

USER GUIDE

Essential Studio for JavaScript

Version - v24.1.41 | Release Date - December 18, 2023

Browser support	69
Required polyfills	69
Using CDN	69
Node.js	69
Getting started	70
Installation and upgrade	70
Installation	70
Install by using npm CLI.....	70
Install by using package.json.....	70
Download JavaScript – EJ2 Installer	70
Download the Trial Version	71
Installation using Web Installer	73
Overview	74
Installation	74
Uninstallation.....	80
Installation using Offline Installer	85
Installing with UI	85
Installing in silent mode	93
Installing Syncfusion JavaScript – EJ2 Mac Installer.....	94
Steps to resolve the warning message in Catalina OS or later	94
Step-by-Step Installation.....	95
License key registration in samples	99
Linux Installer	99
Download Syncfusion JavaScript Linux Installer	99
Installing Syncfusion JavaScript Linux installer	103
Common Installation Errors	104
Unlocking the license installer using the trial key.....	104
License has expired	104
Unable to find a valid license or trial	105
Unable to install because of another installation	106
Unable to install due to controlled folder access	107
Upgrading Syncfusion JavaScript (Essential JS2).....	109
Upgrading to the latest version	109
Upgrade from trial version to license version.....	109
Licensing.....	109

Appearance	109
Theme in ##Platform_Name## controls.....	109
Reference themes in the application	110
NPM packages.....	110
CDN reference.....	111
Change theme dynamically	113
Common variables	115
Size modes Size Mode for Syncfusion ##Platform_Name## Controls.....	131
Size mode for application	131
Size mode for a control	131
Change size mode for application at runtime.....	132
Change size mode for a control at runtime	133
See also	134
Icons Library.....	134
Referring icons in JavaScript application	134
Steps to use icons library	136
Available icons	138
Overview	139
Customizing theme color from theme studio.....	139
Import previously changed settings into the theme studio	148
Material 3 Theme.....	150
Syncfusion Material 3 Theme	150
What are CSS Variables?	151
Dark mode support	152
ThemeStudio application	155
Common.....	155
Accessibility in Syncfusion ##Platform_Name## controls.....	155
Accessibility overview	155
Accessibility standards.....	155
Accessibility compliance	156
Ensuring accessibility	157
Accessibility support for specific controls.....	157
table	157
Animation in ##Platform_Name##	159
Animation effects.....	159

Animation duration.....	160
Animation delay	161
Enable or disable animation globally	162
Right-To-Left support in Syncfusion JavaScript Controls	162
Enable RTL for all controls.....	162
Enable RTL for an individual control	163
State Persistence in Syncfusion JavaScript controls	164
State Persistence supported controls and properties	167
Template Engine	170
Compiling	170
Available template syntax.....	171
Custom helper.....	171
Template in Syncfusion ##Platform_Name## controls	172
Types of templates.....	172
String template	173
Script template.....	174
Function template.....	176
Getting started with Localization.....	179
Loading translations.....	179
Changing current locale	181
Internationalization.....	182
Loading culture data	182
Changing global culture and currency code.....	182
Manipulating numbers.....	183
Manipulating dateTime.....	187
Drag and drop in ##Platform_Name##.....	194
Draggable	194
Droppable	196
See also	197
Troubleshoot.....	198
Content Security Policy	198
How To	199
Updating Syncfusion npm packages	199

3D Chart	204
Es5 getting started in EJ2 JavaScript 3D Chart control	204
Dependencies.....	204
Setup for local environment	204
Adding Syncfusion resources	204
Adding 3D Chart control	206
Populate 3D Chart with data.....	207
Add 3D Chart title	210
Enable legend.....	211
Add data label	212
Enable tooltip.....	213
Working with data in EJ2 JavaScript 3D Chart control.....	215
Local data	215
Remote data.....	216
Binding data using ODataAdaptor	217
Empty points	218
Dimensions in EJ2 JavaScript 3D Chart control.....	221
Size for container	221
Size for chart	222
Category axis in EJ2 JavaScript 3D Chart control	224
Labels placement	225
Range	226
Indexed category axis.....	228
Numeric axis in EJ2 JavaScript 3D Chart control.....	229
Range	230
Range padding	231
Label format.....	237
Grouping separator.....	239
Custom label format	240
DateTime axis in EJ2 JavaScript 3D Chart control.....	241
DateTime axis.....	241
DateTime category axis.....	242
Label format.....	249
Custom label format	251

Logarithmic axis in EJ2 JavaScript 3D Chart control.....	252
Range	253
Logarithmic base	255
Logarithmic interval	256
Axis labels in EJ2 JavaScript 3D Chart control	257
Smart axis labels.....	257
Edge label placement.....	261
Maximum labels	262
Axis customization in EJ2 JavaScript 3D Chart control	264
Title	264
Title rotation	265
Tick lines customization	266
Grid lines customization	267
Multiple axis.....	269
Inversed axis.....	270
Opposed position	271
Multiple panes in EJ2 JavaScript 3D Chart control	272
Rows.....	272
Columns	276
Chart Types	279
Column Chart in EJ2 JavaScript 3D Chart control	279
Stacked column chart in EJ2 JavaScript 3D Chart control	285
100% Stacked column chart in EJ2 JavaScript 3D Chart control	290
Bar Chart in EJ2 JavaScript 3D Chart control.....	294
Stacked bar chart in EJ2 JavaScript 3D Chart control	300
100% Stacked bar chart in EJ2 JavaScript 3D Chart control.....	307
Data labels in EJ2 JavaScript 3D Chart control.....	311
Position	312
Template	314
Text mapping	315
Format.....	316
Margin.....	317
Customization	319
Customizing specific label	320
Legend in EJ2 JavaScript 3D Chart control	321

Position and alignment	321
Legend customization	327
Series selection through legend.....	334
Collapsing legend item	336
Legend title	337
Arrow page navigation.....	339
Legend item padding	340
Tooltip in EJ2 JavaScript 3D Chart control	342
Default tooltip.....	342
Fixed tooltip	343
Format the tooltip.....	344
Tooltip template	346
Customize the appearance of tooltip	347
Selection in EJ2 JavaScript 3D Chart control.....	348
Point.....	349
Series.....	350
Cluster	351
Selection type.....	352
Selection during initial loading.....	354
Selection through legend.....	355
Print and Export in EJ2 JavaScript 3D Chart control	356
Print.....	356
Export.....	358
Appearance in EJ2 JavaScript 3D Chart control	359
Custom color palette.....	359
Data point customization.....	360
Point level customization.....	361
Chart area customization.....	363
Animation.....	365
Chart rotation.....	366
Title	367
Accessibility in EJ2 JavaScript 3D Chart control	373
WAI-ARIA.....	373
Keyboard navigation	374
Accordion	374

Expand mode in ##Platform_Name## Accordion control	374
Single	374
Multiple	375
See Also	377
Accessibility in ##Platform_Name## Accordion control	377
ARIA attributes	378
Keyboard interaction	378
Ensuring accessibility	379

Style in ##Platform_Name## Accordion control	379
Customizing Accordion	379
Customizing the list items	379
Customizing Accordion's header	379
Customizing Accordion's expand and collapse icons	380
Customizing the hover state of Accordion control	380
Customizing selected item of Accordion control	380
How To	380
Set the nested accordion in ##Platform_Name## Accordion control	380
Load content through post in ##Platform_Name## Accordion control	382
Set custom animation in ##Platform_Name## Accordion control	384
To keep single pane open always in ##Platform_Name## Accordion control	386
Create wizard using accordion in ##Platform_Name## Accordion control	388
Load accordion with data source in ##Platform_Name## Accordion control	393
Load accordion items dynamically in ##Platform_Name## Accordion control	394
Add icon to accordion header in ##Platform_Name## Accordion control	397
Add font awesome in ##Platform_Name## Accordion control	404
Customize expand collapse actions in ##Platform_Name## Accordion control	406
Integrate treeview inside the accordion in ##Platform_Name## Accordion control	408
AccumulationChart	411
Pie dough nut in ##Platform_Name## Accumulation chart control	411
Pie Chart	411
Radius Customization	412
Pie Center	413
Various Radius Pie Chart	414
Doughnut Chart	415

Start and End angles	416
Color & Text Mapping	417
Customization	418
Hide pie or doughnut border	419
Multi-level pie chart.....	420
See Also	424
Pyramid in ##Platform_Name## Accumulation chart control.....	424
Mode	425
Size	426
Gap Between the Segments.....	427
Explode.....	428
Customization	429
See Also	430
Funnel in ##Platform_Name## Accumulation chart control.....	430
Size	431
Neck Size	432
Gap Between the Segments.....	433
Explode.....	434
Smart Data Label.....	436
Customization	437

How To	573
Autofill in <code>##Platform_Name##</code> Auto complete control.....	573
Icon support in <code>##Platform_Name##</code> Auto complete control	575
Custom search in <code>##Platform_Name##</code> Auto complete control.....	576
Filter in <code>##Platform_Name##</code> Auto complete control	577
Achieve virtual scrolling in <code>##Platform_Name##</code> Auto complete control	579
Avatar.....	581
Types in <code>##Platform_Name##</code> Avatar control	581
Avatar size	581
Avatar types	582
How To	584
Avatar customization in <code>##Platform_Name##</code> Avatar control.....	584
Integrate avatar into listview in <code>##Platform_Name##</code> Avatar control	588
Integrate avatar into badge in <code>##Platform_Name##</code> Avatar control.....	589
Badge	592
Types in <code>##Platform_Name##</code> Badge control	592
Badge styles	592
Badge types.....	595
How To	603
Badge customization in <code>##Platform_Name##</code> Badge control.....	603
Integrate badge into listview in <code>##Platform_Name##</code> Badge control	607
Dynamic badge content in <code>##Platform_Name##</code> Badge control	608
Barcode	610
Getting started in <code>##Platform_Name##</code> Barcode control.....	610
Dependencies.....	610
Setup for local development.....	611

Configuring system JS	611
Adding CSS reference.....	612
Adding Barcode Generator control.....	612
Adding QR Generator control	614
Adding Datamatrix Generator control	615
BarcodeGenerator in ##Platform_Name## Barcode control	616
Code39	616
Code39 Extended	617
Code 11	618
Codabar	619
Code 32	620
Code 93	621
Code 93 Extended	622
Code 128	622
Customizing the Barcode color	623
Customizing the Barcode dimension	624
Customizing the text	625
Qrcodegenerator in ##Platform_Name## Barcode control	626
QR Code	626
Customizing the Barcode color	628
Customizing the Barcode dimension	629
Customizing the text	630
Datamatrixgenerator in ##Platform_Name## Barcode control	631
Data Matrix	631
Customizing the Barcode color	632
Customizing the Barcode dimension	633
Customizing the text	634
Export in ##Platform_Name## Barcode control.....	635
Export.....	635
Breadcrumb	636
Data binding in ##Platform_Name## Breadcrumb control	636
Items based on current Url	636
Absolute Url	637
Customize text when generated items using Url.....	638
Icons in ##Platform_Name## Breadcrumb control	639

Icon in Breadcrumb item	639
Icon Position.....	643
Icon Only	644
Show icon only for first item.....	645
Navigation in ##Platform_Name## Breadcrumb control	647
URL	647
Enable navigation for last Breadcrumb item	649
Open URL in new page or tab	651
Templates in ##Platform_Name## Breadcrumb control.....	652
Item Template.....	652
Separator Template	654
Customize Specific Item Template.....	655
Overflow in ##Platform_Name## Breadcrumb control.....	656
Collapsed.....	658
Menu.....	660
Wrap.....	661
Scroll.....	663
Hidden.....	664
None.....	666
Accessibility in ##Platform_Name## Breadcrumb control	666
WAI-ARIA attributes.....	667
Keyboard interaction	667
Ensuring accessibility	667

Browser support

The Syncfusion Essential JS 2 components are supported only in modern browsers. This includes the following versions.

Chrome	Firefox	Opera	Edge	IE	Safari	iOS	Android	Windows Mobile
63+	58+	50+	13+	11+	9+	9+	4.4+	IE 11+

Required polyfills

The following polyfills are required to run Essential JS 2 components in each browser.

Browser	Polyfills
Chrome(latest), Firefox(latest), Opera(latest), Edge, Safari 9+	NONE
IE 11	ES6 Promise

The Syncfusion Essential JS 2 components are supported in IE 11 browser with ES6 Promise polyfill.

Using CDN

To add ES6 Promise polyfill using CDN, include this in your HTML file.

```
`ts
<!-- Automatically provides/replaces Promise if missing or broken. -->
<script src="https://cdn.jsdelivr.net/npm/es6-promise@4/dist/es6-promise.js"></script>
<script src="https://cdn.jsdelivr.net/npm/es6-promise@4/dist/es6-promise.auto.js"></script>
<!-- Minified version of es6-promise-auto below. -->
<script src="https://cdn.jsdelivr.net/npm/es6-promise@4/dist/es6-promise.min.js"></script>
<script src="https://cdn.jsdelivr.net/npm/es6-promise@4/dist/es6-promise.auto.min.js"></script>
`
```

Node.js

ES6 Promise polyfill can also be installed in node.js.

To install:

```
`ts
yarn add es6-promise
(or)
npm install es6-promise
`
```

To Use:

```
`ts  
var Promise = require('es6-promise').Promise;  
`
```

For further details, refer to the link [here](#).

Getting started

Installation and upgrade

<!-- markdownlint-disable MD024 -->

Installation

Install by using npm CLI

Syncfusion JavaScript (Essential JS 2) packages are published in [npm](#). You can install the necessary packages from npm's install command. For example, grid package can be installed using following command.

```
`  
npm install @syncfusion/ej2-grids --save  
`
```

Install by using package.json

1. Add the Syncfusion JavaScript (Essential JS 2) package references in the **dependencies** of **~/package.json** file.

```
`  
{  
  "dependencies": {  
    "@syncfusion/ej2-grids": "*",  
    "@syncfusion/ej2-charts": "*"  
  }  
}  
`
```

The ***** indicates the latest version of npm package. Refer the [documentation](#) for more details about npm versioning.

2. Now, open the command prompt and run the **npm install** command line. This will install all npm dependencies in a single command line.

Refer the [documentation](#) for more details about npm package.json

Download JavaScript – EJ2 Installer

The Syncfusion JavaScript - EJ2 installer can be downloaded from the Syncfusion website. You can either download the licensed installer or try our trial installer depending on your license.

- Trial Installer
- Licensed Installer

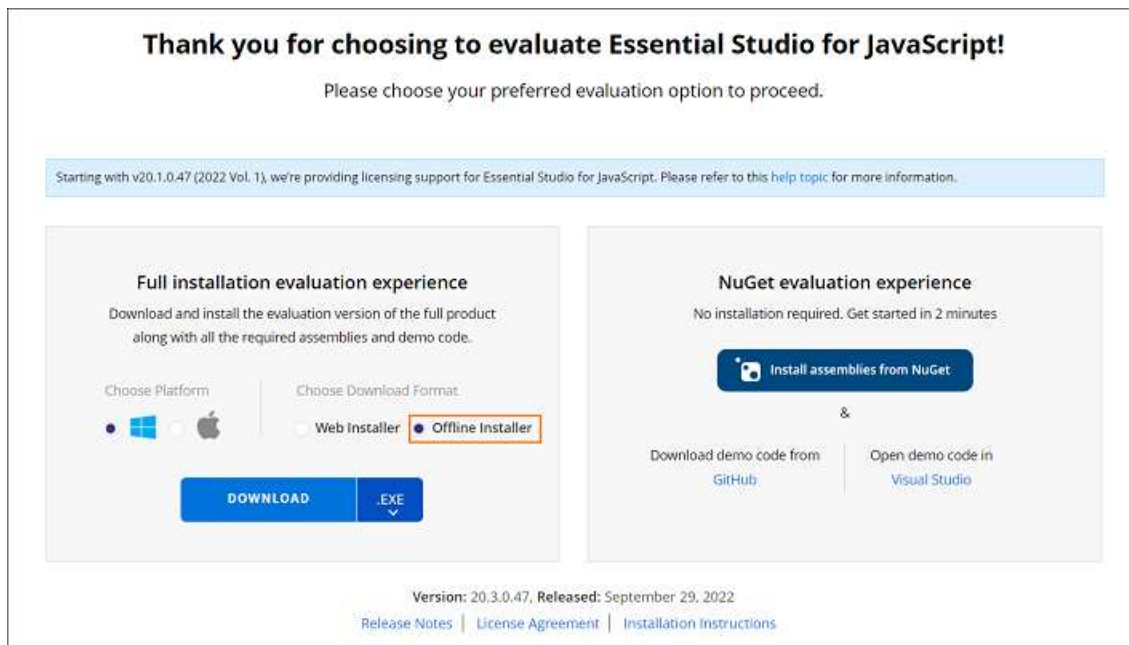

Download the Trial Version

Our 30-day trial can be downloaded in two ways.

- Download Free Trial Setup
- Start Trials if using components through [npm](#)

Download Free Trial Setup

1. You can evaluate our 30-day free trial by visiting the [Download Free Trial](#) page and select the JavaScript platform.
2. After completing the required form or logging in with your registered Syncfusion account, you can download the JavaScript - EJ2 trial installer from the confirmation page. (See the screenshot below.)

3. With a trial license, only the latest version's trial installer can be downloaded.
4. After downloading, the Syncfusion JavaScript - EJ2 trial installer can be unlocked using either the trial unlock key or the Syncfusion registered login credential. More information on generating an unlock key can be found in this article.
5. Before the trial expires, you can download the trial installer at any time from your registered account's Trials & Downloads page (See the screenshot below.)
6. Click the Download (element 1 in the screenshot below) button to get the Syncfusion Essential Studio JavaScript – EJ2 web installer.

Trial Downloads and Unlock Keys

Starting with v20.1.0.47 (2022 Vol. 1), we're providing licensing support for Essential Studio for JavaScript(Essential JS 2). Please refer to this [help topic](#) for more information.

Start Trials if using components through [npm](#)

You should initiate an evaluation if you have already obtained our components through [npm](#)

- You can start your 30-day free trial for JavaScript – EJ2 from the [Start Trial](#) page from your account.

WEB

Blazor
Includes 80+ Blazor components for ASP.NET Core application development.
[Trial in Progress](#)

JavaScript
Includes 80+ JavaScript controls for developing modern web applications. It also includes complete support for Angular, React, and Vue frameworks.
[Start Trial](#)

- To access this page, you must sign up\log in with your Syncfusion account.
- Begin your trial by selecting the JavaScript – EJ2 product.

Note: If you've already used the trial products and they haven't expired, you won't be able to start the trial for the same product again.

- After you've started the trial, go to the [Trials & Downloads](#) page to get the latest version trial installer. You can generate the [unlock](#) key here at any time before the trial period expires. (See the screenshot below.)

Trial Downloads and Unlock Keys

- You can find your current active trial products on the [Trials & Downloads](#) page.

Download the License Version

- Syncfusion licensed products will be available in the [License & Downloads](#) page under your registered Syncfusion account.
- You can view all the licenses (both active and expired) associated with your account.
- Click the Download (element 1 in the screenshot below) button to download the respective product's installer.
- The most recent version of the installer will be downloaded from this page.
- To download older version installers, go to [Downloads Older Versions](#) (element 2 in the screenshot below).
- You can download other platform\add-on installers by going to More Downloads Options (element 3 in the screenshot below).
- For Windows OS, EXE and Zip formats are available for download. They are both Offline Installers.

You can also refer to the [Online installer](#) and [Offline installer](#) links for step-by-step installation guidelines.

Installation using Web Installer

You can refer to the [Download](#) section to learn how to get the JavaScript – EJ2 trial or licensed installer.

Overview

For the Essential Studio JavaScript – EJ2 product, Syncfusion offers a Web Installer. This installer alleviates the burden of downloading a larger installer. You can simply download and run the online installer, which will be smaller in size and will download and install the Essential Studio products you have chosen. You can get the most recent version of Essential Studio Web Installer [here](#).

The frameworks listed below are supported in this installer.

- JavaScript
- Angular
- React
- Vue
- JavaScript (ES5)

Installation

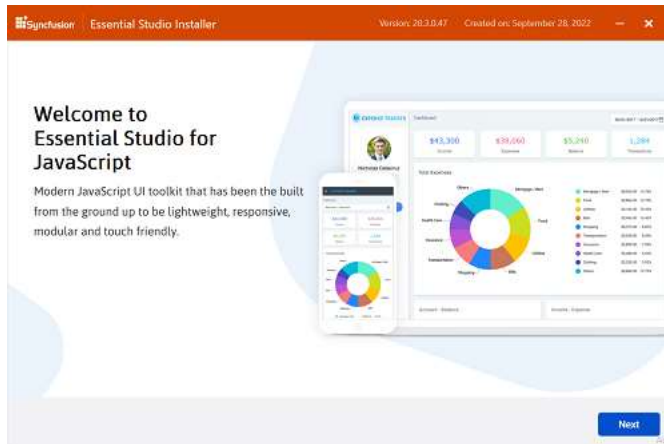

The steps below show how to install Essential Studio JavaScript – EJ2 Web Installer.

1. Open the Syncfusion Essential Studio JavaScript – EJ2 Web Installer file from downloaded location by double-clicking it. The Installer Wizard automatically opens and extracts the package.

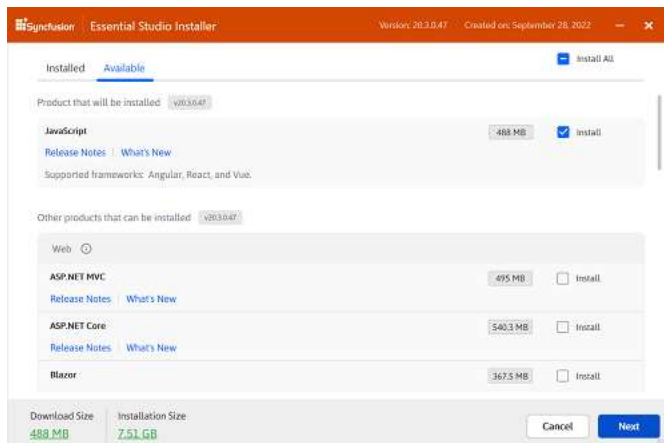

Note: The installer wizard extracts the syncfusionejs2webinstaller_{version}.exe dialog, which displays the package's unzip operation.

2. The Syncfusion JavaScript - EJ2 Web Installer's welcome wizard will be displayed. Click the Next button.

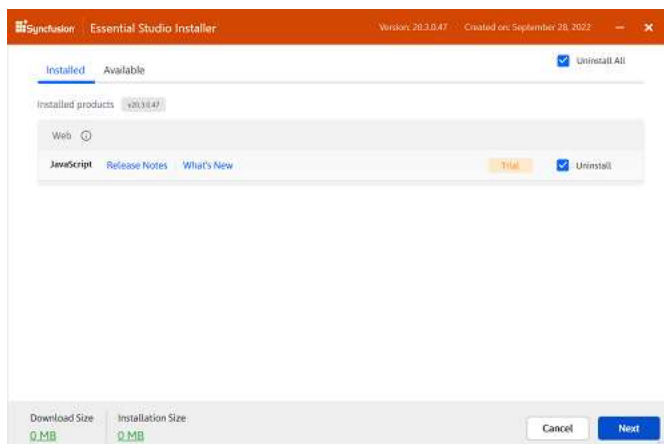

3. The Platform Selection Wizard will appear. From the **Available** tab, select the products to be installed. Select the Install All checkbox to **install all** products.

Available

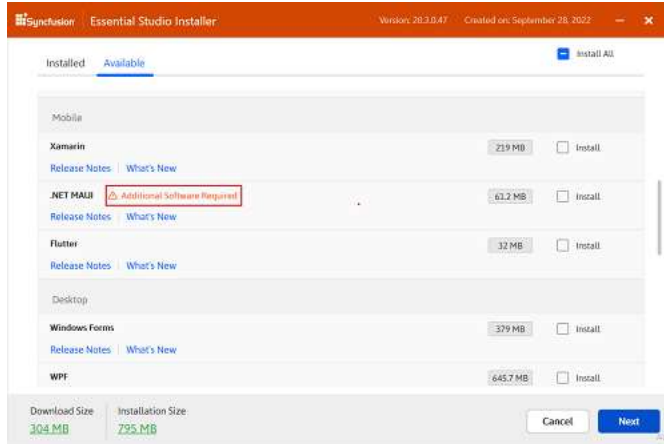

If you have multiple products installed in the same version, they will be listed under the **Installed** tab. You can also select which products to uninstall from the same version. Click the Next button.

Installed

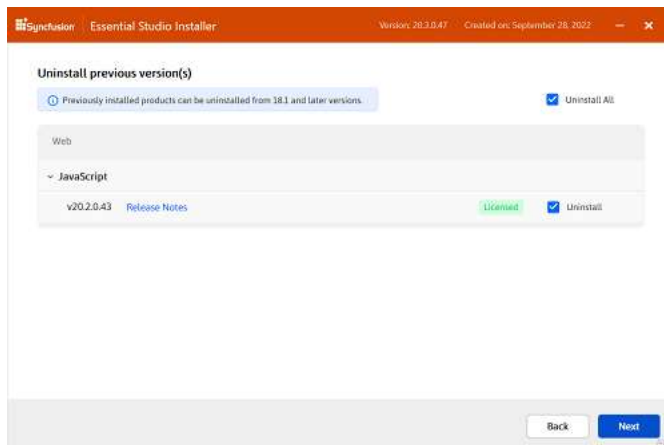

Important: If the required software for the selected product isn't already installed, the **Additional Software Required** alert will appear. You can, however, continue the installation and install the necessary software later.

Required Software

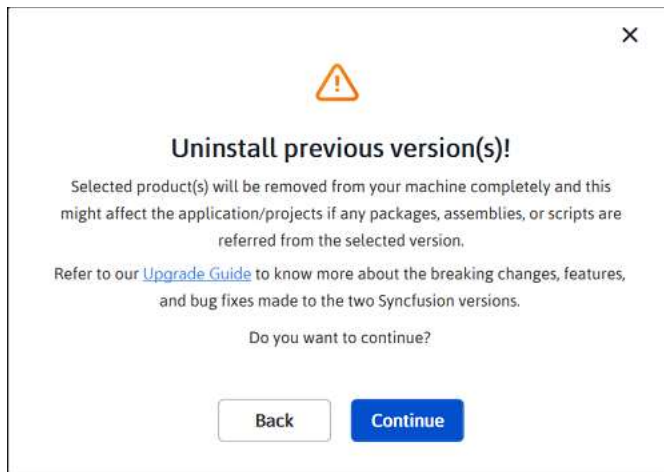

- If previous version(s) for the selected products are installed, the Uninstall previous version wizard will be displayed. You can see the list of previously installed versions for the products you've chosen here. To remove all versions, check the **Uninstall All** checkbox. Click the Next button.

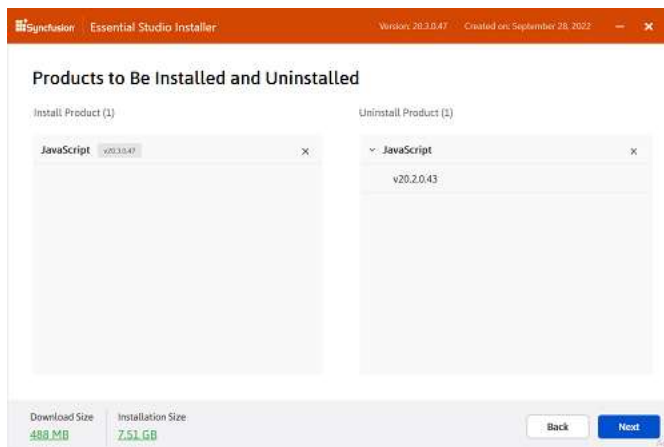

Note: From the 2021 Volume 1 release, Syncfusion has provided option to uninstall the previous versions from 18.1 while installing the new version.

- Pop up screen will be displayed to get the confirmation to uninstall selected previous versions.

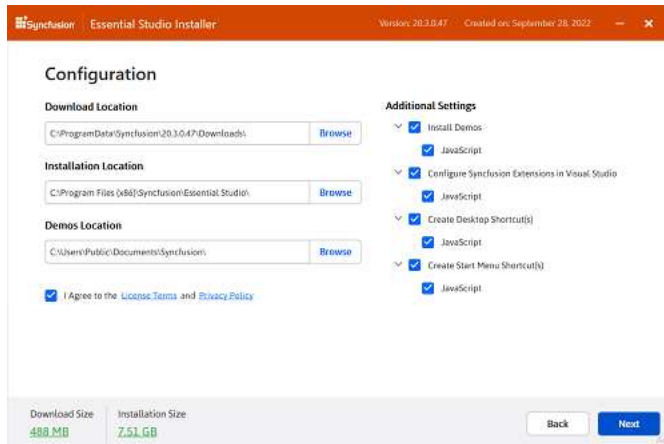

6. The Confirmation Wizard will appear with the list of products to be installed/uninstalled. You can view and modify the list of products that will be installed and uninstalled from this page.

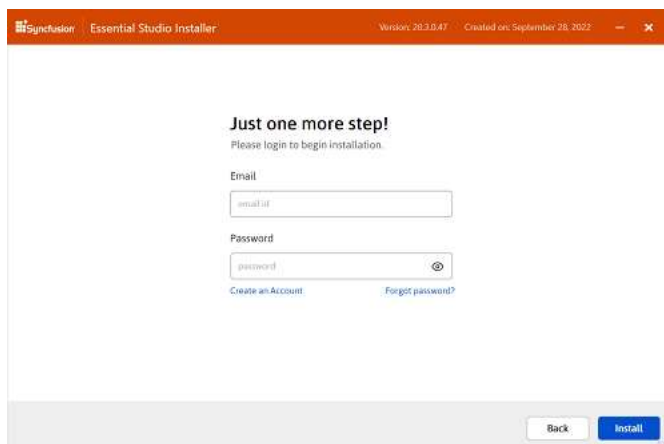

Note: By clicking the **Download Size** and **Installation Size** links, you can determine the approximate size of the download and installation

7. The Configuration Wizard will appear. You can change the Download, Install, and Demos locations from here. You can also change the Additional settings on a product-by-product basis. Click Next to install with the default settings.

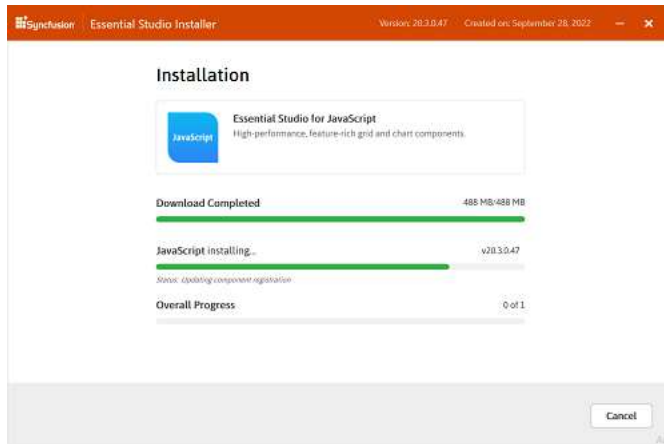

Additional settings

- Select the **Install Demos** check box to install Syncfusion samples, or leave the check box unchecked, if you do not want to install Syncfusion samples
 - Select the **Configure Syncfusion Extensions controls in Visual Studio** checkbox to configure the Syncfusion Extensions in Visual Studio or clear this check box when you do not want to configure the Syncfusion Extensions in Visual Studio.
 - Check the **Create Desktop Shortcut** checkbox to add a desktop shortcut for Syncfusion Control Panel
 - Check the **Create Start Menu Shortcut** checkbox to add a shortcut to the start menu for Syncfusion Control Panel
8. After reading the License Terms and Conditions, check the **I agree to the License Terms and Privacy Policy** check box. Click the Next button.
 9. The login wizard will appear. You must enter your Syncfusion email address and password. If you do not already have a Syncfusion account, you can create one by clicking on **Create an Account**. If you have forgotten your password, click **Forgot Password** to create a new one. Click the Install button.

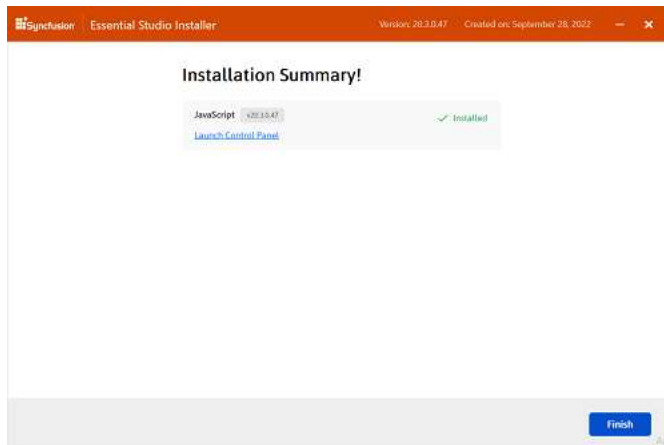

Important: The products you have chosen will be installed based on your Syncfusion License (Trial or Licensed).

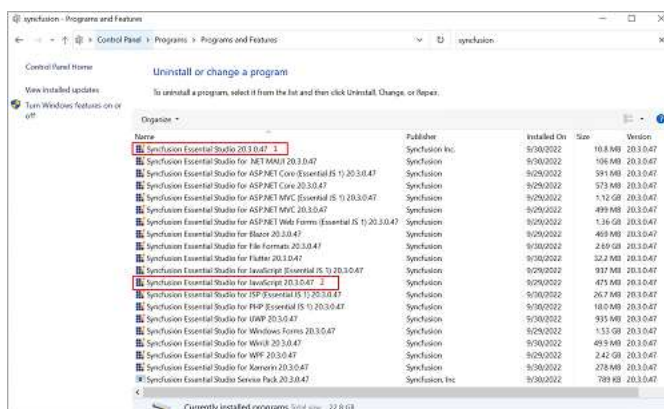

10. The download and installation\uninstallation progress will be displayed as shown below.

11. When the installation is finished, the **Summary** wizard will appear. Here you can see the list of products that have been installed successfully and those that have failed. To close the Summary wizard, click Finish.

- To open the Syncfusion Control Panel, click **Launch Control Panel**.
12. After installation, there will be two Syncfusion control panel entries, as shown below. The Essential Studio entry will manage all Syncfusion products installed in the same version, while the Product entry will only uninstall the specific product setup.

Uninstallation

Syncfusion JavaScript – EJ2 installer can be uninstalled in two ways.

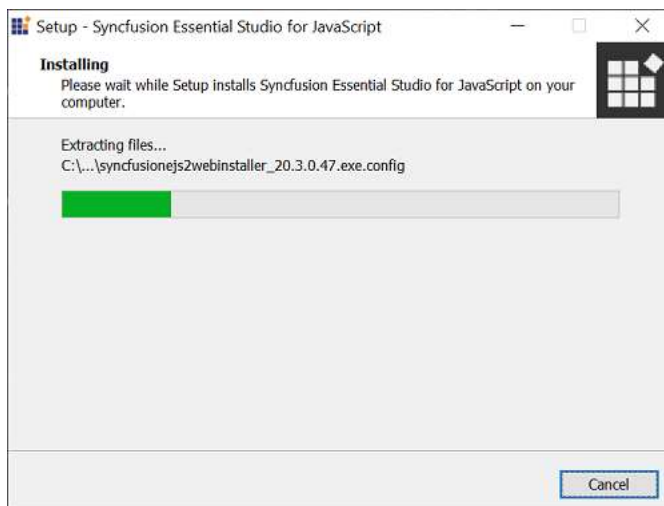

- Uninstall the JavaScript – EJ2 using the Syncfusion JavaScript – EJ2 web installer
- Uninstall the JavaScript – EJ2 from Windows Control Panel

Follow either one of the option below to uninstall Syncfusion Essential Studio JavaScript – EJ2 installer

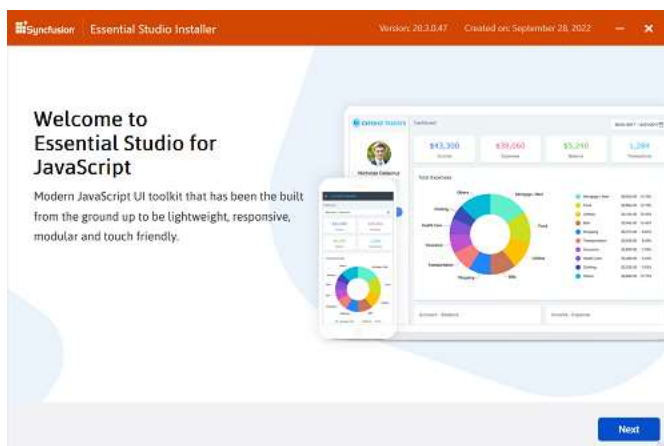

Option 1: Uninstall the JavaScript–EJ2 using the Syncfusion JavaScript–EJ2 web installer

Syncfusion provides the option to uninstall products of the same version directly from the Web Installer application. Select the products to be uninstalled from the list, and Web Installer will uninstall them one by one.

Open the Syncfusion Essential Studio JavaScript – EJ2 Online Installer file from downloaded location by double-clicking it. The Installer Wizard automatically opens and extracts the package

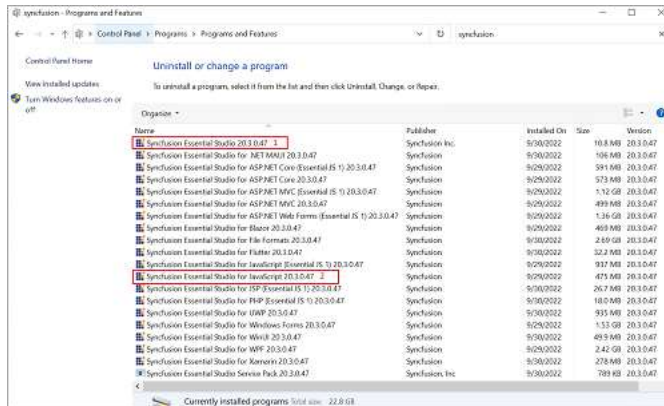

The Syncfusion JavaScript – EJ2 Web Installer’s welcome wizard will be displayed. Click the Next button

Option 2: Uninstall the JavaScript–EJ2 from Windows Control Panel

You can uninstall all the installed products by selecting the **Syncfusion Essential Studio {version}** entry (element 1 in the below screenshot) from the Windows control panel, or you can uninstall JavaScript –

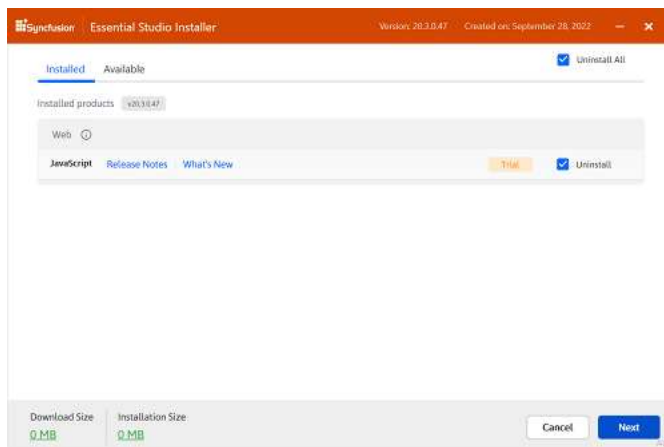

EJ2 alone by selecting the **Syncfusion Essential Studio for JavaScript – EJ2 {version}** entry (element 2 in the below screenshot) from the Windows control panel.

Note: If the **Syncfusion Essential Studio for JavaScript {version}** entry is selected from the Windows control panel, the Syncfusion Essential Studio JavaScript – EJ2 alone will be removed and the below default MSI uninstallation window will be displayed.

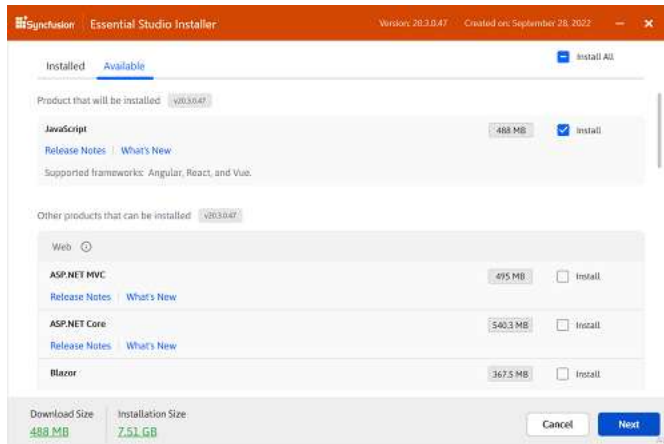

1. The Platform Selection Wizard will appear. From the **Installed** tab, select the products to be uninstalled. To select all products, check the **Uninstall All** checkbox. Click the Next button.

Installed

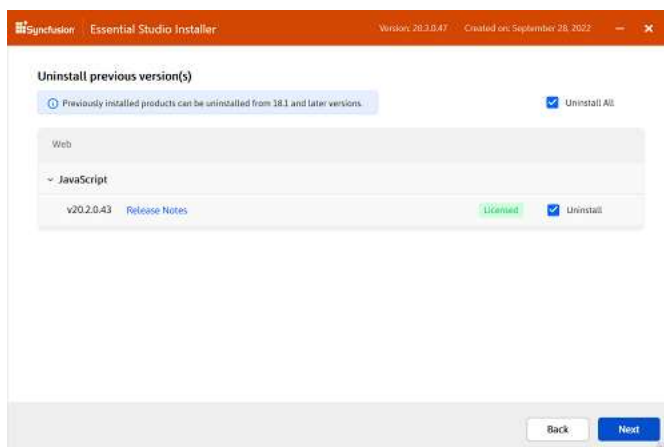

You can also select the products to be installed from the **Available** tab. Click the Next button.

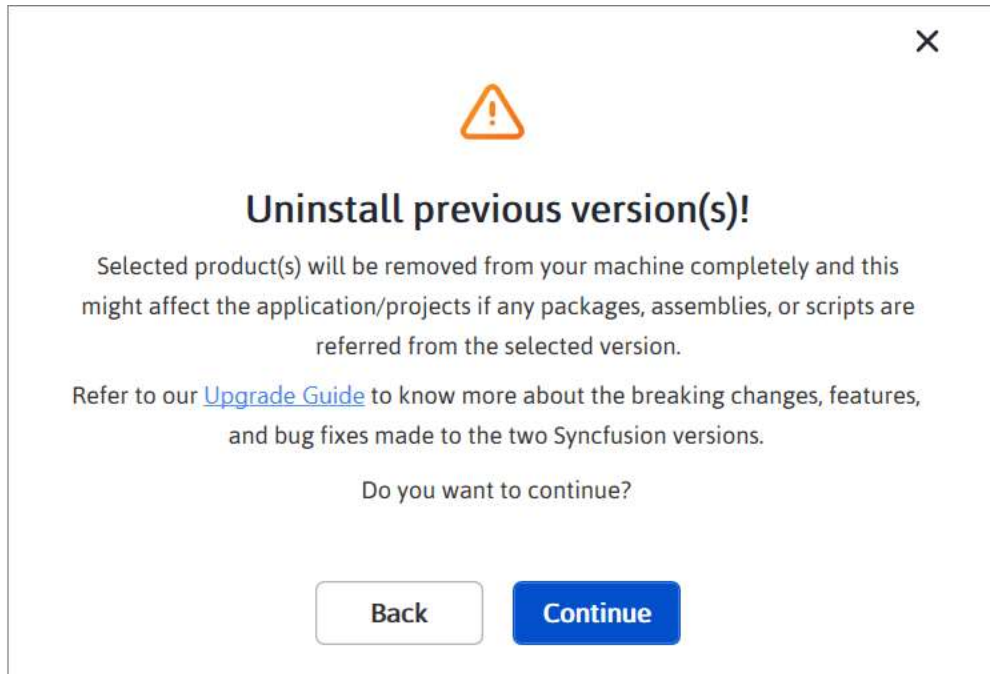

Available

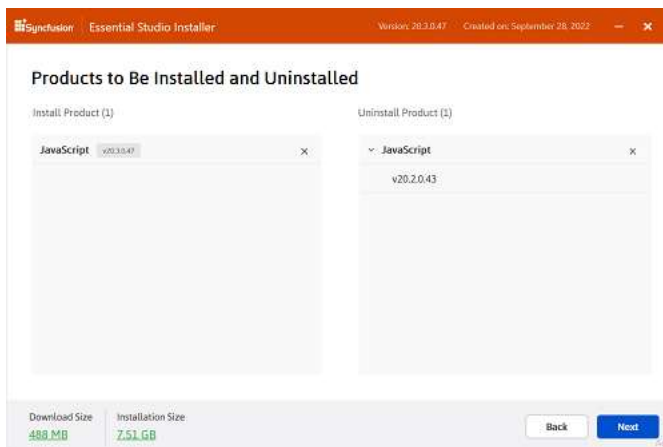

2. If any other products selected for installation, Uninstall previous version wizard will be displayed with previous version(s) installed for the selected products. Here you can view the list of installed previous versions for the selected products. Select **Uninstall All** checkbox to select all the versions. Click Next.

3. Pop up screen will be displayed to get the confirmation to uninstall selected previous versions.

4. The Confirmation Wizard will appear with the list of products to be installed/uninstalled. Here you can view and modify the list of products that will be installed/uninstalled.

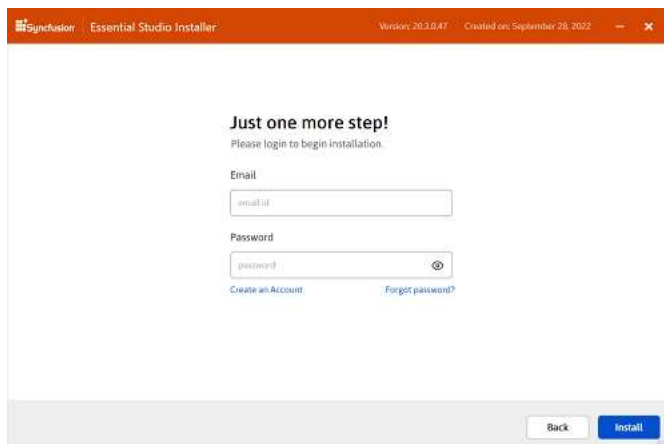

Note: By clicking the **Download Size** and **Installation Size** links, you can determine the approximate size of the download and installation

5. The Configuration Wizard will appear. You can change the Download, Install, and Demos locations from here. You can also change the Additional settings on a product-by-product basis. Click Next to install with the default settings.

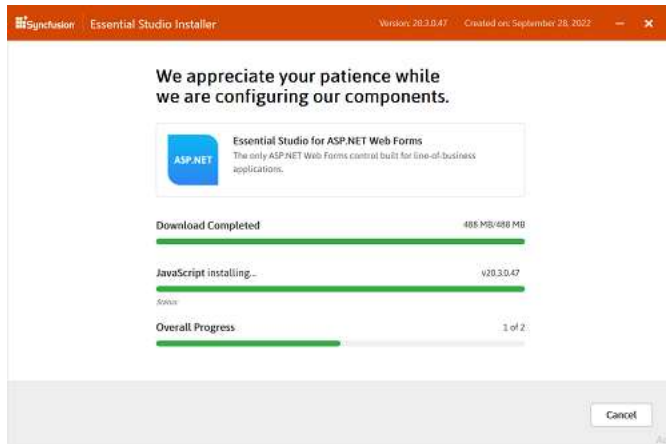

6. After reading the License Terms and Conditions, check the **I agree to the License Terms and Privacy Policy** check box. Click the Next button.
7. The login wizard will appear. You must enter your Syncfusion email address and password. If you do not already have a Syncfusion account, you can create one by clicking on **Create an Account**. If you have forgotten your password, click **Forgot Password** to create a new one. Click the Install button.

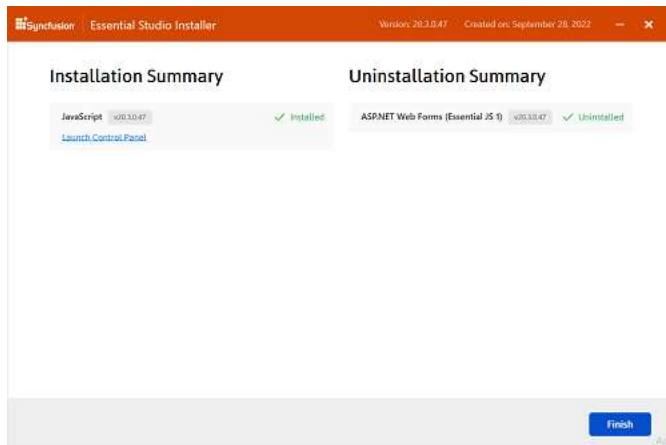

Important: The products you have chosen will be installed based on your Syncfusion License (Trial or Licensed).

8. The download, installation, and uninstallation progresses will be shown.

9. When the installation is finished, the **Summary** wizard will appear. Here you can see the list of products that have been successfully and unsuccessfully installed/uninstalled. To close the Summary wizard, click Finish.

- To open the Syncfusion Control Panel, click **Launch Control Panel**

Installation using Offline Installer

You can refer to the [Download](#) section to learn how to get the JavaScript – EJ2 trial or licensed installer.

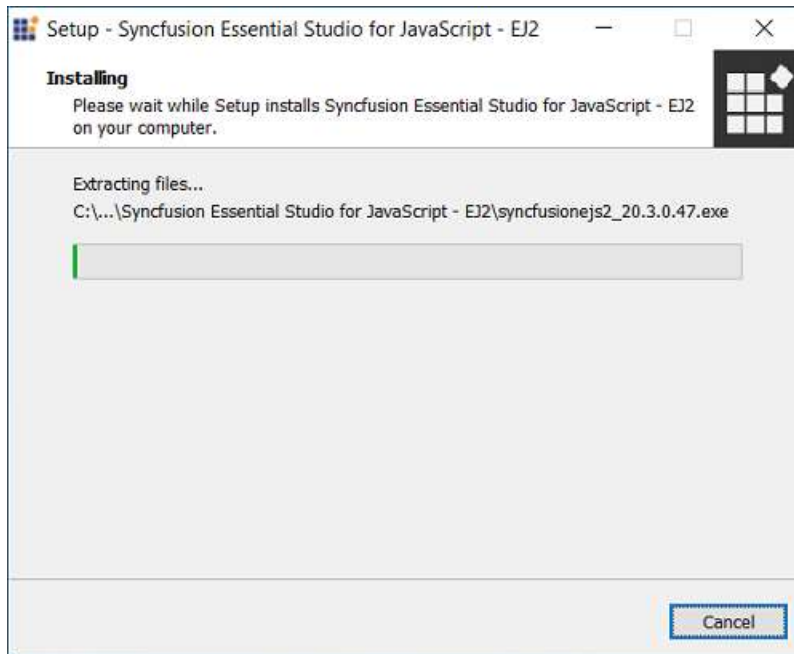

The frameworks listed below are supported in this installer.

- JavaScript
- Angular
- React
- Vue
- JavaScript (ES5)

Installing with UI

The steps below show how to install the Essential Studio JavaScript – EJ2 installer.

1. Open the Syncfusion JavaScript – EJ2 offline installer file from downloaded location by double-clicking it. The Installer Wizard automatically opens and extracts the package

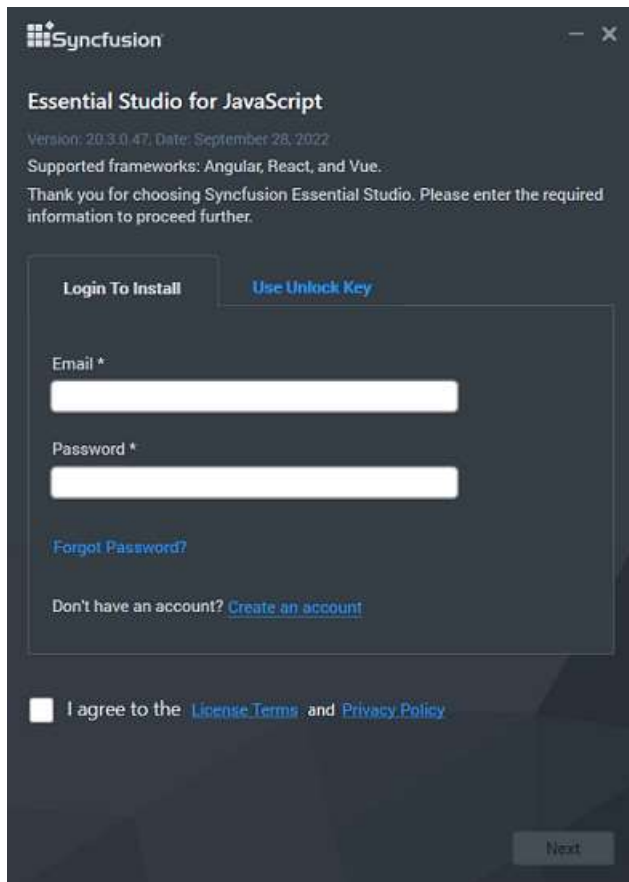

Note: The Installer wizard extracts the syncfusionejs2 (version).exe dialog, which displays the package's unzip operation.

2. To unlock the Syncfusion offline installer, you have two options:
 - Login To Install
 - Use Unlock Key

Login To Install

You must enter your Syncfusion email address and password. If you don't already have a Syncfusion account, you can sign up for one by clicking **"Create an account"**. If you have forgotten your password, click on **"Forgot Password"** to create a new one. Once you've entered your Syncfusion email and password, click Next.

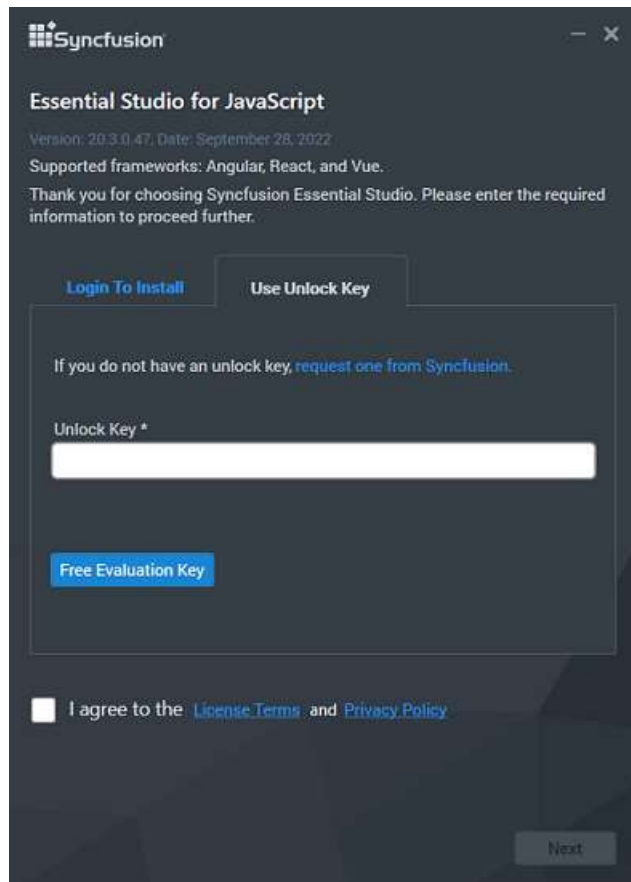

Use Unlock Key

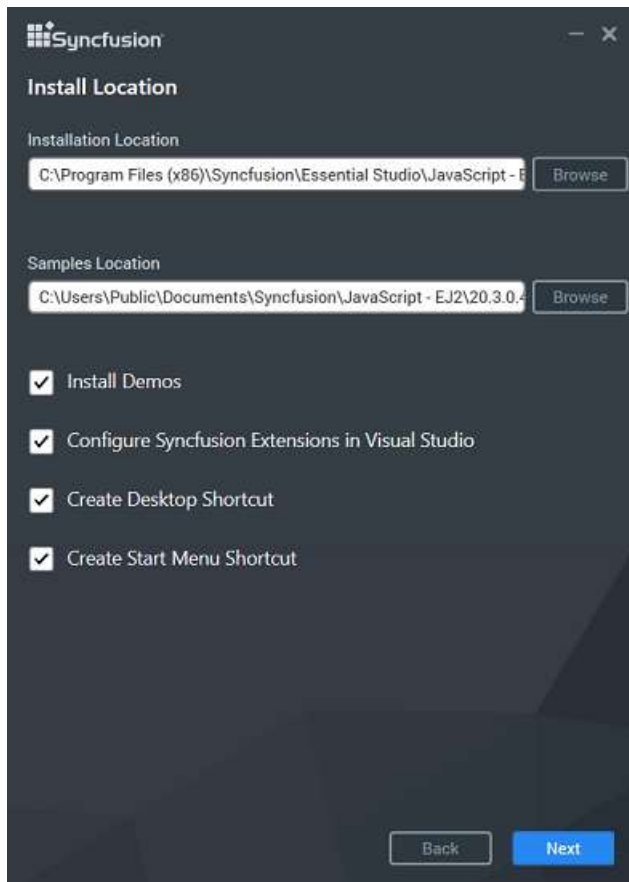

Unlock keys are used to unlock the Syncfusion offline installer, and they are platform and version specific. You should use either Syncfusion licensed or trial Unlock key to unlock Syncfusion JavaScript – EJ2 installer.

The trial unlock key is only valid for 30 days, and the installer will not accept an expired trial key.

To learn how to generate an unlock key for both trial and licensed products, see [this](#) Knowledge Base article.

