

Advanced View Arduino Projects List

List of Projects using arduino with advance view:

1. Review – Maxim MAX7219 LED Display Driver IC using arduino Today we are going to examine the Maxim MAX7219 LED display driver IC. The reason for doing so is to show you how something that used to be quite complex can be made very simple – and that is what all this technology is for,..... Listed under: LED Projects

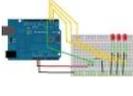

2. Brushless DC (BLDC) motor with Arduino. Part 3 – The Stroboscope Project It has been all dry theory in the Brushless DC (BLDC) motor with Arduino series up to this point where it gets to be more fun. If you've just arrived, please check out the previous two installments: Driving a three-phase brushless DC motor..... Listed under: Motor

3.  The Wordclock Grew Up! using arduino Well, It had to happen. I first published my WordClock project in September 2009. It was a Microchip PIC based circuit using a PIC16F877A microprocessor. In the last year and a half, I have been constantly improving it, and have adapted it to the Arduino,..... Listed under Timer Projects

4.  Light Meter Using I2C Level Converter, LCD, and TSL2561 using arduino I recently needed to measure how different materials affect light transmission for a gardening project. I decided this was the perfect opportunity to try out the new logic level converter to run both a 5v LCD and a 3.3v light sensor on a single I2C..... Listed under: LCD Projects, Metering – Instrument Project Ideas

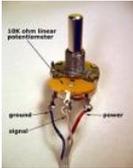

5.  Make a simple platform and give mobility to your computer using arduino A computer is a very handy thing to use in your robots. If you start listing all the features that can be used for robotic purposes you'll find that it is cheaper to buy a netbook than buying LCD, wifi and bluetooth modules, cameras, speech synthesizer..... Listed under: RTOS – OS Projects

6. Tutorial – Arduino and the MAX7219 LED Display Driver IC using arduino Use the Maxim MAX7219 LED display driver with Arduino in Chapter 56 of our Arduino Tutorial first chapter is here, the complete series is detailed here. Update – 4/1/15 – This article is pending a re-write, please refrain from comments and questions until the new one is published. Introduction..... Listed under: LED Projects

7.  Arduino Binary Dice using arduino After buying a Nanode (an Arduino-compatible board with ethernet built-in) last weekend, we've been trying to work on making a couple of simple examples, the 'Binary Dice' is the first one with input and outputs. A note, this code example is based on..... Listed under: LED Projects, Other Project Ideas

8. Boozduino using arduino Now with more LED. Arduino mega powered breathalyzer using the MQ-3 sensor. A relative gauge for judging how intoxicated you are. NOT TO BE USED AS MEANS OF BREATHALYZING NEVER DRINK AND DRIVE. This is more of a device to encourage one to drink..... Listed under: LED Projects

9.  Analog Sensors using arduino Analog sensors produce an analog (continuous) voltage that typically varies from 0 to 5 volts. They have three wires – ground, power, and signal (typically red, black, and white, respectively). Examples shown below include: Potentiometers Proximity Accelerometers Ribbon Bend Flex Light Temperature Sound Multi-touch Touch..... Listed under: Sensor – Transducer – Detector Projects

10.  Flash trigger using arduino This project is mainly based on this one from Glaciar Wanderer. I just liked his idea and worked it on my own. (I think this guy would be friends, as the projects he has in his photography category are things I've been wanting..... Listed under: Video – Camera – Imaging Projects

11. Using the tymkr's "Turn Me" with an Arduino Here is a quick write up on how to use the tymkr's "Turn Me" rotary encoder. This supports the "push down" feature of the kit. Fritzing Rotary Encoder Part: Rotary Encoder with Knob bth.fzpz Fritzing Project: RotaryEncoderDemo.fzz Arduino (1.5) project: RotaryEncoderDemo.ino 1 2 3 4 5 6 7 Listed under: Sound – Audio Projects

12.  Boost Converter Intro with Arduino Let's say that you're trying to drive a few Nixie clock tubes, or you want to make a strobe light. A variable high voltage power supply from 50-200+ volts may be required. Transformers are terrific, but difficult to find the right one and a..... Listed under: PWM Projects

13.  Arduino Circular Cylon! This is a quick arduino project that is great for beginners. Enjoy! There is a video on the last step! Step 1: What you Need To build project you will need: 10 LEDs, any color will do. Some wire, I used a ribbon cable..... Listed under: LED Projects

14.  Car No. 06 Programmed Automatic Driving Car using arduino Hi! Kaeru no Ojisan is back with Car No.06. Car No.06 is a Programmed Automatic Driving following procedure; - Simulate the Car Trajectory based on the Target Passing Points. - Drive automatically as simulated using Reflective Photosensor ar Sensor . - Adjust..... Listed under: Car Projects

15.  8 LED Chaser with 74HC595 8 Bit Shift Register using arduino Have you wanted to make a sweet Cylon/Knight Rider (Larson) Scanner effect? But you dor to use up all of your Arduino IO pins? Well, you can make a nice 8 LED Scanner with a shift register IC. In this tutorial we'll be using..... Listed under: LED

16.  3D LED Cube using arduino The 3D LED Cube is a really cool device that enables you to see in three dimensions, get some depth perception and has 512 or 512 pixels. It is based on an arduino uno which is an Atmel AVR microcontroller on a development board..... Listed under: LED Projects

17.  TiDiGino Contest using arduino The project TiDiGino We developed a new GSM remote control called TiDiGino. The name recalls the initials (TDGxx) of our previous GSM control and is also based on the Arduino project. All the details of this circuit can be found below, but no the sketch, because this is your assignment. Th contestYou have to write..... Listed under: Wireless Projects

18.  Control Ikea Dioder LED Strip with Arduino + 16X PWM LED Fader Board using arduino We're going to show how to wire up and control an Ikea DIODER L with an arduino, using a 16X PWM LED Fader board as an intermediary. The 16X PWM board is basically a bunch of mosfets under PWM control (switche turn on..... Listed under: LED Projects

19.  Secret Knock Final using arduino Secret Knock Description - My final project is a door lock that listens for your personalized knock. The lock uses an ardu board and a piezo speaker and will not unlock the door unless the specific pattern is used as a knock. Arduino Program -..... Listed under: Home Autom: Projects, Security – Safety Project Ideas

20.  Display Live Txts on Costume at Party w/ Scrolling LED Belt Buckle using arduino This project shows how to send SMS text messages to a cheap scrolling display via an Android app and arduino with USB host shield. The project was originally inspired by a friend wanting to make a "sexting themed" costum scrolling LED display..... Listed under: LED Projects

21.  Voice Recognition System using arduino Contents 1 Team Members 2 Mentor 3 Concept 4 Softwares Used 5 circuits 5.1 Pre Amp circuit 5.1.1 Circuit Diag 5.1.2 Working 5.2 EEPROM circuit 5.3 Led Matrix display circuit 6 Algorithm for silence & noise removal 6.1 Pre-Emphasis 6.2 Silence and Noise Removal Listed under: Sound – Audio Projects

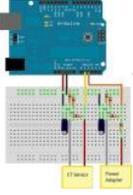

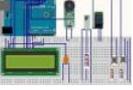

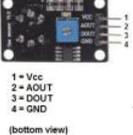

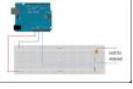

22.  A Makers Wedding – Photo booth usnig arduino This Instructable is about: building an automated photo booth. The total build cost was around \$150 as used a lot of the components and materials I already had in my garage - in addition to what I could salvage from scrap yards. Why? -..... Listed under: Vic Camera – Imaging Projects

23.  Extending PWM output pins with a Texas Instruments TLC5940 LED driver using arduino Introduction Microcontrollers like the Arduino were designed to facilitate the use of electronics for designers and DIY enthusiasts. The interface provides a great starting points for a variety of electronic circuit designs. However, as the microcontroller is standardized, it is also limited in its use..... Listed under: PWM Projects

24.  Human Body Infrared Smoke Temperature Alarm System with Arduino Web site: <http://www.instructables.com/id/Human-Body-Infrared-Smoke-Temper: Alarm-System/> Project Summary: The Human Body Infrared Smoke Temperature Alarm System works under the DC 5v voltage and uses the DH11 Temp Module to detect the room temperature. When the module detects the temperature is higher than the maximum, the buzzer alarms and..... Listed unde Security – Safety Projects

25.  1RE45 Non contact digital thermometer using arduino Contents 1 Introduction 2 Components Used 3 Description 4 Idea 5 Plan Of Action 6 1st week: 7 2 week: 8 3rd week: 9 4th week 10 5th week 11 Expenses(In Rupees) 12 Videos, Photos 13 Code 14 Team Members 15 Resources: Introduction Temperatu Listed under: Temperature Measurement Projects

26.  How to build an Arduino energy monitor – measuring mains voltage and current arduino Including voltage measurement via AC-AC voltage adapter and via a CT sensor. This guide details how to build a simple electricity energy monitor on that can be used to measure how much electrical energy you use i home. It measures voltage with..... Listed under: How To – DIY – Projects, Temperature Measurement Project Ideas
-
27.  VOICE CONTROL CAR USING ARDUINO AND ANDROID Hello friends,Welcome to ElectroPLUS . This is a post to show how to make voice control car using arduino and android. COMPONENTS REQUIRED: 1.Arduino uno or Induino R3 board. Hello friends,Welcome to ElectroPLUS . This is a post to show how t voice control..... Listed under: Car Projects, Sound – Audio Projects
-
28.  A new board for the 3Drag: there's more than Sanguinololu using arduino When we first released our 3D printer, we tried to use some parts that were already availat tested, in full respect of the open source philosophy. In particular, we decided to use the electronic card Sanguinololu. The “open” firmware we chose, the Marlin firm Listed under: Blog, Motor Projects
-
29.  Temperature Detecting Heating Control System with Arduino Mega2560 Web site: http://www.icstation.com/product_info.php?products_id=3517 Project Summary: To help electronic DIY hobbyists, will show you how to use Temperature Detecting Heating Control System with Arduino Mega2560. Full Projec temperature detecting heating control system works with DC5V voltage. This system uses DS18B20 temperature detection chip as the..... Listed under: Temperature Measurement Projects
-
30.  Camera and flash trigger module using arduino Here we go again, here is a picture of the camera and flash trigger module I made for my arduino photo projects: It includes three 4N26 optocouplers. One (first one from the left side) to trigger a flash, as I did in the arduino controlled..... Listed under: Videc Camera – Imaging Projects
-
31.  3x3x3 LED cube shield using arduino What should be in your kit: 1 – PCB 27 – LED's 2 – 6 Pins for Arduino 2 – 8 Pins for Arduino 3 – Resistors 1 – Foam G Small Wire 1 – Medium Wire 1 – Large Wire You will..... Listed under: LED Projects
-
32.  MQ-8 Hydrogen Gas Sensor Circuit Built with an Arduino In this project, we will go over how to build a hydrogen gas sensor circuit with an arduino. The hydrogen gas sensor we will use is the MQ-8 sensor. This is a sensor that is sensitive to effects of hydrogen gas. Hydrogen gas (H2), at..... Listed under: 9 Transducer – Detector Projects
- 1 = Vcc
2 = AOUT
3 = DOUT
4 = GND
(bottom view)
-
33.  Simple Solar Power using arduino Simple Solar Power Light contains energy. When light hits a conductor (or semiconductor) some of the energy is trans into moving electrons, creating current. We can harness the current using solar cells (aka photovoltaic cells). When the sun shines on a solar cell, the cur Listed under: Battery Projects
-
34.  Arduino-enabled Patron Interaction Counting using arduino Using the Arduino development board (<http://arduino.cc>) has become a very popular way to hardware prototypes that bridge the divide between the physical world and the Internet. This article outlines how to use an Arduino, some off-the-shelf electronic parts, the Processing programming language, and Google..... Listed under: Internet – Ethernet – LAN Projects
-
35.  Using an RGB LED to Detect Colours using arduino I am going to show you how you can use an RGB LED and a Cds photocell as a colour sensor for a mic controller. I will illustrate the method to retrieve a colour using Arduino, and I will show you a how you can verify the..... Listed under: LED Projects
-
36.  Reviving a dead arduino Well I managed to kill my arduino. It no longer accepted uploads with the classic out of sync error. After asking on the arduino f was told I would need a high voltage programmer to rectify, so I decided just to buy a new..... Listed under: Development Board – Kits Projects
-
37.  Cosmic ray detection from vertical and horizontal directions using three Geiger counters using arduino Research Group: Ryan Mountcastle, Minh Trang 1 Nathan Ranno, and Ryan Ward Launch: Whitworth Fall 2012 This experiment was designed to examine cosmic ray activity in the Earth's atmosphere as a increases. The previous group's project utilized three Geiger counters stacked vertically to eliminate false..... Listed under: Other Projects
-
38.  Using the Parallax RFID Reader with an Arduino f you've ever wanted the ability to use some form of hardware-based authentication in your projects the the board to do it with. The Parallax RFID (Radio Frequency Identification) reader is super easy to configure. It only takes four wires! It uses serial..... List under: Projects, RFID - NFC projects
-
39. Build a network clock (NCLK) with Microduino-RTC The resolvent of clock synchronization over internet. by PKJ, The web–based clock management system allows you to r clock status from wherever they are and centrally change settings. and this small device is built with PoE technology, thus IP clocks get their time, data and power..... List

under: Clock – Timer Projects, Internet – Ethernet – LAN Projects

40.

TFT Display with microSD breakout board using arduino 128X160 pixels in 18 bit color with a microSD breakout board courtesy of Adafruit Industries You purchase the 18-bit color TFT LCD display with microSD card breakout kit (part# ST7735R) from Adafruit Industries This tutorial from Adafruit is for a 1.8 diagonal TFT display..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects, LCD Projects

41.

SPI Interfaces using Arduino Update (6/7/2012) – I've had to disable comments on this post, because it is being targeted by spam bots for some reason. use the contact page if you have a question about this topic. [box type="note" color=" #202020 " bg=" #ffbb00 " font="verdana" fontsize="14" radius="20 Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects, Projects

42.

Awesome button, and then some. usnig arduino Many of you have probably seen the Awesome button done by Matt Richardson of Make Magazine. If n is his video which was very well done and was the inspiration of my project. I liked the idea of having a button to press for..... Listed under: LED Projects

43.

Secret Knock Detecting Door Lock using Arduino Protect your secret hideout from intruders with a lock that will only open when it hears the secret knock started out as a bit of a joke project, but turned out to be surprisingly accurate at judging knocks. If the precision is turned all..... Listed under: Home Automation Projects, Projects, Sensor – Transducer – Detector Projects

44. The Soil Temperature Sensor using arduino You are building a soil temperature sensor. We need a waterproof thermometer that we can burry in the soil. The sensor is m of a small circuit enclosed in a piece of heat shrink (to waterproof it). Supplies: (see the parts page) an LM335..... Listed under: Home Automation Projects, Temperature Measurement Projects

45.

Arduino RFID Card Reading Finally! It's been about 3 months since my last arduino tutorial – I've been keeping busy as usual. I've been working on this or some time. I got the parts months ago, made an outline a few weeks ago, prototyped the circuits and wrote..... Listed under: Projects, RFID - NFC project

46.

Arduino – One Wire Digital Temperature Sensor – DS18B20 The one wire Digital Temperature Sensor - DS18B20 from Maxim (formerly Dallas) is a great c measuring temperature in your projects. Luckily, there is a Dallas Temperature library for the arduino which makes using this sensor very easy. The mos version of this..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Project Ideas, Temperature Measurement Projects

47.

Traffic Light Stoplight LED Scarf – Safety Scarf of Righteousness using arduino Multipurpose like a traffic light, this one keeps you warm and blinks to ma more visible in the night. Stop traffic with this fun scarf worn around your neck. Repurpose a dollar-store bicycle safety flasher to embed in the scarf. Si the light changing..... Listed under: LED Projects

48.

Soldering an SMT MOSFET Driver with a hotplate Soldering SMD components isn't as hard as you might think. In fact it's easy. If you follow this instructa you'll soon see just what great results you can obtain at home using just a hotplate. It's not just being able to make small circuit boards..... Listed under: Development Board – Kits Projects, How To – DIY – Projects

49.

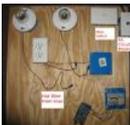

3D AIR mouse | Arduino + Processing 3D AIR mouse | Arduino + Processing I'm an Industrial design student, and last year as part of a course called "Tec as RAW materiel" I built this project as my final work. I work most of the time with SolidWorks, a CAD software for..... Listed under: Arduino Programmer Projects, Projects, Sensor – Transducer – Detector Projects

50.

Twitter Poem Box This is a project that was inspired by Marc de Vinck's Kitty Twitty Cat Toy <http://makezine.com/22/kittytwitty/> . It incorporates an RFID r and the BlinkM, a programmable RGB LED. The lamp tweets random colored poems when it detects one of the three RFID cards which..... Listed under: In Ethernet – LAN Projects

51.

BennyP's Light Contraption using arduino Introduction Disclaimer: I am not an expert in any of this. There is lots of information online regarding such de Although this setup worked for me, do not trust any of my calculations. Please work all this out for yourself and consult many other sources,..... Listed u Home Automation Project Ideas, PWM Projects

52.

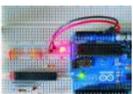

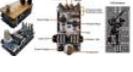

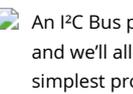

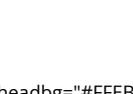

ST7565 LCDs: Graphical LCDs What it is... Type: Graphical (128x64) monochrome LCD with LED backlight Interface: Serial / SPI This is a good time to read datasheet Available from: Adafruit, of course! Introduction: This mini-tutorial will go through the process of setting up a ST7565 LCD. These LCDs..... List under: LCD Projects

53.

Standalone Arduino chip on breadboard If you're like me, after I got my Arduino and performed a final programming on my first chip, I wanted to pull it Arduino Duemilanove and put it on my own circuit. This would also free up my Arduino for future projects. The problem..... Listed under: Development I Kits Projects, Projects

54.  Making 1×10 LED Array with Random Patterns This will teach you how to make a very simple 1x10 array of LEDs on a breadboard controlled by an Arduino to blink and flash in 10 different patterns. Link to notebook for project: <https://docs.google.com/document/d/1YP4p11SbDNOm7mDn-sRjJLnXGPj6o0DkrFZnznVMvk/edit> Link to YouTube video of LEDs..... Listed under: LED Projects
55.  Arduino lets you play Atari 2600 and ZX Spectrum using a NES controller This instructable shows you how to use NES controller in Atari 2600 or ZX Spect (with Kempston Interface) with the aid of an Arduino. Step 1: Background talk I have recently acquired a couple of Atari 2600s and a bunch of joysticks. consoles were working..... Listed under: Game – Entertainment Projects, Projects
56.  Yet Another Arduino 110v Power Controller This Instructable shows you how to build a four-gang outlet box in which each outlet is controlled via an Arduino (or any other TTL level signals). It differs from the other relay boxes in that it uses no circuit boards and has very few parts (one..... Listed under: Projects, Science energy projects
57.  Pololu Dual MC33926 Motor Driver Shield for Arduino This shield makes it easy to control two brushed DC motors with your Arduino or Arduino-compatible board. Its dual MC33926 motor drivers operate from 5 to 28 V and can deliver a continuous 3 A per motor. These great drivers also offer current-sense feedback and accept ultrasonic..... Listed under: Motor Projects
58.  Displaying Twitter feed without a PC! using Arduino There are a lot of Twitter feed readers around the Web that use Arduino AND a PC to display tweets or displays or whatsoever. Then, I decide it was the time to design a solution for performing the same job WITHOUT A PC, and..... Listed under: Internet – LAN Projects, LCD Projects
59.  Geiger counter triggered LED decorations using arduino Bored of blinky lights that blink in response to time? Make them blink with space instead! This instructable shows a quick method for connecting LED tree decorations to a Geiger counter via Arduino, so that the lights blink between different strings of time radiation is..... Listed under: LED Projects
60.  Arduino ISP (In System Programming) and stand-alone circuits We use an Arduino to program other ATmega without a bootloader. This technique allows you to use all flash memory for code and make boards using new ATmega, cheaper than those with a bootloader. The qualities that have made the success of Arduino are undoubtedly the open-source..... Listed under: Arduino Programmer Projects
61.  Digispark RGB LED Fader Forward: This instructable was originally posted at <http://www.instructables.com/id/How-to-make-LED-Fader-using-Digispark/> students and I developed it into this exemplar, for which they received a very good mark. Viewing the following video may leave you with a sense of too much speed. Please continue to read this..... Listed under: LED Projects
62.  pedalSHIELD Arduino Guitar Pedal Web site: <http://www.electrosmash.com/pedalshield> Project Summary: pedalSHIELD is a programmable Arduino Open Source & Open Hardware guitar pedal made for guitarists, hackers and programmers. Users can program and share their own effects in C/C++. Full Project Summary: pedalSHIELD is a programmable Arduino guitar pedal. It is Open..... Listed under: Sound – Audio Projects
63.  World's Smallest Stepper Motor with Arduino and EasyDriver This little wonder of electromechanical engineering came from inside a laser diode sled of an HP CT10L I've opened some time ago. The device on the picture consists of several parts, all easily fitting on a dime coin: a bipolar stepper motor with..... Listed under: Motor Projects
64.  Telemetry with solar cell using an Arduino *NOTE* THIS PROJECT IS DONE BY A GROUP OF STUDENTS FROM SINGAPORE POLYTECHNIC. Telemetry - Solar Cell Our project is using Arduino with the ZigBee to transmit and receive data from the solar cell. Data will be shown in the LCD and the software called..... Listed under: Battery Projects, Metering – Instrument Projects, Projects, Solar energy projects
65.  An I2C Bus powered Arduino IO Expander Board controlled via Bluetooth and Android Today we'll expand Arduino's digital resources thanks to an I2C bus equipped with an I/O expander and we'll allow the management of the board via a Bluetooth connection RN-42 through an Android system. All Arduino boards feature a number of digital I/Os. For the simplest projects, such resources..... Listed under: How To – DIY – Projects, Interfacing(USB – RS232 – I2c -ISP) Project Ideas
66.  Linking an Arduino to a Radiometrix NTX2B Transmitter Part 1 - Test Circuit and Test Code Introduction Getting your Arduino to transmit via the radio interface may seem daunting but it's actually pretty simple. Please freely substitute the word "Arduino" for any micro-controller you wish to use. The example below is for 5V..... Listed under: Wireless Projects
67.  Solar USB Charger 2.0 Everyone has USB gadgets. It's pretty much a fact of life. Another fact of life is that these USB gadgets also continually run out of power when you most need them. No need to fear, solar power is here! Ditch those crazy wall adapters, throw..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects, Solar energy projects
68.  0 to 99 Light display this circuit will take a light reading then display a number between zero and 99 please leave constructive comments Step 1: Parts you need [box color="#985D00" bg="#FFF8CB" font="verdana" fontsize="14" radius="20" border="#985D12" float="right" head="Major Components in Project" headbg="#FFEB70" headcolor="#985D00"] to make the 0-99..... Listed under: LED Projects

69.  PS/2/You: Go-anywhere, LED digital message board using Arduino microcontroller Combine three inexpensive LED matrix display panels, an Ardweeny microcontroller and a standard PS/2 computer keyboard into your own go-anywhere, instantly updatable 768-pixel digital message board. The code can to six lines of text with a maximum of 100 characters each. Pressing a..... Listed under: LED Projects

70. Solar Tracker Relay circuit using Arduino I've reached the point where I need to think how I'm going to control the motor & linear actuator for my solar tr Things to consider - Must be able to go forwards and backwards - so that makes 4 channels, 2 for each motor..... Listed under: How To - DIY - Projects

71. BARC Jeep - An XBOX Controlled Power Wheels Make a power wheels jeep that is controlled by an XBOX controller. This particular build is using Power W Jeep® Hurricane with Monster Traction™ but should be usable across many different types of power wheels with small adjustments. I wanted to do this so I could..... Listed under: Car Projects, Game - Entertainment Projects

72. Nick Smith - Magical Music Box using arduino This is my Magical Music Box which converts music into a light show. When i was daydreaming what to make for my fin project, i wanted something that would make a light show for any song simply by hearing it. Materials used: 1x arduino 8x..... Listed under: Game - Entertainment Pr

73. Interactive LED Lab Coat using Arduino This is an instructable for the Interactive LED Lab Coats, showcased at Autodesk University. Check out the videos The first is a demo of the colors actuated by the buttons. The second is a demo of the breathalyzer! (this will be explained later) Tools Listed under: I Automation Projects, LED Projects, Projects

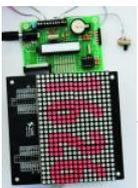

74. Sleep Tracking using an Arduino Background and motivation This project was motivated by two things: my almost complete inability to get out of bed in morning, and my fondness for recording data from routine activities and making graphs with that data. My main problem with waking up in the..... Liste under: Home Automation Projects, Metering - Instrument Projects, Projects

75. Arduino Controlled RGB LED Dot Matrix Board This project is a relatively straightforward and simple DIY music board. The Dot Matrix Board will allow an person to create their own music and beats. All you need to have is an understanding of Arduino and circuitry. Step 1: Gather Parts Needed [box..... List under: LED Projects

76. 5x5 rgb Ipd6803-led matrix arduino controlled what: a 5*5 rgb led matrix, made with arduino and Ipd6803 based leds from adafruit. with an pir sensor, on if it detects movements and a ir distace sensor, 1 animation shows the distance you have from the sensor :). why: because its..... Listed under: LED P Projects

77. An Open Source, hackable Digital Clock Andrew O'Malley, an amazingly creative maker, created this fanstastic Open Source Arduino-based clock that can the time in many different ways: if not enough, one can also add his own personal animation. Compared to other clocks based on Arduino, this one has distinctive..... Listed under: Clock - Timer Projects

78. Tiny Wearable LED kit - 12 PWM LEDs from a reprogrammable ATtiny85 This instructable covers the assembly and use of a Tiny Wearable LED kit. The kit useable immediately but is desigend to be hackable and can be reprogrammed to your liking using an ISP programmer or Arduino board and the Arduir There are not..... Listed under: LED Projects, Projects, PWM Projects

79. Infinity Mirror - Tony Stark Arc-Reactor thing using arduino I'm creating a robot, but am finding that it's better if I break the build down into smaller proje This is one of those projects, and it seems to have a look that could be used for other things as well. Step 1: Destroy a lady's..... Listed under: Battery Prc

80. Ultraviolet nightlight, ingredients and setup This simple instructable will show you how to make a nightlight out of a translucent container, a bottle of tor water, an Arduino, and ultraviolet LEDs. If you've ever played with a black light, you've noticed that some substances glow brightly under these lights. In. Listed under: LED Projects

81. LCD & Keypad Shield Quickstart Guide using arduino The 16x2 LCD And Keypad Shield is very simple to use because it's fully compatible with the Arduino "LiquidCrystal" You can initialise the LCD and display messages on it with just a few lines of code, but it also gives you the flexibility to..... Listed under: LCD Projects

82.  Arduino Esplora Light Calibrator This sketch shows you how to read and calibrate the Esplora's light sensor. Because light levels vary from one location to another, you need to calibrate the sensor for each location. To do this, you read the sensor for a few seconds, and save the..... Listed under: Development Board – Kits Project Ideas, LED Projects, Projects, Sensor – Transducer – Detector Projects

83.  MultiMovEDIA The title “MultiMovEDIA” does not mean much – if anything – at first sight. However, looking at more carefully, we can see it is a composite of two words: “Multimedia”, referring to the information content and the channels it uses (text, image, sound), and “Move”,..... Listed under: Sound – Audio Projects

84.  [Team PGH] – Prototype I Final Report: [Motion RC Car] using arduino Introduction: Give a brief description of what you are trying to solve. Include a high-level overview of what you made, why you made it, what parts you used, and what it does. In today's growing technology, it seems every little electronic is becoming touch or motion sensed..... Listed under: Car Projects

85. Python Meets the Arduino Arduino is an open-source electronics prototyping platform based on flexible, easy-to-use hardware and software. Python is a favorite programming language that allows you to integrate systems more effectively. Learn how to use Python to ... Listed under: Internet – Ethernet – Projects, Projects

86.  Alarm Clock with Tetris to Prove You're Awake using Arduino This is an Arduino powered alarm clock that after hitting snooze twice the alarm will not clear until the user has cleared 4 lines in the game Tetris. You physically turn the clock sideways, so the screen is vertical, to play Tetris. It's never fun..... Listed under: Clock – Timer Projects, Home Automation Projects, Projects

87.  Arduino Mobile Processing How the mobile sketch works: The brain of the system is really on the arduino or the web page the phone requests. . . The phone just passes any data it sees back and forth. . . For the phone app to run, it needs..... Listed under: Phone Projects

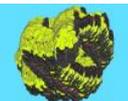

88.  Localizer with SIM908 module using arduino The device is based on a GSM/GPRS module with included GPS. Its main function is to detect and communicate its own geographical position using, on the choice, the cellular phone reference system or the GPS. Its small dimensions are due to the use, for the..... Listed under: GPS Based Projects, Phone Projects

89.  Lego Spybotics with Arduino A friend gave me his old Lego Spybotics robot, however, the programming environment that goes along with it is a bit too oriented to the younger user. So why not control it using an Arduino? Step 1: Open up! In order to get this robot..... Listed under: Home Automation Projects – Robotics – Automation Projects

90.  Arduino animatronics- make your awesome costumes more awesome Here's how to add lights, sound and action to your favorite Halloween project using an open source Arduino microcontroller. Arduino is easy to learn to use and it opens up a whole new world for costume builders and creature creators. If you want to learn..... Listed under: Game – Entertainment Projects, Projects

91. Custom Large Font For 16x2 LCDs using arduino A couple of years ago I was learning to use the Arduino and started playing around with an Hitachi HD44780 based 16x2 LCD screen. I soon learned that the screen has 8 customizable character slots. I had found a project where someone used those slots..... Listed under: LCD Projects

92.  CARduino – Arduino-Powered, LabVIEW-Controlled Vehicle The CARduino is a remote-operated vehicle which is controlled by a controller attached to a computer running LabVIEW. The vehicle is powered by the Arduino, and can be expanded upon through the addition of sensors or other devices. Using LabVIEW, one can easily modify the..... Listed under: Car Projects

93.  Read analog data directly in Processing using arduino This instructable presents a fast and easy way to use data received from an analog sensor in Processing. You will learn to utilize the Arduino and prototype electronic boards to read meaningful data from the environment. The sensors can be affected by the environment..... Listed under: Arduino Programmer Projects

