Comparison of Fission and Capture Cross Sections of Minor Actinides

Tsuneo NAKAGAWA and Osamu IWAMOTO

Department of Nuclear Energy System
Tokai Research Establishment
Japan Atomic Energy Research Institute
Tokai-mura, Naka-gun, Ibaraki-ken

(Received November 26, 2002)

The fission and capture cross sections of minor actinides given in JENDL-3.3 are compared with other evaluated data and experimental data. The comparison was made for 32 nuclides of Th-227, 228, 229, 230, 233, 234, Pa-231, 232, 233, U-232, 234, 236, 237, Np-236, 237, 238, Pu-236, 237, 238, 242, 244, Am-241, 242, 242m, 243, Cm-242, 243, 244, 245, 246, 247 and 248. Given in the present report are figures of these cross sections and tables of cross sections at 0.0253 eV and resonance integrals.

Keywords: Fission Cross Section, Capture Cross Section, Thermal Cross Sections, Resonance Integrals, JENDL-3.3, Minor Actinides

マイナーアクチニドの核分裂断面積と捕獲断面積の比較

日本原子力研究所東海研究所エネルギー・システム研究部
中川 庸雄・岩本 修

(2002年11月26日受理)

JENDL-3.3 に与えられているマイナーアクチニドの核分裂断面積と捕獲断面積を他の評価済みデータおよび実験データと比較した。データを比較した核種は、Th-227、228、229、230、233、234、Pa-231、232、233、U-232、234、236、237、Np-236、237、238、Pu-236、237、238、242、244、Am-241、242、242m、243、Cm-242、243、244、245、246、247 および 248 の合計 32 核種である。本レポートでは、これらの核種の断面積図と、0.0253 eV における断面積および共鳴積分値の表を示す。

1. Introduction

The latest version of Japanese Nuclear Data Library, JENDL-3.3¹⁾, was released in May 2002. This version contains the evaluated neutron-induced reaction data for 337 nuclides in the neutron energy range from 10^{-5} eV to 20 MeV. Data of important nuclides were revised from JENDL-3.2 to overcome the problems found in JENDL-3.2. Various kinds of benchmark tests were performed to confirm that JENDL-3.3 could predict reactor characteristics better than JENDL-3.2.

For minor actinides (MA), many kinds of data were also revised from JENDL-3.2, especially for important MA's of Np, Pu, Am and Cm isotopes. However, we did not update the data of less important minor actinides such as some of Th, Pa, Np, Bk, Cf isotopes. In the present work, therefore, we compared in graphs the data of JENDL-3.3 with other evaluations and experimental data to know the present status of the nuclear data for MA, and to identify the problems of the evaluated data. The data of ENDF/B-VI²⁾ and JEFF-3³⁾ were selected as "other evaluated data". Experimental data were taken from the EXFOR CD-ROM⁴⁾ provided by the IAEA Nuclear Data Section in May, 2002. The experimental data were stored once in the NESTOR-2 system⁵⁾ which was a data storage and retrieval system developed at the Nuclear Data Center, JAERI, and format-changed into suitable form for a graph drawing program.

The nuclides considered in the present work are 32 nuclides of Th-227, 228, 229, 230, 233, 234, Pa-231, 232, 233, U-232, 234, 236, 237, Np-236, 237, 238, Pu-236, 237, 238, 242, 244, Am-241, 242, 242m, 243, Cm-242, 243, 244, 245, 246, 247 and 248. The present comparison was restricted to the fission and capture cross sections which were the most important for the MA's..

In Chapter 2, the graphs of the fission and capture cross sections are shown for above-mentioned nuclides. Comparisons with experimental data measured with a lead slowing down spectrometer are given in a separate chapter, Chapter 3. Chapter 4 shows tables of cross sections at 0.0253 eV and resonance integral.

2. Graphs of Fission and Capture Cross Sections

The fission and capture cross sections of MA are shown in figures. Three types of figures are provided:

- (1) Comparison of evaluated data in the energy range from thermal to 20 MeV

Three sets of evaluated data (JENDL-3.3, ENDF/B-VI and JEFF-3) are drawn in each figure. The cross section in the energy range from 0.322 eV to the upper boundary of the resolved resonance region is averaged in the suitable energy intervals.

- (2) Comparison of evaluated data with experimental data below 10 eV
- (3) Comparison of evaluated data with experimental data above 1 keV

If data of cross section ratio are available, they are also shown.

Type 1 figures are drawn for all the nuclides. However, type 2 and 3 figures are created only in the cases where experimental data exist. The experimental data averaged with reactor spectra, fission spectra, etc. are excluded. However, Maxwellian averaged cross-section data at the thermal neutron energy are included in the figures of type 2. The data measured with a lead slowing-down spectrometer are also included. These data are shown in Chapter 3 again comparing with evaluated data broadened with experimental energy resolution. The evaluated data shown in these figures are cross sections at 0K.

Symbols of experimental data are changed every subentry of the EXFOR database. Therefore there are cases where several sets of experimental data are shown for a single reference. Usually error bars of experimental data are shown. However, they are not shown when so many data points are available. In a few figures, the experimental data are connected with a solid line.

When so many experimental data sets are available, only recent data sets are shown. In such cases, a cut-off year is indicated in a legend box.

For the cross-section ratio data, ratios of evaluated data were calculated using the data in the same library. For example, the ratio data of JENDL-3.3 to ^{235}U fission was calculated by using the ^{235}U data of JENDL-3.3. Only one exception is the ratio to ^{197}Au capture cross section. Since JENDL-3.3 does not contain the data of ^{197}Au , that of ENDF/B-VI was used instead.

References of experimental data shown in the figures are listed in Tables 2.1 to 2.31. In the tables, abbreviations of references and laboratories defined in CINDA⁶⁾ and EXFOR⁷⁾ are used.

Table 2.1 References of ^{227}Th experimental data

3. Graphs of Cross Sections Measured with Lead Slowing Down Spectrometers

The evaluated data are compared with experimental data obtained with lead slowing down spectrometers. The following experimental data are shown in figures:

Alam et al. ⁸⁾	²³⁸ Pu fission, ²⁴² Cm fission
Danon et al. ⁹⁾	²⁴⁷ Cm fission
Kai et al. ¹⁰⁾	^{242m} Am fission
Kobayashi et al. ¹¹⁾	²⁴³ Am fission
Kobayashi et al. ¹²⁾	²²⁹ Th fission, ²³¹ Pa fission
Kobayashi et al. ¹³⁾	²³⁷ Np capture
Maguire et al. ¹⁴⁾	²⁴⁴ Cm fission, ²⁴⁶ Cm fission, ²⁴⁸ Cm fission
Yamamoto et al. ¹⁵⁾	²⁴¹ Am fission
Yamanaka et al. ¹⁶⁾	²³⁷ Np fission

The evaluated data are broadened with experimental energy resolution. Resolution functions used in the present work are as follows:

- 1) For the measurements by Kobayashi et al.^{11,12,13)}, Kai et al.¹⁰⁾, Yamanaka et al.¹⁶⁾, Yamamoto et al.¹⁵⁾ at the Kyoto University:

$$\Delta E_{\text{FWHM}} = \frac{0.162899}{\sqrt{E}} + 0.352787 + 7.599 \times 10^{-5} E$$

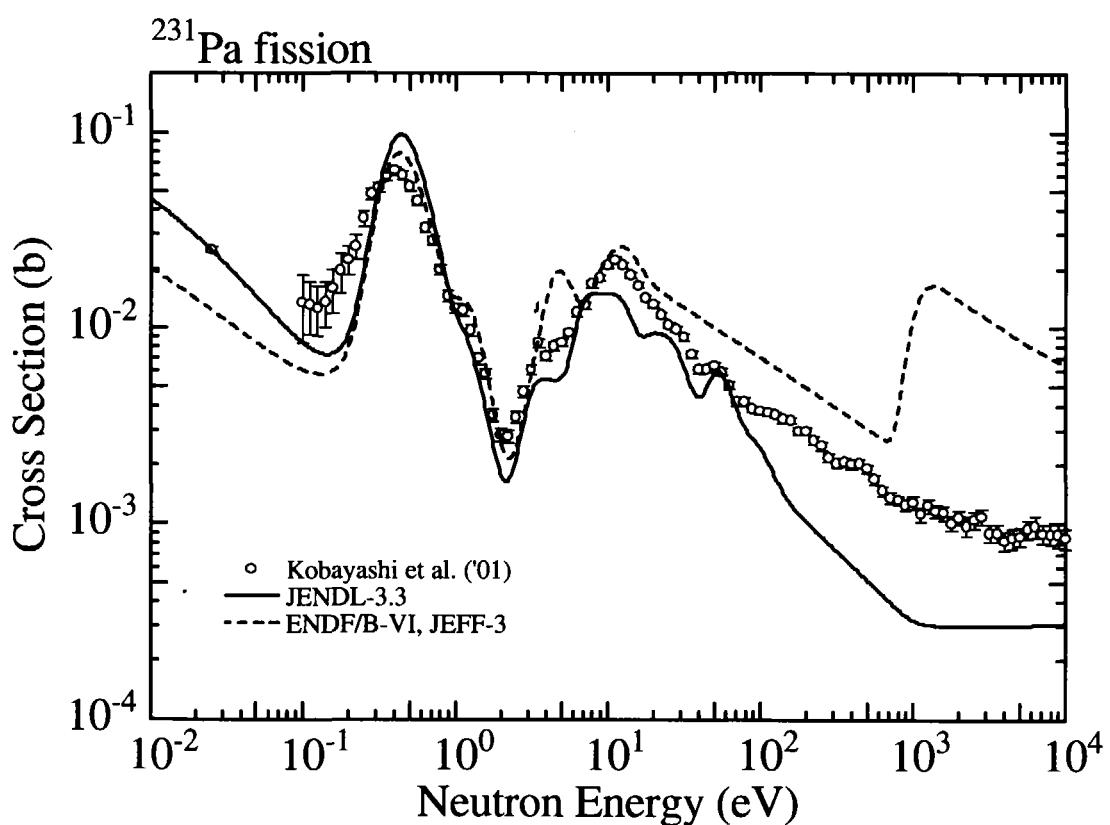

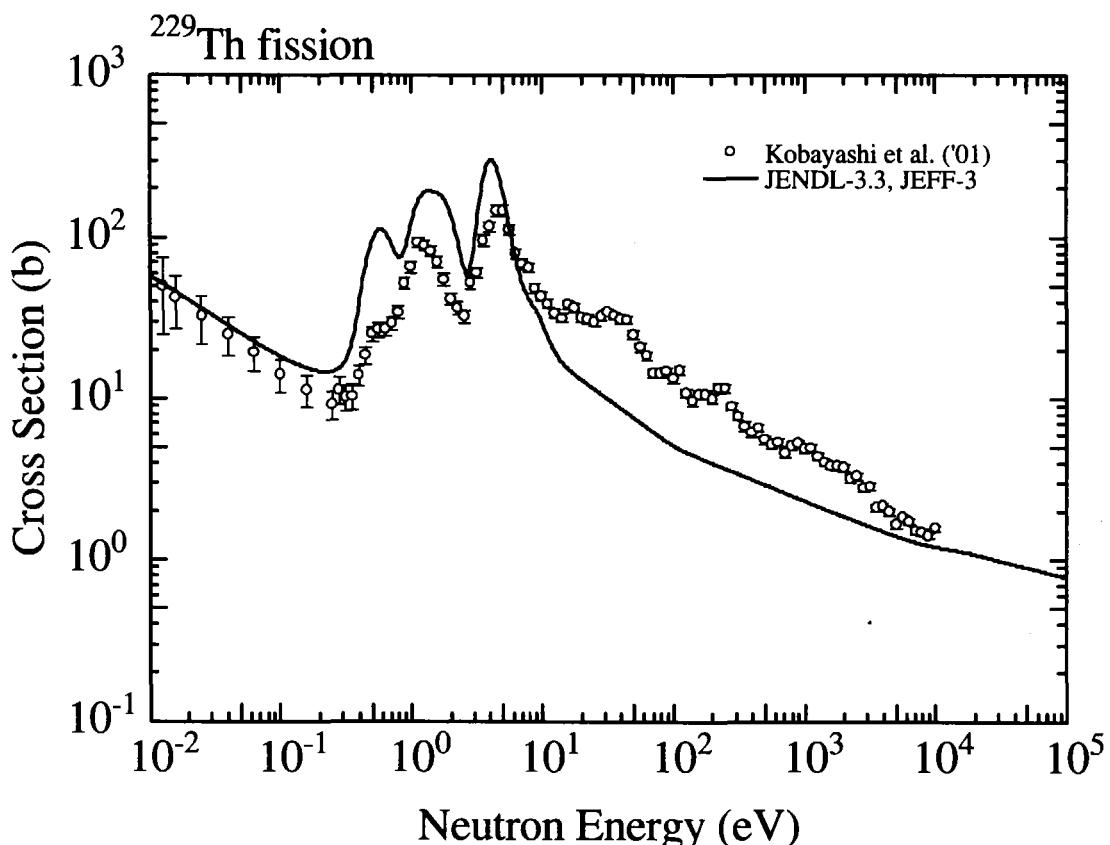

- 2) For the measurements by Danon et al.⁹⁾ at the Rensselaer Polytechnic Institute:

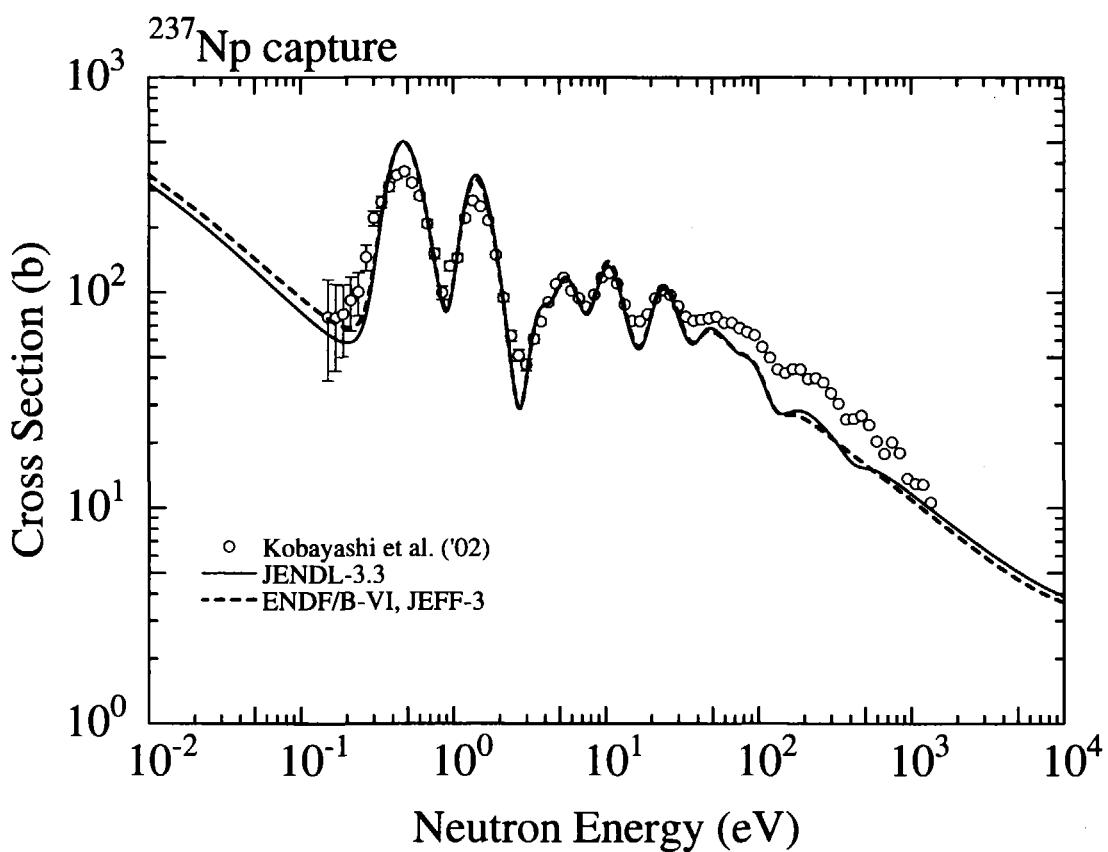

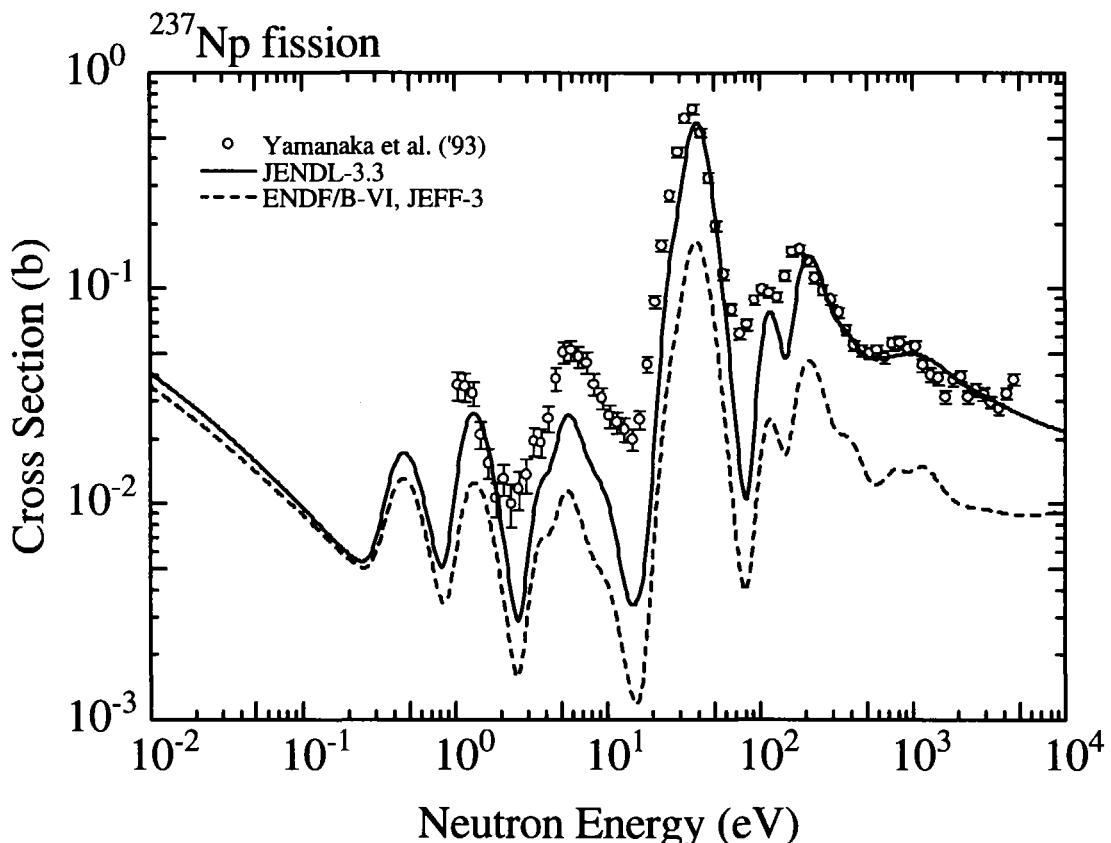

$$\Delta E_{\text{FWHM}} = E \times \left(0.0835 + \frac{0.128}{E} + 3.05 \times 10^{-5} E \right)^{1/2}$$