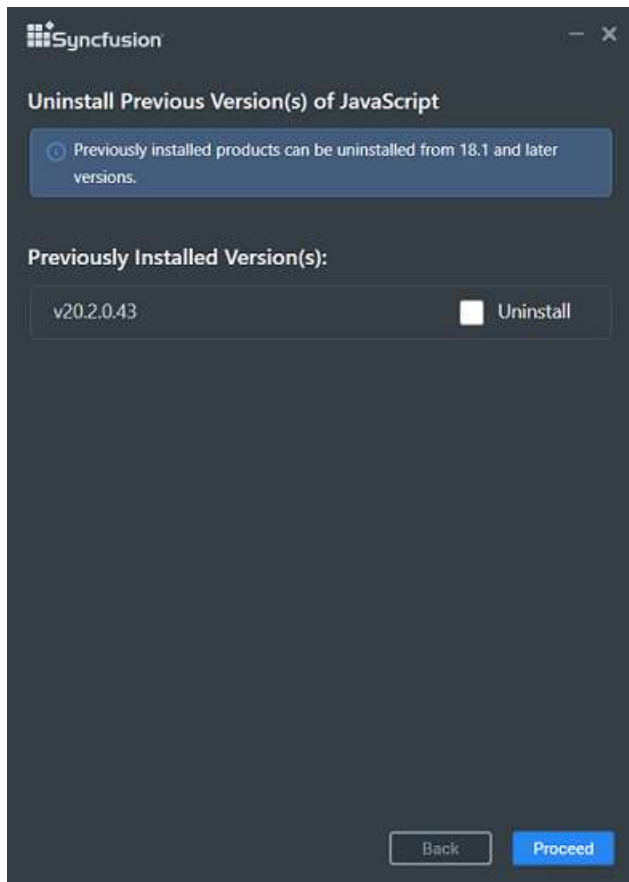

3. After reading the License Terms and Privacy Policy, check the **“I agree to the License Terms and Privacy Policy”** check box. Click the Next button.
4. Change the install and sample locations here. You can also change the Additional settings. Click Next\Install to install with the default settings.

Additional Settings

- Select the **Install Demos** check box to install Syncfusion samples, or leave the check box unchecked, if you do not want to install Syncfusion samples
- Select the **Configure Syncfusion Extensions controls in Visual Studio** checkbox to configure the Syncfusion Extensions in Visual Studio or clear this check box when you do not want to configure the Syncfusion Extensions in Visual Studio.
- Check the **Create Desktop Shortcut** checkbox to add a desktop shortcut for Syncfusion Control Panel
- Check the **Create Start Menu Shortcut** checkbox to add a shortcut to the start menu for Syncfusion Control Panel
- 5. If any previous versions of the current product is installed, the **Uninstall Previous Version(s)** wizard will be opened. Select Uninstall checkbox to uninstall the previous versions and then click the Proceed button.

Note: From the 2021 Volume 1 release, Syncfusion has added the option to uninstall previous versions from 18.1 while installing the new version.

Note: If any version is selected to uninstall, a confirmation screen will appear; if continue is selected, the Progress screen will display the uninstall and install progress, respectively. If none of the versions are chosen to be uninstalled, only the installation progress will be displayed.

Confirmation Alert

Uninstall Progress:

Install Progress

Note: The Completed screen is displayed once the JavaScript – EJ2 product is installed. If any version is selected to uninstall, The completed screen will display both install and uninstall status.

6. After installing, click the Launch Control Panel link to open the Syncfusion Control Panel.
7. Click the Finish button. Your system has been installed with the Syncfusion Essential Studio JavaScript – EJ2 product.

Installing in silent mode

The Syncfusion Essential Studio JavaScript – EJ2 Installer supports installation and uninstallation via the command line.

Command Line Installation

To install through the Command Line in Silent mode, follow the steps below.

1. Run the Syncfusion JavaScript – EJ2 installer by double-clicking it. The Installer Wizard automatically opens and extracts the package.
2. The file syncfusionejs2_(version).exe file will be extracted into the Temp directory.
3. Run %temp%. The Temp folder will be opened. The syncfusionejs2_(version).exe file will be located in one of the folders.
4. Copy the extracted syncfusionejs2_(version).exe file in local drive.
5. Exit the Wizard.
6. Run Command Prompt in administrator mode and enter the following arguments.

Arguments: "installer file path\SyncfusionEssentialStudio(product)_(version).exe" /Install silent /UNLOCKKEY:"(product unlock key)" [/log "{Log file path}"] [/InstallPath:{Location to install}]

```
[/InstallSamples:{true/false}] [/InstallAssemblies:{true/false}] [/UninstallExistAssemblies:{true/false}]
[/InstallToolbox:{true/false}]
```

Note: [...] – Arguments inside the square brackets are optional.

Example: “D:\Temp\syncfusionejs2x.x.x.x.exe” /Install silent /UNLOCKKEY:“product unlock key” /log
 “C:\Temp\EssentialStudioPlatform.log” /InstallPath:C:\Syncfusion\x.x.x.x /InstallSamples:true
 /InstallAssemblies:true /UninstallExistAssemblies:true /InstallToolbox:true

7. Essential Studio for JavaScript (Essential JS2) is installed.

Note: x.x.x.x should be replaced with the Essential Studio version and the Product Unlock Key needs to be replaced with the Unlock Key for that version.

Command Line Uninstallation

Syncfusion Essential JavaScript – EJ2 can be uninstalled silently using the Command Line.

1. Run the Syncfusion JavaScript – EJ2 installer by double-clicking it. The Installer Wizard automatically opens and extracts the package.
2. The syncfusionejs2_(version).exe file will be extracted into the Temp directory.
3. Run %temp%. The Temp folder will be opened. The syncfusionejs2_(version).exe file will be located in one of the folders.
4. Copy the extracted syncfusionejs2_(version).exe file in local drive.
5. Exit the Wizard.
6. Run Command Prompt in administrator mode and enter the following arguments.

Arguments: “Copied installer file path\ syncfusionejs2_(version).exe” /uninstall silent

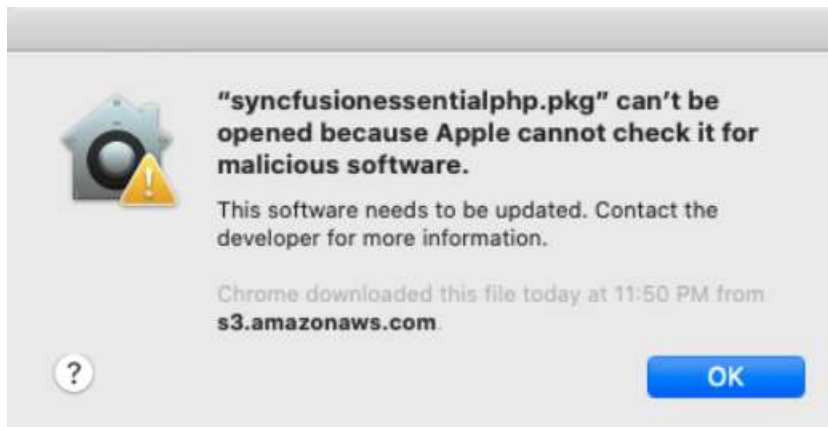

Example: “D:\Temp\syncfusionejs2_x.x.x.x.exe” /uninstall silent

7. Essential Studio for JavaScript (Essential JS2) is uninstalled.

Installing Syncfusion JavaScript – EJ2 Mac Installer

Steps to resolve the warning message in Catalina OS or later

While running Essential Studio JavaScript - EJ2 Mac Installer on Catalina MacOS or later, the below alert will be displayed.

If you receive this alert, follow the below steps for the easiest solution.

1. Right-click the downloaded pkg file.
2. Select the "Open With" option and choose "Installer (Default)". The following pop-up appears.

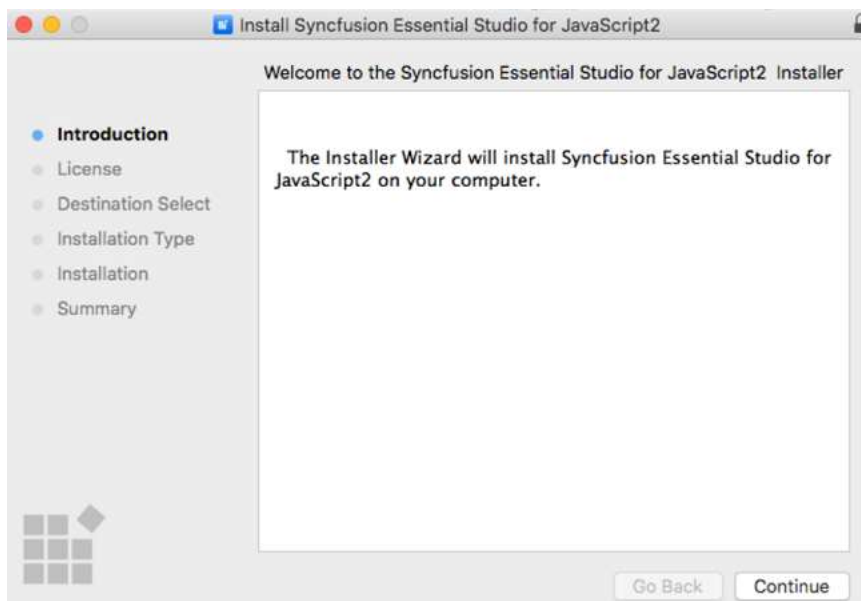

3. When you click "Open" the installer window will be opened.

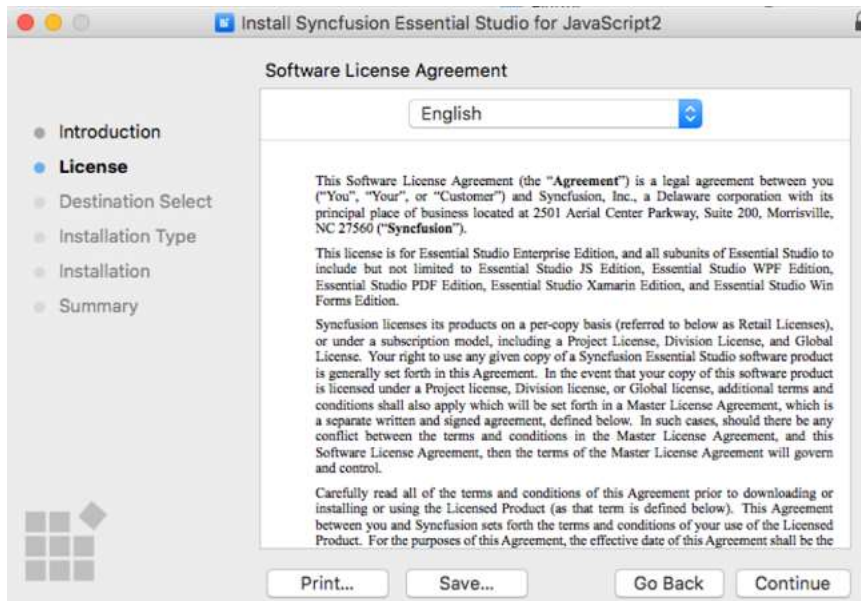

Step-by-Step Installation

The steps below show how to install the Essential Studio JavaScript - EJ2 Mac installer.

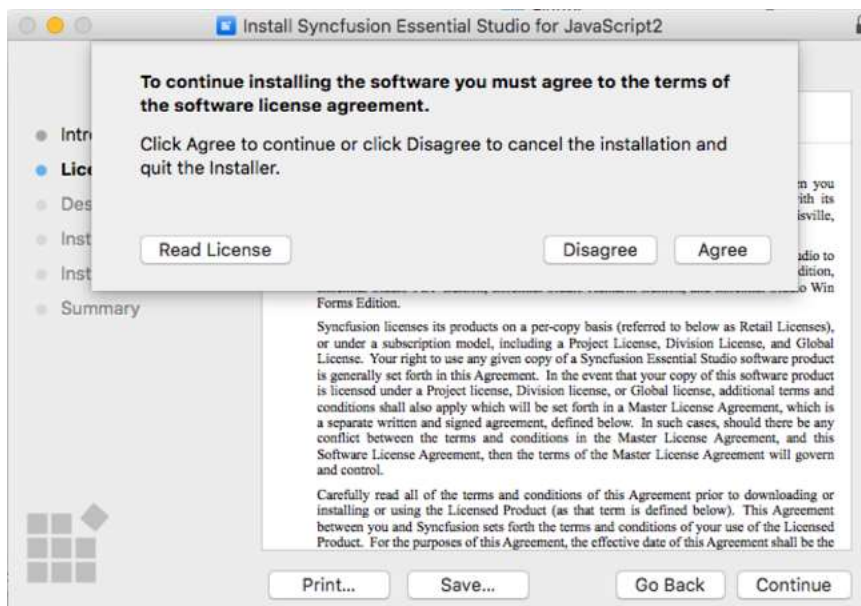

1. Double-click the Syncfusion Essential Studio JavaScript - EJ2 Mac installer(.pkg) file. The installer Wizard opens. Click Continue.

2. The Software License Agreement wizard will appear. Click the Continue button.

3. The License Agreement's Confirmation window will appear. If you have read the Software License Agreement, click **Agree**.

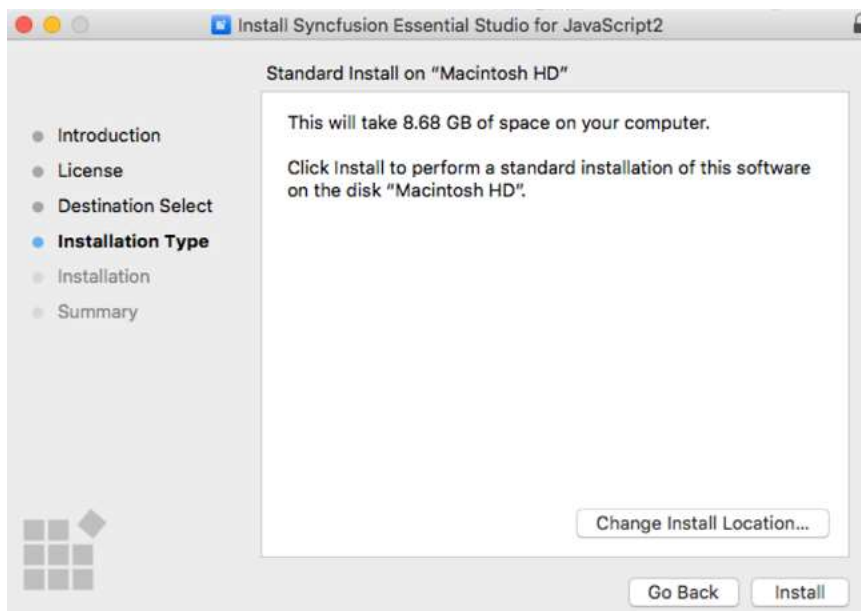

Note: The Unlock key is not required to install the Mac installer. The Syncfusion Essential Studio JavaScript - EJ2 Mac installer can be used for development purposes without registering the Unlock key.

4. The Destination select wizard will appear. You can choose which disc to install the Syncfusion Essential Studio for JavaScript - EJ2 Mac installer on here.

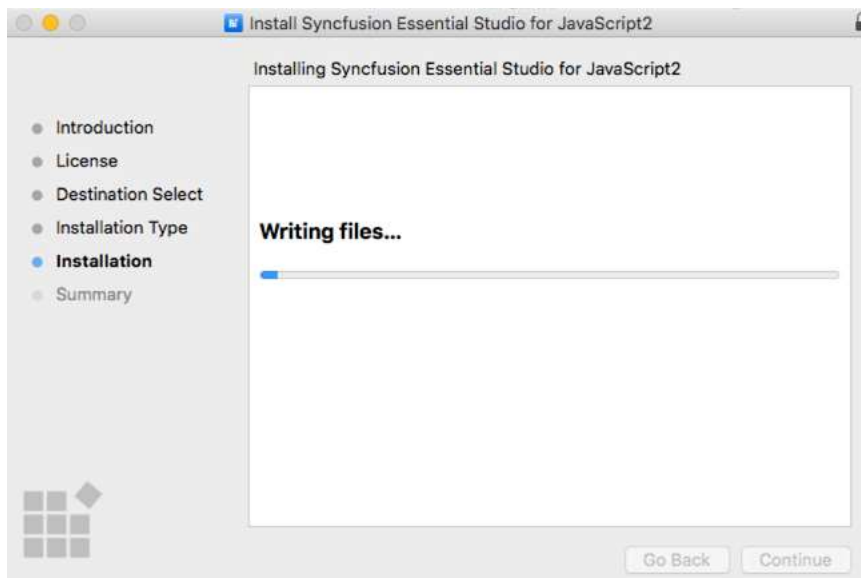

5. The Installation Type wizard will appear. Click Install to begin the standard installation of the Syncfusion Essential Studio JavaScript - EJ2 Mac installer.

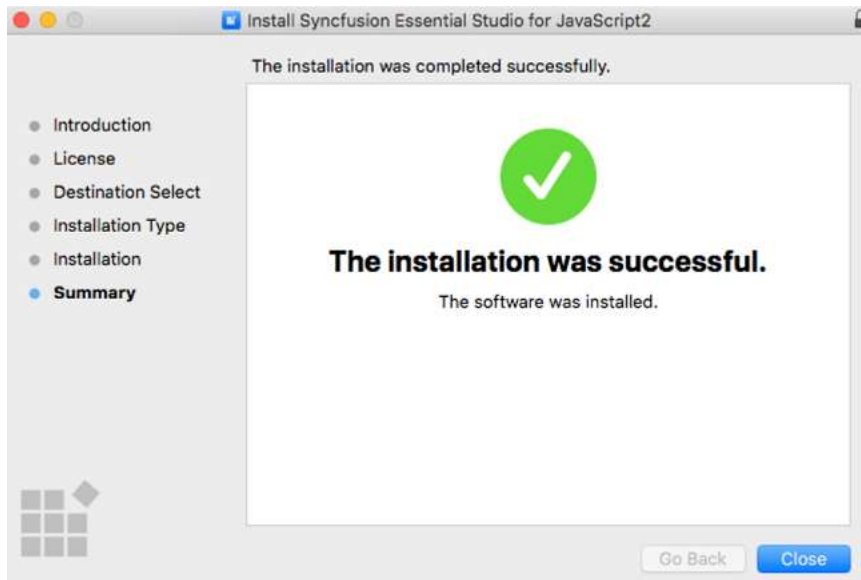

6. The Authentication window will appear. To begin the installation, enter the Mac machine's password and click **Install Software**.

7. The installation process will begin on your machine.

8. Once the installation is complete, the completed screen will be displayed. To exit the installation wizard, click Close.

By default, Mac installer will install the files in following location.

Location: {Documents}\Syncfusion\ {version}\ {platform}

License key registration in samples

After the installation, the license key is required to register the demo source that is included in the Mac installer. To learn about the steps for license registration for the JavaScript - EJ2 Mac installer, please refer to this.

Linux Installer

Download Syncfusion JavaScript Linux Installer

The Syncfusion installer can be downloaded from the [Syncfusion](https://www.syncfusion.com) website. You can either download the licensed installer or try our trial installer depending on your license.

- Trial Installer - Licensed Installer

You can download the Syncfusion installer from [Syncfusion.com](https://www.syncfusion.com) website

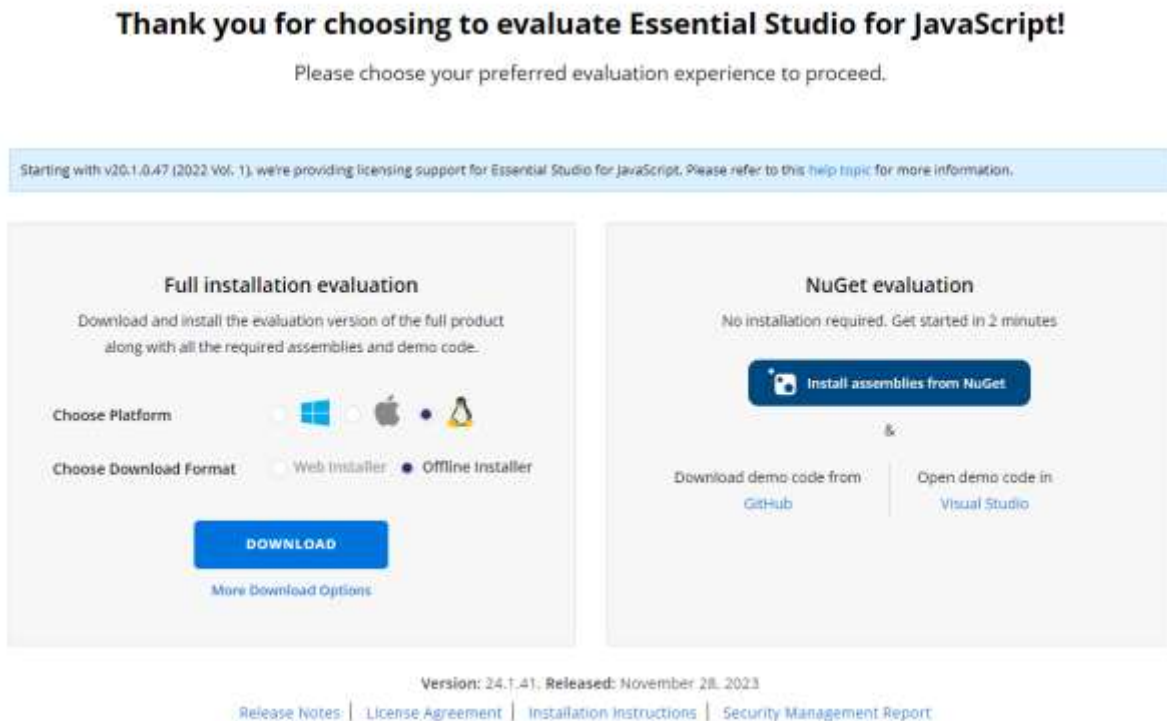

Download the Trial Version

Our 30-day trial can be downloaded in two ways.

- Download Free Trial Setup
- Start Trials if using components through [NuGet.org](https://www.nuget.org)

[Download Free Trial Setup](#)

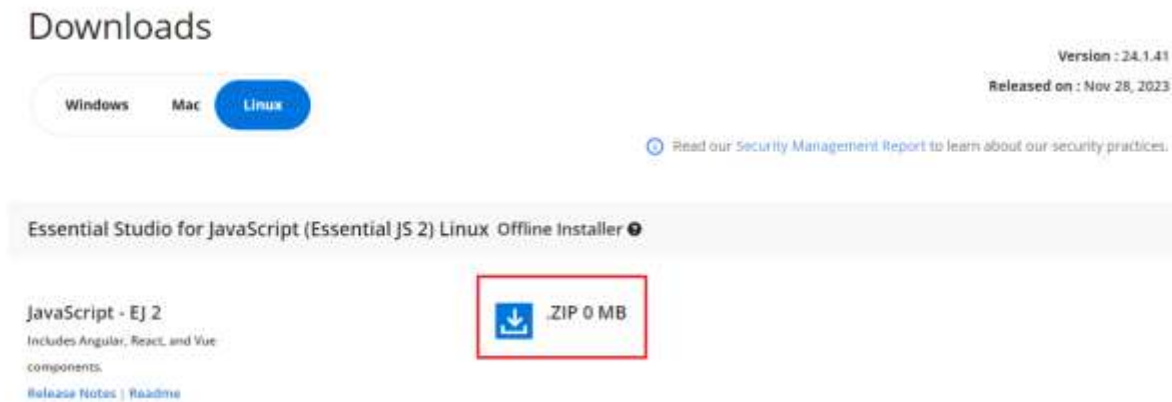

1. You can evaluate our 30-day free trial by visiting the [Download Free Trial](#) page and select the product
2. After completing the required form or logging in with your registered Syncfusion account, you can download the trial installer from the confirmation page. (as shown in below screenshot.)

3. With a trial license, only the latest version's trial installer can be downloaded.
4. Unlock key is not required to install the Syncfusion JavaScript Linux trial installer.
5. Before the trial expires, you can download the trial installer at any time from your registered account's [Trials & Downloads](#) page (as shown in below screenshot.)

6. Click the More Download Options (element 2 in the above screenshot) button to get the JavaScript Product Offline trial installer which is available in ZIP format.

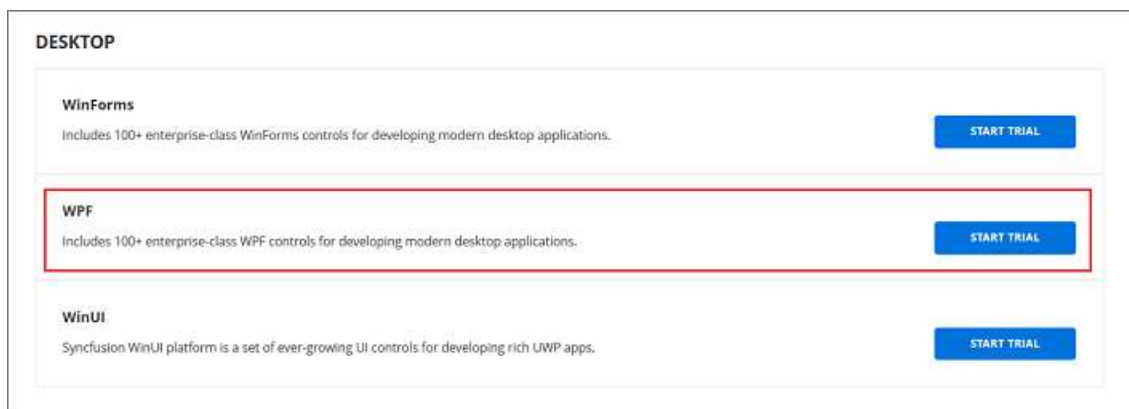

Start Trials if using components through [NuGet.org](https://www.nuget.org)

You should initiate an evaluation if you have already obtained our components through [NuGet.org](https://www.nuget.org/packages?q=syncfusion)

1. You can start your 30-day free trial from the [Start Trial](#) page from your account.

Note: You can generate the license key for your active trial products from [Trials & Downloads](#) page. This license key will be mandatory to use our trial products in your application. To know more about License key, refer this [help topic](#).

2. To access this page, you must sign up\log in with your Syncfusion account.
3. Begin your trial by selecting the Syncfusion product.

Note: If you've already used the trial products and they haven't expired, you won't be able to start the trial for the same product again.

5. You can find your current active trial products on the [Trials & Downloads](#) page.

Download the License Version

1. Syncfusion licensed products will be available in the [License & Downloads](#) page under your registered Syncfusion account.
2. You can view all the licenses (both active and expired) associated with your account.
3. You can download JavaScript Linux licensed installer by going to More Downloads Options (element 3 in the screenshot below).

4. Unlock key is not required to install the Syncfusion JavaScript Linux trial installer.
5. For Linux OS, ZIP formats is available for download.

Downloads

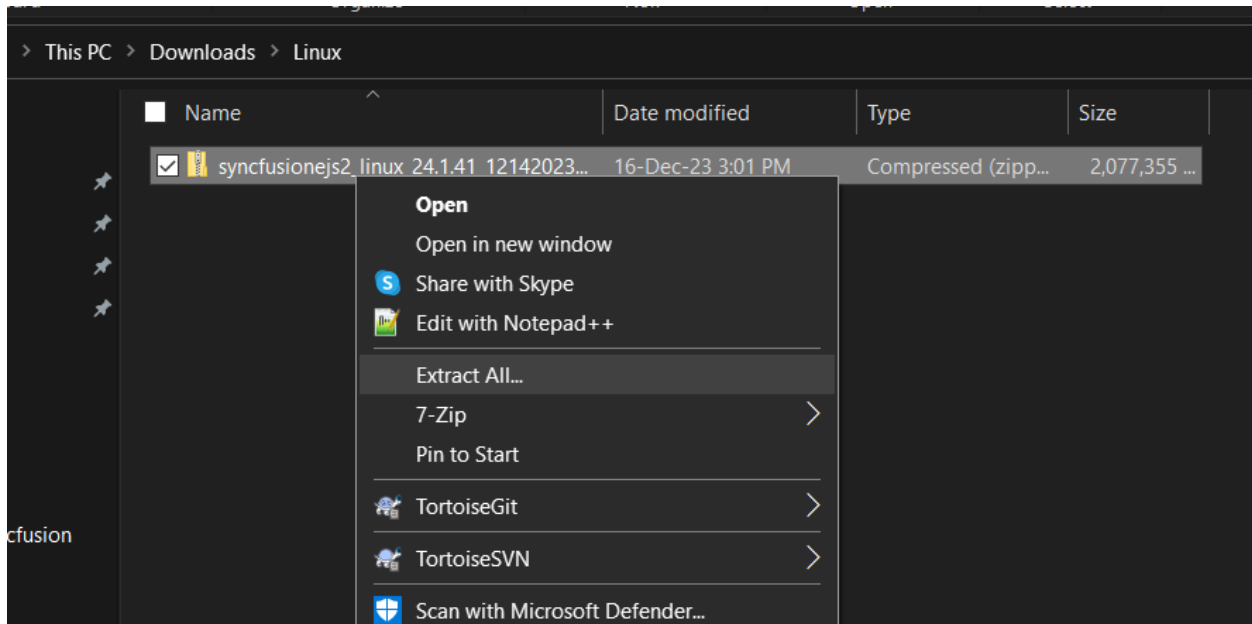

Installing Syncfusion JavaScript Linux installer

Step-by-Step Installation

The steps below show how to install JavaScript Linux installer.

1. Extract the Syncfusion JavaScript Linux installer(.zip) file. The files are extracted in your machine.

2. The Linux zip file contains the following folders.

Note: The Unlock key is not required to install the Linux installer.

4. You can launch the demo source and use the NuGet packages included in the Linux installer.

[License key registration in samples](#)

After the installation, the license key is required to register the demo source that is included in the Linux installer. To learn about the steps for license registration for the JavaScript - EJ2 Linux installer, please refer to this.

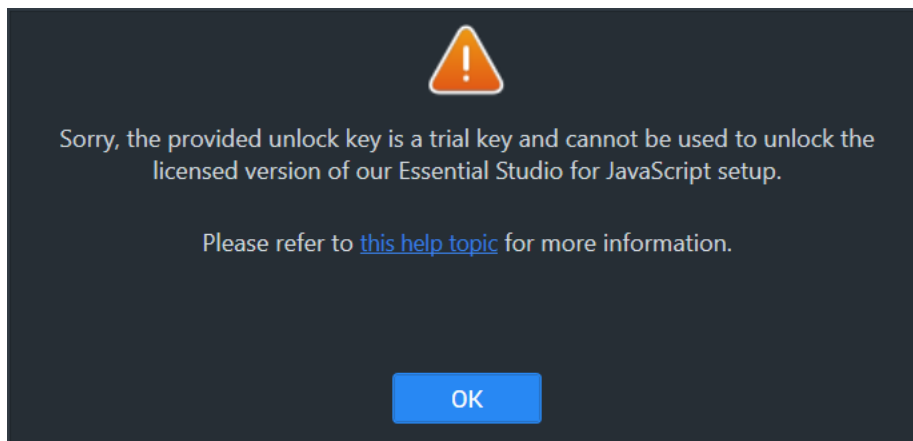

Common Installation Errors

This article describes the most common installation errors, as well as the causes and solutions to those errors.

- Unlocking the license installer using the trial key
- License has expired
- Unable to find a valid license or trial
- Unable to install because of another installation
- Unable to install due to controlled folder access

Unlocking the license installer using the trial key

Error Message: Sorry, the provided unlock key is a trial unlock key and cannot be used to unlock the licensed version of our Essential Studio for JavaScript installer.

Reason
 You are attempting to use a Trial unlock key to unlock the licensed installer.

Suggested solution
 Only a licensed unlock key can unlock a licensed installer. So, to unlock the Licensed installer, use the Licensed unlock key. To generate the licensed unlock key, refer to [this](#) article.

License has expired

Error Message: Your license for Syncfusion Essential Studio for JavaScript – EJ2 has been expired since {date}. Please renew your subscription and try again.

Online Installer

Reason
 This error message will appear if your license has expired.

Suggested solution
 You can choose from the options below.

1. You can renew your subscription [here](#).
2. You can get a new license [here](#).
3. You can reach out to our sales team by emailing sales@syncfusion.com.
4. You can also extend the 30-day trial period after your trial license has expired.

Unable to find a valid license or trial

Error Message: Sorry, we are unable to find a valid license or trial for Essential Studio for JavaScript – EJ2 under your account.

Offline installer

Online installer

Reason
 The following are possible causes of this error:

The following are possible causes of this error:

- When your trial period expired
- When you don't have a license or an active trial
- You are not the license holder of your license
- Your account administrator has not yet assigned you a license.

Suggested solution

1. You can get a new license [here](#).
2. Contact your account administrator.
3. Send an email to clientrelations@syncfusion.com to request a license.
4. You can reach out to our sales team by emailing sales@syncfusion.com.

Unable to install because of another installation

Error Message: Another installation is in progress. You cannot start this installation without completing all other currently active installations. Click cancel to end this installer or retry to attempt after currently active installation completed to install again.

Reason
 You are trying to install when another installation is already running in your machine.

Suggested solution
 Open and kill the msixec process in the task manager and then continue to install Syncfusion. If the problem is still present, restart the computer and try Syncfusion installer.

1. Open the Windows Task Manager.
2. Browse the Details tab.
3. Select the msixec.exe and click **End task**.

Unable to install due to controlled folder access

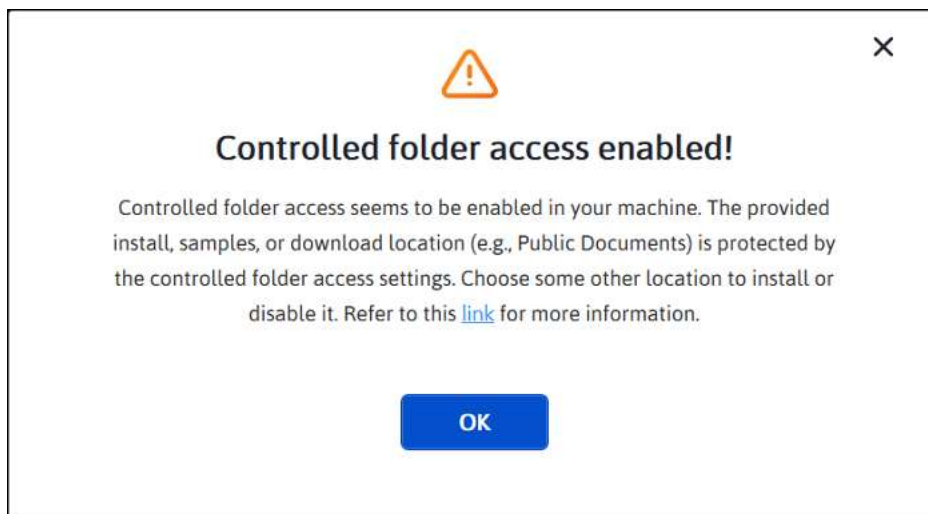

Offline

Error Message: Controlled folder access seems to be enabled in your machine. The provided install or samples location (e.g., Public Documents) is protected by the controlled folder access settings.

Online

Error Message: Controlled folder access seems to be enabled in your machine. The provided install, samples, or download location (e.g., Public Documents) is protected by the controlled folder access settings.

Reason
 You have enabled controlled folder access settings on your computer.

Suggested solution

Suggestion 1:

1. We will ship our demos in the public documents folder by default.
2. You have controlled folder access enabled on your machine, so our demos cannot be installed in the documents folder. If you need to install our demos in the Documents folder, follow the steps in this [link](#) and disable the controlled folder access.
3. You can enable this option after the installing our Syncfusion setup.

Suggestion 2:

1. If you do not want to disable controlled folder access, you can install our demos in another directory.

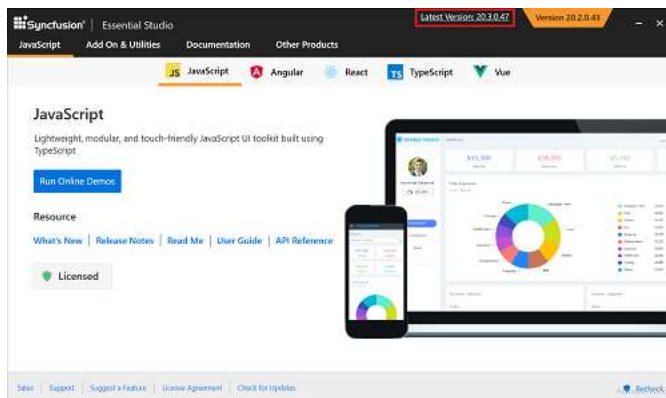

Upgrading Syncfusion JavaScript (Essential JS2)

Syncfusion releases new volumes once every three months, with exciting new features. There will be one Service Pack release for these volume releases. Service Pack releases are provided to address major bug fixes in the volume releases.

You can upgrade to our latest version from any installed Syncfusion version.

Upgrading to the latest version

The most recent version of Syncfusion JavaScript – EJ2 can be downloaded and installed by clicking on the “Latest Version: {Version}” link at the top of the Syncfusion JavaScript – EJ2 Control Panel.

You can also upgrade to the latest version just by downloading and installing the products you require from [this](#) link. The existing installed versions are not required to be uninstalled.

It is not required to install the Volume release before installing the Service Pack release. As releases for Volume and Service Packs work independently, you can install the latest version with major bug fixes directly.

Upgrade from trial version to license version

Uninstall the trial version and install the fully licensed installer from the [License and Downloads](#) section of our website to upgrade from the trial version.

Note: License key registration is not required for JavaScript, if you are using scripts (.js) and css files.

Licensing

Appearance

Theme in ##Platform_Name## controls

The Syncfusion JavaScript library has provided the below list of in-built themes:

|Theme | Style Sheet Name |

|-----|-----|

|Material 3 | material3.css |

|Material 3 Dark | material3-dark.css |

Fluent	fluent.css
Fluent Dark	fluent-dark.css
Bootstrap 5	bootstrap5.css
Bootstrap 5 Dark	bootstrap5-dark.css
Bootstrap 4	bootstrap4.css
Bootstrap 3	bootstrap.css
Bootstrap 3 Dark	bootstrap-dark.css
Google's Material	material.css
Google's Material-Dark	material-dark.css
Tailwind CSS	tailwind.css
Tailwind Dark CSS	tailwind-dark.css
Microsoft Office Fabric	fabric.css
Microsoft Office Fabric Dark	fabric-dark.css
High Contrast	highcontrast.css

The Syncfusion Bootstrap theme is designed based on **Bootstrap v3**, but it can be compatible with **Bootstrap v4** applications. In addition to these four built-in themes, [ThemeStudio](#) also provides support for the Fusion theme, which can only be downloaded from [ThemeStudio](#).

Reference themes in the application

Syncfusion JavaScript controls themes that can be used in the application by referencing the style sheet. Using the following approaches, themes can be referenced in the application.

- [NPM Packages](#) - Used to customize the existing themes and bundle stylesheet's in an application.
- [Content Delivery Network \(CDN\)](#) - Used to reference complete css via static web assets.
- [Theme Studio](#) - Used to customize and generate themes only for the selected (used) components.

NPM packages

All Syncfusion JavaScript (Essential JS 2) packages are available on the [npmjs.com](#) public registry. Themes are shipped as individual and combined CSS files. A combined CSS file can be referred to from the npm package [@syncfusion/ej2](#) and individual CSS files are available within the same control repository's `style` folder. In the `ej2` npm package, we have shipped both CSS and SCSS files for all controls.

Referring all controls theme

Referring all control CSS theme from ej2 package

,

```
@import "../nodemodules/@syncfusion/ej2/<themename>.css";
```

,

Referring all control SCSS theme from ej2 package

```
`scss
@import "../nodemodules/@syncfusion/ej2/<themenam>.scss";
`
```

Referring individual control theme

The individual control theme can be referred from the [individual package](#) or from the **ej2** package.

Referring individual control SCSS theme from an individual package.

```
`scss
@import "<dependent-package>/<dependent-control>/<theme_name>.scss";
@import "ej2-buttons/styles/button/<theme_name>.scss";
`
```

Example:

```
`scss
@import "ej2-base/styles/material.scss";
@import "ej2-buttons/styles/button/material.scss";
`
```

ej2-base is common dependent package for all Syncfusion JavaScript control styles. so, it needs to be added first in the import statement.

Referring individual control SCSS theme from ej2 package

```
`scss
@import "ej2/<dependent-control>/<theme_name>.scss";
@import "ej2/button/<theme_name>.scss";
`
```

Example:

```
`scss
@import "ej2/base/material.scss";
@import "ej2/button/material.scss";
`
```

CDN reference

Syncfusion hosts every Syncfusion JavaScript control as a separate package on the CDN. This allows you to load the scripts and styles for each individual package. Syncfusion also provides a single package that includes all Syncfusion JavaScript controls, allowing you to load the scripts and styles for all controls as a single script and style file.

Single CDN theme reference for all controls

Refer to a single CDN link that contains all Syncfusion JavaScript control styles as follows:

`https://cdn.syncfusion.com/ej2/<version>/<theme_name>.css`

Theme Name	CDN Reference
---	---
Material 3	https://cdn.syncfusion.com/ej2/22.1.34/material3.css
Material 3 Dark	https://cdn.syncfusion.com/ej2/22.1.34/material3-dark.css
Fluent	https://cdn.syncfusion.com/ej2/22.1.34/fluent.css
Fluent Dark	https://cdn.syncfusion.com/ej2/22.1.34/fluent-dark.css
Bootstrap 5	https://cdn.syncfusion.com/ej2/22.1.34/bootstrap5.css
Bootstrap 5 Dark	https://cdn.syncfusion.com/ej2/22.1.34/bootstrap5-dark.css
Bootstrap 4	https://cdn.syncfusion.com/ej2/22.1.34/bootstrap4.css
Bootstrap 3	https://cdn.syncfusion.com/ej2/22.1.34/bootstrap.css
Bootstrap 3 Dark	https://cdn.syncfusion.com/ej2/22.1.34/bootstrap-dark.css
Google's Material	https://cdn.syncfusion.com/ej2/22.1.34/material.css
Google's Material Dark	https://cdn.syncfusion.com/ej2/22.1.34/material-dark.css
Tailwind CSS	https://cdn.syncfusion.com/ej2/22.1.34/tailwind.css
Tailwind CSS Dark	https://cdn.syncfusion.com/ej2/22.1.34/tailwind-dark.css
Microsoft Office Fabric	https://cdn.syncfusion.com/ej2/22.1.34/fabric.css
Microsoft Office Fabric Dark	https://cdn.syncfusion.com/ej2/22.1.34/fabric-dark.css
High Contrast	https://cdn.syncfusion.com/ej2/22.1.34/highcontrast.css

Individual control theme CDN reference

The primary goal of individual CDN control is to optimize the loading time and memory of the website or app in the production stage. Individual control package loading should be done in the order indicated by its dependency graph. The CDN of the dependency packages should be manually included before the intended individual control package CDN.

Dependency style:

```
https://cdn.syncfusion.com/ej2/22.1.34/{DEPENDENCYPACKAGE_NAME}/styles/material.css
```

Control style:

```
https://cdn.syncfusion.com/ej2/22.1.34/{PACKAGE_NAME}/styles/material.css
```

Example:

Button's control style:

<https://cdn.syncfusion.com/ej2/22.1.34/ej2-buttons/styles/material.css>

Button's dependency style:

<https://cdn.syncfusion.com/ej2/22.1.34/ej2-base/styles/material.css>

Change theme dynamically

In the application, Syncfusion themes can be changed dynamically by changing their style reference as follows.

- Add the theme CDN link and DropDownList element to the HTML file using the following code.

```
`html
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="utf-8" />
<meta name="viewport" content="width=device-width, initial-scale=1.0" />
<meta name="author" content="Syncfusion JavaScript Grid control" />
<!-- Syncfusion JavaScript controls styles -->
<link id="css-link" href="https://cdn.syncfusion.com/ej2/22.1.34/bootstrap5.css" rel="stylesheet" />
</head>
<body>
<div id='container' style="margin: 50px;">
<div id='dropdown' style="margin:0 auto auto 0; width:300px; padding-bottom: 20px;">
<!--element which is going to render the DropDownList-->
<input type="text" tabindex="1" id='themes-dropdown' />
</div>
</div>
</body>
</html>
`
```

- The following code example demonstrates how to change the theme dynamically in the application using Syncfusion JavaScript DropDownList control.

```

`ts
import { DropDownList, ChangeEventArgs } from '@syncfusion/ej2-dropdowns';

// define the array of themes data
let themesData: string[] = ['material3', 'material3-dark', 'bootstrap5', 'bootstrap5-dark', 'fluent', 'fluent-dark', 'material', 'tailwind', 'tailwind-dark', 'fabric', 'fabric-dark'];

// initialize DropDownList component
let dropDownListObject: DropDownList = new DropDownList({
//set the data to dataSource property
dataSource: themesData,
placeholder: "Choose a theme",
change: (args: ChangeEventArgs) => {
let themeName = args.value as string;
document.getElementsByTagName('body')[0].style.display = 'none';
let styleLink: any = document.getElementById('css-link');
styleLink.href = 'https://cdn.syncfusion.com/ej2/22.1.34/' + themeName + '.css';
setTimeout(function () { document.getElementsByTagName('body')[0].style.display = 'block'; }, 250);
}
});

// render initialized DropDownList
dropDownListObject.appendTo('#themes-dropdown');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>Grid</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="author" content="Syncfusion JavaScript Grid control">
  <!-- Syncfusion JavaScript controls styles -->
  <link id="css-link"
href="https://cdn.syncfusion.com/ej2/24.1.41/bootstrap5.css"
rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container" style="margin: 50px;">

```

```

<div id="dropdown" style="margin:0 auto auto 0; width:300px;
padding-bottom: 20px;">
    <!--element which is going to render the DropDownList-->
    <input type="text" tabindex="1" id="themes-dropdown">
</div>
<!--element which is going to render-->
<div id="Grid"></div>
</div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Common variables

The following list of common variables are used in the Syncfusion JavaScript library themes for all UI controls. You can change these variables to customize the corresponding theme.

<!-- markdownlint-disable MD033 -->

Syncfusion Material 3 theme

Name	Value (Default Theme)	Value (Dark Theme)
--color-sf-black	rgb(0,0,0)	rgb(0,0,0)
--color-sf-white	rgb(255,255,255)	rgb(255,255,255)
--color-sf-primary	rgb(103, 80, 164)	rgb(208, 188, 255)
--color-sf-primary-container	rgb(234, 221, 255)	rgb(79, 55, 139)
--color-sf-on-primary	rgb(255, 255, 255)	rgb(55, 30, 115)
--color-sf-on-primary-container	rgb(33, 0, 94)	rgb(234, 221, 255)
--color-sf-surface	rgb(255, 255, 255)	rgb(28, 27, 31)
--color-sf-surface-variant	rgb(231, 224, 236)	rgb(73, 69, 79)
--color-sf-on-surface	rgb(28, 27, 31)	rgb(230, 225, 229)
--color-sf-on-surface-variant	rgb(73, 69, 78)	rgb(202, 196, 208)
--color-sf-secondary	rgb(98, 91, 113)	rgb(204, 194, 220)

Size modes Size Mode for Syncfusion ##Platform_Name## Controls

An application that is designed to be accessed through a web browser on various devices, including desktop computers and mobile devices, may have a distinct layout or user interface on a mobile device compared to a desktop computer to better suit the smaller screen size.

Syncfusion JavaScript controls support both touch (bigger) and normal size modes. Touch mode creates a responsive design for mobile devices by adding the `e-bigger` class, which enhances interactions, visibility, and the overall experience.

Size mode for application

The user can enable touch mode (bigger) for the entire application by adding the `e-bigger` class to the `body` element in the `index.html` file as follows:

```
<body className="e-bigger">
```

```
...
```

```
</body>
```

Size mode for a control

The user can enable touch mode (bigger) for a control by adding the `e-bigger` class to the `div` element that contains the control. Another way of enabling touch mode is by adding the `e-bigger` class using the available `cssClass` property of the control.

INDEX.JS

```
// initialize button control
var button = new ej.buttons.Button({ content: 'Button' });
button.appendTo('#element')
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
buttons/styles/material.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>
  <div id="container" class="e-bigger">
```

```

        <button id="element">Button</button>
    </div>
</script>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Change size mode for application at runtime

The user can change the size mode of the application between touch and normal (mouse) mode at runtime by adding and removing the `e-bigger` class. The following steps explain how to change the size mode of an application at runtime:

INDEX.JS

```

var touchButton = new ej.buttons.Button({ content: 'Touch Mode' });
touchButton.appendTo('#touch')
touchButton.element.onclick = () => {
    document.body.classList.add('e-bigger');
}
// initialize mouse button control
var mouseButton = new ej.buttons.Button({ content: 'Mouse Mode' });
mouseButton.appendTo('#mouse')
mouseButton.element.onclick = () => {
    document.body.classList.remove('e-bigger');
}
// initialize Calendar component
var calendar = new ej.calendars.Calendar();
calendar.appendTo('#calendar')

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-

type="text/javascript"></script>
    <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>

```

```

</head>
<body>

  <div id="container">
    <div>
      <button id="touch"></button>
      <button id="mouse"></button>
    </div>
    <div class="control">
      <div id="calendar"></div>
    </div>
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Change size mode for a control at runtime

The user can change the size mode of a control between touch and normal (mouse) mode at runtime by setting the `e-bigger` CSS class.

INDEX.JS

```

var touchButton = new ej.buttons.Button({ content: 'Touch Mode' });
touchButton.appendTo('#touch')
touchButton.element.onclick = () => {
  var controls = document.querySelectorAll('.control');
  for (var index = 0; index < controls.length; index++) {
    controls[index].classList.add('e-bigger');
  }
}
// initialize mouse button control
var mouseButton = new ej.buttons.Button({ content: 'Mouse Mode' });
mouseButton.appendTo('#mouse')
mouseButton.element.onclick = () => {
  var controls = document.querySelectorAll('.control');
  for (var index = 0; index < controls.length; index++) {
    controls[index].classList.remove('e-bigger');
  }
}
// initialize Calendar component
var calendar = new ej.calendars.Calendar();
calendar.appendTo('#calendar')

Icons Library

Syncfusion's icon library is a collection of pre-designed icons that can be used to enhance the user interface of an application. This pre-designed icons are set of `base64` formatted font icons. Utilizing this icon library can make it simpler to create a cohesive, visually pleasing design for an application.

Referring icons in JavaScript application

Using the below approaches, the icons can be referenced in the JavaScript application.

- [npm package](#) - Use the npm package to access icons.
- [CDN reference](#) - Use the static web asset to access icons.

The npm package

All Syncfusion theme icons are shipped in the [ej2-icons](#) package, which is published on the [npmjs.com](#) public registry. This package contains both CSS and SCSS theme files for all themes.

Icons can be used from the npm package `ej2-icons`. To use the icons, install the npm package using the following command:

```
`bash
npm install @syncfusion/ej2-icons
```

Refer to the following syntax to use icons in a JavaScript application:

```
@import "../nodemodules/@syncfusion/ej2-icons/<themename>.css";
```

Example:

```
@import "../node_modules/@syncfusion/ej2-icons/material.css";
```

CDN reference

All Syncfusion theme icons are available on the CDN. Instead of using a local resource on the server, use a cloud CDN to refer to the icons.

Make sure that the version of the icons in the URL matches the version of the Syncfusion React package. This will prevent compatibility issues and ensure that the correct version of the icons is loaded.

To use the icons from the CDN, refer to the icons by URLs in the application. This can be done by linking the icons in the HTML file by adding a link tag to the head section.

```
// Bootstrap5
<head>
<link href="https://cdn.syncfusion.com/ej2/22.1.34/ej2-icons/styles/bootstrap5.css" rel="stylesheet"/>
</head>

//Material
<head>
<link href="https://cdn.syncfusion.com/ej2/22.1.34/ej2-icons/styles/material.css" rel="stylesheet"/>
</head>
```

Steps to use icons library

Let's create a JavaScript application using the following command:

For an introduction and configuration of the common specifications, see [getting started with the Syncfusion JavaScript application](#).

Using icons directly in HTML element

The built-in Syncfusion icons can be rendered directly in the HTML element by defining the `e-icons` class, which contains the font-family and common properties of font icons, and defining the available icon's class with the `e-` prefix.

The following steps explain the direct rendering of the Syncfusion icon in the HTML element.

1. Add the class name `e-icons` to the HTML element that needs to render the icon. 2. Add the icon class with corresponding icon content from the [available icons](#). For example, the below code snippet represents the paste icon class.

```
,
.e-paste:before {
content: '\e355';
}
,
```

3. Add `e-icons` and `e-paste` classes to the HTML element.

```
,
<span class="e-icons e-paste"></span>
,
```

4. Add the CDN link reference of icons library in the `~index.html` file.

```
,
<link href="https://cdn.syncfusion.com/ej2/22.1.34/ej2-icons/styles/bootstrap5.css" rel="stylesheet" />
,
```

Icon size

The `ej2-icons` package offers options to display icons in different size modes. A user can use different icon sizes in their application based on touch or mouse mode. If the user is using touch mode, add `e-large` class to the element to make the icon easily interactable, or add the `e-small` or `e-medium` class in mouse mode.

The pre-defined icon size is present in the available classes listed below.

- `e-small` - Sets the icon size as 8px.
- `e-medium` - Sets the icon size to 16px.
- `e-large` - Sets the icon size to 24px.

Example:

```
,
```

```
<span class="e-icons e-small e-search"></span>
```

```
<span class="e-icons e-medium e-search"></span>
```

```
<span class="e-icons e-large e-search"></span>
```

```
,
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>
  <div id="container">

    <div>
      <p><b>Smaller Icons</b></p>
      <div class="small-icon-bar">
        <span class="e-icons e-small e-cut"></span>
        <span class="e-icons e-small e-copy"></span>
        <span class="e-icons e-small e-paste"></span>
      </div>
      <p><b>Medium Icons</b></p>
      <div class="medium-icon-bar">
        <span class="e-icons e-medium e-cut"></span>
        <span class="e-icons e-medium e-copy"></span>
        <span class="e-icons e-medium e-paste"></span>
      </div>
      <p><b>Larger Icons</b></p>
      <div class="large-icon-bar">
        <span class="e-icons e-large e-cut"></span>
        <span class="e-icons e-large e-copy"></span>
        <span class="e-icons e-large e-paste"></span>
      </div>
    </div>
  </div>
</body>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Icon appearance customization

The Syncfusion JavaScript icons can be customized with custom color and size by overriding the `e-icons` class. Customizing the icons in the library can be useful for making the icons more visually appealing and fitting to the design of the application. For example, a user can change the color of an icon to match the color scheme of their application, or increase the size of an icon to make it more visible on smaller screens. It may also be useful for creating a consistent look and feel across different parts of the application. Overall, customizing the icons in the library can improve the overall user experience of the application.

In the example below, the icon colour is customized with custom color.

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>

Overview

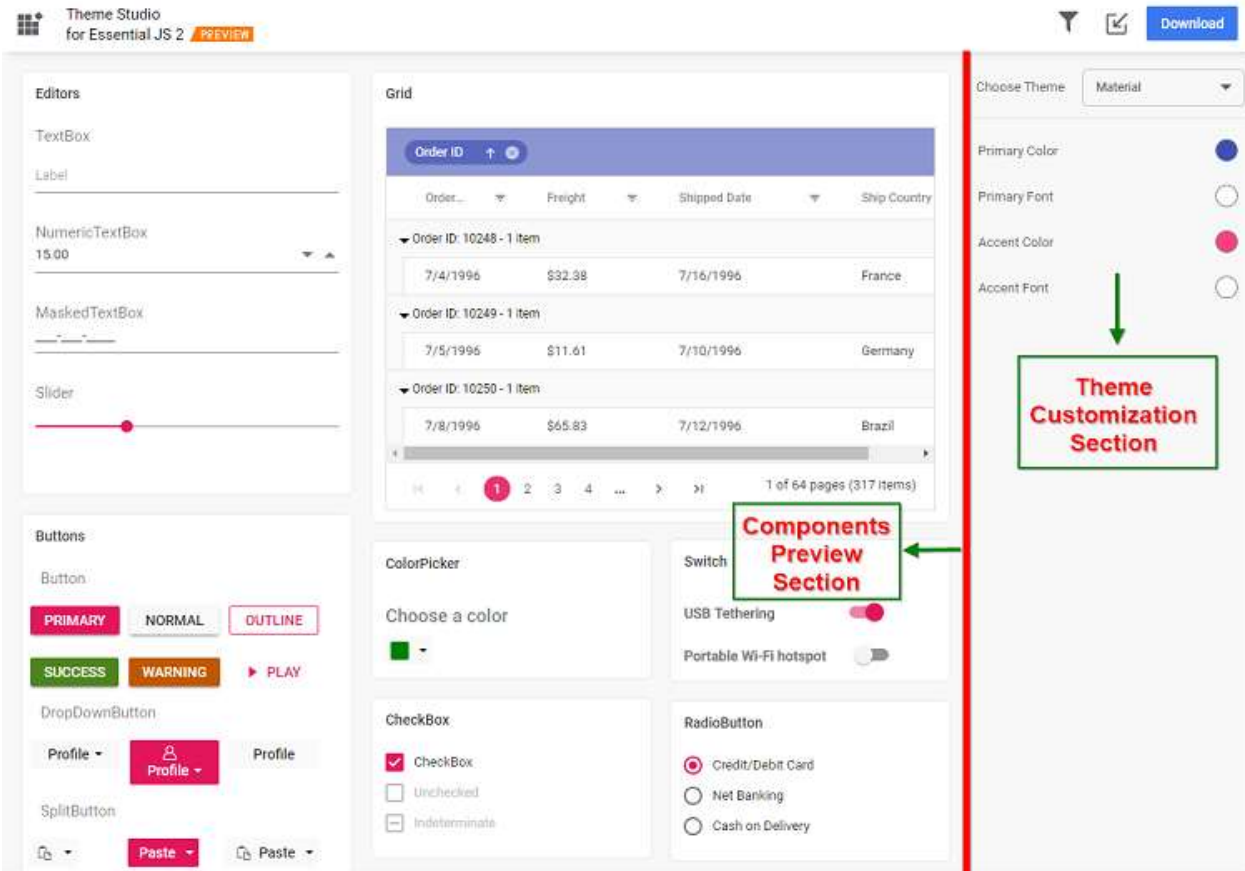

Theme Studio for Essential JS 2 can be used to customize a new theme from an existing theme. It doesn't support with Data visualization controls like Chart, Diagram, Gauge, Range Navigator, Maps.

Customizing theme color from theme studio

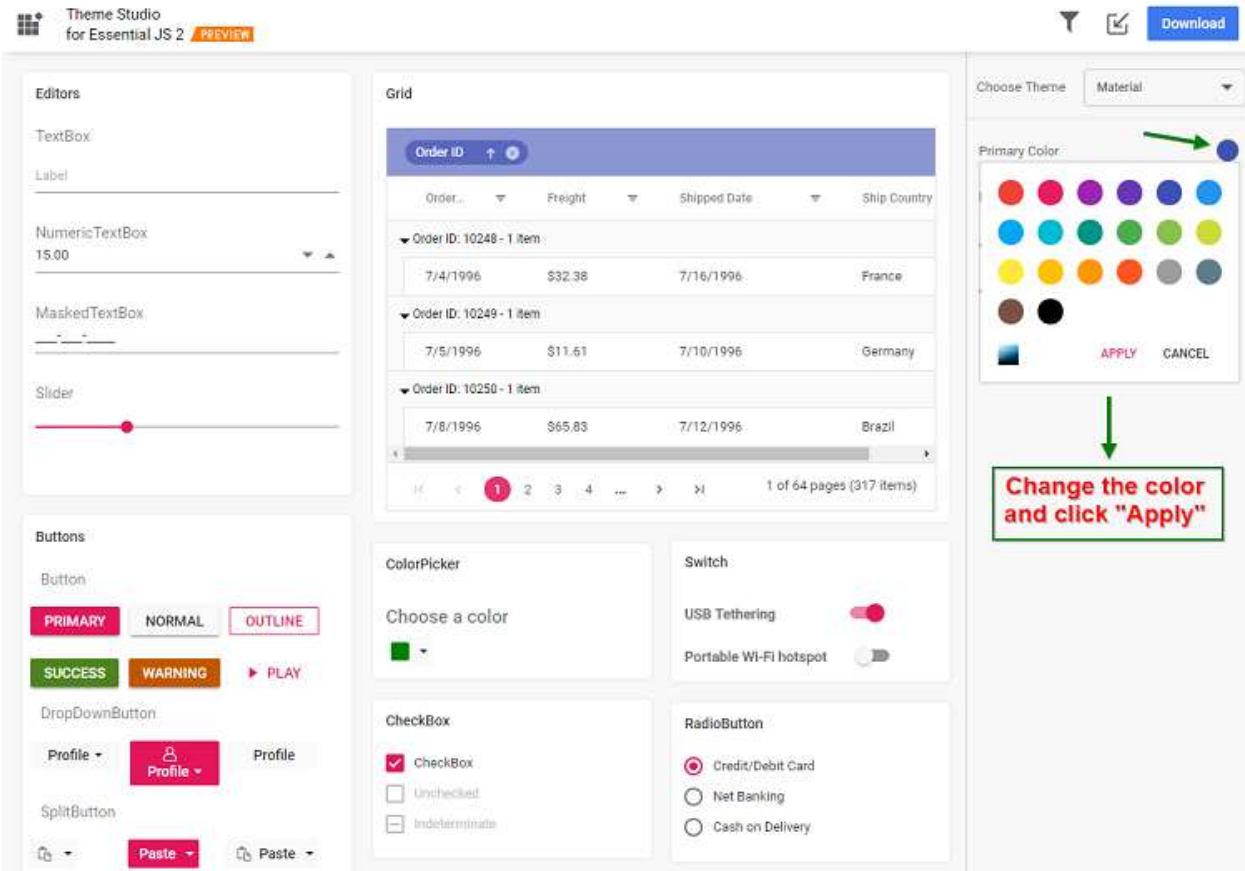

The Essential JS 2 themes are developed under the SCSS environment. Each theme has a unique common variable list. When you change the common variable color code value, it will reflect in all the Syncfusion JavaScript controls. All Syncfusion JavaScript control styles are derived from these [theme-based common variables](#). This common variable list is handled inside the theme studio application for customizing theme-based colors.

Step 1: Navigate to the theme studio application at <https://ej2.syncfusion.com/themestudio/>.

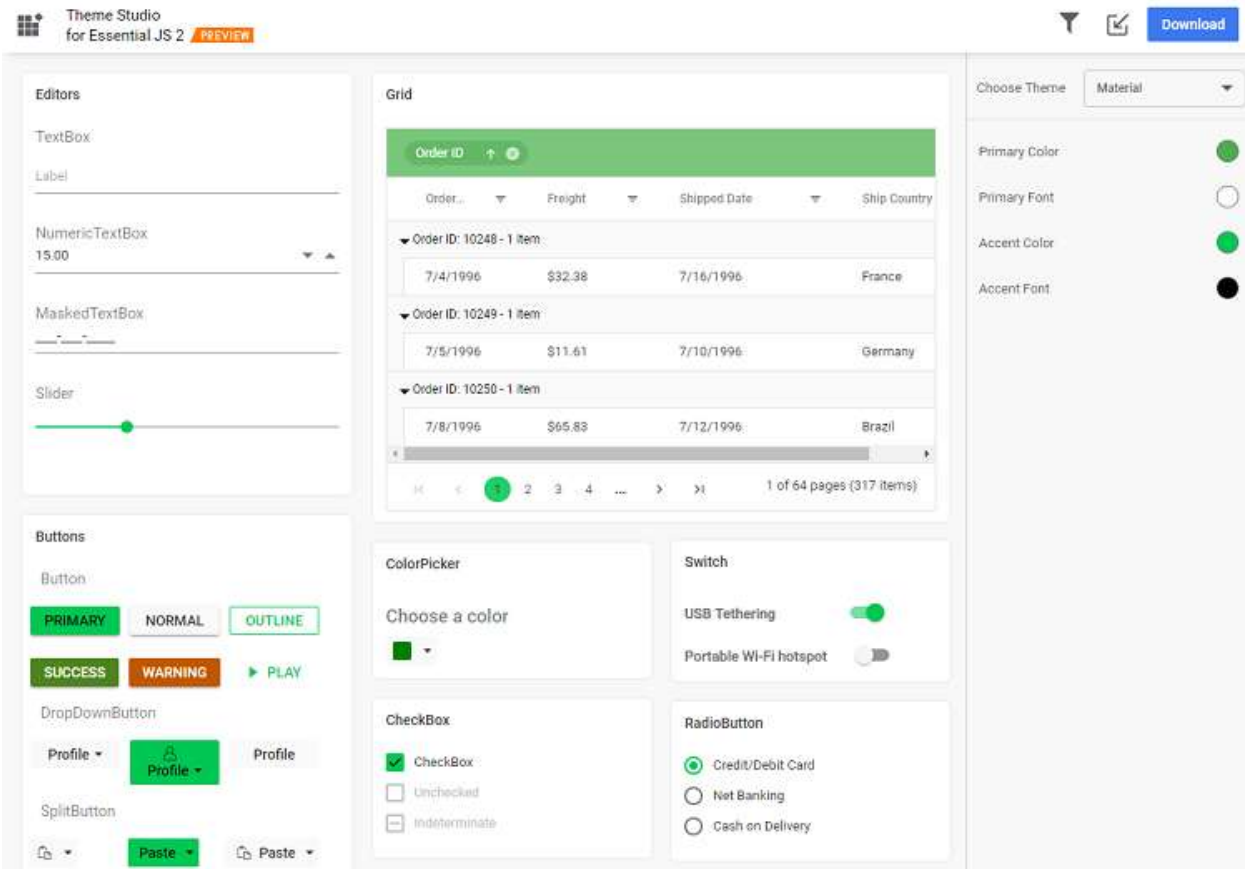

Step 2: The theme studio application page can be divided into two sections: the controls preview section on the left, and the theme customization section on the right.

Step 3: Click the color pickers in the theme customization section to select your desired colors.

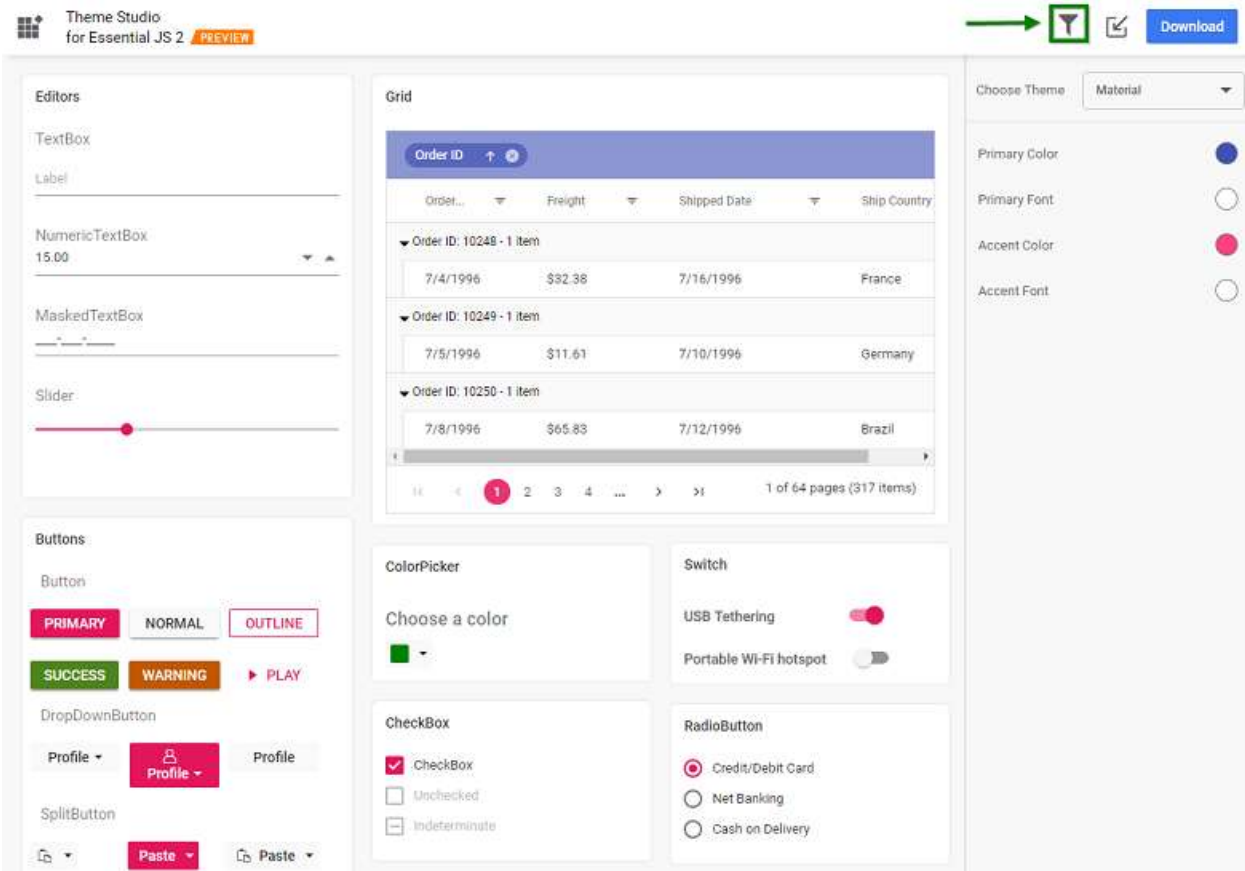

Step 4: The Syncfusion JavaScript UI controls will be rendered with the newly selected colors in the preview section, after selecting the custom color from pickers.

Filtering a specific list of controls

Using the theme studio, you can apply custom themes to a list of specific controls. This option is useful when you have integrated a selective list of Syncfusion JavaScript UI controls in your application. The theme studio will filter the selected controls and customize the final output for those controls' styles alone, reducing the final output file size.

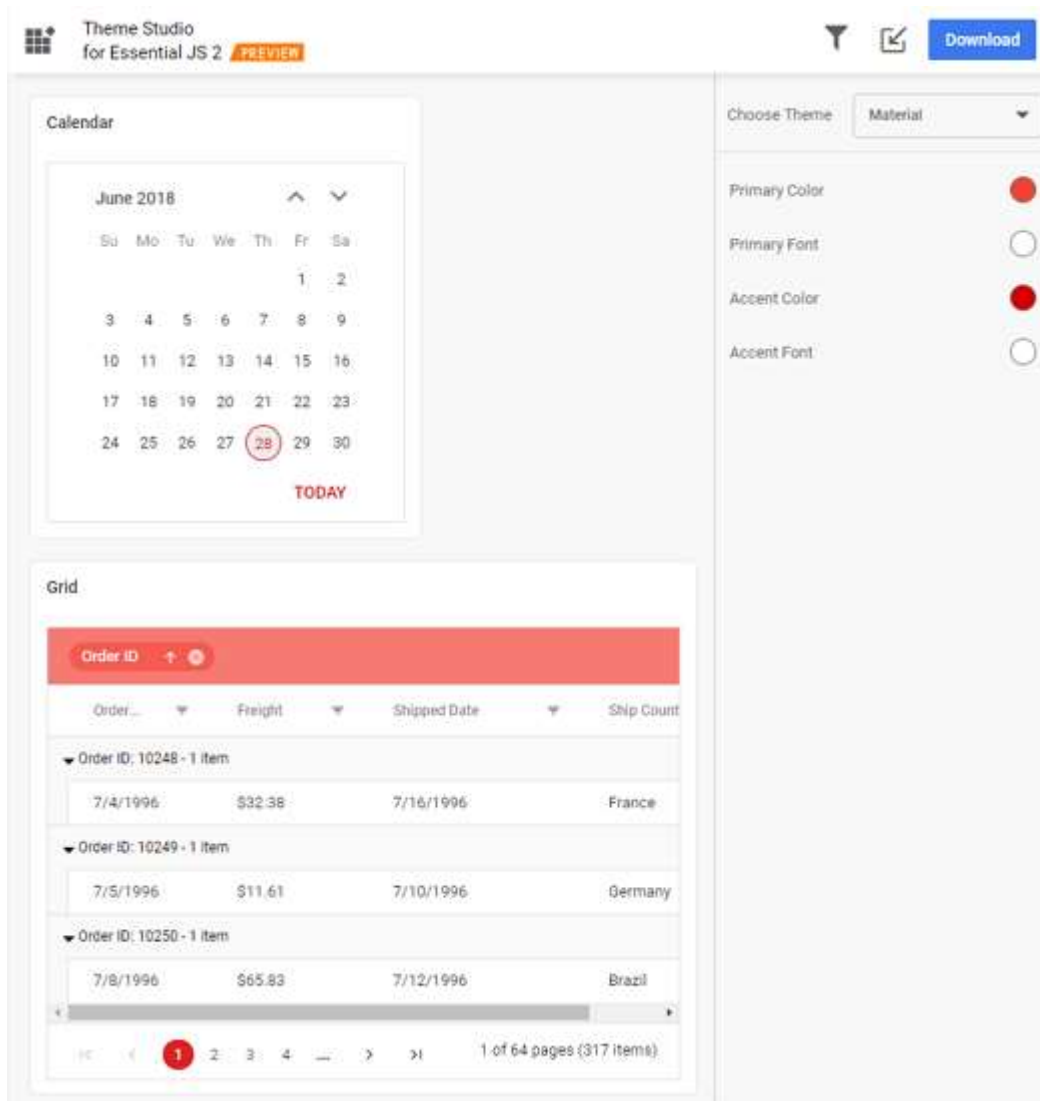

Step 1: Click the Filter icon in the top right corner and select the controls whose theme you want to customize.

Step 2: Click the Apply button in the Filter dialog. Now, only the selected controls will be rendered in the controls preview section.

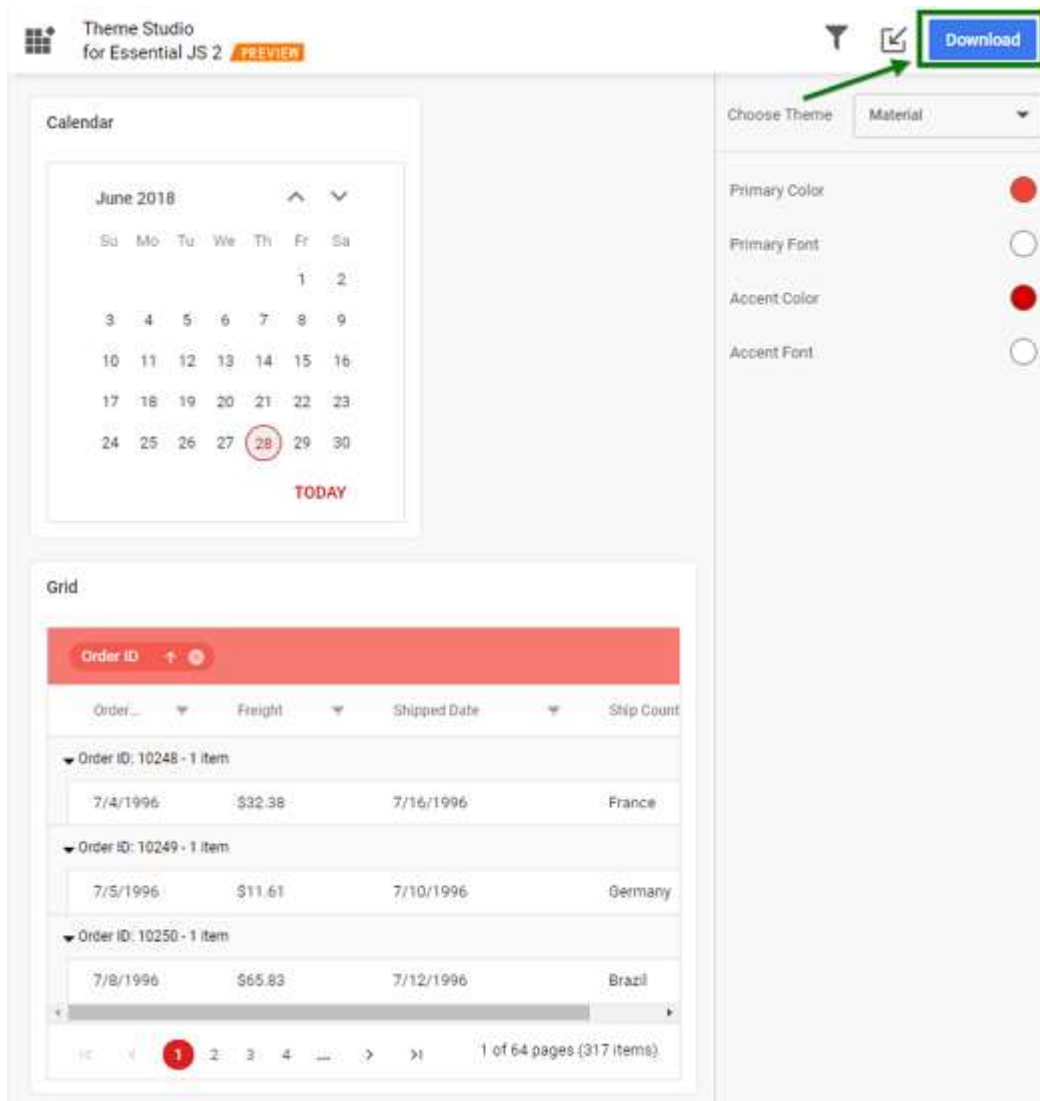

Step 3: Now you can customize the colors in the theme customization section for the controls you selected.

[Download the customized theme](#)

You can download the custom styles after customizing the theme colors.

Step 1: Click the Download button in the top right corner. The Download dialog will open.

Step 2: Assign a theme name in the File Name field and click the Download button. If your application uses both Essential JS 1 and Essential JS 2 controls, then select the Include compatibility css check box before downloading the theme. This option will generate the custom theme for Essential JS 2 compatibility styles, which are compatible as Essential JS 1 styles. Refer this [link](#) for more details about Essential JS 1 and Essential JS 2 compatibility.

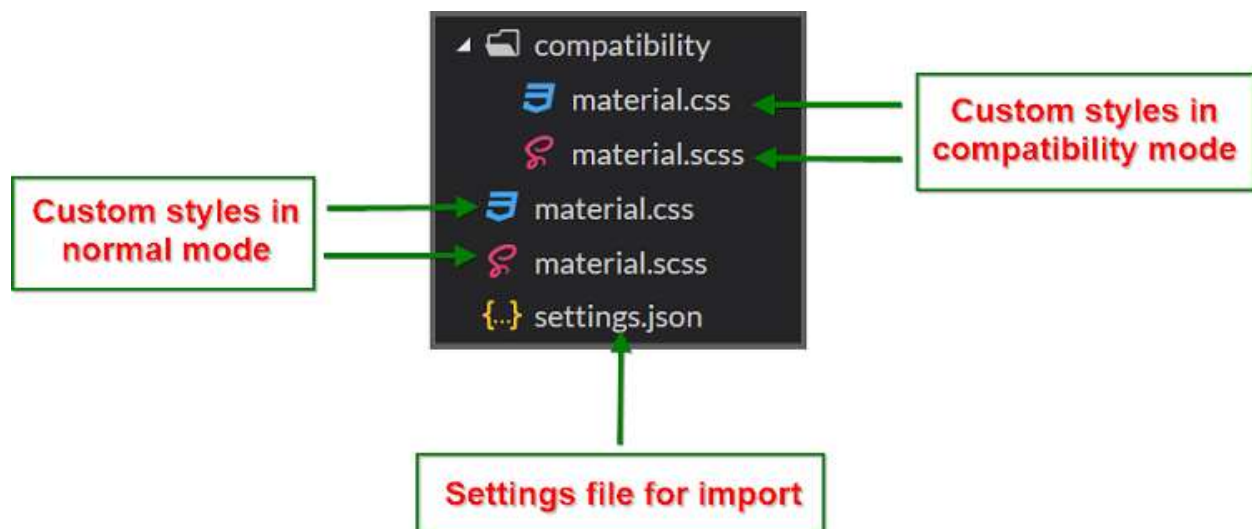

Download [X]

File Name
material

☐ Include compatibility css ⓘ

DOWNLOAD CANCEL

Step 3: The download styles will come as a zip file that contains SCSS and CSS files for the selected Syncfusion JavaScript UI controls. The current settings are stored in the `settings.json` file.

Using customized theme in a web application

You can directly use the customized CSS file in the web application.

Step 1: Copy/paste the customized CSS file from the download folder into your application at any folder.
Example: `styles\{file-name}.css`.

Step 2: Refer the customized CSS file reference in the `index.html` or `shared/_layout.cshtml` main page head section.

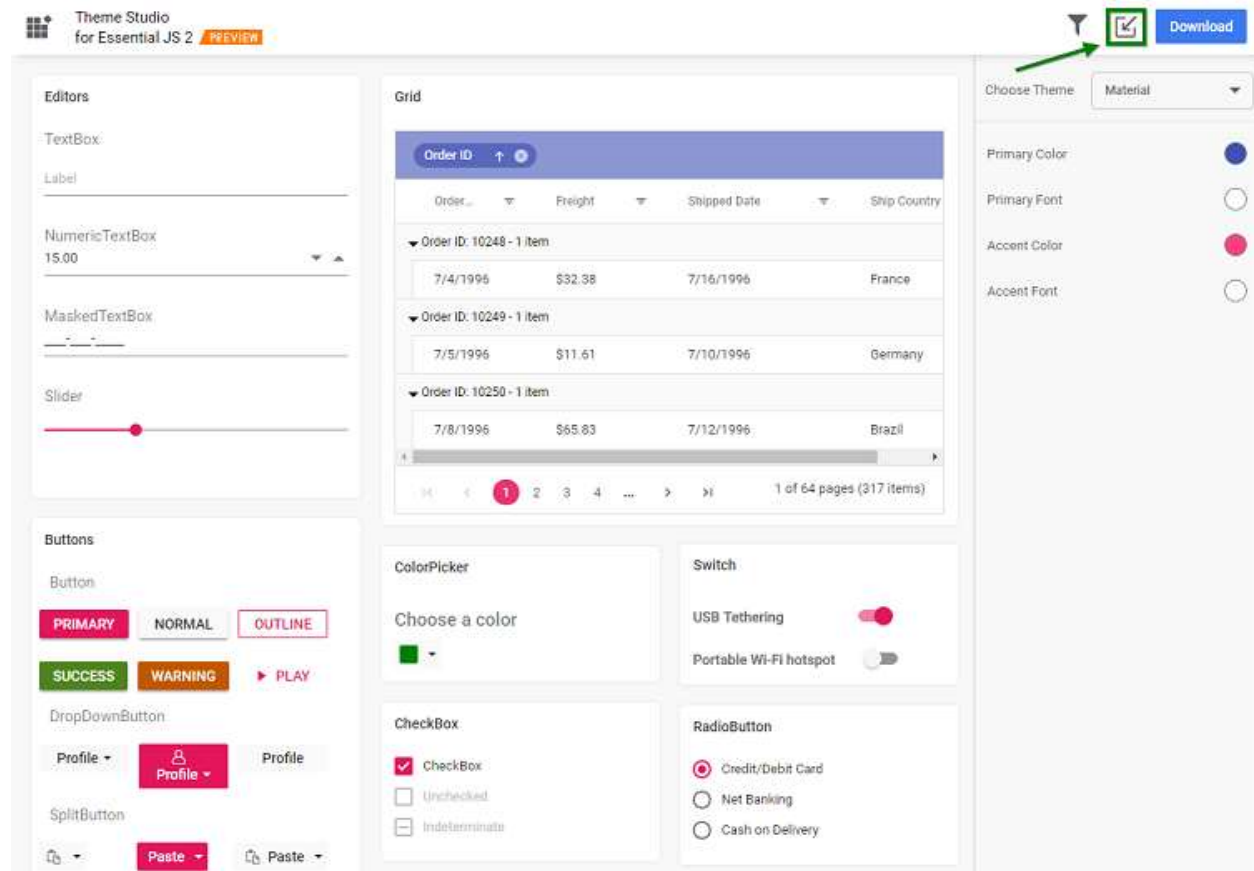

