**Solution Brief**

# The Aqua Platform SaaS Edition

## Key Benefits

**Aqua's Cloud Native Application Protection Platform** allows DevOps and security teams to prioritize risk in minutes across the entire development life cycle, automate prevention, and respond in real time to stop cloud native attacks.

**The Aqua Platform offers two deployment models:**

**⊟ Self-hosted:** The platform with all the components is deployed and maintained by you in your own environment.

**☁ SaaS:** The core infrastructure and services of the platform are deployed and maintained by Aqua, while you manage only the enforcers at the workload level.

- Reduced management overhead
- Fast and easy deployment
- Quick insights into your security posture
- Guaranteed availability
- Seamless scalability

**The Aqua Platform Saas Edition** takes away the maintenance burden and provides hassle-free, enterprise-grade application protection. SaaS allows for immediate updates and quick, effortless scalability for teams and organizations of all sizes. Reducing your management burden means you can focus on delivering more value to your customers. Read on to see what the Aqua Platform SaaS edition enables you to achieve.

# Key benefits

## Save time and management overhead

The core infrastructure and services of the Aqua Platform are deployed and maintained by Aqua, saving you precious time and resources. Upgrades, updates, and bug fixes are automatically and continually applied for all Aqua components except the enforcers at the workload level.

## Deploy fast

In hours, discover assets across your entire cloud native application pipeline, prioritize your biggest risks, detect advanced attacks, and respond to threats in real time.

## Migrate quickly

Migration from self-hosted to the SaaS Edition is easy—just export and upload the settings and database.

## Support your data residency requirements

The Aqua Platform SaaS Edition is deployed in multiple regions around the world, including northern Virginia, US (North America), Singapore (Asia Pacific) and Frankfurt, Germany (Europe). Each region operates as an independent instance of the Aqua Platform, and all customer data remains physically in that region.

## Guarantee availability with SLAs

Benefit from guaranteed service level agreements (SLAs) for availability to support your business-critical applications' ongoing needs for uptime and reliability.

## Scale with ease

Aqua provides the flexibility to scale your security coverage up and down based on changing business needs and number of cloud accounts, container image scans, and workloads.

Aqua Security stops cloud native attacks, preventing them before they happen and stopping them when they happen. With Aqua, DevOps and Security teams prioritize risk in minutes across the entire development lifecycle while automating prevention to secure their cloud native applications on day one. Real cloud native attacks are stopped immediately without killing workloads. With a platform built on the most loved open source cloud native community and innovation from dedicated threat research, Aqua is a complete solution to cloud native security for transformational teams. Founded in 2015, Aqua is headquartered in Boston, MA and Ramat Gan, IL with Fortune 1000 customers in over 40 countries.
