

Stronger data analytics with Data-Driven Everything

What is Data-Driven Everything?

Data-Driven Everything is a BJSS and AWS programme that fast tracks your journey to becoming a data-centric organisation. By aligning business and IT stakeholders, we help you build momentum through small, quick, scalable wins leading to early gains.

Delivered in partnership with AWS

- Healthcare Services Competency
- Migration Services Competency
- Security Services Competency
- Data & Analytics Services Competency
- DevOps Services Competency
- Government Services Competency
- Cloud Operations Competency

Is Data-Driven Everything right for you?

Data-Driven Everything is for any organisation that **wants to develop a strong data analytics capability**, but has struggled due to the following challenges:

- Understanding what great looks like
- Identifying and prioritising use cases
- Securing sponsorship and defining the business case
- Creating a data-driven culture
- Building the data skills and capabilities in-house
- Data privacy, security, compliance, and governance

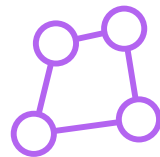

A three-throned approach to data

Delivered in partnership with Amazon Web Services, **Data-Driven Everything** takes a three-pronged approach to helping organisations realise their data ambitions:

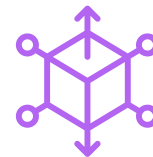

Think big

A **two-day workshop** that brings together business and IT stakeholders to create an ambitious vision for analytics capabilities and identify a single target use-case to build to a Minimum Viable Product (MVP).

Start small

Using BJSS' industry-leading **delivery expertise and data capabilities**, we deliver the agreed MVP in **less than 90 days in which time we demonstrate tangible value** to the business.

Scale fast

We **apply the learnings** from the MVP and develop a plan to **rapidly scale** data analytics capabilities for **enterprise-wide adoption** including a prioritised roadmap to **deliver additional use cases**.

Key benefits of a data-first approach

- **See rapid results:** See demonstrable business value from the MVP in 12 weeks, but with a clear plan for how to replicate those results across the organisation in the short to long-term.
- **Build data maturity:** Working as one team, we map existing levels of maturity and capability and propose a roadmap of initiatives and priorities to build data skills and tools within the organisation.
- **One version of the truth:** Create a single source of consistent, timely and reliable data for the entire organisation so all stakeholders have accurate insights to drive more effective decision making.
- **Align with business goals:** Identifying the right use case for the MVP based on the business priorities and target uses provides clear, measurable objectives for the MVP.
- **Lower risk, higher value projects:** Iteratively delivering a small-scale MVP avoids testing the approach on high-profile projects, reducing the cost and risk of experimentation.
- **Gain stakeholder buy-in:** By demonstrating value early on a small scale, stakeholders can commit to the wider vision.

Why BJSS for your data strategy?

BJSS is the leading technology and engineering consultancy for business. Trusted by clients, we collaborate to deliver complex, innovative technology, engineering and industry solutions that millions of people use every day.

- **Advanced AWS Partner** with over 400 AWS certified developers and the **first AWS partner for D2E** in the EMEA region.
- **Our unique Enterprise Data approach** to delivering data programmes for large-scale organisations has been developed **over eight years of carrying out data science in production.**
- **An end-to-end partner** that can assist at **every step of the data-driven journey**, from strategy to build to capability enhancement to managing your analytics platform.
- Our **self-developed accelerators** deliver results **quickly** without compromising on **quality** or **security.**

“The new solutions we’ve developed with BJSS are powering better decision making and reducing operational risks. With a single view of the truth and a reliable, scalable platform, we have improved our service levels and can now focus on enhancing the customer experience.”

Marcus Sims - Chief Technology Officer, Beauty Bay

About BJSS

Proven to solve your complex technology problems:

- 2,700+ talented people working together on complex projects
- 26 locations across the UK, US, Europe, and Australia

What we do:

- Technology Strategy & Innovation
- Customer Experience, Product & Design
- Technology Delivery
- Managed Services

Our Technology Expertise:

- Software Engineering
- Cloud & Platform
- Data
- Artificial Intelligence

Our Industry Expertise:

- Energy, Commodities & Utilities
- Financial Services
- Healthcare & Life Sciences
- Media & Entertainment
- Public Sector
- Real Money Gaming
- Retail & Consumer Markets
- Transport & Logistics

BJSS works with some of the world's largest companies:
