Ps.-Skylax 17, there can be little doubt that Spina must be the πόλις Ἑλληνίς referred to in the passage. The text is probably corrupt, but Spina is the only city which both topographically and historically fits the text as transmitted (Peretti (1979) 202–16). Apart from a reconstructed form at Steph. Byz. 584.13, the only attestation of the city-ethnic is $\Sigma\pi\iota\upsilon\tau\acute{\omega}\nu$ at Strabo 5.1.7. According to Strabo 5.1.7, Spina had dwindled to a small village but was once a famous Hellenic *polis*: ἡ $\Sigma\pi\acute{\iota}\nu\alpha$, νῦν μὲν κωμίον, πάλαι δὲ Ἑλληνίς πόλις ἔνδοξος. The archaeological record indicates that the period

referred to is C6l–C4 (*infra*), and, combining the archaeological record with the almost universally accepted interpretation of Ps.-Skylax, Spina is therefore included in this Inventory as a *polis*.

According to one tradition, Spina was a Greek colony (Strabo 5.1.7; Just. *Epit.* 20.1.11; Plin. *HN* 3.120: founded by Diomedes), but Hellan. fr. 4 (= Dion. Hal. *Ant. Rom.* 1.18.4, 28.3) describes the town as a Pelasgian foundation. It was founded in Umbrian territory (Just. *Epit.* 20.1.11) or what was originally Umbrian territory before the C6 Etruscan expansion (cf. Pareti (1961) 411–12). By C4m the city fell victim to Celtic invasions (Peretti (1979) 201–2).

The settlement, c.6 km west of present-day Comacchio (prov. Ferrara), was originally situated on the coast (Strabo 5.1.7, though it lay further inland in his time) on the estuary of one of the tributaries of the river Po, *viz.* the river Spinus (Steph. Byz. 584.14).

Aerial photographs have revealed an irregular perimeter and ramparts, a north-west/south-east street grid, with housing plots separated by channels and dykes, and excavations have laid bare the remains of timber houses. The habitation area extended over c.6 ha and was linked to the sea by a 15 m-wide canal, probably built by Etruscan engineers (Uggeri and Uggeri Patitucci (1974); for the urbanisation in an Etruscan setting, see Gulletta (1994) 256 n. 43). The city is Etruscan, but it is profoundly Hellenised with its Greek “merchant-houses”, etc., involved in the dispersal of Greek goods. Greek presence is attested by the finds of Greek graffiti from the site (Colonna (1974)); cf. the vast quantity of Attic C6l–C4 vases from the Valle Trebba cemetery (see *infra*). The evidence indicates a substantial Greek presence at Spina.

Two sectors of the cemetery have been laid bare, one with c.1,413 tombs, another with c.2,650 tombs. The grave goods, primarily vases destined for use in banquets, reflect wide commercial C6–C3 contacts with Greece—mainly Athens (no. 361), with rich finds of Attic red-figure vases covering the period 480–375 (Alfieri (1979), (1994); Berti and Guzzo (1993)). The contacts with the Greek world were sealed by a treasury at Delphi (see *infra*).

A cult of Apollo at Spina can be deduced from the Spinetan treasury at Delphi, and graffiti attest cults of Dionysos and Hermes at S. Maria della Tomba, and votive busts a cult of Demeter (*IGDGG* no. 77b, c; Gulletta (1994) 258; Mambella (1984)).

According to Strabo 5.1.7, the city had a treasury at Delphi, not archaeologically identified (for attempts, cf. Alfieri (1979) xlvi n. 28). The description of the contents of the treasury indicates some wealth (Polemon *apud* Ath. 13.606A).

EPEIROS

PETER FUNKE, NIKOLA MOUSTAKIS, BARBARA HOCHSCHULZ

I. The Region

The basic meaning of ἡ ἧπειρος is “the mainland”, by contrast with the ocean or an island (Hom. *Il.* 3.90; Hdt. 8.66.1; Ar. *Ach.* 534; Xen. *Hell.* 6.1.4; Pl. *Phd.* 111A). In the course of the Archaic and Classical periods, however, the word became common as a toponym designating a specific part of north-western Greece (Franke (1955) 3–30). Whereas in Homer the Akarnanian mainland opposite Ithaka is called ἡ ἧπειρος (*Il.* 2.635), both Hekataios (fr. 26, 106) and later Hellanikos (fr. 83) place the mainland called ἧπειρος further north. The first precise delimitation of the region is found in Pindar (*Nem.* 4.51–53), who says that ἡ ἧπειρος stretches “from Dodone to the Ionian Sea”. Pindar’s statement stands isolated, and neither ἧπειρος nor ἧπειρώτις is used as a toponym in C5 prose and drama, although Thucydides demonstrates that he has a detailed knowledge of the ethnic and political organisation of the region (2.80.5–6).

It is only in C4 that ἡ ἧπειρος (ἧπειρος) becomes a well-defined toponym designating the region stretching from the Keraunian mountains in the north to the Ambrakian Gulf in the south (Xen. *Hell.* 6.1.7; Ephor. fr. 129b; Lycurg. 1.26; *IG* IV².195.23, 73, 122.60). The exact delimitation of the region of Epeiros was in dispute throughout Antiquity. Amphilocheia was part of Epeiros according to Strabo 7.7.1 and 8; but did not belong to Epeiros according to Strabo 9.5.1. There was no clearly defined boundary to the north between Epeiros and Illyria and to the east between Epeiros and the peoples living east of the Pindos Range. Thus, Apollonia (no. 77) belongs to Epeiros according to Strabo 2.5.40 and 16.2.43, but to Illyria according to Steph. Byz. 105.20 and 214.9. The population of these regions was culturally mixed and under shifting domination. Accordingly, this chapter of the Inventory includes some settlements in southern Illyria near the lower reach of the river Aoos. The coastal cities in southern Illyria, on the other hand, as well as Amphilocheia are treated in the chapter about the Adriatic (321–37).

In C4 the toponyms ἡ ἧπειρος (ἧπειρος) and ἧπειρώτις were purely geographical (Theopomp. fr. 382; Lycurg. 1.26); the inhabitants of the region invariably described themselves as members of either a *polis* (*SGDI* 1351.5 (C4s): Ἀνδρόκκας Δωδωναίος) or an *ethnos* (*SGDI* 1351.11: Φίλων Ὀνόπερνος (cf. Hammond (1967) 526, 538–39; cf. Ps.-Skylax 28, 30–32). The ethnic Ἀπειρωτάς (Ἀπειρωτάς, ἧπειρωτής) takes on a political connotation only in C4 when, under Molossian leadership, all the previously independent Epeirotic tribes were united and called σύμμαχοι τῶν Ἀπειρωτῶν (*SGDI* 1336 (C4s); see Cabanes (1976) 155–85). Thereafter the collective use of the regional ethnic is attested both externally (*I. Magnesia* 32.5–6 (C2e); see also *SEG* 23 189.11 (c.330)) and internally on C3 coins (Franke (1961) 121, 125–33; *SNG Cop. Epirus* 104, 106) and in the official designation of the federation and its magistrates (*SGDI* 1350 (C2e); *SEG* 16 385 (C3l); *I. Magnesia* 32.42 (C2e)).

In the Epeirotic federation, the affiliation of a citizen with his city and/or tribal unit is recorded by an ethnic added to his name, either a city-ethnic (e.g. Ἐρχέλαος Δωδωναίος: Cabanes (1976) 586 no. 70.6 (C4)) or an ethnic denoting a subdivision of one of the three major tribes: the Molossians, the Thesprotians and the Chaonians (e.g. Ἀμφικόριος Ἀρκτάν: *SEG* 15 384.9 (370–368)). Sometimes both the subtribal ethnic and the city-ethnic are recorded (Ἀνδροκάδης Ἀρκτάν Ἐδρυμεναίος (*SEG* 15 384.10–11)). In lists of names in which such subdivisional ethnics are recorded, the names of the three major tribes are sometimes added as headings (*Μολοσσῶν Ἀνδρόκκας Δωδωναίος ... Θεσπ<ρ>ωτῶν οἷδε Δόκιμος Λαρισαίος ...* (*SGDI* 1351 (C4s)). Before the creation of the federation, names recorded in external contexts are specified by an ethnic indicating membership of one of the three major tribes (*Νικαρέτα Θεσπρωτίς* (*IG* II² 8840 (C4m); Ἀντάνωρ Ἐθθυμίδου Χαονίς (*F. Delphes* III.4 409.8 (C4l/C3e)). In the federation, the usual naming custom is to use either the regional ethnic (*Αἴσωπος ἧπειρώτης* (*IG* II² 8855 (C4s)) or the regional and tribal ethnics combined (*Σίμακος Φαλακρίωνος ἧπειρώτης ἀπὸ Θεσπρωτῶν* (*IG* IV².1 98.19–20 (C3f)). The recording

of the tribal affiliation by ἀπό plus an ethnic in the genitive is attested only for the three major tribes and testifies to their status as political sub-units of the federation.

The many different ways of recording the *ethnikon* testify to the variety and development of the ethnic and political structure of Epeiros. The tremendously complex organisation of the Epeirote tribes is difficult to analyse due to lack of sources (cf. Franke (1955); Hammond (1967); Larsen (1968); Cabanes (1976); Hammond (1994)). A high number of ethnics is attested; but they do not form an unambiguous pattern, due to the often multi-levelled hierarchical organisation of the Epeirote tribes. Accordingly, it is impossible to draw a clear line between “tribal ethnics” indicating membership of the overriding tribal structure and “city-ethnics” in the proper sense.

The Epeirote tribes were settled *κοιμηδόν* at least to the end of C5. The political transformation of the region began in C5 (Thuc. 2.80.5–6) and went hand in hand with a gradual urbanisation, just as in the other parts of north-western and central Greece. Ps.-Skylax 30–32 claims that Epeiros was still settled *κατὰ κώμας* in C4, but archaeological research in the region has demonstrated that by C4 urban centres had emerged in many places (Dakaris (1987); Ceka (1990); Corvisier (1991)). In C3–C2 Epeiros became dotted with urban centres, which were almost all destroyed by the Romans when, in 168, Aemilius Paulus had seventy Epeirote cities razed to the ground (Strabo 7.7.3, quoting Polyb. for the information; Livy 45.34.1–6; Plut. *Aem.* 29.1–5).

This inventory of Epeirote *poleis* is restricted to communities whose status as *polis* is securely attested before 300. Consequently we have excluded *poleis* founded in the Hellenistic or Roman period on sites with no older remains of urban settlement. Furthermore, we have omitted many epigraphically attested *ethnika*, already listed in Cabanes (1976) 134–41. Another community excluded from the inventory is one attested in a question put to the oracle in Dodona in C4l by the πόλις ἁ τῶν Χαόνων (*SEG* 15 397). Since no toponym is added to the mention of the Chaonians, it is impossible to decide whether the reference is to Phoinike (no. 107)—the *polis* which was the centre of the tribe of the Chaonians—or whether the term *polis* is here used as a designation of the entire tribal organisation (Larsen (1968) 280 n. 3; Cabanes (1976) 156, 174; Hansen (1998) 130). In the latter case *polis* is used in the political sense, without having the urban sense, as a connotation.

The written sources, on the one hand, contain only a few, scattered pieces of information about Epeiros in the Classical period and provide us with an inadequate picture

of the settlement pattern of the region before c.300. There is, on the other hand, archaeological evidence of numerous settlements of C5–C4. Many of them have significant remains of urban structures: defence circuits and fortifications, habitation quarters, etc. (1) Some of these archaeological sites have been identified with ancient toponyms and are recorded in an alphabetically ordered list below. A number of settlements which are classified as *polis*, *limen* or *oppidum* by post-Classical authors are still unlocated. Since it cannot be excluded that they existed in the pre-Hellenistic period, they are also recorded in the list. (2) Others have not so far been linked to a toponym attested in the written sources; these settlements are named after the modern toponym and are likewise recorded below in an alphabetically ordered list.

1. Pre-Hellenistic Settlements not Attested as Poleis

Baiake (*Βαιάκη*) Steph. Byz. 156.16: πόλις τῆς Χαονίας, Ἐκαταῖος. Stephanos quotes Hecat. fr. 104 for the toponym but not necessarily for the site-classification (Hansen (1997) 17–18). One MS (P) has *Βαλάκη*, but the alphabetical arrangement of Stephanos’ texts shows that *Βαιάκη* is the preferable reading. Hammond (1967) 471–72, however, prefers *Βαλάκη*, which he takes to be identical with *Βαλλιακή*. According to Strabo 7.5.8, Balliake was located between Apollonia (no. 77) and Orikos (no. 103). Next, following most editors of Strabo in believing that *Βαλλιακή* must be related to or identical with *Βύλλυς* (*infra* no. 92), he accepts *Βυλλιακή* as a plausible emendation of both *Βαλλιακή* in Strabo and *Βαιάκη* in Stephanos. Finally, he identifies this Bylliake (for which there is no ancient authority whatsoever) with modern Plaka. As soon as the unwarranted emendation of Strabo and Stephanos is discarded, we are left with the unlocated settlement *Βαιάκη*, mentioned by Hekataios as quoted by Stephanos. Whether Strabo’s Balliake is identical with Hekataios’ Baiake is a moot point. Not in *Barr.*, but Hecat. fr. 104 indicates A.

Bouneima (*Βούνειμα*) Steph. Byz. 182.9 (πόλις Ἡπείρου); in Steph. Byz. 631.3 the reading is *Βοννίμων*. Hammond (1967) 660 identifies Bouneima with Moni Voutsia. In *Barr.* 54 unlocated, A? C?.

Charadros (*Χάραδρος*) Polyb. 21.26.7, or *Χαράδρα* (Polyb. 4.63.4). Identified with Palaia-Philippias. *Polis* status in the Hellenistic period is attested by a C2m treaty with Ambrakia (no. 113) concerning the frontiers (*SEG* 35 665), but there is no indication of *polis* status before C3 apart from a C4?

defensive wall (Dakaris (1971*b*) Fig. 30); cf. Cabanes and Andreou (1985); Charneux and Treheux (1988)). *Barr.* 54, C.

Cheimerion (*Χειμέριον*) Thuc. 1.46.4 (*λιμὴν*); Strabo 7.7.5; Steph. Byz. 690.9 (*ἄκρα*). Dakaris identifies Cheimerion with the ancient remains of modern Stigkia about 4–5 km west of Ephyra. An acropolis of 1 ha was fortified probably already in the Archaic period (Dakaris (1972) 80, 96, 134 fig. 22). *Barr.* 54, C but A may be attested as well (*supra*).

Chimera (*Chimera*) Plin. *HN* 4.1.4 (*castellum*). Identified with Himarë, walls of C4s (Corvisier (1991) 219, 287). In *Barr.* 49 only RL, but see *loc. cit.*

Elaias Limen (*Ἐλαίας λιμὴν*) Ps.-Skylax 30; Ptol. *Geog.* 1.14.5, situated near Kerentza. It was probably the harbour of Elea (no. 95; Dakaris (1972) 134). See also Cheimerion (s.v. Ephyra (no. 96)). *Barr.* 54, C?.

Elina (*Ἐλίνα*) *SGDI* 1561 (C1). Elina is identified with Dymokastro (Dakaris (1972) 102), fortified in C4 (*ibid.* fig. 31). *Barr.* 54, C.

Hekatompodon (*Ἑκατόμπεδον*) Ptol. *Geog.* 3.14.7 (*πόλις*). Corvisier (1991) 287 identifies Hekatompodon with Lekel and he reports C4? walls. In *Barr.* 49 identified with Saraquinishti and dated R.

Helikranon (*Ἑλικρανον*) Polyb. 2.6.3. Hammond (1967) 660 identifies Helikranon with Chrysorrachi, where some remains from C5 have been found (Corvisier (1991) 202). In *Barr.* 54 only H.

Ilium (*Ilium*) Town on the *Peutinger Table*; cf. also Verg. *Aen.* 3.336. Hammond (1967) 660 identifies Ilium with Dhespotikon; C4? walls (Corvisier (1991) 284). In *Barr.* 54 only R.

Kas(s)iope (*Κασ(σ)ιόπη*) Strabo 7.7.5; Ptol. *Geog.* 3.14.2 (*λιμὴν*). Probably *Kastrokykia*, walled in C4 (Dakaris (1971*b*) 51). In *Barr.* *Kastrokykia* is identified with Berenike and Kassiope with Kassiope. Only HRL, but C seems to be attested too.

Nerikos (*Νήρικος*) Hsch. 5.18.1 (*πόλις Ἱπείρου*); probably a confusion with Nerikos in Akarnania: Steph. Byz. 473.20 (*πόλις Ἀκαρνανίας*); see also Thuc. 3.7.4. *Barr.* 54, C.

Onchesmos (*Ὀγχησμός*) Ptol. *Geog.* 3.14.2; Strabo 7.7.5 (*λιμὴν*). Dion. Hal. *Ant. Rom.* 1.52.2; Cic. *Att.* 7.2.1. Located north of Saranda (Hammond (1976*b*)); probably the seaport of Phoinike (no. 107). *Barr.* 54, C.

Oropos (*Ὠρωπός*) Steph. Byz. 711.11–12 (*πόλις ἐν Θεσπρωτίᾳ*). Dakaris (1971*b*) 52, 80, 96 identifies Oropos with Voulista Panaghia. Dakaris (1971*b*) 80 describes a walled settlement in C. *Barr.* 54, A? C?

Panormos (*Πάνορμος*) Ptol. *Geog.* 3.14.2 (*λιμὴν*); Strabo 7.7.5 (*λιμὴν μέγας*). Corvisier (1991) 287 identifies Panormos with Borsh and reports C4? walls. Not in *Barr.*

Photike (*Φωτικὴ*) Hierocl. *Synecdoc.* 652.5 (*πόλις*); Procop. *Aed.* 4.1.37 (*πολίχνιον*). Hammond (1967) 659 identifies it with Paramythia, where Dakaris (1972) 99, 115 fig. 31 shows a fortified C4 acropolis. Samsari (1994) 18 identifies Photike with the ancient remains at the sites of Limponi and Lambobithra near Paramythia. In *Barr.* 54 only RL.

Sybota (*Σύβοτα λιμὴν*) Thuc. 1.50.3 (*τῆς Θεσπρωτίδος λιμὴν ἐρῆμος*), 3.76.1 (*λιμὴν*); Ptol. *Geog.* 3.14.5 (*λιμὴν*). *Barr.* 54, C.

Thesprotia (*Θεσπρωτία*) Steph. Byz. 310.16–17 (*πόλις καὶ χώρα ἐξω τοῦ Ἀμβρακικοῦ κόλπου*); cf. Strabo 7.7.8. Unlocated. *Θεσπρωτία* is possibly connected with the C3l–C1e city-ethnic *Θεσπρωτός* (*IG IX².1 31A.47*; *F. Delphes III.2 83*; *SEG 27 203.13–14, 16–17*; *SEG 13 248.9*) and could have been the urban centre of the Thesprotians after C4l. *Barr.* 54, C.

Trampya (*Τραμπύα*) Steph. Byz. 631.3 (*πόλις τῆς Ἱπείρου πλησίον Βουνίμων*); cf. Lycoph. *Alex.* 800 (mythological tradition). Hammond (1967) 660 identifies it with Voutonosi. In *Barr.* 54 recorded s.v. Trampya, A? C? H.

2. Unidentified Classical Settlements

Ano Parakalamo C5e (Corvisier (1991) 202). Not in *Barr.*

Arachovitsa C5 (Corvisier (1991) 202). Not in *Barr.*

Belishove C5l (Corvisier (1991) 288). Not in *Barr.*

Elimi C4 defensive wall (Dakaris (1972) 100–2, fig. 31). Hammond (1967) 79–80 describes the remains of the walls but gives no precise dating. *Barr.* 54, C.

Grammenos/Vourta Walls dated C5–C4 (Corvisier (1991) 214, 282). Not in *Barr.*

Kalivo c.5 km east of Bouthroton (no. 91). C5–C4 fortification wall (Corvisier (1991) 287). *Barr.* 54, AC.

Karos Walls dated C5–C4 (Corvisier (1991) 287). Not in *Barr.*

Kastriza Fortified in C4 (Dakaris (1972) 100, 115 fig. 31). Only H recorded in *Barr.* 54.

Kastroxykia Fortified in C4; probably a seaport of Kassopa (no. 100; Dakaris (1971b) 51 fig. 30); cf. Kassopa (no. 100). Not in *Barr.*

Khoika C4? defensive wall (Dakaris (1972) 97, 115 fig. 31). *Barr.* 54, C.

Kleisoura With a C4? outer wall (Dakaris (1971b) 53 fig. 30). *Barr.* 54, C?

Klimatia Walls dated C5 (Corvisier (1991) 202). *Barr.* 54, C?

Koutsis C4 (Dakaris (1972) 100–2, 115 fig. 31). Not in *Barr.*

Lukovë C4s (Corvisier (1991) 219). Not in *Barr.*

Matohasanaj Fortified in C5l (Corvisier (1991) 288). Not in *Barr.*

Mouzakeika Probably fortified in C4 (Dakaris (1971b) 52–53 fig. 30). *Barr.* 54, C.

Oraiokastron (formerly *Lachanokastro*) Hammond (1967) 270–71, 660 describes the remains of the walls but gives no precise dating. *Barr.* 54, C? H? L?

Phaskomelia Possibly fortified in C4 (Dakaris (1972) 102, 115 fig. 31). *Barr.* 54, C.

Psina Hammond (1967) 190–91 describes the remains of the walls but gives no precise dating; Dakaris (1972) fig. 31 suggests C4? *Barr.* 54, C.

Pyrgos Walls dated C5 (Dakaris (1972) 104, fig. 52), probably part of the *peraia* of Korkyra (no. 123) which is mentioned in Thuc. 3.85.2. *Barr.* 54, A? C.

Ripes Walls dated C5–C4 (Corvisier (1991) 287). Not in *Barr.*

Riza (near *Preveza*) Walls dated C5 though possibly Archaic (Corvisier (1991) 201). Not in *Barr.*

Riziani Dakaris (1972) 112, fig. 31 supposes that a settlement existed in C5 but that it was not fortified. Hammond (1967) 88 reports ancient buildings but gives no precise dating. *Barr.* 54, C?

Selo C5 settlement (Corvisier (1991) 218). Only H recorded in *Barr.*

Tatzat With reference to Philippson (1956) 63 n. 4, where he reports an ancient fortification. *Barr.* 54, C?

Zuka d' Ajtoj Settlement of C5–C4 (Corvisier (1991) 287). *Barr.* 54, AC (Çukë e Ajtoj).¹

¹ The following sites are recorded in *Barr.* Map 54, as C but have not yielded any sign of urban settlement: (1) *Ag. Georgios*—Dakaris (1971b) fig. 30 classifies *Ag. Georgios* as an open settlement in C4; (2) *Ag. Panagia*—Hammond (1967) 177–78 describes fortifications but gives no precise dating; (3) *Aidonia*—Hammond (1967) 55, 67 refers only to remains of house foundations, which may be ancient; Dakaris (1971b) fig. 30 classifies *Aidonia* as an open settlement in C4; (4) *Alpokhori*—Dakaris (1971b) fig. 30 classifies *Alpokhori* as an open settlement in C4; (5) *Anthousa*—Dakaris (1972) 100–36 describes *Anthousa* as an open village in C4–C2; (6) *Bestia*—Dakaris (1971b) 52 describes *Bestia* as an unwallled settlement in C4–C2; (7) *Chalkis*—even Hammond (1967) 255, 703 has doubts that *Chalkis* is an ancient settlement; (8) *Dhrovian*—Hammond (1967) 120 describes the remains of the walls but gives no precise dating; (9) *Doliane*—Hammond (1967) 86–87 refers just to a wall near *Doliane* but gives no dating; (10) *Dovro*—Hammond (1967) 251 mentions no signs of fortifications; (11) *Epitaphion*—Hammond (1967) 152 without dating; (12) *Gradetsi*—Hammond (1967) 181 describes the remains of the walls but gives no precise dating; (13) *Hani Emin Aga*—Hammond (1967) 157–58 describes the remains of the walls without precise dating; (14) *Kalarritai*—Hammond (1967) 178–79 describes the remains of the walls without precise dating; (15) *Kalogeritsa*—Hammond (1967) 158–59 describes the remains of the walls but gives no precise dating; (16) *Kalokhori*—Hammond (1967) 189–90 describes the remains of the walls but gives no precise dating; (17) *Kastri*—Hammond (1967) 163–64 describes the remains of the walls but gives no precise dating; (18) *Kastrion*—Hammond (1967) 67 describes the remains of the walls but gives no precise dating; (19) *Kastriotissa*—Hammond (1967) 149–50 describes the remains of the walls but gives no precise dating; (20) *Kastro*—Dakaris (1971b) fig. 30 classifies *Kastro* as an open settlement in C4; (21) *Kato Zalongon*—Hammond (1967) 188 describes the remains of the walls but gives no precise dating; (22) *Kerasson*—Dakaris (1971b) fig. 30 classifies *Kerasson* as an open settlement in C4; (23) *Kheimadio*—Dakaris (1971b) fig. 30 classifies *Kheimadio* as an open settlement in C4; (24) *Malçan*—Hammond (1967) 97 describes the remains of the walls but gives no precise dating; (25) *Masklinita*—Dakaris (1972) figs. 28, 31 record only graves in C5–C4; (26) *Mesokhora*—Hammond (1967) 251 mentions no fortification; (27) *Moni Sosinou*—Hammond (1967) 196 describes the remains of the walls but gives no precise dating; (28) *Palaiokastron*—Hammond (1967) 212 describes only a Byzantine fortification; (29) *Palaiokhori*—Hammond (1967) 164–65 mentions a walled ancient site. Dakaris (1971b) fig. 30 classifies *Palaiokhori* as an open settlement in C4; (30) *Palaiokhori (Yiatelyio)*—Hammond (1967) 251 describes a wall without precise dating; (31) *Paliouri-Dragoumi*—Hammond (1967) 192–93 describes a wall without precise dating; (32) *Philiates*—Hammond (1967) 86 reports only remains of a tower but gives no precise dating; (33) *Phloriada*—Heuzey (1860) 307 describes the site as an enceinte with towers and dwellings inside and outside the walls but gives no precise dating; (34) *Polystaphylon*—Hammond (1967) 57 mentions only that there was probably a village site in ancient times; (35) *Romano*—Dakaris (1971b) 52 describes an unwallled settlement in C6–C4; (36) *Sinou*—Hammond (1967) 90 mentions walls but gives no precise dating; (37) *Skammeli*—Hammond (1967) 263–64 describes walls but gives no precise dating; (38) *Solomos*—Hammond (1967) 242 describes the remains of the walls but gives no precise dating; (39) *Strongyli*—Dakaris (1971b) fig. 30 classifies *Strongyli* as an open settlement in C4; Hammond (1967) 61: “Although I have not visited the place it is safe to assume that it was occupied in classical Greek times, as well as in Roman times, and was a dependency of Rogous”; (40) *Vagalat*—Hammond (1967) 96 describes the remains of the walls but gives no precise dating; (41) *Vitsa*—Vokotopoulou (1986) *passim* calls *Vitsa* a village; (42) *Voedros Han*—Hammond (1967) 151 describes the remains of the walls but gives no precise dating; (43) *Voutonosi*—Hammond (1967) 261 describes the remains of the walls but gives no precise dating; (44) *Vrosina*—Hammond (1967) 187 describes the remains of the walls but gives no precise dating.

II. The *Poleis*

86. Amantia (Amantieus) Map 49. Lat. 40.25, long. 19.45. Size of territory: ? Type: B. The toponym is *Ἀμαντία, ἡ* (Ps.-Skylax 26; Lycoph. *Alex.* 1043) or *Ἀβαντία* (C3l/C2e Delphic list of *theorodokoi*: Plassart (1921) col. iv 56). The city-ethnic is *Ἀμαντιεύς* (Ps.-Skylax 27).