```
<head>
<link href="styles/{file-name}.css" rel="stylesheet"/>
</head>
```

If you are using Essential JS 1 and Essential JS 2 controls in a same web application, then you have to copy/paste the customized CSS file from the `compatibility` folder in the download location.

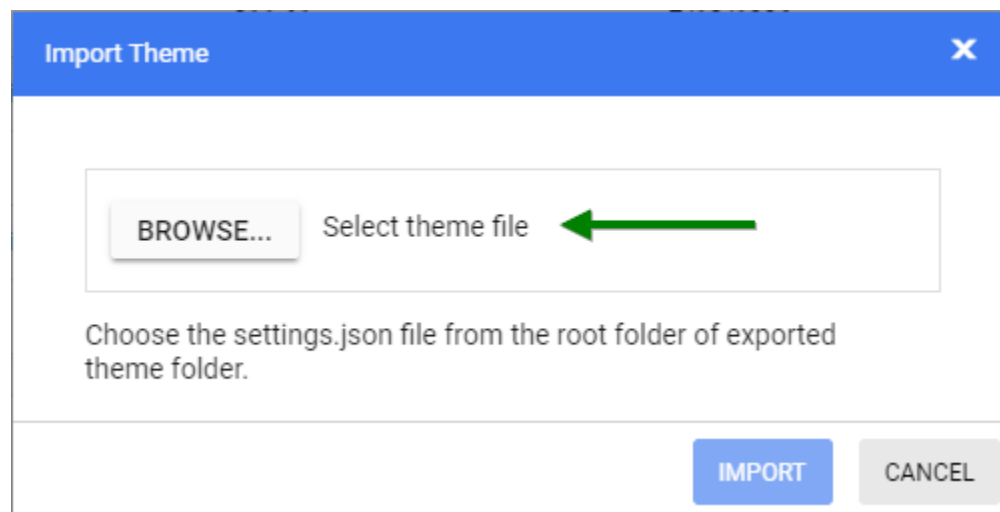

Import previously changed settings into the theme studio

When you want to change your application theme and UI design in the future, you won't need to customize the Syncfusion JavaScript UI controls from scratch in the theme studio. Just import the old `settings.json` file to review and update your stored settings in the theme studio application.

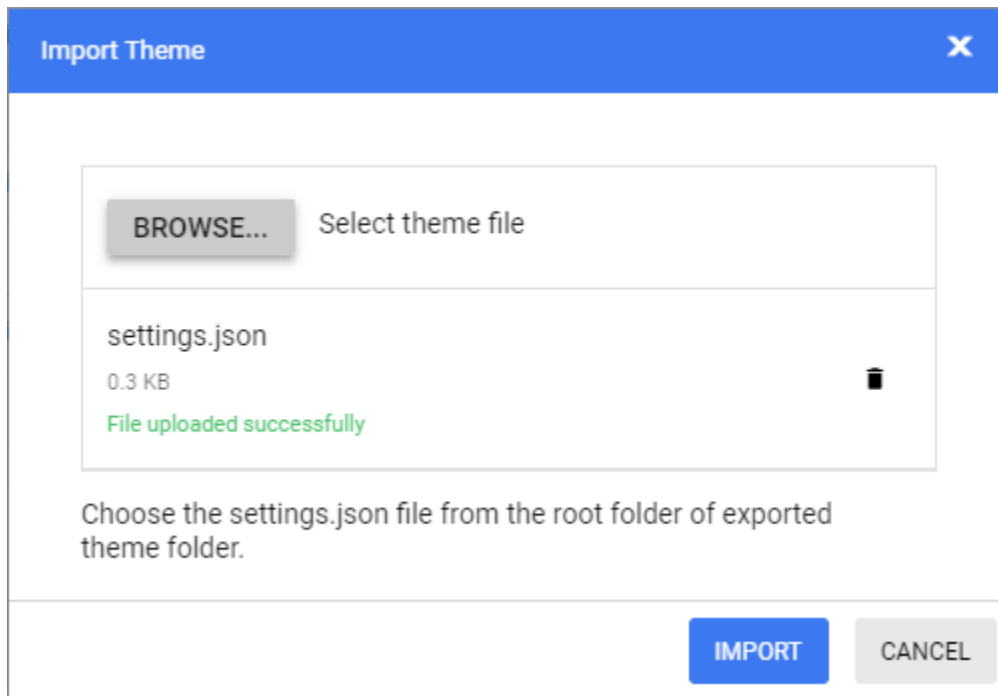

Step 1: Click the Import icon in the top right corner.

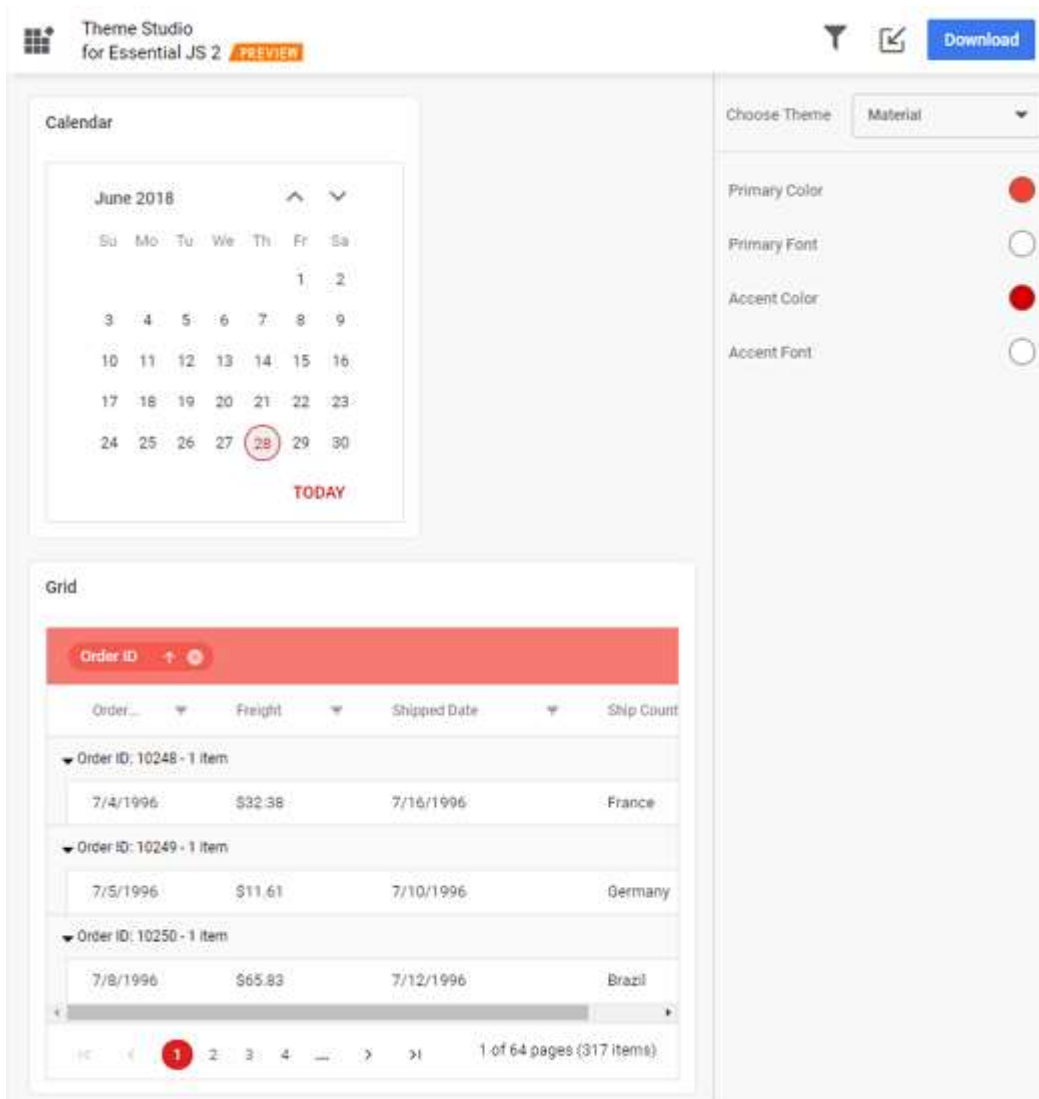

Step 2: The Import Theme dialog will open. Click the Browse button and select a `settings.json` file you exported previously.

Step 3: Click the Import button.

Step 4: The stored data will be reflected in the theme studio application. Now you can change the theme colors based on your latest design and export the theme again.

Step 5: The exported file will contain your latest changes. You can just replace the older custom style with the newer one to refresh your application.

Material 3 Theme

Material 3 is an updated theme that encompasses enhanced theming, components, and personalization features, including dynamic color capabilities. It has been specifically designed to align seamlessly with the new visual style and system UI introduced in Android 12 and above. For more detailed information, please refer to the following link: [Link to Material 3 Information](#).

Syncfusion Material 3 Theme

Syncfusion has introduced the Material theme across all EJ2 Controls. The theme includes light and dark variants and utilizes CSS variables for easy customization of control colors in CSS format. This implementation enables seamless switching between light and dark color schemes, offering users a flexible solution to suit their preferences and application needs.

Note: Please be aware that in the Material 3 theme, we utilize CSS variables with `rgb()` values for our color variables. Using hex values in this context may lead to improper functionality. For example, in previous versions of our Material theme or other themes, the primary color variable was defined as

follows: `$primary: #6200ee;`. In the Material 3 theme, the primary color variable is defined as follows: `--color-sf-primary: 98, 0, 238;`.

What are CSS Variables?

CSS variables, also known as custom properties, are a powerful feature in CSS that allows you to define reusable values and apply them throughout your stylesheets. Prefixed with "--", CSS variables can be utilized in any property value within a CSS rule. To retrieve the value of a CSS variable, the `var()` function is used. CSS variables can access the Document Object Model (DOM), enabling the creation of variables with either local or global scope. For further details, please consult the following link: [Link to CSS Variables Information](#).

How does Syncfusion Theming utilize CSS Variables?

The Material 3 theme in our system incorporates CSS variable support, utilizing CSS variables with `rgb()` values for color customization.

```
`CSS
:root {
--color-sf-black: 0, 0, 0;
--color-sf-white: 255, 255, 255;
--color-sf-primary: 103, 80, 164;
--color-sf-primary-container: 234, 221, 255;
--color-sf-secondary: 98, 91, 113;
--color-sf-secondary-container: 232, 222, 248;
--color-sf-tertiary: 125, 82, 96;
--color-sf-tertiary-container: 255, 216, 228;
--color-sf-surface: 255, 255, 255;
--color-sf-surface-variant: 231, 224, 236;
--color-sf-background: var(--color-sf-surface);
--color-sf-on-primary: 255, 255, 255;
--color-sf-on-primary-container: 33, 0, 94;
--color-sf-on-secondary: 255, 255, 255;
--color-sf-on-secondary-container: 30, 25, 43;
--color-sf-on-tertiary: 255, 255, 255;
}
```

Exploring Color Customization

Through the utilization of these CSS variables, customization of the color variables becomes remarkably straightforward. For example, to customize the primary color variable in this theme, simply modify its value in the root values.

Default primary value

```
--color-sf-black: 0, 0, 0;
--color-sf-white: 255, 255, 255;
--color-sf-primary: 103, 80, 164;
--color-sf-primary-container: 234, 221, 255;
--color-sf-secondary: 98, 91, 113;
--color-sf-secondary-container: 232, 222, 248;
--color-sf-tertiary: 125, 82, 96;
--color-sf-tertiary-container: 255, 216, 228;
--color-sf-surface: 255, 255, 255;
--color-sf-surface-variant: 231, 224, 236;
```

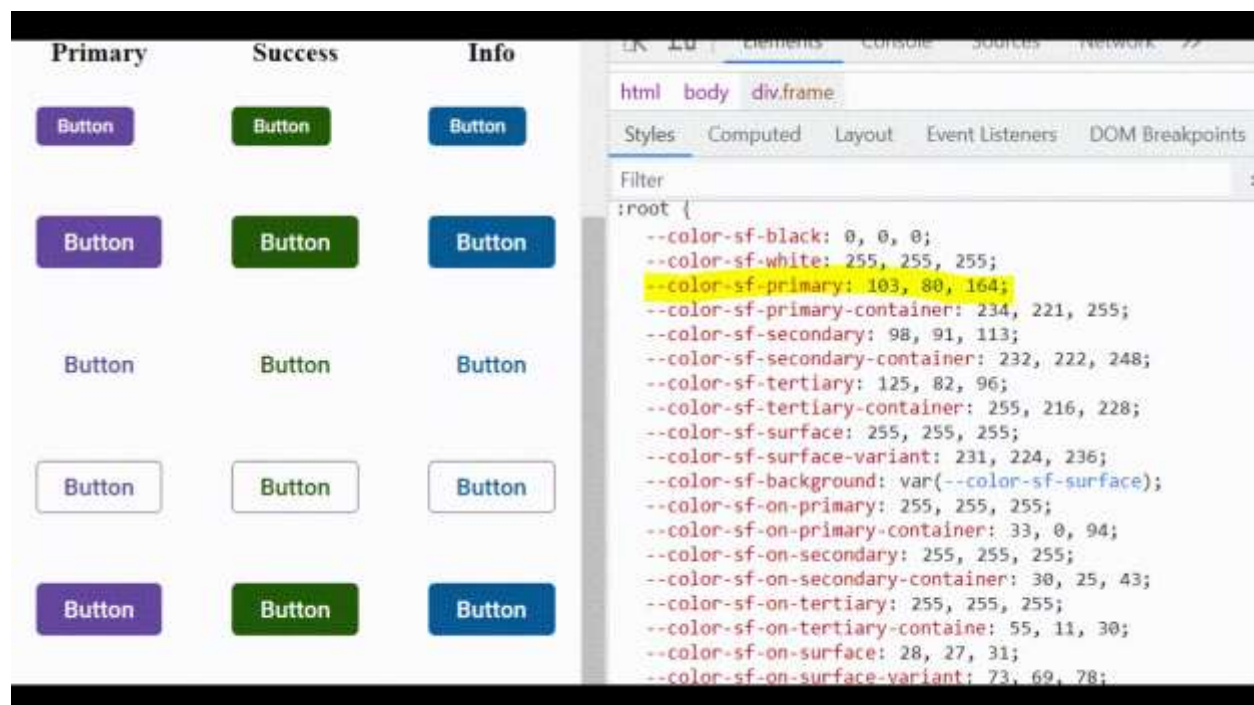

Customized primary value

```
--color-sf-black: 0, 0, 0;
--color-sf-white: 255, 255, 255;
--color-sf-primary: 236, 80, 164;
--color-sf-primary-container: 234, 221, 255;
--color-sf-secondary: 98, 91, 113;
--color-sf-secondary-container: 232, 222, 248;
--color-sf-tertiary: 125, 82, 96;
--color-sf-tertiary-container: 255, 216, 228;
--color-sf-surface: 255, 255, 255;
--color-sf-surface-variant: 231, 224, 236;
```

With this CSS variable support, you can effortlessly customize the color variable values for our EJ2 controls.

Dark mode support

The controls in our system now seamlessly transition between light and dark modes without any noticeable delay. This achievement was made by consolidating the configurations of the light theme and dark theme into [material 3 light theme](#) file.

INDEX.JS

```

var checkBoxObj = new ej.buttons.CheckBox({ label: 'Enable DarkMode',
change: onDarkMode });
checkBoxObj.appendTo('#darkmode');
function onDarkMode(e) {
    e.checked ? document.body.classList.add('e-dark-mode') :
document.body.classList.remove('e-dark-mode');
}

var btnObj = new ej.buttons.Button({ isPrimary: true });
btnObj.appendTo('#normal4');
btnObj = new ej.buttons.Button({ cssClass: 'e-success' });
btnObj.appendTo('#normal5');
btnObj = new ej.buttons.Button({ cssClass: 'e-info' });
btnObj.appendTo('#normal6');
btnObj = new ej.buttons.Button({ cssClass: 'e-warning' });
btnObj.appendTo('#normal7');
btnObj = new ej.buttons.Button({ cssClass: 'e-danger' });
btnObj.appendTo('#normal8');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Material3</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript Grid Control">
    <meta name="author" content="Syncfusion">
    <link href="./index.css" rel="stylesheet">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/material3.css"
rel="stylesheet">
    <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
    <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div style="padding: 10px; display: inline-block;">
            <input id="darkmode" type="checkbox" />
        </div>
        <div class="frame">
            <table id="basic-button">
                <tbody>
                    <tr>
                        <td><button id="normal4">Button</button></td>
                        <td><button id="normal5">Button</button></td>
                        <td><button id="normal6">Button</button></td>
                        <td><button id="normal7">Button</button></td>
                        <td><button id="normal8">Button</button></td>
                    </tr>
                </tbody>
            </table>
        </div>
    </div>
<script>
var ele = document.getElementById('container');

```

```

if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="./index.js" type="text/javascript"></script>
</body></html>

```

The above example demonstrates the appearance of an application in dark mode. By using CSS variable support, the transition between light and dark mode is smooth and visually pleasing.

`CSS

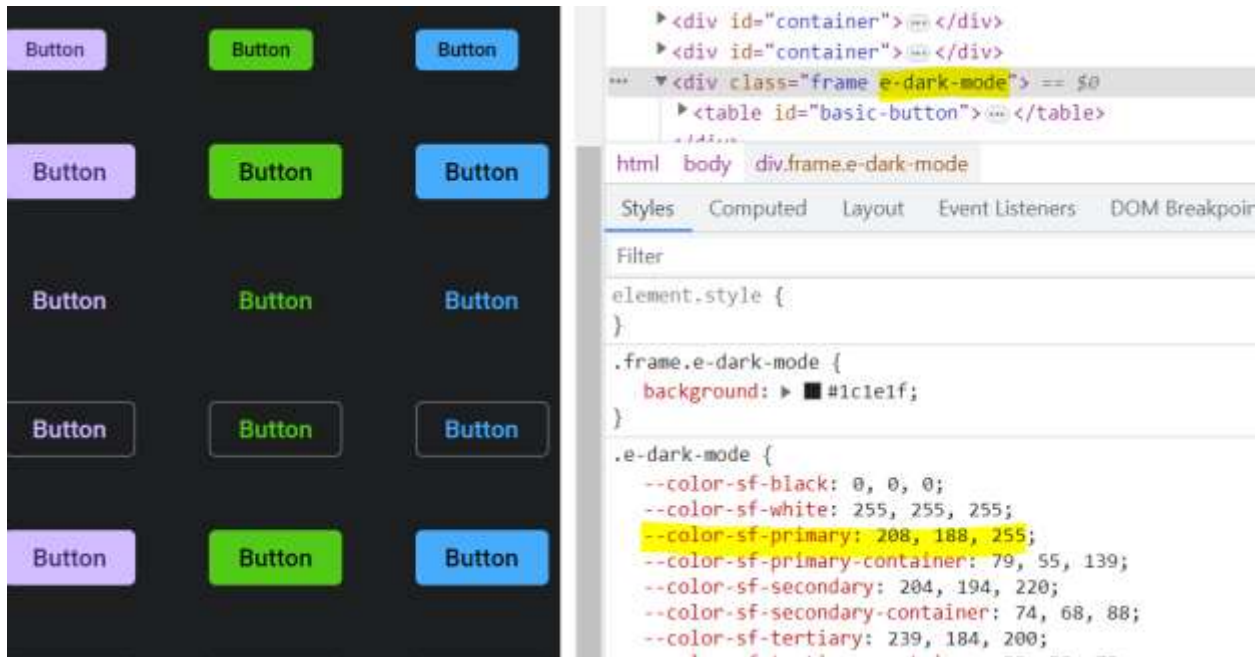

```

.e-dark-mode {
--color-sf-black: 0, 0, 0;
--color-sf-white: 255, 255, 255;
--color-sf-primary: 208, 188, 255;
--color-sf-primary-container: 79, 55, 139;
--color-sf-secondary: 204, 194, 220;
--color-sf-secondary-container: 74, 68, 88;
--color-sf-tertiary: 239, 184, 200;
--color-sf-tertiary-container: 99, 59, 72;
--color-sf-surface: 28, 27, 31;
--color-sf-surface-variant: 28, 27, 31;
--color-sf-background: var(--color-sf-surface);
--color-sf-on-primary: 55, 30, 115;
--color-sf-on-primary-container: 234, 221, 255;
--color-sf-on-secondary: 51, 45, 65;
--color-sf-on-secondary-container: 232, 222, 248;
--color-sf-on-tertiary: 73, 37, 50;
}
`

```

[How to switch to dark mode](#)

With this CSS variable support, transitioning between light and dark theme modes has become effortless. To switch to dark mode, simply add the `e-dark-mode` class to the body section of your application. Upon adding this class, the theme will seamlessly switch to dark mode. Please refer to the example image below for guidance.

ThemeStudio application

The ThemeStudio application now includes seamless integration with the Material 3 theme, offering a comprehensive solution for customization requirements. This enhancement enables users to effortlessly customize and personalize their themes.

Access the Syncfusion ThemeStudio application, featuring the Material 3 theme, via the following link:
[Link to Syncfusion ThemeStudio with Material 3 Theme](#)

Common

Accessibility in Syncfusion ##Platform_Name## controls

Accessibility overview

Accessibility in controls refers to the practice of designing and building user interface elements in a way that makes them accessible to users with disabilities. This can include a variety of things, such as making sure that text is high-contrast and easy to read, providing alternative text for images, and designing controls and interactions that can be used with a keyboard or assistive technology.

Accessibility standards

The control is said to be accessible when it is constructed in accordance with certain standards that are required to make it accessible.

The accessibility of the controls consists of the following standards and aspects:

- [ADA](#) - A law to ensure that people with disabilities have the same opportunities and access as people without disabilities.
- [WCAG 2.2](#) - The Web Content Accessibility Guidelines (WCAG) provide guidelines developed by the World Wide Web Consortium (W3C) to ensure web content is accessible to people with disabilities. WCAG 2.2 establishes a framework of accessibility principles and their associated success criteria. The level of accessibility conformance achieved by a web application is determined by the extent to which it meets these success criteria, categorized into three levels: A, AA, and AAA.

- [Section 508](#) - It is a set of guidelines for making electronic and information technology (EIT) accessible to people with disabilities. These standards apply to federal agencies in the United States, and they are based on the Web Content Accessibility Guidelines (WCAG).
- [WAI-ARIA](#) - WAI-ARIA stands for "Web Accessibility Initiative - Accessible Rich Internet Applications." It is a set of technical specifications and guidelines developed by the World Wide Web Consortium (W3C) as part of the Web Accessibility Initiative (WAI). WAI-ARIA is designed to enhance the accessibility of dynamic web content, particularly web applications and rich internet applications (RIAs), for people with disabilities. WAI-ARIA provides a set of roles, states, and properties that can be added to HTML elements to provide additional context and information about the purpose and behavior of those elements. This can help assistive technologies better understand and interpret web content and interact with web applications.
- [Keyboard navigation](#) - It refers to the ability to use a keyboard to interact with and navigate through a user interface. It is an important aspect of web accessibility, as it allows people who cannot use a mouse or other pointing device to access and use web content and applications.

Syncfusion ##Platform_Name## controls adhere to these established standards.

Accessibility compliance

The accessibility support provided by Syncfusion ##Platform_Name## controls is based on a collection of methodologies for adhering to and applying [recognized standards and technical specifications](#) to ensure an intuitive experience for people with disabilities.

There are several methodologies of accessibility validation that can be performed on the Syncfusion ##Platform_Name## controls, such as:

- The [WAI-ARIA patterns](#) are followed by the Syncfusion ##Platform_Name## controls to enable appreciable accessibility.
- Each ##Platform_Name## control is subjected to manual testing with a screen reader and also automated test cases to ensure the control's required attributes.
- Attributes are allocated and updated correctly during interaction as well. Each control has been assigned a distinct **Role** attribute and its own set of ARIA attributes defined by the [WCAG 2.2](#) specification.

In addition to the methodologies mentioned above, Syncfusion ##Platform_Name## controls are constructed to support the following accessibility aspects.

Screen reader support

A screen reader allows people who are blind or visually impaired to use a computer by reading aloud the text that is displayed on the screen. Syncfusion ##Platform_Name## controls followed the [WAI-ARIA](#) standards to work properly in the screen readers such as [Narrator](#) for Windows and [Embedded VoiceOver](#) for MAC.

Right-To-Left support

Right-to-Left (RTL) support allows applications to effectively communicate with users who use languages that are written from right to left, such as Arabic, Hebrew, etc. Syncfusion ##Platform_Name## controls support the Right-to-Left feature. Refer to the [Right-to-Left documentation](#) to learn more about this support.

Color contrast

Syncfusion `##Platform_Name##` controls come equipped with [predefined themes](#) that guarantee the presence of satisfactory color contrast, benefiting individuals with visual impairments.

Mobile device support

Syncfusion `##Platform_Name##` controls are more user-friendly and accessible to individuals using mobile devices, including those with disabilities. These are designed to be responsive, adaptable to various screen sizes and orientations, and touch-friendly.

Keyboard navigation support

Syncfusion `##Platform_Name##` controls support keyboard navigation, allowing users who rely on alternate methods to effortlessly navigate and interact with the control.

Ensuring accessibility

Ensuring the accessibility of Syncfusion `##Platform_Name##` controls is crucial for making the product inclusive and user-friendly for individuals with disabilities. This process involves various types of accessibility testing, including:

- **Automated testing:** The Syncfusion `##Platform_Name##` control's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools.
- **Manual testing:** This type of testing involves manually evaluating the Syncfusion `##Platform_Name##` controls. During manual accessibility testing, testers will ensure accessibility using the screen readers such as [Narrator](#) for Windows and [Embedded VoiceOver](#) for MAC.

Syncfusion `##Platform_Name##` controls will keep improving when there is anything required. It also involves client feedback to make the control more accessible.

Accessibility support for specific controls

Consult the control-specific documents below for detailed information about how Syncfusion `##Platform_Name##` controls ensure compliance with accessibility standards, encompassing Section 508, WAI-ARIA, WCAG 2.2, keyboard navigation, and more.

Animation in ##Platform_Name##

The **Animation** is used to perform animation effects on HTML elements by running a sequence of frames. It can be used to enhance the user experience.

Syncfusion [Animation](#) library supports animating the HTML elements using the [animate](#) method. This method adds the `e-animate`, `e-animation-id` attributes, and CSS style to the HTML element and removes them after the animation effect is completed.

Animation effects

An animation effect refers to the visual change that occurs over a period of time in HTML elements. The [Animation](#) library supports different types of animation [effects](#). The [name](#) property is used to specify the animation effect of an animation.

Here is an example code snippet using the `FadeOut` and `ZoomOut` animation effects:

INDEX.JS

```
var animation = new ej.base.Animation();
animation.animate('#element1', { name: 'FadeOut' });
animation.animate('#element2', { name: 'ZoomOut' });
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
```

```

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element1"></div>
        <div id="element2"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Animation duration

Animation [duration](#) is the animation property that specifies the length of time that an animation should take to complete. The animation duration is specified in milliseconds (ms) and determines the total amount of time that an animation should run.

For example, if an animation has a duration of 2 seconds, it will take 2 seconds to complete from start to finish. The duration of an animation affects the overall pace of the animation and can be adjusted to match the desired speed and style of the animation.

The value of the animation duration can be adjusted to change the speed of the animation, with shorter durations resulting in faster animations and longer durations resulting in slower animations.

Here is an example code snippet using the animation effects with a duration of **5000** milliseconds:

INDEX.JS

```

var animation = new ej.base.Animation({ duration: 5000 });
animation.animate('#element1', { name: 'FadeOut' });
animation.animate('#element2', { name: 'ZoomOut' });

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">

```

```

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element1"></div>
        <div id="element2"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Animation delay

The animation [delay](#) is the animation property that specifies the amount of time to wait before starting an animation. The animation delay is specified in milliseconds (ms) and determines the amount of time that should elapse before an animation begins.

For example, if an animation has a delay of 2 seconds, it will wait for 2 seconds before starting. This can be useful in creating more complex animations, where multiple elements are animated in sequence, or in creating animations that start only after a user interaction has taken place.

Here is an example code snippet using the animation effects with a delay of **2000** milliseconds:

INDEX.JS

```

var animation = new ej.base.Animation({ delay: 2000, duration: 5000 });
animation.animate('#element1', { name: 'FadeOut' });
animation.animate('#element2', { name: 'ZoomOut' });

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">

    <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
    <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>

```

```
<body>

  <div id="container">
    <div id="element1"></div>
    <div id="element2"></div>
  </div>
</script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Enable or disable animation globally

Enable or disable animation for all ##Platform_Name## controls globally by using the `setGlobalAnimation` method with one of the below options:

- `GlobalAnimationMode.Enable` - Enables the animation for all components, regardless of the individual component's animation settings.
- `GlobalAnimationMode.Disable` - Disables the animation for all components, regardless of the individual component's animation settings.
- `GlobalAnimationMode.Default` - Animation is enabled or disabled based on the component's animation settings.

In the below code snippet, animation is disabled.

INDEX.JS

```
ej.base.setGlobalAnimation(ej.base.GlobalAnimationMode.Disable);
```

`setGlobalAnimation` method controls script-level animations only, and it is not applicable for direct CSS-level animations (animations defined from CSS classes or properties).

Right-To-Left support in Syncfusion JavaScript Controls

Right-to-Left (RTL) support allows applications to effectively communicate with users who use languages that are written from right to left, such as Arabic, Hebrew, etc.

Syncfusion JavaScript (ES5) controls support for right-to-left (RTL) by setting the `enableRtl` property to `true`. This adds the class name `e-rtl` to the control element and renders all Syncfusion JavaScript controls in a right-to-left direction.

Enable RTL for all controls

To enable Right-To-Left (RTL) support for all controls, users can set the `enableRtl` property directly in their application. Here is an example code snippet using the `ListView` control:

INDEX.JS

```
// Enables Right to left alignment for all controls
ej.base.enableRtl(true);
var rtlListObj = new ej.lists.ListView({
```

```

        dataSource: data,
        headerTitle: 'کاری',
        showHeader: true,
        height: '350px'
    });
    rtlListObj.appendTo('#listview');

```

INDEX.HTML

```

<!DOCTYPE html><html><head>
    <meta charset="UTF-8">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
lists/styles/material.css" rel="stylesheet">

    <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
    <script src="es5-datasource.js" type="text/javascript"></script>
    <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="listview"></div>
    </div>
    <script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
    </script>
    <script src="index.js" type="text/javascript"></script>
</body></html>

```

Enable RTL for an individual control

To enable Right-To-Left (RTL) support for an individual control, users can set the [enableRtl](#) property in the control's options. Here is an example code snippet using the ListView control:

INDEX.JS

```

var rtlListObj = new ej.lists.ListView({
    dataSource: data,
    enableRtl: true,
    headerTitle: 'کاری',
    showHeader: true,
    height: '350px'
});
rtlListObj.appendTo('#listview');

```

INDEX.HTML

```

<!DOCTYPE html><html><head>
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
lists/styles/material.css" rel="stylesheet">

```

```

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="es5-datasource.js" type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="listview"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

State Persistence in Syncfusion JavaScript controls

Syncfusion JavaScript controls support persisting their state across page refreshes or navigation. To enable this feature, set the [enablePersistence](#) property to true for the desired control. This stores the control's state in the browser's `localStorage` object on the `unload` event of the page. For example, the [enablePersistence](#) property can be set for the Grid control, as shown in the following code snippet.

INDEX.JS

        <div id="Grid"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

State Persistence supported controls and properties

The following table illustrates the list of Syncfusion JavaScript controls that are supported with state persistence and the properties that are stored in the `localStorage`.

<!-- markdownlint-disable MD033 -->

control Name	Properties
Grid	<ul style="list-style-type: none"> Columns filterSettings searchSettings groupSettings pageSettings selectedRowIndex scrollPosition
Accordion	<ul style="list-style-type: none"> expandedIndices
Tabs	<ul style="list-style-type: none"> selectedItem
Schedule	<ul style="list-style-type: none"> currentView selectedDate scrollLeft scrollTop
Kanban	<ul style="list-style-type: none"> columns dataSource swimlaneToggleArray
Chart	<ul style="list-style-type: none"> zoomFactor zoomPosition
Maps	<ul style="list-style-type: none"> zoomSettings
Pivot Table	<ul style="list-style-type: none"> dataSourceSettings pivotValues gridSettings chartSettings displayOption
TreeGrid	<ul style="list-style-type: none"> columns pageSettings searchSettings filterSettings selectedRowIndex sortSettings
Switch, Checkbox	<ul style="list-style-type: none"> checked
RadioButton	<ul style="list-style-type: none"> checked

	<ul style="list-style-type: none"> value
ColorPicker, ListBox, In-placeEditor, RichTextEditor, Autocomplete, Calendar, ComboBox, DatePicker, DropDownList, MaskedTextBox, NumericTextBox, Textbox, TimePicker, Multiselect, DateTimePicker, Slider, Dropdown Tree	<ul style="list-style-type: none"> value
QueryBuilder	<ul style="list-style-type: none"> rule
Splitter	<ul style="list-style-type: none"> paneSettings

Template Engine

Syncfusion JavaScript (Essential JS 2) has built-in template engine which provides options to compile template string into a executable function. Then the generated executable function can be used for rendering DOM element using desired data.

Compiling

`compile` method from `ej2-base` can be used to convert our template strings into executable functions.

INDEX.JS

```
// data
var data = { name: 'Aston Martin' };
// Compiling template string into executable function
var getDOMString = ej.base.compile('<div>${name}</div>');
// Using generated function to get output element collection
var output = getDOMString(data);
// append html collection to element
document.getElementById('element').appendChild(output[0]);
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
```

```

        <div id="element"></div>
    </div>
</script>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

To enable strict Content Security Policy (CSP), it is recommended to utilize the [function template](#) approach instead of the string template.