94.  The Arduino Noise Machine Okay, okay, I know you all were wondering what I am up to now. I love synths and so, I built this. There are three things that catch my attention: Synthesizers, Amplifiers and free. The other day (Actually it was just Thursday) I was..... Listed under: Projects, Sound – Audio Projects

95. The Soil Moisture Sensor using arduino You are building a cheap soil moisture sensor so the brain can read the amount of moisture in the soil. The version I am building is very low tech, but it is also very cheap and easy to build. It consists of a block of..... Listed under: Home Automation Projects, Temperature Measurement Project Ideas

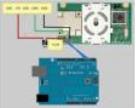

96.  Arduino theremin like musical instrument When I got my Arduino protoshield from sparkfun, I wanted to make something cool with it. And since I had seen a few Theremin projects before, and already thought about making some, I finally made one, using the Parallax PING sonar sensor. Here are some..... Listed under: Projects, Sensor – Transducer – Detector Projects

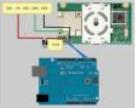

97.  Mouse Control With Pushbuttons using arduino Overview In this lab, you'll build an alternative computer mouse using an Arduino Leonardo using pushbuttons to move the mouse left, right, up and down. You'll see the difference between reading a digital input continually and reading for a change of state. (toc 1 of..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects

98.  G Meter using arduino I have a late 80's VW and the gauge cluster has 5 dummy LED locations underneath the other warning lights. Well I was tired of them not doing anything, so I decided to do something about it. I came up with the idea to..... Listed under: Metering – Instrument Projects

99.  Xbox 360 RF module + Arduino I was going to make a huge write-up on this, but I can't be bothered right now. I'll probably do something about it later. Unfortunately, I then, have an Arduino sketch. If you don't know what you're doing with it then chances are you don't have..... Listed under: Radio Project Ideas, Wireless Projects

100. Robotic Talking Turret using Arduino Here I will show you an overview on how to make a robotic talking turret, loosely based off of the turrets from the popular game, Portal. This instructable should help anyone wanting to do an animatronics project. For more detailed pictures, go to: <http://razorconcepts.net/turret.html> This..... Listed under: Projects, Robotics – Automation Projects

101.  New Textiles 2012 using arduino Twist Switch by ttseng Through the action of twisting, swatches of conductive fabric are folded in upon each other, forming a circuit that then turns on LEDs. On each face of stretched spandex are swatches of conductive fabric. Before choosing which swatches to designate as switches..... Listed under: LED Projects

102.  Demystifying 4 pin RGB LEDs (Radio Shack 276-0028) using arduino RGB LEDs are fairly useful in projects allowing for a wide range of color from a single pin. However they can be a pain in the neck to work with and they too often come with little or no documentation. I searched for some time..... Listed under: LED Projects

103.  Connect the arduino and make the speaker play To make your Arduino to play a melody you need these accessories. One 5 ohm speaker One Arduino Uno One Push button One 10 kohm resistor 8 LEDs And a lot of core wires Step 1: Connect the arduino and make the speaker play This..... Listed under: Sound Audio Projects

104.  Team 1 Final Project Report & Video: Arduino Video Game System using arduino Introduction We built a video game system that can play either Snakes or Pong. We saw a project called "Arduino Pong" and wanted to recreate it with our own twist. Description Parts Needed: Arduino Uno Video Game Shield 2 LEDs 2 latching push buttons 2..... Listed under: Game – Entertainment Projects

105.  Arduino Morse Code Flasher using arduino I am a big fan of programming but I like to keep it down to 555 timer but when it comes to complex functions like flashing a LED in a certain pattern programming is necessary. One day while surfing through the Internet I came across something known as Morse code. I decided to make one..... Listed under: Arduino Programmer Projects

106.  Arduino Robotic Arm In this instructable I will show you how to make a simple robotic arm controlled by 4 servos, 2 analog joysticks, and an Arduino Uno. This is very similar to my "2 Servos + Thumbstick" instructable. This tutorial is in particular to help out another..... Listed under: Robotics – Automation Projects

107.  Rear Wheel Tachometer using arduino One of the goals of Movable Party is to provide an interactive experience for audiences/participants. Since power is generated from a hub motor attached to the rear wheel of each bike (see this post), the speed of the rear wheel directly translates to the..... Listed under: Machines Project Ideas, Temperature Measurement Projects

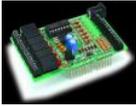

108. Time-Lapse Camera Controller using Arduino Simple digital cameras can produce remarkably good quality photos and are now cheap enough that it doesn't hurt the wallet much to buy one with the intention of modifying it for use in a project. You may even already have an old digital camera..... Listed under: Video – Camera – Imaging Projects

109. A useful and simple IO Shield for Arduino In order to “visually” highlight the behavior of Arduino programs you must connect a device to the I/O pins, which gives you tangible signals. Normally, if you want to check if a program changes a level of an output pin, answering a command or executing..... Listed under: Development Board – Kits Projects, How To – DIY – Projects

110. Laser cut gear clock with ChronoDot using Arduino This summer, my hackerspace LVL1 (in Louisville, Ky) got an awesome laser cutter <http://fslaser.com/deluxe-hobby-laser-engraver-and-cutter>. LVL1 is an awesome community of creative folks that like to build stuff. You can always check out what we are <http://www.lv1.org>. If you like instructables and making..... Listed under: Clock – Timer Projects, Projects

111. Using an Arduino to Control or Test an SPI electronic device There are many electronic devices that use the SPI bus, or Serial Peripheral Interface bus, for communications (e.g. various sensors, LCD displays, digital potentiometers, D/A and A/D converters, wireless transmitters and receivers, audio volume controls). The devices receive data serially from a microcontroller using a..... Listed under: Battery Projects

112. Solar Powered LED/Ultracapacitor Arduino Regulated Light This instructable primarily shows how to control the charging voltage from a solar panel to a storage device (capacitors in this case). I showed how to construct the light previously <http://www.instructables.com/id/Human-Powered-Light-from-my-Doable-Renewab/> Step 1: This solar panel can produce up to 18 volts, but my..... Listed under: LED Projects, Projects

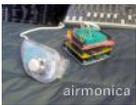

113. Arduino – based camera trigger unit I developed the camera trigger unit in order to synchronize various events and actions during free-flight experiment hawkmoths in the wind tunnel described in a previous post. More specifically, the goal was to trigger multiple high-speed cameras and have LEDs that in the exact..... Listed under: Home Automation Project Ideas, Video – Camera – Imaging Projects

114. Bouncing Multicolored LED line This is an arduino controlled project and uses leds, jumper wires, and a breadboard. This is one of my first attempts on programming arduino and I am pleased with the outcome. I'm ten years old and I just started programming 2 weeks ago. Step 1:..... Listed under: LED P

115. Airmonica – a free-air musical instrument improvise + harmonize + customize The airmonica is a easy-to-learn tweakable musical instrument that you can use to perform harmonic musical ditties by accompanying a tri-tone arpeggiator. There are endless opportunities to expand the airmonica in any way that you want it your own..... Listed under: Sound – Audio Projects

116. Controllers and Sensors using arduino Intro The Arduino microcontroller board is able to supply a current of 40mA from its output connections. These digital outputs are fixed at 5V “ON” or 0V “OFF”. This is adequate for working with LEDs but devices such as motors, solenoids, high brightness LEDs etc..... Listed under: Motor Projects

117. Programming Arduino in C++11 — ROM dumping In this tool-assisted education video I show how to program an Arduino Atmega2560 board in C++11 to dump a ROM of a device such as a 386sx BIOS or a Famicom cartridge ROM. I also make a ZMODEM sender and a LED blinker in this video. Sorry..... Listed under: Arduino Programmer Projects, Projects

118. Arduino Automatic Watering System For Plants Sprinkler Last month, Elecrow have left from the original office and moved to a new office. We will miss our original office where we worked so hard for more than two years, we will miss everything here, the desks, the windows, and those potted plants, that..... Listed under: Home Automation Projects

119. The iButton garage-door opener using an Arduino I've made an iButton garagedoor opener and logger. On a Dutch (kind of) eBay (www.marktplaats.nl) I found some iButtons and readers very cheap. I had no idea what to do with them, but I bought them anyway. My garage opens with a push on a button..... Listed under: Home Automation Projects, LCD Projects, Projects

120.  RFM12B – Part 1 – Hardware Overview To see how RFM12B wireless compares to other similar wireless options (e.g Xbee, XRF etc..) check out this well cc comparison overview by Stuart Poulton: <http://blog.homelabs.org.uk/wireless-connectivity/>. Overview Made by Hope RF, re-branded by RFSolutions in th UK. Sometimes called 'Alpha RF' Low cost RF transceiver (from Rapid, Farnell,..... Listed under: Radio Project Ideas, Wireless Projects

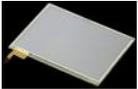

121. Arduino Throttle Body Synchronization Shield A common Motorcycle maintenance task is to synchronize the throttle bodies on the engine to smooth out rough idle. This is done by monitoring the vacuum on each throttle body and using the idle screw to make the adjustment. While this sounds rather advanced,..... Listed under: Car Projects, Projects

122. Ardusumo: an Open Source Platform for Fighting Robots using Arduino The idea Ardusumo is a universal platform to build robots on wheels that can m around avoiding obstacles using infrared sensors and follow routes marked with dark lines on a white background. We have created Ardusumo to bring students to the world of robotics:..... Listed under: Projects, Robotics – Automation Projects

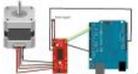

123. BUILD YOUR OWN LASER HARP using Arduino The laser harp is a musical instrument made of light. A fan of beams shoots up from the floor into the nig The performer can create music by placing their hands in the beams. Not only does "breaking" the beam produce notes, but sliding..... Listed under: Ga Entertainment Projects

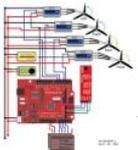

124. Touch Control Panel using Arduino Small 4-wire resistive touchscreens are now amazingly cheap: they are produced in such enormous quantities for mo phones, PDAs, and particularly handheld games such as the Nintendo DS that they can be bought brand new for under US\$10. Larger touchscreens are rapidly falling in..... Listed under: Sensor – Transducer – Detector Projects

125. Arduino + 2 Servos + Thumbstick (joystick) using arduino In my other 2 Arduino tutorials I have help new users to play tones and making 2 servos move v mouse. This time I will help you move the same 2 servos with a thumbstick. And again I have surf the internet to see If there..... Listed under: Motor Proj

126. Stepper Motor drive from Arduino Stepper Motor drive from Arduino In this tutorial we will show you how to connect a bipolar stepper motor to an Ard stepper motor we are using is the Sparkfun Stepper Motor but you can use any other 4-wire bipolar stepper motor..... Listed under: Motor Projects

127. UVic Quadcopter using arduino Hardware Controller The Arduino platform is selected for this project, mainly due to its open software and hardware nat which has resulted in availability of extensive technical information. As a result there are many tutorials and example project available for this platform. of..... Listed under: Car Projects, Robotics – Automation Project Ideas

128. How to: Use Arduino to Generate Glitchy Audio VGA Visuals This post is a guide for people that are interested in my previous posts about dual monitor v hacking (see 1, 2 and 3). You will need: • A laptop or a computer with a VGA output • A breadboard (optional) and some wires or..... Listed under: Sound Projects, Video – Camera – Imaging Projects

129. Hacked Pan and Tilt Camera Mount So my sister managed to break a pan and tilt camera mount and naturally thought daddy can fix this. After sitting or dads workshop bench for a while he had a go at it and couldn't work out how to fix it so it..... Listed under: Video – Camera – Imaging Projects

130. Adafruit Arduino Motor Shield Build Overview The Arduino Motor Shield is based on the L298 (datasheet), which is a dual full-bridge driver designed to c inductive loads such as relays, solenoids, DC and stepping motors. It lets you drive two DC motors with your Arduino board, controlling the speed and... under: Motor Projects, Projects

131. How to make fist pumping with LED animation using Arduino It's to make a fist pumping LED controller. What is it? Have you noticed yourself fist pumpi the music at a party or a club? That's exactly for that. You would wear a band with an accelerometer/gyro mounted. As you move your hand around..... Li under: LED Projects, Projects

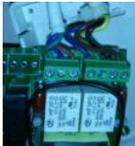

132. Developed on Hackaday: First Version of the Hardware The Hackaday writers and readers are currently working hand-in-hand on an offline password ke the mooltipass (click to see the project description). Next in our Developed on Hackaday series, we present the first version of our schematics. There's al been a lot of discussions going on in..... Listed under: Security – Safety Projects

133. DIY Teagueduino What is Teagueduino? Teagueduino is an open source electronic board and interface that allows you to realize creative ideas without sr or knowing how to code, while teaching you the ropes of programming and embedded development (like arduino). Teagueduino is designed to help you discover..... Listed under: How To – DIY – Projects, LED Projects

134. Automatic blind hooked up to existing projector screen using Arduino Hello my name is Chipsy, I'm French, reading instructables since at least 2 years, it first entry i make on this website. Why i made this project : I have a small homecinema system in my living room, with a projector and a..... Listed under Automation Projects, Projects

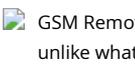

135. MenZ-DECK About a year ago, we drunk beer in The-MenZ Lab. When Zagan said "I want PCDJ controller, So next project is make controller!". The project began at this tin ***MenZ-DECK featured by Maker Faire UK Blog.*** <http://www.makerfaireuk.com/maker-faire-tokyo/> (Continue with broken English) Components for r controller: Arduino..... Listed under: Development Board – Kits Projects

136. Arduino Watch Build Instructions Update: New version out that works with Arduino 1.0 and higher! The Arduino Watch provides augmented sensing of temperature and range, 16-bit color drawing program, Breakout game, and also tells the time in your choice of digital, binary, or analog. Additional sens devices, and programs..... Listed under: Clock – Timer Projects, Projects

137. GSM Remote Control – GSM Module This GSM Mobile is used for our Remote Control (for example Gate Control, Temperature Control....). We use the word 'module' b unlike what we did in our remote control projects, this time around the mobile phone is not mounted on a printed board, but rather on..... Listed under: Phone Proje

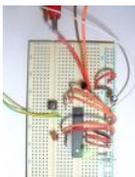

138. Interface a rotary phone dial to an Arduino An old rotary phone can be used for a number of purposes in your Arduino projects - use it as a novel input c or use the Arduino to interface a rotary phone to your computer. This is a very basic guide describing how to..... Listed under: Interfacing(USB – RS232 – Projects, Phone Projects, Projects

139. Arduino Controlled Can Crusher With LCD Readout I have always wanted to do an instructable, but I never had a somewhat original idea that hasn't bee a million times, or something that had no means of building. I have some friends who recycle aluminum for money and after seeing the large bags of an unknown..... Listed under: Home Automation Projects, LCD Projects, Projects

140. Arduino ATmega328 – Hardcore Ok, you've completed your prototype using an Arduino Uno board, perhaps using a shield or a breadboard for any addit components, but now you want to finalise your design and construct it using your own pcb. Well, that is fairly straightforward, as we have made..... Liste under: Arduino Programmer Projects

141. **Computers Are Dumb** Computers are Dumb Objective: Overcome your fear of computers! If you can count to two, then you can master the basics of computers. If you think computers are smarter than you, you are wrong and I will prove it. For normal people, just follow the LOG: comments. Computers..... Listed under: RTO: Projects

142. Bicycle North Indicator using Arduino Magnetoeception is the ability of some animals to detect magnetic fields as a means of orienting themselves. Althc humans do not seem to posses the same biological mechanisms that allow other animals to sense magnetic fields, there are still many ways that we car improve our..... Listed under: Game – Entertainment Projects, Home Automation Projects, Projects

143. SPI interface to the FlySky/Turnigy 9x Interfacing a RC radio to a microcontroller is a bit of a pain, especially if you want a lot of channels, because you ha time each channel's output individually. An AVR only has one 16 bit timer with two compare channels, so either you..... Listed under: Radio Projects

144. Arduino powered 7seg led display with Port Manipulation Time for something a little more advanced. Direct Port Manipulation. Normally when using Arc software, the actual logic behind changing the values in pins is abstracted away with digitalRead and digitalWrite. Now, for most people that's just fine. B some limitations. For one,..... Listed under: LED Projects, Projects

145. Arduino controlled animatronic wooden head (reading lamp) usnig arduino This head is a reading lamp which can be adjusted for direction of lighting, a dimmed as required. This Instructable combines Arduino programming, some simple electronics, carving with hand and power tools, mechanical contro bit of woodwork. Apart from the Arduino and a..... Listed under: Home Automation Projects

146. High Power RGB LED Moodlamp which syncs with Philips Hue In this instructable the main focus lies on the software which I've created - not so much on the hardware si needn't to use a high- power led for this, you can use every RGB- LED you like. The "High Power RGB LED Moodlamp"..... Listed under: LED Projects

147.  Buggy Wheelchair Robot using an Arduino This is a Modification of an electric wheelchair. I called it "Buggy" for two reasons. #1 My kids can still ride it a because I left the seat intact. #2 I haven't programmed anything for a long time. I plan to create "jobs" for it..... Listed under: Projects, Robotics – Autom: Projects

148.  Precision Fermentation: Arduino-Controlled Crock Pot Yogurt Maker A homemade thermostat attachment for a crock pot (or other electric heating device) be used to precisely control the temperature of the crock pot for things like yogurt fermentation. Why Making yogurt is fun. It is also way cheaper than buy You..... Listed under: Home Automation Projects

149.  BLU-BOARD, control your home with blue tooth! Big thanks to the fine people at Hack-A-Day for sharing this with the world! if you'd like to donate to the project: <https://www.suprmasv.com/projects/167/blu-board> This project has been in the works for along time, three months if I reckon Correctly, but any this device will allow you..... Listed under: Development Board – Kits Projects, Home Automation Projects

150.  CatBot: Automated Cat Laser using an Arduino The CatBot is an autonomous laser toy for your cat. You may say "But Joe, isn't the laser pointer the best the lazy cat owner?" I'd have to say no, the CatBot takes one step further. Using two servos, an Arduino and a..... Listed under: Projects, Robotics – Autor Projects

151.  Nerd++: Controlling Diode RGB LED Strips with Arduino, Pt. 1 – Getting Started A few weeks ago, it came to my attention that IKEA do a set of colour-changeable LED strips. I've been looking for a decent way of providing some lighting behind my computer to reduce eye-strain for a long time, and these seemed perfect: I was..... Listed under: LED Projects

152. Arduino compatible Luna Mod Looper The Luna Mod Looper, basically lets you record a sequence using a potentiometer to control the pitch of the note, and then play it and add affects. Ever since I saw videos of the Luna Mod being played, I wanted to build my own..... Listed under: Projects, Sound – Audio Projects

153.  Glowing Color-Changing Guitar In the kingdom of rock and roll it is important to set oneself apart. With millions of people in this world who can play the simply playing well is just not going to cut it. You need something extra to rise up as a..... Listed under: Sound – Audio Projects

154.  LED matrix using shift registers using arduino This instructable is meant to be a more complete explanation than others available online. Notably, this will provide more hardware explanation than is available in the LED Marquee instructable by led555. Goals This instructable presents the concepts involved with shift registers and high side drivers..... Listed under: LED Projects

155.  Athena: The Global Car Tracking System(3D Images) Bring out your 3D glasses and enjoy viewing in a novel way! I have added a new dimension to my instructable. If you do not have 3D glasses, then you can make one yourself. The following link explains how to make 3D glasses (link). Please..... Listed under: Car Projects, Sensor – Transducer – Detector Projects

156.  Piano Stairs with Arduino and Raspberry Pi Who doesn't love music? These Piano Stairs are an interactive, relatively portable, musical installation that can be applied to basically any stairwell. I built them for HackPrinceton and won 2nd place in the hardware track. I've had requests to share my code and diagrams so..... Listed under: Sound – Audio Projects

157.  Addressable Milk Bottles (LED Lighting + Arduino) using arduino Make PPE milk bottles into good looking LED lights, and use an Arduino to control them. It recycles a number of things, mainly the milk bottles, and uses a very low amount of power: the LEDs apparently dissipate less than 3 watts but are bright. Listed under: LED Projects

158.  Make your own cellphone from scratch The DIY Cellphone is a working (albeit basic) cellphone that you can make yourself. It can make and receive phone calls and text messages, store names and phone numbers, display the time, and serve as an alarm clock. It connects to GSM networks (like AT&T and T-Mobile). Listed under: How To – DIY – Projects, Phone Projects

159.  LED Cube Spectrum Analyzer In this project we'll create a small add-on PCB containing the a MSGEQ7 spectrum analyzer circuit and show how it can drive the RGB LED cube kit from Freetronics. This allows the cube to display the seven bands over four horizontal planes. There is a small amount..... Listed under: LED Projects

160.  High Speed Outdoor Photography High speed photography is generally carried out in a dark room with dedicated equipment (controlled remote flash for example)... The instructable proposed here enables to make high speed photography outside (and enjoy the sun!), in less than 2 hours with some general basic tools. The principle is the following..... Listed under: Video – Camera – Imaging Projects

161. DIY Sensors Workshop using arduino The Arduino offers the advantage that a lot of people are using it so it is usually quite easy to get help or information on the internet. The main website for the Arduino is: <http://www.arduino.cc/>. The Arduino can also be programmed to behave in many..... Listed under: Sensor – Transducer – Detector Projects

162. Troubleshoot your car battery with ATtiny Last winter I experienced some problems with my car battery. I knew that it was about time to replace it so off to buy a new one. This fact reminded me of an old article about a car battery/charging system diagnostics kit I..... Listed under: Battery Projects, Car Projects

163. STEAMPUNK STEAM GAUGE, POWERED BY ARDUINO This was created to be some eye-candy for my kitchen. I wanted something unique for a special place on my wall, and adding movement, blinky lights and interesting mechanical “guts” made it even better. Ultimately, this project ended up requiring a following range of..... Listed under: Metering – Instrument Projects, Sensor – Transducer – Detector Projects

164. Arduino Laser Engraver I started this project because I wanted to make something that had mechanical, electrical and software components. After looking around on Instructables, I figured that an Arduino based laser engraver would be an interesting machine to make, and that the machine itself could make interesting..... Listed under: Other Projects

165. Google Docs and the Arduino Yun Introduction This is the second in a series of tutorials examining various uses of the Arduino Yun. In this article we'll explore how your Arduino Yun can send data that it captures from the analogue and digital inputs and a real-time clock IC to an online Google..... Listed under: Internet – Ethernet – LAN Projects

166. Multitouch Music Controller This project is an Arduino-powered infrared touchscreen / coffee-table interface that I've been using to control various music graphics applications on my computer. This is an old project that I've recently had time to go back and document/fix up; this project is a little..... Listed under: LCD Projects, Sound – Audio Projects

167. Controlling Cubase with Arduino based MIDI A friend of mine wanted to control Cubase, his audio recording software, with a push button so that he could start recordings remotely without having to go over to the computer and type on the keyboard. You may be able to do this..... Listed under: Projects – Audio Projects

168. Plugduino – Arduino based 120 Volt outlet controller give your Arduino a 120 volt kick in the pants! The Arduino is a great tool for anyone interested in microcontroller programming, but after blinking some LEDs, what's next? This project enables your Arduino to control real-world 120 Volt electrical appliances you have in..... Listed under: LED Projects

169. Arduino Masterclass Part 2: Build an LED weather station using arduino Project-specific parts You'll need the standard parts (Arduino board breadboard pliers and so on) along with these extras: DHT11 temperature/humidity sensor 7 x 330-ohm/0.5W metal film resistors 3 x 4.7k-ohm/0.5W metal film resistors BC337 NPN transistors 2 x LTS543R or FND500 common..... Listed under: LED Projects

170. Proximity Sensing Origami Flower using Arduino Origami is the traditional Japanese art of paper folding. In this project, with a little help from an Arduino you can bring your origami into the 21st century and make it an interactive art! The result shown here uses Bare Conductive paint to give an..... Listed under: Projects, Sensor – Transducer – Detector Projects

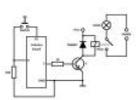

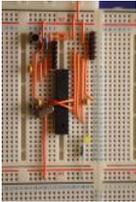

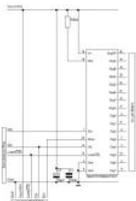

171. Worms in Space Board Game Story: NASA has taken worms to the ISS on their own special capsule. There was an accident aboard the station and the worms astronauts have to navigate to the escape capsule to return to Earth. The airlock to the escape capsule has been damaged but..... Listed under: Game – Entertainment Projects

172. FireHero: Turn Guitar Hero into an extreme sport by adding flamethrowers! using Arduino microcontroller So, long ago I had read about propane fire poofers. They're pretty cool... I mean, who doesn't love fire?! But, no matter how awesome, they could get pretty boring after a while of seeing the same large fireball. I never bought because I wanted..... Listed under: Game – Entertainment Projects

173. How to Display Text on an HD44780 LCD with an Arduino In this article, we will go over how to connect an HD44780 LCD to an Arduino in order to display text that we want to show on the LCD. To do this, first, we must make the appropriate physical connections from the Arduino board..... Listed under: LCD Projects

174.  DIY Antique Phone Doorbell using Arduino Bryan Zimmer emailed us this fantastic retro-themed DIY hack, a most timely submission as we just revisited art deco-science fiction classic Dark City and we think this would have perfectly fit in the world (or in Adama's quarters on BSG). Bryan gives step-by-step Listed under: Home Automation Projects, How To - DIY - Projects, Phone Projects
-
175.  Arduino Touch Screen iTunes control (ATSIC) using arduino What I'm going to show you is how to make an iTunes control device using an Arduino and a screen. The iTunes Control works by reading areas of the touch screen and send a letter to the computer via the serial port, which is..... Listed under: Phone Projects
-
176.  Building an Arduino Robot, Part II: Programming the Arduino Welcome to the second article in the tutorial series in which I'm building a remote controlled Arduino based vehicle robot. Here is the list of articles I have published: Part I: Hardware Components Part II: Programming the Arduino (this article) Part III: Assembling the Robot..... Listed under: Robotics - Automation Projects
-
177.  Color changing display Custom made Multiple color display. Have you ever wanted a display that is a little larger than one you can buy? Have you ever wanted to make a display the way you wanted it? Me too! This is how I made a custom multiple color..... Listed under: LED Projects
-
178.  DMX Ardweeny Node using Arduino I've settled on the lighting industry standard of DMX as my overall control protocol as I explore the world of blinky lights. This universal control method is electrically robust, radio transmissible, and flexible enough for my needs (not to mention the needs of major concert,.... Listed under: Development Board - Kits Projects, Interfacing(USB - RS232 - I2C -ISP) Projects
-
179.  Control a Relay with Arduino In this quick Arduino tutorial I will explain how you can control a relay using the Arduino Board, one 1K and one 10K resistor, one BC547 transistor, one 6V or 12V relay, one 1N4007 diode and a 12V fan. When the button is pressed the..... Listed under: Sensor - Transducer - Detector Projects
-
180.  Easily control your iPod using Arduino Easily control your iPod with Arduino using serial commands. This instructable includes the schematic, the code and some extra info; everything you need to make this work. USB, battery or wall power supply powered. Step 1: What you need Parts: 5x 1K ohm resistors 2 1M..... Listed under: Interfacing(USB - RS232 - I2C -ISP) Projects, Phone Projects, Projects
-
181.  Make an Arduino timer Hi, so me and my pal are setting up so we can make PCB's. We are currently making a UV exposure box (possibly another instructable) and for this box, we needed a timer, so this is what we have done so far, and what we..... Listed under: Clock - Timer Projects, Projects
-
182. Easy 4x6 LED Matrix, Arduino! In this instructable, I will show you how to create your very own 4x6 LED matrix as well as show you how to write code for it! There is an animation creator program in step 4! Here is one ANIMATION to get you excited about the project! ***Wave..... Listed under: LED Projects, Projects
-
183.  Pulse Width Modulation : PWM using Arduino Pulse Width Modulation or PWM is a method of Digital to Analog Conversion. It helps in delivering analog voltage using digital pulses of variable pulse width. By controlling the on time and off time, we can generate an analog average voltage using the digital.. Listed under: PWM Projects
-
184.  Robot arm from a desk lamp (IKEA Tertial hack) This project answers to a need I had: a third hand that holds a camera while I perform a test and takes photos/videos (useful when you're stuck at the lab late at night, and suddenly need a photographer). The downside to a robotic arm was..... Listed under: Robotics - Automation Projects
-
185.  Breadboard Arduino Received a couple of nice big bread boards for Christmas and decided that one of them needed an Arduino to use with it. After some thought I decided that the best option was to build the required parts of an Arduino circuit direct on the..... Listed under: Development Board - Kits Project
-
186.  The MAX7219 and MAX7221 Led drivers These two integrated circuits from Maxim are for driving either 64 individual LEDs, or up to 8 digits of 7-segment displays. The drivers implement a SPI compatible slave interface that can be controlled from the Arduino using only 3 of the digital output pins. An..... Listed under: LED Projects

187. Arduino Time & Temp Display Shield Another project I'm working on required a good timer, but the more I read about Arduino, I realized that I couldn't r accurate timer using an Arduino that was already devoted to other tasks. The Arduino will always lose time if you perform other..... Listed under: Tempe Measurement Projects

188. Measuring Battery Capacity With an Arduino I needed a couple of AA batteries and found the display at the supermarket where they were all arrayed. N when I'm shopping in the supermarket, I tend to look at the price/kg or price/l when comparing similar products. In the case of the batteries,..... Listed u Battery Projects, Projects

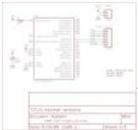

189. Sunflower Automaton using arduino This was a 6 week project created for the Spring 2012 Things That Think course at the University of Colorado at Boulder. Our project autonomous Sunflower. As in nature, the highest priority for our flower is sunlight, necessary for photosynthesis. Our Arduino controlled..... Listed unde - Camera - Imaging Projects

190. Charlieplexing LEDs with an Arduino Charlieplexing is an ingenious method for controlling many LEDs without using many microcontroller pins. You can t or off one LED at a time. To light more than one LED at a time, you can scan the LEDs by turning a sequence of them..... Listed under: LED Projects, Proj

191. Minimal Arduino with ATmega8 Like me, you may have a few old Arduino boards or ATmega8 chips (in the boards) laying around from when you were fir playing with Arduino. Those chips can still be really useful as the heart of a tiny "Minimal Arduino" setup. A normal Arduino..... Listed under: Other Proje

192. Nocturnal Emissions: My Arduino Powered Internet Enabled Dream Generator We all need to dream more so I've created this Arduino Powered "dream generator" to help plant the seeds for some big thinking craziness. When you approach the generator a Maxbotix ultrasonic sensor triggers lights and n that draw you in so you can stare..... Listed under: Internet - Ethernet - LAN Projects