Amantia is attested as a *polis* in the urban sense in Lycoph. *Alex.* 1043 (*εἰς Ἀμαντίαν πόλιν*). Also, Ps.-Skylax indicates that Amantia was of some importance by listing it as the only site between the two *poleis* of Apollonia (no. 77) and Orikos (no. 103) (Ps.-Skylax 26, where *Ἀμαντία* seems to denote the territory rather than the urban centre of the *polis*; cf. Steph. Byz. 82.23: *Ἀμαντία Ἰλλυρίων μοῖρα*). Apart from the collective and external use of the city-ethnic found in Ps.-Skylax, the only attestation in Greek sources of the city-ethnic is in Steph. Byz. 83.1.

Cults of Aphrodite (Ceka (1990) 218) and Athena (Tzouvara-Souli (1979) fig. 1) are attested; they are probably of Hellenistic date.

Amantia is identified with the ancient remains near Plocē (Corvisier (1991) 288); it was fortified in C5; the walls were about 2,100 m long and enclosed an area of roughly 20 ha. A temple and a stadium have been found south of the walls (Ceka (1990) 217–18). Ceka (1990) 217 suggests that Amantia replaced Thronion (cf. 328), which was destroyed by Apollonia (no. 77) in C5m.

87. Artichia Map 54. Unlocated, not in *Barr.* Type: C. The toponym is *Ἀρτιχία, ἡ*. The only thing we know about Artichia is that in, probably, 355 a *theorodokos* was appointed to host *theoroi* from Epidauros: *Ἀρτιχία. Σχιδᾶς* (*IG* iv².1 95.30), cf. Perlman (2000) 278. Cabanes (1997a) suggests locating Artichia in the Parauaia in the Permet basin.

88. Batiai Map 54. Lat. 39.15, long. 20.50. Size of territory: 1 or 2. Type: A. The toponym is *Βατία, ἡ* (Theopomp. fr. 206) or *Βαταίαι, αἱ* (Theopomp. fr. 382 *apud* Strabo 7.7.5).

The earliest evidence of Batiai as a *polis* is Theopomp. fr. 206, where Batiai is mentioned together with Elateia (no. 94), Pandosia (no. 104) and Boucheta (no. 90) as *πόλεις τῶν Κασσωπαίων*. Since these three sites are mentioned by Dem. 7.32 as being colonies of Elis (no. 251), it seems reasonable to suppose that Batiai too was an Elean colony. Batiai was a *polis* belonging to the Kassopians (Theopomp. fr. 206), who in turn formed a section of the Thesprotians (Strabo 7.7.5). In C4s Batiai was a dependency of Kassopa (no. 100).

Batai is identified with the ruins of the Kastri hill 3 km south of Rizovouni (Podogora), 3.5 km east of the modern

village of Thesprotiko (plain of Lelovo), an advantageous position controlling the plain and the main route to central Epeiros (Dakaris (1971b) 183). The construction of a polygonal wall around the hill makes good use of the natural formation of the ground. Its construction is dated to the period after 343/2. It was 1,400 m in circumference and enclosed an area of 10.1 ha (ibid. 185). The principal northern side (main entrance) was protected by large towers. Four other gates have been identified in the north-east, south, south-west and north-west corners (ibid. 186 figs. 45–46). Traces of a polygonal wall are also visible inside the town, indicating the existence of a walled acropolis (ibid.). In the northern part of the acropolis is preserved a wall, which may have enclosed a shrine or a *temenos* (ibid.). Four cisterns have been found with a total capacity of about 300–400 m³ (ibid.). Dakaris (1971b) 87 states that it is impossible to determine the specific functions of the buildings inside the town.

89. [Berenike] Map 54. Lat. 39.02, long. 20.45. Size of territory: ? Type: C. Berenike was a *polis* founded by Pyrrhos II in C3s (Steph. Byz. 164.3: App. *Mithr.* 4). The town was situated at modern Michalitsi (Dakaris (1971b) fig. 30, *pace Barr.*). The place, however, was fortified already in C4s (Dakaris (1971b) fig. 30). Dakaris (1971b) 51 supposes that Berenike was a seaport of Kassopa (no. 100) in addition to the one at modern Kastrosykia. Therefore the precursor of Berenike can perhaps be recognised as a dependent *polis* from C4s, *viz.* a dependency of Kassopa.

90. Boucheta (Bouchetios) Map 54. Lat. 39.10, long. 20.50. Size of territory: 1 or 2. Type: A. The toponym is *Βούχετα, τὰ* (Dem. 7.32; Theopomp. fr. 206) or *Βουχέτιον, τό* (Theopomp. fr. 382; Strabo 7.7.5) or *Βούχετον, τό* (Polyb. 21.26.8). The city-ethnic is *Βουχέτιος* (*IG* ix².1 512 (C3)).

Boucheta is classified as a *polis* in the urban sense by Dem. 7.32 and by Theopomp. fr. 206. It is also regarded as a colony of Elis (no. 251) (Dem. 7.32). The individual use of the city-ethnic is attested externally in a C3 sepulchral inscription found in Palairos (no. 131) (*IG* ix².1 512). Boucheta was a *polis* belonging to the Kassopians (Theopomp. fr. 206), who in turn formed a section of the Thesprotians (Strabo 7.7.5). In C4s Boucheta was a dependency of Kassopa (no. 100).

According to tradition, Boucheta was situated in the Kassopaia at the river Louros at a short distance from the sea. Dakaris (1971b) 177 fig. 9 and Hammond (1976a) locate it on a secluded hill, where ruins of the Byzantine castle of Rogoi are visible, on the right bank of the river Louros. This

was an advantageous position near the Ambrakian Gulf, to which Boucheta was connected by the navigable Louros. Dakaris (1971*b*) 178 suggests that Boucheta was the port of Elateia (no. 94) and Batiái (no. 88).

The site was settled from prehistoric times. Corvisier (1991) 201 suggests that, already in the Archaic period, 0.75 ha was fortified. By C5l an isodomonic wall with eight towers had been built and enclosed an area of 1.5 ha. The only gate was in the north-west corner (Dakaris (1971*b*) 181 fig. 47). When in C4f the settlement extended westward, the wall with interval towers was increased and now enclosed up to 3.5 ha, with a population of about 1,000. The gateway was situated on the western side (*ibid.*).

The visible remains of the urban structure have been destroyed by building activity in mediaeval and modern times; the only traces are of a large ancient building on the southern foothill which can be followed for about 80 m; it might be a stoa-shaped structure which probably served as a wharf or shipyard of the navigable river (*ibid.* 182–83 fig. 47).

91. Bouthroton (Bouthrotios) Map 54. Lat. 39.45, long. 20.00. Size of territory: ? Type: A. The toponym is *Βουθρωτός* (Hecat. fr. 106 = Steph. Byz. 709.16–18) or *Βουθρωτόν* (Strabo 7.7.5). The individual use of the city-ethnic *Βουθρωτίσιος* is attested internally in a C3m dedication (*SEG* 36 567).

Bouthroton is attested as a *polis* in the urban sense at Hecat. fr. 106; it is unlikely that there was a *polis* in Epeiros as early as 500, unless it was a Greek colony (Hansen (1997) 20). There is no tradition of a Greek colony, but excavations have yielded Protocorinthian, Corinthian and Attic pottery of C7 to C5. It is perfectly possible that there was a Greek colony unattested but for the quote from Hekataios (Hammond (1967) 474; Hansen (1997) 20).

Bouthroton was situated about 6 km from modern Saranda. Ptol. *Geog.* 3.14.4 lists Bouthroton as part of Thesprotia. Bouthroton was the urban centre of the Prasaiboi, as is demonstrated by several Hellenistic proxeny decrees and manumission inscriptions found in Bouthroton (*SEG* 32 622–25, 36 561–68, 38 470–519).

The acropolis was protected by three circuit walls. The oldest wall was constructed between C6 and C5. Further fortified extensions are dated from C5–C4 and C3 (Bergemann (1998) 50). The walls surrounded 3.7 ha (Corvisier (1991) 287). A C4 stoa and a C4l theatre on the south slopes of the acropolis have been excavated (Bergemann (1998) 50).

92. Byllis (Byllion) Map 49. Lat. 40.35, long. 19.45. Size of territory: ? Type: B. The toponym is *Βύλλις*, ἡ (*SEG* 38 542

(C3–C2); Plut. *Brut.* 26.4) or *Βουλλίς* (Ptol. *Geog.* 3.13.4). The city-ethnic is *Βυλλίων* (*SEG* 43 334 (oracular lead tablet of C4m); *SEG* 24 449.1 (C3s); Hellenistic coins (Head, *HN*² 314–15)) or *Βουλινώς* (Ps.-Skylax 27).

The only attestation of Byllis as a *polis* is in Steph. Byz. 190.12 (*πόλις Ἰλλυρίδος*). The collective use of the city-ethnic is attested externally in a C4m oracle inquiry (*SEG* 43 334) and internally by C3–C2 coins (Head, *HN*² 314–15).

The territory of the Bylliones is quite well identified by Ceka (1987) 135–36. He describes a trapezoidal territory on the right side of the rivers Lufinje and Aoos, extending in the west to the Malakastra mountains, in the south-west to Kalivac, and in the south-east to Rabie. This territory corresponds quite well with the tradition (Strabo 7.5.8; Ptol. *Geog.* 3.13.4).

Byllis was part of the Atintania (Ceka (1987) 141, map). Ptol. *Geog.* 3.13.4 mentions Byllis under the heading *Ἐλυμιωτῶν*. Byllis was the urban centre of the *κοινὸν Βυλλιόνων* which is attested in C3s (*SEG* 24 449). Ceka (1987) 137 traces the origin of the *koinon* back to C4m. The Bylliones acted for the first time as a political unit c.C4m, when they posed an oracle inquiry to Dodone (Dakaris *et al.* (1993) 56).

The town of Byllis was situated at the right side of the Aoos, at modern Gradisht. It was fortified in C4m (Ceka (1990) 221). The wall enclosed an area of 28 ha (Corvisier (1991) 288). The archaeological remains confirm that Byllis was a political and cultural centre of the region in the Hellenistic period. Excavations have brought to light an agora, two stoas (C3s), a C3m theatre for c.7,500 spectators, a stadium (C3s), a cistern and a peristyle temple of C3s (Ceka (1990) 224–29).

93. Dodone (Dodonaioi) Map 54. Lat. 39.30, long. 20.45. Size of territory: ? Type: B. The toponym is *Δωδώνη*, ἡ (Aesch. *PV* 658; Hdt. 1.46.2). The city-ethnic is *Δωδωναίος*, and the external use is attested both collectively (Hdt. 2.57.1) and individually (*SGDI* 1351 (C4s), 1355 (undated)).

Usually Dodone is mentioned as an oracle (Hdt. 2.52) or a sanctuary (Eur. *Phoen.* 983). Dodone was the religious, political and cultural centre of the Molossian League and later of the Epirote League. Copies of the decrees (proxeny and citizenship decrees, manumission records) of the Molossian and Epirote League were set up in Dodone (the oldest decrees: Cabanes (1976) 534–40 no. 1 (370–368), no. 2 (shortly before 330), no. 3 (before 330)). From these inscriptions we know of the main institutions and the most important magistrates of the Molossian and Epirote

League; but we have no information about the institutions of the city itself. For the Molossian League are attested *basileus*, *prostates*, *grammateus*, *damiorgoi*, *synarchontes*, *hieromnemes* (Cabanes (1976) 534–40 nos. 1–3) and an *eklesia (sic)* (ibid. 541 no. 5).

Attested cults include Zeus Dodonaïos or Naïos (Hom. *Il.* 16.233; Cabanes (1976) 550 no. 24 (C5); Dem. 18.253); Dione (Cabanes (1976) 550 no. 24 (C5)); Themis (ibid. 560 no. 22 (C4)); Apollo (ibid. 560 no. 22 (C4)); Aphrodite and Herakles (Dakaris (1993a) 19–20).

Dodone is situated 22 km south-west of modern Ioannina at the foot of Mt. Tomaros (Dakaris (1993a) 6). The acropolis was surrounded by a C4 polygonal wall which enclosed an area of 3.4 ha (Dakaris (1971a) 72–73). It had ten towers, two main gates (in the north-east and south-west) and a small gate in the south (Dakaris (1993a) 34–35). On the acropolis some foundations of buildings and a rectangular cistern hewn out of the rock are noticeable, but not yet completely excavated (Dakaris (1971a) 75).

The main sanctuary was situated below the acropolis. The central cult site was the prophetic oak. In C51 the first temple was built, simple in construction with *pronaos* and *cella* (Evangelidis and Dakaris (1959) 27; Dakaris (1960) 6; Dieterle (1999) ch. iii.1).

The Molossian and Epeirote federal coins had among other types the head of Zeus Dodonaïos and Dione, eagle, thunderbolt or oak leaves, all referring to the oracle at Dodone. Legend: *ΜΟΛΟΣΣΟΝ* or *ΑΠΕΙΡΩΤΑΝ* (Franke (1961) 93–97, 150–56; *SNG Cop. Epirus* 105–34).

94. Elateia Map 54. Lat. 39.10, long. 20.40. Size of territory: ? Type: A. The toponym is *Ἐλάτεια, ἡ* (Dem. 7.32; Steph. Byz. 264.3), *Ἐλάτρεια* (Theopomp. fr. 206) and *Ἐλάτρεια* (Strabo 7.7.5; Steph. Byz. 264.5). The only attestation of a city-ethnic is in Steph. Byz. 264.4–5.

Elateia is classified as a *polis* in the urban sense by Dem. 7.32 and by Theopomp. fr. 206. It is also regarded as being a colony of Elis (no. 251) (Dem. 7.32). Elateia was a *polis* belonging to the Kassopians (Theopomp. fr. 206), who in turn formed a part of the Thesprotians (Strabo 7.7.5). In C4s Elateia was a dependency of Kassopa (no. 100).

Elateia controlled the plain east of the river Louros and also the northern highland region (Dakaris (1971b) 173). The location of Elateia has been much in dispute (cf. Dakaris (1971b) n. 456). Hammond (1967) 477–78 and Dakaris (1971b) 171 locate it convincingly at the foot of Mt. Zalongo north of the village Paliorophoro. This site was settled from prehistoric times. Probably colonists established themselves

on the north side of the hill, where the most ancient remains of buildings have been found (Dakaris (1971b) 172). Dakaris (ibid.) 172 suggests that in C51 the settlement was fortified with a polygonal wall of 1,690 m in circumference, which enclosed an area of 12.7 ha corresponding to a population of about 3,800. The main gate was in the south-east leading to the Louros plain and Boucheta (no. 90), a second gate was in the south, a third in the east, and a fourth in the north (ibid. 174). There were at least two cemeteries outside the main section of the walled town (ibid. 176). The uneven nature of the terrain necessitated the construction of terraces and the building of tiered streets. There are no signs of grid planning of the town (ibid. 175 figs. 43 and 44).

95. Elea (Eleaios) Map 54. Lat. 39.25, long. 20.35. Size of territory: ? Type: B. The toponym is *Ἐλέα, ἡ* (BCH 80 (1956) 300 (C41–C3m)) or **Ἐλεία* (Franke (1961) 300–7, arguing that MS *Ἐλεδ* in Ps.-Skylax 30 should be emended *Ἐλεία* or *Ἐλέα* instead of *Ἐλαία*, as the coins carry the legend *EAEATAN* or *EAEAI(ΩN)*; according to Franke (1961) 300, the toponym *Ἐλαία*—derived from Thuc. 1.46.4 (*ἐν τῇ Ἐλαιάτιδι*) and Ptol. *Geog.* 3.14.5 (*Ἐλαίας λιμῆν*)—is erroneous, and the passages should be emended *Ἐλεάτιδι* and *Ἐλείας* respectively. The city-ethnic is *Ἐλεαῖος* (SGDI 1351 (C4s); coinage: Franke (1961) 43) and later *Ἐλεάτας* (coinage: Franke (1961) 44–45).

According to Ps.-Skylax 30, Elea was just a harbour (*λιμῆν*), but the archaeological, numismatic and epigraphical record reveals that in C4s Elea must have been a *polis*. Franke (1961) 301–2 suggests that Elea was a colony of Corinth (no. 227). The collective use of the city-ethnic is attested internally on C4s coins (*infra*). The individual use of the city-ethnic is attested externally in a C4s manumission inscription from Dodone (no. 93) which records the name of a witness from Elea (SGDI 1351).

Elea was situated in the region of Elaiatis which, in turn, was part of the region of Thesprotia (Thuc. 1.46.4; Ps.-Skylax 30). This is confirmed by a C4s manumission inscription from Dodona recording an *Ἐλεαῖος* among the Thesprotian witnesses (SGDI 1351).

Dakaris (1972) 97 identifies Elea with Charauge (near modern Veliani) on the slopes of the Korila and describes it as a fortified settlement of 10 ha (Dakaris (1987) 75). Gates are visible in the south-western and eastern part (Dakaris (1972) figs. 42 and 43). The city was grid-planned and had an agora (Dakaris (1971b) 184), a Hellenistic theatre comparable in size to the small theatre of Kassopa (no. 100), and two stoas to the west and east of the theatre (Dakaris

(1971*b*) 178, (1972) figs. 42 and 43), probably of the Hellenistic period.

For a short period between c.360 and 335 Elea struck bronze coins: *obv.* head of Persephone facing, or Pegasos; *rev.* Kerberos, or trident; legend: *EΛEATAN* or *EΛEAI(ΩN)* (Franke (1961) 40–41; *SNG Cop. Epirus* 49–50).

96. Ephyra (Ephyros) Map 54. Lat. 39.15, long. 20.30. Size of territory: ? Type: A. The toponym is *Ἐφύρα*, *ἦ* (Strabo 7.7.5) or *Ἐφύρη* (Thuc. 1.46.4), later *Κίχυρος* (Strabo 7.7.5; Paus. 1.17.4). Dakaris (1972) 29 suggests that the site was renamed after 343/2. The city-ethnic is *Ἐφυρος* (Paus. 9.36.3).

Ephyra is called a *polis* in the urban sense by Thucydides in a passage where he explicitly distinguishes between the *polis* Ephyra and its harbour Cheimerion (1.46.4). Like Elea, Ephyra was situated in the region of Elaiatis, which in turn was part of the region of Thesprotia (Thuc. 1.46.4).

Thucydides' description of Ephyra as lying inland and above the harbour has led to the identification of Ephyra with the ancient settlement at Xylokastron near modern Likouresi, 800 m north of the junction of the river Kokkytos with the Acheron. This site was inhabited from the pre-historic period and was already in LH III a fully developed settlement with a fortified acropolis enclosing an area of 4.24 ha (Dakaris (1972) 80 fig. 40); the settlement was the same size in C4 (ibid. 115). A gate has been found in the southern part (ibid. fig. 40). The identification of the ancient remains on the opposite hill (Dakaris (1993*b*)) with the Nekromanteion mentioned in Hdt. 5.92*γ* is now untenable in the light of Baatz (1999), who shows that the excavated building was an aristocratic residence erected between C4l and C3l, whereas the Nekromanteion must have been situated at the foot of the hill instead.

97. Eurymenai (Eurymenaios) Map 54. Lat. 39.40, long. 20.55. Size of territory: ? Type: B. The toponym is *Εὐρυμεναί, αἱ* (Diod. 19.88.4: *εἰς Ἐυρυμενάς πόλιν Ἡπειρωτικὴν* (rC4l)). The city-ethnic is *Ἐυρυμεναῖος* (SEG 15 384 (370–368)).

Eurymenai is called a *polis* in the urban sense by Diod. 19.88.4, reporting the siege, conquest and destruction of the *polis* in 312. The individual use of the city-ethnic is attested externally in two C4f Molossian citizenship decrees (SEG 15 384.11, 28) in which a citizen of Eurymenai occurs as *damiorgos*: *δαμοργῶν Ἄνδροκάδεος Ἀρκτάνος Εὐρυμεναίων*. In C4f Eurymenai was a member of the Molossian Koinon and belonged to the tribe of the *Arktanoi* (ibid.).

Eurymenai is identified with the ancient remains of modern Kastritsa, which is situated on the south side of the lake of Ioannina (Hammond (1997) 31); the site, however, is identified with Tekmon (no. 109) by Cabanes (1997*b*) 116. The site was settled from the prehistoric period (Dakaris (1951), (1952)). In C4 the settlement on the hill was fortified. The area enclosed by the circuit measures c.34.4 ha (Corvisier (1991) 214; Vokotopoulou (1970)).

98. Gitana Map 54. Lat. 39.35, long. 20.15. Size of territory: ? Type: B. The toponym is *Γίτανα*, *τά* (Polyb. 27.16.5). In the MSS the toponym is either *Γίτωνα* (P) or *Γείτανα* (Va) and *Γίτανα* is an emendation based on *Gitana* at Livy 42.38.1. Dakaris (1972) 36 suggests that *Γίτανα* is probably a corruption of *Τίτανα* or *Τιτάνη*, derived from the word *τίτανος*, “gyps”, which suits the location of the site. For seal impressions inscribed with the toponym, see Preka-Alexandri (1996) 197–98.

Livy 42.38.1 calls Gitana a meeting place of the Epeirote League (*concilio Epirotarum*). A C4m manumission inscription naming the eponymous *prostates* of the Thesprotians testifies to the importance of this town already in the Classical period and shows that Gitana belonged to the Thesprotian tribal community (SEG 26 717).

According to the C4m manumission inscription, Themis was worshipped in Gitana (SEG 26 717); Tzouvara-Souli (1979) appendix fig. 1 mentions a cult of Aphrodite but does not suggest any date.

Gitana is situated near Philiates on the north-west side of the limestone mountain Brysella at the confluence of the Kalpakiotikos and Kalamas, which was navigable up to this point (Dakaris (1972) 35). According to Polyb. 27.16.4–6, Gitana was situated c.16 km from the sea.

In C4 an area of 28 ha was enclosed with a circuit wall running for 3,000 m (Dakaris (1972) 115), and the town was grid-planned. The agora has been identified in the western part, and a small theatre has been discovered outside the wall (undated, but presumably C3–C2). The main gate was in the northern side, and further gates were situated to the north-west, west and between the lower town and the acropolis (Dakaris (1987) 75 and (1972) figs. 53–54).

99. Horraon (Horraitas) Map 54. Lat. 39.15, long. 20.55. Size of territory: ? Type: B/C. The toponym is *Ὀρραον*, *τό* (SEG 35 665A.18 (C2m)). The city-ethnic is *Ὀρραίτας* (Cabanes (1976) 586 no. 70.5) or *Ὀρραεῖτας* (SEG 35 665 (C2m)) or *Ὀρ(ρ)εῖτας* (GGMI 239.45 = Dikaiarchos(?); cf. BCH 109 (1985) 522–23). The rough breathing is attested in the Latin form *Horreum* (Livy 45.26.4).

Horraon is not explicitly classified as a *polis* in any source; but in a decree of c.330, a citizen of Horraon is recorded among the *hieromnemes* of the Molossian *koinon* (Cabanes (1976) 539–40 no. 3; cf. *BCH* 109 (1985) 522). It follows that Horraon was a member of the *koinon* and probably a *polis* in the political sense. The collective use of the city-ethnic is attested externally in a C2m treaty (*SEG* 35 665A.24). The individual use of the city-ethnic is attested externally in a C4 manumission document (Cabanes (1976) 586 no. 70). Horraon has been identified by Cabanes and Andreou (1985) 520 with the ancient remains near Ammotopos. Excavations show that Horraon was fortified before C4m (*AR* (1976–77) 43). The enclosed area measures c.7.2 ha (Corvisier (1991) 284). The city was grid-planned, and some houses of C4m–s have been excavated (Dakarīs (1989) 42–44; Hoepfner and Schwandner (1994) 147–50).

100. Kassopa (Kassopaios) Map 54. Lat. 39.10, long. 20.40. Size of territory: 5 (c.900 km²: Hoepfner and Schwandner (1994) 120). Type: A. The toponym is *Κασσώπα* (*IG* IV².1 95.25 (355); *BCH* 45 (1921) IV.51 (C3l)), in *κοινὴ Κασσώπη*, ἡ (*SEG* 36 555 (C2s); Steph. Byz. 365.21) or *Κασσωπία* (Diod. 19.88.3 (rC4l)). The city-ethnic is *Κασσωπαῖος* (C4 coins (*infra*); *I.Magnesia* 32.51 (C2e); *IG* VII 188.11 (C2e)) or *Κασσωπός* (Herodorus (*FGrHist* 31) fr. 35; Ps.-Skylax 31).

The earliest source classifying Kassopa explicitly as a *polis* in the political sense is a C4l/C3e dedication on a statue base (*SEG* 34 589). The evidence for Kassopa as a *polis* in the urban sense is literary and retrospective (Diod. 19.88.3: *Κασσωπιῶν πόλιν* (rC4l)). The collective use of the city-ethnic is attested externally in *IG* VII 188.11 (= Ager (1996) no. 85) and internally on the C4 coins (Franke (1961) 69–70) and on weights stamped with the inscription *Κα[σσωπαίων]* (*SEG* 35 673). The individual use of the city-ethnic is attested externally in *IG* IX².1 243.4 (C3)).

Kassopa was situated in a region called *Κασσωπία* (Dem. 7.32; Theopomp fr. 206–7; Ps.-Skylax 31–32) or *Κασσιοπαία* (Plut. *Mor.* 297B) or *Κασσιόπη* (Ptol. *Geog.* 3.14.8), which was part of Thesprotia (Strabo 7.7.5). In most cases it is impossible to determine whether the evidence concerns the *polis* Kassopa or the region Kassopia. The territory was delimited by the river Acheron, the Ionian Sea and the Gulf of Ambrakia, and must have been c.900 km² in size (Thuc. 1.46.4; Ps.-Skylax 31; Ps.-Skymnos 447, 453, and Strabo 7.7.1, 5). To Kassopaia belonged in C4 four smaller towns of 5 to 8 ha (Batiai (no. 88), Berenike (no. 89), Boucheta (no. 90), and *Kastroxykia* (probably = *Κασσιόπη λιμνή*, mentioned in Ptol. *Geog.* 3.14.2; Strabo 7.7.4)), one medium-sized town (Elateia (no. 94)) and two large towns

(Pandosia (no. 104) and Kassopa (Corvisier (1991) 87; see also the map in Hoepfner and Schwandner (1994) 116)).

According to Strabo 7.7.5, the Kassopaians were Thesprotians, and c.330–325 they became members of the Epeirote Federation (Hoepfner and Schwandner (1994) 116). From C4m Kassopa was the political centre of the region and is recorded in the C4m list of *theorodokoi* from Epidauros (*IG* IV².1 95.25). The attested political institutions are all of the Hellenistic period (*SEG* 15 383 (C2)). A C3–C2 honorific decree passed by the *πόλις Κασσωπαίων* (*SEG* 35 671) suggests that there was a popular assembly. The archaeological evidence (*infra*) indicates that these institutions existed already in C4 (Hoepfner and Schwandner (1994) 119).

Kassopa is identified with the remains of an ancient settlement near modern Kamarina. Situated on the slopes of Mt. Zalongo, Kassopa had a dominating position with a superb view of the Gulf of Ambrakia. The C4m defence circuit enclosed an area of 30 ha (Hoepfner and Schwandner (1994) 123). The agora is situated south of the main road, in the westernmost part of the town. The place was probably chosen because of its magnificent view. The town was grid-planned, and the west side of the agora was probably from the beginning reserved for public buildings. The open *ekkle-siasterion* of C3l (Hansen and Fischer-Hansen (1994) 62–63) most likely had a predecessor in the form of a natural theatre. A temple of Aphrodite was built about C4m (Hoepfner and Schwandner (1994) 120–45 figs. 94 and 95). The main deity of the town seems to have been Aphrodite (coins (*infra*), temple, *SEG* 15 383 (C2)). A C4–C3 theatre is located in the western part of the city (*TGR* II. 231).

The Kassopaians struck silver and bronze coins in the period 342–330/25; *obv.* head of Aphrodite wearing stephanos or boucranium; *rev.* serpent or dove; legend (sometimes on *obv.*): *ΚΑΣΣΩΠΙΑΙΩΝ* (Franke (1961) 69–75; *SNG Cop. Epirus* 43–45).

101. Nikaia Map 49. Lat. 40.30, long. 19.45. Size of territory: ? Type: C. The toponym is *Νίκαϊα* (Steph. Byz. 474.17). The only attestation of the city-ethnic is in Steph. Byz. 475.2.

Nikaia is called *polis* only by Steph. Byz. 474.20 (*πόλις ἐν Ἰλλυρίδι*). It has been included in this inventory because of the remains of a fortified C5–C4 settlement which is too large to be a *kome* (*infra*), combined with the site-classification in Steph. Byz. Nikaia was a member of the *koinon* of the Bylliones, as is apparent from a C2l inscription which mentions a *Σώστρατος*... *Βυλλίων ἀπὸ Νικαίας* (Leonardou (1925–26) 25 no. 140.11; Robert (1928) 433–34). A Hellenistic

(?) manumission inscription found at Nikaia records the *strategos eponymos* of the *koinon* of the Bylliones (SEG 35 696).

The ancient remains near Klos have been identified with Nikaia. The site was fortified in C5. The area enclosed by the wall measures c.18 ha (Corvisier (1991) 288). The city plan of Nikaia is similar to that of Amantia (Ceka (1990) 218–19).

102. Olympia (Olympastas) Not in *Barr.* Lat. 40.25, long. 19.35. Size of territory: ? Type: C. The toponym is Ὀλύμπα, ᾶ (terracotta stamp (*infra*)), in *koine* Ὀλύμπη, ἥ (Steph. Byz. 491.3). The city-ethnic is probably Ὀλυμπαστάς (C3–C2 coins (*infra*)).

Olympa is called a *polis* only by Steph. Byz. 491.3 (πόλις Ἰλλυρίας). The reason for including Olympa in this inventory is the evidence for *polis* status in the Hellenistic period, combined with the remains of a fortified C5–C4 settlement which is too large to be a *kome* (*infra*). The collective use of the city-ethnic is attested internally on the C3s–C2f coins (*infra*). A C3l dedication to Zeus Megistos mentions a *politarches*, the *synarchontes* and a *grammateus* (SEG 35 697).

Bronze coins of C3s–C2f with the legend ΟΛΥΜΠΙΑΣΤΑΝ and a terracotta stamped with ΟΛΥΜΠΙΑΣ, all found near Mavrove, have led to the identification of the ancient remains at this site with Olympa (Dautaj (1981); Ceka (1988)). The site was fortified in C5l/C4e (*ibid.* 80–81). The enclosed area measures c.15 ha (Corvisier (1991) 288). The plan of the town is similar to that of Phoinike (Ceka (1990) 220).

103. Orikos (Orikios) Map 49. Lat. 40.20, long. 19.30. Size of territory: ? Type: A. The toponym is Ὀρικός, ὁ (Hdt. 9.93.1; Polyb. 7.14d) or Ὀρικός (SEG 43 339 (C5m); Ps.-Skylax 26), ὁ (Polyb. 7.14.d) or Ὀρικόν, τό (Cass. Dio 41.45.1; Strabo 7.5.8 (conj.)). The city-ethnic is Ὀρικός (IG IX 1² 4. 1203(C3)).

Orikos is classified as a *limen* by Hecat. fr. 106 and Hdt. 9.93.1. But it is called a *polis* in the urban sense at Ps.-Skylax 26 and in Hellenistic sources (Apollodoros fr. 300; Ps.-Skymnos 441, describing Orikos as a Ἑλληνὶς πόλις).

In the Classical period Orikos was probably part of the *peraia* of Korkyra mentioned by Thuc. 3.85.2. The collective use of the city-ethnic is attested externally in a Korkyraian decree of C3l (*I. Magnesia* 44.46 = IG IX 2.1 1196) and internally in a C3 oracle inquiry (IG IX 1² 4. 1203) and on C3–C2 coins (Head, *HN*² 314–15; Hammond (1967) 639).

According to the ancient sources, Orikos was situated on the Ionian coast near the Acroceraunian mountains at a

distance of 80 miles from Salentinum (Plin. *HN* 3.145); the site has been identified with the ancient remains found on an island in the southern part of the Gulf of Valona, which already in Antiquity became connected with the mainland (Plin. *HN* 2.204), i.e. modern Pascha Liman (Hammond (1976c)). Orikos is situated on a small promontory which is easily defensible on the landward side. The settlement covered an area of 5 ha (Corvisier (1991) 287). The archaeological remains are scarce. Hammond (1967) 127 reports a post-Classical circuit wall and towers.

104. Pandosia (Pan-) Map 54. Lat. 39.15, long. 20.34. Size of territory: ? Type: A. The toponym is Πανδοσία, ἥ (Dem. 7.32; Theopomp. fr. 206; Strabo 7.7.5). The only attestation of a city-ethnic is in Steph. Byz. 499.22. Hellenistic coins bear an abbreviated form of the city-ethnic: ΠΑΝ (Head *HN*² 321; Dakaris (1971b) 169). Pandosia is classified as a *polis* in the urban sense by Dem. 7.32 and by Theopomp. fr. 206. It is also regarded as being a colony of Elis (no. 251) (Dem. 7.32). Pandosia was a *polis* belonging to the Kassopians (Theopomp. fr. 206), who in turn formed a section of the Thesprotians (Strabo 7.7.5, 6.1.5). In C4s Pandosia was a dependency of Kassopa (no. 100). Pandosia is recorded in the C4m list of *theorodokoi* from Epidauros (IG IV 2.1 95.24).

An oracle from Dodona, misinterpreted by Alexander I, shows that Pandosia was built on three hills near the Acherusian lake and the river Acheron (Strabo 6.1.5) and was situated in the region of Kassopaia (Dem. 7.32; Strabo 7.7.5). On the basis of the literary sources, Hammond ((1967) 477–78, 674–75, with map) identified Pandosia with Gourana near modern Trikastro (accepted by *Barr.*). Dakaris, on the other hand, combined the thesis of Leake ((1835) 4.55, 73, 75) with that of Philippson (1956) 106 and identified Pandosia with the ancient remains of a site near Kastri: a rounded hill in the middle of the Acheron plain rising to a height of 107 m between Kanalikon and Ephyra. Contrary to the ancient description, the Acheron flows to the south of this hill. Dakaris counters this objection with the suggestion that the course of the Louros has changed and that in Antiquity the river-bed was on the southern side of the hill (Dakaris (1971b) 164).

Pandosia was connected with the sea by the Acherusian lake and the navigable river Acheron. Dakaris believes that a port existed on the south side of the lake at Dromos Skalomatos, where oak keels of ancient vessels have been found. Another port may have existed on the north side of the lake near the south wall of Pandosia, because ancient metal rings were formerly affixed to the rocks for tying up

small ships. The bridge mentioned by Plin. *HN* 4.1.4 probably linked the main settlement on Kastri hill with the two northern hillocks (Dakaris (1971*b*) 170).

The site was settled from the prehistoric period (Corvisier (1991) 201). The way Philip besieged and pillaged the land of the colonists (Dem. 7.32) was one normally adopted against walled cities. Therefore the conquest of Pandosia by Philip II (343/2) constitutes the *terminus ante quem* of the older walls. This date is in accordance with the style of the walls and the political role Pandosia played at this time. Dakaris suggests that Pandosia was fortified between C51 and 343/2; the polygonal enclosure encompassed an area of 13.1 ha (Dakaris (1971*b*) 167). The settlement is divided into two parts by an inner wall (ibid. 167 with fig. 42; cf. *AR* (2000–1) 67). The wall was reinforced with twenty-two towers and had two gates on the eastern side, the southern one leading to the Acherousian lake (Dakaris (1971*b*) 167 with fig. 42). From the very few remains of buildings it is impossible to reconstruct the city plan (ibid. 168). The nature of the terrain makes it most unlikely that the city was grid-planned (ibid. 167). On the hill-top two large cisterns are preserved (ibid. 169–70).

105. Passaron Map 54. Lat. 39.40, long. 20.45. Size of territory: ? Type: C. The toponym is *Πασσαρών, -ώνος* (Plut. *Pyrrh.* 5.5) and *Passaron* (Livy 45.26.4). Passaron is not called a *polis* in any ancient source. It is described as an *oppidum* by Livy 45.26.4 and as a *χωρίον τῆς Μολλοσιδος* by Plut. *Pyrrh.* 5.5.

Passaron is located near Gardiki on the hill above Radotovi in the north-west of modern Ioannina (Dakaris (1987) 72). Decrees found at this site (*SEG* 26 719 mentioning the *prostates* of the Molossoi (after 264); Cabanes (1976) 545–46 no. 13) as well as the literary tradition (Plut. *Pyrrh.* 5.5) indicate that Passaron with its temple was the political centre of the Molossians, where the Molossian kings and people exchanged oaths (Plut. *Pyrrh.* 5.5). The fortification of the acropolis covering an area of 3.65 ha dates from C55 (Dakaris (1987) 72); in C41 a new defence circuit enclosed an additional area of 10 ha (Corvisier (1991) 213–14). Three cisterns and three gates in the north, south-east and west have been identified. The cavea of a theatre, lying outside the fortification, has been excavated (Dakaris (1987) 72 fig. 1). A C4 temple (Evangelidis (1952) 306–8) at the foot of the hill is thought to have been the official sanctuary of the Molossoi, where, probably, Zeus Areios was worshipped (Plut. *Pyrrh.* 5.5).

106. Phanote (Phanoteus) Map 54. Lat. 39.35, long. 20.20. Size of territory: ? Type: C. The toponym is *Phanote* (Livy

43.21.4, 45.26.3). The city-ethnic is *Φανοτεύς* (Polyb. 5.96.6, 27.16.4).

Phanote is called a *polis* at Polyb. 5.96.4 (*ἐπὶ τῆς τῶν Φανοτέων πόλεως*); Livy classifies it as *urbs* (45.26.3) and as *castellum Epiri* (43.21.4). The only reason to include Phanote as a possible *polis* in the Classical period is the combination of the Hellenistic site-classification with the remains of a fairly large C41 settlement (*infra*).

Phanote is no longer localised at Raveni (Hammond (1967) 660; *Barr.*) but at modern Doliane (Dakaris (1972) 40–41). The town was built on a hill on the right side of the Kalamas. An area of c.5.3 ha was fortified in C41 (ibid. 154). The main gate was on the northern side (ibid. fig. 56). The cemetery was discovered c.200 m further north (ibid. 155).

107. Phoinike Map 54. Lat. 39.50, long. 20.05. Size of territory: ? Type: B. The toponym is [*Φοιν*]ίκα, ἡ (*SEG* 23 189.1.12 (c.330)).

Phoinike is called a *polis* in the urban sense by Polyb. 2.5.5 and 2.8.4. *Polis* status in C4 is strongly indicated by the epigraphical and archaeological record: an oracle inquiry of C41/C3e from Dodone (no. 90) filed by *ἄ πόλις ἄ τῶν Χαόνων* is ascribed to Phoinike (Dakaris *et al.* (1993) 58 = *SEG* 15 397.4). Phoinike seems to have been the political centre of the Chaonians from C4m (Cabanes (1976) 115–16). Phoinike is recorded in the C4s list of *theorodokoi* from Argos (*SEG* 23 189; Charneux (1966*a*) 156–239, (1966*b*). The patron god was probably Athena Polias (*SEG* 15 397.4 (C41/C3e)).

Phoinike has been identified with the ancient site on the hill above modern Finik in southern Albania, where a small walled acropolis of about 1.5 ha can be traced back to C5 (Corvisier (1991) 218; Budina (1986) 119; 6 ha). In the Hellenistic period the city grew to cover up to 57 ha.

108. Poionos Map 54. Unlocated, not in *Barr.* Type: C. The toponym is *Ποιωνός*. The only thing we know about Poionos is that in, probably, 355 a *theorodokos* was appointed to host *theoroi* from Epidauros: *Ποιωνός. Ἄδματος* (*IG* 1v².1 95.27), if the reading *Ποιωνός* is correct. Cabanes (1997*a*) 97 has no doubt, and Perlman (2000) 182 rejects the conjecture *Τόρωνος* suggested by Baunack (1895) 56 and again by Dakaris (1972) 34. Hammond (1967) 519 suggests that Poionos might be a personal name. If so, the Thesprotians had four *theorodokoi*. Because of the geographical order in the list, Cabanes (ibid.) supposes that Poionos was a harbour between Thesprotia and Korkyra (no. 123).

109. Tekmon Map 54. Lat. 39.40, long. 20.55. Size of territory: ? Type: C. The toponym is *Τέκμων* (Steph. Byz. 611.21)

or *Tecmon* (Livy 45.26.4, 10). The only source for the city-ethnic is Steph. Byz. 611.21.

Tekmon is called a *polis* by Steph. Byz. 611.21 (πόλις Θεσπρωτῶν) and an *oppidum* by Livy (45.26.4). The only reason to include Tekmon in this inventory is the site-classification in Steph. Byz. combined with the remains of a fortified C4 settlement which is much too large to be a *kome* (*infra*).

Tekmon is identified with the ancient remains of modern Kastritsa, which is situated on the south side of the lake of Ioannina (Cabanes (1997b) 116). Hammond, however, ((1997) 31) prefers to identify this site with Eurymenai (no. 97). The site was settled from the prehistoric period (Dakaris (1951), (1952)). In C4, the settlement on the hill was fortified and the walls enclosed an area of c.34.4 ha (Corvisier (1991) 214; Vokotopoulou (1970)). Unlocated in *Barr.* and only H.

110. Torone Map 54. Lat. 39.31, long. 20.10. Size of territory: 1 or 2. Type: C. The toponym is *Τορώνη, ἡ* (Ptol. *Geog.* 3.14.5).

Torone is mentioned by Ptol. *Geog.* 3.14.5 in a context which indicates that it was either a *polis* or a harbour. If we accept Dakaris' emendation of *Ποίωνος* into *Τόρωνος* (Dakaris 1972) 34), Torone may be recorded in the C4m list of *theorodokoi* from Epidauros (IG IV².1 95.27 as emended already by Baunack (1895) 56, rejected by Perlman (2000

182, see *supra* 108), which would indicate that the settlement was a *polis* in C4m. Against this view, see Cabanes (1997a) 97.

In Ptolemy's list Torone is recorded between the mouth of the Thyamis and Sybota. Accordingly, Dakaris (1972) 115 with fig. 49 locates Torone on a peninsula in the northern part of Sybota Bay (= modern Lygia) and suggests that the site belonged to the *peraia* of Korkyra (no. 123), referred to by Thuc. 3.85.2. This place was settled from the Archaic period. Probably in C5 the open settlement was transformed into a small fortified acropolis of 1.2 ha. It expanded to the south and west; by 427 it had grown to 21.5 ha, and in C4 it covered 58 ha (Corvisier (1991) 205–6; Dakaris (1972) 115 figs. 49–51). Three parts can be distinguished: part A, fortified already before 427 with gates to the south, east and west (*ibid.* fig. 51); part B, also fortified before 427 with a gate probably in the east; and part C, fortified after 427 with a gate in the west (*ibid.* fig. 50).

111. Zmaratha Map 54. Unlocated, not in *Barr.* Type: C. The toponym is *Ζμαράθα, ἡ* The only thing we know about Zmaratha is that in, probably, 340–338 a *theorodokos* was appointed to host *theoroi* from Epidauros: *Ζμαράθα. Ἐπί(ι)κος Νικάνδρου* (IG IV².1 95.76); cf. also Perlman (2000) 259.

AKARNANIA AND ADJACENT AREAS

HANS-JOACHIM GEHRKE, ECKHARD WIRBELAUER

I. The Region

No ancient name for the region as a whole existed, but for the main part of the mainland, the name *Ἀκαρνανία* is attested (Hecat. fr. 110–11; Hdt. 2.10.3 (*Ἀκαρνανίη*); Thuc. 2.80.8; Xen. *Hell.* 6.2.37; *IG* II² 237.35 (C4); *IG* IX².1 393.3 (C3)). The ethnic is *Ἀκαρνάν* (Hdt. 1.62.4, 7.221; *SEG* 42 1041 (C4)), the feminine form *Ἀκαρνάνις* (*IG* IX².1 585.2 (Pagasai, c.300)) or *Ἀκαρνάνισσα* (*IG* II² 2332.97 (183/2)). The collective use of the ethnic is attested externally in Attic inscriptions of C4 (*IG* II² 43.B.12 (= *Staatsverträge* 257 (377)); 96.8), internally in local inscriptions of the Hellenistic period (*IG* IX².1 3A; *IG* IX².1 583 (Olympia, 216)), and very often in literary sources (e.g. Thuc. 2.30.1; Xen. *Hell.* 4.6.4; Arist. fr. 477); for the individual and external use, cf. *Ἀκαρνάν* ἐξ *Ἀλυζίας* (*SEG* 42 1041 (Ephesos, C4); cf. *LGPN* IIIA 367, s.v. *Πόλλυς*) and *Ἀκαρνάν* *Θυρρείεως* (*SGDI* 2658 (Delphi, 315–280)). The region itself is called *χώρα* (Thuc. 2.102.2, 6) and *ἔθνος* (Ps.-Skylax 34); this last term is also used to denote the community of the Akarnanians (*IG* IX².1 583.11–12, 56 (Olympia, 216)), for which we find *τὸ πλῆθος τῶν Ἀκαρνάνων* as well (ibid. 56). The normal term for the political unit, i.e. the Akarnanian federal state, is *τὸ κοινὸν τῶν Ἀκαρνάνων* (Xen. *Hell.* 4.6.4; *IG* IX².1 208.7, 9–10 (C2)). Owing to the nature of the region, there was a distinction between inland Akarnania (*ἡ μεσόγεια τῆς Ἀκαρνανίας*, Thuc. 2.102.1), part of which was *τὸ Ἀκαρνανικὸν πεδίων* near the river Acheloos (Thuc. 2.102.2), and the coastal region (*ἡ ἄλλη Ἀκαρνανία ἢ περὶ θάλασσαν*, Thuc. 2.33.2; cf. *οἱ ἀπὸ θαλάσσης Ἀκαρνᾶνες*, Thuc. 2.80.1, and *οἱ ἐπὶ θαλάσσης ἄνω Ἀκαρνᾶνες*, Thuc. 2.83.1).

The frontiers of Akarnania were the Gulf of Arta to the north, between Argos Amphilochikon (no. 115) and Actium (cf. no. 114; Strabo 7.7.56, 10.2.1, 7), the Ionian Sea to the west, from Actium to Oiniadai (no. 130) (Thuc. 2.102.2; Strabo 10.2.1), and the river Acheloos to the east (*IG* IX².1 3A; Strabo 8.2.3, 10.2.1; for the inconsistencies in Strabo, cf. Gehrke (1994) 108–9), thus bordering on Argos Amphilochikon and on the Agraians to the north-east, on Aitolia to the east.

The common designation of the islands opposite the west coast of Greece, and especially of Akarnania, is “the Ionian islands”. The name covers Korkyra (no. 123), Leukas (no. 126), Kephallenia, Ithaka (no. 122) and Zakynthos (no. 141), and has been used since the last years of the eighteenth century when the French called their new possessions in the Ionian Sea “les îles Ioniennes”.¹ They adopted the ancient terms for the sea in this region (cf. Treidler (1929)): *Ἰόνιος κόλπος* (Hecat. fr. 91, 92; Skylax (*FGrHist* 709) T 4; Hdt. 6.127; Thuc. 1.24.1); other terms: *Ἰόνιος πόντος* (Hdt. 7.20; Eur. *Phoen.* 208) or simply *Ἰόνιον* (Arist. *Pol.* 1329^b20) and, poetically, *Ἰόνιον κύμα* (Hes. fr. 372.8, MW), *Ἰόνιος πόρος* (Pind. *Nem.* 4.53; Aesch. fr. 32 B.327, Mette; Soph. fr. 337, Radt), named after Io (Aesch. *PV* 840) or a certain Illyrian Ionios (Theopomp. fr. 128a). The terms normally designated the southern part of the Adriatic Sea between Greece and Italy. Occasionally, some islands were seen to belong to the same regional unit as Akarnania (Thuc. 2.7.3: Korkyra (no. 123), Kephallenia, the Akarnanians and Zakynthos (no. 141); cf. Thuc. 2.30.2: the position of Kephallenia *κατὰ Ἀκαρνανίαν καὶ Λευκάδα*; and Strabo 8.2.2: *Ἀκαρνανία καὶ αἱ προκείμεναι νῆσοι, Ζάκυνθος καὶ Κεφαλληνία καὶ Ἰθάκη καὶ Ἐχινάδες*).

Unlike the other islands, Kephallenia was divided between four *poleis* (*τετράπολις οὔσα, Παλῆς, Κράνιοι, Σαμαῖοι, Πρώννοι*; Thuc. 2.30.2). A number of sources testify to co-operation between the four *poleis* and a common identity of all Kephallenians: *IG* II² 96 = *Staatsverträge* 262; cf. also *Κεφαλλᾶνες ἐκ Κρανίων* (*IG* IX.1 276.3 (Oporus, C3–C2?)) or *Κεφαλλῆνι/-ῆνες ἐκ Παλέων* (*F.Delphes* III.4 376.3–4 (suppl., 358/7); *BCH* 68–69 (1944–45) 121 no. 32.4 (Delphi, C3)) or *Κεφαλλᾶν ἐκ Πρώνων* (*IG* IX².1 8.3–4 (suppl., C3)). Dreher (1995b) 199 n. 116 and, implicitly, Bengtson (*Staatsverträge* 262) have assumed the existence of a Kephallenian federal state; but this seems unwarranted. Unlike the Akarnanians and other federal states, the

¹ Steinhart and Wirbelauer (2002) 50. For this reason, the island of Kythera was included among the Ionian islands. Since this island lies outside the Ionian Sea, we have excluded it from the present study. Cf. also Thiry (2001) 132ff.

Kephallenian *poleis* did not strike common coins, and each of them seems to have been an independent polity (Paleis (no. 132) in 435; Kranioi (no. 125) in 431/30(?); Pronnoi (no. 135) in 377; Same (no. 136) in 189/8). From outside, the islanders were often seen simply as Kephallenians (especially at Athens; cf. Thuc. 3.94.1–2; Dem. 32.9, and Aristotle's *Κεφαλλήνων πολιτεία* no. 79, Gigon). A Kephallenian Confederacy with common institutions is not explicitly attested, and what united the Kephallenians seems to have been a geographical and ethnic identity (cf. the eponymous common ancestor, Kephalos) rather than some kind of political organisation.

From C8, the whole region was one of the centres of Corinthian colonisation, especially Korkyra (no. 123), Ambrakia (no. 113), Anaktorion (no. 114), Leukas (no. 126); cf. Domingo-Forasté (1988); Jouan (1990). One of the Corinthian colonies on the mainland, Anaktorion, became a member of the Akarnanian Confederacy during the Peloponnesian War (Thuc. 4.49; see *infra*), while Ambrakia, on the northern side of the Gulf of Arta, remained independent. A special case is Amphiloichian Argos (no. 115), east of the Gulf: not belonging to the Akarnanian Confederacy, it maintained special relations with the *κοινόν* (Gehrke (1994–95) 43).

Akarnania was organised as a federal state already in Classical times (Gehrke (1994–95) 42–43; Beck (1997) 31–43). In C5s–C4, the mint of the Confederacy may have been at Stratos (no. 138) (silver drachms and fractions). Types: *obv.* head of Acheloos; *rev.* F within incuse square; cf. Kraay (1976) 129 and no. 443; *SNG Cop. Acarnania* 405–6. Like many *poleis* of the region, the Akarnanian *koinon* struck coins on the Corinthian standard too (pegasi, c.350–330; cf. *BMC Corinth* 113).² The interpretation of these coins as federal has been questioned by Dany (1999) 280–81.

The members of the Confederacy were divided into *πόλεις* and *ἔθνη* (IG IX².1 583.40 (Olympia, 216); Habicht (1957) 109–10), *ἔθνος* being the term designating a member state of the Confederacy without an urban centre. Thus, the Akarnanian communities are categorised as *poleis* only if there are other indications of *polis* status—for example, an urban centre. In the region as a whole, altogether thirty settlements seem to have been *poleis* (including possible *poleis* placed in category C). They are described in the inventory

² Coins of the Akarnanian Confederacy are listed by Imhoof-Blumer (1878) 13–46; *BMC Thessaly* 168–70; *BMC Corinth* 113; Head, *HN*² 333–34; Grose (1926) nos. 5387–97; *SNG Copenhagen* 418–24; *IGCH* nos. 145, 147, 201, 236, 312, 1971, 2187; *SNG Stockholm* 1365–69; *SNG Paris, Delepierre* 1209; *SNG Tübingen* 1564–66; Taliercio Mensitieri and Spagnoli [1993] pl. 3; *CH* viii. 506.

below. The letters . . . λϵ[ις?] at the end of the list in IG IX².1 582.49 (from Magnesia, c.207) may indicate an Akarnanian *polis* we cannot identify. We have classified it as C at the end of the Inventory.

A number of communities are attested as *poleis* only by Steph. Byz.: Akra (62.6), Apollonia (106.3–4), Aspalatheia (134.5: *πόλις Ταφίων*), Athenai (35.1ff, from Demetrios of Skepsis, perhaps founded as a fortification by the Athenians c.450 (Kirsten (1937) 2210)), Erysiche (281.10ff, see *infra*), Psophis (704.20–21; this name is also attested in Zakynthos (no. 141), Taphos (609.3: *πόλις Κεφαλληνίας, νῦν δὲ Ταφιοῦσσα*, attested as a *polis* also Eur. *HF* 60 (*ἄστν* in 1080), but in a mythological context (destruction by Amphitryon)); the question whether the island of Taphos (Meganisi?) was a *polis* remains open. With Taphos was also connected the place-name Telebois (*μοῖρα τῆς Ἀκαρνανίας, ἀπὸ Τηλεβόου*, 620.14), but likewise in a mythical context. Melos is referred to by Steph. Byz. 450.14 only as *κώμη τῆς Ἀκαρνανίας*. Whether these names (except for Athenai) represent historical toponyms remains dubious.³

The remaining names attested in the sources and the archaeological sites, especially those included in *Barr.*, are the following.

1. Pre-Hellenistic Settlements not Attested as Poleis

Ambrakos (*Ἀμβρακος*) Steph. Byz. 85.10 (*πολίχμιον*); Polyb. 4.61.4, 63.4. Ps.-Skylax 33 speaks of an *ἐπὶ θαλάττης τεΐχος*, meaning obviously Ambrakos; for *τεΐχος* as “fort, fortress”, i.e. a fortification located in the territory of a *polis*, see Flensted-Jensen (1997) 120–21. Fortified settlement (Hammond (1967) 138). *Barr.* C.

Dioryktos (*Διόρυκτος*) Polyb. 5.5.12; Dion. Hal. *Ant.* 1.50.4. In *Barr.* a settlement of C?, but no settlement is attested.

Ellomenon (*Ἐλλομενόν*) Thuc. 3.94.1 is our only source, and there is no authority for *Barr.*'s Hellomenon. On Leukas (no. 126), and probably a second-order settlement. *Barr.* C.

Euboia (*Εὔβοια*) Strabo 10.1.15 (*τόπος*). Mentioned by Strabo in a retrospective context. *Barr.* A?

³ The Epidaurian list of *theorodokoi*, IG IV².1 95.33–38, has, between Argos and Aitolian Proschion, the places Akripos, Hyporeiai, Therminia and Phyleia. According to Robert (1940) 107–8, Hyporeiai was Akarnanian. So the other places, especially Akripos, which is named between Argos and Hyporeiai, may have been part of Akarnania too. Nevertheless, we have excluded them from this Inventory because there is no additional evidence for their being Akarnanian. See Perlman (2000) 69.

