

Status of the VE-RFQ Injector for the ISL Cyclotron*, O. ENGELS, J. HÄUSER, F. HÖLLERING, A. SCHEMPP, NTG, Gelhausen-Hailer; A. DENKERT, H. HOMEYER, W. PELZER, HMI - The new VE-RFQ-injector for the cyclotron at HMI in Berlin is now being commissioned. The ECR-source together with the RFQs supply heavy ion beams with 90 - 360 keV/u for $q/A > 0.15$ matched to the isochronous cyclotron. Properties of the new injector, results of rf-tests, and first beam measurements will be presented.