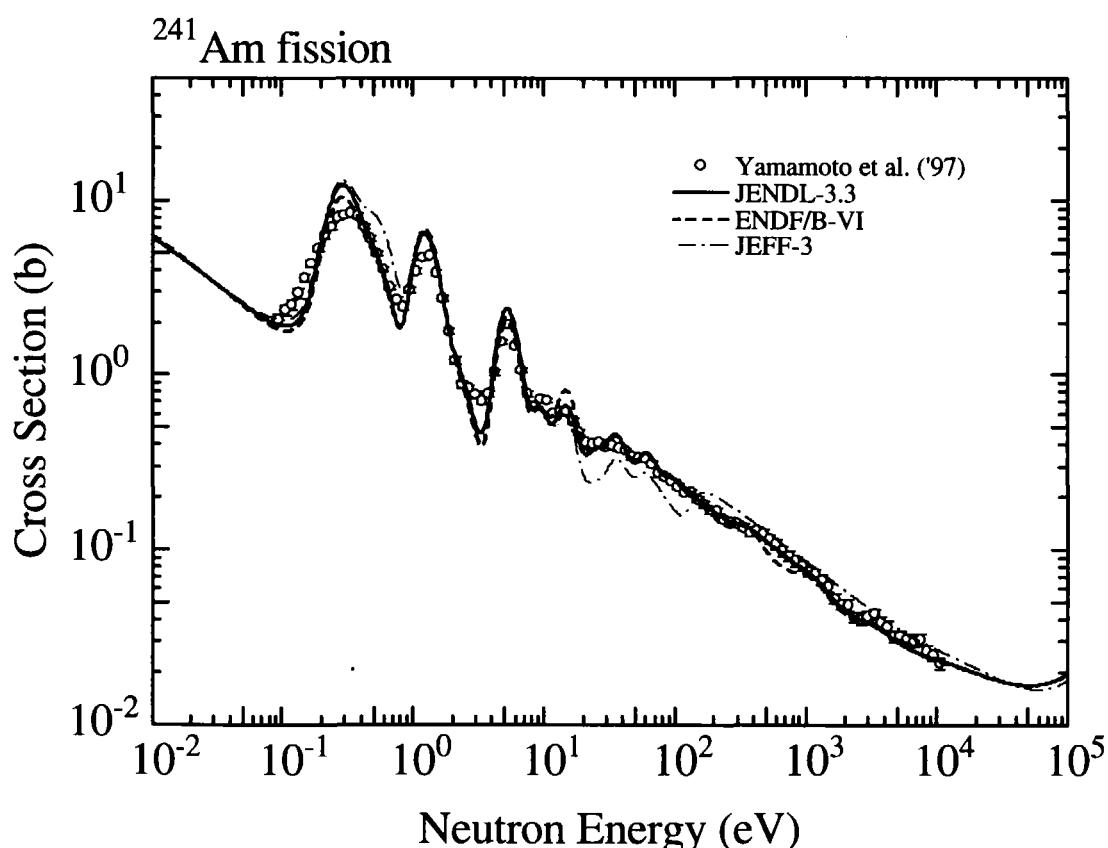

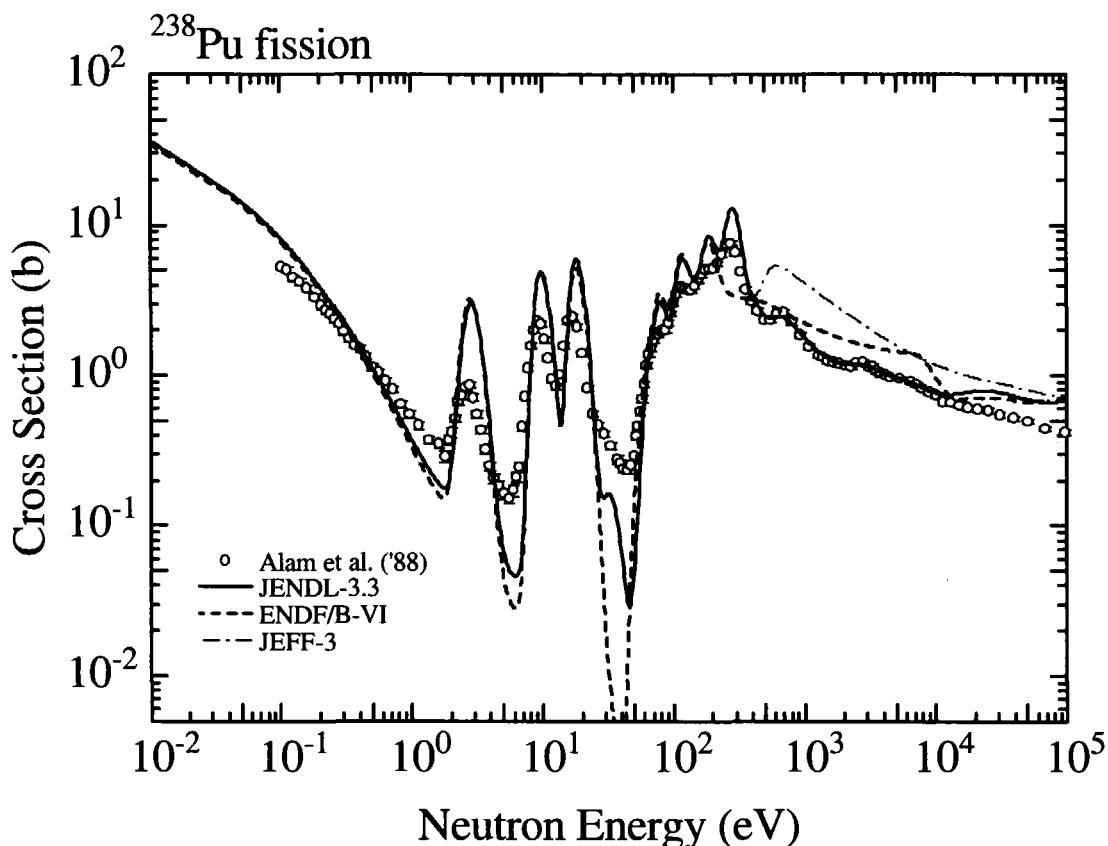

- 3) For the measurements by Maguire et al.¹⁴⁾, Alam et al.⁸⁾ at the Rensselaer Polytechnic Institute:

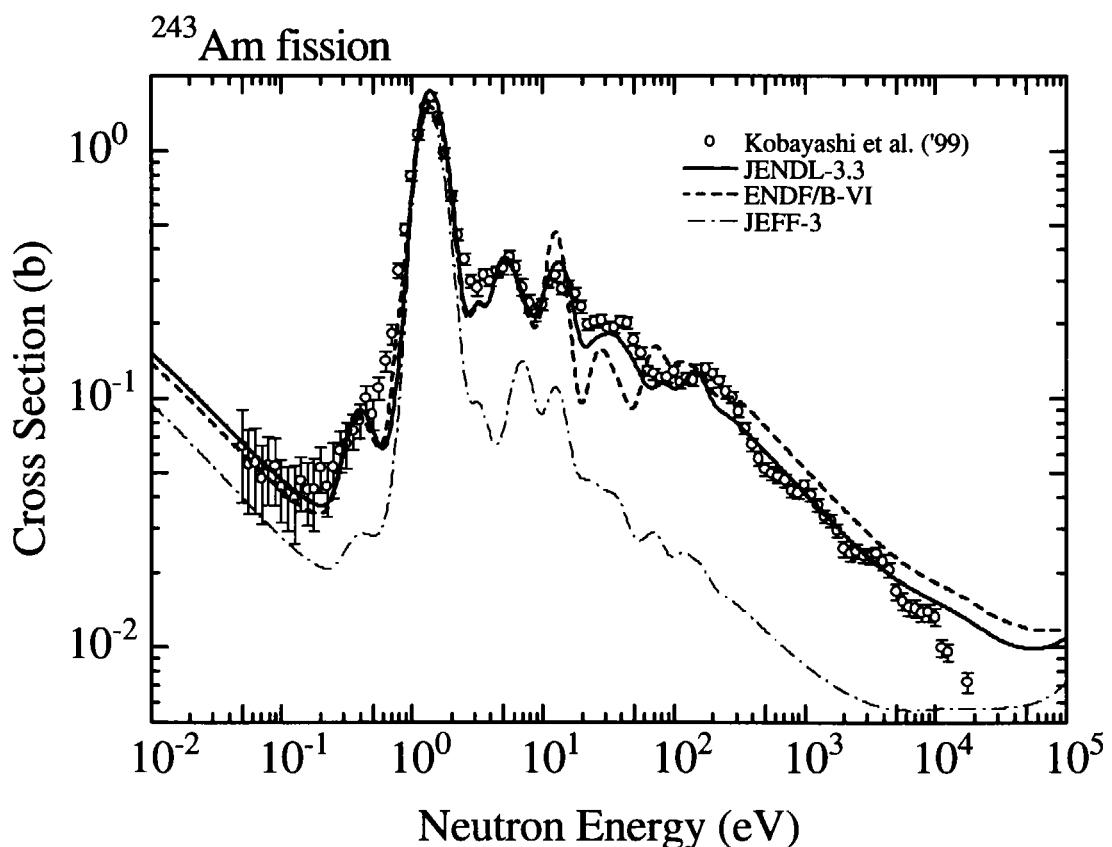

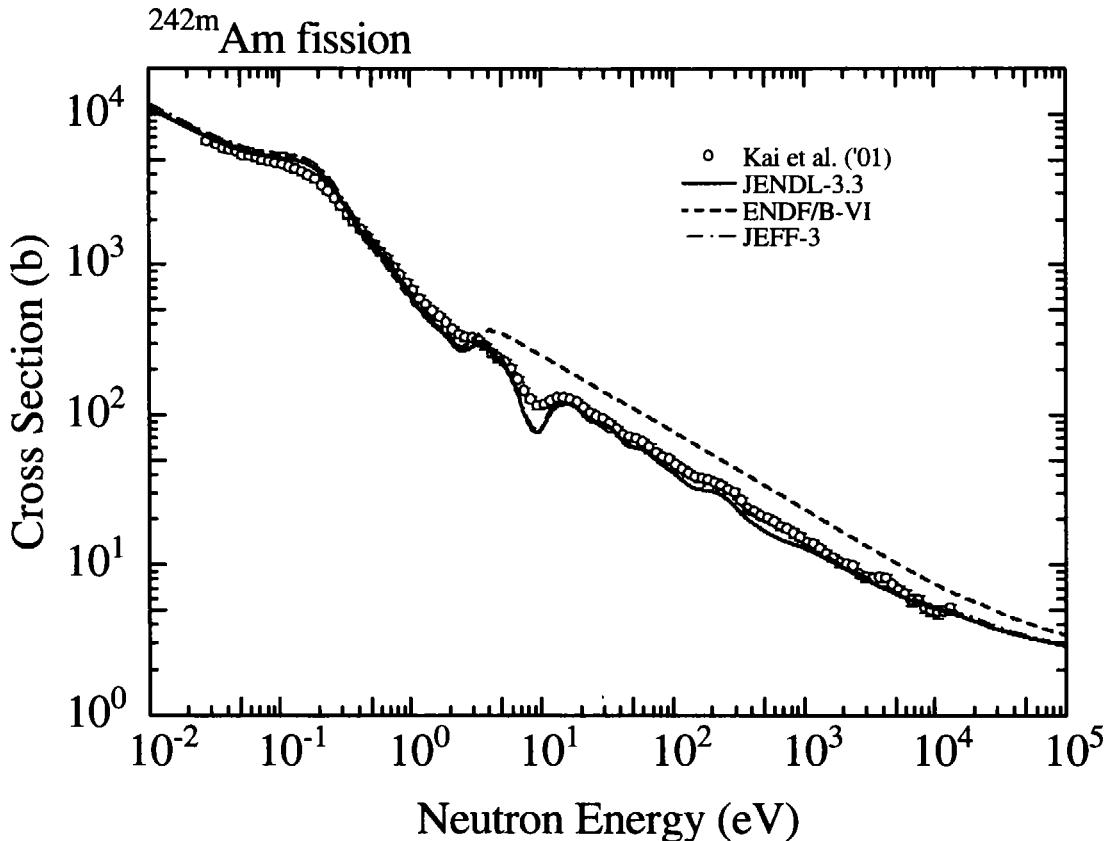

$$\Delta E_{\text{FWHM}} = E \times \left(0.0746 + \frac{0.130}{E} + 2.52 \times 10^{-5} E \right)^{1/2}$$

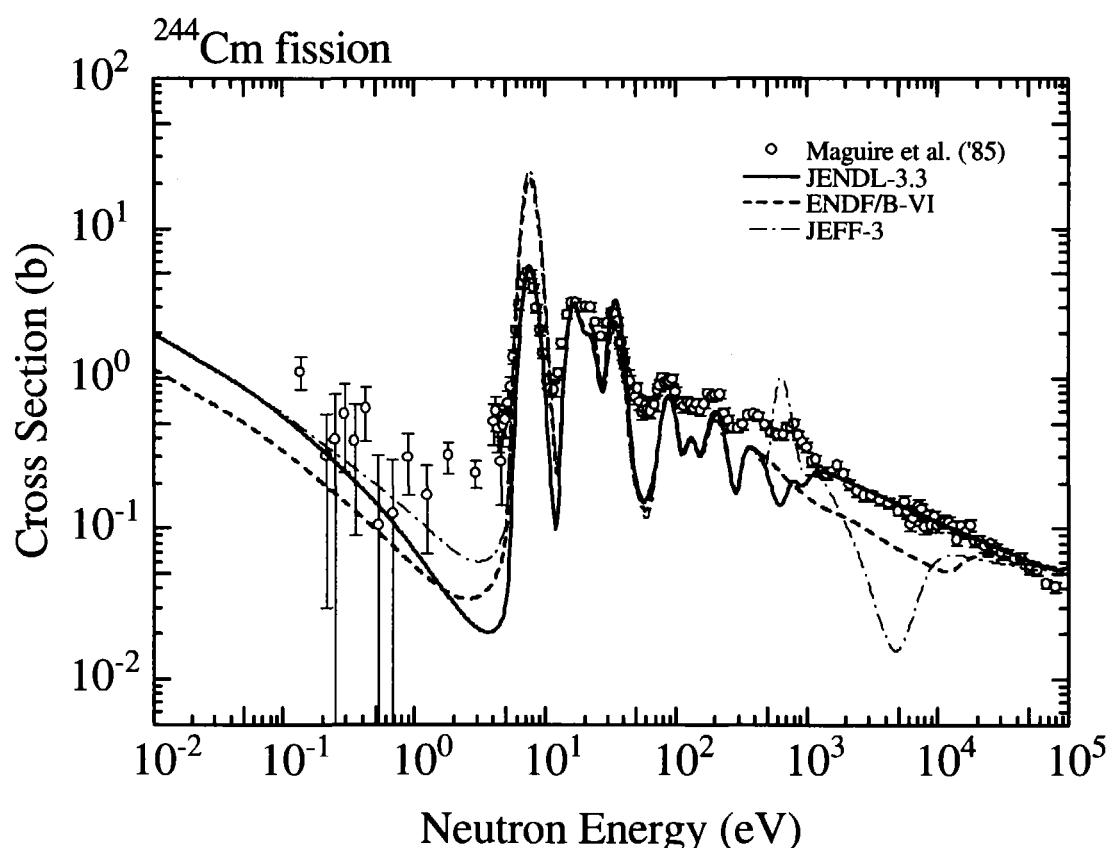

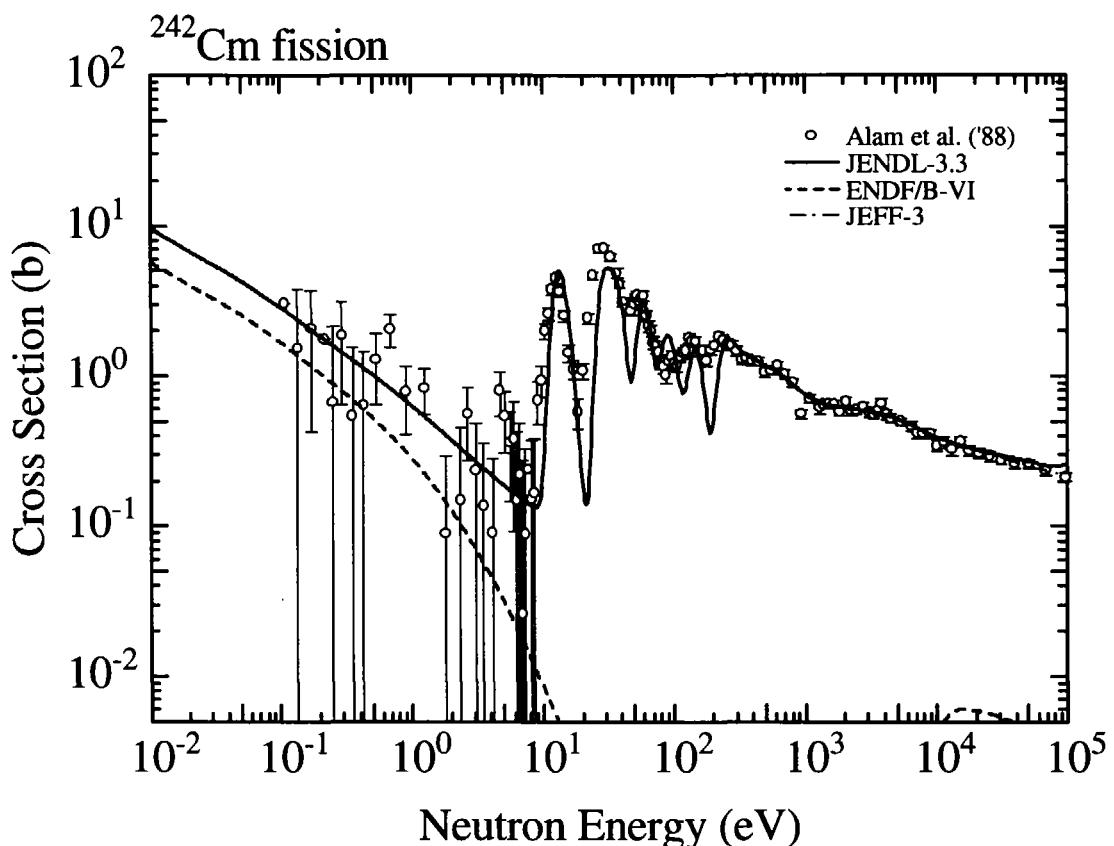

The unit of energy E in the above functions is eV. The shape of resolution function is assumed to be Gaussian type. The above functions give very large values near to the lower and upper boundaries (0.1 eV and 10 keV). When the Gaussian width ($= \Delta E_{\text{FWHM}} \times 0.42466$) is larger than the neutron energy, it is assumed to be the same as the neutron energy.

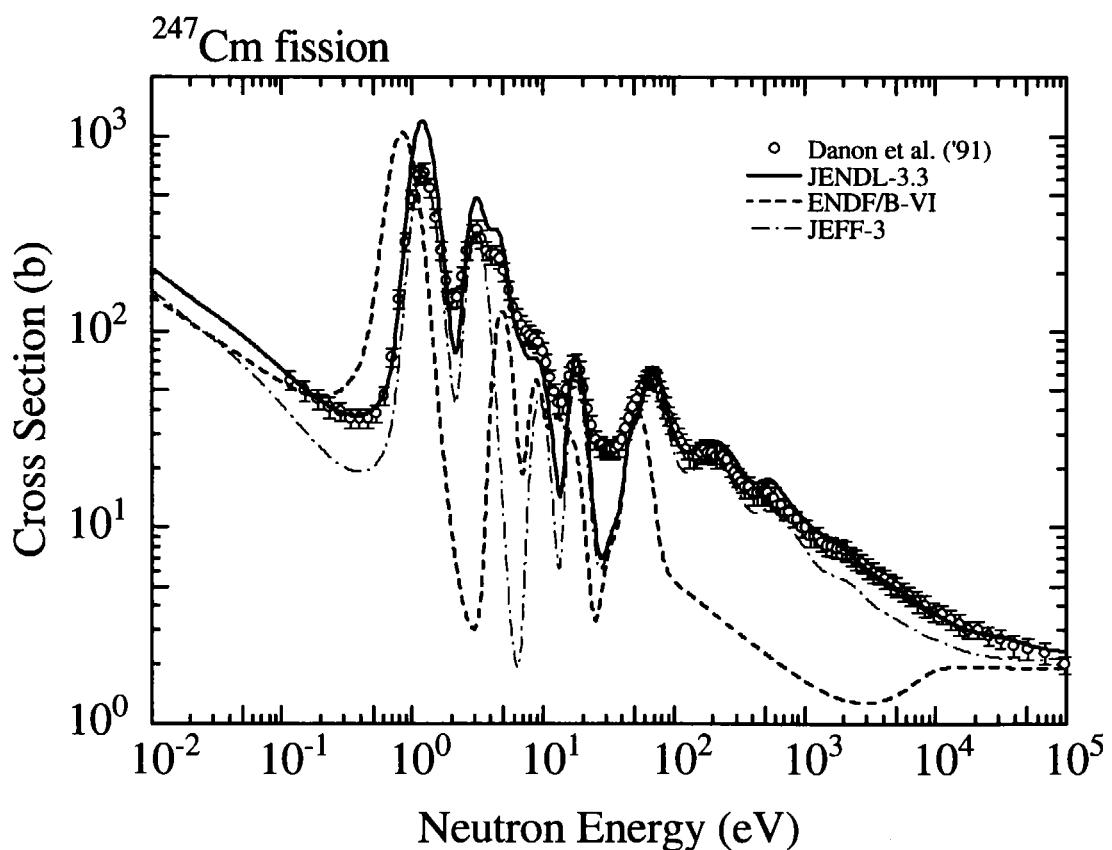

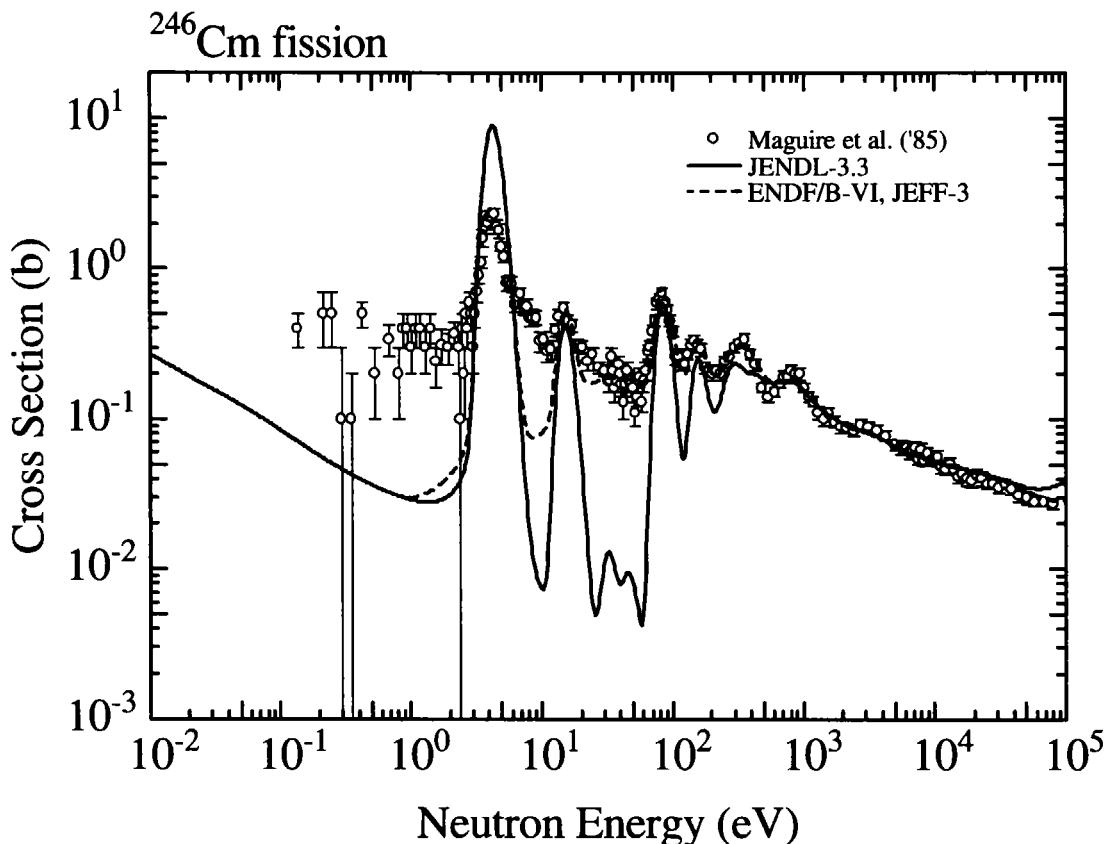

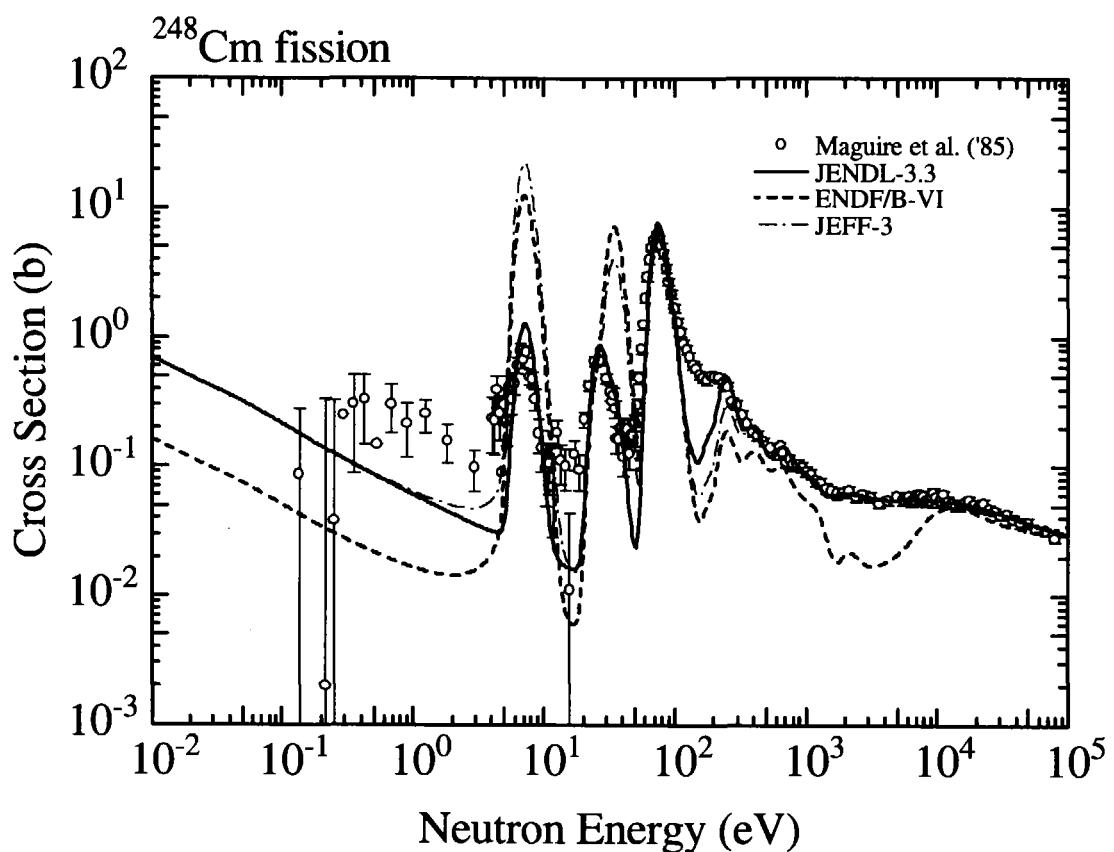

4. Thermal Cross Sections and Resonance Integrals

The fission and capture cross sections at the neutron energy of 0.0253 eV are listed in Table 4.1. The point-wise cross sections of evaluated data were calculated with the LINEAR and RECENT codes of PREPRO2000¹⁷⁾ allowing an interpolation error of 0.1 %. The evaluated data are compared with recommendation by Mughabghab¹⁸⁾, and with experimental data stored in the EXFOR database. In the table, Maxwellian spectrum average data which have an EXFOR flag of “MXW” are included, but average data in a reactor spectrum with a flag of “SPA” are excluded. Ratio data to other reaction cross sections are also excluded from the table. References of the experimental data are found in Tables 2.1 to 2.31 given in Chapter 2.