Idomene (*Ἰδομενή*) Thuc. 3.112.1. Place in Amphilochia, north of Argos (no. 115), with two hills, a higher and a lower one, according to Pritchett (1992) 37ff at modern Paliokoulia and Alonaki (the last one perhaps the site of a sanctuary, *ibid.* 45–46; cf. Schoch (1997) 39–40). According to *Barr.* a fortress and a sanctuary. *Barr. C.*

Ithoria (*Ἰθωρία*) Polyb. 4.64.9 (*χωρίον*). Fortified hill-top settlement (Bommeljé *et al.* (1987) 74, s.v. Agios Elias). *Barr. C.*

Kranea (*Κράνεια*) Theopomp. fr. 229 (*χωρίον Ἀμβρακιωτῶν*). Probably identical with Steph. Byz. 377.17: *Κορώνεια . . . φρούριον τῆς Ἀμβρακίας* (Hammond (1967) 140). *Barr. C.*

Krenai (*Κρηναί*) Thuc. 3.105.2 (*χωρίον*). Place in southern Amphilochia, *pace* Pritchett (1992) 13ff and Schoch (1997) 39, to be located at modern Palaioavli at the south-east corner of the Gulf of Arta: Hammond (1967) 248 n. 1. *Barr. C.*

Metropolis (*Μητρόπολις*) Thuc. 3.107.1, location and function unknown, near Olpai (Pritchett (1992) 26–27; Schoch (1997) 48–49). *Barr. C.*

Nellos (*Νήλλος* or *-ον*) IG II² 43.B.37–38. Also called Arkadia (Diod. 15.45.3). Unlocated fortified settlement on Zakynthos (no. 141), where the exiled Zakynthian democrats in 375 had established a temporary splinter community (Dreher (1995*b*) 177–78). *Barr. C.*

Nerikos (*Νήρικος*) Hom. *Od.* 24.377 (*πτολίεθρον*); Thuc. 3.7.4; Strabo 10.2.8; Eust. *Od.* 2.327.31. Fortified place perhaps in the *peraia* of Leukas (no. 126). *Barr. C.*

Nesos (*Νήσος*) Probably the harbour of Thyreion (no. 139). Not in *Barr.*

Olpai (*Ὀλπαι*) Thuc. 3.105.1 (*τεῖχος*). Fortified settlement in the territory of Argos Amphiloichikon (no. 115), used by the Akarnanians and (probably) the Argeians as the seat of their common law court, situated 25 stades from Argos, usually located at modern Agrilovuni (see e.g. Pritchett (1992) 22–25 or Schoch (1997) 37–38), where remains of a peribolos wall (Hammond (1967) 204–5) and of a large temple (Rhomaios (1918) 116) have been found. *Barr. C.*

Ptychia (*Πτυχία*) Thuc. 4.46.3 (*νήσος*); Steph. Byz. 538.10 (*νήσος παρὰ τῇ Κερκύρα*). The island of Ptychia mentioned by Thuc. 4.46.3 has been identified with the modern island of Vido (Bürchner (1922) 1411–12 no. 9;

Dontas (1965) 139–40 n. 3). *Barr. C.*

Sauria (*Σαυρία*) Diod. 19.67.4. Fortified place in central Akarnania, to be located at modern Rigani (Pritchett (1991) 8–9, 13–14). In 314 a place of refuge for the population of southern Akarnania, especially from Oiniadai (no. 130; Diod. 19.67.4); for a discussion of the historical circumstances, see Freitag (1994) 222–23. *Barr. C.*

2. Unidentified Classical Settlements

Ag. Mina Remains of a “town of no small importance” (Benton (1932) 233) on the island of Kalamos, probably of the Classical and/or Hellenistic periods. *Barr. C?*

Ag. Pandleimona Port and small fortress with finds from the Classical and/or Hellenistic periods, perhaps belonging to Astakos (no. 116) (Murray (1982) 57–61; Schoch (1997) 41–42). *Barr. C.*

Kalamos Benton (1932) 233–34 gives some information about ruins of various periods on the island of Kalamos: e.g. a round tower at Xylokastro. Not in *Barr.*

Kharakti (= *Kastro tou Sordatou*) See Pronnoi (no. 135).

Limena Vatheos (= *Ormos Vathy*) Remains of an ancient settlement with “a classical foundation” (Benton (1932) 232) on the island of Meganisi, which is usually identified with ancient Taphos. *Barr. A? or C?*

Lykoniko Fortified place south of Monastiraki (Akarnania), Pritchett (1992) 108–13; probably a fortress (or two), but the existence of a settlement is not to be excluded. *Barr. C?*

Palatia Possibly a settlement of the Classical period.

Psara Near the place Psara (or Psari), south of the modern village of Konopina, remains of at least two ancient cemeteries, ruins of houses on two hills, one of them called Kastro (information from local inhabitants), and numerous sherds (many of them black-glazed) and tile fragments indicate a settlement of Classical/Hellenistic times. The site is a candidate for an Akarnanian urban centre, which, however, in the present state of research cannot be identified with any of the places attested in our written sources. Not in *Barr.*

Sterna Fortified sanctuary and settlement on Mount Sterne in the territory of Palairos (no. 131). *Barr. A?C.*

II. The *Poleis*⁴

112. Alyzeia (Alyzaios) Map 54. Lat. 38.45, long. 20.55. Size of territory: 2. Type: A. The toponym is Ἀλύζεια, ἡ (SEG 15 393 (Dodona, C5–C4); SEG 42 1041 (Ephesos, C4)) and (in literary sources) Ἀλύζια (Thuc. 7.31.2), Ἀλύζεια (Xen. *Hell.* 5.4.65–66), Ἀλυζία (Ps.-Skylax 34) or Ἀύζεια (Hecat. fr. 111). The city-ethnic is Ἀλυζαῖος (on C4s coins, *infra*; IG VII 2418.18 (355–351), with a variant in the same inscription: Ἀλυζῆος (ibid. 5, cf. SEG 37 531.11)), or Ἀλυζεύς (IG IX².1 582.49 (Magnesia, c.207)), or—with reference to the Confederacy—Ἀκαρνάν ἐξ Ἀλυζέας (SEG 42 1041 (Ephesos, C4); cf. LGPN IIIA 367, s.v. Πόλλυς).

Alyzeia is called a *polis* in the urban sense by Ps.-Skylax 34. The collective use of the city-ethnic is attested externally in a decree from Thebes (no. 221) (IG VII 2418.5, 16, 18 (355–351)) and internally on coins (see *infra*) and on an undated tile stamp (IG IX².1 450); the individual use is attested externally in two inscriptions from Dodona (SEG 15 395 (C5–C4)) and Ephesos (SEG 42 1041 (C4)).

Whether Alyzeia was founded by Corinth (no. 227) is disputed (for a discussion, see Domingo-Forasté (1988) 23–25; Schoch (1997) 33). According to ancient tradition, the eponymous hero of the *polis* was Alyzeus, son of Penelope's father Ikarios and brother of Leukadios (*Alkmaionis* fr. 5, Bernabé; Ephor. fr. 124; Strabo 10.2.9).

Alyzeia was a member of the Akarnanian Confederacy (SEG 42 1041; cf. IG IX².1 582.49 (c.207)), during the Third Sacred War allied with Thebes (no. 221) (IG VII 2418), and a member of the Hellenic League of 323 (*Staatsverträge* 413). In 413 slingers and javelin-throwers from Alyzeia were raised by the Athenians (Thuc. 7.31.2, 5). An Athenian honorific decree of C4s may have bestowed *proxenia* on a citizen of Alyzeia (SEG 21 340.7–8: ... κράτους Ἀλ[ύζειον πρόξεινον]; cf. Diod. 18.11.1). *Theorodokoi* to host *theoroi* from Argos (no. 347) and Epidauros (no. 348) are attested for C4 (SEG 23 189.1.6 (330–324); IG IV².1 95.19).

The urban centre lay at a distance of 15 stades from the sea, the important harbour and precinct of Herakles at modern Mytikas (Strabo 10.2.21; Murray (1982) 114–21).

Alyzeia must have been fortified before 391 (ibid. 112–13). There are remains of the circuit walls 2.3 km long (apart from the southern wall, which has almost completely disappeared), with twenty-four towers, mostly of polygonal construction (ibid. 106–13), and a fortified acropolis at the north-east extremity of the city (ibid. 110–11). The walls enclosed an area of 27 ha.

Alyzeia struck coins between 350 and 330 (*BMC Corinth*, lviii, with reference to Imhoof-Blumer (1878) 47; Head, *HN²* 329). Corinthian staters (c.340–290; types: *obv.* Pegasos; *rev.* Athena) with the legend ΑΛΥΖΑΙΩΝ or ΑΛΥ were found in Sicilian hoards (Talbert (1971) 61; *IGCH* nos. 88, 2144–45, 2151, 2180–81, 2187–88; Taliercio Mensitieri and Spagnoli (1993) pl. 5f); *SNG Cop. Acarnania* 280–82. Contemporary bronze coins show types related to the cult of Herakles (Head, *HN²* 429).

113. Ambrakia (Ambrakiotēs) Map 54. Lat. 39.10, long. 21.00. Size of territory: 4. Type: A. The toponym is Ἀμπρακία, ἡ (SEG 41 540A.7 (C6); cf. Cassio (1994) 103 l.7; SEG 44 463) or Ἀμπρακία (Thuc. 4.42.3) or Ἀμβρακία (most common; see e.g. Xen. *Hell.* 6.2.3; Ps.-Skylax 33). The city-ethnic is Ἀμπρακιώτας, -της (Hdt. 8.45; Thuc. 1.46.1; Xen. *An.* 1.7.18; ML 27.11 (479); *CID* II 4.III.28 (363), and coin legends, see *infra*) or Ἀμβρακιώτας, -της (Hellen. fr. 83; IG II² 236.b.6 (338/7); and coin legends, see *infra*) or Ἀμβρακιάτ[ης] (Parke (1967) 267 no. 12; *SGDI* 3184; Ἀμβρακιά[τας] from Dodona (c.C3)) or Ἀμβρακίνος (Philistos (*FGH Hist* 556) fr. 62).

Ambrakia is called a *polis* in the urban sense by Thuc. 3.105.4, 110.1, 112.1, 8, 113.2, 4, 5; Ps.-Skylax 33; and in the political sense by Thuc. 3.113.6 and 7.25.9; it is subsumed under the heading *poleis* at Thuc. 2.9.2, 3. A *politēs* is attested in an inscription (SEG 41 540A.9 (C6)), and among the Aristotelian *politeiai* there was one of Ambrakia (fr. 481.1). In an early inscription Ambrakia is referred to as *patris* (SEG 41 540A.9 (C6)).

The collective use of the city-ethnic is attested externally on the Serpent Column from Delphi (ML 27.11) and in other inscriptions (IG II² 236.b.6; SEG 9 2.19, 56–57 = Tod 196 (330–325)), internally on coins (see *infra*; cf. the undated tile stamp SEG 34 588c). The individual use of the city-ethnic is attested externally, especially in inscriptions at Delphi (*CID* II 4.III.28; SEG 31 535.2 (both C4)).

The name of the territory was Ἀμβρακία (Archestratos fr. 16.1, Olson and Sens = *Suppl. Hell.* 146.1; Ps.-Skylax 33; *Etym. Magn.* 81.3–4). It is briefly described by Polyb. 21.26.3–4. Ambrakia bordered on the Thesprotians (Hdt.

⁴ According to the conventions of the database, the ethnics attested in the inscriptions of the Akarnanian Confederacy are classified as *external* because they were not found “inside” the respective *poleis*. On the other hand, the decrees of Korkyra, Same and Ithaka recorded in Magnesia are considered to be internal, because the written documentation alone is external whereas the decisions were taken in the *poleis* mentioned and the wording is their own. By contrast, the decrees summarised by the Magnesians with κατὰ τὰ αὐτὰ δὲ ἐψηφίσαντο are seen as *external*, the original wording being unknown.

8.47) and on the Amphilocheians (Hecat. fr. 26; Thuc. 2.68.5), and was situated in the region of Dryopis (Dion. Calliphon. 30, *GGM* 1 239); Athanadas (*FGrHist* 303) fr. 1). It had a *λιμὴν κλειστός* (Ps.-Skylax 33; Dion. Calliphon. 29–30, *GGM* I 239), and a fort *Ἀμβρακος* stood in the lagoons of the river Arachthus (Polyb. 4.61.4–8, 63.1–2; Steph. Byz. 85.10 calls it a *πολίχμιον*), which can be identified with remains on the island of Phidokastro (Hammond (1967) 138; Tzouvara-Souli (1992) 208–9). Two other settlements are mentioned by Steph. Byz. (381.13 with reference to Theopomp. fr. 229 (*Κράνεια χωρίον Ἀμβρακιωτῶν*), 377.17 (*Κορώνεια φρούριον τῆς Ἀμβρακίας*)). Another fortress, Herakleia, with a sanctuary of Herakles, occurs in a Hellenistic inscription (*SEG* 35 665.A.18, 27 (c.160)). The territory was divided into *μέρη* (*Δεξαμεναί*, Steph. Byz. 225.10) and a *μέρος ποτ' Ὀρραον* (*SEG* 35 665.A.18, 20 (c.160)) are attested, but they must not have been administrative units.

Ambrakia was founded by Corinthians (no. 227) (Thuc. 2.80.3; Dem. 3.34) at the time of Kypselos (Strabo 7.6.6, 10.2.8; Ant. Lib. *Met.* 4.4), i.e. between 657/6 and 627/6 (for the date of Kypselos, see Gehrke (1990) 34). The oecist was Gorgos, son of Kypselos (Ps.-Skymnos 455; Nic. Dam. (*FGrHist* 90) fr. 59.1; Strabo 10.2.8 (MS Gargasos); Ant. Lib. *Met.* 4.4 (MS Torgos); one coin attested: Kraay (1976) no. 428 with the name added).

After the expulsion of the tyrant Periander (Arist. *Pol.* 1304^a31–33, 1311^a40–^b1; cf. Plut. *Mor.* 768F (rC6)), Ambrakia was organised as a moderate oligarchy with a low census, later as a democracy (Arist. *Pol.* 1303^a20–25; Diod. 17.3.3; cf. Gehrke, *Stasis* 19; Schüttrumpf and Gehrke (1996) 455). After the battle of Chaironeia, an oligarchy was established, supported by a Makedonian garrison, but after the death of Philip II, Ambrakia became democratic again (Diod. 17.3.3, 4.3; cf. Gehrke, *Stasis* 19). The historical circumstances of the tyranny of a certain Phalaikos (or Phaylos) in Ambrakia (e.g. Ant. Lib. *Met.* 4.4–5) remain dubious, cf. Keyßner (1938) 1612.

Ambrakia was a member of the Hellenic League against Persia (Hdt. 8.45, 47, 9.28.5, 9.31.4; *Staatsverträge* 130). Before the Peloponnesian War, it sided with the Corinthians (no. 227) against Korkyra (no. 123) and acted, consistently, as a Spartan ally during the war (Thuc. 2.9.2, 2.80.5, 3.105.1, 6.104.1, 8.106.3), although in 426 it was forced to conclude a *symmachia* and a treaty with the Akarnanians and the Amphilocheians (Thuc. 3.114.3; *Staatsverträge* 175). In 395, Ambrakia became a member of the alliance between Boiotia, Athens (no. 361), Corinth (no. 227) and Argos (no. 347) against Sparta (no. 345) (Diod. 14.82.3; *Staatsverträge*

225), but it sided with Sparta against Athens and Korkyra in 375 and 373/2 (Xen. *Hell.* 5.4.65–66, 6.2.3). Ambrakia is attested as a member of the Corinthian League of 338/7 (*IG* II² 236.b.6; *Staatsverträge* 130) and of the Hellenic League of 323 (*Staatsverträge* 413). In 317/16, it was allied with Olympias (Diod. 19.35.7).

Ambrakia was engaged with contingents in the following battles: against Korkyra on the river Arachthus c.600 (*CEG* I 145; cf. Hammond (1967) 493; Andreou (1991) 436–38); against the Perrhaibians together with Corinth (no. 227) in C6 (*SEG* 41 540A.7; cf. Cassio (1994) and *SEG* 44 463); at Salamis with seven ships (Hdt. 8.45); at Plataiai with 500 hoplites (Hdt. 9.28.5, 31.4); at Epidamnos in 435 with eight ships (Thuc. 1.27.2); at Sybota in 433 with 27 (Thuc. 1.46.1); and against Korkyra together with Leukas (no. 126) in 427 with thirteen ships (Thuc. 3.69.1). In 425, Ambrakia went to war against Akarnania and Amphilocheian Argos (no. 115) with at least 3,000 hoplites (Thuc. 3.105.1), and in 414, three Ambrakian ships joined the Corinthian fleet (Thuc. 6.104.1). In 405, the Ambrakian Euantidas fought under Lysander's command at Aigos potamoi (Paus. 10.9.10). In 375 and 373/2, Ambrakia supported the Peloponnesian navy with six ships (Xen. *Hell.* 5.4.65–66, 6.2.3).

The patron deities were Apollo Soter (or Agyieus) and Herakles; cf. the *aition* reported by Ant. Lib. *Met.* 4 (cf. *SEG* 35 665.B.33–34, 45 (C2), with Cabanes and Andréou (1985) 513, 531, 533–34; Jacoby, comm. in Athanadas (*FGrHist* 303); Tzouvara-Souli (1992) 197–200). The Ambrakians used a Dorian calendar like Corinth (no. 227) and Korkyra (Bischoff (1919) 1592 no. 32; cf. Cabanes and Andréou (1985) 536–37). Sophron of Ambrakia is recorded as a winner in the Olympic Games of 432 (*Olympionikai* 321).

The eponymous hero of the *polis* was Ambrax, son of Thesprotos and grandson of Lykaon (Steph. Byz. 84.22–85.1; Eust. *Comm. Dionys. Per.* 493, but see Hecat. fr. 26) or son of Dexamenos and grandson of Herakles (Dion. Hal. *Ant. Rom.* 1.50.4). According to another version, Ambrakia, daughter of the Dryopian king Melaneus or Augeas or Phorbas, son of Helios, was eponymous (cf. Ant. Lib. *Met.* 4.3; Steph. Byz. 85.1–2, 225.11–12; Eust. *Comm. Dionys. Per.* 493).

Ambrakian *theorodokoi* are attested for *theoroi* from Argos (no. 347; *SEG* 23 189.1.10 (330–324)), Delphi (no. 177) (*SEG* 31 535.2 (c.320)) and Epidauros (no. 348) (*IG* IV².1 95.32, 81–82 (356/5)). In the Delphic decree a grant of *proxenia* was added to the grant of *theorodokia* (*SEG* 31 535.3).

Public architecture is not attested before the Hellenistic period, nor are there ruins of older public buildings except

for the remains of a late Archaic temple (Tzouvara-Souli (1992) 43; Lang (1996) 296 with n. 529). The acropolis was situated on the hill called Perranthes (Livy 38.4.1, 4.6, 5.2; cf. Hammond (1967) 143). The walls mentioned by Livy (38.4.4) belong primarily to the time of Pyrrhos; they enclose an area of c.130 ha, but there are remains of the older walls of late Archaic or Classical times (Hammond (1967) 141–44, 481, 584–85, 659; Cabanes and Andréou (1985) 525–27 (sketch); Pritchett (1992) 120 with reference to Catling; Tzouvara-Souli (1992) 26–31; Andréou (1993) 93–94; Lang (1996) 296). The city buildings follow a plan with a rectangular road system (Tzouvara-Souli (1992) 31–33; Andréou (1993) 93–94; Lang (1996) 297–98) in both Archaic and Classical times. It has been suggested that one of the two theatres attested by archaeology goes back to C4l (*TGR* ii. 129) and is the one referred to at Dion. Hal. *Ant. Rom.* 1.50.4 (cf. Frederiksen (2002) 72).

Ambrakia struck coins on the Corinthian standard and with Corinthian types (pegasi) in about 480, in the 430s and in C4s (Kraay (1977), (1979), and Talbert (1971); *IGCH passim* (cf. p. 395); Kraay (1976) 126–28; Taliercio Mensitieri and Spagnoli (1993), especially pls. 3 and 5b–f, h, i, l; *CH*viii. 226, 450, 530). They bear the legends *ΑΜΙΠΑΚΙΟΤΑΝ*, *ΑΜΙΠΑΚΙΩΤΑΝ*, or *ΑΜΒΑΚΙΩΤΑΝ* and various abbreviations (Head, *HN*² 319–20; Franke (1961) 323–32; Hammond (1967) 717–31; Tzouvara-Souli (1992) 127–32; cf. Kraay (1976) 123–27; Stazio (1995) 181 and the articles cited above). *SNG Cop. Acarnania* 1–20.

114. Anaktorion (Anaktorieus) Map 54. Lat. 38.55, long. 20.50. Size of territory: 2. Type: A. The toponym is *Ἀνακτόριον* (Thuc. 1.55.1; *IG* iv².1 95.22 (356/5)), originally *Φανακτόριον* (cf. the city-ethnic *Φανακτοριῆς*). The city-ethnic is *Ἀνακτοριεύς* (coins with *ΑΝΑΚΤΟΠΙΕΩΝ* (*infra*); *IG* ix².1 3A.24 (263?)), originally *Φανακτοριεύς* (ML 27.10 (Delphi, 479), and the earliest coin legend), or *Ἀνακτόριος* (Hdt. 9.28.5; Thuc. 1.46.1; coins with *ΑΝΑΚΤΟΠΙΩΝ* (*infra*)).

Anaktorion is called a *polis* in the urban and political senses simultaneously by Thuc. 4.49 (Hansen (1998) 32–33); in the urban sense implicitly by Ps.-Skylax 34, and in the political sense Anaktorion is subsumed under the heading *poleis* at Thuc. 1.46.1–2 and 2.9.2–3.

The collective use of the city-ethnic is attested externally on the Serpent Column from Delphi (ML 27.10 (479)) and internally on coins (see *infra*). The individual use of the city-ethnic is attested in the inscription concerning the cult of Artemis Leukophryene in Magnesia (*IG* ix².1 582.5 (c.207)).

The name of the territory was *Ἀνακτορία γῆ* (Thuc. 1.29.3) situated *ἐπὶ τῷ στόματι τοῦ Ἀμβρακικοῦ κόλπου* (Thuc. 1.55.1, 4.49), 40 stades from Actium (Strabo 10.2.7). Anaktorion possessed a *λιμῆν* (Ps.-Skylax 34) inside the Gulf of Arta and another *ἐκτός*, at the sanctuary of Apollo Aktios (Strabo 10.2.7). Anaktorion was part of Akarnania according to the *theorodokoi* lists (*IG* iv².1 95.8 + 22; *SEG* 36 331.A.15 + 20 (both C4s)) and Ps.-Skylax 34.

Anaktorion was founded by Corinthians (no. 227; Paus. 5.23.3; Steph. Byz. 92.15–16; the participation of Korkyra (no. 123) is disputed; cf. Domingo-Forasté (1988) 6–42; De Fidio (1995) 125ff) at the time of Kypselos (657/6–627/6; for the date, see Gehrke (1990) 34; Strabo 10.2.8; Nic. Dam. (*FGrHist* 90) fr. 57.7). For a discussion of Plut. *Mor.* 552E (colonisation of Anaktorion under Periander's rule), see Domingo-Forasté (1988) 8–11. The oecist was Echiades (Nic. Dam. *loc. cit.*). Thucydides' description of Anaktorion as *Κορινθίων πόλις* (4.49) indicates that in C5 it was still, at least to some extent, controlled by its *metropolis*.

During the Great Persian War, Anaktorion belonged to the Hellenic League (Hdt. 9.28.5, 31.4; ML 27.10; *Staatsverträge* 130). It is attested as a *symmachos* of Sparta (no. 345) in 431 and 429 (Thuc. 2.9.2, 80.5) and entered into alliance with Thebes (no. 221) during the Third Sacred War (*IG* vii 2418). In the battle of Plataiai, Anaktorion was present, together with Leukas (no. 126), with 800 hoplites (Hdt. 9.28.5). During the Korkyra campaign of 435, it joined the Corinthians (no. 227) with one ship under its own commander (Thuc. 1.46.1).

Being founded by Corinthians, Anaktorion was *κοινὸν Κερκυραίων καὶ ἐκείνων* (Thuc. 1.55.1). In 432 it was captured by the Corinthians and received new Corinthian settlers (*ibid.*; Losada (1972) 17). When it was captured by Athenians and Akarnanians in 425, the Akarnanians sent new colonists (Thuc. 4.49, probably reflected in Ps.-Skymnos 460–61). After that, Anaktorion must have been a member of the Akarnanian Confederacy (Freitag (1996) 85–86, attested in *IG* ix².1 3A.24 (263?), 583.8 (216), 582.41 (c.207)).

Theorodokoi were appointed to host *theoroi* from Argos (no. 347) (*SEG* 23 189.1.3 (330–324)), Epidauros (no. 348) (*IG* iv².1 95.22, 76–77 (356/5)) and Nemea (*SEG* 36 331.A.20–23 (331/30–313)). The public assembly of Anaktorion was called *halia*, the eponymous magistrate was a *prytanis* (*IG* ix².1 212.1, 3 (C4–C3)); cf. Sherk (1990a) 257.

The famous sanctuary of Apollo Aktios was situated outside the city (Thuc. 1.29.3; cf. *IG* ix².1 583.14–15, 54 (Olympia, 216) and 582.40–41 (Magnesia, c.207)), with a temple of

Apollo (Strabo 7.7.6), a *Helenaion*, other unknown structures ἐν τ[ῶν] ἄλσει and *parembolai*, i.e. places for camping visitors (*IG* ix².1 583.38–41; cf. Habicht (1957) 98–102). There was a festival (ἡ Ἀκτιάς, *IG* ix².1 583.45; cf. *BE* (1956) 11) with *agones*. From C4 onward, some types of coins refer to this cult and festival.

The circuit of the city walls was described by Leake (1835) 493–94 (cf. Strauch (1996a) 377). Thucydides reports at 4.49 that Anaktorion in 425 was betrayed to the Athenians, an indication that the town was fortified.

Anaktorion struck coins on the Corinthian standard and with Corinthian types (pegasi) in the 430s and in C4s (Imhoof-Blumer (1878) 53ff; Kraay (1979) 53, 55; Domingo-Forasté (1988) 132–46 and (1993); Talbert (1971) 61; *IGCH passim* (cf. p. 395); Taliercio Mensitieri and Spagnoli (1993) pl. 3; *CH* viii. 159, 167, 232; cf. in general Head, *HN*² 329). The coins bear the legends *ΑΝΑΚΤΟΠΙΕΩΝ*, *ΑΝΑΚΤΟΠΙΩΝ* and various abbreviations, the oldest coins use initial *F*.

115. Argos (Argeios) Map 54. Lat. 38.55, long. 21.10. Size of territory: 3. Type: A. The toponym is Ἄργος, τό (Thuc. 3.105.2; *IG* iv².1 95.33 (356/5)) or Ἄργος τὸ Ἀμφιλοχικόν (Hecat. fr. 102c; Thuc. 2.68.1, 3). The city-ethnic is Ἀργεῖος (Thuc. 3.105.1; Cabanes (1976) 586 no. 70.7 (Dodona, C4)) and Ἀργεῖος ὁ Ἀμφίλοχος (*IG* ix².1 186.16 (Magnesia, c.207)) or Ἀμφίλοχος ἐξ Ἄργεος (*F.Delphes* III.4 407 (325–275)).⁵

Argos is called a *polis* in the urban sense by Thuc. 2.68.9, 3.105.1, 106.3, and by Ps.-Skylax 34; the territorial sense is a connotation at Thuc. 2.68.4 and 6, as is the political sense at 2.68.4. At Hecat. fr. 102c = Strabo 6.2.4 we cannot be certain that the term *polis* stems from Hekataios.

The collective use of the city-ethnic is attested externally by Thucydides (see *supra*) and internally on C4s coins (see *infra*). The individual use of the city-ethnic is attested externally in an Athenian proxeny decree (*IG* II² 374.11–12 (322/1)) and in Dodona (see *supra*).

The territory was called Ἀργεῖα (Thuc. 3.105.1, 106.3) or Ἀμφιλοχία (Thuc. 3.105.2). There existed at least three other settlements within the territory: Olpai (τεῖχος, Thuc. 3.105.1), Metropolis (Thuc. 3.107.1; Pritchett (1992) 25–27) and Krenai (χωρίον, Thuc. 3.105.2). In C5, Limnaia (no. 127)

was part of the Argeia too (Thuc. 2.80.8). The Argeia was situated between Epiros and Akarnania; cf. also *IG* iv².1 95.33.

The mythical founder of Argos was Amphilochos (Hecat. fr. 102c; Thuc. 2.68.3; Ps.-Skymnos 455–57, according to Ephor. fr. 123b together with his father and brother, sc. Akarnan), the son of Alkmaion (Ephor. fr. 123b) or Amphiaros (Thuc. 2.68.3; Ps.-Skymnos 455–57). According to Thuc. 2.68.5, only the Argeians (together with the Ambrakiot settlers expelled at about 440 BC, see *infra*), probably the population of the urban centre, were Hellenes while the other Amphilochians were Barbarian (for a discussion of the problem cf. Hammond [1967] 419; Hornblower [1991] 353–3).

Whether Argos was a member of the Akarnanian Confederacy is disputed (Klaffenbach (1957) xviii against Beloch (1922) 291). In about 440 the Amphilochians were expelled by Ambrakian settlers, but some two years later, with Athenian aid, they were resettled together with Akarnanians in Argos, while the Ambrakian settlers were exposed to *andrapodismos* (Thuc. 2.68.5–7; Gehrke, *Stasis* 34). At least there must have been a special relationship between Argos and the Akarnanian Confederacy (Gehrke (1994–95) 43 with n. 6).

The Argeian/Akarnanian physician Euenor was honoured by the Athenians with proxeny (*IG* II² 242 + 373 (337/6)), later citizenship (*IG* II² 374 (322/1)). Argeian *theorodokoi* hosted *theoroi* from Argos (no. 347) (*SEG* 23 189.I.9 (330–324)) and Epidauros (no. 348) (*IG* iv².1 95.33).

The surviving walls at the site of Neochori are described by Pritchett (1992) 20–21 (with pls. 22–25), those of Palaioavli, Pritchett's candidate for Argos, *ibid.* 17 (with pls. 9–21). Argos is commonly connected with the ruins near Ag. Ioannis/Neochori (Heuzey (1860) 282ff; Oberhammer (1887) 26–27; Strauch (1996c); *Barr.*); for a recent discussion, see Hammond (1967) 246 and Pritchett (1992) 13–21, who locate Argos at Palaioavli (cf. Schoch (1997) 38); but the remains at Neochori are much more impressive and thus a better candidate for a major *polis* site than the ruins at Palaioavli (probably ancient Krenai, see *supra* 353). Thucydides' description of the unsuccessful Ambrakian attack on Argos in 430 indicates that the city was fortified (Thuc. 2.68.9).

Argos struck coins of silver and bronze on the Corinthian standard and with Corinthian types in C4s (Talbert (1971) 61; *IGCH passim* (cf. p. 396); Taliercio Mensitieri and Spagnoli (1993) pls. 3, 5; *CH* viii. 159, 167, 232, 431; cf. in general Imhoof-Blumer (1878) 82–97). The coins bear the legends *ΑΠΤΙΩΝ*,

⁵ Perhaps other Argeioi are mentioned in Greek inscriptions, but normally an Argeios will be identified with a citizen of the famous city in the Argolid. But the Argeios named in the inscription published by Cabanes (1976) 586 no. 70.7 (Dodona, C4) looks like a neighbour of the two other persons, a Horraitas and a Dodonaioi; cf. also the Argeioi in *IG* ix.1² 125.10, 49–50; 30.21, 24, 29.

ΑΡΓΕΩΝ, *ΑΡΓΕΙΩΝ*, or *ΑΜΦΙΛΟΧΩΝ* and various abbreviations. *SNG Cop. Acarnania* 308–22.

116. Astakos (Astakenos) Map 54. Lat. 38.35, long. 21.05. Size of territory: 2. Type: A. The toponym is Ἄστακός, ἡ (Thuc. 2.30.1, 33.1) or Ἄστακοί (only in inscriptions: *IG* IV².1 95.14 (356/5); *SEG* 36 331.A.52 (331/30–313)). The city-ethnic (not attested before the Hellenistic period) is Ἄστακός (*IG* IX².1 443 (C3–C2); *IG* IX².1 208.4, 33 (C2); cf. Klaffenbach (1957) 87) or Ἄστακηνός (*SEG* 43 35 (C3)). A C4 Attic inscription (*IG* II² 266) has Ἀκαρνᾶνες ἐξ Ἄσ[τακοῦ (vel Ἄσ[τακῶν]). There was another city named Astakos in Bithynia (no. 737). Well known, e.g. as a member of the Delian League, this *polis* (destroyed and refounded by the Bithynian king Zipoites near the former site) took the name Nikomedeia in early C3. Therefore, all Astak(en)oi attested in Hellenistic inscriptions must be seen as citizens of the Akarnanian *polis*, e.g. the *paroikos* Nikon Astakenos at Rhamnous (*SEG* 43 53 (C3 after 229)). Only the πατρις Ἄστακίη (*SEG* 4 105 (Rome, first century AD)) may refer poetically to Nikomedeia, cf. e.g. Nonnus, *Dion.* 14.327, 16.166 or *Anth. Pal.* 7.627.3.

Astakos is called a *polis* in the urban sense by Ps.-Skylax 34, who also classifies Astakos as a *limen*. Thuc. 2.30.1 has χωρίον.

The collective use of the equivalent of the city-ethnic is attested externally in an Athenian inscription (*IG* II² 266) and internally on a stamped tile (*IG* IX².1 443 (C3–C2)). The individual use of the city-ethnic is attested externally in, e.g., *SEG* 43 53 (Rhamnous, C3), see n. 7. The bay near Astakos is named Ἄστακηνός κόλπος by Strabo 10.2.21.

Steph. Byz. 137.6 calls Astakos Κεφαλληνίας ἄποικον, but, according to Kirsten ((1940) 298), it may have been a colony of Corinth (no. 227), like Anaktorion (no. 114), Ambrakia (no. 113) and Leukas (no. 126; cf. Wacker (1996a) 99 with n. 6; Schoch (1997) 42; *contra* Klaffenbach (1957a) x).

According to the *theorodokoi* lists, Astakos was part of Akarnania (*IG* IV².1 95.8 + 14 (356/5)). After the expulsion of the tyrant Euarchos in 431 (Thuc. 2.30.1), repeated after his return in 429, Astakos became an Athenian ally and, probably, a member of the Akarnanian Confederacy (cf. Gomme *ad* Thuc. 2.102.1). The membership is attested only later (*IG* IX².1 208, 209 (C2)). *Theorodokoi* to host *theoroi* are attested in Epidauros (no. 348; *IG* IV².1 95.14, 63 (356/5)) and in Nemea (*SEG* 36 331.A.52–53 (331/30–313)).

Ruins of a sanctuary of Zeus Kara(i)os have been found 200 m west of the western gate; they can be identified by an inscription of C2 (*IG* IX².1 434). The remains of the ancient

walls, visible today as foundations of a mediaeval wall, are poorly preserved (Wacker (1996a) 101). The masonry suggests different phases (Murray (1982) 69–70), the first being probably C5 (Oberhummer (1887) 212; Philippon and Kirsten (1958) 395).

Astakos struck silver coins perhaps only in C4s, on the Corinthian standard and with Corinthian types: *obv.* Pegasos; *rev.* head of Athena with an *astakos* (i.e. a crayfish); legend: ΑΣ (Imhoof-Blumer (1878) 97–99; Head, *HN*² 329; *CH* viii. 232).

117. Derion (Derieus) Map 54. Lat. 38.40, long. 21.20. Size of territory: 1. Type: C. The toponym is Δήριον, τό (*SEG* 36 331.A.41 (331/30–313)). The city-ethnic is Δεριεύς (*IAEpi* 42.61, 65 (C3); Diod. 19.67.4 (r314)) or Δηριεύς (*IG* IX².1 3A.23 (263?)).

Derion is probably to be connected with the ruins at Skourtou in central Akarnania (Rhomaïos (1918) 113–14; cf. the discussion by Pritchett (1992) 81–85); it is not attested as a *polis* in our sources. If the identification with the ruins of Skourtou is correct, Derion had an urban centre and may have been a *polis* already in C5–C4, not just one of the ἔθνη attested in *IG* IX².1 583.40 (Olympia, 216).

The collective use of the city-ethnic is attested externally by Diod. 19.67.4 (r314). The individual use of the city-ethnic is attested externally in an inscription from the Asklepieion at Epidauros (*IAEpi* 42.61, 65 (C41–C3e)) and in the treaty of 263(?) between the Aitolians and Akarnanians (*IG* IX².1 3A.23).

According to the Nemean *theorodokoi* list, Derion was part of Akarnania (*SEG* 36 331.A.15 + 41 (331/30–313)). At least in 314 it was a member of the Akarnanian Confederacy (Diod. 19.67.4; *IG* IX².1 3A.23; cf. also the *theorodokoi* lists cited below). In C41–C3e Aristarchidas of Derion was appointed *proxenos* by Epidauros (no. 348) for having hosted *theoroi* from there (*IAEpi* 42.61, 65). Other *theorodokoi* are attested in the Nemean List (*SEG* 36 331.A.41–43 (331/30–313)).

The remains of the site at Skourtou have recently been described by Pritchett (1992) 81–85, who refers to the acropolis, a possible temple site (citing Woodhouse) and the walls, and mentions “pieces of glazed pottery” of C5 (*ibid.* 85). However, there is a problem concerning the walls: Diodorus speaks of <ἀν>οχύρων καὶ μικρῶν χωρίων and of διεσπαρμένης τῆς οἰκίσεως and mentions Δεριεῖς in that context (19.67.3–5). But <ἀν>οχύρων is a conjecture (by Reiske and Dindorf); the MSS have ὀχύρων, and Diodorus writes in general terms.

118. Echinios (Echinaios) Map 54. Lat. 38.55, long. 20.55. Size of territory: 1. Type: B. The toponym is *Ἐχίνεος, ὁ* (IG IV².1 95.17 (356/5)) or *Ἐχίνος* (SEG 36 331.A.24 (331/30–313)). The city-ethnic is *Ἐχινναῖος* (IG II² 208.1, 7 (suppl.) = *Staatsverträge* 325 (349/8)). Perhaps more Akarnanian Echinaioi are mentioned in Greek inscriptions, but normally an Echinaios will be identified with a citizen of the homonymous city in Malis, cf. e.g. SEG 25 642 (168/7).

Echinios is, in all probability, to be located at the ancient site of the Kastro of Prophitis Elias (Pritchett (1992) 93–101). Echinios is commonly located on the bay of Rouga (Heuzey (1860) 375–76; Oberhummer (1887) 36; Philippson (1905); Klaffenbach (1957) 33). But Rouga is an obvious place for the harbour of Thyrraeon (no. 139). According to an inscription found during an excavation at Rouga by L. Kolonas (not yet published), its probable name was Nesos.

Echinios is not attested as a *polis*. The Hellenistic poet Rhianos of Bene called it *ἄστν* (Steph. Byz. 292.16–17: *Ἐχίνος ἄστν, Ἐχίνον(?) ἄστν conj.* Jacoby, *FGrHist* 265, fr. 34). As a member of the Akarnanian Confederacy which had an urban centre and presumably struck coins, Echinios was probably a *polis*, at least from C₄ (*infra*).

The external use of the city-ethnic is attested in an Attic decree of 349/8 (IG II² 208, the individual use in line 1, the collective in line 7 (suppl.)). For the individual use, see also *Ἀκαρνάν ἀπ' Ἐχίνου*, in a funerary epigram from Kos (IG IX².1 579.6 (C₃)).

According to the *theorodokoi* lists, Echinios was part of Akarnania (IG IV².1 95.8 + 17 (356/5); SEG 36 331.A.15 + 24 (331/30–313)). The mythical founder and eponym was Echinios (Rhianos (*FGrHist* 265) fr. 34 = Steph. Byz. 292.16–17). Membership of the Akarnanian Confederacy is well attested (IG II² 208.1, 6ff = *Staatsverträge* 325 (349/8), cf. IG IX².1 579.6 (C₃)).

Echinios sent envoys to Athens (no. 361) in 349/8 (IG II² 208; cf. Wilhelm (1889) 127–30), and there were Echinaian *theorodokoi* to host *theoroi* from Epidauros (no. 348) and from Nemea (*supra*).

The remains of the site of Kastro to be identified with Echinios are described by Pritchett (1992) 93–97, who mentions Geometric, Classical and Hellenistic pottery. The walls have been compared with those of Rhamnous and Eleutherai by Heuzey (1860) 381–82. A *temenos* of Apollo is attested in an epigram found at the Kastro (IG IX².1 238.5; cf. now Pritchett (1992) 95).

A Pegasus-type stater on the Corinthian standard (*obv.* head of Athena with fish-hook; legend: E) has tentatively been attributed to Echinios (Imhoof-Blumer (1878) 100;

Head, *HN*² 329). Since then, eight coins of this type have been found in Sicilian and South Italian hoards (Talbert (1971) 62; *IGCH* no. 2187; Taliercio Mensitieri and Spagnoli (1993) especially pls. 1, 3; *CH* viii. 232); the coinage can be dated to C₄s: *SNG Cop. Acarnania* 324.

119. Euripos (Euripios) Map 54. Lat. 38.55, long. 21.00. Size of territory: 1. Type: B. The toponym is *Ἐϋρίπιος, ὁ* (Ps.-Skylax 34 according to the MS; cf. Marcotte (1985) 254; IG IV².1 95.15 (356/5)). The city-ethnic is *Ἐϋρίπιος* (*ArchDelt* 22B.2 (1967) 321; *BE* (1970) 343 (C₃s); cf. Antonetti (1987) 100–1; Strauch (1996a) 282–83, 319; but the connection with the Akarnanian Euripos is not beyond doubt; there are also inscriptions relating to other *euripoi* *Euripoi*, e.g. SEG 3 415).

Euripos is presumably to be located west of the site Saradiniko on the west bank of the river Nissis near Loutraki (described by Pritchett (1994) 192–95). Pritchett (1992) 90–92 locates Euripos on the Bay of Rouga, but for the connection of that site with the harbour of Thyrraeon, see above Echinios (no. 118); cf. Kirsten (1941a) 108 n. 3; Schwandner in AA (1991) 614. Euripos is not attested as a *polis* in the sources, but from the passage of Ps.-Skylax (*supra*) and, particularly, from the *theorodokoi* lists concerning Akarnania (see *infra*), we have to infer that it was a member of the Akarnanian Confederacy. Since remains of a Classical and Hellenistic urban settlement with a cemetery exist west of the above-mentioned Late Hellenistic/Roman site of Saradiniko (information from E.-L. Schwandner), Euripos was probably a *polis*, at least from C₄.

The collective use of the city-ethnic is attested externally in a C₃s building inscription at Makryada (*ArchDelt* 22B.2 (1967), but see *supra*).

Euripian *theorodokoi* hosted *theoroi* from Epidauros (no. 348) (IG IV².1 95.15 (356/5); cf. SEG 35 306) and from Nemea (SEG 36 331.A.28–30 (331/30–313)). The Pegasos-type staters with an E assigned to Echinios (no. 118) may have been coins of Euripos as well.

120. Herakleia Map 54. Lat. 38.55, long. 20.55? The location of Herakleia is unknown, *pace Barr.* map 54, Pritchett suggests the area of Vonitsa ((1992) 2–3, 97–101; cf. SEG 42 379), but the question has to remain open. Thus, there are no identifiable ruins to show that Herakleia had an urban centre; nor is Herakleia mentioned in the *theorodokoi* lists. Type: C. The toponym is *Ἑράκλεια* (SEG 1 94; cf. *LSAG*² 127–28, 131 no. 13 (C₇–C₆)) or *Ἡράκλεια* (Steph. Byz. 303.16, 304.2).

Herakleia is not mentioned as a *polis* in the ancient sources. Pliny records it under *Acarnaniae* . . . *oppida* (*HN* 4.5).

Because of the Corinthian interests in the region, the inscription on the golden phiale of C7–C6 found in Olympia (SEG 1 94; cf. *supra*) is connected with Pliny's *Heraclia* by Pritchett (1992) 100–1, *contra* L. Antonelli; cf. SEG 45 404.

Coins of C5s with the legend *HPAKΛEΩTΩN* or monograms attributed by Imhoof-Blumer (1878) 101–12 to the Akarnanian Herakleia may have been struck by another Herakleia (cf. Head, *HN*² 328–34; Rhomaios (1918) 115). *SNG Cop. Acarnania* 325.

121. Hyporeiai (Hyporeates) Map. 54. Unlocated, not in *Barr.* Type: C. The toponym is 'Υπώρειαι (IG IV².1 95.35 (356/5)). The ethnic is 'Υπωρεά(της) (IG IX².1 587.3 (C4); cf. SEG 39 281).

On the location, see Pritchett (1992) 79 n. 1: "L. Robert, *Hellenica* 1 (1940) 106–108, has shown . . . that it [sc. Hyporeiai] was an Akarnanian town and he suggests from its position that it was in eastern Akarnania on the Aitolian frontier 'au pied des monts'."

Hyporeiai is attested only twice: as a toponym in an Epidaurian *theorodokoi* list, and on an Athenian grave *stèle* from the Piraeus (both cited above). Since the deceased of IG IX².1 587 is called *Ἀκαρνάν 'Υπωρεά(της)* (Robert (1940) 106–8), Hyporeiai must have been a member of the Akarnanian Confederacy in C4. So it may have been a *polis* (cf. *loc. cit.*), although an *ἔθνος* (cf. Habicht (1957) 109–10) cannot be excluded.

A *theorodokos* to host *theoroi* from Epidauros (no. 348) is attested for 356/5 (IG IV².1 95.35 (356/5)).

122. Ithaka (Ithakesios) Map 54. Lat. 38.25, long. 20.40. Size of territory: 2. Type: A. The toponym is 'Ιθάκα, ἡ (*I.Magnesia* 35.37 = Rigsby (1996) 212–14 no. 85 (c.207)) or 'Ιθάκη (Ps.-Skylax 34). The city-ethnic is 'Ιθακήσιος (Bacchyl. fr. 29; Eur. *Cyc.* 277; Arist. *Ithac. Pol.* fr. 511) or 'Ιθακος (*I.Magnesia* 36.4, 27; this form of the ethnic is also found on coins (*infra*) but is otherwise confined to poetry and to Odysseus, e.g. Eur. *Cycl.* 103).

Ithaka is attested as a *polis* in the urban sense by Ps.-Skylax 34 and in the political sense by Eur. *Cyc.* 276 (but in a mythical context). The earliest epigraphical attestation of the political sense is in an Ithakan decree from Magnesia (*I.Magnesia* 36.4, 27 (c.207)). *Polis* status in C6 may be inferred from the cult of the goddess Athena Polias (IG IX².1 1614 (C6), *contra* Cole (1995) 301–4. Ithaka is included among the Aristotelian *politeiai* (Arist. fr. 509–14).

The collective use of the city-ethnic is attested externally in the Aristotelian *'Ιθακησίων πολιτεία* (no. 68, Gigon) and internally on the coins (see *infra*).

The name of the island is 'Ιθάκη (Hom. *Il.* 2.632; *Od.* 1.18). It is identical with that of the city and the territory (Ps.-Skylax 34). The place *Ἀλαλκομεναί* called ἡ τῶν 'Ιθακησίων πόλις (Plut. *Mor.* 301D) or πόλις ἐν 'Ιθάκῃ τῇ νήσῳ (Steph. *Byz.* 75.14) is commonly identified with the site at the Aëtos mountain (Partsch (1890) 57–58; Strauch (1996b)), but it seems to be a mythological fiction (Wirbelauer (1998) 248–51). Other toponyms on Ithaka attested in ancient sources derive from the *Odyssey*. The island is situated near Kephallenia (Strabo 10.2.11–12; Steph. *Byz.* 328.12; cf. Strabo 8.2.2).

From the fact that Kephallenian cities were members of the Second Athenian Naval League, Dreher (1995b) 191, 199, infers Ithakan membership of the League too. The only *psaphisma* of Ithaka known to us is the inscription from Magnesia on the Maeander (*I.Magnesia* 36.29 (c.207)).

There was a sanctuary of Athena Polias and Hera Teleia (IG IX².1 1614 (C6); cf. *I.Magnesia* 36.30) and a cave sanctuary at the Polis bay (Benton (1934–35), (1938–39); Steinhart and Wirbelauer (2002) 334–35, Mycenaean to Roman times) with dedications, particularly to the Nymphs and to Herakles and Odysseus. The veneration of Athena and Odysseus is also attested on some coins (Head, *HN*² 428 (C4–C3)). A sanctuary and temple of Apollo were situated in the saddle east of the Aëtos mountain (Symeonoglou, *Prakt* (1986) 236–37, pl. 104a; cf. SEG 38 432 (C6–C3) and IG IX².1 1685). The existence of a *stadion* is to be concluded from the mention of the games called *Odysseia* in *I.Magnesia* 36.16.

The settlement in the saddle east of Aëtos, presumably the urban centre of Ithaka, had a fortified acropolis on the summit of the mountain and polygonal city walls (C5–C4; sketch map: Heurtley and Lorimer (1932–33) pl. 1; renewed: Symeonoglou, *Prakt* (1985) 202; cf. especially Kilian (1975)) and several buildings (Symeonoglou, *Prakt* (1984ff); *Ergon* (1984ff); Steinhart and Wirbelauer (2002) 331; Randsborg (2002) 1.109, 2.282–83). The city walls enclose an area of c.12 ha. A harbour (Λιμὴν) is recorded by Ps.-Skylax 34. There are other remains of polygonal walls scattered on various sites in the northern part of the island.

The eponym of Ithaka was Ithakos (Hom. *Od.* 17.207), brother of Neritos and son of Pterelaos (Akousilaos (*FGrHist* 2) fr. 43), cf. Wirbelauer (1998) 280–83.

The patron deity of Ithaka was Athena Polias (IG IX².1 1614 (C6); cf. SEG 27 180; *LSAG*² 231 no. 3). There was a festival called *Odysseia* at least in the Hellenistic period (*I.Magnesia* 36.16).

Ithaca struck bronze coins from C4 to C2. Types: *obv.* head of Athena or Odysseus; *rev.* fulmen in olive wreath, or Odysseus, or cock; legend: *ΙΘΑ, ΙΘΑΚΩΝ* (Postolakas (1868) 90; Head, *HN*² 428; Grose (1926) nos. 6697–99; *SNG Cop. Acarnania* 478).

123. Korkyra (Korkyraios) Map 54. Lat. 39.35, long. 19.55. Size of territory: 5. Type: A. The toponym is *Κορκού[ρα]* (Korinna col. II.36, Campbell), *Κόρκυρα*, ἡ (*IG* I³ 364.1, 7 = ML 61 (433/2); *IG* IV².1 95.28 (356/5)) or *Κέρκυρα* (*IG* II² 5224.2 = *CEG* 469 (C4f); Hdt. 7.145.2; Thuc. 3.70.3). The name of the island is the same as that of the *polis* (Ps.-Skylax 29). The city-ethnic is *ϕορϕυραῖος* (*F.Delphes* III.4 454 = *LSAG*² 233 and 234 no. 15 (c.500–475); cf. *SEG* 31 546, 547), *Κορκυραῖος* (*IG* II² 97 (375); on coins, cf. Head, *HN*² 327 (C4)) or *Κερκυραῖος* (*Agora* XVII 517 (C5–C4)), which is the only form attested in literary sources (Hdt. 7.15.3; Thuc. 3.70.1).⁶

Korkyra is called a *polis* both in the urban sense (Thuc. 3.72.3, 74.2; Xen. *Hell.* 6.2.17, 24; Ps.-Skylax 29) and in the political sense (Thuc. 1.55.1, 3.70.1; Dem. 24.202). The territorial sense is a connotation at Thuc. 1.37.3. The citizen of Korkyra is called *politēs* by Thuc. 3.70.2 and Xen. *Hell.* 6.2.22, and the *polis* was included among the Aristotelian *politeiai* (fr. 517.1).

The collective use of the city-ethnic is attested externally in different inscriptions (e.g. *IG* II² 97 (375)) and in Classical authors (e.g. Hdt. 7.154.3; Thuc. 1.32.2), and internally on coins (Head, *HN*² 327 (C4)). The individual use of the city-ethnic is attested externally in Delphi (*CID* II 5.I.2 (359/8)) and Athens (*IG* II² 9010 (C4s)). It is called *patris* in *IG* II² 5224, an inscription which is dated to c.375 on formal grounds; however, the grave associated with the *stèle* seems to date to the third quarter of C5; the *stèle* was presumably erected in 375 when Korkyra joined the Second Athenian Naval Confederacy (cf. *IG* II² 96); see Knigge (1972) and (1988) 99–100.

The name of the territory is *Κερκυραία* (Thuc. 1.30.1) or *Κορκυραία* (Strabo 7.75). *Κερκυραία* (Strabo 7 fr. 6) as the name of the *peraia* around Buthroton is supposed by Bürchner (1922) 1401, 1417 (cf. Thuc. 3.85.2; Strauch (1997)

227). The island of Ptychia mentioned by Thuc. 4.46.3 has been identified with the modern island of Vido (Bürchner (1922) 1411–12 no. 9; Dontas (1965) 139–40 n. 3). The mountain *Ίστοώνη* had a *τείχος/τείχισμα* held by the oligarchs in 427–425 with 600 men (Thuc. 3.85.4, 4.2.3, 46.2). On the north coast of the island lay a town named Kassiope with a port and a temple of Zeus Kasios (Adler (1919) 2267; Bürchner (1919), (1922) 1413 no. 13; Schwabl (1972) 320–21, see also *SEG* 23 395).

The position of Korkyra was excellent for the traffic between Greece and Italy (Thuc. 1.36.2, 44.3; Xen. *Hell.* 6.2.9; cf. Partsch (1887) 57; Kiechle (1979); Thiry (2001) 139–40).

For the foundation of Korkyra we have two different traditions. Strabo 6.2.4 says that it was founded in the same year as Syracuse (no. 47), i.e. traditionally in 733; Euseb. *Chron.* (translated by Jerome), however, gives the year 706, which better fits the archaeological evidence (cf. Coldstream (1977) 185; Kalligas (1984); De Fidio (1995) 90–94; Lang (1996) 301). The *metropolis* was Corinth (no. 227) (Hdt. 3.49.1; Thuc. 1.25.3, 38.1; cf. *Corinth* VIII.3 23 = *SEG* 28 380 (C4)), but we hear also of Eretrians (no. 370) from Euboea as colonists before the Corinthians (Plut. *Mor.* 293AB; for a discussion, see Kalligas (1984); De Fidio (1995) 64–65; Parker (1997) 55–57). The oecist was the Bacchiad (Timaios (*FGrHist* 566) fr. 80; schol. Ap. Rhod. 4.1212–14, 1216) Chersikrates from Corinth (Strabo 6.2.4). Perhaps the inscription *Χερσικρατιδῶν πατριωστῶν* (Klaffenbach (1940) 164–65 no. 3) is related to a cult for Chersikrates as *heros ktistes*. The mythical eponym is Korkyra, daughter of Asopos (Korinna, *PMG* 645 col. III.21; schol. Pind. *Ol.* 6.144; Diod. 4.72.1; Paus. 5.22.6).

The foreign relations of Korkyra are amply attested. The Korkyraians concluded an *ἐπιμαχία* with Athens (no. 361) in 433 (Thuc. 1.144.1–2; *Staatsverträge* 161) and an alliance in 427 (Thuc. 3.75.1; *Staatsverträge* 172). In 375, Korkyra became a member of the Second Athenian Naval League (*IG* II² 96–97 = *Staatsverträge* 262–63; Dreher (1995a) 13–14; *contra*: Cargill (1981) 68ff) and, in 340 or later, a member of the Hellenic League against Philip II (Dem. 18.237; *Staatsverträge* 343; cf. *CEG* II 809). For C4 (C3; Parke), a *sympoliteia* with the Orikioi (no. 103) is attested (Parke (1967) 261 no. 6 = *SEG* 23 474; for further information, see Strauch (1997) 227 n. 72).