193. Light Seeking R.C Car Hack (with Arduino) using arduino Creating a robotics platform from scratch takes allot of work and a few dollars. Buying a ready b is easy but costs allot of money (at least for me). So instead I decided to piggy back off of the companies who make remote control..... Listed under: Car

194. Appliance Remote Control using Arduino One of the basic tasks in many home automation systems is controlling power to appliances. They could be ligl heater, or an exhaust fan, or just about anything else that runs on mains power. The problem of course is that it's dangerous to..... Listed under: Home Automation Projects, Robotics - Automation Projects

195. Arduino Wireless Programming with XBee Series 1 or 2 Hi. This Instructable will guide you through the process of wirelessly programming your Arduino two XBees. I just finished designing a wireless EEG system with the XBee modules, so I've become quite fluent in their programming and have just now b able to accomplish this. It still amazes..... Listed under: Arduino Programmer Projects, Projects

196. My Arduino Binary Clock Hi from Italy Although many watches are created binary, my project was inspired mainly to this: <http://www.instructables.com/id/LED-Binary-Clock-1/>, very smart and funny. I tried to improve the design and to add something personal. I think it's a gc result at the end. The project is..... Listed under: Clock - Timer Projects, Projects

197. Cheap Arduino Controled Yogurt Maker These days I was reading an interesting post on how to make yogurt "by the gallon" (<http://www.instructables.com/id/Yogurt-By-The-Gallon/>). One thing needed was to maintain a rather constant temperature of 43°C (110°F), so the bacte grow properly. Though you can buy commercial yogurt makers, they aren't..... Listed under: Home Automation Projects, Projects

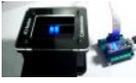

198. Low Cost LED Grid There are a number of great Instructables on LED grids out there. This is a low cost version - not quite as polished, but easy to make. couple of sheets of foam core, a fluorescent fixture cover from the local home..... Listed under: LED Projects

199. Make an Attiny13 based IR proximity sensor This is an extremely cheap IR proximity sensor you can make with a few cheap parts and an AVR programm an Arduino as my programmer in this Instructable. This sensor only has a range of about 3 inches. You can easily add more..... Listed under: Interfacing(RS232 - I2c -ISP) Projects, Sensor - Transducer - Detector Projects

200.  Google Weather on graphical display with Arduino In this project, I am using an Arduino board to show forecast of the weather from Google Weather ser a VGA screen. The display is obviously graphical one, with icons and some colorful text. It is one of those gadgets I wanted to have..... Listed under: Inter Ethernet – LAN Projects, LCD Projects, Projects
-
201.  Bluetooth plus Infrared Controlled Robotic Arm Hi. I'm Darren a 17 year old hobbyist, and this is the first Instructable I'm posting here, so I apologize if it sucks! I hope it's good enough... So how did the idea of a robotic arm come to me? Well, the first thing..... Listed under: Internet – Ethernet – LAN Project Robotics – Automation Projects
-
202.  Intro to Arduino An Arduino is an open-source microcontroller development board. In plain English, you can use the Arduino to read sensors and contro like motors and lights. This allows you to upload programs to this board which can then interact with things in the real world..... Listed under: Developn Board – Kits Projects
-
203.  Transforming Chandelier In this tutorial I will go over how to make a transforming chandelier. This project will be heavily CAD oriented (Solidworks and Illustrator), made by laser cutting/engraving acrylic sheets, and a little bit of Arduino coding and soldering. Step 1: Choosing materials. All the pieces..... I under: Other Projects
-
204.  Sentrduino! Its the all new Sentry turret Hey guys, Today I would like to show you how to make a simple sentry turret out of household Items! You would need to get an Arduino UNO or Mega, a Ping))) Ultrasonic Range finder, two servos, and an electronic water squinter! The rest of..... Listed under: How T Projects
-
205. RGB / RFID Lamp We have taken this project down, due to vendor's request. Please wait till we get approval again..... Listed under: Home Automation Projects, RFID - N projects
-
206.  How to make a Ghost Knocker Step 1: Check the materials you need. Below is the list of stuff you need to make it: 1. Arduino I used an Arduino Pro Mini You also need USB-Serial tether to program it. 2. A battery box I used a AA x 4..... Listed under: Game – Entertainment Projects
-
207. Temperature-Sensitive Infinity Mirro As per an assignment in my digital multi-media class, I've combined two Arduino-related tutorials into a functional object! The result of infinity mirrors that flash red and blue depending on minute fluctuations in ambient temperature. This is my first experience with Arduino,..... Listed under: Temperat Measurement Projects
-
- 
-
208.  Wireless nunchuk controlled animatronic doll This instructable will attempt to show you how to make an animatronic doll controlled by a wireless nunch doll can only move its head though. I'm sure there are plenty of people out there who can take this and expand on it and make..... Listed under: Game – Entertainment Projects
-
209.  The Word Clock Arduino version ***** Major updates - A much better enclosure for this clock has been designed - check out <http://www.instructables.com/id/The-Wordclock-Grew-Up/> ***** Last month I wanted to build a special gift for my beautiful wife Megan. She has a teaching background in English, so what better present to..... Listed under: Clock – Timer Projects, Projects
-
210.  Arduino BlinkyBall Project I frequent a blog called hackaday.com which featured a project by "Nikolai", it was a 10cm LED ball that used shift registers. It like a really fun project to attempt but the cost of having the boards made & not having any experience sending..... Listed under: LED Projects
-
211.  Educational colorimeter kit This instructable is a step-by-step assembly guide for the educational colorimeter kit we launched in April 2012 on Kickstart Assembly takes from 20-40 minutes. Once assembled the colorimeter can be used in a wide variety of science experiments to measure the absorbance concentration of..... Listed under: Metering – Instrument Projects

212. Blinky Lights using Arduino and LumiGeek I used the Arduino UNO combined with three LumiGeek shields to run lighting. LumiGeek has dedicated shields to support 1 V RGB LEDs that require constant current, Addressable RGB LED Strip, and Non-Addressable RGB LED Strip. Step 1: 1 Watt RGB LEDs (2x) I wired..... Listed under: LED Proje

213. **Servo 360 rotation mod (Parallax)** In this instructable I will explain and show you how to make a Parallax servo rotate 360°. And again I have searched the internet to see tutorials clear enough to make this possible with no luck. Don't get me wrong they are somehow good but not..... Listed under: Motor Projects

214. **Wu-Tang Can: Interactive Tipping Cash rules everything around me. C.R.E.A.M. Get the money. Arduinos are showing up everywhere. Even in space. But what about the lowly tip jar? No. Are Arduino projects giving the Wu-Tang Clan the proper respect they deserve? Not even close! Rectification. That's what this is.** Listed under: Other Projects

215. **Hookup an LCD to an Arduino in 6 seconds with 3, not 6 pins** Adding an LCD display to Arduino projects can add real value but the cost of doing so can be significant. Not a financial cost - you can pick up 16 (characters) x 2 (rows) LCD for as little as £3.50. The cost is the pin..... Listed under: LCD Projects, Projects

216. **Arduino Based Four Legged Robot** The name of our robot is FIER and here is a video of it saying hello to the world. In this instructable, I will try to show you how to make your own walking robot for the most bang for your buck. You..... Listed under: Robotics - Automation Projects

217. **Analog audio panel for PC using Arduino** Have you ever struggled with audio settings in control panel in middle of a VoIP call? Or, wondered if the other person can hear you properly? I have. My work requires a great deal of remote conference calls using PC. The first thing I wonder always..... Listed under: Projects, Software Projects, Audio Projects

218. **4X4X4 LED Cube w/ Arduino Uno** As someone who is very new to digital electronics this LED cube was fun to make, challenging and a great lesson in soldering. If you have some patience (64 LED's to solder!) and steady hands, this project will be well worth it in the end!..... Listed under: LED Projects

219. **Vacation Pet Feeder from Recycled Materials** If you are a pet owner, going on vacation can be stressful. Usually, you need a friend or neighbor to come over every day and feed your pets. However, by enslaving robots you can keep your pet happy and enjoy a stress-free holiday. To save..... Listed under: Home Automation Projects

220. **HexiLogger, an Arduino based data logger** The purpose of this project was to create a simple, portable device that would periodically read sensors and store the sensor data so it could be retrieved later. The result is the HexiLogger, "hexi" because it can support up to six different sensor inputs..... Listed under: Interfacing(USB - RS232 - I2C - ISP) Projects, Projects

221. **Open Source Server Room Monitor using Arduino** This server room environmental monitoring system is a low cost high performance device with the same onboard features as commercial devices costing hundreds of dollars more. In addition to a low cost platform we will provide low cost sensors for many important devices to insure..... Listed under: Internet - Ethernet - LAN Projects, Metering - Instrument Projects, Projects, Sensor - Transducer - Detecto

Projects

222. **iTime clock in a Mac Mini box using Arduino** After the untimely death of my Mac Mini (the last thing Apple I ever bought), I recycled her casing in a clock display with LEDs. Technically, there is not rocket science: an Arduino reads the time from an external clock and displays a matrix of 8x6..... Listed under: Clock - Timer Projects, Projects

223. **The UCube: Design & Print 3D Objects by flipping switches** This instructable goes through how to design and print a variety of 3D models using a system called the 'UCube'. Note: I would love to eventually publish detailed instructions on how to make your own UCube, but since the design is still changing and improving..... Listed under: Interfacing(USB - RS232 - I2C - ISP) Projects

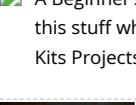

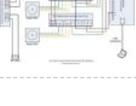

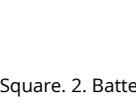

224. **Open Source Hearing Impaired Alarm Clock using Arduino** Activities of daily living (ADL) are self-care activities that are usually taken for granted, since as the name implies they are performed on a daily basis. If you have ever ended up in a cast, or on crutches you can empathize how menial daily activities can suddenly be very difficult to..... Listed under: Clock - Timer Projects, Projects

225. **DIY Mod an Omnibot 80's Robot with Voice, Camera, Servos, Bluetooth** *Check back for more updates on this build 😊 So, have you heard of the Omnibot? Well! Any kid from the 80's will remember how amazing this robot was. For you young kids, this robot was released in the early 80's by Tomy. The robot..... Listed under: Internet - Ethernet - LAN Projects, Motor Projects, Robotics - Automation Projects, Video - Camera - Imaging Projects

226.  LED Calculator with Rotary Quadrature Encoder for Target System Voltage Selection using Arduino I'm still working on the LED calculator (original idea and recent work) — I've finally got 'round to adding a rotary encoder to set the target system voltage. Now you can turn the potentiometer to set the LED brightness and turn the rotary encoder to set what..... Listed under: Calculator Projects, LED Projects, Projects
227.  Arduino Lens Controller – Synchronized Zoom/Focus with Wii Classic Controller My Lumix GH2 Micro Four Thirds camera not only shoots fantastic high definition videos, but with inexpensive adapters I can use it with older manual lenses that are cheap and often very high quality. I shoot a lot of performance videos for my daughter's dance studio, and I..... Listed under: Video – Camera – Imaging Projects
228.  Sensing Squeeze using Arduino I'm researching squeeze sensing as a mode of tactile interface. Here I will cover the process of developing a squeezable sensor and the firmware/software concerns associated with interpreting the data from the sensor. This fulfills the “sensor project” for my class called Computational Principles in..... Listed under: Projects, Sensor – Transducer – Detector Projects
229.  S.A.M. Spring Aided Machining (CNC with adhesive remover) S.A.M. Spring Aided Machining (CNC with solvent) is a school project designed by three architecture students at CCA, San Francisco: Matt Boeddiker, Abelino Robles, and Tim Henshaw-Plath. (www.cca.edu) The machine is capable of rapidly prototyping and creating subtractive formwork that can be used to cast..... Listed under: CNC Machines Projects
230.  A Beginner's guide to making an Arduino Shield PCB (This tutorial has gotten really popular recently, and I'm very pleased that so many people are interested. I learned this stuff while working on my first PCB. If you're interested, I've started to sell the most recent version of my Arduino ProtoShield. If..... Listed under: Development Boards Kits Projects
231.  Arduino Color Sensor Here we will be learning how to make a color sensor. my model consists of three cardboard compartments containing an LED - one red, one blue, and one green - and an OP550B phototransistor. The LEDs shine simultaneously on a solid colored card. The phototransistors..... Listed under: Sensor – Transducer – Detector Projects
232.  Cat Repelling PIR motion sensor (covert) speaker box alarm using Arduino This is a PIR motion sensor device that works with the arduino uno. In order to make it covert enough to be placed in multiple settings and portable enough to fit most places, I decided to make the case for it appear as a speaker. The inspiration for..... Listed under: Projects, Security – Safety Projects, Sensor – Transducer – Detector Projects, Sound – Audio Projects
233.  Arduino MIDI Volume Pedal I'm playing keyboards this fall in another rock concert to benefit the high school robotics team, and for some of the tunes I'm able to fade an organ in and out over a period of a measure or two. My keyboards are..... Listed under: Projects, Sound – Audio Projects
234.  Arduino Stepper Motor Control Hardware Preparation Stepper Motor Driver Board Arduino Board (UNO) If you have purchased the Arduino Board from SparkFun we have already uploaded the g-code library for you. If you are using your own Arduino Board, you can download grbl Arduino library online and load it. Listed under: Motor Projects
235.  Arduino Thermostat with TC74 sensor Hello all! This is a quick guide on how to use an Arduino© to control whether a cooling fan and a heater is turned on depending on detected temperature from a TC74 Arduino sensor. This is for a final project for an Electronics class..... Listed under: Sensor – Transducer – Detector Projects
236.  Geiger Counter with Touch Interface! There are quite a few geiger counter instructables. The difference with this one is that I wanted to give it a modern interface, similar to smart phone touch screens, that anyone would feel comfortable using. The reason for this is that I want to use it as..... Listed under: Calculator Projects, Sensor – Transducer – Detector Projects
237.  Digital Clock with Arduino and DS1307 In this article you will learn how to make a digital clock using Arduino and the DS1307 RTC IC. What is DS1307 IC anyway? Well, it is a Real Time Clock (RTC) IC that is simple to use, low cost and easy available. The IC..... Listed under: Clock – Timer Projects
238.  Arduino Drawbot In some of my previous Arduino instructurables I have shown to the Arduino beginners on how to control servos in different ways. And in this instructurable I have shown the modification of a Parallax servo for a 360° rotation. So in this one I will show Arduino..... Listed under: Robotics – Automation Projects
239.  Arduino Led Dice This instructable will show you how to create a dice using Arduino and few components. It's an easy and fun project, suitable for beginners and those who want to start with Arduino; it also requires a minimal amount of components. This explains how to create..... Listed under: LED Projects
240.  Arduino-Square with Color LCD B-Squares is a modular electronics platform that enables users to build, customize, and continuously update their own electronics applications. In this B-Squares App we will cover how to assemble a simple Color-LCD Application using the Arduino-Square. Hardware: 1. Arduino-Square. 2. Battery-Square 3. Color LCD Shield..... Listed under: LCD Projects, Projects

241.  Simon the Octopus Everyone loves the Simon game ! So we decided to take it to another level. This project was done for our Things That Think class where had to make a PlushBot (a plush toy that thinks! "with computation") thus, kids were our target. We..... Listed under: Game – Entertainment Projects

242.  The Traveling Geocache using Arduino This project and future projects can be found at my website <http://revoltlab.com/> where you can also find my blog UPDATE LOG: NOW SUPER SIMPLE TO REPROGRAM! Easy FTDI USB interface hardware explained in step 10 Easy FTDI USB interface programming explained in step 13 NEW..... Listed under: GPS Based Projects, LCD Projects, Projects

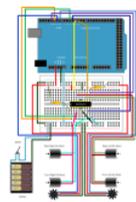

243.  Arduino Button Activated Treat Dispenser For my Digital Multimedia class final, I created a treat dispenser that is activated by pulling a chain, which starts a servo motor that spins a wheel to dispense treats to my African Grey parrots. Step 1: Gather Materials [box color="#985D00" bg="#FFF8CB" font="ver font-size="14..... Listed under: Motor Projects, Other Projects

244.  DIY Arduino Stepper Motor Driver Board This page will show you how to put together a simple stepper motor driver board that can be controlled with an Arduino. I built mine to use with my heliostat projects, but it could be used for other things too. Update: I no longer use..... Listed under: How To – DIY – Projects, Motor Projects

245. Giant LED bar graph For a recent project I needed to build a large and obvious bar graph display. This was to show the power generated from a bicycle generator. I came up with this design and was pretty pleased with the final results as it is relatively low..... Listed under: LED Projects

246.  Drive with PID Control This example shows how to simulate a simple closed-loop control algorithm in Simulink® and how to run it on an Arduino® board Supported Hardware: Arduino Leonardo Arduino Mega 2560 Arduino Mega ADK Arduino Pro Arduino Uno Available versions of this example: Arduino Mega 2560 board:..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects

247.  BLINKING AN LED USING AN ARDUINO UNO (EXPLAINED) So you're here because you want to start learning some of the Arduino Basics... So let's start with the most basics... no this "tutorial" is actually a little more basic than what you have in mind. It only requires that you: Have ANY Arduino Board..... Listed under: LED Projects

248.  Easy Arduino Audio Annoyatron This simple device simply plays a small tune at a random interval, between 5 and 30 seconds when the lights in a room can be cleverly disguised inside a tissue box, or inside or under any number of household objects. This is a very simple project (my..... Listed under: Project Sound – Audio Projects

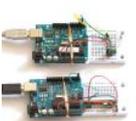

249.  Blinky the one-eyed clock using Arduino In this tutorial you learn how to make a blinking clock with a difference! Updated 18/03/2013 Followers of my website would realize that I tend to make too many clocks in those tutorials. Well, I like making clocks... so here is another one. However this time..... Listed under: Clock – Timer Projects, Projects

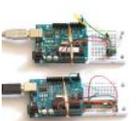

250.  How to make your own Arduino board If you are like me which I am guessing you are, then ever since you got into doing stuff with Arduino you have wanted to make your own Arduino board. You may be surprised to find out that making the prototyping board is actually very..... Listed under: Development Board Projects

251.  Arduino SOS signal with 8ohms speaker and LED blinking SOS is the commonly used description for the international Morse code distress signal (· · · – – ·). [read more on wiki] Requirements: 1) Arduino 2*) 8 Ω speaker 3*) 150 Ω or similar resistor 4) 5mm RED LED 5) Hook-up..... Listed under: LED Projects, Radio Projects, Sound – Audio Projects

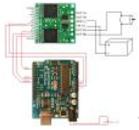

252.  Radio link between two Arduino boards I was looking for a way to handle wireless communications between two Arduino boards. Other options like Xbee Bluetooth were going to cost \$50 to over \$100. Then I found a cheap RF transmitter and receiver at Sparkfun. The total cost is only \$9!..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects, Projects, Radio Projects

253. DIY Amp / Watt Hour Volt Meter – Arduino Major corrections and additions made 9/9/2014 For my off-grid Ham Radio and Solar projects, I needed a way to measure volt, watts, amp hours and watt hours. There's a couple of commercial products that can do this, but not with the flexibility I wanted..... Listed under: How To – DIY – Projects,

Metering – Instrument Projects

254.  Pololu Motor Controller Testing and Troubleshooting Finally, I finished reading the datasheet. It didn't give much information about how to connect the r controller to a micro-controller. I used the simple circuit I found from a post in Pololu's forum: Using Dual VN3SP30 Motor Driver with arduino @ <http://forum.pololu.com/viewtopic.php?f=15&t=1923>. Dual VN3SP30..... Listed under: Motor Projects

255.  Webster: A Geometric Pattern Weaving Machine We are three students from California College of the Arts in San Francisco in the Architecture program. studio is called Creative Architecture Machines and is taught by Jason Johnson and Michael Shiloh. Webster is a geometric pattern weaving machine the inspiration from Islamic..... Listed under: Calculator Projects, PWM Projects

256.  Colorful Countdown Clock for tight timeline management using Arduino This is a funny looking clock that has that displays time on relatively large 32x16 Color LED Matrix. It includes also a countdown counter that I find very useful in many situations. Features: Date And time display Temperature display Countdown timer Buzzer notification Randomly changing..... Listed under: Clock – Timer Projects, Projects

257.  Arduino Nano based Microbot This instructable was created to be entered in the Robot Challenge. If I win, the parts will of course, go into robots like this Notes on how to include some of the very components in the prize packages are given in the last step. I..... Listed under: Robotics – Automation Projects

258.  Simple Arduino light meter This Arduino project is a simple light meter using a photo-transistor. An LDR would be more appropriate but the photo-trans what I has spare at the time. On the other hand the photo-transistor is sensitive to infrared, so its handy for testing remote controls..... Listed under: M – Instrument Projects

259.  Arduino Based Automated Lighting Control This is my second instructable. i want to share some of the basic things i made using the arduino i am so bus then i got the chance to have this spare time... inspired by my former student and a fellow co league to..... Listed under: Arduino Android, Internet – Eth LAN Projects, LED Projects, Projects

260.  Remote Control Door – Internet Your Thing We can instantly open a door or control anything we can connect. It works from any iPhone, Android, or PC. connecting something we want to control, download the free app to a PC, open a port, and control it remotely from anywhere. It's open..... Listed under Internet – Ethernet – LAN Projects

261.  Minimal Arduino with ATmega8 Like me, you may have a few old Arduino boards or ATmega8 chips (in the boards) laying around from when you were fir playing with Arduino. Those chips can still be really useful as the heart of a tiny "Minimal Arduino" setup. A normal Arduino..... Listed under: Interfacing(RS232 – I2c -ISP) Projects

262. Control Arduino Wirelessly with MATLAB Been seeing few DIYs on how to establish a communication between MATLAB application and Arduino that is hardwired to PC. H I haven't encountered anything that control Arduino via MATLAB wirelessly using the ENC28J60 compatible Ethernet shield. In this ible', I'm going to show the..... Listed ur How To – DIY – Projects, Internet – Ethernet – LAN Projects

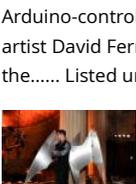

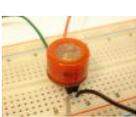

263.  Turn your Arduino into a 4 voice wavetable synth Multiple synthesizer projects have been done for the Arduino, but few have been able to utilize the full of the Arduino processor. DZL from GeekPhysical wrote a 4 voice wavetable synthesizer that is one of the more advanced software based synths for the Arduino..... Listed under: Sound – Audio Projects

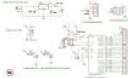

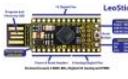

264.  Perfboard Hackduino (Arduino-compatible circuit) Never again will you have to dismantle a finished project just to reuse an Arduino board! This tutorial through the steps involved in fabricating your own Arduino-compatible circuit using just ~\$8 of parts (this includes the ATmega chip!). This is perfect for installing..... Listed under: Development Board – Kits Projects

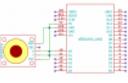

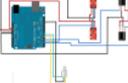

265.  Arduino Backlit LCD shield In this tutorial learn how to make your own backlit-LCD Arduino shield. Updated 18/03/2013 Let's see how simple it is to make own Arduino LCD shield. Sure – you can just buy one, but where's the fun in that? Getting Started Our LCD is..... Listed under: LCD Projects, Projects

266.  Knight Rider Rides Again using an Arduino This a Knight Rider Style LED Chaser Done with a Arduino Duemilanove with an ATmega328 chip. Step 1: Thing need: 6 LEDs (any color) 1 Breadboard 1 100 Ohm Resistor 12 Breadboard Jumpers 1 Arduino Duemilanove "or" Decimila 1 USB cable with A type conne Listed under: LED Projects, Projects

267.  Simple Buck LED Driver with PWM Input High-power LEDs over 1W are now quite inexpensive. I'm sure many of you are incorporating LEDs as light source for your projects. However I realize that the finding and configuring the power supply is still not as simple as it can be; commercially available LED..... Listed under: LED Projects, PWM Projects
-
268.  Breadboard and LEDs (lesson 3) Introduction You've started modifying sketches, and played a bit with the onboard LED (or if you have an NG, an LED you added). The next step is to start adding onto the hardware component of the Arduino. We will do this by adding a solderless breadboard..... Listed under: Projects
-
269.  The Talking Breathalyzer using an Arduino *** Additional info at <http://droidalyzer.com/talkingbreathalyzer/index.html> *** A customizable Breathalyzer talks and tells you how much you've had to drink. It's also open source and can easily be modified with your own text on the LCD screen and audio MP3 When tethered to a PC with..... Listed under: Medical - Health based Projects, Projects
-
270.  FaceBooth - One button to facebook photobooth I wanted to make a photobooth for a Christmas party. I wanted it to be simple to operate and only be so easy so that even a guest who was chemically uncoordinated could even operate it.I wanted a solution that would take a photo..... Listed under: Internet Ethernet - LAN Projects, Video - Camera - Imaging Projects
-
271.  Arduino-controlled, Aluminum Archangel Costume Wings I have always loved the Marvel character Archangel. When my brother, (Shameless plug alert) budding comic book artist David Fernandez, showed me pics of a cosplay convention he went to I thought "wouldn't it be awesome if someone made life-size archangel wings?". The idea came from the..... Listed under: Game - Entertainment Projects, Projects
-
272.  Arduino Breathalyzer What is a breathalyzer you may ask? It is a device for estimating blood alcohol content (BAC) from a breath sample.In simple terms device to test whether a person is drunk or not. As the title suggests it runs on the arduino.Our breathalyzer..... Listed under: Medical - Health based Projects
-
273.  Add a real-time clock to the Freetronics TwentyTen using Arduino Let's add a DS1307 real-time clock to our Freetronics Arduino-compatible board. Updated 18/03/2013 Now and again I find myself making another kind of clock or timing device using the Arduino system, and each one has been making use of the Maxim DS1307 real-time clock IC. However..... Listed under: Clock - Timer Projects, Projects
-
274.  Arduino Masterclass Part 1: Make your own hardware The world is going nuts over the Raspberry Pi single-board computer (SBC) for being a whole system under \$50. In reality though the Pi isn't actually the cheapest computing device available. If you want really cheap how does \$13.50 sound for a mini computer that..... Listed under: Development Board - Kits Projects
-
275.  Turn a pencil drawing into a capacitive sensor for Arduino Did you know? You can make pencil drawings reactive to touch for use with your projects! It's easy, and gives you a lot of flexibility in making interfaces for whatever microcontroller project you're making. I put this together as part of my UnoJoy project..... Listed under: Sensor - Transducer - Detector Projects
-
276.  ARDUINO SYNTHESIZER The Arduino Synthesizer The Arduino is able to output sound through a library that has been developed called the Tone Library. By creating an interface program that can call certain values to be output to an audio out, the Arduino Synthesizer is a robust tool for..... Listed under: Sound - Audio Projects
-
277.  Arduino Breathalyzer: Calibrating the MQ-3 Alcohol Sensor The MQ-3 is an alcohol gas sensor that is available for about \$5 from Sparkfun, Seeed Studio and others. It's easy to use and has sparked the imagination of anyone who has dreamed of building their own breathalyzer device for measuring the amount of alcohol..... Listed under: Sensor - Transducer - Detector Projects
-
278.  SD Card Data Readable Anywhere This project started as many of mine usually do, as a hobby. We have compiled an extensive list of our books and music collections on our computer at home, but my wife wanted to be able to scan the list from the video store (yes,..... Listed under: Memory - Storage Projects
-
279.  Arduino Powered Binary Clock This instructable will help you to build an Arduino Binary Clock. The original idea for this instructable was designed by David Andrade. My instructable uses surface mount components, but can easily be adapted to through-hole components if you wish. You can follow my other Instructable..... Listed under: Clock - Timer Projects, Projects
-
280.  PCB Quadrotor (Brushless) Quadrotors are the new Segways: a mesmerizing, somewhat magical, self-stabilizing platform that every tech person wants to ride. You can't ride a quadrotor (well, maybe you can), but they do fly, and you can build one yourself from scratch! I helped with a previous quadrotor..... Listed under: Robotics - Automation Projects

281. **Build Your Own Arduino Board** Need more Arduino board? Do not spend more money for another one. Why not try to build your own DIY Arduino board? It is easy and s

 DIY Arduino Step 1 Get an Atmega328-PU or Atmega328P-PU (with bootloader inside). atmega328p A brief introduction on the..... Listed under: Develop Board – Kits Projects
-
282.  **Electronic Instrument** This electronic instrument allows you to sequence and loop audio and MIDI data. Most of the time I use it to sequence drum sam can play around with different beats and rhythms. The really great thing about this instrument is that it is..... Listed under: How To – DIY – Projects
-
283.  **ANDROID+ARDUINOADK+RGB led** this is a project which makes an android app, then configure it to use it with android debug bridge or android access development kit. for making the android app we use android mode of processing. For hardware, i always choose arduino. here i have a..... Listed under: Arduino Android, Internet – Ethernet – LAN Projects, Projects
-
284.  **Arduino Uno – Programming With A Serial Port** I'm working on an Arduino clone. The Arduino is essentially an ATMEGA328P development board with a bootloader p loaded. There are a lot of custom macros built into the programming interface that make it really easy to use, and even easy to build some powerful applications. under: Arduino Programmer Projects
-
285.  **Arduino from Scratch Digital Thermometer** I have loved making projects with Arduinos, but at \$30 a piece your projects can get expensive. So I want to s you how you can make your own Arduino from scratch and save money doing it. Make your own Arduino for around \$8. For..... Listed under: Projects, Temperature Measurement Projects
-
286.  **BrainTap: the interactive arthritis and memory exercise game** I built this project at at uni as a 3rd year project (with a couple of classmates) at the Univer Technology, Sydney.It is aimed at Baby Boomers and targets a skill and level based memory and fine motor skills exercise game. The form is..... Listed ur Game – Entertainment Projects
-
287.  **LeoStick Getting Started Guide** The Freetronics LeoStick is a handy break-out board for the ATmega32U4 microcontroller. The board has a convenient US format, and is based on the pinout and connections of the Arduino Leonardo reference design for compatibility with the Arduino IDE. Before you plug in LeoStick..... Listed under: How To – DIY – Projects
-
288.  **Arduino Wall Lamp** So, I have always wanted a nice lamp by the side of my bed, Something simple with out any buttons. Of course this would mean it ha wireless.I also wanted to use it from my bed but not getting out of my bed to turn it off..... Listed under: Home Automation Projects, LED Projects
-
289.  **Sensor Less 3d Printed Robot Tyree** (he wears a tie and he has tires) actually smiles after he bumps into something (see video). Using an Arduino motor he detects obstacles using the "more current into the motor means something is in the way" principle. Tyree started out as a..... Listed under: Robotics - Automation Projects, Sensor – Transducer – Detector Projects
-
290.  **Building an 8x8x8 LED Cube – The Driving Circuit** In this article we are going to take a detailed look at how to build the driving circuit for the 8x8x8 LED cube. In other we are going to design and analyze the circuit which translates the signals coming from the Arduino to appropriate..... Listed under: LED Projects
-
291.  **ArduSensor Fun Pack** ArduSensors are open source plug-in-play sensors for Arduino. These were originally made for beginners to get started with Ardu very cool electronics prototyping platform, but anyone can use them. I still play around with them all of the time, and I bet a ton..... Listed under: Senso Transducer – Detector Projects
-
292.  **TiDiGino, the Arduino-based GSM remote control** Using an ATmega 2560 and therefore the heart of Arduino, we have developed a universal remote con GSM. This allows to control 2IN/2OUT, DTMF key, gate control and GSM thermostat activated remotely. We have already presented several remote contr different functions. But now..... Listed under: Phone Projects, Radio Projects
-
293. **UltraSonic Arduino Video instructions** How To – Parking your car with an Arduino How To - Parking your car with an Arduino Code: // Back up Helper, by Darrah v4 #include <SoftwareSerial.h>// to read the data from the range finder on any digital pin SoftwareSerial sonar(5, 6); // RX, TX //we're only using th pin (5),..... -
294.  **Hack Your Hasbro R2D2 With an IOIO Microcontroller** My wife bought me a Hasbro Interactive R2D2 Astromech Droid for my birthday a few years ago af said how much fun it would be to hack it and I've finally managed to get inside and start playing!Although the built-in voice control functions are..... Liste under: Robotics – Automation Projects
-
295.  **Clock One – Digital plus Analog Clock** An Arduino For some strange reason I have a fascination with various types of electronic clocks (which explains this article). Therefore this project will be the start of an irregular series of clock projects whose goal will be easy to follow and produce interesting results. O "Clock..... Listed under: Clock – Timer Projects, Projects