Available template syntax

Name	Syntax	Description
---	---	---
Expression	<div>\${name}</div>	We have expression evolution as like ES6 expression string literals.
Dot Variable Access	<div>\${person.info.name}</div>	Access the json variable with dot notation.
Variable Function	<div>\${name.toUpperCase()}</div>	Utilize the variable function example, name.toUpperCase()
Window Function	<div>\${getCurrentTime()}</div>	Use window function inside template. Note: Here, getCurrentTime() is a function that defined in the window object.
Custom Helper Function	<div>\${convertToCurrency()}</div>	Use function that passed in helper function.
IF Else Statement	<div> \${if(gender==="male")} Male \${else} Female \${/if} </div>	Branching statement in Template.
For Statement	<div> \${for(mark of marks)} \${mark} \${/for} </div>	Use for looping inside template.
For Index value access	<div> \${for(mark of marks)} \${markIndex} \${/for} </div>	Get the index value of item while using for statement. Use the variable Index that suffixed with loop item name.

Custom helper

Custom helper function can be defined and passed to `compile` function. Refer to the following example.

INDEX.JS

```

var customHelper = {
    upperCase: function upperCase(str) {
        return str.toUpperCase();
    }
};

```

```

var data = { name: 'Aston Martin' };
var getDOMString = ej.base.compile('<div>${upperCase(name)}</div>',
customHelper);
let opElem = getDOMString(data);
document.getElementById('element').appendChild(opElem[0]);

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Template in Syncfusion ##Platform_Name## controls

Syncfusion JavaScript controls are rendered with a pre-defined layout or structure that is used to define how the control should be rendered on the user interface. The user wants to customise the appearance of the control and add functionality that is specific to the needs of the application. Syncfusion JavaScript controls have the option to achieve this using template support. A template can contain a variety of elements, depending on the context in which it is being used.

Types of templates

Syncfusion JavaScript controls have two types of templates, such as:

- [String template](#)
- [Script template](#)
- [Function template](#)

String template

Users can add templates to Syncfusion JavaScript controls by using **string literals** and JavaScript expressions. Using this approach, the template string is passed to the library's template engine, which parses the string and generates the corresponding HTML elements along with the data bindings.

The template string can be added directly to the **template** property of the control. Refer to the following code snippet.

INDEX.JS

```
var grid = new ej.grids.Grid({
  columns: [
    { field: 'OrderID', headerText: 'Order ID', textAlign: 'Right', width:
125 },
    { field: 'CustomerName', headerText: 'Customer Name', width: 125 },
    { headerText: 'ShipCountry', template: '<div>${ShipCountry}</div>',
width: 125 },
  ],
  dataSource: [
    { OrderID: 10248, ShipCountry: "France", CustomerName: "Paul Henriot" },
    { OrderID: 10249, ShipCountry: "Germany", CustomerName: "Karin Josephs"
},
    { OrderID: 10250, ShipCountry: "Brazil", CustomerName: "Mario Pontes" },
    { OrderID: 10251, ShipCountry: "France", CustomerName: "Mary Saveley" }
  ],
  width: 'auto',
  height: 359
});
grid.appendTo('#Grid');
```

INDEX.HTML

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>EJ2 Grid</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript Grid Control">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/material.css"
rel="stylesheet">
  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>
  <div id="container">
    <div id="Grid"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
```

```

}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Script template

A script template is a type of template that uses a scripting language, such as JavaScript, to define the structure and layout of the content that is displayed in the control. These template elements can be defined in the `script` tag along with the unique identifier. The script template's identifier needs to be mapped to the corresponding control's template property along with the fragment identifier (#). Refer to the below code sample.

Add the below HTML template to the `index.html` file.

```

`html
<script id="customTemplate" type="text/x-template">
<tr>
<td class="photo">
${EmployeeID}
</td>
<td class="details">

```

First Name	\${FirstName}
Last Name	\${LastName}
Title	\${Title}
Country	\${Country}

```

</td>
</tr>
</script>
`

```

Here, the script template identifier (customTemplate) is assigned to the `template` property of the Grid control. Refer to the following code snippet.

INDEX.JS

```

var grid = new ej.grids.Grid({
  dataSource: employeeData,
  rowTemplate: '#customTemplate',
  columns: [
    { headerText: 'Employee ID', width: 150, textAlign: 'Center', field: 'OrderID' },
    { headerText: 'Employee Details', width: 300, field: 'EmployeeID' }
  ]
});

```

```

    ],
    height: 315
  });
grid.appendTo('#Grid');

```

INDEX.HTML

```

<!DOCTYPE html>
<html lang="en">

      <td class="photo">
        ${EmployeeID}
      </td>
      <td class="details">
        <table class="CardTable" cellpadding="3" cellspacing="2">
          <colgroup>
            <col width="50%">
            <col width="50%">
          </colgroup>
          <tbody>
            <tr>
              <td class="CardHeader">First Name </td>
              <td>${FirstName} </td>
            </tr>
            <tr>
              <td class="CardHeader">Last Name</td>
              <td>${LastName} </td>
            </tr>
            <tr>
              <td class="CardHeader">Title
                </td>
              <td>${Title}
                </td>
            </tr>
            <tr>
              <td class="CardHeader">Country
                </td>
              <td>${Country}

```

```

        </td>
      </tr>
    </tbody>
  </table>
</td>
</tr>
</script>

<div id="container">
  <div id="Grid"></div>
</div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Function template

The function template approach is compatible with the strict guidelines of [Content-Security-Policy \(CSP\)](#). In the application, JavaScript functions with [string literals](#) can be used to add templates in the Syncfusion JavaScript (ES5) controls. This approach eliminates the need for the `unsafe-eval` keyword in the meta tag of project pages. It is essential to convert all inline string and script templates into function templates that comply with the [Content-Security-Policy \(CSP\)](#) guidelines in order to avoid potential security risks and enhance the overall safety of the application.

Lets discuss about converting the existing [string template](#) and [script template](#) into a function template approach.

Convert the existing string template into function template

To convert the existing [string template](#) into function template, create a function template and define the template using [template literals](#) enclosed in backticks. Add the following function template to the `index.html` file.

```
`js
```

```
var customTemplate = (data) => <div class="template">${data.ShipCountry}</div>
```

```
,
```

Here, the function template identifier (customTemplate) is assigned to the `template` property of the Grid control. Refer to the following code snippet.

INDEX.JS

```

//function template
var customTemplate = (data) => `<div
class="template">${data.ShipCountry}</div>`
var grid = new ej.grids.Grid({
  columns: [
    { field: 'OrderID', headerText: 'Order ID', textAlign: 'Right', width:
125 },
    { field: 'CustomerName', headerText: 'Customer Name', width: 125 },
    { headerText: 'ShipCountry', template: customTemplate, width: 125 },

```

```

    ],
    dataSource: [
      { OrderID: 10248, ShipCountry: "France", CustomerName: "Paul Henriot" },
      { OrderID: 10249, ShipCountry: "Germany", CustomerName: "Karin Josephs" },
    ],
    { OrderID: 10250, ShipCountry: "Brazil", CustomerName: "Mario Pontes" },
    { OrderID: 10251, ShipCountry: "France", CustomerName: "Mary Saveley" }
  ],
  width: 'auto',
  height: 359
});
grid.appendTo('#Grid');

```

INDEX.HTML

```

<!DOCTYPE html>
<html lang="en">
<head>
  <title>EJ2 Grid</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript Grid Control">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/material.css"
rel="stylesheet">
  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>
  <div id="container">
    <div id="Grid"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Convert the existing script template into function template

To convert the existing [script template](#) into function template, create a function template and define the template using [template literals](#) enclosed in backticks. Add the following function template to the `index.js` file.

```

`js
var customTemplate = (data) => `<tr>
<td class="photo">
${data.EmployeeID}

```

</td>

<td class="details">

First Name	\${data.FirstName}
Last Name	\${data.LastName}
Title	\${data.Title}
Country	\${data.Country}

</td>

</tr>

,

Here, the function template identifier (customTemplate) is assigned to the **template** property of the Grid control. Refer to the following code snippet.

INDEX.JS

```
var customTemplate = (data) => `<tr>
  <td class="photo">
    ${data.EmployeeID}
  </td>
  <td class="details">
    <table class="CardTable" cellpadding="3" cellspacing="2">
      <colgroup>
        <col width="50%">
        <col width="50%">
      </colgroup>
      <tbody>
        <tr>
          <td class="CardHeader">First Name </td>
          <td>${data.FirstName} </td>
        </tr>
        <tr>
          <td class="CardHeader">Last Name</td>
          <td>${data.LastName} </td>
        </tr>
        <tr>
          <td class="CardHeader">Title</td>
          <td>${data.Title}</td>
        </tr>
        <tr>
          <td class="CardHeader">Country</td>
          <td>${data.Country}</td>
        </tr>
      </tbody>
    </table>
  </td>
</tr>`;
var grid = new ej.grids.Grid({
  dataSource: employeeData,
```

```

    rowTemplate: customTemplate,
    columns: [
      { headerText: 'Employee ID', width: 150, textAlign: 'Center', field:
'OrderID' },
      { headerText: 'Employee Details', width: 300, field: 'EmployeeID' }
    ],
    height: 315
  });
grid.appendTo('#Grid');

```

INDEX.HTML

```

<!DOCTYPE html>
<html lang="en">
<head>

}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Getting started with Localization

Localization library allows you to localize the text content of the Syncfusion React UI Components. This is useful if you want to display the UI in a language other than English.

Loading translations

To load a translation object in your application, you can use the load function from the @syncfusion/ej2-base module. This function takes an object that contains the translations for various languages, with the keys being the language codes and the values being the translation objects.

INDEX.JS

```

ej.base.L10n.load({
  'de-DE': {

```

```

        'grid': {
            'EmptyRecord': 'Keine Aufzeichnungen angezeigt',
            'GroupDropArea': 'Ziehen Sie einen Spaltenkopf hier, um die
Gruppe ihre Spalte',
            'UnGroup': 'Klicken Sie hier, um die Gruppierung aufheben',
            'EmptyDataSourceError': 'DataSource darf bei der Erstaustlastung
nicht leer sein, da Spalten aus der dataSource im AutoGenerate
Spaltenraster',
            'Item': 'Artikel',
            'Items': 'Artikel'
        },
        'pager': {
            'currentPageInfo': '{0} von {1} Seiten',
            'totalItemsInfo': '({0} Beiträge)',
            'firstPageTooltip': 'Zur ersten Seite',
            'lastPageTooltip': 'Zur letzten Seite',
            'nextPageTooltip': 'Zur nächsten Seite',
            'previousPageTooltip': 'Zurück zur letzten Seit',
            'nextPagerTooltip': 'Zum nächsten Pager',
            'previousPagerTooltip': 'Zum vorherigen Pager'
        }
    });
ej.grids.Grid.Inject(ej.grids.Page, ej.grids.Group);
var grid = new ej.grids.Grid({
    dataSource: data,
    locale: 'de-DE',
    allowGrouping: true,
    allowPaging: true,
    pageSettings: { pageSize: 6 },
    columns: [
        { field: 'OrderID', headerText: 'Order ID', textAlign: 'Right',
width: 120 },
        { field: 'CustomerID', headerText: 'Customer ID', width: 150 },
        { field: 'ShipCity', headerText: 'Ship City', width: 150 },
        { field: 'ShipName', headerText: 'Ship Name', width: 150 }
    ],
    height: 220
});
grid.appendTo('#Grid');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

</head>
<body>

    <div id="container">
        <div id="Grid"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Changing current locale

The current locale can be changed for all the Syncfusion React UI Components in your application by invoking `setCulture` function with your desired culture name.

```

`ts
import {L10n, setCulture} from '@syncfusion/ej2-base';
L10n.load({
  'fr-BE': {
    'Button': {
      'id': 'Numéro de commande',
      'date': 'Date de commande'
    }
  }
})

```

```
});
setCulture('fr-BE');
`
```

Note: Before changing a culture globally, you need to ensure that locale text for the concerned culture is loaded through `L10n.load` function.

Internationalization

The `Internationalization` library provides support for formatting and parsing date and number objects using the official [Unicode CLDR](#) JSON data. The `en-US` locale is set as default *culture* and `USD` is set as default *currencyCode* for all Syncfusion JavaScript UI controls.

Loading culture data

It requires the following CLDR data to be load using `loadCldr` function for cultures other than `en-US`.

File Name	Path
ca-gregorian	cldr/main/en/ca-gregorian.json
timeZoneNames	cldr/main/en/timeZoneNames.json
numbers	cldr/main/en/numbers.json
numberingSystems	cldr/supplemental/numberingSystems.json
currencies	cldr/main/en/currencies.json

Note: For `en`, dependency files are already loaded in the library.

Installing CLDR data

CLDR data is available as npm package. So, we can install it through below command to our package.

```
`bash
npm install cldr-data
`
```

Binding to i18n library

```
`ts
import { loadCldr } from '@syncfusion/ej2-base';
loadCldr(enNumberData, entimeZoneData);
`
```

Changing global culture and currency code

To set the default culture and the currency code for all Syncfusion JavaScript UI controls, you can use the methods `setCulture` for setting the default locale and `setCurrencyCode` for setting the currency code.

```
`ts
import { setCulture, setCurrencyCode } from '@syncfusion/ej2-base';
setCulture('ar');
```

```
setCurrencyCode('QAR');
```

```
,
```

Note: If global culture is not set, then `en-US` is set as the default locale, and `USD` is set as the default currency code.

Manipulating numbers

```
<!-- markdownlint-disable MD024 -->
```

Supported format string

```
<!-- markdownlint-disable MD024 -->
```

Based on the [NumberFormatOptions](#) number formatting and parsing operations are processed. You need to specify some or all of the following properties mentioned below table.

No	Properties	Description
----	------------	-------------

---	---	---
-----	-----	-----

1	<code>format</code>	Denotes the format to be set .Possible values are
---	---------------------	---

2	<code>C</code>	denotes currency type.
---	----------------	------------------------

3	<code>P</code>	denotes percentage type.
---	----------------	--------------------------

E.g:	<code>formatNumber(1234344,{format:'N4'})</code>	
------	--	--

Note:	If no format is specified it takes numeric as default format type.
-------	--

2	<code>minimumFractionDigits</code>	Indicates the minimum number of fraction digits. Possible values are 0 to 20.
---	------------------------------------	---

3	<code>maximumFractionDigits</code>	Indicates the maximum number of fraction digits. Possible values are 0 to 20.
---	------------------------------------	---

4	<code>minimumSignificantDigits</code>	Indicates the minimum number of significant digits. Possible values are 1 to 21. Note: If <code>minimumSignificantDigits</code> is given it is mandatory to give <code>maximumSignificantDigits</code>
---	---------------------------------------	---

5	<code>maximumSignificantDigits</code>	Indicates the maximum number of significant digits. . Possible values are 1 to 21. Note: If <code>maximumSignificantDigits</code> is given it is mandatory to give <code>minimumSignificantDigits</code>
---	---------------------------------------	--

6	<code>useGrouping</code>	Indicates whether to enable the group separator or not . By default grouping value will be true.
---	--------------------------	--

7	<code>minimumIntegerDigits</code>	Indicates the minimum number of the integer digits to be placed in the value. Possible values are 1 to 21.
---	-----------------------------------	--

8	<code>currency</code>	Indicates the currency code which needs to considered for the currency formatting.
---	-----------------------	--

Note: The `minimumIntegerDigits`, `minimumFractionDigits` and `maximumFractionDigits` are categorized

as group one,

`minimumSignificantDigits` and `maximumSignificantDigits` are categorized as group two.

If group two properties are defined, then the group one properties will be ignored.

Custom number formatting and parsing

Custom number formatting and parsing can also be achieved by directly specifying the pattern in the **format** property of `NumberFormatOptions`. One or more of the custom format specifiers listed in the table below can be used to create custom number format.

Specifier	Description	Input	Format Output
0	Replaces the zero with the corresponding digit if one is present. Otherwise, zero appears in the result string.	<code>instance.formatNumber(123,{format: '0000' })</code>	<code>'0123'</code>
#	Replaces the "#" symbol with the corresponding digit if one is present; otherwise, no digit appears in the result string.	<code>instance.formatNumber(1234,{format: '####' })</code>	<code>'1234'</code>
.	Denotes the number of digits allowed after the decimal points if it's not specified then no need to specify decimal point values.	<code>instance.formatNumber(546321,{format: '###0.##0#' })</code>	<code>'546321.000'</code>
%	Percent specifier denotes the percentage type format.	<code>instance.formatNumber(1,{format: '0000 %' })</code>	<code>'0100 %'</code>
\$	Denotes the currency type format based on the global currency code specified.	<code>instance.formatNumber(13,{format: '\$ ###.00' })</code>	<code>'\$ 13.00'</code>
;	Denotes separate formats for positive, negative and zero values.	<code>instance.formatNumber(-120,{format: '###.##;(###.00);-0'})</code>	<code>'(120.00)'</code>
'String' (single Quotes)	Denotes the characters enclosed within single Quote(') to be replaced in the resultant string.	<code>instance.formatNumber(-123.44,{format: "####.## '@'"})</code>	<code>'123.44 @'</code>

Note: If a custom format pattern is specified, other [NumberFormatOptions](#) properties will not be considered.

Number Parsing``getNumberParser``

The [getNumberParser](#) method, which will return a function that parses a given string based on the [NumberFormatOptions](#) specified.

INDEX.JS

```
var intl = new ej.base.Internationalization();
var nParser = intl.getNumberParser({ format: 'P2' , useGrouping: false});
var val = nParser('123567.45%');
document.querySelector('.result').innerHTML = val + ' %';
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Form Validator</title>
  <meta charset="utf-8">

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

``parseNumber``

The [parseNumber](#) method, which takes two arguments, the string value and [NumberFormatOptions](#) and returns the numeric value.

INDEX.JS

```

var intl = new ej.base.Internationalization();
var val = intl.parseNumber('$01,234,545.650', { format: 'C3', currency:
'USD', minimumIntegerDigits: 8 });
document.querySelector('.result').innerHTML = val + ' ';

```

INDEX.HTML

Manipulating dateTime

Supported format string

Date formatting and parsing operations are performed based on the [DateFormatOptions](#). You need to specify some or all of the following properties mentioned in the table below.

| Options | Descriptions |

---	---	---
-----	-----	-----

| Type | It specifies the type of format to be used supported types .
1. **date**
 2. **dateTime**
 3. **time**
 Based on the type specified the supported skeletons are given below.
 1. short
 2. medium,
3. long
4. full
 E.g: formatDate(new Date(), {type: 'date', skeleton:medium})
 Note: If no type is specified then **date** type is set by default. |

skeleton	Specifies the format in which the dateTime format will process
----------	---

<!-- markdownlint-disable MD036 -->

Date type skeletons

skeleton	Option input	Format Output
----------	--------------	---------------

---	---	---
-----	-----	-----

short	{type: 'date', skeleton:'short'}	11/4/16
-------	----------------------------------	---------

medium	{type: 'date', skeleton:'medium'}	Nov 4, 2016
--------	-----------------------------------	-------------

long	{type: 'date', skeleton:'long'}	November 4, 2016
------	---------------------------------	------------------

full	{type: 'date', skeleton:full}	Friday, November 4, 2016
------	-------------------------------	--------------------------

Time type skeletons

skeleton	Option input	Format Output
----------	--------------	---------------

---	---	---
-----	-----	-----

short	{type: 'time', skeleton:'short'}	1:03 PM
-------	----------------------------------	---------

medium	{type: 'time', skeleton:'medium'}	1:03:04 PM
--------	-----------------------------------	------------

Long	{type: 'time', skeleton:'long'}	1:03:04 PM GMT+5
------	---------------------------------	------------------

full	{type: 'time', skeleton:'full'}	1:03:04 PM GMT+05:30
------	---------------------------------	----------------------

DateTime type skeletons

Skeleton	Option input	Format Output
----------	--------------	---------------

---	---	---
-----	-----	-----

short	{type: 'dateTime', skeleton:'short'}	11/4/16, 1:03 PM
-------	--------------------------------------	------------------

medium	{type: 'dateTime', skeleton:'medium'}	Nov 4, 2016, 1:03:04 PM
--------	---------------------------------------	-------------------------

Long	{type: 'dateTime', skeleton:'long'}	November 4, 2016 at 1:03:04 PM GMT+5
------	-------------------------------------	--------------------------------------

full	{type: 'dateTime', skeleton:'full'}	Friday, November 4, 2016 at 1:03:04 PM GMT+05:30
------	-------------------------------------	--

Additional skeletons

Apart from the standard date type formats additional format are supported by using the additional skeletons given in below table.

skeleton	Option input	Format Output
----------	--------------	---------------

---	---	---
-----	-----	-----

d	{skeleton:'d'}	7
---	----------------	---

E	{skeleton:'E'}	Mon
Ed	{skeleton:'Ed'}	7 Mon
Ehm	{skeleton:'Ehm'}	Mon 12:43 AM
EHm	{skeleton:'EHm;'}}	Mon 12:43
Ehms	{skeleton:'Ehms' }	Mon 2:45:23 PM
EHms	{skeleton:'EHms'}}	Mon 12:45:45
Gy	{skeleton:'Gy' }	2016 AD
GyMMM	{skeleton:'GyMMM'}	: Nov 2016 AD
GyMMMd	{skeleton:'GyMMMd'}	Nov 7, 2016 AD
GyMMMEd	{skeleton:'GyMMMEd'}	Mon, Nov 7, 2016 AD
h	{skeleton:'h'}	12 PM
H	{skeleton:'H'}	12
hm	{skeleton:'hm'}	12:59 PM
Hm	{skeleton:'Hm'}	12:59
hms	{skeleton:'hms'}	12:59:13 PM
Hms	{skeleton:'Hms'}	12:59:13
M	{skeleton:'M'}	11
Md	{skeleton:'Md'}	11/7
MEd	{skeleton:'hms'}	Mon, 11/7
MMM	{skeleton:'MMM'}	Nov
MMMEd	{skeleton:'MMMEd'}	Mon, Nov 7
MMMd	{skeleton:'MMMEd'}	Nov 7
ms	{skeleton:'ms'}	59:13
y	{skeleton:'y' }	2016
yM	{skeleton:'yM' }	11/2016
yMd	{skeleton:'yMd' }	11/7/2016
yMEd	{skeleton:'yMEd' }	Mon, 11/7/2016
yMMM	{skeleton:'yMMM' }	Nov 2016
yMMMd	{skeleton:'yMMMd' }	Nov 7, 2016
yMMMEd	{skeleton:'yMMMEd' }	Mon, Nov 7, 2016
yMMM	{skeleton:'yMMM' }	Nov 2016

Note: Culture specific format skeletons are also supported.

Custom formats

To use the custom date and time formats we need to specify the date/time pattern directly in the *format* property.

Custom format string must contain one or more of the following standard date/time symbols

Symbols	Description
-----	-----
G	Denotes the era in the date
y	Denotes the year.
M / L	Denotes month.
E / c	Denotes the day of week.
d	Denotes the day of month.
h / H	Denotes the hour. <i>h</i> for 12 hour and <i>H</i> for 24 hours format.
m	Denotes minutes.
s	Denotes seconds.
a	Denotes the am/pm designator it will only be displayed if hour is specified in the <i>h</i> format.
z	Denotes the time zone.
' (single quotes)	To display words in the formatted date you can specify the words with in the single quotes

Custom format example

```

`ts
import { Internationalization } from '@syncfusion/ej2-base';
let intl: Internationalization = new Internationalization();
let formattedString: string = intl.formatDate(new Date('1/12/2014 10:20:33'), { format: '\year:\y'
\month:\ MM' });
//Output: "year:2014 month:01"
`

```

Note: If the format property is given as an option, other properties are not considered.

<!-- markdownlint-enable MD036 -->

Date Parsing

`getDateParser`

The [getDateParser](#) method will return a function that parses a given string based on the [DateFormatOptions](#) specified.

INDEX.JS

```

var intl = new ej.base.Internationalization();
var dParser = intl.getDateParser({skeleton: 'full', type: 'dateTime'});
var val = dParser('Friday, November 4, 2016 at 1:03:04 PM GMT+05:30');

```

```
document.querySelector('.result').innerHTML = val.toString();
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>

Drag and drop in ##Platform_Name##

Drag and drop is a feature of a user interface that allows users to select an item or items and then move them to a different location or onto another interface element by "dragging" the selected item(s) with a pointing device (such as a mouse) and then "dropping" them at the desired location.

Syncfusion JavaScript controls support drag and drop feature through two libraries. These are [Draggable](#) and [Droppable](#).

Draggable

The Syncfusion's [Draggable](#) library allows users to make any DOM element draggable by passing it as a parameter to the [Draggable](#) constructor. This can be useful for creating interactive and user-friendly interfaces, such as allowing a user to reorder items in a list by dragging them. The below code snippet enables the draggable functionality for the specific DOM element passed to the [Draggable](#) constructor.

INDEX.JS

```

var dragElement = document.getElementById('element1');
var draggable = new ej.base.Draggable(dragElement, {clone: false});

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Draggable</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

base/styles/material.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element1"><p>Draggable Element </p></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}

```

```

    </script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Clone draggable element

Syncfusion provides the option to create a clone of a draggable element while the user is dragging it. It can be achieved by setting the [clone](#) property to `true`. Here's an example of how to create a clone of a draggable element.

INDEX.JS

```

var dragElement = document.getElementById('element1');
var draggable = new ej.base.Draggable(dragElement, {clone: false});

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Draggable</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element1"><p>Draggable Element </p></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Drag area

A drag area is a specific area within a user interface that is designated for drag and drop operations. When an object or element is dragged within a drag area, certain actions or events may be triggered. The user can specify the drag area by using the [dragArea](#) property. Refer to the below sample.

INDEX.JS

```

var draggable = new ej.base.Draggable(document.getElementById('element1'), {

```

```

        clone: false
    });
    var droppable = new ej.base.Droppable(document.getElementById('droppable'),
    {
        drop: (function (e) {
            e.droppedElement.querySelector('.drag-text').textContent =
            'Dropped';
        })
    });

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Draggable</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="droppable">
            <p class="drop"><span>Drop Target </span></p></div>
            <div id="element1"><p class="drag-text">Drag </p></div>
        </div>
</script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Droppable

Droppable element refers to an area of a user interface that can receive a draggable element that is being moved by a user. Syncfusion's [Droppable](#) library converts any DOM element into a droppable zone, which accepts draggable elements.

When a draggable element is moved over a droppable element, the [drop](#) event can be triggered. The user can get details about the dropped element through the event argument. Based on the event argument, the user can append the dragged element to the target element.

Refer to the following code snippet to enable droppable zones.