The Korkyraians were involved in the following wars and engagements. In C7 (664?), Korkyra and Corinth (no. 227) fought the first naval battle in Greek history, as far as Thucydides knew (1.13.4). About 600, the Arniad Charops (not Arniadas, cf. *SEG* 36 541) was killed in a naval campaign

⁶ Attic inscriptions of C5/C4 use both forms (*Κερκ* . . . , *Κορκ* . . .), while in Hellenistic and Roman times *Κορκ* . . . is preferred. Outside Attika, the epigraphical evidence usually has *Κορκ* . . . (exception: *SEG* 31 548–50 (Delphi, C5–C3), but cf. the note of the *SEG* editor on Vatini's readings; *SEG* 25 354 (Sikyon, n. d.)). Therefore, editors (at least those of non-Attic inscriptions) should avoid restoring *Κερκ* . . . without special arguments (e.g. in *I.Didyma* 214A.1.11 (C1), the restoration [*Κορ*]κυραῖος seems preferable), cf. now Hallou in *IG* IX².1 4 p. 1.

on the river Arachthus (*CEG* I 145; Hammond (1967) 493; Andreou (1991) 436–38). Before the Persian wars, the Korkyraian fleet was among the best in Greece (Thuc. 1.14.2; Kiechle (1979) 175). Sixty ships were sent to Salamis, but remained in western waters (Hdt. 7.168.3). Before the Peloponnesian War, the Korkyraian navy was the second largest in Hellas, surpassed only by the Athenian (Thuc. 1.33.1). Korkyra could muster 110 ships against the Corinthians, of which about seventy were lost in the battle of Sybota (in 433, Thuc. 1.47.1, 54.2). In 373/2, the Spartans under Mnasippos besieged Korkyra without success (Xen. *Hell.* 6.2.3–26). In 345/4, two Korkyraian ships joined Timoleon (Plut. *Tim.* 8.5). Three *strategoî* (Mikiades, Aisimides and Eurybatos) are attested as commanding the fleet in 433 (Thuc. 1.47.1, 48.3).

Korkyraian envoys were sent to Athens in 433 (Thuc. 1.31.2–44), in 427 (Thuc. 3.71.2) and in 375 (*IG* II² 96). The envoys Thersandros and Simylos died in Athens (*IG* II² 5224 = *CEG* II 469 (C4f, r433/2?); cf. Knigge (1988) 99–100).

Before the Hellenistic period, Korkyra gave *proxenia* to Menekrates of Oiantheia (no. 166) (*CEG* I 143 (625–600?); but cf. *SEG* 44 441 and *Nomima* I 34 (c.550)) and to some Corinthians (Thuc. 3.70.1), and Korkyraians were granted *proxenia* in Delphi (no. 177) (*SEG* 31 534 (C4); *F.Delphes* III.4 406.2–4 (C4–C3); for *proxenoi* of Delphi, cf. Empereur (1981) 418).

Theorodokoi were appointed in Korkyra to host *theoroi* from Argos (no. 347) (*SEG* 23 189.1.13 (330–324); cf. Cabanes (1969) 551; *SEG* 26 427 and 36 337), Delphi (no. 177) (*F.Delphes* III.4 406.2–4 (C4–C3)), Epidauros (no. 348) (*IG* IV².1 95.28 (356/5)) and Nemea (*SEG* 36 331.B.6–7 (331/30–313)).

Several Korkyraian *Olympionikai* are attested (111, 118, 155(?), 161, 168, 409? (C6–C4)). The famous bronze bull in Delphi was a communal dedication of the Korkyraians (Paus. 10.9.3–4; *F.Delphes* III.1 2 (c.480); cf. *LSAG*² 113 no. 13; *F.Delphes* III.4 454 = *LSAG*² 233 and 234 no. 15 (c.500–475); cf. Bommelaer (1991) 103–4 no. 104; Jacquemin (1999) 64–65, 320 no. 122). Another bronze bull was dedicated at Olympia (Paus. 5.27.9).

In C7–C6, Korkyra was under the rule of the Corinthian tyrant Periander (Hdt. 3.52.6). During the Archidamian War, there was a *stasis* between democrats and oligarchs (Thuc. 3.70–85; Diod. 12.57, 13.48; cf. Gehrke, *Stasis* 88–93). Thereafter, Korkyra was democratic (for 375, see *IG* II² 96 = *Staatsverträge* 262; *IG* II² 97 = *Staatsverträge* 263), but suffered from civil strife several times: in 411/10 (Diod. 13.48.5ff), in 375/4 (Diod. 15.46.2, 47.1) and in 361, when the

oligarchs came to power once again (Aen. Tact. 11.15).

The oldest public enactment (C7) is attested indirectly by proxeny given by the *damoi* to Menekrates of Oiantheia (no. 166) (*CEG* I 143.3). *Nomoi* are mentioned by Xen. *Hell.* 5.4.64, 375. A law court can be inferred from Thuc. 3.70.3. The eponymous magistrate was a *prytanis* (*IG* IX².1 786.1 (C4)), together with whom *synarchoi* are mentioned (Klaffenbach (1940) 163 no. 1 (C4)). A *boule* and *bouleutai* are attested by Thuc. 3.70.5–6. Explicitly, the term *halia* does not occur earlier than in Hellenistic inscriptions (e.g. *IG* IX².1 786.5 (C4)). But since we know of decisions of the Korkyraian people before that date (*CEG* I 143.3, 5–6; Thuc. 3.71.2), we have to conclude that the *halia* had existed since the Archaic period.

From inscribed lead tablets found at Palaiopolis (c.500) we are informed about the Korkyraian system of civic subdivisions (Kalligas (1971); cf. Jones, *POAG* 159–61; Hadzis (1993); *Nomima* II 73), a combination of proper names given in gen. pl./sing. with a feminine ordinal adjective. A different kind of civic subdivision is attested in the form of a sub-ethnic on the back of one of the tablets: *Ἐϋρυλλος Ἀμφινεύς* (*SEG* 41 543). Two members of the Dorian *phyle* Hylleis are recorded in *IG* IX².1 798.3, 5 (C2); cf. *SEG* 25 609; Kalligas (1971) 87).

The acropolis (Thuc. 3.72.3) was situated in the southern part of the city (Bürchner (1922) 1411). A *τείχος* with *ύργοι* is mentioned by Xen. *Hell.* 6.2.15, 17, 20 (373/2). Whether the remains of a wall with gates and towers between the ports of Hyllos and Alkinoos can be identified with Xenophon's *τείχος* is a matter of discussion; for: Schmidt (1890) 46 and pl. II; Spetsieris-Choremis (1997) 12 (C5–C4); against: Kaletsch in Lauffer (1989) 503, who dates this wall to the Hellenistic period. Archaeological evidence for the urban structure is reported by Lang (1996) 299–301.

The most important public buildings were the *bouleuterion* (Thuc. 3.70.6: *ἐς τὴν βουλὴν*) and the *prytaneion* (*I.Magnesia* 44.40, 42 (c.207)). The agora, where in C5 most of the oligarchs lived (Thuc. 3.72.3), was situated in the northern part of the city near the northern harbour (Thuc. 3.72.3, 74.2).

A *νεώριον* is attested by Thuc. 3.74.2 (cf. *ναώριον*: *SEG* 13 384.10, 11 (C2)), who likewise mentions two Korkyraian ports (3.72.3), the *Ἰλλαικός* (*Ἰλλικός*, Apoll. Rhod. 4.1125) or *Ἰλλου* (schol. Dionys. Per. 493 = *GGM* II.450) *λιμὴν*, and the *λιμὴν ὁ πρὸς αὐτῇ* [sc. *τῇ ἀγορᾷ*] *καὶ πρὸς τὴν ἡπειρον* (commonly identified with the *Ἀλκίνοου λιμὴν*, schol. Dionys. Per. 493). Xen. *Hell.* 6.2.36 has only one *λιμὴν τῶν Κερκυραίων*. According to Ps.-Skylax 29,

Korkyra had three good harbours near the city, but the identification of the third remains doubtful.

The patron deity of Korkyra was Apollo Korkyraios (Kalligas (1968) 313 = *LSAG*² 453 no. A (C5)). On his cult, see also Kalligas (1969a) 54–58; (1968) 304–13 (C6 and later). Sanctuaries for the following deities are attested: Artemis (Rodenwaldt (1939); Schleif *et al.* (1940); Riemann (1943) (C6); votive inscriptions: Klaffenbach (1940) 163–64 no. 1 (C4); no. 2 (C3)); Apollo Pythios (Klaffenbach (1940) 165–66 no. 5 = *LSAG*² 234 no. 17 (C5)); Hera Akr(a)ia (*IG* IX.1 698 = *LSAG*² 234 no. 18 (C5), identified by Dontas (1965), (1976), and Kalligas (1969a) 51, 53, with one of the three temples known in the Mon Repos area; for the Heraion near the polis, see Thuc. 3.81.2); the Dioskouroi (Thuc. 3.75.3; for a *horos* Διοσκούρων found near the Menekrates monument, see *IG* IX².1 883.11 (C4)); Dionysos (Thuc. 3.81.5; for traces of a possible cult place, see Cremer (1981); Lang (1996) 299–300). There was a *temenos* of Zeus (Thuc. 3.70.4; for the cults of Zeus in Korkyra, see Schwabl (1972) 336 no. 9 (337); (1978) 1477) and one of the *heros Alkinoos* (Thuc. 3.70.4). Outside the city, a temple of Zeus Kasios existed in Kassiope (see *supra*) and one of Artemis in the southern part of the Kanopi peninsula (Lang (1996) 299 no. 540).

The Korkyraians used the Dorian calendar of Corinth (no. 227) (Bischoff (1919) 1592 no. 31; Hadzis (1995)). The oracle of Dodona was consulted by the Korkyraians in C5 (Parke (1967) 260 nos. 2, 3), and in C4 (C3; Parke) together with the Orikiioi (no. 103) (*ibid.* 261 no. 6 = *SEG* 23 474). In Delphi, Korkyra held the *promanteia* (*F.Delphes* III.4 389 (C4); cf. Vatin (1981) 445; *SEG* 31 555).

In about 627, Epidamnos (no. 79) was founded by Korkyraians together with Corinthian and other Dorian settlers (Thuc. 1.24.2; Diod. 12.30.2; cf. Gomme (1945–81) i. 159; Gehrke, *Stasis* 60–61 n. 4). According to Strabo 7.5.8, Apollonia (no. 77) was a κτίσμα Κορινθίων και Κερκυραίων, and Korkyra participated probably in the colonisation of Leukas (no. 126; together with Corinth (no. 227), Plut. *Them.* 24.1, from Theophrastos; Frost (1980) 201–2).

Anaktorion (no. 114) is recorded as a place common to Korkyraians and Corinthians before 432 (Thuc. 1.55.1), which may suggest that it was a shared foundation too (but see *supra* 356). Kiechle (1979) 179 supports the hypothesis that Korkyra was involved in the colonisation of the Dalmatian island of Melaina Korkyra (no. 83) carried out by the Knidians (no. 903).

During C6–C4, Korkyra struck coins (silver and bronze) following local tradition in both standard and design. Silver

denominations: stater, drachm, triobol, diobol, obol. Types: *obv.* often cow (suckling calf) or amphora; *rev.* often stellate or floral pattern; legend: the Archaic coins are anepigraphic, but from about 450 onward, they are generally inscribed *KOP*. After 338, Korkyra began to strike staters similar to those of Corinth but with the legends *KOP*, *KOPKYPAIΩN* or *K*. A few have been found in hoards from Sicily and Magna Graecia (Talbert (1971) 61; Taliercio Mensitieri and Spagnoli (1993) especially pls. 3, 5h). *IG* I³ 383.91–93 (429/8) mentions *Korkyraioi stateres* (cf. Regling (1929) 2175). Head, *HN*² 325–28; Kraay (1976) 123, 128–29; *IGCH passim* (cf. p. 398); Spetsieris-Choremis (1981) = *CH* viii. 41; cf. *ibid.* 52, 53, 160, 450; *BMC Thessaly* 115–67; *BMC Corinth* 112; *SNG Cop. Acarnania* 140–69.

124. Koronta (Korontaios) Map 54. Lat. 38.35, long. 21.10. Size of territory: 2. Type: B. The toponym is *Κόροντα, τά* (Thuc. 2.102.1) or *Κορόνται, αἱ* (*IG* IV².1 95.12 (356/5); *SEG* 36 331.A.49 (331/30–313)). The city-ethnic is *Κορονταῖος* (*IG* IX².1 583.6 (216), 582.2 (c.207)).

Koronta is not explicitly attested as a polis but named together with Stratos (no. 138) και ἄλλων χωρίων (*sc.* of Akarnania) by Thuc. 2.102.1. Since it was a member of the Akarnanian Confederacy, struck coins in C4–C3 and had a walled urban centre (with the highest degree of probability the site near modern Chrysovitsa; Pritchett (1992) 102–3; Schoch (1997) 43–44), it is to be classified as a polis of type B.

The collective use of the city-ethnic is attested internally in abbreviated form (*K* (*infra*) or *KO* on coins (see *s.v.* Torybeia (no. 140)). The individual use of the city-ethnic is attested externally in Hellenistic inscriptions (see *supra*).

Koronta was part of Akarnania (*IG* IV².1 95.8 + 12 (356/5); *SEG* 36 331.A.15 + 49 (331/30–313)), lying in the *mesogeia* (Thuc. 2.102.1). From the account of Thucydides (especially 2.102.1) we have to conclude that Koronta belonged to the Akarnanian Confederacy already in C5. It is explicitly attested as a member in C3 (*IG* IX².1 583, 582).

In 429, a group of citizens loyal to the Peloponnesians was exiled by the Athenians (Thuc. 2.102.1).

Theorodokoi are attested in Koronta to host *theoroi* from Epidaurus (no. 348; *IG* IV².1 95.12 (356/5)) and Nemea (*SEG* 36 331.A.49–51 (331/30–313)).

The walls of the presumed site of Koronta near Chrysovitsa were built of polygonal and horizontal masonry (Pritchett (1992) 103 with pls. 77–81). Kirsten dated them to the Hellenistic period (Philippson and Kirsten (1958) 635 n. 15), but given the well-founded general observations by Pritchett ((1992) 115ff), an earlier date seems preferable.

A Pegasos-type stater of Corinthian standard has been attributed to Koronta. *Obv.* Pegasos; *rev.* head of Athena with Makedonian shield; legend: K (Imhoof-Blumer (1878) 114; Head, *HN*² 329). Since then, eight coins of this type have been found in Sicilian and South Italian hoards (Talbert (1971) 61; *IGCH* 88, 2030, 2180, 2185, 2187, 2198; Taliercio Mensitieri and Spagnoli (1993) especially pls. 1, 3); this coinage can be dated to C4s. For other coins, see Torybeia (no. 140); *SNG Cop. Acarnania* 323.

125. Kranioi (Kranios) Map 54. Lat. 38.10, long. 20.30. Size of territory: 2 or 3. Type: A. The toponym is *Κράνιοι* (Thuc. 5.35.7; *IG* 1x.1 276.3 (Opous, C3–C2?)) or *Κράνια* (schol. Thuc. 1.27.2, Hude). The city-ethnic is *Κράνιος* (Thuc. 2.30.2, 33.3; *I.Magnesia* 35.39 (c.207)) or *Κράνειος* (*Etym. Magn.* 507.31).

Kranioi is referred to as a *polis* in the urban sense by the term *τετράπολις* at Thuc. 2.30.2, where the use of city-ethnics instead of toponyms indicates that the political sense is a connotation (Hansen (2000) 174 n. 3 and 208); cf. Xen. *Hell.* 6.2.33: *τὰς ἐν τῇ Κεφαλληνίᾳ πόλεις*.

The collective use of the city-ethnic is attested externally in Hellenistic inscriptions (*I.Magnesia* 35.39 (c.207); *IG* 1x.1 276.3 (Opous, C3–C2?)) and by Thuc. 2.30.2, 33.2, and internally in various abbreviations, on C5–C4 coins (see *infra*). The individual use of the city-ethnic is attested externally in an honorific decree from Delphi (*F.Delphes* III.3 204.3 (162/1?)).

The name of the territory is given by Thuc. 2.33.3 as *ἡ Κρανίων γῆ*. It included the southern part of the island of Kephallenia without the peninsula to the west (cf. Paleis (no. 132)).

The eponym of the island was the hero Kephalos, son of Deion(eus) and father of Pronos, Samos, Peleus and Kranios, the eponyms of the four Kephallenian *poleis* (Gehrke (1994) 110–12; Wirbelauer (1998) 269–80).

In 431, an Athenian envoy was sent to Kephallenia to ascertain the Kephallenian views on the growing conflict (Thuc. 2.7.3; Diod. 12.43.5). The Corinthian aggression in the winter of 431/30 (Thuc. 2.33.3) indicates that Kranioi was pro-Athenian; its inhabitants may have been among the Kephallenians who supplied ships to the Athenians under Demosthenes during the campaign in 426 (Thuc. 3.94–98) and hoplites in 413 (Thuc. 7.31.2). In 421 the Athenians settled Messenians and other people from the Peloponnesos in Kranioi (Thuc. 5.35.7). They were expelled by the Spartans in 401 (Diod. 14.34.2–3). In 373/2 the Kranioi may have been among the Kephallenians who became members of the

Second Athenian Naval League (*Staatsverträge* 262 and 267 = *Agora* xvi 46; Xen. *Hell.* 6.2.33, 37; cf. Dreher (1995b) 191, 199) and of the Corinthian League of 338/7 (*Staatsverträge* 403). The Argive *theorodokoi* list *SEG* 23 189.1.20 (330–324) mentions Kephallenia; so at least one of the four Kephallenian *poleis* appointed *theorodokoi* to host *theoroi* from Argos (no. 347).

Archontes as judges in one city of Kephallenia (probably Kranioi or Paleis (no. 132): Wirbelauer (1998) 341–42) are attested by Dem. 32.9; cf. 14, 22–23.

A sanctuary of Demeter and Kore is mentioned in a late inscription (Kalligas (1978); *SEG* 30 517 (C1)). Whether the foundations with orthostats on the acropolis belong to this temple or to another one has to remain open (cf. Kalligas (1969b) 270–72). A rural sanctuary of C6 was discovered at Minies; its remains are now covered or destroyed by the modern airport (Kalligas (1973) 83–84; Randsborg (1995) 97).

The acropolis is situated on the top of the hill in the south-western part of the settlement (Kalligas (1969b) 270–72). Polygonal and ashlar walls exist on three sides of the town, and there are two other stretches connecting the main wall with the plain of Kútavos, probably the ancient harbour of Kranioi (for Mycenaean remains and those of C5–C4, see Partsch (1890) 80–84 with pl. 2; Benton (1932) 224–25; Kalligas (1969b) 272, (1978) 137; Steinhart and Wirbelauer (2002) 333; Randsborg (2002) i.106–8, ii.275–81, 299–307).

According to Kraay (1976) 96, the Kranioi were the first Kephallenians to strike coins: silver coins of C5–C4. Denominations: triobol, trihemibol, obol. Types: *obv.* mostly ram's head; *rev.* bow, often in incuse square; legend: *KP, KPA, KPANI*. Bronze coins were issued from C5 onward. Types: *obv.* head of ram or of bull, male figure, identified by head with Kephalos, the mythical eponym; *rev.* head of Kephalos; legend: *KPA, KP, K or H*, monograms (Babelon, *Traité* ii.1 no. 1229; *ΚΕΦΑ*; see Postolakas (1868) 91–94; Babelon, *Traité* ii.1. 907–10; 2. 791–96; Head, *HN*² 427, and cf. Kraay (1976) 96; *SNG Cop. Acarnania* 452–59).

126. Leukas (Leukadios) Map 54. Lat. 38.50, long. 20.45. Size of territory: 4. Type: A. The toponym is *Λευκάς*, *ἡ* (Thuc. 3.94.2; Xen. *Hell.* 6.2.3; *IG* iv².1 95.20 (356/5)). The city-ethnic is *Λευκάδιος* (Hdt. 8.45; Thuc. 3.94.2; *ML* 27.10 (479); *IG* II² 104 = *Staatsverträge* 278 (368)). According to Ps.-Skylax 34, the *polis* of Leukas was called *Ἐπιλευκάδιοι* in earlier times. This name of a *πόλις μετὰ Ἀκαρνανίαν* is known also to Steph. Byz. 274.11 (from Hecat. fr. 110).

Leukas is called a *polis* in the urban sense by Ps.-Skylax 34 and in the political sense by Thuc. 1.30.3. At Thuc. 3.94.2 *polis* is used in the urban and political senses simultaneously. It was included among the Aristotelian *politeiai* (no. 101, Gigon); for the use of *politeia* in connection with Leukas, cf. Arist. *loc. cit.*. At Hecat. fr. 102c = Strabo 6.2.4 we cannot be certain that the term *polis* stems from Hekataios.

The collective use of the city-ethnic is attested externally on the Serpent Column from Delphi (ML 27.10) and in Hdt. 8.45 and Thuc. 3.94.2; internally it is found on C5–C4 coins (*ΛΕΥΚΑΔΙΩΝ* and various abbreviations). The individual use of the city-ethnic is attested externally in several inscriptions (e.g. *IAEpi* 14 (Epidauros, C4–C3)) and by Hdt. 9.38.2.

The *polis* of Leukas (Ps.-Skylax 34) was situated on the island of the same name (Harp. s.v.), which was also, *quater* territory, called *Λευκαδία* (Thuc. 3.94.1). To the north and north-east, the Leukadians bordered on the Thesprotians (Hdt. 8.47). An isthmus with an artificial channel (*dioryktos*) connected the northern part of the island with the mainland (Strabo 10.2.8; cf. Partsch (1889) 2–7; (1907), Fiedler (1996) 159). A part of the mainland opposite was, as *peraia*, under Leukadian control (Thuc. 3.94.2). Part of this *peraia* may have been the fortified place Nerikos (Thuc. 3.7.4; Strabo 10.2.8), which can be identified tentatively with the ruins near Ag. Georgios (dominating the southern entrance into the Leukas channel), as suggested by Fiedler ((1996) 159–60, 162) and others. Other place-names attested for Leukas island are Ellomenon (Thuc. 3.94.1) and Phara (Ps.-Skylax 34); in all probability, they were dependent settlements; they cannot be located with certainty (for the proposals, see Fiedler (1996) 159–60 and s.v. Palairos (no. 131)). There are various remains on the island (see in general Fiedler (1996) 161–68), among them a Doric temple at Agios Ioannis Rodakis (Dörpfeld (1927) 263–64).

Leukas was founded during the reign of the tyrant Kypselos (Strabo 10.2.8, for the date (657/6–627/6), see Gehrke (1990) 34; Oberhammer (1887) 76 proposed c.635) by Corinthians (no. 227) (e.g. Hdt. 8.45; Thuc. 1.30.2; Ps.-Skylax 34; Dem. 9.34.). New settlers arrived in the time of his successor Periander (Plut. *Mor.* 552E). The oecist was Pylades (Nic. Dam. (*FGrHist* 90) fr. 57.7), and the colonists were sent out by Kypselos and his son Gorgos (Strabo 10.2.8).

According to the *Alkmaionis* (fr. 5, Bernabé; Ephor. fr. 124 = Strabo 10.2.9), Leukadios, son of Ikarios, Penelope's father, was the eponym of Leukas.

Leukas was a member of the following leagues: Hellenic League of 481 (ML 27.10; Hdt. 8.45 *et passim*; *Staatsverträge*

130), Peloponnesian League (Thuc. 2.9.3; Diod. 12.42.4 (r431); Paus. 10.9.10 (r405)), Second Athenian Naval League (*IG* 11² 104 = *Staatsverträge* 278 (368); cf. Dreher (1995b) 191 with n. 122), Hellenic League against Philip II (Dem. 18.237; Aeschin. 3.95–98 (256); cf. *Staatsverträge* 343) and against Antipater in 323 (*Staatsverträge* 413). Leukas did not enter the Akarnanian Confederacy until the years 280/265 (cf. *IG* 1X².1 3A.24 (263?); cf. Funke *et al.* (1993) 134; Schoch (1997) 74).

In 435, Leukas was allied with Corinth (no. 227) against Epidamnos (no. 79) (Thuc. 1.26.1, 27.2) and against Korkyra (no. 123) in 433 (Thuc. 1.46.1). During the Corinthian War, it was allied with Boiotia, Athens (no. 361), Corinth and Argos (no. 347) (Diod. 14.82.3; *Staatsverträge* 225). In 368, Leukas concluded a treaty(?) with Athens (no. 361) (*IG* 11² 104 = *Staatsverträge* 278).

Leukas was engaged in the following campaigns and battles: in the battle of Salamis with three ships (Hdt. 8.45); at Plataiai together with Anaktorion (no. 114) with 800 hoplites (Hdt. 9.28.5); at Epidamnos and Sybota with ten ships (Thuc. 1.27.2, 46.1); in the campaign of 427 with thirteen ships (together with Ambrakia (no. 113); Thuc. 3.69.1, cf. Diod. 30.40.5); in 414 with two ships sent to Taras (no. 71; Thuc. 6.104); in the battle of Aigos potamoi (405) under Telykrates in Lysander's fleet (Paus. 10.9.10); against Korkyra, supporting the Lakedaimonian fleet, in 373/2 (Xen. *Hell.* 6.2.3, 26); following Timoleon to Sicily with one ship in 345/4 (Plut. *Tim.* 8.5). The Leukadian mercenary leader Euthymos first fought under Timoleon, later against him, and was executed by him c.339 (ibid. 30.6–9 and 32).

Leukadian envoys took the oaths on a treaty with Athens (*IG* 11² 104 = *Staatsverträge* 278). The Leukadians Nausigenes and Euandros were appointed *proxenoi* by Epidauros (no. 348) (*IAEpi* 14 (C4–C3)). *Theorodokoi* were appointed to host *theoroi* from Argos (no. 347) (*SEG* 23 189.1.8 (330–324)), Epidauros (no. 348) (*IG* 1V².1 95.20 (356/5); *IAEpi* 14) and Nemea (*SEG* 36 331.B.9–13 (331/30–313)). In the 320s, Leukas imported 15,000 *medimnoi* of grain from Kyrene (no. 1028) (*SEG* 9 2.20 = Tod 196).

In the Archaic or early Classical period the constitution changed from oligarchy to democracy. An Archaic law seems to have prescribed the preservation of the old *κλήροι*. The abolition of this law led to a democratisation of the Leukadian constitution, perhaps in C6–C5 (Arist. *Pol.* 1266^b21–24; Gehrke, *Stasis* 101). Magistrates are attested generally, as *ἄρχαι*, by Arist. *Pol.* 1266^b24. Münsterberg (1973) 43 records more than sixty names of officials on Leukadian coins.

An agora is attested explicitly only for the Hellenistic period (*forum*, Livy 33.17.12 (r197)); no remains of it have yet been found (Fiedler (1996) 162). From a votive inscription on a miniature bronze helmet crest we know of a dedication to Athena (*IG* ix².1 1237(C6)). A temple of Apollo was situated near the isthmus and the *polis* of Leukas (Thuc. 3.94.2; Strabo 10.2.9; Plut. *Pomp.* 24, but cf. Dörpfeld (1927) 271). There were temples of Hera (*Heraeum*, Livy 33.17.2, near the city) and of Aphrodite Aineas (Dion. Hal. *Ant. Rom.* 1.50.4, on an island between the *dioryktos* and the *polis*, cf. the mention of a temple of Aphrodite in a Messenian inscription of C2: Themelis (1993) 35; Strauch (1997) 240 with n. 120); for the remains of a temple at Ag. Ioannis Rodakis, see *supra*.

The site of the *λυμῆν* (Ps.-Skylax 34) is unknown (Fiedler (1996) 162). Two moles have been found at the southern end of the Leukas channel (Murray (1982) 226ff; (1988) 101ff; Fiedler (1996) 162; Schoch (1997) 20). The acropolis (*arx*, Livy 33.17.11 (r197)) was presumably situated on the northern hill of the city (Fiedler (1996) 162). There are only a few, undated remains of a city wall (cf. *muri*, *moenia*: Livy 33.17.4, 9–10, 13 (r197)) and of other walls to the north and northwest of the ancient *polis* (Fiedler (1996) 161–63). The remains of houses dating to the Classical/Hellenistic period were laid out in accordance with a grid-plan street system (Fiedler (1996) 161–62).

