Clever **+** **Google** for Education

Secure, simple rostering for Google Classroom

Now, school districts with Google Workspace for Education Plus can have all their classes ready and available in Classroom from day one, at no additional cost, with automatic roster updates whenever data changes in the SIS.

Seamlessly sync class rosters

Clever automates creating and updating Classroom courses based on the daily changes in your district's student information system (SIS). When a student's school or rosters change, those updates are synced seamlessly to Google Classroom. Now, Clever integrates with Classroom to automatically create and manage your classroom rosters at scale.

More time for teaching and learning

Teachers no longer have to manually add students to Classroom. Instead, they can focus on building relationships and developing trust with their new pupils - knowing their Classroom rosters will be ready for students to **start learning on day one**.

The foundation for interoperability

Build the foundation for interoperability across the tools used every day in your district by by simplifying Google Classroom roster creation with Clever.

Your partners in data privacy

Student data privacy is the top priority for both Clever and Google for Education, so you can help students learn without worry. We continuously invest in people, practices, and infrastructure to safeguard student data.

"This integration provides our teachers with rostering updates whenever data changes in our student information system. We're already seeing how it's making learning easier for students and teachers. The technology becomes so seamless that teachers can focus on the content rather than the platform for delivering it."

ERICK BUENROSTRO, YSLETA SCHOOL DISTRICT

Get started

The Clever and Google Classroom integration is available at no additional cost to Google Workspace for Education Plus customers. Visit **Clever's Help Center** or schedule a call with your success manager to get started.