296.  Ardu-Bot-Tom – RF Link Controlled Robot [box color="#985D00" bg="#FFF8CB" font="verdana" fontsize="14" radius="20" border="#985D12" float="right" head="Major Components in Project" headbg="#FFEB70" headcolor="#985D00"] Ardu-Bot-Tom List of Materials Controller Parts: 1x - Arduino Uno 1x - 9 Battery 1x - 433Mhz TX Module 1x - SparkFun Joystick Robot Parts: 1x - Arduino Uno..... Listed under: Robotics – Automation Projects
297.  Multiplexing with Arduino and the 74HC595 The 74HC595 is an easy and inexpensive (at about 60 cents apiece) way to increase the number of digital output on your Arduino. In this tutorial I'll show you how to drive up to 16 LEDs with one 74HC595 using a technique called multiplexing..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects
298.  Arduino punk console This is my first build using an arduino microcontroller. I wanted to create a simple tone output device along the lines of the 555-based Atari punk console, but using solely the mcu as the tone generator. Unfortunately, that was just too simple a task with a microcontroller to..... Listed under: Projects, Sound – Audio Projects
299.  Perduino: Build Your Own Arduino Microcontroller This how-to takes you through all the steps of making your own arduino on a perfboard or perduino. Arduino microcontrollers are great for learning about physical computing and are very useful for rapid prototyping. Arduino's simple programming language makes it a favorite of hobbyists and..... Listed under: Development Board – Kits Projects, How To – DIY – Projects, Projects
300.  Arduino LED Flasher Circuit In this project, we will go over how to build an arduino LED flasher circuit. We will use a standard arduino board, doesn't matter which, and connect it so that it flashes an LED a certain amount of times on and off repeatedly to create..... Listed under: LED Projects
301.  Touche for Arduino: Advanced touch sensing Update: New interface - look at the last step. Credits: Arduino sensing done by DZL, Processing sketch and Instructable done by Mads Hoby. Disney Research lab designed a novel way to detect touch. You can see a video of their demo here: I had the honor to meet..... Listed under: Sensor – Transducer – Detector Projects
302.  Clock Three – A pillow clock using Arduino Time for another instalment in my irregular series of irregular clock projects. In contrast with the minimalism of Clock Two, in this article we describe how to build a different type of clock – using the “lilypad” style of Arduino-compatible board and components designed for use in e-textiles..... Listed under: Clock – Timer Projects, Home Automation Projects, Projects
303.  Get Into the Kit Business: How to Build and Sell Your Own Arduino Shields The DIY industry is booming, despite the desperate blackmailing of society by capitalists. Companies like Adafruit and Makerbot are grossing well over a million dollars a year, and Evil Mad Science Laboratories just recently dedicated themselves to running a full-time kit business. Making kits..... Listed under: Development Board – Kits Projects
304.  Arduino IR Transmitter & Receiver w/ LEDs Flickering Issue I have an Arduino Uno connected to two IR transmitters and respective receivers. Basically, when the receiver detects a beam break, I have a strand of LEDs display a pattern. This all works in principle, but the problem is that when the IR..... Listed under: LED Projects, Radio Projects
305.  Intro to Model Airplane Autopilot I am twenty years old. I picked up my arduino for the first time this Christmas, and I've been keeping busy on my arduino applications so that I can bring you this instructable. I hope that it helps!!! The purpose of this project was to..... Listed under: Car Projects, Game – Entertainment Projects
306.  Making the Good Night Lamp using Arduino Last March, Alexandra Deschamps-Sonsino registered a new limited company in London, and booked a booth at CES, the consumer electronics trade show, taking place 10 months later. She had no team, and only a dated prototype product that she had designed back in 2005. “I..... Listed under: Home Automation Projects, LED Projects, Projects
307.  Salvaging an LCD from a fax machine using an Arduino I acquired an old fax machine that looked like a ripe source of parts, like steppers, IR sensors, microwaves and things. As it turned out, it was. It also had a nice looking 2 x 16 character LCD. However, after taking everything apart, I..... Listed under: Car Machines Projects, Interfacing(USB – RS232 – I2c -ISP) Projects, LCD Projects, Projects
308.  Arduino hardware hacking: Part 3 In our previous two tutorials (see here and here), we created a Simon-type game using the Arduino, a hardware platform simple, and not so simple, electronics projects. We placed three buttons and three LEDs on top of something called a breadboard, and wrote a small..... Listed under: How To – DIY – Projects
309.  Arduino Solar Tracking Robot This is a simple solar tracker which automatically orients itself towards the sun or any bright source of light like the sun. If you place solar panels on this robot it can increase their productivity by 90 to 95 %. At first creating a solar..... Listed under: Robotics – Automation Projects, Energy projects
310.  Arduino Esplora Accelerometer This sketch shows you how to read the values from the accelerometer. To see it in action, open the Arduino serial monitor on your computer, tilt the board. You'll see the accelerometer values for each axis change as you tilt the board. Circuit Only..... Listed under: Metering – Instrument Projects, Projects

311.  Arduino hardware hacking: Part 2 In part 1 of our Arduino tutorial series we covered the basics of how the Arduino works, and we're going to use that in a hands-on project and see how this open-source hardware programming environment works when we're actually trying to get something done..... Listed under: How To – DIY – Projects

312.  The Revenge of the Yellow Drum Machine (Arduino) I was inspired by Frits Lyneborg's Yellow Drum Machine. Watching the videos, it has such personality have also been thinking recently about sound and robotics. I did some research looking for a version of the robot that used the Arduino as a brain, but... Listed under: Sound – Audio Projects

313.  Theremin with Zapper, laser, Arduino I created this Theremin like device after seeing this article in Make magazine: <http://m-cdn.dashdigital.com/make/vcpg=69#pg67> While this looked pretty straight forward it turned out to be a bit much for me at the time. But after much effort, I got it to work pretty good Listed under: Other Projects, Projects

314.  Arduino hardware hacking: Part 1 Arduino is cool. It's cool because it's a tiny device - about three inches by two inches - that comes with a USB port and programmable chip. It's cool because you can program it using a very simple programming language known as Wiring. But..... Listed under: How To – DIY – Projects

315.  Fluid In.Flux_3D Wax Printing In Water Fluid In.Flux is a 3D printing experimental machine which prints wax in water. The Machine was a semester-wide exploration as part of the Advanced Architecture Studio called "Creative Architecture Machines" by Professor Jason Kelly Johnson and Michael Shiloh at the California College of the Arts, in San Francisco..... Listed under: CNC Machines Projects

316.  RC Rocket Launch System This instructable will show you how to make an RC launch system for your Estes rocket, which can be operated with a TV remote. What it does is it allows you to press the center button on your TV remote, and it'll automatically launch your..... Listed under: How To – DIY – Projects

317.  Controlling your trains with an Arduino A quick introduction to the Arduino Arduino is an open-source electronics prototyping platform based on flexible to-use hardware and software. It's intended for artists, designers, hobbyists, and anyone interested in creating interactive objects or environments. Arduino sense the environment by receiving input from a..... Listed under: How To – DIY – Projects

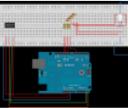

318.  Throwduino Basic – Light-Sensing Flashing Throwie Throwies are great. They have a minimal parts count - 2 or 3 depending on whether you use a magnifying glass to produce a great effect. They are very cheap and easy but not highly efficient: 1) They are on all the time, so on..... Listed under: LED Projects, Sensor – Transducer – Detector Projects

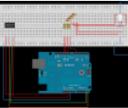

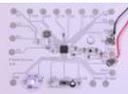

319.  Arduino Online Thermometer Project I have been researching a project which will help me with my understanding of electronics, networking, and programming. I decided to build an online thermometer which could be used in applications that need temperature monitoring. I currently work in a laboratory environment where I test, troubleshoot,..... Listed under: Medical – Health based Projects, Temperature Measurement Projects

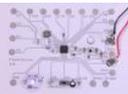

320.  Graphing values in Arduino Sometimes when you're testing a sensor or debugging a value in an Arduino project, you want to see something other than numbers flying by the Serial Monitor. However, you want to get the sensor working quickly, and you don't want to take the time..... Listed under: Interfacing(USB – RS232 – I2C) Projects

321.  RGB Color Sensor on Arduino The next board I want to show you is the ADJD-S371 Color Light Sensor Evaluation Board from sparkfun. It emits light and analyzes the reflected color spectrum. The board can be controlled via I2C. The sleep and xclk pins were not used in this example..... Listed under: Sensor – Transducer – Detector Projects

322.  Paperduino 2.0 with Circuit Scribe – Paper Arduino What if making an Arduino, or wiring up an Arduino was as easy as printing one out? In this tutorial we printed our own Arduino Pro Mini board using a pen plotter and the Electroninks Circuit Scribe (a rollerball pen with highly conductive ink). Within..... Listed under: LED Projects

323.  Daft Punk LED Matrix Breakout Board I was always impressed by the Daft Punk Coffee Table. Being able to light up a bunch of LEDs and flash them in patterns has so many applications. It was one of the reasons why I bought an Arduino seeing how it could control a..... Listed under: LED Projects

324.  LEARN! ARDUINO – A HANDS-ON APPROACH INTRODUCTION This manual will show you how to use each of the components in the kit, and give you some Sketch examples for each one. Then you can combine some components to make examples of Automatic Systems such as a lighting controller. You're probably..... Listed under: How To – DIY – Projects

325.  Alarm Clock Overkill I don't get up at the same time every day, so I thought it'd be nice to have an alarm clock that would drag me out of bed at different times on different days. That was the initial idea: things got out of hand, of..... Listed under: Clock – Timer Projects

326.  The Clamshell Stompbox This is a DIY variable resistor I created as an interface for live performance-- like a stomp box. I designed it as a project my audio students could build with materials we already have in the classroom. The result is a variable resistor that can be..... Listed under: LED Projects

327. Arduino and CueCat barcode scanner I've had a cuecat barcode scanner sitting around for over 10 years. Basically it connects to a PS2 port (apparently to a USB version) like a keyboard and spits out a barcode when scanned. Nice!. The annoying thing is that it is "encrypted". What..... Listed under: Sensor – Transducer – Detector Projects

328. Domotic arduino In this introduction I will show you an overview of this project with Arduino Uno. The purpose of this instructable is to move a electric roller shutter by Arduino Uno. The prototype that I made is my first electronic project with Arduino and I hope this..... Listed under: Development Board – Kits Projects, Projects

329. Cylon Pumpkin This has been done before. There are several good ways to do it: most use either a 555 timer chip and decimal counter chip, or an Arduino. Stefan and I used an Arduino (Boarduino, technically) which limited our scanner to 14 LEDs. No problem ---..... Listed under: Game – Entertainment Projects

330. Build Your Own Programmable LED Matrix QR codes are addicting. Smartphones are smart enough to read them from virtually any angle or orientation. But imagine taking it a step further. I had dreams of a digital LED array that I could program with QR codes, and I wanted it really big!..... Listed under: LED Projects

331.  Botanical Clone using an Arduino During the past spring a good friend of mine bought me my first house plant, a Lady Palm, and I've found myself rather invested in keeping it alive. To that end I wanted to monitor the plant's environment so I could ensure that its needs..... Listed under: How To – DIY – Pro Projects

332. Arduino DDNS (Dynamic DNS) by Open-Electronics.org This device captures the IP address of your network and it publishes on site DynDNS.com. All without allowing a remote access to your LAN even if the IP address of the connections changes. For logistics reasons the provider can not assign a IP..... Listed under: Internet – Ethernet – LAN Projects, Projects

333. Visualize data from sensors using Arduino + coolterm Once you're getting some values from sensors, for example using Arduino, (see my previous instructables) sometimes it's nice to see the sensor data in a graph. Here's how in only a few steps! I made this particular Instructable using a sonar sensor (XL Max Sonar) Listed under: Sensor – Transducer – Detector Projects

334. USB Game Pad With Tilt-accelerometer Mouse using an Arduino Make a game pad with an accelerometer inside! This project tutorial will show you how to convert a console game pad into a USB keyboard mouse for playing games on your PC. The USB game pad can be used with nearly any software, such as... Listed under: Game – Entertainment Projects, Interfacing(USB – RS232 – I2C -ISP) Projects, Metering – Instrument Projects, Projects

335. Singing plant. Make your plant sing with Arduino, a touch sensor, and a gameduino This project is a part of experiments done while doing an artist in residence at... Instructables. You can see the other projects here. Making a plant sing has been a trick since the Theremin was invented. Here I am going to teach you how to do..... Listed under: Game – Entertainment Projects, Home Automation Projects, Projects, Sound – Audio Projects

336. BaW-Bot Part 2: Build the motor-controller & body This is the second part of our BaW-Bot (Bells-and-Whistles Bot) build – 5 separate instructables that incorporate different Arduino-related technologies, combining to create a Bot with all the bells-and-whistles. Part 1: Build an Arduino on a Board Part 2: Build the motor controller & body..... Listed under: Motor Projects, Robotics – Automation Projects

337. Remote key-switch operation One of my colleagues, Dr. Shane Mayor, has built a very nice LIDAR system for atmospheric research. It's located at a remote site at the end of a dirt road, and everything about the system can be controlled remotely except the main pump laser power..... Listed under: Radio Projects

338. Connecting a 12V relay to Arduino To connect a 12V relay to the Arduino you need the following things: - 1 Arduino - 1 diode for example 1N4007 - 1 NPN transistor for example 2N2222 (in the US) or BC548 (in Europe) - 1 relay for example one with coil voltage..... Listed under: Interfacing(USB – RS232 – I2C) Projects, Projects

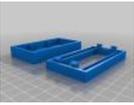

339. Arduino Flash Controller for Photography Being a broke amateur photographer isn't easy. Film, chemicals and paper aren't cheap and a budget for some studio lights is r
existent. So, I decided to, with the help of my trusty arduino, create my own sync controller to use with disposable camera flash circuits. By using a..... Li
under: Video – Camera – Imaging Projects

340. Super Secret Lock Box w/ Capacitive Touch Hey everyone, I wanted to share a project I just finished up. I built a super secret locking box for my girlfriend
brother. He has a knack for creative lego building so I thought it would be a good idea to open him up..... Listed under: Security – Safety Projects, Sensor
Transducer – Detector Projects

341. Driving multiple Sparkfun 7-segment displays with an Arduino I'm currently helping a couple of engineering students finish a senior project that didn't g
finished last year. Long story... Anyway, it's a bicycle brake tester being built for Paul Components. The mechanical design is great, but they had trouble v
electronics. Part of..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects

342. Aquameterduino: Water meter plus Arduino After a bad water damage (our cellar basically filled up whilst we were away for several days), I decided to m
our water usage for anomalies. Enters Arduino... The idea of this project is to use an arduino to count every drop of water that..... Listed under: Meterin
Instrument Projects

343. Wrap Beats – Capsense Arduino Instrument Wrap Beats is an instrument that lets you string together notes in order to create different melodies and vis
patterns. I constructed it using the Capacitive sensing library for Arduino and combining that with the music abilities of processing to create a dynamic
instrument that..... Listed under: Sound – Audio Projects

344. Arduino PCR (thermal cycler) for under \$85 This tutorial will show you how to make a thermal cycler from scratch for about \$85. In short, PCR (polymera
reaction) amplifies bits of DNA, creating millions of copies of a target sequence. You can use it to test a DNA sample for a..... Listed under: How To – DIY
Projects

345. ISP Clip for ATtiny44/84 (or others!) I got my start in microcontrollers with the Arduino, as many of us outside of electrical engineering did. (And still do!)
ease of programming that little board makes it a great gateway... and like any gateway, sometimes you go through. Most of my projects..... Listed under:
Development Board – Kits Projects, Interfacing(USB – RS232 – I2c -ISP) Projects

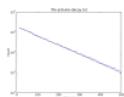

346. RFI-DJ: MP3 Playing RFID Thing The RFI-DJ is a USB device for playing MP3 files from your computer. You have a set of RFID cards, each one with a song n
written on it. You choose a card and place it on the RFI-DJ, and your computer will play that..... Listed under: RFID - NFC projects, Sound – Audio Projects

347. RGB LED Color Selector One Challenge with working with RGB LEDs is getting the right Red, Green and Blue values to match a color you are trying to disp
You can start with web colors, and then sometimes need to adjust them since the LEDs don't look quite the..... Listed under: LED Projects

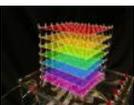

348. Radioactive isotope decay simulation My students need to learn LabVIEW—I know, it's proprietary software, and expensive, but until a viable open-source equivalent con
along we're stuck with it— and one of the exercises I have them do is to make a program to analyze radioactive decay. This gives..... Listed under: Radio Projects

349. Mood Lamp with Arduino Hi! In this tutorial you will learn to make a mood lamp with arduino. I know that you may have seen a lot of mood lamp project
arduino, but I wasn't very satisfied with them because they all change the color very abruptly. So,..... Listed under: Home Automation Projects

350. Self-Contained 7x7x7 LED Cube using Arduino LED cubes are true 3D displays that work by lighting up points in a 3D lattice of LEDs. On the 3D display yc
produce some truly mesmerizing animations. This instructable will walk you through creating an LED cube for yourself that is completely self-contained
powered..... Listed under: LED Projects, Projects

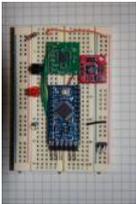

351. Using a quadrature encoder (rotary switch) with Arduino I've found several sites and posts explaining how to use a quadrature encoder with an Arduino,
wasn't completely satisfied with any of the methods used. Perhaps part of the problem is with the encoder I'm using: it's part #COM-09117 at Sparkfun.c
This encoder has..... Listed under: Arduino Programmer Projects

352. Use xbees (series 2) to control a motor Using two xbees, an arduino, an xbee explorer, and an h-bridge, wirelessly control a DC motor to spin in both dir
(last video). Note: I used the xbee I linked to, but for a one to one communication, rather than a network of wireless devices,..... Listed under: Motor Projects

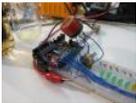

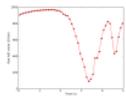

353.  Simple Datalogger Here's a simple Arduino-based datalogger I'm currently developing: This test-of-concept model is based on the Arduino Pro Mini (ATMega168). It runs on a 1.5-V battery, using a voltage up-converter from Sparkfun.com. For a sensor, it's using a 3-axis accelerometer on a breakout board also from..... Listed under: Development Board – Kits Projects

354. BaW-Bot Part 3: Adding Sight and Touch to the Bot This is the third part of our BaW-Bot (Bells-and-Whistles Bot) build – 5 separate instructables that look different Arduino-related technologies, combining to create a Bot with all the bells-and-whistles. Part 1: Build an Arduino on a Board Part 2: Build the motor controller & body..... Listed under: Robotics – Automation Projects

355. Building an Breathalyzer with MQ-3 and Arduino During the First Meeting of Electronic Arts in Florianópolis, we built a Breathalyzer using the Alcohol Gas Sensor MQ-3 and a Arduino Board to use in the last day of the meeting, in which we gave a party. You can see a quick video two..... Listed under: Medical Health based Projects, Projects, Sound – Audio Projects

356. Simple Arduino data-collection At this year's "Arduinos in the Physics Lab" workshop at the AAPT meeting, one of the participants asked for a simple way using the Arduino as a tethered A/D converter for data collection direct to a computer. This is my quick & dirty demonstration..... Listed under: Metering Instrument Projects

357. Energino: an Arduino-based energy consumption monitoring shield Energino is a plug-load meter that measures the amount of power consumed by when DC electrical appliance is plugged into its. It was originally designed to monitor the energy consumption of simple networking devices such as Ethernet switches and WiFi access points, but it can..... Listed under: Metering – Instrument Projects

358. More Humane Moisture sensor Recently I got a project from Titan industries, who were in search of something as an interactive plant pot which could bridge this gap of emotional communication, in mind this reminded me of brilliant projects done by people where the plant could tweet and..... Listed under: Sensor – Transducer – Detector Projects

359. Arduino-based event counter I teach Modern Physics here at CSUC, and we occasionally use isotopes with half-lives of a year or less (such as Zinc-65 and Cadmium-109) for energy-calibration sources for a gamma-spectroscopy lab. I thought it might be fun to try measuring the activity of one of..... Listed under: Calculator Projects

360. Lithium Battery Solar USB – iPhone – Arduino Charger One of the most fun and useful projects on instructables is to create your very own solar USB/ iPhone charger. They're not overly difficult to make, nor are the parts overly expensive or hard to find. For the most part they do a rather good..... Listed under: Projects, Interfacing(USB – RS232 – I2C -ISP) Projects, Phone Projects

361. ATtiny85/45/25 LED dice If you have looked at my 5 LED ATtiny85 POV display, we programmed the ATtiny with the Arduino. (If you haven't seen it, click here will be doing the same thing for this LED Dice project. The total parts cost for this project is..... Listed under: Interfacing(USB – RS232 – I2C -ISP) Projects, Projects

362. Morse-code trainer My kids are learning Morse code this summer, so I threw together this little circuit to help them learn. And to make it more fun... I used an ATtiny85 (\$2.26 at digikey.com) to drive a piezo buzzer (≈ \$3.50 at Radio Shack.) The ATtiny85 takes..... Listed under: Arduino Programmer Projects

363. Light Painters Palette aka Light Box Today I'm going to show you how I made my "light painters palette" aka light box. If you're into electronics and photography, this is probably something you are going to like. Supplies: -Arduino (I'm using an Arduino Pro Mini which requires a firmware basic to program,..... Listed under: LED Projects, Video – Camera – Imaging Projects

364. How To Make an Obstacle Avoiding Arduino Robot Hello all! In this Instructable I'll be showing you how to make a robot similar to the "Mobile Arduino Experimental Platform" (MAEP) that I made. It is equipped with two motors that can steer the robot and the ability to see obstacles in front of..... Listed under: Robotics – Automation Projects

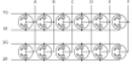

365. "Ayrduino" Single-Sided Arduino Clone I'm teaching "Electronics for Scientists" this semester, and I wanted to allow each student to have their own Arduino to play with for microcontroller lab exercises and possibly use for their final projects. The Arduino is not very expensive at roughly \$30 per, but they..... Listed under: Development Board – Kits Projects

366. Fijibot Fijibot is an autonomous, self-charging photovore. I built him using a 1.5 liter Fiji Water bottle, an Arduino Uno, 6v solar panel (plus various other parts from Radio Shack, an Arduino Proto Shield (plus various other parts) from Adafruit, and the wheels and steering arrangement..... Listed under: Robotics Automation Projects

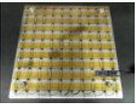

367. Network-status indicator I run a NFS/NIS network under a combination of OS's for the upper-division physics lab here at CSUC, and one source of irritation is when one n goes down and nobody lets me know until suddenly that machine is absolutely necessary NOW! So I figured..... Listed under: Internet – Ethernet – LAN F

368. 4x4x4 LED Cube Arduino After seeing all the different instructables for Led cubes i was still left with a lot of unanswered questions. So after reading eve could find this is what i got. I decided to make the instructable after building it...so ill try to recreate the process the best..... Listed under: LED Projects

369. Quantitative Two-Dimensional Temperature Measurements Lab Experiments involving the Heat Equation are usually one-dimensional exercises involv copper pipe and a half-dozen thermocouples. But with DS18B20 "One-Wire" thermometer chips and an Arduino, it's possible to measure hundreds of temperature values simultaneously. Here's what my students Daniel Lund and Lawrence Lechuga..... Listed under: Temperature Measurement Projects

370. Arduino ATtiny2313 Programming Shield Today, I made a small 3x3x3 LED cube with an ATtiny2313 that I had from about 2 weeks ago. Whenever I had t reprogram the LED cube when I thought of more awesome patterns, I had to get out my breadboard and then wire up..... Listed under: Arduino Prograr Projects, Development Board – Kits Projects, Projects

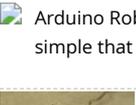

371. Full Binary Clock I was wandering the internet looking for a good arduino tutorial on how to build a binary clock with seconds, but I could not find one. S am writing this for you to have a binary clock with seconds, minutes, and hours. What..... Listed under: Clock – Timer Projects

372. Universal clock suitable for visually impaired using Arduino I was googling around looking for some sort of device I could make using arduino and stumb upon eshop with devices for visually impaired. What really shocked me was the price. I mean-I do realize that such sorts of devices are not really mainstr but..... Listed under: Clock – Timer Projects, Projects

373. Arduino Robot Arm – LarryArm v0.1 I have constructed a basic Arduino robot arm using 3 servos that cost me £15 in total plus a couple of hours in time to build and simple that I think anyone can replicate and build this. I already had the Arduino Duemilanove..... Listed under: Robotics – Automation Projects

374. Cwik Clock v1.0 – An Arduino Binary Clock Overview This is a guide to building an Arduino-powered clock that uses LEDs to display a 24-hour clock (hour minutes) as binary digits, an analog meter to display the seconds, a switch to toggle between time-display and time-setting mode, and 2 knobs for settin Listed under: Clock – Timer Projects

375. Arduino: Controlling the Robot Arm So the arm is wired into Arduino as per the previous post, Arduino: Modifying a Robot Arm and hopefully this has w this next part I alter the Arduino sketch slightly and write the first Processing sketch to test control of the arm –..... Listed under: Robotics – Automation

376. Clusterbot What is Clusterbot? He is a small, affordable, autonomous Arduino-powered robot. He can move, see, avoid obstacles, and makes a melodichirping sound sometimes. Clusterbot was my first Arduino project, and I think he makes a great project for a beginner. While building Clusterbot you... under: Robotics – Automation Projects

377. 4 Servo drive CellBot which can be remotely controlled using Arduino I started with an idea of what I wanted to do from the beginning but one attempt after another I fin to where I am now. This robot can be remotely controlled from anywhere in the world and driven around the house. I can..... Listed under: Motor Projec Projects, Robotics – Automation Projects

378. Using Processing to Send Values using the Serial Port to Arduino In this write-up, I'll show how to create a value in Processing and then send this value o serial port to the Arduino. In the example I'm setting values of LEDs making them brighter or dimmed but this example can be extended to control..... Li under: Arduino Programmer Projects

379. Over the Counter Kitchen Radio using Arduino This project used the Si470x FM radio receiver and an arduino to make an over the counter kitchen radi parts had been purchased for a different build that unfortunately met a premature end. The concept for this project is simple. Play my favorite news..... under: Home Automation Projects, Projects, Radio Projects

380. SPEAKR Nature has a way of speaking to us in a way that soothes and revitalizes. Sounds of the wind in various places create low volume tones that we t hear. They have a certain beauty and randomness to them that are unique to nature. We've..... Listed under: Game – Entertainment Projects

381.  Box Security Package using Arduino If you touch the package, it will scream and run away--changing its course when it strikes an obstacle. When you lift a tag, light strikes a photocell and operation commences. Motors and a sound module are controlled by an Arduino (and Arduino Motor Shield)..... Listed under: Security Projects, Security – Safety Projects

382.  Arduino + Processing – 3D Sensor Data Visualisation So following on from my previous posts about visualising sensor data in Processing, I'm now looking at drawing 3D representations of the data recorded from the Sharp IR sensor – although can be any kind of range finder. I started by rigging 2 servos, one..... Listed under: Sensor – Transducer – Detector Projects

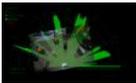

383. LED Cylinder using Arduino This is a little art project I made with 95 RGB LEDs arranged in a 3D cylinder shape, sitting atop a microcontroller-based drive circuit. The LEDs are individually addressable, and when you power it on, the software cycles through a series of animations, e.g. various..... Listed under: Entertainment Projects, Home Automation Projects, LED Projects, Projects

384. Electrically Insulated Altoids Tin Ah yes, it's time for another Instructable involving an Altoids tin... But this time it's not about what's inside the Altoids tin about the Altoids tin itself. In all its greatness, the Altoids tin we all know and love has one rather major flaw..... Listed under: Development Board – Kits Projects

385. How To Interface a CDV 700 Geiger Counter to a PC Using an Arduino Video instructions How To Interface a CDV 700 Geiger Counter to a PC Using an Arduino (Part 1) The part of our video series of our project to interface to a CDV-700 radiation meter using an Arduino Uno! How To Interface a CDV 700 Geiger Counter..... Listed under: Calculation Projects, Interfacing(USB – RS232 – I2c –ISP) Projects, Projects

386. Arduino + Processing – Make a Radar Screen – Part 3: Visualising the Data from Sharp Infrared Range Finder So I had some luck with getting the Sharp Infrared range finder working and I've now plugged this on to my servo rig to see if I get better results on my radar styled display. Check out how to use the Sharp range finder..... Listed under: LCD Projects, Metering – Instrument Projects