The resonance integrals of fission and capture cross sections are given in Table 4.2. Those of evaluated data were calculated in the energy range from 0.5 eV to 20 MeV by using the above-mentioned point-wise cross-section data. For the experimental data, the energy range is shown in the table if available. References of the experimental data are listed in Table 4.3. When a single reference gives a couple of data because of various experimental conditions, they are listed with the same reference name.

5. Conclusions

The fission and capture cross sections of MA's given in JENDL-3.3, ENDF/B-VI and JEFF-3 were compared with each other and with experimental data. It was seen from the cross-section graphs that the data of JENDL-3.3 were not in good agreement with experimental data of the fission cross section of ^{228}Th , ^{229}Th , ^{230}Th , ^{232}U , ^{247}Cm in the smooth region, and those of ^{232}Pa , ^{236}Np , ^{238}Np fission cross section and ^{232}Pa capture cross section in the thermal and resonance region. From the comparison with the data of lead slowing-down spectrometers, discrepancies were found for the ^{229}Th fission, ^{231}Pa fission, ^{237}Np capture cross sections and fission cross section of Cm isotopes in the resonance region.

It should also be noted that the discrepancies among experimental data are quite large and available experimental data are old for several nuclides. In particular the capture cross section above the resonance region was not reported in the last one decade. Therefore, we can conclude that the re-evaluation of nuclear data is needed for the minor actinides mentioned above, and new measurements, especially for the capture cross section, should be performed to improve the nuclear data of MA's.

照度	ルクス	lx	lm/m ²
放射能	ベクレル	Bq	s ⁻¹
吸収線量	グレイ	Gy	J/kg
線量当量	シーベルト	Sv	J/kg

表2 SIと併用される単位

名 称	記 号
分、時、日	min, h, d
度、分、秒	°, ', "
リットル	l, L
トン	t
電子ボルト	eV
原子質量単位	u

1 eV = 1.60218 × 10⁻¹⁹ J

1 u = 1.66054 × 10⁻²⁷ kg

表5 SI接頭語

倍数	接頭語	記号
10 ¹⁸	エクサ	E
10 ¹⁵	ペタ	P
10 ¹²	テラ	T
10 ⁹	ギガ	G
10 ⁶	メガ	M
10 ³	キロ	k
10 ²	ヘクト	h
10 ¹	デカ	da
10 ⁻¹	デシ	d
10 ⁻²	センチ	c
10 ⁻³	ミリ	m
10 ⁻⁶	マイクロ	μ
10 ⁻⁹	ナノ	n
10 ⁻¹²	ピコ	p
10 ⁻¹⁵	フェムト	f
10 ⁻¹⁸	アト	a

(注)

- 表1～5は「国際単位系」第5版、国際度量衡局1985年刊行による。ただし、1 eVおよび1 uの値はCODATAの1986年推奨値によった。
- 表4には海里、ノット、アール、ヘクタールも含まれているが日常の単位なのでここでは省略した。
- barは、JISでは液体の圧力を表わす場合に限り表2のカテゴリーに分類されている。
- EC閣僚理事会指令ではbar、barnおよび「血圧の単位」mmHgを表2のカテゴリーに入れている。

国際単位系(SI)と換算表

表1 SI基本単位および補助単位

量	名称	記号
長さ	メートル	m
質量	キログラム	kg
時間	秒	s
電流	アンペア	A
熱力学温度	ケルビン	K
物質量	モル	mol
光度	カンデラ	cd
平面角	ラジアン	rad
立体角	ステラジアン	sr

表3 固有の名称をもつSI組立単位

量	名称	記号	他のSI単位による表現
周波数	ヘルツ	Hz	s ⁻¹
力	ニュートン	N	m·kg/s ²
圧力、応力	パスカル	Pa	N/m ²
エネルギー、仕事、熱量	ジュール	J	N·m
功率、放射束	ワット	W	J/s
電気量、電荷	クーロン	C	A·s
電位、電圧、起電力	ボルト	V	W/A
静電容量	ファラード	F	C/V
電気抵抗	オーム	Ω	V/A
コンタクタンス	ジーメンス	S	A/V
磁束密度	ウェーバ	Wb	V·s
磁束密度	テスラ	T	Wb/m ²
インダクタンス	ヘンリー	H	Wb/A
セルシウス温度	セルシウス度	°C	
光束度	ルーメン	lm	cd·sr
照度	ルクス	lx	lm/m ²
放射能	ベクレル	Bq	s ⁻¹
吸収線量	グレイ	Gy	J/kg
線量当量	シーベルト	Sv	J/kg

表2 SIと併用される単位

名 称	記 号
分、時、日	min, h, d
度、分、秒	°, ', "
リットル	l, L
トン	t
電子ボルト	eV
原子質量単位	u

$$1 \text{ eV} = 1.60218 \times 10^{-19} \text{ J}$$

$$1 \text{ u} = 1.66054 \times 10^{-27} \text{ kg}$$

表5 SI接頭語

倍数	接頭語	記号
10^{18}	エクサ	E
10^{15}	ペタ	P
10^{12}	テラ	T
10^9	ギガ	G
10^6	メガ	M
10^3	キロ	k
10^2	ヘクト	h
10^1	デカ	da
10^{-1}	デシ	d
10^{-2}	センチ	c
10^{-3}	ミリ	m
10^{-6}	マイクロ	μ
10^{-9}	ナノ	n
10^{-12}	ピコ	p
10^{-15}	フェムト	f
10^{-18}	アト	a

(注)

- 表1—5は「国際単位系」第5版、国際度量衡局1985年刊行による。ただし、1eVおよび1uの値はCODATAの1986年推奨値によった。
- 表4には海里、ノット、アール、ヘクタールも含まれているが日常の単位なのでここでは省略した。
- barは、JISでは液体の圧力を表わす場合に限り表2のカテゴリーに分類されている。
- EC開闢理事会指令ではbar、barnおよび「血圧の単位」mmHgを表2のカテゴリーに入れている。

換 算 表

力	N(=10 ⁵ dyn)	kgf	lbf
