

SCW TRUST AGENT

Visibility and control to scale developer driven security

**With powerful insights into every commit
and developer secure code competencies**

What is SCW Trust Agent?

Effective secure by design strategy is reliant on the developers that implement its principles from initial design to production. This dynamic necessitates the highest level of security competencies across development teams. Developers need language specific knowledge and skills to implement best practices in the code they produce, proactively identify vulnerabilities, and remediate threats. But too often there is a gap between language specific security competencies and the code developers write

This disconnect creates blindspots in an organization's overall security posture, increases the likelihood for code-based vulnerabilities, and can ultimately block the realization of a developer-driven security culture.

SCW Trust Agent is a groundbreaking offering that gives organizations unique visibility across its entire code repository capturing every commit and analyzing it against the developer's secure code profile.

SCW Trust Agent builds upon the insights unlocked through SCW Trust Score to analyze how effectively your security program is applied in every commit.

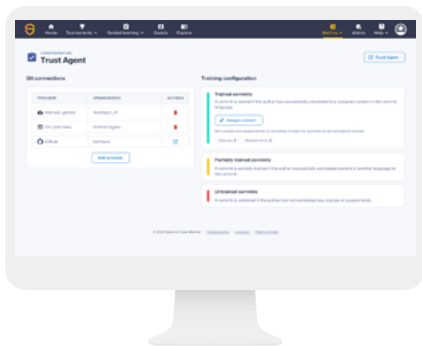

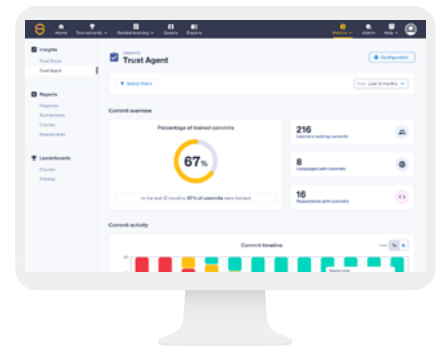

Value and benefits

- ↑ **Strengthen security posture**
- ↑ **Optimize the development lifecycle**
- ↑ **Scale developer driven security**
- ↑ **Ensure regulatory compliance**
- ↑ **Visibility and control in one place**
- ↑ **Fine-tune secure code learning**

**Cut vulnerabilities by
53%**

Actionable Insights

Detailed views into specific code commits, who made them, and their language-specific security knowledge and skills. Plus team and repo level dashboards that offer insight into how well development teams' security competencies and code commits are aligned across the entirety of the organization.

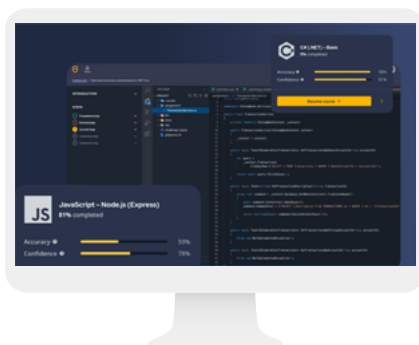

Policy Configuration

Policies and their overall restrictiveness can be set based on the project's sensitivity and requirements, ensuring language-specific security competencies without slowing down software delivery.

Extensive Code Repository Support

Deploy SCW Trust Agent in any Git-based source code management tool including Github, GitLab, Bitbucket, Azure Repos and more.

Agile Secure Code Learning

SCW Trust Agent is backed by the SCW Agile Learning Platform, powering developer security competency insights and the tools they need to build their knowledge and skills.

About Secure Code Warrior

Secure Code Warrior gives your developers the skills to write secure code. Our learning platform is the most effective secure coding solution because it uses agile learning methods for developers to learn, apply, and retain software security principles. Over 600 enterprises trust Secure Code Warrior to implement agile learning security programs, deliver secure software rapidly, and create a culture of developer-driven security.