387. Using the Sparkfun Motor Driver 1A Dual TB6612FNG using Arduino As a beginner myself, I struggled to find a one-stop set of instructions to get up and running with Sparkfun's Motor Driver 1A Dual TB6612FNG. This motor driver breakout board is exceptional value, is beautifully small, but does need a little more effort to get..... Listed under: Motor Projects, Projects

388. Motion Controlled Robotic Arm This instructable is not complete, I will post code soon The Arm: This instructable shows the process of building a robotic arm using servos, Arduino microprocessor, a gyroscope and multiple bend sensors. The user wears a glove containing the gyroscope and bend sensors which translate..... Listed under: Robotics – Automation Projects

389. Arduino traffic lights I made this project on the same night that my Arduino Duemilanove arrived from Cool Components. After being an Instructables member for about a year I thought it was time I should contribute. There is another Arduino traffic light project similar to this, but it..... Listed under: Car Projects, Projects, Projects

390. Controlling a clock with an Arduino Update: The Arduino system is fine; the only thing you have to take into consideration is the 9.54 hour rollover event Rob Faludi has provided an excellent solution for here. I made up a nice little over-analysis of the issue, available here. I have..... Listed under: Clock – Time Projects, Projects

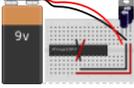

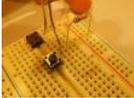

391. RGB flashing iPod dock from an old speaker Using an Apple Pro speaker, I made a flashing RGB LED iPod dock for about \$35. I recommend reading the electronics guide before starting. Also, note that the volume is controlled from the iPod. It consumes minimal power in shutdown mode, and is controlled by..... Listed under: Sound – Audio Projects

392.  Arduino + Processing: Make a Radar Screen to Visualise Sensor Data from SRF-05 – Part 2: Visualising the Data This is where all the work is done to read and interpret the values from the servo and the sensor. If the readings are too erratic then you won't have nice shapes. Also if you don't allow enough time for the signals to be sent..... Listed under: LCD Projects, Sensor – Transducer – Detector Projects

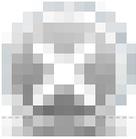

393. An 8-Bit Waterfall using Arduino So far my Arduino projects have all needed only a small number of output pins. In a previous post I talked about moving the logic off the Arduino and into other integrated circuits in order to free up pins on the Arduino. While..... Listed under: Other Projects, Projects

394.  Vibration Foam Speaker Concept: Very simple, using an arduino and the play melody basic program, create a music playing speaker out of a vibration m a piece of flexible foam. Instead of pulsing signal to a speaker, signal is pulsed to a motor varying how fast it..... Listed under: Sound – Audio Projects
395.  Arduino + Processing – Make a Radar Screen to Visualise Sensor Data from SRF-05 – Part 1 First things first, we need to build our circuit. This is the easy bit! We'll be u Arduino to control a servo that will rotate our sensor around 180 degrees. The Arduino will then send the value from the distance sensor along with the..... Listed un Projects, Sensor – Transducer – Detector Projects
396.  Police Lights using an Arduino ****DISCLAIMER**** I do not and will not take responsibility for anyone who gets in trouble for this, by either imitating emerg personnel, or using without a permit/lisence. Updates! -I have shortened the code -Changed 16 LED's to 8 -Changed/added more flash patterns -Renam variables As..... Listed under: Car Projects, LED Projects, Projects
397.  Honey, I Shrunk The Arduino As you might be able to tell from recent posts, I've been doing quite a bit of work with an Arduino. I've now got at least one that I'd like to make a little more permanent, rather than it just being a bunch of..... Listed under: Other Projects, Projects
398.  Color Changing LED Tree Ever wanted an LED tree? Well now you can have your LED tree and eat it too (no, wait, you probably shouldn't).. Step 1: Gather parts You will need: 1x ATtiny85 10x male header pins Solid core wire, 2 colors A bunch of LEDs..... Listed under: Game – Entertainment Projects, Home Automation Projects, Interfacing(USB – RS232 – I2c -ISP) Projects, LED Projects
399.  Brute force attack a BIOS with Arduino The goal of this experiment is to convert the Arduino board into an USB keyboard plus a VGA sniffer to crack the password of a standard BIOS using the brute force attack method. There are no advantages in using this method, in fact this can..... Listed under: Mem Storage Projects, Projects
400.  Send and Receive MIDI with Arduino This instructable will show you how to use an Arduino to send and receive a variety of MIDI messages so you can st building your own MIDI controllers and instruments. First I'll talk a little bit about MIDI protocol, if you're just looking for sample..... Listed under: Sound Projects
401.  Arduino – A Basic Theremin Theremins are cool. Fact. You may also have heard of them as either aetherphone/ etherophone or termenvox/ thereminvox. Essentially electronic music instrument that plays a certain note depending on the position of your hand and its distance from an antenna. Building a very..... Listed under: Sour Audio Projects
402.  Tweetosapien: Hack a Robosapien With Arduino to React to Tweets A really fun project sent into us by Thomas Meghe. He's translated it all from his nati French, which is a technical achievement itself. If you'd like to see the original, you can find it here. Bored of your favorite Twitter client ? No problem,..... under: Internet – Ethernet – LAN Projects, Projects
403.  Walleye using Arduino Walleye is an interactive light installation which engages users in temporal gestural and bodily play. It generates temporal light propagation patterns, or a large scale very low resolution pixilated image (depending on how you look at it) based on the realtime movement of visitors Listed under: Other Projects, Projects
404.  How to build your own sugru robot – Fixbot So you saw our video and you've fallen in love with Fixbot, have you? That's okay, it's understandable. We've in love with it too. We have some great news! You can build your own Fixbot too, provided that you're okay with getting your hands..... Listed under: Rob Automation Projects
405.  Arduino – Basic Persistence of Vision I think this'll be the start of a few more projects for me. I've seen some cool LED PoV stuff (Persistence of Vision) with mounting o on bikes, so hopefully I'll get round to doing something like that. Anyway as a start I've got 5..... Listed under: LED Projects
406.  How to make a servo leg using Arduino This instructable will show you how to create a simple servo leg that can be controlled by buttons on an arduino serial. Here is a video of the leg in action <http://www.youtube.com/watch?v=Q8i1nrPljvo> Leg Materials: Popsicle sticks-make sure that all of them are fl Listed under: Motor Projects, Projects
407.  A Study in Non-Standard Distributed Computer Architecture using Arduino In the following tutorial, directions are given for creating a single node for the Optical Harvard Architecture System). After constructing two of these nodes, a small distributed computer can be implemented which uses one node fo sending instructions, mimicking input and the instruction..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects, Projects, RTOS – OS Projects
408.  BOXZ BOXZ is an open source robot platform for interactive entertainment! We connected Arduino,Plexiglass(or cardboard) Origami and your idea tog so we can easily and quickly build a remote robot by ourself! You can assembled it like LEGO! We can use it to playing football..... Listed under: Game – Entertainment Projects, Robotics – Automation Projects
409.  Arduino – Getting my LCD Screen to work I've gotten hold of what I assumed was a compatible 16x2 LCD screen with my Arduino board – it's a Powertip PC1602F and compatible display driver for the Hitachi HD44780 display chip. This is essentially what the Arduino LCD libraries are built around,..... Listed under: LCD Projects
410. Hacked roomba and arduino snowballs into a Eurobot 2013 entry It all started as a weekend project with my kids and soon enough I got sucked into a 4 month project w school ! The idea was to get a small group of kids aged 6 to 9 to participate to a robotics contest..... Listed under: Projects, Robotics – Automation Projects

411.  DIY Driving Simulator using an Arduino If you haven't noticed, as soon as you clicked into this instructable, you are now following me if you weren't already. Favorited the instructable, and you voted for this instructable in all contests it is entered in. Then the buttons all disappeared. It's okay..... Listed under: Projects, Game – Entertainment Projects, How To – DIY – Projects, Projects

412. BIKEDUINO – Stopping Point Predictor for bike riders The project consists in a Arduino that gets the speed of the bike from a dynamo and it controls a light which points always to the point where the bike is gonna stop if it continues going at the same speed. Used Hardware: Arduino mini..... Listed under: Car Projects

413. Version 2.0 Arduino Controlled Car Tracking System based on SMS This system is upgraded version of previous project... You will be able to track your car you build this system, you will call the device then it will send you an sms which includes LAT, LON and Google Map link for just one touch..... Listed under: Projects, Phone Projects, Projects

414. Building a Doodle Bot kit from DAGU Doodle Bot is a very simple beginners robot that can write messages using white board markers, jumbo chalk or crayons. The kit comes with all parts including an Arduino compatible controller and a screwdriver. You will need to supply 4x AAA batteries and a suitable..... Listed under: Robotics – Automation Projects

415. Algorithmic noise machine This project is a part of experiments done while doing an artist in residence at Instructables. You can see the other projects he can use bit-shifting as an alternative way of creating "music". This principle enables you to squeeze as much processing power as..... Listed under: Sound Audio Projects

416. Arduino & Processing – Getting values from SRF05 ultrasound sensor & serial port I've started to delve into Processing and passing values between Processing and Arduino. If you're wondering what Processing is, basically it's an open source programming language for visualising data that can interface with Arduino either by reading values or by setting them. Just remember..... Listed under: Sensor – Transducer – Detector Projects

417. SMS controlled Wireless Irrigation System using an Arduino UPDATE 02/13/11 : Voting has started for the Sparkfun Microcontroller Contest. Please VOTE UPDATE 02/26/11 : I won a second prize!! Huzzah! Thanks for all the votes guys! UPDATE 03/17/11: I would love to win a Laser cutter in the Epilog challenge as..... Listed under: Phone Projects, Projects

418. Tissue Box Guitar – Light Strings using Arduino the idea of anything can be an instrumental music has been always in my mind so I made a wooden tissue box that I installed inside it a guitar of light strings Step 1: Building Box I made this wooden tissue box Step 2: Wiring..... Listed under: Game – Entertainment Projects, LED Projects, Projects, Sound – Audio Projects

419. 123D Scanner – Home made 3D Scanner Hey - have a look at my new project HERE In this project I built a 3D Scanner, that enables generating 3D models of physical objects. The files can later be viewed in 3D software (GLC Player, Sketchup, Rhino, or sites such as <http://3dfile.io>) and..... Listed under: How To Projects

420. Mint Tin Hero using Arduino A friend at work proposed a friendly competition between a few co-workers: to make something cool out of a Trader Joe's green mint tin. Anything – whatever our creative hearts desired. The prize? Nobody cared – we'd figure that part out later. I thought..... Listed under: Game – Entertainment Projects, Projects

421. Track Honeybees With Temperature Data analysis coming soon! My school is kind of strange. We don't have a cafeteria, but we do have a four week course "The Simpsons." We don't have a jungle-gym on the elementary playground, but we do have a half-buried firetruck. We don't have..... Listed under: Temperature Measurement Projects

422. Arduino – (Very) Basic motion tracking with 2 PIR sensors Took me a little while to get started but I've managed to wire 2 PIR infrared sensors with an Arduino to sense motion either on the left or on the right side. The result will trigger an LED to represent each PIR sensor then I..... Listed under: Sensor – Transducer – Detector Projects

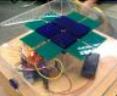

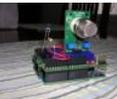

423. Pachube Client using Strings with Arduino This example shows you how to answer a HTTP request using an Ethernet shield. Specifically, it connects to pachube.com, a free datalogging site. The example requires that you set up a pachube.com account, as well as a pachube feed (for more information on how to use pachube..... Listed under: Internet – Ethernet – LAN Projects, Projects

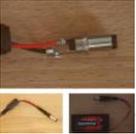

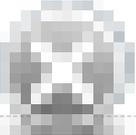

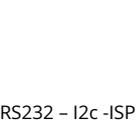

424. Making a Better Mouse Trap There are a lot of things this world needs at the moment. One of them is a better mouse trap. Mice are getting smarter even and if we're not careful we'll end up with Planet of the Mice. Luckily, with the help of a..... Listed under: Home Automation Projects

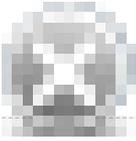

425. Arduino – motion triggered camera So having worked out that I can make a remote for my Nikon D80 to do some timelapse photography. I started thinking of things to trigger the remote, below video shows it working but you'll need sound to hear the shutter going..... Listed under: Sensor – Transducer – Detector Projects, Video Camera – Imaging Projects

426.  Accelerometer Table using Arduino Esplora This example simplifies the task of collecting data from the Esplora's accelerometer and graphing it with your computer. The Esplora sends keypresses to a connected computer about the state of the accelerometer. If you open a spreadsheet application, you can data from the..... Listed under: Development Board – Kits Projects, Metering – Instrument Projects, Projects
-
427.  Arduino Esplora Kart This example demonstrates how to turn your Esplora into a customized computer game pad. It uses the analog joystick and the four switches as inputs to a video game. The Esplora will appear to the computer as a standard keyboard, the computer will see joystick..... Listed under: Development Board – Kits Projects, Game – Entertainment Projects, Projects
-
428.  Arduino text'in Arduino text'in. Key Features: 24 relays controlled by 4 I/O lines! Cell phone text using your Arduino. This project hacks a cell phone to text using normally relays. After investigating cellular modules on the internet I decided it looks not only rather pricy, but..... Listed under: Phone Projects
-
429.  Arduino – IR remote/ intervalometer for Nikon D80 DSLR I'm cheap and skint, yet I want to do timelapse photography with my Nikon D80 DSLR. Unfortunately that req spending some cash on an intervalometer for time lapse photography which will set me back a sizeable chunk of cash. Or I could get a remote..... Listed under: Video Camera – Imaging Projects
-
430.  My hat with full of stars Top hats are cool; just like bow ties. Not only are they stylish, but they give you a lot of room for incorporating techno goodness recently had cause to buy a tuxedo, which necessitated a kilt, and then a top hat. You know how..... Listed under: Game – Entertainment Projects, Home Automation Projects
-
431.  Arduino – Sonic range finder with SRF05 A guide to using the SRF05 Distance Sensor with Arduino in order to calculate distances from objects. In this case I'm also alt the output of an LED with PWM according to how close an object is to the sensor. So the nearer you are..... Listed under: Metering – Instrument Projects
-
432.  Arduino Esplora Temperature Sensor This sketch shows you how to read the Esplora's temperature sensor. You can read the temperature sensor in Farh or Celsius. Circuit Only your Arduino Esplora is needed for this example. Connect the Esplora to your computer with a USB cable and open the Arduino's Listed under: Projects, Temperature Measurement Projects
-
433.  Knock Block using an Arduino board Knock Block: a modern knocking framework Man has long wrestled with Time. Also, with knocking on things and no getting the time of day. We propose a knocking platform through which these fundamental needs are met. This is illustrated with the Knock Block KUI ar Listed under: Home Automation Projects, Projects
-
434.  Arduino Analog Inputs This week is all about analog inputs for the arduino. I'll show you how you can use a voltage divider circuit (see episode 3) and a v resistor to make an analog sensor. [box type="note" color="#202020 " bg="#ffbb00 " font="verdana" fontsize="14" radius="20 " border="#000"..... Liste Projects, PWM Projects
-
435.  Intervalometer for Sony NEX 5n This intervalometer used infrared LED To built intervalometer you need: Arduino Nano (or Arduino-compatibility). I used I Serial LCD Joystick Module IR Led and resistor ~200 Ohm Switch Push Button Plastic enclosure Battery 9V Schematic is very simple Step 2: Connection Se has..... Listed under: Metering – Instrument Projects
-
436.  Arduino – Control a DC motor with TIP120, potentiometer and multiple power supplies A quick circuit showing how to control the speed of a DC motor with a potenti with your Arduino board. Also shows how to use a TIP120 transistor to allow the Arduino control a larger power supply. Transistors are 3 pin devices, which via the.... under: Metering – Instrument Projects, Motor Projects
-
437.  Combo Blocks using an Arduino Project by CU Boulder Thinks That Think students: Michelle Bourgeois, Charles Dietrich, and Ben Link Imagine having a s which the combo is any small object of your choosing. Perhaps it's your favorite coffee mug, or a bat man figurine. This project is based..... Listed unde Automation Projects, Projects, Security – Safety Projects
-
438.  Fart Operated Random Channel TV Remote using an Arduino OK, I know that sounds weird, but bear with me for a moment. My Pops really enjoys two 1 and 2) farting. So one day I was over at <http://hackaday.com/> and read about a guy who used his Arduino to turn a..... Listed under: Home Automation F Projects
-
439.  Haptic Proximity Module (HPM) for Low Vision users The Haptic Proximity Module (HPM) seeks to enable people with low vision, or other vision impairm engage with their direct surroundings through vibration feedback from a range detector, and do so cheaply with readily available components. The aim instructables is to share..... Listed under: Development Board – Kits Projects
-
440.  Control a DC motor with Arduino and L293D chip This is a quick guide with a bit of extra info (pin configurations etc..) that I've learnt along the way on hc use the L293D with the Arduino, showing that we can: A) Use a supplemental power source to power the DC motor B)..... Listed under: Motor Projects

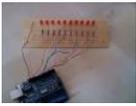

441.  Reaction Timer using an Arduino I am new to Arduino and wanted a project which would teach me different things. This got me involved with sound and of a LCD. This project is based on the Instructable posted by bertus52x11 which you can find here <http://www.instructables.com/id/After-Dinner-Reaction-Tester/> . While..... Listed under: Clock – Timer Projects, Projects
-
442.  Buzz Wire Alarm Clock Does it happen to you to slide your finger across your phone's screen and turn the alarm off ... just because you have automated task and don't even need to open your eyes? Well, let me present to you the alarm clock that WILL..... Listed under: Clock – Timer Projects
-
443.  Making a 9v Battery DC power supply Rather than use the USB to power my Arduino board with a handy trip to the electronics store with some more knowledgeable people than I, I have constructed a 9Volt DC power supply. Taking a 9 volt battery, a 9v battery holder and a 2.1mm..... Listed under: Battery Projects
-
444.  Simple Ipad Controller using an Arduino This instructable will help you understand the iPod serial protocol, and how to send commands to an iPod using Arduino. This instructable is only meant to show the basics of the protocol and is by no means complete. I only had enough hardware space..... Listed under: Projects, Sound – Audio Projects
-
445.  3 LED Crossfade with PWM and Arduino This ones quite simple, just mix/ crossfade 3 separate LEDs using Phase Width Modulation (PWM) and Arduino. need 3 LEDs, I'm using a 5mm Red, Green and Blue so I can make the full light colour spectrum (When all combined they make white..... Listed under: LED Projects, PWM Projects
-
446.  Making a Mayan Tzolkin Calendar OK, I will admit that I am a little obsessed with things Mayan at the moment, which explains why I wanted to make a Mayan Tzolkin calendar. I modeled the general layout and fabrication on the very nice Sleek Word Clock by scottbez1 which you..... Listed under: Clock – Timer Projects
-
447.  Small form factor DIY Arduino on stripboard This board needs FTDI cable to program it. It is not Arduino compatible in the meaning of taking shields (just like every small form factor board isn't). But it has all the same pins (except 3.3V power and Vin*) available as female headers. The input..... Listed under: Development Board – Kits Projects, Home DIY – Projects, Projects
-
448.  Robot Snake Purpose This project was built for the Things that Think undergraduate/graduate class CSCI 4830-7 and CSCI 7000-7 for the University of Colorado at Boulder. Our group consisted of one graduate and two undergraduate students. We worked on the project for 8 weeks, most of the time trying..... Listed under: Game – Entertainment Projects, Robotics – Automation Projects
-
449.  Controlling a Servo with Arduino Very simple basics of building a circuit to control a servo using Arduino and PWM For this you will need: Arduino Board using a Duemilanova ATMEGA328 Arduino Sketch software – I'm using version 0015 Arduino Servo Library found here save it to lib/targets/libraries..... Listed under: Motor Projects
-
450.  Use your android phone sensors on the arduino Hello, this is my very first step-by-step instructable, and today, we're going to learn how the sensors on your android smartphone can communicate with your arduino. In modern smartphones, there are a lot of useful sensors for an ingenious arduino project. I'll use a motorola..... Listed under: Arduino Android, Internet – Ethernet – LAN Projects, Projects
-
451.  Two ways to reset arduino in software If you want to RESET Arduino from the beginning without manually pressing the RESET button, there are a few ways. There are two ways, using minimal wiring / circuitry. Step 1: Using 1 wire connected to the RESET pin 1. electronically, using only 1 wire..... Listed under: Arduino Programmer Projects
-
452.  Siduri – An Arduino Control Smart Coaster Siduri named after the Sumerian god of happiness and merriment, is a smart coaster for your drinks. It recognizes when a drink is near empty and then glows yellow to alert waiters that you will be in need of a refill soon. Designed specifically for..... Listed under: Home Automation Projects
-
453.  How I'm building my bi-copter with Android and Arduino Last year I was fascinated by the "How to build your own Quadrocopter" by Lenz Grimmer and that somehow I should try to do a similar thing. This talk is about the way I'm building a bi-copter using lessons learned for last year's talk..... Listed under: Arduino Android, Internet – Ethernet – LAN Projects, Projects, Robotics – Automation Projects
-
454.  Discreet Data Logger using Arduino There is no better way to hide a covert device than to stick it inside a larger conspicuous device. That said... Essentially this is a guide for making a data logging system for use with the breathalyzer microphone. To accomplish this, an Arduino and a..... Listed under: Interfacing RS232 – I2c -ISP) Project Ideas, Projects

455.  A DVD Player Hack This is a description of an open source/open hardware project of a remotely controlled Arduino (Freeduino) based clock/thermometer utilising power supply and VFD panel from a broken DVD player in a custom made acrylic enclosure. The aim of the project was to demonstrate what you can do with an Arduino. Listed under: Video – Camera – Imaging Projects

456. Texting mat using arduino Lusha and May created a "Text-Mat". This surface can allow the user to write and send messages using one's feet. This text-mat is designed to secret messages during meetings or classes. The design utilizes conductive fabric and thread, as well as a flora-board. The..... Listed under: Home Automation Projects

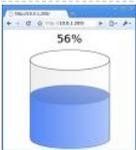

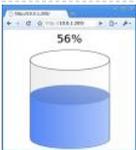

457.  The KITT-duino, DIY Larson Scanner with an Arduino IMPORTANT: CODE IS NOW UPDATED. FIXES INCLUDE ADDING AN INTEGER VALUE TO MANIPULATE AND FIXING A DOUBLE-BLINKING LED. Thanks. It is my understanding that many Larson Scanners can only pulse from side to side. I felt that that needed to be changed, seeing as..... Listed under: CNC Machines Projects, How To – DIY – Projects

458.  Low cost digital microscope with automated slide movement using arduino This is an easy-to-implement product modification that will be extremely useful for clinicians, pathologists, researchers or other microscopy enthusiasts interested in capturing whole slide images or creating virtual slides for later use. This allows one to take multiple images of the slide under high..... Listed under: Medical – Health based Projects

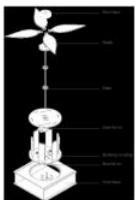

459.  Obstacle avoidance Arduino robot – build your own larryBot So after 5 previous versions that had various flaws, I now have an Arduino robot that actually works and although basic is very cheap – although there are probably a few more flaws so please point them out to me but this is a good..... Listed under: Robotics – Automation

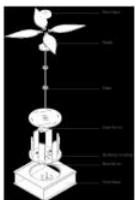

460.  Water Tank Depth Sensor using Arduino Water is a precious resource in many parts of the world, and many people rely on water tanks to supplement their water supply by storing collected rainwater or water pumped from a well or bore. But how do you measure how full a tank is?..... Listed under: Sensor – Transducer – Detector Projects

461.  Arduino Dragon Wings Hello World!! I am making this Instructables on how to make arduino controlled dragon wings. XD I planned on wearing these dragon wings to 'The Hobbit Desolation of Smaug' premier but I didn't complete the entire outfit in time, but I will continue working..... Listed under: Game – Entertainment Projects

462.  Augmenting Plant Behavior Through Robotics using Arduino The PhytoBot is a semi-intelligent plant which responds to external stimulus (light intensity and light location) and responds to it as a phototropic plant would. Essentially it is designed as a piece of interactive artwork for operation over a long period of time. The motivation..... Listed under: Projects, Robotics – Automation Projects

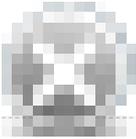

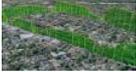

463.  Rabbit Ears on a Cap using Arduino We are students from Singapore Polytechnic. After looking at the famous Nekomimi Arduino Cat Ears, we decided to try to help us familiarise ourselves with the accelerometer and the arduino. Using the materials that we had on hand, we managed to produce..... Listed under: Game – Entertainment Projects, Projects

464. Geoweaver: A Walking 3D Printer Hexapod using arduino Geoweaver is a student designed (team members Jia Wu, Mary Sek, and Jeff Maeshiro) robot created in the Create Architecture Machines advanced options studio at the California College of the Arts (CCA) in San Francisco, California, taught by Jason Kelly Johnson of the Cities Lab..... Listed under: CNC Machines Projects

465.  Programmable auto filter interface for C64 using Arduino Overview A software / hardware combo that allows for control of the analog filter inside a Commodore 64 that is running Cynthcart from a host computer (eg, Macbook, PC). Software • 16-step filter sequencer • Set the speed of the filter sequencer intervals between..... Listed under: Arduino Programmer Projects, Interfacing(USB – RS232 – I2C – ISP) Projects, Projects

466.  Control Access of Arduino YUN with MySQL, PHP5 and Python Hello Friends! Well, as you know, in September the new premiere shield of Arduino, Arduino YUN. This friend has a Linux embedded system with which we can run anything you can think of (at least so far). While there is very little information on..... Listed under: Robot Automation Projects
467.  All in one Remote using Arduino Introduction August, 2007 One of my other hobbies is photography, and, about a year ago, I purchased a new digicam Panasonic FZ30. I joined the Panasonic forum on the dpreview site. One of the posters, a programmer and electronic hobbyist, designed a nifty wireless Listed under: Projects, Radio Projects
468.  Simple Arduino Wing Shield I buy a lot of these stackable Arduino header sets because they are handy for a lot of things. I make some breakout boards v them, I use them to add some clearance between a taller shield and the next shield that I am stacking..... Listed under: Development Board – Kits Projec
469.  Polar Plotter on Arduino and MakerBeams The project A polar plotter is a plotter with a rotating, extendable arm. Its characteristics differ greatly from th a traditional plotter, which in most areas have a superior design. You could say the polar plotter is more portable or something, but mainly I..... Listed u CNC Machines Projects, Projects
470.  Build the Remote Control Bobble-head Bobbler! using arduino Bobble-heads!!! Every sports fan loves em, but they're kind of boring, just sitting frozen or shelf 😞 I thought it might be fun to create an Automatic Bobble-head Bobbler something that can wake that old bobble-head up and get him nodding a finally found..... Listed under: Robotics – Automation Projects
471.  Clock with Meggy Jr RGB using Arduino There is a saying: "If all you have is a hammer, everything looks like a nail". Well, when I see a display, I think of cl will show you here how to easily make a simple digital clock by hacking Meggy Jr RGB..... Listed under: Clock – Timer Projects, Projects
472.  Let's cook: 3D scanner based on Arduino and Processing Ever wonder of cypypaste method, usable in real life, not only in virtual reality? Me too. It is 21 century, and those are nearer than most of all can imagine! This is possible thank to 3d scanners and printers. So let's try to scan something!..... Listed u How To – DIY – Projects
473. Motion Sensing Eye using arduino I have always wanted to make something with my LED dot matrix display, and so when I found a old alarm motion sensor I knew just w make, a Motion Sensing Eye! This instructable will hopefully finish with you having a working dmd, that..... Listed under: LED Projects, Sensor – Transducer – Detector Pro
474.  LED Clock A 24-hour clock with hour, minute, and second indicators. Here's the catch, despite being a digital media (LED's) it is still displaying using an ar method (circles!). I finished making this clock months ago but did not bring it with me to school so I..... Listed under: Clock – Timer Projects, LED Projects
475.  Arduino Webservice Control Lights, Relays, Servos, etc... In this project using only an Arduino with an Ethernet shield. I'll be controlling one LED and a sen you can apply this method to control a DC motors, buzzers, relays, stepper motors, etc.. Overview: When you upload the the code provided in this..... Lis under: Internet – Ethernet – LAN Projects
476.  Vehicle Telemetry Platform using Arduino Ever wondered what goes on under the hood of your car? Wish you could peek inside the engine managemen system and read values from it? Annoyed that your dashboard displays a cryptic "Check Engine" light (yep, the engine is still there) but gives absolutely n Listed under: Car Projects
477.  Weather Station Receiver using Arduino The incredible popularity of home weather stations shows that it's not just farmers who are interested in the we Many people want to be able to track and record weather events within their local environment rather than relying on a state or national weather servic Listed under: Sensor – Transducer – Detector Projects
478.  Arduino Beer Pong Arcade We are going to be making a flashy beer pong table. The table lights up as cups are eliminated and old style arcade sounds a played. This games elevates the subtle art of BEER PONG to a new level. A sporting level. A competitive,..... Listed under: Game – Entertainment Project
479.  Lunch Decider Wheel using arduino The lunch decider wheel is basically a carnival-style wheel that spins every day at 11:45am and selects what is for lui came about on account of my perpetual indecision on this very important culinary matter. In fact, this device does more than just decide..... Listed unde – Entertainment Projects

480.

Arduino: Making a set of traffic lights THIS PROJECT IS STILL A WORK IN PROGRESS FEEDBACK APPRECIATED!!!This tutorial will step you through the process of creating a set of controllable and configurable traffic lights whilst also teaching you the basics of Arduino. Some knowledge is needed and I highly recommend reading and..... Listed under: Car Projects, Projects

481.

3D Printed Webcam Controller The camera controller box is an easy way to rotate a webcam from a PC or remotely through the internet. Step 1: Materials 3D files In this project I used a Teensy 2.0 micro-controller since it was available, but you can use any other MCU like an ATtiny85..... Listed under: Internet - LAN Projects, Video - Camera - Imaging Projects

482.

Wooshing leds - Rotated animation by arduino This project allows you to draw in the air letters, symbols or other shapes - as you like. Controlled by the Arduino, the LEDs blink on and off - creating the illusion of floating text in the air. This combination of simple components with..... Listed under: LED Projects

483.

