PH III-73/19

19 December 1973

Dear Colleague,

The meeting of 13 and 14 December on facts, plans, suggestions and ideas concerning the Improved SC (\equiv SC2) is behind us. There will not be any proceedings or minutes as it was a free-discussion meeting aimed at informing the participants and bringing out ideas rather than at recording statements of opinions and intentions.

However, one of the suggestions made and discussed at the meeting, has been written up and is ready for a detailed study: the proposal (PHIII-73/13) to build a large-acceptance magnetic spectrometer as a facility at the SC2 (the "Omicron Project"). We should like to invite those of you who are interested in participating actively in a full-scale investigation of the feasibility and potential of such a device to let us know as soon as possible.

The next meeting of the Physics III Committee will be held on

Monday, 25 March and Tuesday, 26 March 1973 starting at 14.30
on the Monday in the Council Chamber

and I have pleasure in inviting you.

The March meeting will be a business meeting at which we expect to be able to consider Proposals and Letters of Intention for experiments at the SC2, and to recommend tentative allocations of running time.

To ensure that your proposals and Letters of Intention will be read carefully and will receive the attention due to them, please make sure that they are in my hands at CERN not later than Friday, 8 March.

With the compliments of the season and best wishes for 1974.

Yours sincerely,

A.J. Herz

Secretary, Physics III Committee