The Leukadian mint is the oldest known in Akarnania, and its coins had the widest circulation. The silver coinage started in about 490 and was strongly influenced by Corinth (no. 227) (Carter (1993); cf. Anaktorion (no. 114)). Next to the Corinthian, the Leukadian pegasi are the coins most frequently found in Sicilian and South Italian hoards (Talbert (1971) 60, 62; *IGCH passim* (cf. p. 401); Taliercio Mensitieri and Spagnoli (1993) especially pls. 3, 5c (more than 500 pieces); *CH* viii. 53, 95, 159, 160, 167, 226, 232, 264, 506). Denominations: stater, drachm and smaller fractions. Types: *obv.* Pegasus; *rev.* head of Athena; legend: *A*, sometimes *AEY* or *AEYKAAIΩN*. Smaller C4 denominations struck in bronze with various types. More than sixty names of officials are attested on Leukadian coins (Münsterberg (1973) 43; for the coins, see generally Postolakas (1868) 54–89; Imhoof-Blumer (1878) 115–38; Head, *HN*² 329–31. *SNG Cop. Acarnania* 326–76, *Suppl.* 249–50).

127. Limnaia (Limnaios) Map 54. Lat. 38.50, long. 21.10. Size of territory: 2. Type: B. The toponym is *Λιμναία*, ἡ (Thuc. 2.80.8, 3.106.2; *IG* iv².1 95.8 (356/5)). The city-ethnic is *Λιμναίος* (*IG* ix².1 588.9–10 (Sparta, C2)).⁷

Limnaia is not attested as a *polis* in ancient sources. It is mentioned under the heading *Ἀκαρνανία* in an Epidaurian and a Nemean *theorodokoi* list (C4) and was, at least in Hellenistic times, a member of the Akarnanian Confederacy (see *infra*). Whether it was a *polis* or an *ethnos* in this Confederacy in the Classical period has to remain open. It is called a *κώμη ἀτείχιστος* by Thuc. 2.80.8. The walls at Karvassaras (modern Amphilochia) to be identified with the site of Limnaia, however, suggest an urban centre. But they cannot be dated with certainty (cf. *infra*).

Thuc. 2.80.8 mentions Limnaia as a village in the Argeia, i.e. the territory of Argos Amphiloichikon (no. 115) which was destroyed by a Spartan army under Knemon. Limnaia seems to have had a common frontier with Medion (no. 129) (to the south-west?) and with the Agraioi (Thuc. 3.106.2). According to Polyb. 5.5.14, the *καλουμένη Λιμναία* was a coastal site in the Gulf of Arta. Limnaia is attested as a part of Akarnania in an Epidaurian *theorodokoi* list (*IG* iv².1 95.8). It was a member of the Akarnanian Confederacy (*IG* ix².1 588.9–10 (Sparta, C2); cf. *IG* ix².1 3A). *Theorodokoi* were appointed to host *theoroi* from Epidauros (no. 348; *IG* iv².1 95.8) and Nemea (*SEG* 36 331.A.31–33 (331/30–313)).

As the evidence stands, the most likely reconstruction is that, in C5s, Limnaia was a *κώμη* belonging to Argos (no. 115), but by 356/5 it had become a political unit and acquired the status of *polis*. The urban centre was fortified, and the community became a member of the Akarnanian Confederacy in its own right. See Medion (no. 129) and Phoitiiai (no. 134).

The walls at Amphilochia, with polygonal masonry, are described and discussed by Pritchett (1992) 2–6, 118–19; according to Winter (1971) 98, 111, they are not earlier than the last quarter of C4.

128. *Matropolis (Matropolites) Map 54. Lat. 38.35, long. 21.15. Size of territory: 2. Type: B. The toponym is **Ματρόπολις*, ἡ (see the ethnic), in *koine*: *Μητρόπολις* (Polyb. 6.64.3–4). The city-ethnic is *Ματροπολίτας* (*IG* ix².1 3B.4, 8 (C3); cf. Freitag (1994) 223–24 no. 11).⁸

⁷ Perhaps other Akarnanian Limnaians are mentioned in Greek inscriptions, but normally a Limnaios will be identified with a citizen of the Thessalian city Limnaion, see *infra* 679; see Stählin (1926); Daux (1955) 38; *SEG* 15 340 and 19 379.

⁸ Perhaps other Akarnanian Matropolitai are mentioned in Greek inscriptions, but normally a Matropolites will be identified with a citizen of the homonym Thessalian city (no. 403) (cf. e.g. *SEG* 27 123.11; Daux (1955) 37–38). The same problem concerns the coinage of Matropolis (Isler (1996) 170–71 n. 17). This Matropolis is not to be confused with the *Μητρόπολις καλουμένη* mentioned by Thuc. 3.107.1 in the territory of Argos Amphiloichikon (Pritchett (1992) 25–27).

*Matropolis is not attested as a *polis* before C₃, when the term is found in the urban sense in Polyb. 4.64.4 (r219) and in the political sense in an inscription concerning a boundary dispute between Oiniadai (no. 130) and *Matropolis found in Aitolian Thermos (IG IX².1 3B.8 (C₃)). But the *polis* status of *Matropolis in the Classical period is strongly indicated by the toponym itself, the coinage of C₄ (see *infra*), the membership of both the Aitolian and the Akarnanian Confederacies (see *infra*), and the existence of an urban centre at the site of Palaiomanina (identified convincingly with *Matropolis by Pritchett (1991) 8–15; cf. Freitag (1994) 224 and see *infra*).

In C_{3s} *Matropolis belonged to the Stratos district (Στρατικὸν τέλος) of the Aitolian Confederacy (IG IX².1 3B.2 (before 230); cf. Swoboda (1913) 332–33 n. 6; Klaffenbach (1957) xx; Guarducci, *EG* II 554; Freitag (1994) 223–24). Later on, it is attested as a member of the Akarnanian *koinon* (IG IX².1 209, 208 and 588.11 (C₂); cf. IG IX.2 61.5 (Lamia, 216–212)), part of which it must have been before the Aitolian conquest of about 250 (IG IX².1 3A; cf. Klaffenbach (1957) xx).

*Matropolis had an acropolis (ἄκρα) as a part distinct from the city (Polyb. 4.64.4). The site of Palaiomanina fits very well the Polybian report, which is decisive for the identification (Pritchett (1991) 11–12, with reference to Kirsten). The walls of the acropolis, in trapezoidal masonry, are flanked with towers, while the enceinte of the city is constructed of polygonal blocks (for a description, see Pritchett (1991) 9–12, who reports Geometric pottery and metal objects found on the site: *ibid.* 10).

A Pegasos-type stater of Corinthian standard (*obv.* Pegasos; *rev.* head of Athena with Makedonian shield and monogram MA) has been attributed to *Matropolis (Imhoof-Blumer (1878) 142–43; Head, *HN²* 331). Since then eighteen coins of this type have been found in Sicilian and South Italian hoards (Talbert (1971) 62; *IGCH* 2030, 2180, 2183, 2185, 2187; Taliercio Mensitieri and Spagnoli (1993) especially pls. 1, 3; *CH* viii. 167). This coinage can be dated to C_{4s}. *SNG Cop. Acarnania* 399.

129. Medion (Medionios) Map 54. Lat. 38.45, long. 21.10. Size of territory: 2. Type: B. The toponym is *Μεδεών* (Thuc. 3.106.2) or *Μεδιών* (IG IV².1 95.13 (356/5); *SEG* 23 189.1.2 (suppl., Argos, 330–324); cf. Cabanes (1969) 550; *SEG* 36 331.A.44 (Nemea, 331/30–313); Steph. Byz. 440.1). The city-ethnic is *Μεδιώνιος* (Mastrokostas (1965) 159 no. 17 = *SEG* 25 633 (stamped roof-tile of C₄–C₃)).

Medion is not attested as a *polis* before Polyb. 2.2.7, 11, 2.3.1 and 6 (r231), where the term is found in the urban sense. But

in *theorodokoi* lists of C₄ it is recorded under the heading Akarnania, it is attested as a member of the Akarnanian Confederacy in C₃, it struck coins (see *infra*) and had a walled urban centre (near modern Katouna (Pritchett (1991) 83–88), where Medion is securely located by a tile stamp (*SEG* 25 633) found there). So it was probably a *polis* already in the Classical period.

The collective use of the city-ethnic is attested externally in Hellenistic inscriptions (IG IX².1 388.1 (Megara, C₃), 582.46 (Magnesia, c.207)) and internally by a tile stamp (*SEG* 25 633 (C₄–C₃)) and in abbreviated form (*ME*) on C_{4s} coins (*infra*). The individual use of the city-ethnic is likewise attested externally in Hellenistic inscriptions (IG IX².1 583.21 (Olympia, 216), 582.4 (Magnesia, c.207)).

The name of the territory was *Μεδιωνία* (Polyb. 2.3.1). Medion is named among the other Akarnanian places in *theorodokoi* lists of C₄ (see *infra*). It was a member of the Akarnanian Confederacy (IG IX².1 583, 582) and appointed *theorodokoi* to host *theoroi* from Argos (no. 347) (*SEG* 23 189.1.2 (330–324); cf. Cabanes (1969) 550), Epidauros (no. 348) (IG IV².1 95.13 (356/5)) and Nemea (*SEG* 36 331.A.44–46 (331/30–313)).

The walls of Medion, today poorly preserved, were of polygonal masonry (for a description, see Pritchett (1991) 85–88). Remains of a Doric temple (C₄?) and a *horos* inscription of a cult place of Asklepios are reported by Schwandner, *AA* (1989) 651.

Some bronze coins of C_{4s} have been attributed to Medion by Imhoof-Blumer (1878) 139–41; Head, *HN²* 331; Hammond (1967) 729. Types: *obv.* head of Athena or Apollo; *rev.* tripod or owl between *M* and *E*. *SNG Cop. Acarnania* 397–98.

130. Oiniadai (Oiniadas) Map 54. Lat. 38.25, long. 21.10. Size of territory: 3. Type: A. The toponym is *Οἰνιάδαι*, *οἶ* (Thuc. 1.111.3; Soph. *Tr.* 510; Polyb. 4.65.4–5; IG IV².1 95.9 (356/5)); *Οἰνειάδαι* (Hippoc. *Epid.* 5.1.3–8). According to Steph. Byz. 281.10–11, the original toponym was *Ἐρπυσίχη*, probably a construct by Hellenistic authors (Freitag (1994) 22). The city-ethnic is *Οἰνιάδας* (Thuc. 2.82, 3.94.1; IG IX².1 3A.22, 24–25 (263?)).

Oiniadai is called a *polis* in the urban sense by Thuc. 2.102.2 and Ps.-Skylax 34. The earliest attestation of the political sense is in a C₃ decree (IG IX².1 3B.7–8). The word *πατρις* is used by Diod. 18.8.6 (r c.325/4; see Jehne (1994) 241–43).

The collective use of the city-ethnic is attested externally by Thuc. 2.82 and 3.94.1 as well as in an inscription concerning a boundary dispute (IG IX².1 3B.3–4, 7–8 (C₃ before 230))

and internally on C₃ coins (*infra*) and on a stamped tile (SEG 42 486 (C₃–C₂)).

The territory is called *χώρα* (IG IX².1 3B.3–4 (C₃); Polyb. 21.32.14) or *οἱ περὶ Οἰνιάδαις τόποι* (Thuc. 2.102.6) or *ἡ Οἰνιάς* (schol. Thuc. 2.102). It was situated in south-western Akarnania, at a distance of about 70 stades from the mouth of the river Acheloos (Strabo 10.2.2). It is attested as part of Akarnania in the *theorodokoi* lists (see *infra*). To the north, Oiniadai bordered on the territory of *Matropolis (no. 128) (IG IX².1 3B).

The Argive hero Alkmaion passes for the founder of Oiniadai, while his son Akarnan gave his name to the whole region (Thuc. 2.102.5–6; Jouan (1990); Gehrke (1994–95) 46–48).

Messenians from Naupaktos (no. 165) attacked Oiniadai in 456/5 and forced its population to leave their town, but in the next year the Oiniadai returned (Paus. 4.25.3). In 325/4 (Jehne (1994) 241–43), the Oiniadai were driven out by the Aitolians (Diod. 18.8.6; Plut. *Alex.* 49.8). On Kassander's advice the Oiniadai left their settlement in 314 and moved to Sauria (Diod. 19.67.4; cf. Freitag (1994) 222–23). Strabo 10.2.2 mentions an old Oiniadai at a greater distance from the sea; the matter remains a mystery (for a discussion, see Freitag (1994) 226–27).

According to Freitag (1994) 236 with n. 97, Oiniadai did not become a member of the Akarnanian Confederacy until 424, when the *polis* was forced to join the Athenian League (Thuc. 4.77.2; Kagan (1974) 281). In the years before, Oiniadai had supported the Lakedaimonians against the Akarnanians and Athenians (Thuc. 2.82). In 263(?), Oiniadai is attested as part of the Akarnanian *koimon* (IG IX².1 3A.22).

Oiniadai appointed *theorodokoi* to host *theoroi* from Epidaurus (no. 348; IG IV².1 95.9 (356/5)) and Nemea (SEG 36 331.A.34–7 (331/30–313)).

An acropolis (*ἄκρα*) is attested by Polyb. 4.65.5–11 (r219). Remains of an edifice consisting of a complex of thirteen rooms on a hill-top near the acropolis may have been a dwelling house (cf. Powell (1904) 214). The existence of a city wall in the 450s is indicated by Thucydides' reference to a *poliorkia* by the Athenians (1.111.3; cf. Paus. 4.25.2 claiming that in 456/5 the Messenians of Naupaktos (no. 165) tried to take Oiniadai using scaling ladders and *μηχανήματα*); Plutarch mentions a wall of Oiniadai at the time of the Perikleian expedition to Akarnania (Plut. *Per.* 19.3); in 219, Philip V fortified Oiniadai (again?; Polyb. 4.65.5ff). There are substantial remains of a regular polygonal wall over 6 km in length (described by Powell (1904) 146ff and Kirsten (1937) 2215ff). It enclosed the acropolis and the lower city, an

area of altogether 59 ha, and may date from C₅–C₄ (Winter (1971) 236; Pritchett (1992) 117–18, against Kirsten (1937) 2224, who argued that only the acropolis had been enclosed by a wall until Philip V fortified Oiniadai in 219). Inside the circuit, few remains of streets and houses are discernible (cf. the plan by Kirsten (1937) 2217–18). The results of recent archaeological investigations have been published by Kolonas, Serbetis and Schmidt (1992).

There are remains of a small temple on the western side of the harbour of Oiniadai, where a fragment of a foot from a statue has been found. Powell (1904) 205 suggests that it might have been Athena the Saviour, who was worshipped as the goddess of the sailors in the Piraeus.

The evidence for silver coins remains doubtful (Head, *HN*² 331). Bronze coins of C₃ have the legend *OINIADAN* (Imhoof-Blumer (1878) 15–17, 151; Grose (1926) 5372–9; *IGCH* 145, 311–12; *SNG Cop. Acarnania* 400–3).

131. Palairos (Palairos) Map 54. Lat. 38.50, long. 20.50. Size of territory: 2. Type: B. The toponym is *Πάλαιρος* (Epicharm. fr. 38, Kaibel (CGF); IG IV².1 95.21 (356/5)). The city-ethnic is *Παλαιρεύς* (Thuc. 2.30.1; IG IX².1 582.47 (Magnesia, c.207)) or *Παλαιραῖος* (SEG 9 2.35 = Tod 196 (Kyrene, 330–325)).

Palairos is not attested as a *polis* before the Hellenistic period unless one accepts a conjecture in the text of Ps.-Skylax 34: the MS has an otherwise unknown *polis Φαρά* listed between Leukas (no. 126) and Alyzeia and situated opposite Ithaka (and Kephallenia); instead of *Φαρά*, Wirbelauer (1998) 221–22 conjectures *Πάλαιρος*. Palairos was probably a *polis* already in C₅: it was a member of the Akarnanian Confederacy, it had an urban centre, and it seems to have struck coins (see *infra*). Palairos is called a *polis* in two inscriptions of C₂–C₁ (SEG 27 156, 157).

The collective use of the city-ethnic is attested externally in an inscription from Kyrene (SEG 9 2.35 = Tod 196 (330–326)) as well as by Thuc. 2.30.1 and internally in two mutilated honorific inscriptions (SEG 27 156, 157 (C₂–C₁)). The external and individual use is attested in the feminine form on a grave *stele*: *Παλαιραία* (IG IX².1 379.2 (undated)).

Palairos was situated on the Plagia peninsula and bordered to the west on the Leukadian *peraia* (Wacker (1999)). In 431 the Corinthian *polisma* Sollion (no. 137) on the southern side of the peninsula (*supra*) was given to Palairos by the Athenians (Thuc. 2.30.1).

c.330–325, the *polis* received 10,000 *medimnoi* of grain from Kyrene (no. 1028) (SEG 9 2.35 = Tod 196).

Palairos was part of Akarnania according to the *theorodokoi* lists (see *infra*). The earliest explicit attestation of Palairos as a member of the Akarnanian Confederacy is of C31 (IG IX².1 582 (Magnesia, c.207); cf. IG IX².1 3A), but the addition of *Ἀκαρνάνων* to the city-ethnic found both in Thuc. 2.30.1 (*Παλαιρεῦσι Ἀκαρνάνων*) and in the Kyrenaian grain inscription (SEG 9 2.35 = Tod 196 (330–326): *Ἀκαρνάνων Παλαιραίοις*) is a very strong indication that Palairos was a member from C5 onwards.

Palairos appointed *theorodokoi* to host *theoroi* from Argos (no. 347) (SEG 23 189.1.5 (330–324)), Epidauros (no. 348) (IG IV².1 95.21 (356/5)) and Nemea (SEG 36 331.A.16–19 (331/30–313)).

The agora of Palairos with public buildings was possibly situated in the northern part of the upper city (Wacker (1996b) 94). Several cults of different deities are attested for Palairos but cannot be connected with existing remains. Outside the city, on the mountain Profitis Ilias, was a C4 extra-urban sanctuary (Faisst and Kolonas (1990)). On the way to this site, about 100 m from the north-western corner of the city wall, a shrine of Artemis has been located (Camp (1977) 280–81; Wacker (1996b) 97–98). To the south-west of Profitis Ilias, on the summit of the mountain Sterna above the old village of Plagia, there are impressive remains of what must have been a fortified sanctuary controlled by Palairos (according to unpublished tile stamps: information from E.-L. Schwandner); other references concerning the site are given by Pritchett (1994) 205–7, who identifies it erroneously with Sollion (no. 137) (see *supra*).

There are virtually no traces left of walls or public architecture on the acropolis of Palairos, situated on the eastern summit of the upper city (Kirsten (1942) 2458). The acropolis and lower town were fortified. The existing circuit of walls of cyclopean, polygonal and horizontal masonry was not erected as late as C3, as suggested by Kirsten, but most likely in C5; see Murray (1982) 145; Pritchett (1992) 115–19. Wacker (1999) 81–90 gives a description of the different phases of the construction of the walls. In the whole area of the city, remains of houses are visible, in the western part of the upper city in an orthogonal structure (Wacker (1996b) 94; cf. Lang (1994) 243).

There is only slight evidence for Palaean coinage: a Pegasus with monogram read by Imhoof-Blumer (1878) 153 as ΠΑΛΑΙΡ(ΟΣ); cf. Head, *HN*² 331.

132. Paleis (Paleus) Map 54. Lat. 38.15, long. 20.25. Size of territory: 2 or 3. Type: A. The toponym is *Παλεῖς* (*F.Delphes* III.4 376.4 (suppl. 358/7)) or *Πάλη*, ἡ (schol. Thuc. 1.27.2,

Hude). The city-ethnic is *Παλεῖς* (Hdt. 9.28.5; Thuc. 1.27.2, 2.30.2; *I.Magnesia* 35.39 (c.207); Paus. 6.15.7; *Etyim. Magn.* 507.31) or *Παλαιεῖς* (Polyb. 5.3.4, 5.2, 16.6, 17.5, 100.8).

Paleis is referred to as a *polis* in the urban sense by the term *τετράπολις* at Thuc. 2.30.2, where the use of city-ethnics instead of toponyms indicates that the political sense is a connotation (Hansen (2000) 174 n. 3, 208); cf. Xen. *Hell.* 6.2.33: *τὰς ἐν τῇ Κεφαλληνίᾳ πόλεις*.

The collective use of the city-ethnic is attested externally by Hdt. 9.28.5, 31.4; Thuc. 1.27.2, 2.30.2; and in a Hellenistic inscription from Magnesia (*I.Magnesia* 35.39) and internally, in abbreviation, on coins (see *infra*). The individual use is attested externally as *Κεφαλλήν ἐκ Παλέων* in a Delphic inscription (*BCH* 68/9 (1944–45) 121 no. 32.4 (C3)).

The territory of Paleis lies in the western part of the island of Kephallenia (cf. Thuc. 2.30.2; Paus. 6.15.7), today called Paliki.

Hdt. 9.28.5 (cf. 31.4) erroneously lists 200 hoplites from Paleis among the Greeks fighting at Plataiai (cf. Büchner (1921) 210, 212–13; Wirbelauer (1998) 319–20).

In 435 the Paleis supported the Corinthian campaign against Korkyra (no. 123) with four ships (Thuc. 1.27.2). For membership in the Second Athenian Naval League and the Corinthian League, other alliances, military matters, envoys, *theorodokoi*, officials, taxation and founding myth, see the collective attestations of Kephallenians cited s.v. Kranioi (no. 125).

A [...] *στρατιδᾶς* was appointed *proxenos* by Delphi (no. 177) in 358/7 (*F.Delphes* III.4 376.4 (suppl.)).

A sanctuary of Poseidon(?) was discovered in the southern part of the Paliki peninsula at Valtza (cf. Randsborg (1995) 97 and (2002) ii.59, 310). The acropolis of Paleis was situated on a hill at a distance of 1.5 km to the north of the modern town of Lixuri. Remains of the walls described by travellers up to the eighteenth century have disappeared because the stones were reused in buildings in Lixuri (Büchner (1921) 211; Steinhart and Wirbelauer (2002) 333–34; Randsborg (2002) ii. 281–82).

The silver coinage of Paleis started with a single type (*BMC Peloponnesus* 84 no. 1: *obv.* ram with legend Π; *rev.* pine-cone and sprays, all in incuse square), before 431. From 431 onward, Paleis struck silver coins. Denominations: tetrobols and smaller fractions. Types: Kephalos or Persephone (wearing barley wreath); legend: ΠΑ and/or ΚΕΦΑΛΟΣ or ΚΕΦΑ. Bronze coins date from C5–C2 (see in general Postolakas (1868) 94–96; Biedermann (1887) 67–68; Head, *HN*² 427–28; Babelon, *Traité* ii.2. 795–802;

Grose (1926) nos. 6684–93; Kraay (1976) 96; *SNG Cop. Acarnania* 460–68).

133. Phara Map 54. Lat. 38.40, long. 21.35. Size of territory: ? Type: A. Our only source is Ps.-Skylax 34, where πόλις Φαρά is listed between Leukas (no. 126) and Ithaka (no. 122). Following Partsch (1889) 20, *Barr.* places Phara on Leukas and identifies the settlement with modern Pyrgi. But in Ps.-Skylax, Phara is listed *after* Leukas, and if Phara had been a *polis* on Leukas, Ps.-Skylax would undoubtedly have classified Leukas as a *dipolis* island. Thus, Phara must either have been one of the small islands between Leukas and Ithaka or situated on the coast of Akarnania in the *peraia* of Leukas. If we accept Ps.-Skylax's text as it stands, Phara must be classified as an unlocated *polis* in Akarnania. Alternatively, one may assume a corruption and conjecture Πάλαιρος (Wirbelauer (1998) 221–22; see *supra* 368).

134. Phoitiiai (Phoitieus) Map 54. Lat. 38.40, long. 21.10. Size of territory: 2. Type: [A]. The toponym is Φοιτίαι, αἱ (IG IV².1 95.11 (356/5)) or Φυτία, ἡ (Thuc. 3.106.2). The city-ethnic is Φοιτιεύς (CID II 1.11.16, 23 (362/1)) or Φοιτιίης (IG IX².1 390.10 (C5)) or Φοίτιος (Hellan. fr. 30 = Steph. Byz. 669.15).

The only attestation of Phoitiiai as a *polis* (in the urban sense) is at Polyb. 4.63.7–9, but in the Delphic *naopoioi*'s accounts of C4f the Phoitiieis are recorded under the heading ταῖδε τῶν πόλεων (CID II 1.1.27 and 1.16). It was probably a *polis* already in C5; it was a member of the Akarnanian Confederacy and it had an urban centre (see *infra*).

The collective use of the city-ethnic is attested externally in the Delphic accounts (CID II 1.11.16 (362/1)). The individual use is attested externally in a proxeny decree of Stratos (IG IX².1 390.10 (C5)) and in CID II 1.11.23 (362/1).

The territory (ἡ Φυτία, Thuc. 3.106.2) belonged to the Akarnanian region, according to the *theorodokoi* lists (see *infra*). The eponym of Phoitiiai was Phoitios, son of Alkmaion and grandson of Amphiaros (Steph. Byz. 669.13–14).

The fact that a Phoitian is attested as *bolarchos* of Stratos (no. 138) in a proxeny decree of C5l (IG IX².1 390.9–10) shows that Phoitiiai was either a civic subdivision of Stratos or a dependent *polis*. In 362/1 Phoitiiai and Stratos contributed jointly to the Delphic *naopoioi*'s fund (CID II 1.11.16, 23), which indicates that Phoitiiai was (now?) a *polis* side by side with Stratos and undoubtedly, like Stratos, a member of the Akarnanian Confederacy. Membership is explicitly stated in the Aitolian–Akarnanian treaty of c.263 (IG IX².1 3A.23). Phoitiiai appointed *theorodokoi* to host *theoroi* from

Epidaurus (no. 348) (IG IV².1 95.11 (356/5)) and from Nemea (SEG 36 331.A.47–48 (331/30–313)).

Ruins of a Doric temple are visible near Vlyziana (Kirsten (1941b) 440; Philippson and Kirsten (1958) 397; Schoch (1997) 57). Phoitiiai is commonly located at the site of the Porta hills, 2 km to the north of Bambini (Pritchett (1991) 4–7; Schoch (1997) 56–58). There one can find remains of two acropoleis, to the north and to the south (Kirsten (1941b) 438–39), and a circuit of walls about 2.8 km long, with eighteen (Noack) or eleven (Kirsten) towers, mostly of polygonal masonry (Noack (1916) 217ff; Kirsten (1941b) 438–42; Pritchett (1991) 6–9). The date proposed by Noack and Schoch ((1997) 57–58), C5–C4, is preferable to that of Kirsten ((1941b) 440: C3, before 219).

The attribution to Phoitiiai of some silver and bronze coins of C4m–C3m with the legend ΦΥ or Φ is not beyond doubt; cf. Imhoof-Blumer (1878) 152–55; Head, *HN*² 331; Kirsten (1941b) 437.

135. Pronnoi (Pronnos) Map 54. Lat. 38.10, long. 20.45. Size of territory: 2 or 3. Type: A. The toponym is Πρόννοι, οἱ (Polyb. 5.3.3) or Πρόννοι, οἱ (IG IX².1 8.3–4 (suppl., C3); BCH 45 (1921) col. 11.142 (C3–C2)) or Πρόνιαια (schol. Thuc. 1.27.2, Hude); cf. Πρόνησος in Strabo 10.2.13. The city-ethnic is Προνναῖος (Thuc. 2.30.2) or Πρόννος (IG II² 43.B.12 = *Staatsverträge* 257 (377)) or Πρόνοος (*Etym. Magn.* 507.31).

Pronnoi is referred to as a *polis* in the urban sense by the term τετράπολις at Thuc. 2.30.2, where the use of city-ethnics instead of toponyms indicates that the political sense is a connotation (Hansen (2000) 174 n. 3, 208); cf. Xen. *Hell.* 6.2.33: τὰς ἐν τῇ Κεφαλληνίᾳ πόλεις.