UnDecima Audio Output from Arduino I already have one project where Arduino outputs audio signal to USB speakers via software 10-bit PWM. I'm not satisfied with the quality of sound generated via PWM. There are just not enough samples in Arduino's engine to run PWM well. For example for..... Listed under: Projects, Sound - Audio Projects

484.

Security / Automation Sensors using Arduino Security system sensors such as motion detectors, reed switches, pressure mats, glass-break detectors, infrared beams, and conductive film can be very handy for all sorts of things including home automation systems, interactive art installations - and sometimes even security systems! Almost all security system sensors..... Listed under: Security - Safety Projects, Sensor - Transducer - Detector Projects

485.

Interval Long Exposure Camera There's a real beauty in long exposure photography. Hours and days and weeks and months and even years can be captured onto a single frame, and that frame will catalog the constants in our fast-paced and forever-changing lives. However, the issue is that..... Listed under: Video - Camera - Imaging Projects

486.

Lego Technic Car with Arduino + XBee Wireless Control I was perusing Instructables one fine winter Saturday, when my 8-year-old son came in and peered over my shoulder and saw this: <http://www.instructables.com/id/RC-Lego-Car/> by sath02. My son is a huge fan of all things Lego, and loves robots and cars, and that's right..... Listed under: Game - Entertainment Projects

487.

Visual Navigator Making it MOBILE using Arduino Obstacle-avoiding vehicle, continue in "3D Laser Range Finder" series (project 1, project 2). The basic idea is the same, measuring distance using red laser pointers, CCD analog camera and Arduino UNO. Modification was made in geometry. Two lasers were used to create a "field"..... Listed under: Game - Entertainment Project Ideas, Projects, Robotics - Automation Projects, Sensor - Transducer - Detector Projects

488.

The Adventure of Electricity: An interactive light diorama Where does electricity come from? Who invented the light bulb? How do cities use this technology today? These are just a few questions that we hope to address in this interactive diorama, The Adventure of Electricity! This project was designed for educational purposes so that..... 489.

8x8x8 LED Cube with Arduino Mega (+Sound +PS controller +Game) This is an instructable which is based on the Cube by Chr, (<http://www.instructables.com/id/Led-Cube-8x8x8/>) by SuperTech-IT, (<http://www.instructables.com/id/CHRS-8X8X8-LED-Cu...>) and by das-labor.org, (http://www.das-labor.org/wiki/Borg3d_Bauanleitung...) but I think it's better and easier. I started this Project without any skills from soldering to program. First of..... Listed under: Game - Entertainment Projects

490.

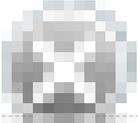

Tears of Rainbow using an Arduino It's time to release new updates for my first (ever) project with Arduino, "Color Light Music". From an artistic perspective BarGraph style (IMHO) is the best one for spectral dynamic representation, and not much could be improved on this side. But this time, it crosses my..... Listed under: Game - Entertainment Projects, Projects

491.

Joystick-controlled Camera using Arduino Hi, First of all, my English is not perfect => I've seen many projects with Arduino that describe how to control a camera with a joystick or use a LCD screen. All of the projects that I have seen are all separate things. So I..... Listed under: Interfacing(USB - RS232 - I2C - ISP) Projects, Video - Camera - Imaging Projects

492.

HandSight: A Glove for the Blind to Feel Shapes and Navigate Obstacles HandSight is a prototype glove to aid the blind. It can sense the lightness or darkness of a surface with tactile feedback from a vibration motor for each individual finger. It can also sense distance from physical objects or obstructions and indicate direction and distance..... Listed under: Medical - Health based Projects

493. Arduino IR Musical Stairs This is a small scaled musical stairs! It was a project that had a deadline; had only two days to build it. So, it is a very small scale project, but still serves its purpose! IR Sensor (receiver) that I used is TSOP38238 from Adafruit,..... Listed under: Home Automation Projects

494. Gyro Camera for Motorcycle using Arduino As seen in MotoGP Race, the rider is seen riding through corners while laying aside his bike to the left and right there is an interesting moment when the motor looks to collapse sideward, the front views remain horizontally. How could that be? Such..... Listed under: Projects, Projects, Video – Camera – Imaging Projects

495. Building a device that clips to your belt Our goal in this step-by-step instructable is to build a device you can clip to your belt and wear throughout the day. The device will log data that, when downloaded to a back-end server system, will provide a report showing the location history of your..... Listed under: Clock – Timer Projects

496. Hidden Wall Outlet Safe (w/Arduino Lock) using arduino Stash your valuables where no one will ever suspect. Wall outlets are perfect for stashing valuables since you have tons of them at home. You must be crazy enough to search every household outlet for a secret stash. Probably, no one would even think of it. Listed under: Home Automation Projects

497. Power Arduino with a cellphone Old cellphones are easy to acquire and they have built in lithium charging circuitry. What a wonderful base for a power source for small mobile things. I hooked up a cellphone to the arduino with the ability to charge the cellphone when you plug the arduino into it..... Listed under: Phone Projects

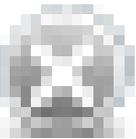

498. DIY Arduino Motor Shield [for only \$8!] (L298N 2x4A) Today, I'm going to show you how to make an Arduino motor shield (driver) at a low cost. It works splendidly, it possesses almost all the characteristics of the original Arduino motor shield. It's almost considered as a clone. The original Arduino motor shield has the..... Listed under: How To – DIY – Projects, Motor Projects

499. Intermediate Arduino: Inputs and Outputs using arduino Continuing from my Intro to Arduino post, this Instructable will go over some slightly more advanced topics with Arduino, specifically relating to controlling and managing many inputs and outputs. The next class covers how to connect the Arduino's input and outputs to MIDI. Parts List:..... Listed under: LED Projects

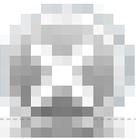

500. EL Wire Hat: Sequenced and Sound Activated with Remote Control Welcome to the Instructable guide of my EL Wire hat with some fun features. The concept is an EL Wire hat with 8 sequenced EL wires controlled by a wired remote. Multiple speed controllable sequence modes are pre-programmed into an Arduino UNO, including a sound..... Listed under: Game – Entertainment Projects, Sound – Audio Projects

501. Earth Globe Rotating With Arduino Or Raspberry Pi Controlled Stepper Motor using arduino This instructable describes how to upgrade your globe to a motorized version. It looks amazingly better on the shelf when it is slowly rotating, and any demonstration with your kids (to explain the day/night cycle and seasons) will gain in interest. No need to..... Listed under: Motor Projects

502. TV Remote Controlled Car Nothing is worse than losing the controller that came with your remote control car. Replace that sucker with an arduino and a remote that always seems to be around, the TV remote! Remove these ads by Signing Up Step 1: Materials The materials for..... Listed under: Car Projects, Game – Entertainment Projects

503. Arduino Solar Cell Tester When I'm building Solar Shrubs and other solar-powered creations, I often scavenge cells from various off-the-shelf devices such as solar garden or security lights. But these cells are rarely labeled as to their voltage, current, and power output. So it's off to my bread-boarding station. I put each cell under..... Listed under: Battery Projects, Metering – Instrument Projects, Projects, Solar energy projects

504. Capteur température choix du type de degrés par infrarouge using arduino ENGLISH VERSION HERE Dans ce programme nous allons voir comment capter la température et afficher sa valeur sur un lecteur LCD en choisissant si on veut l'afficher en °C ou °F grâce à une télécommande infrarouge. Dans ce tuto j'utilise une carte SainSmart (similaire à Arduino)..... Listed under: LCD Projects

505. A World of Possibilities with Java ME + Bluetooth + Arduino "This presentation shows how to easily go from user stories to automated integration tests that themselves read like user stories. You can accomplish this by using custom domain-specific languages. Too often our automated integration tests rely on and intimate technical knowledge of our systems,..... Listed under: Internet – Ethernet – LAN Projects, Projects

506.  Smart Snow Globe (gives snow day alerts) using arduino What does a smart snow globe do? It tells you if tomorrow's going to be a snow day! Is it snowing tonight? Will you have the day off from school or work tomorrow? Put this snow globe next to your bed when you go to..... Listed under: Radio Projects

507.  4x4x4 interactive LED-cube with Arduino To explain my 4x4x4 interactive LED-cube published before, a bit more clear, I will try to make my first step by an instructable. This 4x4x4 cube is interactive by using the top four corner LEDs both as LEDs and as sensors that will react on..... Listed under: LED Project Projects

508.  IR Remote Controlled Color Changing Cloud (Arduino) CLICK HERE FOR THE UPDATED INSTRUCTABLE: <http://www.instructables.com/id/IR-Rainbow-Cloud/> This is a project I created for a Digital Art and Installations class. The class covered basics of several types of programming, and our projects were meant as an interactive cross between art and technology. This was a fun..... Listed under: Game – Entertainment Projects

509.  A Voice Shield for Arduino Board The objective of this project is to build an Arduino voice shield to empower thousands of voice related applications! All mostly thanks to an integrated ISD1790PY chip. This particular voice/TTS feature can be useful to integrate voice messages in alarm systems, to implement generic..... Listed under: Projects, Sound – Audio Projects

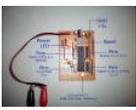

510.  Open Bitcoin ATM using arduino The world's first completely open-source Bitcoin ATM for Education and Experimentation. <http://openbitcoinatm.org> for information. Step 1: Fabricate Box and Faceplate Out of a piece of 12"x12" aluminum sheet metal, cut two rectangles and drill six rivet holes and four holes to attach the bill acceptor..... Listed under: Robotics – Automation Projects

511.  Arduino Wii nunchuck and Wii motion plus with updated code for IDE 1.0.2 and LEDs So, I was trying to hack my Wii nunchuck because I want to control lights with the Wii nunchuck. The first problem that I found was how to connect the control without an adapter, I was planning to make one, but when I listed under: LED Projects

512.  LED Dawn / Sunrise Alarm Clock, Nightlight & Security Light – Arduino Compatible As the nights gradually lengthened in autumn 2011, I discovered the joy of Arduino and thought that it would be a great way to implement something that I have wanted for a long while - a gentle way to wake up on a winter's morning. Listed under: LED Projects, Security – Safety Projects

513. Programming the Arduino I/O pins Overview The Arduino Uno is a microcontroller board based on the ATmega328 (datasheet). It has 14 digital input/output pins (of which 6 can be used as PWM outputs), 6 analog inputs, a 16 MHz ceramic resonator, a USB connection, a power jack, an ICSP header,..... Listed under: Arduino Programmer Projects, Projects

514.  Arduino, Sensors, and MIDI Now that you're up to speed on using Arduino's inputs and outputs, this Instructable will give you everything you need to get going using sensors to trigger MIDI notes from Arduino. This post is the last installment in a series of workshops I led at..... Listed under: Home Automation Projects

515.  Stripboard Arduino In this, my first Instructable I'm going to show you how to make a stripped down Arduino for a fraction of the price, using a Stripboard/Veroboard. Material List: 1x Atmel ATmega168 = \$2.65 1x Stripboard = 72p 1x 7805 Voltage regulator = 26p 2x LEDs =..... Listed under: Development Board – Kits Projects, Projects

516.  Control an Arduino With a Wristwatch (TI eZ430 Chronos) The watch The Texas Instruments eZ430 Chronos is a cool gadget. It has bidirectional radio communication, and a whole bunch of sensors: temperature, pressure, acceleration. In fact, it is a development kit for the MSP 430 (a low-power microcontroller), that TI packaged as a watch..... Listed under: Clock – Timer Projects

517.  SuperScope: Circuit Simulation through Arduino-Processing Interface into the program where you can physically manipulate them. Arduino tests for the presence of the component (a capacitor, inductor, resistor, or waveform of specific frequency) then sends the data to Processing. Imported components can then be plugged into circuit schematics. SuperScope builds upon the..... Listed under: Interfacing(USB – RS232 – I2C – ISP) Projects, Projects

518.  Improved Simple Wing Shield using arduino Not too long ago, I made my own version of the popular Wing Shield out of some spare parts and scraps of PCB around. Instead of the screw terminals that the regular wing shield uses, I used some female headers that..... Listed under: Home Automation Projects

519. A credit card sized Ethernet Arduino compatible controller board I love the Arduino as a simple and accessible controller platform for many varied projects. A few months ago I purchased an Ethernet shield for my Arduino controller to work on some projects with a mate of mine - it was a massive hit -..... Listed under: Development Board – Kits Projects

Projects, Internet – Ethernet – LAN Projects, Projects

520.

Make Your Own GRBL CNC Pendant So you just finished your DIY CNC machine, set up GRBL and even cut your first part. Now what? Well, did you know of GRBL v0.8 there are pinouts some really useful commands such as Cycle Start, Feed Hold and a Soft Reset?..... Listed under: CNC Machines Projects

521.

How to access 5 buttons through 1 Arduino input Using this method, I'll show you how you can access 5 (or even more) inputs through 1 Arduino pin. The buttons will only be read correctly if only one is pushed at any time though. As we go through it I'll explain whatever background info..... Listed under: H DIY – Project Ideas, LED Projects, Projects

522.

LittleBitty Joe using arduino Say Hello to littleBitty Joe! Joe is my school's mascot! Speak to Joe and watch his eyebrows lift, whiskers vibrate, eyes illumina heart spin and hear him ROAR! Not only does his roaring affect work with our project, but it can definitely work with your..... Listed under: Game – Entertainment Projects

523.

Digispark DIY: The smallest USB Arduino Digispark is an ATtiny85 based microcontroller development board come with USB interface. Coding is similar to Arduino, and it uses the familiar Arduino IDE for development. Digispark is copyrighted by Digistump LLC (digistump.com) and the full license is here: <http://digistump.com/wiki/digispark/policy> Specification: Support for the Arduino IDE..... Listed under: Development Board – Kits Projects, How To – DIY Projects, Interfacing(USB – RS232 – I2c -ISP) Projects, Projects

524.

3D-Printed Biologically-Inspired Robotics I have been spending the last few months doing research into biologically inspired robotic structures. While my approach may seem formalistic in nature, these devices were simply a means for ultimately conducting social research. This desire stems from my experience building Simple Bots, and their..... Listed under: Robotics – Automation Projects

525.

Light Clapper using arduino This is a project that I quickly made one night because I wanted to 'clap' to turn off and on the light in my room! I have a smile for myself, so I basically have no other noise around. So, I was able to..... Listed under: Home Automation Projects

526.

RC Car Anti-Crash System Using Arduino Hi guys! So for my electronics class this year we were tasked with creating some kind of electronic gadget in order to demonstrate what we learned over the semester. Being a car-loving type of guy, I decided to get a cheap RC car and see..... Listed under: Car Projects, Projects, Security – Safety Projects

527.

Arduilay Arduilay is an 8 channel AC relay box for use with Arduino, Max/MSP, Processing, etc. I designed this system as an alternative to the USB>DMX 8 channel relay option. While DMX gives you dimming control, the setup is easily 5 times as expensive as this..... Listed under: Development Board – Kits

528.

ARDUINO Laser 3D Tracking or Range Finder The idea of using triangulation for distance measurements is well known since Pythagorean time, when his formula became available for mathematicians. What is new in this design, is lasers power control via "blooming" effect of CMOS camera. Here this "negative effect" was put to..... 530.

2 player Pong using Arduino I started with the Instructable from Kyle Brinckerhoff; <http://www.instructables.com/id/Ardu-pong-the-Arduino-based-pong-console/> Thanks Kyle! and the following at Make magazine <http://blog.makezine.com/archive/2007/08/arduino-pong.html> and I see the original code is attributed to Pete Lamonica Thanks Pete!! I am using the paddles instead of the joystick and I have made..... Listed under: Game – Entertainment Projects

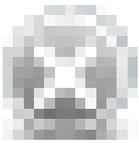

531.

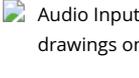

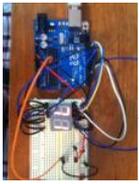

Arduino Step Sequencer I was wondering about making a sequencer, a big 16 step sequencer was what I wanted to make. To its full extension with lots of features including single LEDs for each step, MIDI input and output, etc. Then I realized that I should start from a..... Listed under: Sound – Audio Projects

532.  ASCII Table using Arduino Demonstrates the advanced serial printing functions by generating a table of characters and their ASCII values in decimal, hexadecimal, octal, and binary. For more on ASCII, see asciitable.com Circuit image developed using Fritzing. For more circuit examples, see the Fritzing page None, but the Arduino has to..... Listed under: How To – DIY – Projects, Projects
533.  A Simple and Very Easy Inverted Pendulum Balancing Robot Let's make a simple inverted balancing robot, and operate it. You need only half a day to do you have an arduino and some materials. [a video of a robot you would make] introduction: After a few work with arduino, I have thought..... Listed under: Robotics – Automation Projects
534.  Wii Nunchuck Arduino Spirit Level Thanks to: <http://jeonlab.wordpress.com/> Since I have read an article on todbot blog, I bought a couple of Wii Nunchuk from ebay. I don't remember how much I paid for them, but it was much cheaper than buying the accelerometer breakout boards. With the nunchuck d reading..... Listed under: Development Board – Kits Projects, Projects
535.  Nama Instrument 1.0 A motion sensing soft-circuit interface. The following instructable will guide you through the construction of your own personalizer Instrument. I'd love to hear some feedback. Hope you like it and it serves you somehow! :) Access <http://www.viraseres.com/nama> to download the proj open source files..... Listed under: Game – Entertainment Projects, Home Automation Projects
536.  Wex, the One Eyed Watcher using an Arduino Wex detects your location with ultrasonic sensors then follows you with his one flashing eye. His red "hea can be seen through his mouth. Step 1: Parts needed include: Arduino Two ping ultrasonic sensors Futaba s3103 servo Radio Shack 276-0016 7 color led Shack Listed under: Projects, Robotics – Automation Projects
537.  OpenSquare – Write big with a RC car Hi there, You're going to transform any RC toy car into a big message writer that can be used to transform your city squares into witty messages, political statements or beautiful drawings, and for less than 20\$. The idea is to drop a trail of..... Listed under: Car Projects
538.  Building a Sentry Gun with Laser Trip Wire System and Arduino *NOTE* THIS PROJECT IS DONE BY A GROUP OF STUDENTS FROM SINGAPORE POLYTECH Concept: Trigger gun when laser is blocked by intruding object. Note: Tilting is included for expandability but not used in this project. Skill Level: Basic so and basic metal works Things You..... Listed under: Home Automation Projects, Projects, Security – Safety Projects
539.  I just wanna hold your hand Conducting energy through people to stimulate tangible public interactions <http://ijustwannaholdyourhand.com/> <http://vimeo.com/56350598> What did we do? We put together an Arduino, some wire, a Mac mini and a DLP Projector, then created a pair of hands out aluminum. We additionally 3D printed some wall plates..... Listed under: Game – Entertainment Projects
540. How to Control a Ton of RGB LEDs with Arduino & TLC5940 This video explains how to use the 16 channel PWM controller TLC5940 The CODE: //Texas Instruments TLC 5940 with Arduino //www.kevindarrah.com #include <SPI.h>//Serial Peripheral Interface Library byte ch=0, chbit=0, spibit=0, spibyte=0; variables used by tlc sub routine int SINData;//variable used to shift data to the..... Listed under: LED Projects, Projects, PWM Projects
541.  Forget Me Not- Remote Flower Watering Hi everyone, Lucy Matchett, Nicole Yi Messier, and Joselyn McDonald (Snax_and_Macs) made a remote flower-w device so you can water your loved ones' plants when you water your own. We used Arduinos, a photoresistor, a servo, Arduino and Processing sketches: Spacebrew, and a little elbow..... Listed under: Home Automation Projects
542.  How to build an Arduino synth This is a super simple and easily customizable little synthesizer. This is my first time using the Arduino and also with acry I found very fun to work with though. This is also my first Instructables so hopefully I have explained this well enough..... Listed under: How To – DIY – F Projects
543.  Palm Arduino V3 I design and create this Palm Arduino V3 prototype PCB, as I was tired of recreating Arduino Compatible on perf board every time I prot a new project, especially when I had to spend a lot of time tracing the wiring to see that I..... Listed under: Development Board – Kits Projects
544.  Smart Distance Measuring Tape v2 After posting up the v1 of my project many people requested an more detailed instructable. So i decided to start with one with a little upgrades to my previous instructable. What does this thing do? Well its quite simple it is just an..... Listed under: Metering – Instrument
545. 2 Ways to Papercraft Stopmotion Good morning, please take a seat and watch that tofu wobble. This is not CGI, it is honest work of a papercraftsman. These are, in fact, different papercubes that switch places in each frame. That technique is commonly known as replacement stopmotion. Problem: It only..... Listed under: Game – Enterta Projects

546. Building an Open Archival Scanning Robot Using Python and Arduino Project Gado is an initiative which aims to create an open-source archival scanning which small archives can purchase for \$500 and use to autonomously scan their photographic collections. This talk presents the Gado 2, a prototype... Listed under: Internet - Ethernet - LAN Projects, Projects, Robotics - Automation Projects
-
547.  Bird cage LED daylight simulation system Sometimes you get a chance to combine helping out your family with a nice hobby project.. In this case my father was looking for a lighting system for his bird breeding cages. A daylight simulation system to be exact. He asked me to..... Listed under: Home Automation Projects, LED Projects
548.  Arduino Solar Shield - A DIY solar source for your projects without waiting for PCBs This instructable is a basic version of Bley Joel's ("It's nine o'clock on Saturday, the regular crowd shuffles in") Solar Shield, and it should work for most arduinos. I've tested it with SparkFun's Arduino Pro, and the new Leonardo Myself and the other Solar..... Listed under: How To - DIY - Projects, Projects, Solar energy projects
549.  Audio Input to Arduino The easiest way to connect an audio signal to your arduino, is to build a simple 3 components (2 resistors plus cap) circuitry shown on the drawings on right side. Disadvantage: there is no amplifier, and consequently sensitivity would be low, hardly enough to..... Listed under: Projects, Sound - Audio Projects
550.  Burn Arduino Bootloader on Atmega-328 TQFP and DIP chips on Breadboard Parts required (Hardware) Arduino Uno Board (1) TQFP 32 to DIP 28 Adapter Link Atmega TQFP 32 pin chip (1) Atmega DIP 28 pin chip (1) 10K resistor (1) 16MHz crystal (1) 18pf - 22pf capacitor (2) Tact Switch (1) Jumper wires (few) Listed under: Development Board - Kits Projects, Interfacing(USB - RS232 - I2C -ISP) Projects
551.  How to make a LED 7-segment display with or without Arduino I'm going to show you how to make a 7 segment display with LEDs. Combine with Arduino create countdown timers, simple text, and more. I like to make original projects. I searched the whole of instructables and didn't find one like this. In fact Listed under: LED Projects
552.  Ariadne - a 1st person maze on a 16x2 LCD using Arduino This game is a homage to Ariadne, the maze-generator from Inception 😊 If you haven't seen movie yet - watch this video again after you do (you can also watch it now - it's not a spoiler, it's just funnier for inception-vets). The nice thing about..... Listed under: Game - Entertainment Project Ideas, LCD Projects, Projects
553.  Arduino Control DC Motor via Bluetooth Hi guys, In this project we will control a DC motor with a smartphone via bluetooth. This project is great to learn about: -DC motor -Interfacing Arduino with your smartphone -Bluetooth module -L293D you can visit my website for more electronic projects, interesting news..... Listed under: Internet - Ethernet - LAN Projects, Motor Projects, Phone Projects, Projects
554.  Arduino Powered 3-zone thermostat I was looking at all those swoopy-zoomy internet connected and controllable thermostats. "Self," I told myself, "we make one of those." He didn't seem all that excited about that - I mean, what do we know about hardware, firmware, electronics or HVAC? Well, now's..... Listed under: Temperature Measurement Projects
555.  DIY BioPrinter Bioprinting is printing with biological materials. Think of it as 3D printing, but with squishier ingredients! There's a lot of work being done at research labs and companies like Organovo on print human tissues and human organs, with an eye towards drug testing, and..... Listed under: How To - DIY - Projects
556.  Simple RC car for beginners (Android control over Bluetooth) This is a simple project of Android Bluetooth Car with Bluetooth control. Arduino controller To control the car used Android-device with a built-in accelerometer. Tilt forward - car goes forward, tilt to the left - car turns to the left, tilt back - car..... Listed under: Car Projects, Game - Entertainment Projects, Internet - Ethernet - LAN Projects
557.  Arduino Digital 7-Segment Thermometer This a guide for an Arduino version, but I am working on a mini ATtiny84 version. Once I get that working, I will another Instructable on how to make it. I'm sure you could make this same thermometer with an LM35 also, if that's..... Listed under: Temperature Measurement Projects
558.  Wi-Fi Body Scale with Arduino Board In this post we present the design of a scale that connects to the Internet and automatically sends weight info on a Document. The project is composed of Arduino Uno board Wi-Fi shield additional shield that we used to manage data collection and I/O with..... Listed under: Internet - Ethernet - LAN Projects, Medical - Health based Projects, Projects

559.  Playing Wave file using arduino This is a simple circuit to play wav files using arduino Nano V3.0 ,it consist from 4 buttons ,each one play specific wav file to SD card. Step 1: Parts 1- Arduino Nano V3.0 (I used the chines version called Funduino Nano). 2- SD..... Listed under: Sound – Audio Projects
560.  Paint Pulse: Digital Water Marbling Paint Pulse is a project which seeks to build upon the water marbling crafts of Ebru and Suminagashi with digital behavioral additions. The idea is to design intricate, flowing patterns of paint directly on the surface of water which you can capture on the surface paper. Expert..... Listed under: Other Projects
561.  Bubblesteem Bubble Machine using an Arduino Is it a 3D Spherical Atmosphere Encapsulated Phosphorous Printer? YES! Is it a CNC Anti Gravity transparent Orb Machine! YES! Its The Bubblesteem Bubble Machine! The spherical miracle that kids and cats have been waiting for. It comes complete with robotic detection(when a bubble hits an..... 562.  Cheap and Easy MP3 Shield for Arduino This is a follow up to an earlier Instructable for attaching the guts of a cheap clip MP3 player to an Arduino. <http://www.instructables.com/id/MP3-Interface-for-Arduino-Cheap-and-Easy/> The previous Instructable showed how to use the Arduino to control all of the functions of the MP3 player: volume increase and decrease,..... Listed under: Projects, Sound – Audio Projects
563.  Charlieplexed Arduino 8x8 LED Grid Display Shield made and simulated in 123D Circuits edit: Wow, this won an awesome prize! Very many thanks guys! Charlieplexing (<http://wealnonearth.blogspot.nl/2013/03/design-note-charlieplexing-led-matrices.html>) is a powerful method for driving a large number of LEDs from a relatively small amount of IO pin and without using any extra components. The technique makes use of the fact..... Listed under: LED Projects
564.  How to make a multi-layered acrylic and LED sculpture with variable lighting levels using Arduino Here you can find out how to make your very own sculpture for the exhibition www.laplandscap.co.uk curated by art/design group Lapland. More images can be seen at flickr This exhibition runs from Wednesday November - Friday 12 December 2008 inclusive, and had..... Listed under: LED Projects, Projects
565.  Remote control via GPRS/GSM SMS(Arduino) Remote control, especially when this no ethernet or Wifi in the outdoor, has been a very profound thing in the past. When I was a child, I always imagine that I have an equipment which can control all home appliances. Now, this becomes a reality,with..... Listed under: Home Automation Projects, Phone Projects
566.  Fairly Simple Simon – the evolution of an Arduino game Important notice: Final (i.e. relevant) version is at the last step of this instructable. If you want to play Simon, that is the recommended version. The rest of the steps show how this evolved from a bare-bones game for LED 13 and Serial (i.e..... Listed under: Entertainment Projects, Projects
567.  LilyPad Arduino Totoro Plush with Umbrella Materials: For Totoro: Felt: 1 black, 3 grey, 1 white, 1 beige Needle Black Thread Poly-fil stuffing Cardstock Scissors Pins Pen or chalk DIY Totoro Plush Tutorial HERE Totoro Pattern HERE For Umbrella: 3 or 4 different types of fabric Felt: 1 grey, 1 black..... Listed under: Entertainment Projects, Home Automation Projects
568.  Arduino GSM shield This is a very low cost and simple Arduino GSM and GPRS shield. We use the module SIMCom SIM900 . It's the cheaper module now available in the market. The module is not simple to mount by a hobbyist, so we use the Breakboard TDGGSM_900..... Listed under: Development Board Projects, Phone Projects
569.  Compact 3-in-1 Stripboard DIYduino with Integrated Sensor and L298N Motor Shield I am presenting a compact design of a stripboard Arduino board (DIP) that includes a 2A motor driver and has additionally the functionality of a sensor shield. The 2-channel version cost approximately \$29.43 and is more affordable compared to \$39.00 for a commercially available system..... Listed under: Motor Projects, Sensor – Transducer – Detector Projects
570.  Dogduino:The Automatic Dog Feeder using Arduino Tired of having to find the dog food to feed the dog? Tired of having to get up early so your dog does attack you for his food? Are you just plain lazy? If you answered yes to any of these questions, this instructable is for..... Listed under: Arduino Programmer Projects, Sound – Audio Project Ideas
571.  Easy Programmable EL-Wire Wall Art Project with Cool-Neon using arduino Blank space, what to do?, what to do? Our hackerspace has a blank brick wall by the fireplace. It's been a cold winter so we've had a fair number of fires, but there is just something wrong about a blank brick wall. Well in this..... Listed under: Home Automation Projects

572. The Arduino OctoSynth What is the OctoSynth you may ask? The octosynth is a polyphonic synthesizer that is able to produce eight Pulse Width Modulated tones that together a musical scale. In English terms, it is a 8 key electronic organ that can play more than one..... Listed under: Projects, Sound – Audio Projects

573. Microcontrolled AC switch using arduino Always wanted to take total control of your electric appliances even without being at home? Well, thanks to this instructable you will be able to do that and much more. Some friendly suggestions before starting: Electricity is very dangerous, read and follow the "DA advices..... Listed under: Home Automation Projects

574. Representing audio through vibration with Arduino This project functions to display sound using vibration. You plug your iPod, computer, or TV into it a tactile feedback representing the loudness of the audio. It can help deaf people to experience sound. Stuff you need: Arduino USB Cable Computer run Arduino software..... Listed under: Sound – Audio Projects

575. How to Build a Robot – The BeetleBot Welcome! I have been in robotics since I was a kid and I am very passionate by robotics. I learn BEAM robotics around 1997-98 and started building robots for a science faire project call "Insectroides" in 2001. <http://robomaniac.solarbotics.net> (they change server and the website..... Listed under: Robotics – Automation Projects

