Re ; Future activity at the ISR

=====

At the meeting of the ISRC on 14 October, 1970 (CERN/ISRC/70-23) it was concluded that there is no way to fit the proposed experiment on deep inelastic scattering ("Measurements of Inelastic Proton Collisions with Large Energy Transfers at the ISR", J.V. Allaby et al, CERN/ISRC/70-7, 10 April 1970) into the present ISR experimental programme.

As a result, we have decided, on their invitation, to collaborate with the Rome group (U. Amaldi et al) on the small angle elastic scattering experiment. This activity will continue a fruitful CERN-Rome collaboration already started at the PS in January 1970.