The collective use of the city-ethnic is attested externally in an Athenian *psephisma* (IG II² 43.B.12 (377)) and internally on the coins (see *infra*). The individual use is attested externally in Hellenistic inscriptions (see *supra*).

Pronnoi was situated in the south-eastern part of the island of Kephallenia (cf. Thuc. 2.30.2).

Pronnoi was a member of the Second Athenian Naval League (IG II² 43.B.12 = *Staatsverträge* 257 (377)); cf. Dreher (1995b) 190) and of the Corinthian League of 338/7 (IG II² 236.b.12 = *Staatsverträge* 403). For other alliances, military matters, envoys and *theorodokoi*, taxation and founding myth, see the collective attestations of Kephallenians cited s.v. Kranioi (no. 125).

Pronnoi is commonly identified with the site on the Pachni hill, where there are some remains of a Classical and Hellenistic settlement (C5–C3; Randsborg (2002) i. 30, 87; ii.

57, 261–64). This site matches Polybios' description of Pronnoi as a *πολισμάτιον δυσπολιόρκητον* almost to perfection (Polyb. 5.3.4). But we know about another acropolis in the Pronnoi territory, at Palaiokastro with remains of Mycenaean and Byzantine walls, and a rock-cut altar with three steps within (Steinhart and Wirbelauer (2002) 157 pls. 63–64; Randsborg (2002) i. 15–20, 84–86; ii. 57, 258–62). For other finds, see now the catalogue in Randsborg (2002) i. 4–36; ii. 54–59. Near the chapel of Ag. Georgios, 3 km north of Skala, the foundations of a Doric temple (C6–C3) are visible (Kalligas (1969*b*) 273–76; Steinhart and Wirbelauer (2002) 156, 158, pls. 65–66, 335; Randsborg (2002) i. 12–13; ii. 58), perhaps a cult of Poseidon in reaction to earthquakes, cf. Wirbelauer (1998) 182–88).

Pronnoi struck silver (triobols and smaller fractions) and bronze coins in C4 and/or C3. Silver types: *obv.* head of Kephalos, or female head; *rev.* club; legend: ΠΡΩΝΝΩΝ or monogram with barley-corn. Bronze types: *obv.* head of Zeus; *rev.* monogram with pine-cone, which is interpreted as the symbol of Zeus Aine(s)ios (Postolakos (1868) 97–98; Biedermann (1887) 71; Head, *HN*² 428; Babelon, *Traité* ii. 2. 807–8; Grose (1926) 6694; Kraay (1976) 96; *SNG Cop. Acarnania* 469–71).

136. Same (Samaios) Map 54. Lat. 38.15, long. 20.40. Size of territory: 2 or 3. Type: A. The toponym is Σάμα, ἡ (*BCH* 45 (1921) col. II.136, 140; *IG* IX².1 2.9, 27 (both C3–C2)) or Σάμη (Strabo 10.2.10; schol. Thuc. 2.30.2) or Σάμος, ὁ (Strabo 10.2.10; schol. Thuc. 2.30.2; schol. Dionys. Per. 524 = *GGM* II 450; schol. Hom. *Il.* 2.634, Erbse) or Σάμαια (schol. Thuc. 1.27.2, Hude). The city-ethnic is Σαμαῖος (Thuc. 2.30.2; *I.Magnesia* 35.15, 16, 18, 27, 29 (c.207); *Etyim. Magn.* 507.31; schol. Thuc. 2.30.2, Hude).⁹

Same is referred to as a *polis* in the urban sense by the term *τετράπολις* at Thuc. 2.30.2, where the use of city-ethnics instead of toponyms indicates that the political sense is a connotation (Hansen (2000) 174 n. 3, 208); cf. Xen. *Hell.* 6.2.33: τὰς ἐν τῇ Κεφαλληνίᾳ πόλεις.

The collective use of the city-ethnic is attested internally in a Samaian decree from Magnesia (*I.Magnesia* 35.15, 16, 18, 27, 29 (c.207)) and on coins (see *infra*).

Same was situated in the northern and north-eastern part of Kephallenia (cf. Thuc. 2.30.2). In the northern peninsula today called Erisos, in the Pylaros valley, there are some remains of settlements and fortified places, e.g. a small

fortress of polygonal masonry at Pyrgos (C5–C3; Partsch (1890) 64–65; Steinhart and Wirbelauer (2002) 194 pl. 78; for a survey, see Randsborg (2002) i. 53–60; ii. 54–59). There are foundations of a temple outside the *polis* on the top of the hill Alpovuni (Parsch (1890) 72 and pl. 2; Randsborg (1995) 96 and (2002) ii.58).

For league membership, alliances, military matters, envoys, *theorodokoi*, taxation and foundation myth, see the collective attestations of Kephallenians cited s.v. Kranioi (no. 125).

Two acropoleis are known to Livy (38.29.10), one called Cyneatis or Cyatis. Partsch (1890) 59–72 gives a description of their wall circuit and of the walls joining them. The remains are of polygonal and rectangular masonry (C4?, certainly C3; Randsborg (2002) i. 43–52; ii. 57–58, 264–75).

Same struck various silver and bronze coins from C5 onward. Denominations: tetrobols and smaller fractions. *Obv.* male head (Apollo? or Kephalos?) or Athena; *rev.* hound or ram; legend: ΣΑΜΑΙΩΝ, ΣΑΜΑΙ, ΣΑ or monogram (Postolakos (1868) 98–101; Biedermann (1887) 69–71; Head, *HN*² 428; Babelon, *Traité* ii. 2. 803–6; Grose (1926) nos. 6695–6; cf. also *IGCH* 183; Kraay (1976) 96; *SNG Cop. Acarnania* 472–77).

137. Sollion Map 54. Unlocated. Type: A. The toponym is Σόλλιον, τό (Thuc. 2.30.1 with schol.; 3.95.1, 5.30.2). The only source for a city-ethnic is Steph. Byz. 581.9–10, who suggests Σολλιεύς. Sollion is called both a *polisma* and a *polis* in the urban sense at Thuc. 2.30.1. At 3.95.1 and 5.30.2 Thucydides uses the toponym without any site-classification.

Thucydides describes Sollion as *Κορινθίων πόλισμα* (2.30.1), which indicates that Sollion was a colony of Corinth (no. 227) (Graham (1962), (1964) 118–19), *pace* Salmon (1984) 277–78, who overlooked that Thuc. 2.30.1 uses *polis* synonymously with *polisma*. However, the colony was not an independent community, for at Thuc. 5.30.2 we are told that the Athenians had not complied with the terms of the Peace of Nikias and surrendered Sollion to the Corinthians. The inference is that Sollion was a dependent *polis*, a colony that to some extent was under Corinthian supremacy (Graham (1964) 118–42). Sollion was conquered by the Athenians in 431/0 and handed over to the *polis* of Palairos (no. 131), Thuc. 2.30.1: οἱ . . . Ἀθηναῖοι . . . Σόλλιον τε Κορινθίων πόλισμα αἰροῦσι καὶ παραδίδοασι Παλαιρεῦσιν Ἀκαρνάνων μόνους τῆν γῆν καὶ πόλιν νέμεσθαι. The presumption is that Sollion thereafter was the harbour of Palairos (Thuc. 3.95.1) and had ceased to be a *polis*.

⁹ Perhaps other Samaioi are mentioned in Greek inscriptions, but sometimes the distinction between the various cities or ethnics beginning with Σαμ- is impossible.

The exact location is unknown (cf. Pritchett (1992) 87–88, (1994) 205–7, who identifies Sollion with the ruins of Sterna (see Palairos (no. 131)) and the recent discussions: Wacker (1996*b*) 96–97 and Schoch (1997) 21–22), but from Thuc. 3.95.1 one has to infer that Sollion lay on the south side of the Plagia peninsula, probably in or near Zaverda Bay.

138. Stratos (Stratios) Map 54. Lat. 38.40, long. 21.20. Size of territory: 2. Type: A. The toponym is Στράτος (Thuc. 2.80.8; *IG* IV².1 95.10 (356/5)), ὄ (Polyb. 5.13.10), or ῆ (Paus. 6.2.1). The city-ethnic is Στράτιος (Thuc. 2.81.2; *IG* IX².1 390.1–2 (C5); *CID* II 1.11.17, 22 (362/1); cf. Στρατικός, *IG* IX².1 3A.25 (263?)).

Stratos is called a *polis* in the urban sense by Thuc. 2.81.2, 4–5, 2.102.2, 3.106.1. The territorial sense is a connotation at Thuc. 2.80.8. The political sense is attested in a C5 proxeny decree of Stratos (*IG* IX².1 390.1–2). The collective use of the city-ethnic is attested externally in the Delphic contribution list *CID* II 1.11.17 (362/1) and by Thucydides (see *supra*), and internally in the proxeny decree mentioned above as well as on the coins (see *infra*). The individual use of the city-ethnic is attested externally in *CID* II 1.11.22 (362/1), and internally in a manumission inscription (*IG* IX².1 394.4, 10 (C2)).

Stratos was part of Akarnania (*IG* IV².1 95.8 + 10 (356/5); *SEG* 36 331.A.15 + 38 (331/0–313); Strabo 10.2.2), lying in the interior (Thuc. 2.102.1; Strabo 10.2.3) beside the river Acheloos (Polyb. 5.6.6) as πόλις μεγίστη τῆς Ἀκαρνανίας (Thuc. 2.80.8). Its territory is called Στρατίων γῆ (Thuc. 3.106.2). The Στρατικὸν τέλος of the Aitolian Confederacy included at least, besides Stratos itself, the *poleis* of Oiniadai (no. 130) and Matropolis (no. 128) (*IG* IX².1 3B.2 (C3 before 230)).

Stratos was a member of the Akarnanian Confederacy and the seat of the federal institutions (Xen. *Hell.* 4.6.4 (r389); *IG* IX².1 393 (C3)). Klaffenbach (1957*a*) xiv suggests that the central position of Stratos in the Confederacy—attested by Xen. *Hell.* 4.6.4—may be traced back to 424.

During the Peloponnesian War (in 429), citizens loyal to the Peloponnesians suffered expulsion by the Athenians (Thuc. 2.102.1). In 314, on the advice of Cassander, many Akarnanians moved to Stratos (Diod. 19.67.4; see Freitag (1994) 222–23 for the historical circumstances).

Stratos honoured Lysias from Megara (no. 225) and his two sons with *proxenia* (*IG* IX².1 390 (C5)) and appointed *theorodokoi* to host *theoroi* from Epidauros (no. 348) (*IG* IV².1 95.10 (356/5)) and Nemea (*SEG* 36 331.A.38–40, B.38–40 (331/30–313)). A Stratian Olympic winner with unknown name is attested for 368 (*Olympionikai* 416(?)). He was honoured with a statue by Lysippos (Paus. 6.2.1).

The oldest attested public enactment is the proxeny decree of C5 (*IG* IX².1 390), which mentions a *bolarchos* from Phoitiiai (no. 134) (*ibid.* 390.9).

To the west of the middle hill lay the agora of Stratos, with large *stoai*, a *bouleuterion* and a great altar, all of C4 (Schwandner, *AA* (1991) 614, (1992) 669, (1993) 678, (1995) 783, (1996) 555–56 with pls. 2–3, (1997) 509–10; Lang (1994) 243). The ruins of the Doric temple of Zeus (C4; cf. *IG* IX².1 394.4, 18 (suppl., C2), and *IG* IX².1 395 (C4, perhaps a list with contributions to the temple building)) have been studied by Picard and Courby ((1924); cf. Zschietschmann (1931) 334–35; Wurster (1973) 209–10; Bankel (1984)). At a distance of about 4 km to the west of Stratos (site of Spathari), remains of an Archaic temple (C6, with Hellenistic restorations and, probably, a Geometric predecessor) have recently been excavated (Schwandner (1994), *AA* (1995) 784–86, (1996) 557–58). Midway between this temple and the city, another extra-urban sanctuary existed, which was discovered in 1993 (Schwandner, *AA* (1995) 783–84). The C4 theatre of Stratos (now excavated: Schwandner, *AA* (1993) 678, (1996) 555–56, (1997) 509; *TGR* ii: 302) accommodated c.8,000 spectators (Lang (1994) 243).

The acropolis of Stratos was situated on the northern edge of the city. The circuit of walls (Pritchett (1989) 137–39) built of pseudo-isodomic masonry and surrounding both the fortified acropolis and the town was about 7.5 km long and enclosed an area of c.80 ha. According to Thuc. 2.81.2, Stratos was a walled city in 429, which suggests (*pace* Winter (1971) 112 n. 26) that the existing enceinte dates from at least C5 (Pritchett (1992) 115–16; Gehrke (1994–95) 44–45); at present archaeology dates the fortification to C4 (Schwander and Kolonas (1996)).

Stratos struck silver coins c.450–400. Denominations: pentobols and smaller fractions. Types: *obv.* head of Acheloos; *rev.* head of Kallirhoë; legend: ΣΤΡΑΤΙΩΝ, ΣΤΡΑ, ΣΤΡ, Σ (Imhoof-Blumer (1878) 156–67; Head, *HN*² 331–32; Grose (1926) no. 5380; *IGCH* nos. 88, 208; *SNG Cop. Acarnania* 404). Besides that, there is a Pegasus type of C4s (Talbert (1971) 62; Kraay (1976) 126 with pl. 24 no. 437). For the federal coins struck at Stratos, see 352 *supra*.

139. Thyreion (Thyrieus) Map 54. Lat. 38.50, long. 21.00. Size of territory: 2. Type: B. The toponym is Θύρρειον, τό (*IG* IV².1 95.16 (356/5); *SEG* 36 331.A.26 (331/30–313); in Ps.-Skylax 34 one should read Θύρρειον instead of the MS's Οὐριτόν; see Kirsten (1961); Marcotte (1985) 255) or Θύριον (Polyb. 4.6.2, 24.3; Θούριον in Polyb. 18.10.10, 28.5.1). The city-ethnic is Θύρρειος (*IG* IX².1 3A.23 (263?)) or Θυρρεύς

(*IG* 1x².1 582.46 (c.207)), *Θυριεύς* (*Xen. Hell.* 6.2.37), *Θυρρεεύς* (*SGDI* 2658 (315–280)) or *Θούριος* (Androktion (*FGrHist* 324) fr. 65 = Steph. Byz. 320.21).

Thyrreion was never called a *polis* before Hellenistic times (*IG* 1x².1 243.2 (C₃), 244.5–6 (C₃–C₂, restored); *SEG* 13 327.7–8 (c.192, restored)), unless one accepts Kirsten's emendation of Ps.-Skylax 34 (see *supra*). Xenophon speaks, in connection with *poleis* in Akarnania, of the *Thyrreians* having a *χωρίον καρπερόν* (*Hell.* 6.2.37). However, Thyrreion was a member of the Akarnanian Confederacy, had a walled urban centre and struck coins in C₄ (see *infra*); so it was probably a *polis* in the Classical period.

The collective use of the city-ethnic is attested externally in inscriptions of C₃ (*IG* 1x².1 3B.3; 1x².2 243.2) and by *Xen. Hell.* 6.2.37, and internally on coins and tile stamps (*IG* 1x².1 366; *SEG* 25 632 (C₃)). The individual use of the city-ethnic is attested externally in Hellenistic inscriptions (*SGDI* 2658 (Delphi, 315–280); *IG* 1x².1 3A.23 (263?)) and internally in *SEG* 43 227.4–6 (167?).

Thyrreion was part of Akarnania (*Xen. Hell.* 6.2.37; *IG* 1v².1 95.8 + 16 (356/5); *SEG* 36 331.A.15 + 26 (331/30–313)). As a member of the Akarnanian Confederacy, it is not explicitly attested before about 263 (*IG* 1x².1 3A.23; cf. also 1x².2 582 (Magnesia, c.207)), but considering the mention of the community in *Xen. Hell.* 6.2.37 and in the *theorodokoi* lists (*supra*), membership can be traced back at least to C₄.

Xenophon regarded the Thyrreians as brave soldiers (*Hell.* 6.2.37). c.300, Herakleitos of Thyrreion was appointed *proxenos* by Delphi (no. 177) (*SGDI* 2658; cf. *LGPN* 11A 195 s.v. *Ἡράκλειτος*). Thyrreion appointed *theorodokoi* to host *theoroi* from Argos (no. 347) (*SEG* 23 189.1.4 (330–324, restored)), Epidauros (no. 348) (*IG* 1v².1 95.16 (356/5)) and Nemea (*SEG* 36 331.A.26–7 (331/30–313)). A sanctuary of Zeus Meilichios is attested in a C₅ *horos* inscription (Mastrokostas (1965) 157 no. 11 = *SEG* 25 630).

The acropolis of Thyrreion is mentioned in an unpublished inscription of C₃; for the ruins, see Pritchett (1992) 89–90 with references. The walls are described by Kirsten (1956) 58–59 (with Noack's plan) and Pritchett (1992) 89–90 (with bibliography); for recent excavations at Thyrreion, see *BCH* 114 (1990) 758. According to *Xen. Hell.* 6.2.37, Thyrreion must have been fortified already in C₄ (cf. Lang (1994) 242). According to an inscription found during excavation at Rouga by L. Kolonas, Thyrreion had a harbour, probably by the name of "Nesos".

In C₄s, Thyrreion struck staters of Corinthian type and standard (pegasi), with the legends *Θ*, *ΘY*, *ΘYP*, *ΘYPP* (Imhoof-Blumer (1878) 168–74). Most of the surviving

specimens (more than 300 pieces) have been found in hoards from Sicily and Magna Graecia (Talbert (1971) 62; Taliervo Mensitieri and Spagnoli (1993) especially pl. 3). Some bronze coins were struck in the same period. Types: *obv.* Athena; *rev.* owl; legend: *ΘYPPEΩ* (Head, *HN*² 332–33; Grose (1926) nos. 5381–86; Hammond (1967) 726, 729; *IGCH passim* (cf. p. 408); Taliervo Mensitieri and Spagnoli (1993) especially pl. 5; *CH* viii. 159, 167, 232, 506, 580; Liampi (1996) 174; *SNG Cop. Acarnania* 407–16).

140. Torybeia (Torybeieus) Map 54. Lat. 38.45, long. 21.05(?). Size of territory: 2(?). Type: B. The toponym is *Τορύβεια*, *ἡ* (*IG* 1v².1 95.18 with *SEG* 11 411 (356/5)) or *Τύρβειον*, *τό* (*SEG* 23 189.1.7 (suppl., 330–324); *F.Delphes* III.3 203.5 and Flacelière (1937) 441 n. 1 (suppl., both 272)). The city-ethnic is *Τορυβειεύς* (*CID* II 26.18, 19 (suppl., C₄)) or *Ἀκαρνάν ἐκ Τυρβείων* (*F.Delphes* III.3 203.5 and Flacelière (1937) 441 n. 1 (suppl.)).

Torybeia is not attested as a *polis*. But in C₄ *theorodokoi* lists it is recorded under the heading Akarnania, and in C₃ it is attested as a member of the Confederacy (see *infra*). If one accepts the identification of the ruins of Komboti with Torybeia (cf. Kirsten (1940) 298ff; Klaffenbach (1957) 36; Pritchett (1992) 104–8; Hoepfner and Schwandner (1994) 340 n. 333) and the interpretation of the coins given below, there can be little doubt that Torybeia was a *polis* already in the Classical period.

The collective use of the city-ethnic is perhaps attested internally on coins (in abbreviation, see *infra*); the external and individual use is attested in two Delphic inscriptions (*CID* II 26.18, 19 (suppl., C₄); *F.Delphes* III.3 203.5 (C₃)).

Torybeia was part of Akarnania (*IG* 1v².1 95.8 + 18 with *SEG* 11 411) and is attested in 272 as a member of the Akarnanian *koinon* (*F.Delphes* III.3 203.5 and Flacelière (1937) 441 n. 1 (restored)). It appointed *theorodokoi* to host *theoroi* from Argos (no. 347) (*SEG* 23 189.1.7 (330–324, restored)) and Epidauros (no. 348) (*IG* 1v².1 95.18; *SEG* 11 411); cf. Cabanes (1985) 346–47.

The *kastro* of Komboti, presumably the site of Torybeia, shows remains of an agora and stoas (Heuzey (1860) 350ff; Pritchett (1992) 104–8) as well as a circuit wall of mostly polygonal masonry (Pritchett *loc. cit.*). The city was built on a grid plan ("Streifenstadt") with characteristic house types of a certain luxury (bathrooms); see Hoepfner and Schwandner (1994) 218, 306, 320 with fig. 305; Lang (1994) 242–43.

Imhoof-Blumer ((1878) 112–13) reports two small silver coins of similar type and of equal weight with types: *obv.* Acheloos; *rev.* *KO* or *TO* below the cross of a capital *T*. Since

Imhoof-Blumer could not know of the inscriptions attesting Akarnanian Torybeia, he interpreted *KO* and *TO* as names of officials. Both Koronta (no. 124) and Torybeia were situated in central Akarnania and, in the light of the epigraphical evidence, we should now tentatively interpret the letters as abbreviations of the city-ethnics *KO(PONTAIQN)* and *TO(PYBEIQN)*. If so, this would be the first evidence of Torybeian coinage.

141. Zakynthos (Zakynthios) Map 54. Lat. 37.45, long. 20.55. Size of territory: 4. Type: A. The toponym is *Ζάκυνθος*, *ἦ* (Hdt. 6.70.2, 9.37.4; Thuc. 2.80.1; *IG* IV 619.9 (Argos, C3)). The city-ethnic is *Ζακύνθιος* (Hdt. 3.59.1, 6.70.2; Thuc. 1.47.2, 2.9.4; *SEG* 40 507 (C5–C4); *IG* II² 43.B.35 = *Staatsverträge* 257 (373/2); for the date, see now Dreher (1995a) 18).

Zakynthos is called a *polis* in the urban sense by Xen. *Hell.* 6.2.3 and Ps.-Skylax 43. Under the heading *πόλεις*, Zakynthos is listed as an ally of Athens (no. 361) in 431 (Thuc. 2.9.1, 4) and in 373/2 as a member of the Second Athenian Naval League (*IG* II² 43.32, 70, 78, B.35–38).

The use of the city-ethnic is attested externally in an Attic inscription (*IG* II² 43.B.35) and in the authors quoted above, and internally on the coins (see *infra*). The individual use is attested externally in various inscriptions (e.g. *SEG* 40 507 (Michalitsi, C5–C4); *IG* V 11457.7 (Messene, C4–C3)).

The name of the territory is *νησος Ζάκυνθος* (Thuc. 2.66.1). There was a place *Νῆλλος* occupied by democrats during a *stasis* in 373/2 (*IG* II² 43.B.35; cf. Xen. *Hell.* 6.2.2; Diod. 15.45.2 calls it *Ἀρκαδία*; for a discussion, see Mitchel (1981) 73ff). The island was situated *πρὸ τοῦ Κορινθιακοῦ κόλπου* (Strabo 2.5.20) near Elis (no. 251) (Thuc. 2.66.1; cf. Strabo 8.2.2, 10.2.18, 17.3.20), Kephallenia (Diod. 16.6.5, 9.4) and Ithaka (no. 122) (Heliod. *Aeth.* 5.22.5). Zakynthos formed a regional unit together with Korkyra (no. 123), Kephallenia and Akarnania (Thuc. 2.7.3).

According to Thuc. 2.66, Zakynthos was a colony of the Achaians. This seems not implausible. In the mythical tradition, the founder of the city was Zakynthos, son of Dardanos, from Arkadian Psophis (no. 294; Paus. 8.24.3), which is perhaps spun out of the name of the Zakynthian acropolis (cf. the alternative name *Ἀρκαδία* for *Νῆλλος*; see *supra*). Another tradition is reflected in Dion. Hal. *Ant. Rom.* 1.50.3 and Steph. Byz. 294.3, who mentions Bateia as the oecist of the island.

In 433, 1,000 Zakynthian hoplites joined the Korkyraians against Corinth (no. 227) (Thuc. 1.47.2). At the beginning of the Peloponnesian War (431), Athens sent an envoy to Zakynthos to ascertain the Kephallenians' loyalty (Thuc.

2.7.3; cf. Diod. 12.43.5). During the Peloponnesian War, Zakynthos was allied with Athens (e.g. Thuc. 2.7.3, 9.4, 66; Ar. *Lys.* 394) and supported the Athenians with money, infantry and ships (Thuc. 2.9.4–5, 3.94–95, 4.8.2–5, 4.13.2, 7.31.2, 57.7).

After the Peloponnesian War, Zakynthos became oligarchic. At the beginning of C4, the tyrant Dionysios of Syracuse settled, among others, 600 Messenian exiles from Naupaktos (no. 165) and Zakynthos in Sicilian Messana (no. 51) (Diod. 14.78.5 (r396)). Probably during the Corinthian War, the oligarchs were driven out of Zakynthos by the democratic faction (Diod. 15.45.2, misplaced); but a few years later, presumably after the King's Peace (386), they in turn exiled the democrats. These democrats were brought to *Νῆλλος* by the Athenian general Timotheos in 375. They sided with the Athenians, while the oligarchs in the town were allied with Sparta (no. 345), sent envoys to Sparta, and in 374 supported the Peloponnesian fleet under Mnasippos against Korkyra (Xen. *Hell.* 6.2.2–3; Diod. 15.45.2–3; *IG* II² 43.B.37–38; Gehrke, *Stasis* 198–99). Zakynthos entered the Second Athenian Naval League, probably in 373/2 (*IG* II² 43.B.35–38 = *Staatsverträge* 257; cf. Gehrke, *Stasis* 198). The island was the base for Dion's operations before his return to Sicily (Plut. *Dio* 22.8–25.2), and he had Zakynthian mercenaries in his army (Diod. 16.31.7; Plut. *Dio* 57.2, 4 (r357–354)). In 338/7 Zakynthos became a member of the Corinthian League (*IG* II² 236.b.12 (suppl.); cf. *Staatsverträge* 403).

The Zakynthian Menalkos was appointed *proxenos* by the Messenians (*IG* V.1 1425 (C4–C3)). A Zakynthian winner is attested for an unknown Athenian festival (*IG* II² 2312.7 (suppl., C4f)).

The following cult sites are attested: a temple of Apollo (Plut. *Dio* 23.3 (r357)) and a temple of Aphrodite (Dion. Hal. *Ant. Rom.* 1.50.3) with statues of Aphrodite and Aineias. Benton (1932) 217 reports traces of another temple.

There existed a *stadion* in Zakynthos (Plut. *Dio* 23.4 (r357)) and a harbour (Ps.-Skylax 43), situated near the town (Heliod. *Aeth.* 5.18.3). The name of the acropolis was *Ψωφίς* (Paus. 8.24.3; Steph. Byz. 705.4, citing Paus.).

According to Strabo 3.4.6 and App. *Hisp.* 25, Saguntum in Spain was a colony of Zakynthos, but that seems to be derived from the similarity of the names (cf. *SEG* 42 972.2). Steph. Byz. (159.11–13) calls the Libyan city of Barka a *κτίσμα Πέρσεως Ζακύνθου Ἀριστομέδοντος Λύκου*, obviously a mythographical construction possibly connected with Psophis, which is attested as a Libyan *polis* in Steph. Byz. 705.2. Hdt. 3.59 mentions Zakynthians in Cretan Kydonia (no. 968). Their relationship to the inhabitants of our island is not clear.

From C5 onward, Zakyntos struck silver “drachms and smaller fractions with the type of a tripod, thus initiating the Apolline theme which was to remain prominent throughout Zacynthian coinage” (Kraay (1976) 96). Types: *obv.* Apollo laureate; *rev.* tripod; legend: ZA, ZAKYNΘION, or

ZAKYNΘΟΣ on the reverse (Postolakas (1868) 102–8; *BMC Peloponnesus* xxxix–xlii, 94–104; Babelon, *Traité* ii. i. 901–6; ii. 2. 773–92; Head, *HN*² 429–31; Grose (1926) nos. 6700–11; Kraay (1976) 96, cf. *IGCH* 153; *SNG Cop. Acarnania* 479–81).