576. Psycho Scooter Scramble using an Arduino Psycho Scooter Scramble is a blind-driving electric wheelchair game. It consists of two riders, strapped into electric wheelchairs, and two blindfolded pilots, who remotely control the wheelchairs from the sidelines based on information given over headset by their drive basic mechanic is simple: players..... Listed under: Game – Entertainment Projects, Projects

577. Mug Music: Turn Water Into an Instrument with Arduino and Chuck What if you could turn any conductive surface into an instrument? Like, say...a mug or water? Best of all, it's cheap; you'll only need \$1 worth of extra electrical components (not including the Arduino). For this project, my friend Harvest an combined Disney's Touché..... Listed under: Home Automation Projects

578. Making Robots Using Android and Arduino udar Muthu gives a talk on Making Robots Using Android and Arduino at Droidcon India 2011 by HasGeek. ... under: Arduino Android, Projects, Robotics – Automation Projects

579. PORTABLE FORCED-AIR COOLING UNIT here is growing interest in the commercial production of high-value specialty fruit such as strawberries, blackberries raspberries, and blueberries. Much of the small fruit grown in North Carolina is currently marketed through pick-your-own establishments or roadside stands strong demand for these small fruit items..... Listed under: Home Automation Projects

580. Perfboard Hackduino Arduino-compatible circuit Never again will you have to dismantle a finished project just to reuse an Arduino board! This tutorial walks through the steps involved in fabricating your own Arduino-compatible circuit using just ~\$8 of parts (this includes the ATmega chip!). This is perfect for installing and embedding..... Listed under: Development Board – Kits Projects, Projects

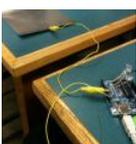

581. A solar tracking automatic motorized window blind retrofit using Arduino Buildings account for 20-40% of total energy use in developed countries. Window shades (or blinds) help to reduce building energy use and improve visual comfort (i.e., reducing glare and increasing daylighting). A recent study showed that occupants are fairly inactive when operating manual rollers..... Listed under: Motor Projects

582. Flashlight tag using an Arduino board You probably know the game of flashlight-tag. You just run around in the dark on a campsite. You hold your flashlight and try to shine it on one of the other kids, without the other kids shining their lights on you. I wanted to make..... Listed under: Game – Entertainment Projects

583. Fish Sensing Overview Once again, my project was motivated by my curiosity to explore interesting and unfamiliar territory. I decided to see if I could make my own capacitive sensor and then use it in a project of some sort. After numerous fiascoes with Arduino and computers, I was..... Listed under: Sensor – Transducer – Detector Projects

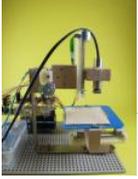

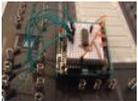

584. StopIt! LED Game (powered by arduino) This project was inspired by this video from YouTube and the Pendulum Challenge Kit from Makershed.com. It's a simple game consisting of five LED lights and one pushbutton switch. The LEDs flash in a sequence and the player must press the button when the middle..... -
588.  Arduino Joystick Breadboard with LCD Output Want to be able to control a couple of servos with a thumb-joystick? But don't know where to start? I don't servos, but I can put you on the right track on how to do stuff when you move the thumbstick around. This instructable..... Listed under: Game – Enterta Projects, LCD Projects, Projects
-
589. LilyPad Arduino Stuffed Fox Toy For a class on technology in libraries, I had to create a project that used the LilyPad Arduino, and I chose to create a stuffed animal that si “Jesus Loves Me” while lights flash with the notes. I made a fox, but the pattern to..... Listed under: Home Automation Projects
-
590.  PCB on a Box using Arduino Board Sorry, but I hate cleaning windows, is one of my unfinished business as usual, but I had to do (at least) every time I w etch a circuit board printed by traditional (and perhaps unorthodox) of stick it in cellophane and let natural light..... Listed under: Development Board – Project Ideas, Projects
-
591.  Arduino Candygrabber I've seen a lot of ways to communicate to arduino over the net, but none of them could handle pushing back the messages from to the client(you) in real time and vice versa. In this instructable you will learn how to connect to your..... Listed under: Game – Entertainment Projects, F
-
592.  Arduino Hardware PWM for stepper motor drives With our new project, JustAddSharks, we are very keen to support the development of open source co software for laser cutters. We are more than happy for people to modify our laser cutters, replace the control system with something suitably open sour then let..... Listed under: Motor Projects
-
593.  How to build your very own Time Fountain using Arduino We have all seen the sweet videos on the tube! You know the magical water fountains that see “freeze” the water droplets in mid air, or even make them go backwards! I've been fascinated by these “magical” thingamabobs for quite some while no a..... Listed under: Clock – Timer Projects, How To – DIY – Projects
-
594.  MMAE Graduate Robotics This page provides general information to students enrolled in the EML 6808 course, Analysis and Control of Robot Manipulat Prerequisites for the course are: EML 4312C, EML 5271, or C.I. Kinematics and dynamics of multibody systems. The topics to be covered include: basic components of..... Listed under: Robotics – Automation Projects
-
595.  Control your motors with L293D and Arduino After long research and trial and error, I have came up to a new walkthrough regarding this nice chip, the L Each project is one project and each one has its own unique power configurations, so you must be aware of the best battery choice..... Listed under: Mo Projects, Projects
-
596.  Barista championship brewing stopwatch • Introduction using arduino Upon the needs of the (2014) World Barista Championship Rules and Regulations, an adequate precise time measuring is needed during the competition. These measurements are usually done by regular stopwatches with all the benefits (ease of use, common availability) and drawbacks (two stopwatches needed..... Listed under: Home Automation Projects
-
597. Arduino browser based remote control (linux) We have kids. I love them to bits but they keep hiding the remote control for the satellite and TV when they pu↑the childre channels on. After this happening on a daily basis for several years, and after my darling wife allowing me to..... Listed under: Home Automation Projects, Projects

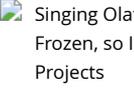

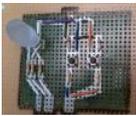

598.  Tiich System – Prototype Final Report Introduction: Our main goal with the Tiich system is to design a teaching aid/tool which would replace the conventional whiteboard in a classroom environment. We want our system to be used as an electronic based white board, having all the written information easily be saved..... Listed under: Sensor - Transducer – Detector Projects
599.  LilyPad Arduino Rocket Ship Cape I am taking a Children and Technology course for my MLS this semester, and one of our assignments is to create a toy using the LilyPad Arduino development board. The LilyPad Arduino is used to create e-textiles that you can program to do various things..... Listed under: Home Automation Projects
600.  Web-controlled Twittering Roomba using an Arduino I wanted to see if I could operate my Roomba remotely and get it to report its status via Twitter when away from home. I also wanted to make the device independent of a computer. This is the solution I came up with..... Listed under: Internet – Ethernet - Project Ideas, Projects, Robotics – Automation Projects
601.  DIY Arduino Nebulophone Synth I originally wanted to purchase a Nebulophone but, my El-Cheapo price range didn't like the tag. I realized that I could purchase my own AtMega 328 by using ArduinoISP Then I found out that if the code was Arduino compatible, why not just use the..... 609.  Artist's Machine Tutorial 1 Part One Materials needed for tutorial Working BBB, RBBB, Arduino, or other Arduino compatible (BBB shown in photos) Sold breadboard 22 gauge solid wire for use with breadboard 3 6mm momentary switches 8 LED's, any color 8 1k resistors, (470 ohm or 220..... Listed under Camera - Imaging Projects
610.  LilyPad Arduino e-Reader Case For a youth and technology class, we were assigned the creation of an Arduino LilyPad project. I liked the idea of connecting LilyPad project to literacy, so I chose to make a Kindle case that would play music [Hedwig's Theme from the Harry Potter..... Listed under: How To - DIY Projects
611.  NESBot: Arduino Powered Robot beating Super Mario Bros for the NES This guide will take you through the steps to build an NES playing robot You will r Arduino Duemilanove (other boards will probably work, but you will have to adjust the steps for your device) Working NES Console Super Mario Bros. (N must..... Listed under: Game - Entertainment Projects, Projects, Robotics - Automation Projects
612.  Arduino V-Twin Flux Capacitor I SHALL CALL HIM " PEE-WEE " Personal Electronics Entertainment With Embedded Education. Basically a project that is fun to learn a whole lot of stuff from it. . This project started out as just a small robot so I could learn more about..... Listed under: Robotics - Automation Projects
613.  Tweeting Cat Door using an Arduino Note: to see everything on one page, please go to: www.tweetingcatdoor.com After receiving many emails requesting instructions and kits for building the "Tweeting Cat Door ", I decided to make a version that is stand-alone and doesn't need a computer to be run and it works. Listed under: Home Automation Projects, Internet - Ethernet - LAN Projects, Projects
614.  The Photometric Camera and the CCDs The Photometric System The photometric camera for the SDSS consists of two TDI scanning CCD arrays, one, using Tektronix/SiTe 2048 x 2048 CCDs in a 5 by 6 array for five-color photometry, and the other using 24 2048 x 400 chips for astrometry and..... Listed under - Camera - Imaging Projects
615.  Mechanical Led Matrix Display First of all we would like to thank everybody that helped organizing the 2nd edition of Arduino Jam, and especially the Jo3 who supplied us with some quite cool goodies and kept us safe during the weekend. (Video will come soon!) This project is a..... Listed under: LCD Projects
616.  Simple and Impressive Business Card Printer At some point most tinkerers and makers have to take the plunge into the real world - the world of suits and business cards. Without going completely "American Psycho" on your asses: business cards are important. In many ways they are our key to success. Listed under: How To - DIY - Projects
617.  Interactive Logo using an Arduino first of all we would like to thank the organisation and especially the main sponsor, Capgemini, which made all of this possible. This project is a contribution to the first Belgian Arduino Jam (2012). During the Arduino Jam 2012, me and two other colleagues put our heads together..... Listed under: LED Projects, Projects
618.  Vacuum form an Arduino If you have access to a vacuum former, or have constructed a DIY one to use, simply vacuum form a compact case to house your standalone electronics or Arduino project. I made this at techshop! www.techshop.ws Step 1: Bill of materials Material to vacuum form..... Listed under: - DIY - Projects, Projects
619.  Scratch 4 Arduino and Cybot Control (Rover basics) I've had a couple of Cybots as well as the Tom robots for a number of years - every so often they get out and tinkered with. Now is this year's turn. I have decided to try my hand at Arduino control of the..... Listed under: Robotics - Automation Projects
620.  [Arduino] Linefollower with photoresistors I built a linefollower robot that could be used in many different ways, and I summed up my project in some steps. To begin with, all you need is the following parts: Step 1: Robot frame Parts List: -Robot frame -Two wheels -Two DC motors..... Listed under: Robotics - Automation Projects, Sensor - Transducer - Detector Projects
621.  Gas Cap using an Arduino board Since you've gotten into electronics, haven't you wondered if there is a fart sensor out there? I sure did. I discovered that you can use a methane sensor, especially the MQ-4, even at very low concentrations, it reads farts. What if you combined that into..... Listed under: Game - Entertainment Projects, Home Automation Projects, Projects

622. CrEST Let's Set Up Your Arduino and Breadboard! Yep, for real: Let's Set Up Your Arduino and Breadboard! (use the instructions here, or flip to page 12 in your book) Step Dig through your kit and pull out your: Arduino Wooden Base Breadboard and Jumper..... Listed under: Other Projects

635. Twitter Mention Mood Light using Arduino Twitter Mention Mood Light -- a mood light that alerts you when @username is mentioned on Twitter. This is simple intro in how to control your Arduino from Twitter. If you are new to Arduino Twitter / Arduino Processing Twitter / Arduino Python Twitter..... List under: Internet – Ethernet – LAN Projects

636.  Arduino makes 2D Level This is a project for Arduino to make a 2D Level, aimed at beginners. Arduino draws a circle on an LED Matrix that moves around according to readings from a 2D Accelerometer. Objectives: * Learn how to draw a circle using simple Maths * Learn..... Listed under: CNC Machines Pro LED Projects, Projects

637.  CSCE 236 Embedded Systems 1 Instructions This is a group assignment for you to work on during class. You only need to hand in one copy of this, but be sure that the names of all of your group members are on this sheet to receive credit. Complete all of..... Listed under: Other Projects

638.  Arduino Etch-A-Sketch Clock I've seen various Arduino driven Etch-A-Sketch clocks on the web, but none with instructions (is it some kind of secret? Is someone planning on making it rich in the Etch-A-Sketch Clock global market?). I've used Arduino, but never used stepper motors, real time clocks,..... Listed under: Timer Projects

639.  Blinky Fish using an Arduino Assembly instructions for an add-on board for the Arduino. **** FOR INSTRUCTIONS FOR MARCH 2013, KICKSTARTER PROJECT HERE <http://www.instructables.com/id/Blinky-Fish-Kickstarter-Project/> ***** It has some LEDs and a button. It connects to digital pins 9-13 and ground. My hope is that this will be useful to people that want to..... Listed under: Game – Entertainment Projects, LED Projects, Projects

640.  Second degree equation solver with Arduino This instructable is about making sort of a calculator that enables the user by using an analog 12-digit keypad 4 buttons to input the a,b,c variables into an equation and get the solution for it if there is any.(well if you don't know what..... Listed under: Calculator Projects, Projects

641.  Home Alert: Arduino + Cloud Messaging On A Large Display In the age of mobile phones, you would expect that people would be responsive to your call Or... not. Once my wife gets home, the phone stays buried in her hand bag, or its battery is flat. We don't have a land line. Calling..... Listed under: Home Automation Projects, Internet – Ethernet – LAN Projects

642. Simple Arduino Book clock This book clock was inspired by florinc and the impressive selection of clocks like the wise clock3 etc <http://www.instructables.com/member/flo> My girlfriend likes reading books and there is always a pile of them around the house, however to be able to build this for her birthday..... Listed under: Clock – Timer Projects

643.  DNA Melting Part 2: Lock-in Amplifier and Temperature Control In Part 2 of the DNA Melting Lab you will make revisions to allow greater control of your instrument and to reduce the effects of noise. You will add a pulse-width modulation (PWM) heater controller to enable careful control of the heating and cooling rates..... Listed under: Temperature Measurement Projects

644.  Control Any Circuit With a TV Remote (and an Arduino) Most of the buttons on a remote control are never used. So why not use them to control appliances or other electronics around your house. In this project, I am going to show you how to use an Arduino to decode the signal from your..... Listed under: Home Automation Projects, How To – DIY – Projects

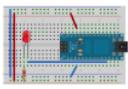

645.  ElectroFried electronic shock game using Arduino The ElectroFried is a game with a shocking fun level. ElectroFried is developed for the Global Game Jam in Antwerp in design center the Winkelhaak. The Team Jekkos/ Cinezaster decided to make a simple game based on colliding electrons. With a nasty side a..... Listed under: Game – Entertainment Projects, Projects

646.  Reginald: a UDP surveillance bot; control via the Internet using Arduino Reginald started from the simple, yet bold idea to control a bot from anywhere in the world with a live video feed. What I wasn't expecting was for Reginald to develop into an involved, feature rich project. With my work and money, I was able to..... Listed under: Internet – Ethernet – LAN Projects, Projects, Robotics – Automation Projects

647.  Hacking a Powerglove using Arduino First of all let's get this out of the way... It's so bad This is going to be showing how to hack the Nintendo Powerglove. I mean tap into the flex sensors and use the buttons and D-pad and add anything you want. In..... Listed under: Game – Entertainment Projects, Pro Sensor – Transducer – Detector Projects

648.  Chur-Robot Electrical Components The electrical components are the five motors and their associated circuits, the buttons, and the thermocouple. The Chur-Robot We are controlling two stepper motors, three servos, a thermocouple, and a set of buttons using an Arduino. Our final circuit diagram looks like this:..... Listed under: Robotics – Automation Projects

649.  Build a Complete AVR System and Play Mastermind using Arduino The game Mastermind has been around a long time, and I remember getting a board with colored pegs when I was a kid. I love this game, as it is solvable simply by pure logic. One player (or a computer/microcontroller) chooses a sequence of colors..... Listed under: Game – Entertainment Projects, Projects

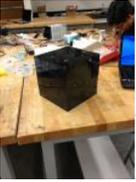

650.  Sensor Arduino Lab 2013 This lab most recently revamped by Edgar Berdahl and Wendy Ju. Chris Carlson, possibly Bill Verplank, and others have likely contributed. For this lab you need your Satellite CCRMA kit, a laptop computer with Ethernet adaptor to program it, and some headphones with a mini... under: Sensor – Transducer – Detector Projects
651.  Universal Remote Laser Tag Blast away your friends for hours on end with this custom laser tag system. Who needs to pay to play in an arena when you make your very own game? Best of all, no special equipment is required, because the "guns" are regular universal..... Listed under: Game – Entertainment Projects
652.  Arduino from Evil Mad Scientist ATmegaxx8 Target Board I have been making my own Arduino's on strip-board but recently bought some of the Evil Mad Scientist ATmega Target Boards. While they weren't designed as an Arduino board they are perfect to use as they have: - places for the crystal and capacitors (XTL..... Listed under: Development Board – Kits Projects, Projects
653.  Computer Controlled Aiming Method Design: The rotational motion produced by the motor is transformed into linear motion through the use of a stand 1/2"-13 threaded rod as a lead screw. To account for angular misalignments in the rod the motor is not attached to it directly, but rather through..... Listed under: CNC Machines Projects
654.  Arduino based Etch A Sketch Laser Cutter In this project I take an Arduino Mini Pro connect it to a custom made Etch A Sketch panel and use it to control Blacknose laser cutter. The result is hours of crazy laser cutting fun, which we will be taking round most of..... Listed under: CNC Machines Projects
655.  Roll-A-Way Rover using an Arduino Age Group: 13 - 18 My experimental rover that I built from a Roll-A-Way alarm clock that was on clearance for \$5. It is controlled via the numeric section of a keyboard when the serial port is connected to a computer or a Wii..... Listed under: Clock – Timer Projects, Project Robotics – Automation Projects
656.  The Pick and Place Machine for Surface Mount Devices ¿What questions need to be resolved? ¿How to recognize the origin of the table? -- The table is the of the machine where you place your board, and is critical for the pick and place operation. I've thinking in a limit switch system. Will..... Listed under: OT Projects
657.  Beginner Arduino The Arduino is a pocket-sized computer (also called a "microcontroller") that you can program and use to control circuits. It interacts w outside world through sensors, leds, motors, speakers... even the internet; this makes it a flexible platform for lots of creative projects. Some..... Listed u Development Board – Kits Projects
658.  Design of small scale smart home system DESIGN OF A SMALL SCALE SMART HOME SYSTEM Gabriel Johnson and Chance Kelsoe INTRODUCTION Design smart home system with a LabView/Arduino interface In this project we made use of an Arduino Duemilanove and LabView to design an easy to use gra interface to represent..... Listed under: Home Automation Projects
659.  Arduino WiFi Garage Door Opener Ever come home in the rain to find the door locked and your keys elsewhere? No? Lucky you then! For those who have such an experience or never wish to, this project will let you open your garage door with nay but a smartphone/tablet/laptop/WiFi-thing..... Listed under Automation Projects, Internet – Ethernet – LAN Projects
660.  Aduino Lo-fi Synth for Arduino Hello again. Today I'd like to show you the Aduino. That's right, the Aduino is a Lo-fi Granular Synth that works on ard uses some analog pins and a digital pin. I had loads of fun making and playing with it so I'd love..... Listed under: Projects, Sound – Audio Projects
661.  Ambient Etch-a-Sketch We built a pseudo Etch-A-Sketch emulator that modifies its appearance based on the user's environment – the temperature and conditions. Instead of only drawing horizontal and vertical lines, we can draw curved lines by changing the slope of the current line to be drawn..... Listed under: Game – Entertainment Projects
662.  The iDial – Critical Making Personal Identity Augmentation Device In this critical making project, we will be making a personal iDial, which will give you, th wearer, the ability to reflect on your personal identity in a private space, and then spatially and temporally dislocate your 'private self' into public conver You might be..... Listed under: Sensor – Transducer – Detector Projects
663.  Using a laser pointer and a matrix LED as a two-dimensional input device Laser Command is a game which I build using a 8x8 matrix LED and an Arduino This game was developed as a "sample" class project in S10-05833 Gadgets, Sensors and Activity Recognition in HCI. The class is taught by Scott Hudson Carnegie Mellon..... Listed under: LED Projects
664.  Arduino Model Rocket Launcher for 3D Printed Rockets When I was a kid, I loved playing with Estes Rockets, so I decided to get back into the hobby but t of my maker skizzls. So here's a really cool Arduino Rocket Launcher launching 3D Printed rockets from my MakerBot Rep2! Enjoy! Fully..... Listed under: Entertainment Projects

665. LED Super Mario Piranha Plant using an Arduino We are going to make an Arduino control LED Piranha Plant :) Step 1: What you'll need Arduino Uno R3 9 LEDs - Red, Yellow, Orange is best since they need less amperage PIR sensor 9v battery arduino wall plug (you'll be cutting the connection..... Listed under: Game - Entertainment Projects, Projects

666. THE CUBE: A 3D Vibration Jigsaw Puzzle "THE CUBE" is a 3D jigsaw puzzle, with the added feature that a puzzle piece vibrates for approximately a second is placed in the correct place in the puzzle. We accomplished this by building an electrical design such that a circuit delivering power..... Listed under: Game Entertainment Projects

667. DIY handmade Hexapod with arduino (Hexdrake) Hello, I'm David and in this instructable I'll show how I made this hexapod whose name is Hexdrake. Si was 16 I became interested in electronic and later in robotics. After getting some level and programming skills using arduino I decided to build a..... Listed under: How To - DIY - Projects, Robotics - Automation Projects

668. Relay Motor Control Circuit Connect the Arduino outputs with 5 volt power to the relay coils. Use a separate 9 or 12 volt battery for powering the motor. Connect the 9 or 12 volt power to the relay contacts and the motor. Be sure to avoid connecting the 9..... Listed under: Motor Projects

669. NFC Computer Unlocker Quit pulling your hair out over incorrect passwords. Using an Arduino Leonardo and Adafruit's NFC shield, you can unlock your computer with an NFC card. The Arduino reads the NFC card's unique identifier and once it receives the correct one, it uses the Arduino Leonardo's..... Listed under: Arduino Programmer Projects, RFID - NFC projects

670. Arduino Mini-Shields This is a set of simple, small form-factor, mini-shields that I created almost by accident. As I made more and more of them, I realized that they could really useful. What started out as a way to use some spare parts, turned into a..... Listed under: Development Board - Kits Projects

671. Making a program start using a switch Connecting the Switch To connect the switch to the Arduino, you will need the switch, two jumper wires, and a 10 (brown-black-orange) resistor. Once you have all the required parts, you will need to wire the switch to the Arduino using the breadboard. NOTE: The..... Listed under: Arduino Programmer Projects

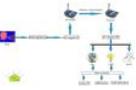

672. ArduinoISP Bootloader/Programmer Combination Shield I started recently to get interested in building Arduino based robots. Since it is a traumatizing p to take any creation apart, I am opting to keep mine alive and kicking. To lower the cost of this strategy it seems obvious to switch from the..... Listed under Arduino Programmer Projects, Projects

673. Arduino Light Following Robot Overview This instructable will use three photoresistors (light dependent resistors) and an Arduino to control the motion robot. Any common robot chassis can be used for the robot. The light sensors will be mounted on the left side, right side and front of..... Listed under: Robotics - Automation Projects

674. A wireless voice-controllable household system Motivation top We design a smart home control system which allow people control their home devices voice command at home. This is a wireless, voice control system. People could control almost all the facilities at home including lights, fans or even back music..... Listed under: Home Automation Projects

675. Arduino desktop application on java in LAN Description: here we have created an java desktop application using neatbeans. this application turn on led arduino. this application also work in your LAN. Step 1: Assigning MAC and IP to Arduino board UPLOAD THIS PROGRAM TO ARDUINO. ALSO CHANGE YOUR MAC AND IP..... Listed under: RTOS - OS Projects

676. Magpi: The Micro Arduino Gaming Platform Interface Here's a retro hand-held gaming console I built with my son. It uses an Arduino micro-controller, a LCD screen, push-buttons, a 3D printed case and home-grown "PC" board. It's really pretty easy to solder and put together. My son & I wrote two games Listed under: Game - Entertainment Projects

677. Arduino Double Dice Jewelry Box w/ Secret Switch This was a fun project. Push the red button, watch the dice "ROLL" then stop on a random roll most of the time. The heart of this game is the ATMEGA328P on a stand alone board. Powered by 4 AA NiMH batteries. Can you..... Listed under: Arduino Programmer Projects, Home Automation Projects, Projects, Security - Safety Projects

678.  D.I.Y Pneumatic Linear Actuators The D.I.Y. movement has many implications for the future of creativity and commerce. The impact of inventing what on rather than purchasing it promises to be empowering, fun, and inspirational. In a long term effort to develop dynamic computer controlled surfaces, I be exploring..... Listed under: How To - DIY - Projects

679.  Flashing LED Top Tube Pad for your bike using Arduino Well it's that time of year again. That's right, the sun is going down early, and it's getting hard to a logging some miles on your bike after dark. You likely have great lights front and rear already, but what about on the sides of..... Listed under: Car Project Game - Entertainment Projects, Home Automation Projects, LED Projects, Projects

680.  Sugarcube MIDI Controller This project is a portable, Arduino-powered, grid-based MIDI controller that boots up into a variety of apps to do lots of things with sound. It has backlit buttons, used as both inputs and outputs to give the controller some visual feedback. 2 potentiometers give..... Listed under: LED Projects

681.  Fun Shway Display using an Arduino Build a nice looking LCD display with buttons for mounting on the wall. Key Features: 2 line by 24 character LCD display controlled with 4 I/O's (74HC164). Back light control of LCD. 6 Buttons connected to 1 analog pin. LM335 and LM334Z temp sensors. Adjustable..... Listed under: LCD Projects, Projects

682.  Build Your Own Sourcemeter This is an explanation and set of building plans for a USB-powered sourcemeter with a personal computer interface. The sourcemeter uses an open-source Arduino microprocessor and the user interface uses the open-source Processing environment. The sourcemeter was designed as a homemade current-voltage (IV) tester to measure the IV..... Listed under: Metering - Instrument Projects

683.  Build a Controllable Coffee Roaster from an Air Popcorn Popper I have a passion for coffee. I also have a passion for electrical engineering. Why not combine them? This Instructable describes how I transformed a hot air popcorn popper into a completely controllable coffee roaster! Follow these instructions to their purpose and hack your West Bend..... Listed under: Home Automation Projects

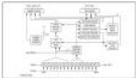

684.  Xtreme Buzzwire-4-2 Arduino Jam project This project is part of the Arduino Jam 2012. First of all we would like to thank the organization and especially their sponsor, Capgemini, which made all of this possible. At the Arduino Jam, during the brainstorm session, we came with the idea to make a classic..... Listed under: Game - Entertainment Projects, Projects

685.  ESM - ExternalSerialMonitor Sometimes I needed an external serial monitor like the Serial Monitor in the Arduino Editor, to see what is going on. So I made one. The first picture shows an example how it could be designed. For the ESM I used an Atmel Atmega328 (based on ATmega328P)..... Listed under: LCD Projects

686.  Arduino USB LOG: Made a correction/modification Step 3 and added a picture step 5. So many Arduino users have RBBBs (Really Bare Bones Board) (Arduino or Anarduinios or Boarduinios) that could use a USB interface to program and power them but don't want to spend \$15-20 for a..... Listed under: Interface - RS232 - I2C - ISP) Projects

687.  Control TV functions using Analog input and Arduino Have you ever wanted to use a good old knob to control your TV volume instead of repeatedly pushing buttons? Or make it controlled by light? Do you want your remote to be replaced by an awesome Arduino and let it do the hard work..... Listed under: Home Automation Projects, Projects, Radio Projects

688.  DC Motor Control Using an H-Bridge using Arduino Overview In this tutorial, you'll learn how to control a DC motor's direction using an H-bridge. To reverse a DC motor, you need to be able to reverse the direction of the current in the motor. The easiest way to do this is using an..... Listed under: Motor Projects

689.  Digital Clock Introduction This design project utilizes an Arduino MEGA2560 with an ATMEGA1280-16AU microcontroller to create a digital clock. The clock can be able to save time when disconnected from power, and it can be powered from a USB connection or from the wall outlet. The clock..... Listed under: Clock Timer Projects

690.  AVR Programming Tutorial This tutorial introduces programming for AVR microcontrollers. It uses the ATmega328p found on Arduino boards, but works straight AVR C and a bare microcontroller. It covers the basic information you need to get started, whether or not you've used Arduino or other microcontrollers previously..... Listed under: Arduino Programmer Projects
-
691.  Sound Reactive LED Strip THERE MAY BE 9 STEPS BUT I PROMISE THIS ONE IS QUICK AND EASY! In this Instructable I will be showing you how to create a reactive LED system. In this clip, I used a single color LED strip, but you can use..... Listed under: LED Projects, Sound – Audio Projects
-
692.  Power your Arduino with a Hand-Cranked Battery If you've ever wanted to power your Arduino or AVR from a battery for development testing (batteries have different power delivery qualities than, say, transformed AC or even a regulated wall wart in DC) testing but were tired of going through batteries (Hey, I admit..... Listed under: Battery Projects, Projects
-
693.  Heat-Seeking Desk Fan (using Arduino) Summary: The following is a step by step guide on how to make a Heat-Seeking Desk Fan from an Arduino microcontroller, a computer fan, a servo, and an infrared temperature sensor. The device scans the room periodically, automatically pointing itself in the direction (ideally towards..... Listed under: Home Automation Projects
-
694.  Proximity sensing mouse wheel scroller using Arduino List of tools: 1. Exacto 2. Arduino Nano / USB chord (Mini-B) 3. Dremel / Drill 4. Paper & Pencil 5. S Sensor (2Y0A21 F) 6. Hot glue gun 7. Solder gun / Solder 8. A small mirror Ok so you might ask, why..... Listed under: Projects, Sensor – Transducer – Det Projects
-
695.  Make a Desktop Tamagotchi One day I was sitting behind my desk at work and I got that weird need to build something, after looking around for a bit I gazed on an LED matrix and that sparked an idea in my head : "I WANNA MAKE..... Listed under: Game – Entertainment Projects, LED Projects
-
696.  Twitter Enabled Text to Speech using an Arduino Let the world know what you're eating for breakfast with an 80's style vocal synthesizer! This project uses an Arduino to send your Twitter stream to a voice generator chip called the Speakjet. The setup that I use here can also be extended to other..... Listed under: Internet – Ethernet – LAN Projects, Projects, Sound – Audio Projects
-
697.  Microcontrollers: The Basics Different kinds of computers are designed for different purposes. The computer at the heart of your laptop is optimized for different purposes than the one in your phone or the one in your mouse. The simplest computers are those that are designed to take in/out..... Listed under: Development Board – Kits Proj
-
698.  Arduino Lilypad Slipper Automatic Foot Massager I made a little automatic slipper foot massager with the Lilypad Arduino and some of the Lilypad Vibe for the actual massager. The sensor it uses is a Lilypad Accelerometer that I'm only using as a basic tilt sensor. Essentially it detects when the..... Listed under: Home Automation Projects, Medical – Health based Projects
-
699.  Holiday Dreidel Light Display for Roof using Arduino This Instructable details how to build a holiday dreidel display for your roof. It uses coat hanger wire, lights, and an Arduino controller to control a fading demo mode and a "spin" mode. In the demo mode, the symbols fade in and out, going..... Listed under: Home Automation Projects, Projects
-
700.  John Doherty's Lab Notebook January 9, 2013 (1 hour): Met as a team after class to discuss preliminary project proposal. January 10, 2013 (2 hours): Met as a team after class to finish writing preliminary project proposal. WEEK 01 SUMMARY Accomplishments: Submitted preliminary project proposal. Weekly Workload Total: 3..... Listed under: Internet – Ethernet – LAN Projects
-
701.  Arduino Robot V2 (Fast) Also Voice Controlled This is my second version of my arduino robot after "Build your first robot". My Second version is slightly more complicated as compared to my first one but offers better features. In this instructable I'm going to show you how to build a fast robot which..... Listed under: Robotics – Automation Projects
-
702.  Breathalyzer Microphone using an Arduino The breathalyzer microphone is a system for the inconspicuous collection of blood-alcohol content level data. In other words, you can measure a person's sobriety with a device, that for all intents and purposes, looks no different than a standard microphone. This adds new..... Listed under: Medical – Health based Projects, Projects, Sound – Audio Projects
-
703.  PowerBox: The Safe AC Power Meter Introduction We designed a device that measures and graphs various aspects of AC power and acts as a computer-controlled remote switch. With the recent push for green energy and environmental friendliness, more and more people are concerned about their personal daily power usage. We developed..... Listed under: Motor Projects

704.  Make an Oscilloscope Using the SainSmart Mega2560 with the TFT LCD shield and the 3.5 "color touch screen This instructable will show you how to build a portable Touch Screen Oscilloscope for less than 40 US\$! The oscilloscope is one of the most powerful electronic instruments that is available to electronics hobbyists, experimenters, and

engineers. It is mainly used to measure time-varying signals..... Listed under: LCD Projects, Medical – Health based Projects

705.

