

Immunization Requirement for CD131 & CD230

State licensing requires that **all** persons working with children in licensed childcare centers must have verification of immunizations. Therefore, students registered for CD131 or CD230 will need to provide verification of the following immunizations:

- TB clearance (dated within one year of taking CD131 or CD230)
- Measles vaccine (usually in the form of a MMR)
- Pertussis vaccine (usually in the form of a DTP)
- Flu vaccine (dated within August 1 and December 1 of the year enrolled).

NOTE: Flu vaccine can be declined by signing a declaration that you have declined this vaccine (available on the first day of class).

Verification needs to be in paper form and should be turned in to the instructor on the first day of class.

NOTE: Verification is only needed once if both classes are taken within one year of one another. If verification is provided for CD131, it will not be needed again for CD230.

Date: _____

Student Name: _____

Quarter: _____

Class Enrolled (circle): CD131 CD230

VACCINE	DATE OF VACCINE	VERIFICATION PROVIDED*	INITIAL (Cal Poly - staff only)	COMMENTS
TB				
MMR				
DTP				
FLU				

- Attach verification documents to this form.

NOTE:

TB tests are only valid if they are within one year of taking either course. For example, if a student takes 131/230 Winter 2017, they must have proof of clearance dated no later than January 2016. If they had the test prior to that date, they must get another one. The campus health department can administer the test for a small cost.

CD131 TB clearances can transfer to 230 provided they take 230 within a year.
