

ISR-CO/DN/1s

9th December, 1970

M E M O R A N D U M

To : Parameter Committee  
From : L. Resegotti, W. Schnell, D. Neet  
Subject : Modifications suggested by the PS Coordinator  
for Runs in 1970

---

The suggested changes are included in the attached schedule dated 9.12.1970.

1. There are no changes in the irregular period (weeks 2 and 3), but the possibility exists to use the PS beam for filling the ISR a few more times after 24.00 hr on 14.1.1971 if requested in advance.

2. Changes in the first and second 3 week periods :

The double run (6 hours at 4 bunches + 6 hours at 12 bunches) on the Friday of the first week is replaced by one 6 hour run with 4 bunches.

To compensate for this one has changed the 6 hour run on the Monday of the third week to a regular double run.

For the third week there are 2 other changes : (a) the run on Tuesday changes to Wednesday (b) the double run on Thursday changes to Friday and starts one hour earlier.

The second week remains unchanged.

3. Changes in the third and fourth 3 week periods :

The suggested changes are the same as for the first and second 3 week periods, with the exception that the double run on the Friday of the third week starts at 14.00 hr. The extra MD hour before each 20 bunch run would not be needed any longer from the third period onward, so that the double run that Friday ends on Saturday morning at 02.00 hr.