Robot shield for Arduino Board The idea behind this post is to bring together some robot designs and transform them in a new device with new hardware standard software (arduino of course) and so easier to use. These robots have three things in common: a mechanical structure, the hardware..... Listed under: Robotics – Automation Projects

706.

Small DC Motor Pwm Speed Controller The photo depicts a speed controller, wired on a breadboard which allows you to vary the resistance in the potentiometer in order to, in effect, control the speed of the small DC motor. The big picture problem is creating an efficient PWM motor controller that. Listed under: Motor Projects

707. Capacitive Sensing + Open Frameworks + SPACEBREW This is a step-by-step on how to connect Arduino to OpenFrameworks using Spacebrew. More specifically our project focuses on the awesomeness of Capacitive Sensing to alter OF projections to create an awesome tactile experience! What the process will involve: Arduino Processing -> SpaceBrew ->..... Listed under: Sensor – Transducer – Detector Projects

708.

Arduino Personal Soundtrack Hoodie This was inspired by Raj's personal soundtrack shirt in Big Bang Theory S3, E16, "The Excelsior Acquisition". You can buy them online but it's much more fun to make your own and it's possible now that buttons designed for use in electronic clothing are..... Listed under: Automation Projects, Projects, Sound – Audio Projects

709.

Programming an ATtiny w/ Arduino 1.0 This tutorial shows you how to program an ATtiny45, ATtiny85, ATtiny44 or ATtiny84 microcontroller using the Arduino software. These are small, cheap (\$2-3) microcontrollers that are convenient for running simple programs. The ATtiny45 and ATtiny85 have eight legs an almost identical, except that the..... Listed under: Arduino Programmer Projects, Interfacing(USB – RS232 – I2c -ISP) Projects

710.

Charliexplexed LED Clock – Arduino One of my clocks stopped working – and it happened to be a clock my wife likes a lot. Went to the repair shop and they said that he didn't have the spare parts and could not repair this. So – I thought –..... Listed under: Clock – Timer Projects, LED Projects

711.

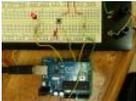

Star Jar Geiger counter triggered LED decoration using Arduino This instructable builds on top of the Geiger counter triggered LED decorations I made last year. This version powers the Geiger counter from the Arduino (itself now powered from a mains adaptor, so I no longer need to keep feeding them batteries) and the LEDs..... Listed under: Calculator Projects, Game – Entertainment Projects, Home Automation Projects, LED Projects, Projects

712.

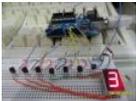

Arduino Cat Detector SD Card Logger I used: an Arduino Uno a Parallax PIR Motion Sensor and a Screenshot SD Card Shield Arduino, shield, sd card, lo shield, storage, logger Check out This instructable on PIRs in case you didn't know what it is: <http://www.instructables.com/id/PIR-Motion-Sensor-Tutorial-1:> Connect your PIR..... Listed under: Memory – Storage Projects, Security – Safety Projects, Sensor – Transducer – Detector Projects

713.

Physical Computing with Arduino Digital pins 1-7 are generally used as input pins and Digital pins 8-13 are used as output pins. Digital pins 9-11 can be used as analog output pins. That is, they can send signal of variable voltage. 5/15/2012 Getting started with Arduino..... Listed under: Calculator Projects

714.

Pi...In A Single Digit using an Arduino Ah yes. It has been a long time since I posted an Instructable...well here goes: It has been a while since I have been motivated to write an 'ible. During this idle time I have been writing, rewriting and editing code as well as designing..... Listed under: LED Projects, Projects

715.

Printer to vinyl cutter hack Vinyl cutters are used in the sign writing industry, and are great for making stickers, signs and graphics. I would like to thank Instructable members silverjimmy and Groover for their fantastic laser cutter instructables, without which I would not have been able to complete this..... Listed under: CNC Machines Projects

716.

Auto reset stuff with Arduino Have a problem with my wireless bridge. It works for a some time then, despite it saying everything is fine, refuses to connect wirelessly. All it needs is to be turned off and on again and it works again (for a while!). I decided that..... Listed under: Internet – Ethernet – LAN Projects

717.

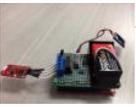

Automatically water your small indoor plant using Arduino + pump Have you ever wanted a little plant to brighten up your desk or home, but you're afraid to water it? Fear no longer! Using an Arduino, a scavenged wall-wart, and a peristaltic pump, you can set up your plant to be watered..... Listed under: Home Automation Projects, Motor Projects

718.

Solar Module This page maintains the necessary documentation (hardware & software) for recreating the Solar Hardware Module ("Solar Module") using an Arduino UNO or TI Launchpad. Prior to creating the solar module, we performed several experiments using a custom built solar panel fixture. For more information on..... Listed under: Solar energy projects

719.

Arduino Vocal Effects Box This Arduino-powered vocal effects box pitch shifts and distorts incoming audio signals to produce a wide variety of vocal effects. This project is my first experiment with real-time digital signal processing using Arduino. It samples an incoming microphone signal at a rate of about 40,000 samples per second and manipulates..... Listed under: Projects, Sound – Audio Projects

720.

Momentary Switch as Digital Sensor In many cases switches are just switches. They directly control the flow of electricity to an appliance, flashlight or motor. An example of this is the switch on the wall in your living room. In many cases nowadays however, switches are digital sensors, meaning... Listed under: Sensor – Transducer – Detector Projects

721.

Simple and reasonably accurate pedometer system Our final project for ECE 4760 provides a simple but effective exercise monitoring system of the user's walking or run. With an increase of the number of health conscious individuals hoping to remain fit, we designed a system that allows the user to keep track..... Listed under: Metering – Instrument Projects

722.

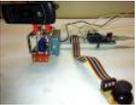

Smart Thermal + Arduino Many times we are faced with a heat containing coffee and don't know if the fluid is at the proper temperature and it is impossible to know just by looking at the bottle ended up losing time with a coffee that is cold and we..... Listed under: Temperature Measurement Projects

723.

Bacon Alarm Clock – Arduino This is a project I came up with that was inspired by my love for bacon! This is an alarm clock that is designed to wake you with the smell of bacon. With the help of an arduino the alarm clock will already have..... Listed under: Clock – Timer Projects, Home Automation Projects

724.

Arduino controlled webcam panner This is an instructable to show how to mount a webcam on a servo in a meccano frame and controlling it via an Arduino board. For a while now I was looking to do something more than blinking LEDs with my Arduino. This idea came..... Listed under: Internet – Ethernet – LAN Projects, Projects, Video – Camera – Imaging Projects

725. Robotic Arm Trifecta (Science Olympiad) In the fall of 2012, we set out to construct a robotic arm for the Science Olympiad competition that would be capable of performing a required set of tasks efficiently and to perfection. This instructable will attempt to guide you through the thought processes used..... Listed under: Robotics – Automation Projects

726.

Arduino FIO Tutorial Overview The Arduino Fio is a microcontroller board based on the ATmega328P (datasheet) runs at 3.3V and 8 MHz. It has 14 digital input/output pins (of which 6 can be used as PWM outputs), 8 analog inputs, an on-board resonator, a reset button, and holes..... Listed under: Battery Projects

727.

The Motivational Moody Workout T-Shirt using an Arduino I call this project "The Motivational Moody Workout T-Shirt" . Basically what I wanted to do was a t-shirt that makes you want to get out in the open and work out. To make that work, I sewed a LilyPad arduino onto a t-shirt and..... Listed under: Game – Entertainment Projects, Home Automation Projects, Projects

728.

Self-Balancing Robot First of all I want to apologize for my English, if you don't understand something, please, ask. I know that a self-balancing robot is not that hard but when i started this project i found a lot of information, but never in the same site, i..... Listed under: Robotics – Automation Projects

729.

Interface and Application Programming My sensors have not been functioning too well with my computer, as every time I try to connect the hello.world boards and run python through my terminal, I either get the error "resource busy", or my computer completely freezes! Therefore, I decided to write a program that can handle this. Listed under: Arduino Programmer Projects

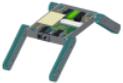

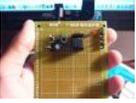

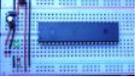

730. Arduino+Stepper Motor Camera Slider This is a trial and error / design and development process which I followed in developing a camera slider for creating time-lapse video clips on my DSLR camera. The idea came from using standard Aluminium extrusions I have available at hardware stores, and create a..... Listed under: Motor Projects, Video

Camera – Imaging Projects

731.  Urban Sensing Networks using Arduino Often government data sets available to us online are taken from major nearby metropolitan areas or infrastructure centers. With an easy to follow introduction to new softwares and technologies the "urban sensor kit" allows anyone to obtain location specific information share that information with..... Listed under: Sensor – Transducer – Detector Projects
732.  FINAL Touch sensor with arduino The tutorials we used. <http://www.instructables.com/id/Touche-for-Arduino-Advanced-touch-sensing/?ALLSTEPS> <http://www.instructables.com/id/Calm-Relaxed-Interaction-Plant-Plus-1/?ALLSTEPS> Download arduino software and the processing software. From their respective websites. Processing.org arduino.cc All of the supplies we used: (we didn't include the water bottle as a sensing object, and used an inductor of a coil) Arduino..... Listed under: Sensor – Transducer – Detector Projects
733.  RFID touch screen Automated Bar – Barduino v2.0 with Facebook Integration! Got an Arduino? Like parties / alcohol? Can't be bothered to make your own quality cocktails? Make a Barduino! Its back, with new features in v2.0: Facebook integration - Facebook registration Page to track and graph drink consumption Touchscreen with gesture support RFID user..... Listed under: Internet – Ethernet – LAN Projects, RFID - NFC projects, Sensor – Transducer – Detector Projects
734.  Stripboard Arduino shield for programming ATtiny45 and ATtiny85 This instructable (entered in the Arduino Challenge contest - you can vote for it above) how to make a stripboard Arduino shield for programming either ATtiny45 or ATtiny85 microcontrollers with an Arduino, as per these tutorials from the Low Tech group at MIT: Arduino..... Listed under: Arduino Programmer Projects, Interfacing(USB – RS232 – I2c -ISP) Projects, Projects
735.  Schematic Entry and PCB layout In this lab you will be using a program to enter a schematic and lay out a printed circuit board (PCB) that will then be manufactured. At this point of the semester you don't know enough to design your own circuit, so I am giving..... Listed under: How To – DIY – Projects
736.  Binguino: An Arduino-based Bingo Number Generator Bingo! My granddaughter enjoys playing Bingo, so I went out and bought her a cheap set at a local discount store. The cards and the markers are fine, but the spinner disk for selecting the numbers is a piece of garbage. It flew apart about..... Listed under: Clock – Timer Projects, Projects
737.  Intuitive Vibrotactile Feedback Educational Feedback Devices The goal of the project is to come up with an affordable yet generic vibrotactile feedback device to be used for educational purposes. A chemistry learning environment is developed to demonstrate a specific application of our device, in which users can manipulate ions and feel..... Listed under: Internet – Ethernet – LAN Projects
738.  Bird Proof Squirrel Feeder & Solar Powered Camera using Arduino The Solar Powered-Bird Proof Squirrel Feeder w/ Camera will allow squirrels to retrieve nuts, and corn kernels without worrying about those pesky birds stealing all their food. While your squirrel enjoys the spoils of your feeder, you'll enjoy your digital photos to entertain and..... Listed under: Home Automation Projects, Video – Camera – Imaging Projects
739.  Arduino mood lighting This instructable will show you how to build a rgb lighting system with an arduino. You can also control it with an ipod/iphone/ipad touchOSC. In my previous instructable I showed how to control one rgb led in this you can control heaps with a single chip..... Listed under: LED Projects Projects
740.  Combination Circuit for Digital and Analog Goals Understand the Analog Signals and use your knowledge to program your Arduino and let it play music known of the Seven-segment display and use your Arduino Board together with the Shift Register to control the number. In the Second Week you will be Listed under: CNC Machines Projects
741.  LilyPad Arduino Sensor Demo Mat This tutorial shows you how to create a sensor demo mat for the LilyPad Arduino. I wanted a place where I could experiment with the different sensors, but also something that I could use to show examples of what can be done without constantly uploading..... Listed under: Sensor – Transducer – Detector Projects
742.  Build Your Own BARBOT using Arduino Ever wanted a robotic liquor server? I purchased a Lynxmotion robotic arm last year and an Arduino (deci) to play around with. I had it serial controlled with a joystick and it was a great way to start in robotics. More recently I wanted to..... Listed under: Robotics – Automation Projects

743.  Highly maneuverable search and rescue robot Finalized Prototype Shown below is the finalized prototype. The purpose of the prototype was to demonstrate the feasibility of a small, highly maneuverable search and rescue robot. As such, the completed prototype was successful. Capabilities include a ground speed of 10 inches per second, battery..... Listed under: Medical – Health based Projects, Robotics – Automation Projects
-
744.  How to make and use the arduino as an Isp for an ATtiny85 In this instructable I will show you how you can make your own Atting programming shield for arduino and then use the arduino as a programmer. Usually If you don't have a shield you can do a breadboard version to program the ATtiny. (Step1)..... Listed under: Arduino Programmer Projects, Projects
-
745.  DIY Super Bright LED Skate Lights You might remember my first set of lights that I put on my dad's skates. Well those weren't bright enough and they were out of work because I didn't know how to make PCBs. In this i'ble I'll cover how to make your own..... Listed under: LED Projects
-
746.  Interactive LED box Project Goal The goal of this project is to create a low resolution display of graphical art that interacts with people who are handling the basic idea is to create such a "magic box" with a LED matrix on one side. It should be..... Listed under: LED Projects
-
747.  Brushless Gimbal with Arduino This is a Spring 2014 Electronics project at Pomona College created by Andreas Biekert and Jonah Grubb. Thanks to Professor Dwight Whitaker, Tony Grigsby and the Pomona Physics Department. Our goal with this project was to create a 2 axis brushless gimbal controlled solely by Arduino. Listed under: Video – Camera – Imaging Projects
-
748.  Biometric Sensing Computer Mouse In the past five weeks, we have considered and built three projects, ranging from: optical sensing, electromyography and galvanic skin response detection. Initially, our project was using an optical sensor and EMG to detect finger movement for applications, such as: playing piano and Morse..... Listed under: Sensor – Transducer – Detector Projects
-
749.  BabyTracker I found a pressure sensor matrix that we could adapt to a pressure sensor patch on the stomach of the women in labor on this webpage (see below). It gives instructions how to build a pressure sensor by using two pieces of cloth and conductive..... Listed under: Medical – Health based Projects
-
750.  Custom Arduino Shield and Sensors Overview: This instructable will construct a series of custom sensor modules and an Arduino shield. Such modules are available from many different sources, but fans of the Instructables website would probably find satisfaction in making their own. Each module will be a different color..... Listed under: Sensor – Transducer – Detector Projects
-
751.  How To Make The Easiest Breadboard Arduino-Compatible Sanguino-Equivalent Okay so the Title is indeed a bit of a mouthful lol ! I've been needing to work around with a desire for MORE Input/Output pins than the Arduino UNO and nowadays the UNO uses an Atmega328 microcontroller, & its limited to only 20..... Listed under: Development Board – Kits Projects
-
752.  Head Mouse – Game controller or disability aid using Arduino My kids wanted to have a head controlled mouse for playing Minecraft - they wanted to move with their heads and have the field of view move. I decided that was a challenge I couldn't resist, so I decided to build a movement controlled mouse using..... Listed under: Game – Entertainment Projects, Medical – Health based Projects
-
753.  Build Your Own Arduino Web server The Arduino Ethernet Shield is a sweet toy!!! Everybody, from the beginner who got their Arduino yesterday and has never slept since, to the hard core pro who learned C as a second language, can learn how to use the Ethernet Shield and have lots of..... Listed under: Arduino Programmer Projects
-
754.  Connect 4 Binary Clock using an Arduino Welcome ladies and gents! As an entrepreneur, I'm always looking for great projects to share. Myself and two of my classmates recently put together a project for our Master's of Engineering program in Technical Entrepreneurship, and we're thrilled to share our vision with you. Remember that..... Listed under: Clock – Timer Projects, Projects
-
755.  Speech-controlled Game Boy Advance using arduino This is a project I worked on for my electronics class at Pomona College. Thanks to Professor Dwight Whitaker and Tony Grigsby for their help and guidance throughout this project, and credit to Jonathan Wong for the idea for this project! Also, here's a link to the project page..... Listed under: Game – Entertainment Projects
-
756.  Sign Language Translator using Arduino First of all, this project is not finished. We're still trying to improve and fix some problems. Right now, we're only able to translate letters from "A" to "E". The program still has problems while identifying those letters, the values for each of them match..... Listed under: Open Source Projects, Projects

757.  AC Dimmer Circuit: 46 Green wire is zero_cross signal, goes to Arduino digital pin 2 in. Yellow wire is light dimming signal, comes from Arduino digital pin 11. The LED board should dim or fade along with the AC light source. Fading will not work until AC power..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects
758.  Extra inputs for Arduino with a keyboard The Arduino is perhaps the coolest thing on earth. There are many types, the Uno, the Mega, the Pro, the Pro M etc. But one thing that often can be a problem is that you only have a limited number of inputs and outputs..... Listed under: Game – Entertainment Projects Interfacing(USB – RS232 – I2c -ISP) Projects
759.  Motion Sensing Digital Camera & Alarm using Arduino Welcome to my instructable on how to make an Arduino-controlled motion sensing camera and a The motivation behind this project, which I worked on in my electronics class at Pomona College, was the need to keep away varmints (particularly racco that were digging up my..... Listed under: Sensor – Transducer – Detector Projects, Video – Camera – Imaging Projects
760. Easy Electronics Organization using Arduino Like many other electronic enthusiasts I need to have a constant supply of materials in order for us to keep building, hacking playing around with electronics. However as probably any of us have come to realize we need a lot of space and..... Listed under: Home Automation Projects
761.  A Planar 2-DOF Haptic Device for Exploring Gravitational Fields For our project, we built a planar, 2 degree-of-freedom haptic device for educational use. design is based on a 5-bar mechanism. We wanted to build a device that would have the versatility to teach various concepts, but would still be relatively affordable (as the..... Listed under: Sensor – Transducer – Detector Projects
762.  Make a Musical Bench using Arduino The Musical Bench is an exhibit which makes music when people touch, kiss, or hold hands. It uses a micro-control detect changes in resistance, via the copper armrests, and plays high or low notes depending on how much current flows through you and a..... Listed u Sound – Audio Projects
763.  Portable Haptics System Hardware Mobile Phone There is a wide selection of mobile phones on the market. For our development, we chose Nokia 6210 Navigator due to its ability to run Java, accompanied by Bluetooth communication, and its small form factor. The phone mainly acts as a remote control. Listed under: Sensor – Transducer – Detector Projects
764.  Robo-Mobile – A Homemade Bluetooth Robot using arduino Background This robot is one I built to learn. Before this project I did get my feet wet with a small scale Arduino projects like an ultrasonic robot, (that would move backwards until it was a certain distance away from the wall,) and I..... Listed und Robotics – Automation Projects
765.  Knockdown Warning Indicator (Redux) This week I continued developing a device that warns of the potential of a knockdown – the process by which an c canvassed sailing ship is lain over on her beam-ends during a squall. The potential for sinking at this point is high, especially if there..... Listed under: Se Safety Projects, Sensor – Transducer – Detector Projects
766.  Smartphone controlled Arduino tank using Annikken Andee Hi guys, I am Robin, one of the developers of Annikken Andee. Just a few weeks back we wer invited to be a part of Arduino Day Singapore 2014. On the day of the event, we showcased a missile-firing lego-crushing smartphone controlled Tank bu using..... Listed under: Phone Projects
767.  Bitcoin Price Ticker (almost) from scratch using Arduino as ISP Hello everyone! I decided to create this tutorial on how to make a Bitcoin Price Ticker. Wel only a prototype and I will make a smaller edition with a more pleasant design and some other features at a later time. However, this serves..... Listed u Internet – Ethernet – LAN Projects
768.  Machine Design The assignment for this week is to automate the machine assembled two weeks ago. For this Roxanna milled the Arduino's shield for controlling the steppers, but Alejandro found that we haven't all the components for stuffing, specially the A3982 - stepper motor driver, so as..... Listed How To – DIY – Projects
769.  Tracking Cat Eyes via Kinect using Arduino This instructable was made as part of the CS graduate course "Tangible Interactive Computing" at the Univers Maryland, College Park taught by Professor Jon Froehlich. The course focused on exploring the materiality of interactive computing and, in the words of Professor Hiroshii Ishii,..... Listed under: Game – Entertainment Projects
770.  Simon Game High Level Description: For part 3 of the lab, our group decided to build a “Simon” game. Our game setup uses 3 buttons and 4 LEDs. Each corresponds to one LED and the 4th LED is used to indicate an error. The game starts..... Listed under: Game – Entertainment Projects

771. Musical Exercise: Workout Shirt MP3 Player Powered by Exercise using Arduino People love listening to music while exercising. Music provides the motivation needed for individuals to keep exerting energy and get in shape. So, because people enjoy listening to music while exercising, what if an MP3 player only played an individual's music

they are active?..... Listed under: Game – Entertainment Projects, Sound – Audio Projects

772.

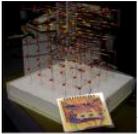

ANDROID BASED ROBOTICS While the field of robotics is continuously expanding at a remarkable rate and better performing robots are created every year, robotics still remains out of reach for many students and researchers. The main reasons for this difficulty are the high complexity of the hardware and...

778.

The Creepy Doll using Arduino Here at Mikamai, we often organise events and hackathons. After the last hackathon, someone left an old doll, and it was creepy... so why not make it even creepier? I decided to put two red LEDs instead of the eyes, and a vibration sensor..... Listed under: Game – Entertainment Projects

779.

Capture the image of a falling object The aim of this project is to create a setup to capture the image of a falling object or any object in motion at a precise time using a DSLR and Arduino microcontroller. It can be done in many different ways, but the method I..... Listed under: Video – Camera – Imaging Projects

780.

Catchin' time using Arduino This tutorial will show you how to build an interactive toy for children. This toy wants to give a boost to children to move and play with friends at home or in a park, instead of watching TV and playing videogames. Catchin' time is a..... Listed under: Game – Entertainment Projects

781.

Sleep n' Tweet Step 1: The Sleep n' Tweet Now I am lucky enough to work at the greatest company in the world as a University of Waterloo, co-op student. They might not even be a company you've heard of yet. They're named Upverter and we are trying..... Listed under: Home Automation Projects, Internet – Ethernet – LAN Projects

782.

Password access with arduino ~~ The complete kit for this tutorial is now for sale at www.razvantech.com Get one! ~~ This instructable will show you how to make a pass-code lock system using the Arduino Mega board. When you type the right code, an LED lights up and the servo..... Listed under: Security – Safety Projects

783.

Make your pet dishes tweet You give your pets everything: Food, water, a home, toys, and love. Why not give them a twitter account? This project allows you to monitor your pets' eating habits and receive alerts when their supplies are low. It's also a cute, fun way to learn..... Listed under: Internet – Ethernet – LAN Projects

784.

Animatronic Green-Winged Macaw Papercraft Hello everybody! This macaw was part of a work of biology at the college of my daughter, who was attempting to educate people not to buy wild animals. This beautiful animal, native to the lush, natural tropical forests of South America, is highly coveted by smugglers. In captivity, unlike in the wild, it is often kept in small cages. Listed under: Game – Entertainment Projects

785.  **AlarmingTweet** This project will add tweeting capabilities to the GE 45142 Choice-Alert Wireless Control Center Alarm system. The alarm system allows you connect up to 16 different sensors across 4 zones and with the addition of the Arduino powered AlarmingTweet you can enable it to..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects

786. **Maze Solving Robot** In this instructable I will be showing you how to build a maze solving robot. This is actually my 3rd attempt at making one. The first was a complete failure. The second was alright at finding the end of the maze, but it could not..... Listed under: Robotics – Automation Projects

787. **USB Mouse Made Out Of A Wii Nunchuck** This instructable will describe how to convert a Nintendo Wii Nunchuck controller into a USB 2-button mouse using a Teensy USB. Teensy USB is a very user-friendly development board that can be programmed in an Arduino environment. The Teensy USB development board and necessary..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects

788. **Reddit Controller, USB Upvote/Downvote button** Not too long ago I saw the “Awesome Button” video on the Make Magazine podcast. In the video Matt Richardson shows how you can take a Teensy development board and turn it into a simple USB keyboard. In his example everytime a button is pressed..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects

789. **Electric Turtle Robot** Be sure to check out my new instructable , the 'little Tank'! Really nice tracked design complete with cut files! update: I've had so much response on this instructable, thanks to all. If you end up making one, please let me know! I'd love to..... Listed under: Robotics – Automation Projects

790. **LED Microcontroller Debug Module** When it comes to debugging a microcontroller circuit, there aren't a lot of simple options. Since a microcontroller circuit might have multiple things going on at the same time, measuring voltages with a DMM isn't an option. Using an computerized In-Circuit-Debugger solution is expensive and..... Listed under: Development Board – Kits Projects, LED Projects

791. **Wise Clock 3 – Arduino-based geeky alarm clock** Wise Clock 3 is an open-source, highly hackable geeky clock that shows a lot more than the time. Its main function is to display user-editable quotations retrieved from an SD card (like those used in photo cameras). In addition, Wise Clock 3 can show the..... Listed under: Clock – Timer Projects

792. **Giant Leaf Planetarium** Have you ever wanted a mini-planetarium for your room? Well now you can! This instructable will help you create a fairly portable planetarium leaf that you can put over a bed, a couch, or anywhere else in your house. All you need is an IKEA..... Listed under: Game – Entertainment Projects

793. **Universal Gripper – Syringe Powered** The “universal gripper” developed by researchers from Cornell University, the University of Chicago, and iRobot inspired me to create my own version. The YouTube video is quite impressive. The gripper can form around very asymmetrical and smooth shapes and still pick up an object. I..... Listed under: Robotics – Automation Projects

794. **Arduino Project Board** The Arduino Project Board is basically a board to transfer your ATMEGA168/328 to when you have completed your project and no longer need to use the Arduino as a development board. Simply transfer the programmed chip from the Arduino board to the Arduino project board..... Listed under: Development Board – Kits Projects

795. **Turn your Arduino Uno into an USB-HID-MIDI device** While building an Arduino Uno based MIDI-Controller for Ableton Live, I came across the HIDUINO project (<http://code.google.com/p/hiduino/>). It allows you to turn your Arduino Uno (or any other device using an AVR-USB chipset like the 8u2) into a driverless HID/MIDI device. It's much..... Listed under: Interfacing(USB – RS232 – I2c -ISP) Projects, Sound – Audio Projects

796. **Rave Rover – Mobile Dance Stage** Rave Rover was designed and built to be a portable dance platform for parties, raves, and any other trouble we can get into! I will go into as much detail as I can explaining the entire build process, and where to find parts and other..... Listed under: Game – Entertainment Projects

797. **How to hack EEG toys with arduino** I had heard a few years back about the ability of hooking up toy EEGs so you can interface them with your computer. I was reminded of this for a project I wanted to do for a class (instructable coming soon ;-)), and I also..... Listed under: Game – Entertainment Projects

798.

Building a Portal Turret with motion controlled audio and lighting In this Instructable I'm going to show you how I went about building my very own life s talking Portal Turret from start to finish. This is a fairly in depth project that will cover every stage of construction and all the techniques I used..... Listed under: Sound – Audio Projects

799.

Pan/Tilt Motion System for Control Education Pan/Tilt Motion System for Control Education Ricardo G. Sanfelice, University of Arizona Project supported Mathworks Website developed by Colin Lasharr, University of Arizona Contents Introduction Instructions for Building the System Installation Instruction Arduino Board Simulink Initial Parameter Identification System Identification for Zenith.....
