When complete, the strip below the grid can be split into eight pairs of numbers. Adding the numbers in a pair gives one of the 16 numbers in the grid. Multiplying them gives a different number in the grid. For example, a 4 and 6 in the strip could be paired to make 10 (4+6) and 24 (4x6) in the grid. Enter each sum below the corresponding number in the grid. The blanks in the strip must be deduced, bearing in mind the numbers are listed in ascending order.

The next Tetonor puzzle will appear on Tuesday

Winning Move

White to play. This position is from Arslanov-Slade, Titled Tuesday, chess.com 2024.

In this unusual position Black has promoted a pawn and thus has two queens. For the moment this extra material is secure as 1 Rxb1 Qxb1+ leads to mate. Nevertheless the black king is clearly in great danger and, with a carefully structured sequence, White can force the win. Can you see how?

Codeword

Every letter in the crossword-style grid, right, is represented by a number from 1 to 26. Each letter of the alphabet appears in the grid at least once. Use the letters already provided to work out the identity of further letters. Enter letters in the main grid and the smaller reference grid until all 26 letters of the alphabet have been accounted for. Proper nouns are excluded.
