

ISR RUNNING IN

A minor irritation of ISR operation is the timing of Polaroid picture development. Several people have agreed that the recital of a short poem, acting both as a rudimentary clock and as a temporary distraction, would fulfil an operational need. The following lines are proposed, in the spirit of the current economy drive, as a means of establishing a time interval of 10 to 15 seconds, according to speed of diction.

POLARODE

*Ten seconds it takes to develop a shot  
(Eight in a pack which isn't a lot);  
Divisional budget is low - be thrifty,  
Each exposure costs one Franc fifty,  
Far more per second than indexed pay  
(Which would buy many Polaroid pictures a day).*
