Figure S3. Top 10 scoring molecules obtained by screening the ZINC subset for each target (CM,  $\beta_2$ AR, DDR1, and BCD) together with the HTVS docking score, the ECFP4 Tanimoto similarity to  $\beta_2$ 

best scoring molecule (in parenthesis), and the Molecule.one score [in square brackets].

**Figure S4.** (a) Molecule.one score versus docking score for the 100 best binders predicted for the four different targets by screening the ZINC subset. (b) Tanimoto similarity to the best scoring molecule for each target vs docking score for the 100 best binders predicted for the four different targets by screening the ZINC subset.
