Preface to the Original Japanese Edition	ix
Preface to the English Edition	x
1. Introduction	1
1.1 Attractive and Repulsive Forces between Molecules	1
1.2 Chemical Bond between Hydrogen Atoms and Repulsive Force between Helium Atoms	3
1.3 The van der Waals Equation of State	5
1.4 The van der Waals Attractive Force between Macroscopic Bodies	6
2. The Symmetry of Molecules	9
2.1 Structure of Molecules	9
2.2 The Ground State of Atoms	10
2.3 Linear Molecules	12
2.4 Nonlinear Molecules	14
3. Electrostatic Properties of Molecules	17
3.1 Polarizability	17
3.2 Electronegativity	18
3.3 Dipoles, Quadrupoles, and Octopoles	19
3.4 Hydrogen Bond	22
4. The Potential of Dispersion Forces	25
4.1 Electric Polarizability with Dispersion	25
4.2 Time-independent Perturbation	27
4.3 Attractive Potential between Two Molecules	28
4.4 Three-molecular Potential	33
4.5 Symmetric Uniaxial Molecules	36
5. Equation of State for Gases	39
5.1 Virial Coefficients and Cluster Coefficients	39
5.2 The Gamma Function	42
5.3 Zeros of the Cluster Coefficients and the Critical Temperature	44
5.4 The Canonical Distribution	47

5.5	The Grand Canonical Distribution	51
5.6	Cluster Integrals	53
5.7	Spherically Symmetric Square-well Potential	55
6.	The Lennard-Jones Potential	60
6.1	The Second Virial Coefficients	60
6.2	Three-molecule Cluster Integrals	62
6.3	Four-molecule and Five-molecule Cluster Integrals	67
6.4	Quantum Corrections to the Cluster Integrals	69
6.5	Potential between Unlike Rare-gas Atoms	76
7.	Intermolecular Potential with Convex Cores	79
7.1	Core Potential and Fundamental Measures of a Convex Body	79
7.2	Steiner's Formula	81
7.3	Isihara-Hadwiger's Formula	85
7.4	The Second Virial Coefficient for the Core Potential	87
7.5	Three-convex-body Problems	93
7.6	Three-molecule Cluster Integrals for Polyatomic Molecules	97
8.	Potential Depth Depending on Molecular Orientations	100
8.1	The Roles of Electric Multipoles	100
8.2	Core Potential Combined with Quadrupolar Interaction	102
8.3	Intermolecular Potentials for H_2 , N_2 , O_2 , and CO_2	104
9.	Molecular Models Representing Crystal Structures	111
9.1	The Symmetry of Crystal Structures	111
9.2	Representation of $Pz3$ Structures by Means of Quadrupole Spheres	114
9.3	Crystals of Prolate, Uniaxial Quadrupolar Molecules	117
9.4	Crystals of Oblate, Uniaxial Quadrupolar Molecules	124
9.5	Octopolar Molecules	128
9.6	Molecules with Octahedral Symmetry	135
10.	Viscosity and Thermal Conductivity of Gases	139
10.1	Velocity Distribution Function for Molecules in Gases	139
10.2	The Boltzmann Equation	141
10.3	Boltzmann's H Theorem and the Maxwellian Velocity Distribution	143
10.4	Velocity Distribution not Far from the Maxwellian	145
10.5	Expressions for Viscosity	149
10.6	Expressions for Thermal Conductivity	152

10.7 $\Omega^{(l,r)}$ for the Lennard-Jones Potential	157
10.8 Interatomic Potential for Rare Gases Determined from Transport Coefficients	160
11. Diffusion and Thermal Diffusion in Gases	163
11.1 Two-component Gases	163
11.2 The Coefficient of Diffusion	165
11.3 Thermal Diffusion between Isotopes	167
11.4 The Rigid Convex-body Model of Polyatomic Molecules	170
11.5 The Core Potential Applied to Transport Phenomena	172
Bibliography	175
Bibliographical Notes	177
Chapter 4, 5, and 6	177
Chapter 7	177
Chapters 10 and 11	178
References	178
Molecule Index	179
Subject Index	181