INDEX.JS

```
var draggable = new ej.base.Draggable(document.getElementById('element1'), {
  clone: false
});
var droppable = new ej.base.Droppable(document.getElementById('droppable'), {
  drop: (function (e) {
    e.droppedElement.querySelector('.drag-text').textContent =
    'Dropped';
  })
});
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Draggable</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="droppable">
      <p class="drop"><span>Drop Target </span></p></div>
      <div id="element1"><p class="drag-text">Drag </p></div>
    </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Troubleshoot

Content Security Policy

Content Security Policy (CSP) is a security feature implemented by web browsers that helps to protect against attacks such as cross-site scripting (XSS) and data injection. It limits the sources from which content can be loaded on a web page.

To enable strict [Content Security Policy \(CSP\)](#), certain browser features are disabled by default. In order to use Syncfusion controls with strict CSP mode, it is essential to include following directives in the CSP meta tag.

- Syncfusion controls are rendered with calculated **inline styles** and **base64** font icons, which are blocked on a strict CSP-enabled site. To allow them, add the [style-src 'self' 'unsafe-inline'](#); and [font-src 'self' data:;](#) directives in the meta tag as follows.

HTML

```
<meta http-equiv="Content-Security-Policy" content="default-src 'self';  
style-src 'self' 'unsafe-inline';  
font-src 'self' data:;" />
```

- Syncfusion **material** and **tailwind** built-in themes contain a reference to the [Roboto's external font](#), which is also blocked. To allow them, add the [external font](#) reference to the [style-src](#) and [font-src](#) directives in the above meta tag.

The resultant meta tag is included within the `<head>` tag and resolves the CSP violation on the application's side when utilizing Syncfusion controls with material and tailwind themes.

HTML

```
<head>  
...  
<meta http-equiv="Content-Security-Policy" content="default-src 'self';  
style-src 'self' https://fonts.googleapis.com/ 'unsafe-inline';  
font-src 'self' https://fonts.googleapis.com/ https://fonts.gstatic.com/  
data:;" />  
</head>
```

Note: From the release 2023 Vol2 - 22.1 version, the Content Security Policy for Syncfusion controls has been enhanced by implementing a [function template](#) approach for template properties to eliminate the usage of the `unsafe-eval` directive in the CSP meta tag.

- [How to resolve the Content Security Policy \(CSP\) errors](#)

How To

Updating Syncfusion npm packages

Keeping Syncfusion npm packages up to date is important to ensure that you have access to the latest features and bug fixes. The [npm-check-updates](#) package is a helpful tool that can be used to update your Syncfusion packages to their latest versions.

Updating All Syncfusion Packages

To update all Syncfusion packages, you can install the `npm-check-updates` package globally by running the following command,

```
`bash
npm install -g npm-check-updates
`
```

Next, use the `ncu` command to update the `package.json` file to the latest version for all `@syncfusion` packages,

```
`bash
ncu -u -f /^@syncfusion/
`
```

Finally, run the following commands to update the packages in `node_modules` and remove any duplicate packages that have been installed,

```
`bash
npm update
npm dedupe
`
```

Updating a specific npm package

You can also update a specific npm package by running the following commands from the command prompt in the root of your application,

```
`bash
npm update @syncfusion/ej2-grids
npm dedupe
`
```

This will update the specific package you have provided and run `npm dedupe` command which will remove any duplicate package.

How to load culture files in Essential JS 2 using Ajax

Ajax post can be used to load the `cldr` JSON files. To get started, install the `cldr-data` package using the following command.

```
`
npm install cldr-data
`
```

,

Loading culture using Ajax

To load locale files based on the selected culture, you can use the Ajax post method as shown in the following code snippet. The cldr files will be loaded based on the selected culture using the following function.

,

```
//Function for loading locale files based on culture name
function loadCultureFiles(name:any) {
  let files: string[] = ['ca-gregorian.json', 'numbers.json', 'timeZoneNames.json'];
  let loadCulture = function (prop:any) {
    let val:string, ajax: Ajax;
    if (name === 'ar' && prop === files.length - 1) {
      ajax = new Ajax( './node_modules/cldr-data/supplemental/' + files[prop], 'GET', false);
    } else {
      ajax = new Ajax( './node_modules/cldr-data/main/' + name + '/' + files[prop], 'GET', false);
    }
    ajax.onSuccess = function (value:any) {
      val = value;
      loadCldr(JSON.parse(val));
    };
    ajax.send();
  };
  for (let prop = 0; prop < files.length; prop++) {
    loadCulture(prop);
  }
}
loadCultureFiles('de');
```

,

Loading translations

To load the translation object in your application, use the `load` function of the `L10n` class.

,

```
//loading locale files
L10n.load({
  'de': {
```

```
'calendar': { today: 'heute' },
},
});
`
```

Loading CLDR files using loadCldr function

Pass the loaded locale files into the `loadCldr` function, as shown in the following example. The `setCulture` method allows you to set the required culture.

```
`
import { Calendar } from '@syncfusion/ej2-calendars';
//import the loadCldr from ej2-base
import { loadCldr, L10n, Ajax, setCulture } from '@syncfusion/ej2-base';
declare var require: any;
//loading locale files
L10n.load({
  'de': {
    'calendar': { today: 'heute' },
  },
});
//Function for loading locale files based on culture name
function loadCultureFiles(name:any) {
  let files: string[] = ['ca-gregorian.json', 'numbers.json', 'timeZoneNames.json'];
  let loadCulture = function (prop:any) {
    let val:string, ajax: Ajax;
    if (name === 'ar' && prop === files.length - 1) {
      ajax = new Ajax( './node_modules/cldr-data/supplemental/' + files[prop], 'GET', false);
    } else {
      ajax = new Ajax( './node_modules/cldr-data/main/' + name + '/' + files[prop], 'GET', false);
    }
    ajax.onSuccess = function (value:any) {
      val = value;
      loadCldr(JSON.parse(val));
    };
    ajax.send();
  };
}
```

```

for (let prop = 0; prop < files.length; prop++) {
  loadCulture(prop);
}
}

loadCultureFiles('de');

let calendarObject: Calendar = new Calendar({
  //sets the locale.
  locale: 'de'
});

calendarObject.appendTo('#element');
setCulture('de');calendarObject.appendTo('#element');
setCulture('de');
`

```

All components' localized texts are provided in the ej2-locale [GitHub](#) repository. You can also find examples in this [link](#).

How to load the culture file in Essential JS 2

In Essential JS 2, the culture file can be loaded by using the loadCldr function. The culture file contains information about the specific culture, such as date and time formats, currency symbols, and translations for UI elements.

Installing the CLDR JSON Files

To use the loadCldr function, you first need to install the CLDR JSON files from the npm package. You can do this by running the following command.

```

npm install cldr-data
`

```

Loading the culture

To load the culture file in your application, you need to import the required locale and supplemental files from the `cldr` package. For example, to load the German culture, you would import the following files.

```

import * as n1 from '../node_modules/cldr-data/main/de/currencies.json'
import * as n2 from '../node_modules/cldr-data/main/de/timeZoneNames.json';
import * as n3 from '../node_modules/cldr-data/main/de/numbers.json';
import * as n4 from '../node_modules/cldr-data/main/de/ca-gregorian.json';
import * as s from '../node_modules/cldr-data/supplemental/currencyData.json';
import * as s2 from '../node_modules/cldr-data/supplemental/numberingSystems.json';
`

```

Loading translations

To load the translation object in the application, use the `load` function of the `L10n` class. For example, the following code loads a German translation for the word "today" in the calendar component.

```
L10n.load({
  'de': {
    'calendar': { today: 'heute' }
  }
});
```

Using the loadCldr function

Once you have imported the necessary culture files, you can use the `loadCldr` function to load them in your application. You also need to pass the culture code in the `setCulture` function.

```
import { Calendar } from '@syncfusion/ej2-calendars';
import { Tab } from '@syncfusion/ej2-navigations';
import { L10n, setCulture, loadCldr } from '@syncfusion/ej2-base';
import * as n1 from '../node_modules/cldr-data/main/de/currencies.json';
import * as n2 from '../node_modules/cldr-data/main/de/timeZoneNames.json';
import * as n3 from '../node_modules/cldr-data/main/de/numbers.json';
import * as n4 from '../node_modules/cldr-data/main/de/ca-gregorian.json';
import * as s from '../node_modules/cldr-data/supplemental/currencyData.json';
import * as s2 from '../node_modules/cldr-data/supplemental/numberingSystems.json';

L10n.load({
  'de': {
    'calendar': { today: 'heute' }
  }
});

//Initialize calendar component.
let calendarObject: Calendar = new Calendar();

//Render initialized calendar.
calendarObject.appendTo('#element');

loadCldr(n1, n2, n3, n4, s, s2);
```

```
setCulture('de');
```

```
,
```

All components' localized texts are provided in the ej2-locale [GitHub](#) repository. Also find the example sample from this [link](#).

How to resolve Content Security Policy (CSP) errors

Enabling the strict Content Security Policy (CSP) may cause the following issues with the Essential JS 2 controls in your application.

Template rendering

From the 2023 Vol2 - 22.1 release onwards, the Content Security Policy for Syncfusion controls has been enhanced. The usage of the `unsafe-eval` directive has been eliminated from the CSP meta tag.

Note: If users prefer to continue using inline string and external templates, it is necessary to include the `unsafe-eval` directive in the CSP meta tag in order to bypass the CSP violation.

3D Chart

Es5 getting started in EJ2 JavaScript 3D Chart control

This section explains you the steps required to create a simple 3D Chart and demonstrate the basic usage of the 3D Chart control.

Dependencies

Below is the list of minimum dependencies required to use the 3D Chart.

```
|-- @syncfusion/ej2-charts
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-pdf-export
|-- @syncfusion/ej2-file-utils
|-- @syncfusion/ej2-compression
|-- @syncfusion/ej2-svg-base
```

```
,
```

Setup for local environment

Refer the following steps for setup your local environment.

Step 1: Create a root folder **myapp** for your application.

Step 2: Create **myapp/resources** folder to store local scripts and styles files.

Step 3: Create **myapp/index.js** and **myapp/index.html** files for initializing Essential JS 2 3D Chart control.

Adding Syncfusion resources

The Essential JS 2 3D Chart control can be initialized by using either of the following ways.

- Using local script.
- Using CDN link for script.

Using local script

You can get the global scripts and styles from the [Essential Studio JavaScript \(Essential JS 2\)](#) build installed location.

After installing the Essential JS 2 product build, you can copy the chart and its dependencies scripts and style file into the **resources/scripts** and **resources/styles** folder.

Refer the below code to find location chart's script and style file.

Syntax:

Dependency script: **(installed location)/Syncfusion/Essential Studio/{RELEASEVERSION}/Essential JS 2/{DEPENDENCYPACKAGENAME}/dist/global/{DEPENDENCYPACKAGE_NAME}.min.js**

Script: **(installed location)/Syncfusion/Essential Studio/{RELEASEVERSION}/Essential JS 2/{PACKAGENAME}/dist/global/{PACKAGE_NAME}.min.js**

Example:

Dependency script: **C:/Program Files (x86)/Syncfusion/Essential Studio/15.4.30/Essential JS 2/ej2-base/dist/global/ej2-base.min.js**

Script: **C:/Program Files (x86)/Syncfusion/Essential Studio/15.4.30/Essential JS 2/ej2-charts/dist/global/ej2-charts.min.js**

After copying the files, then you can refer the chart's scripts into the **index.html** file. The below html code example shows the minimal dependency of chart.

```
<!DOCTYPE html>
<html xmlns="http://www.w3.org/1999/xhtml">
<head>
<title>Essential JS 2 3D Chart</title>
<!-- Essential JS 2 Chart's dependent scripts -->
<!-- Essential JS 2 Chart's global script -->
</head>
<body>
</body>
</html>
```

,

Using CDN link for script

Using CDN link, you can directly refer the chart control's script into the `index.html`.

Refer the chart's CDN links as below

Syntax:

Script: `http://cdn.syncfusion.com/ej2/{PACKAGENAME}/dist/global/{PACKAGENAME}.min.js`

Example:

Script: <http://cdn.syncfusion.com/ej2/ej2-charts/dist/global/ej2-charts.min.js>

The below html code example shows the minimal dependency of chart.

```
`html
<!DOCTYPE html>
<html xmlns="http://www.w3.org/1999/xhtml">
<head>
<title>Essential JS 2 3D Chart</title>
<!-- Essential JS 2 Chart's global script -->
</head>
<body>
</body>
</html>
```

,

Adding 3D Chart control

Now, you can start adding 3D Chart control in the application. For getting started, add a **div** element for 3D Chart control in `index.html`. Then refer the `index.js` file into the `index.html` file.

In this document context we are going to use `ej2.min.js` which includes all the Essential JS 2 components and its dependent scripts.

```
`html
<!DOCTYPE html>
<html xmlns="http://www.w3.org/1999/xhtml">
<head>
<title>Essential JS 2 3D Chart</title>
<!-- Essential JS 2 all script -->
</head>
<body>
<!-- Add the HTML <div> element for 3D Chart -->
```

```
<div id="element"></div>
</body>
</html>
`
```

Place the following 3D Chart code in the **index.js**.

```
var chart3D = new ej.charts.Chart3D();
chart3D.appendTo('#element');
`
```

The below example shows a basic 3D Chart.

INDEX.JS

```
var chart3D = new ej.charts.Chart3D();
chart3D.appendTo('#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Populate 3D Chart with data

This section explains how to plot below JSON data to the 3D Chart.

```
var chartData = [
```

```
{ month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
{ month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
{ month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
{ month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
{ month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
{ month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
`
```

Add a series object to the 3D Chart by using [series](#) property. Now map the field names `month` and `sales` in the JSON data to the [xName](#) and [yName](#) properties of the series, then set the JSON data to [dataSource](#) property.

Since the JSON contains category data, set the [valueType](#) for horizontal axis to `Category`. By default, the axis `valueType` is `Numeric`.

INDEX.JS

```
var chartData = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Category'
    },
    series:[{
        // dataSource for 3d chart series
        dataSource: chartData,
        xName: 'month',
        yName: 'sales',
        type: 'Column'
    }]
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
```

```

<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

The sales data are in thousands, so format the vertical axis label by adding \$ as a prefix and K as a suffix to each label. This can be achieved by setting the ``${value}K`` to the [labelFormat](#) property of axis. Here, `{value}` act as a placeholder for each axis label.

INDEX.JS

```

var chartData = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Category'
    },
    primaryYAxis: {
        // label format for axis
        labelFormat: `${value}K`
    },
    series:[{
        dataSource: chartData,
        xName: 'month',
        yName: 'sales',
        type: 'Column'
    }]
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">

```

```

<link href="index.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Add 3D Chart title

You can add a title using [title](#) property to the 3D Chart to provide quick information to the user about the data plotted in the 3D Chart.

INDEX.JS

```

var chartData = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart3D = new ej.charts.Chart3D({
    // Title for 3d chart
    title: 'Sales Analysis',
    primaryXAxis: {
        valueType: 'Category',
        title: 'Month'
    },
    primaryYAxis: {
        labelFormat: '${value}K'
    },
    series:[{
        dataSource: chartData,
        xName: 'month',
        yName: 'sales',
        type: 'Column'
    }],
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Enable legend

You can use legend for the 3D Chart by setting the [visible](#) property to true in [legendSettings](#) object.

INDEX.JS

```

var chartData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart3D = new ej.charts.Chart3D({
  // Legend for 3d chart
  legendSettings: {
    visible: true
  },
  primaryXAxis: {
    valueType: 'Category'
  },
  primaryYAxis: {
    labelFormat: '${value}K'
  },
  series:[{
    dataSource: chartData,
    name: 'Sales',
    xName: 'month',

```

```

        yName: 'sales',
        type: 'Column'
    }],
    title: 'Sales Analysis'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Add data label

You can add data labels to improve the readability of the 3D Chart. This can be achieved by setting the [visible](#) property to true in the [dataLabel](#) object. Now, the data labels are arranged smartly based on series.

INDEX.JS

```

var chartData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category'
  },

```

```

primaryYAxis: {
    labelFormat: '${value}K'
},
series:[{
    dataSource: chartData,
    xName: 'month',
    name: 'Sales',
    yName: 'sales',
    type: 'Column',
    // Data label for 3d chart series
    dataLabel: {
        visible: true
    }
}],
legendSettings: { visible: true },
title: 'Sales Analysis'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

    <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
    type="text/javascript"></script>
    <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
    ="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Enable tooltip

The tooltip is useful when you cannot display information by using the data labels due to space constraints. You can enable tooltip by setting the [enable](#) property as true in [tooltip](#) object.

INDEX.JS

```

var chartData = [

```

```

        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
    ];
    var chart3D = new ej.charts.Chart3D({
        // Tooltip for 3d chart
        tooltip: {
            enable: true
        },
        primaryXAxis: {
            valueType: 'Category'
        },
        primaryYAxis: {
            labelFormat: '${value}K'
        },
        series:[{
            dataSource: chartData,
            name:'Sales',
            xName: 'month',
            yName: 'sales',
            type: 'Column',
            dataLabel: {
                visible: true
            }
        }
    ]],
    legendSettings: { visible: true },
    title: 'Sales Analysis'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">

</body></html>

```

<!-- markdownlint-disable MD036 -->

Working with data in EJ2 JavaScript 3D Chart control

Local data

A simple JSON data can be bound to the 3D chart using [dataSource](#) property in series. Now map the fields in JSON to [xName](#) and [yName](#) properties.

INDEX.JS

```

var chartData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
    labelRotation: -45,
    labelPlacement: 'BetweenTicks'
  },
  series:[{
    dataSource: chartData,
    type: 'Column',
    xName: 'month',
    yName: 'sales'
  }],
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100,
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>

```

```

<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Remote data

The remote data can be bound to the 3D chart using the [DataManager](#). The [DataManager](#) requires minimal information like web service URL, adaptor and cross domain to interact with service endpoint properly. Assign the instance of the [DataManager](#) to the [dataSource](#) property in series and map the fields of data to [xName](#) and [yName](#) properties. You can also use the [query](#) property of the series to filter the data.

INDEX.JS

```

var dataManager = new ej.data.DataManager({
    url: 'https://services.syncfusion.com/js/production/api/orders'
});
var query = new ej.data.Query().take(5).where('Estimate', 'lessThan', 3,
false);
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Category',
        labelRotation: -45,
        labelPlacement: 'BetweenTicks'
    },
    series:[{
        dataSource: dataManager,
        type: 'Column',
        xName: 'CustomerID', yName: 'Freight', query: query
    }],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100,
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">

```

```

<meta name="description" content="Typescript UI Controls">
<meta name="author" content="Syncfusion">
<link href="index.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Binding data using ODataAdaptor

OData is a standardized protocol for creating and consuming data. You can retrieve data from OData service using the **DataManager**. Refer to the following code example for remote data binding using OData service.

INDEX.JS

```

var query = new ej.data.Query();
var data = new ej.data.DataManager({
    url: 'https://services.syncfusion.com/js/production/api/orders',
    adaptor: new ej.data.ODataAdaptor()
});
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Category',
        labelRotation: -45,
        labelPlacement: 'BetweenTicks'
    },
    series:[{
        dataSource: dataManager,
        type: 'Column',
        xName: 'CustomerID', yName: 'Freight', query: query,
    }],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100,
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Empty points

The data points that uses the **null** or **undefined** as value are considered as empty points. The empty data points are ignored and is not plotted in the chart. When the data is provided by using the points property, by using [emptyPointSettings](#) property in series, the empty can be customized. The default [mode](#) of the empty point is **Gap**.

INDEX.JS

```

var chartData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: null }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: undefined },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
    labelRotation: -45,
    labelPlacement: 'BetweenTicks'
  },
  series:[{
    dataSource: chartData,
    xName: 'month',
    yName: 'sales',
    type: 'Column',

```

```

        emptyPointSettings: {
            mode: 'Gap'
        }
    }],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100,
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>

if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Customizing empty point

The specific color for empty point can be set by the [fill](#) property in [emptyPointSettings](#).

INDEX.JS

```

var chartData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: null }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: undefined },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart3D = new ej.charts.Chart3D({

```

```

    primaryXAxis: {
      valueType: 'Category',
      labelRotation: -45,
      labelPlacement: 'BetweenTicks'
    },
    series:[{
      dataSource: chartData,
      xName: 'month',
      yName: 'sales',
      type: 'Column',
      emptyPointSettings: {
        mode: 'Average',
        fill: 'green'
      }
    }],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100,
  }, '#element');

```

INDEX.HTML

```

```

Dimensions in EJ2 JavaScript 3D Chart control

Size for container

The 3D chart can be rendered to its container size and it can be set via inline or CSS as demonstrated below.

```
<div id='container'>

<div id='element' style="width:650px; height:350px;"></div>

</div>
`
```

INDEX.JS

```
var chartData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
  },
  series: [
    {
      dataSource: chartData, xName: 'month', yName: 'sales',
      type: 'Column'
    }
  ],
  enableRotation: true,
  rotation: 22,
  depth: 100,
  width: '650px',
  height: '350px'
}, '#element');
```

INDEX.HTML

</body></html>

```

<!-- markdownlint-disable MD036 -->

Size for chart

<!-- markdownlint-disable MD036 -->

The size of the 3D chart can be set directly through [width](#) and [height](#) properties.

In Pixel

The size of the 3D chart can be set in pixel as demonstrated below.

INDEX.JS

```

var chartData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
  },
  series: [
    {
      dataSource: chartData, xName: 'month', yName: 'sales',
      type: 'Column'
    }
  ],
  enableRotation: true,
  rotation: 22,
  depth: 100,
  width: '650', height: '350'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>

<script src="index.js" type="text/javascript"></script>
</body></html>

```

In Percentage

By setting the value in percentage, 3D chart gets its dimension with respect to its container. For example, when the height is **50%**, chart renders to half of the container height.

INDEX.JS

```

var chartData = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Category',
    },
    series: [
        {
            dataSource: chartData, xName: 'month', yName: 'sales',
            type: 'Column'
        }
    ],
    enableRotation: true,
    rotation: 22,
    depth: 100,
    width: '80%', height: '90%'
}, '#element');

```

```

Note: When you do not specify the size, it takes 450px as the height and window size as its width.

Category axis in EJ2 JavaScript 3D Chart control

The category axis is the horizontal axis of a 3D chart that shows text values rather than numerical values. Compared to the vertical axis, this axis has fewer labels. The following sample shows to render the 3D chart using category axis.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },
  { country: "Germany", gold: 40, silver: 30, bronze: 22 },
  { country: "Italy", gold: 40, silver: 35, bronze: 37 },
  { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
  },
  series:[{
    dataSource: chartData,
    xName: 'country', yName: 'gold',
    // Series type as column series
    type: 'Column'
  }
]);

```

```

    }],
    title: 'Olympic Medals',
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
  }, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Note: To use category axis, we need to inject **Category3D** module using **Chart3D.Inject(Category3D)** method and set the [valueType](#) of axis to **Category**.

Labels placement

By default, category axis labels are placed between ticks in an axis. It can also be placed on ticks using the [labelPlacement](#) property.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },
  { country: "Germany", gold: 40, silver: 30, bronze: 22 },

```

```

    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
  ];
  var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
      valueType: 'Category',
      labelPlacement: 'OnTicks',
    },
    series:[{
      dataSource: chartData,
      xName: 'country', yName: 'gold', type: 'Column'
    }],
    title: 'Olympic Medals',
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100,
  }, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

```

Range

The range of the category axis can be customized using [minimum](#), [maximum](#) and [interval](#) properties of the axis.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },
  { country: "Germany", gold: 40, silver: 30, bronze: 22 },
  { country: "Italy", gold: 40, silver: 35, bronze: 37 },
  { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
    interval: 2, minimum: 1, maximum: 5
  },
  series:[{
    dataSource: chartData,
    xName: 'country', yName: 'gold', type: 'Column'
  }],
  title: 'Olympic Medals',
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100,
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Range

The range of an axis will be calculated automatically based on the provided data, and it can also be customized by using the [minimum](#), [maximum](#) and [interval](#) properties of the axis.

INDEX.JS

```

var chartData = [{ x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 }, { x: 4, y:
14 }, { x: 5, y: 1 }, { x: 6, y: 10 },
    { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 }, { x: 10, y: 10 }, { x:
11, y: 16 }, { x: 12, y: 6 },
    { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 }, { x: 16, y: 2 }, {
x: 17, y: 14 }, { x: 18, y: 7 },
    { x: 19, y: 7 }, { x: 20, y: 10 }];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Double',
        minimum: 1,
        maximum: 20,
        interval: 5
    },
    series: [
        {
            type: 'Column', xName: 'x', yName: 'y', columnSpacing: 0.1,
            dataSource: chartData
        }
    ],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">

```

```

<meta name="viewport" content="width=device-width, initial-scale=1.0">

var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Range padding

Padding can be applied to the minimum and maximum extremes of an axis range by using the [rangePadding](#) property. Numeric axis supports the following types of padding.

- None
- Round
- Additional
- Normal
- Auto

Numeric - None

When the [rangePadding](#) is set to **None**, minimum and maximum of the axis is based on the data.

INDEX.JS

```

var chartData = [{ x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 }, { x: 4, y:
14 }, { x: 5, y: 1 }, { x: 6, y: 10 },
    { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 }, { x: 10, y: 10 }, { x:
11, y: 16 }, { x: 12, y: 6 },
    { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 }, { x: 16, y: 2 }, {
x: 17, y: 14 }, { x: 18, y: 7 },
    { x: 19, y: 7 }, { x: 20, y: 10 }];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Double'
    },
    primaryYAxis: {
        //RangePadding as none in Y Axis

```

```

        rangePadding: 'None'
    },
    series: [
        {
            type: 'Column', xName: 'x', yName: 'y', columnSpacing: 0.1,
            dataSource: chartData
        }
    ],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>

if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Numeric - Round

When the [rangePadding](#) is set to **Round**, minimum and maximum will be rounded to the nearest possible value, which is divisible by interval. For example, when the [minimum](#) is 3.5 and the [interval](#) is 1, then the minimum will be rounded to 3.

INDEX.JS

```

var chartData = [{ x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 }, { x: 4, y:
14 }, { x: 5, y: 1 }, { x: 6, y: 10 },

```

```

    { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 }, { x: 10, y: 10 }, { x:
11, y: 16 }, { x: 12, y: 6 },
    { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 }, { x: 16, y: 2 }, {
x: 17, y: 14 }, { x: 18, y: 7 },
    { x: 19, y: 7 }, { x: 20, y: 10 }];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Double'
    },
    primaryYAxis: {
        rangePadding: 'Round'
    },
    series: [
        {
            type: 'Column', xName: 'x', yName: 'y', columnSpacing: 0.1,
            dataSource: chartData
        }
    ],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">

```

if(ele) {
    ele.style.visibility = "visible";
}

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Numeric - Normal

When the [rangePadding](#) is set to **Normal**, padding is applied to the axis based on default range calculation.

INDEX.JS

```

var chartData = [{ x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 }, { x: 4, y: 14 }, { x: 5, y: 1 }, { x: 6, y: 10 }, { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 }, { x: 10, y: 10 }, { x: 11, y: 16 }, { x: 12, y: 6 }, { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 }, { x: 16, y: 2 }, { x: 17, y: 14 }, { x: 18, y: 7 }, { x: 19, y: 7 }, { x: 20, y: 10 }];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Double'
    },
    primaryYAxis: {
        rangePadding: 'Normal'
    },
    series: [
        {
            type: 'Column', xName: 'x', yName: 'y', columnSpacing: 0.1,
            dataSource: chartData
        }
    ],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Numeric - Auto

When the [rangePadding](#) is set to **Auto**, horizontal numeric axis takes **None** as padding calculation, while the vertical numeric axis takes **Normal** as padding calculation.

INDEX.JS

```

var chartData = [{ x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 }, { x: 4, y: 14 }, { x: 5, y: 1 }, { x: 6, y: 10 }, { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 }, { x: 10, y: 10 }, { x: 11, y: 16 }, { x: 12, y: 6 }, { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 }, { x: 16, y: 2 }, { x: 17, y: 14 }, { x: 18, y: 7 }, { x: 19, y: 7 }, { x: 20, y: 10 }];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Double',
        // Set the rangePadding as auto in X Axis
        rangePadding: 'Auto'
    },
    primaryYAxis: {
        rangePadding: 'Auto'
    },
    series: [
        {
            type: 'Column', xName: 'x', yName: 'y', columnSpacing: 0.1,
            dataSource: chartData
        }
    ],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
}, '#element');

```

```

Label format

Numeric label format

Numeric labels can be formatted by using the [labelFormat](#) property. Also, it supports all globalize format.

INDEX.JS

```

var chartData = [{ x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 }, { x: 4, y:
14 }, { x: 5, y: 1 }, { x: 6, y: 10 },
    { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 }, { x: 10, y: 10 }, { x:
11, y: 16 }, { x: 12, y: 6 },
    { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 }, { x: 16, y: 2 }, {
x: 17, y: 14 }, { x: 18, y: 7 },
    { x: 19, y: 7 }, { x: 20, y: 10 }];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Double'
    },
    primaryYAxis: {
        labelFormat: 'c'
    },
    series: [
        {
            type: 'Column', xName: 'x', yName: 'y', columnSpacing: 0.1,
            dataSource: chartData
        }
    ],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,

```

```

    tilt: 10,
    depth: 100
  }, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">

if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

The following table describes the result of applying some commonly used label formats on numeric values.

<!-- markdownlint-disable MD033 -->

Label Value	Label Format: Property Value	Result	Description
1000	n1	1000.0	The Number is rounded to 1 decimal place.
1000	n2	1000.00	The Number is rounded to 2 decimal place.
1000	n3	1000.000	The Number is rounded to 3 decimal place.
0.01	p1	1.0%	The Number is converted to percentage with 1 decimal place.
0.01	p2	1.00%	The Number is converted to percentage with 2 decimal place.
0.01	p3	1.000%	The Number is converted to percentage with 3 decimal place.

1000	c1	\$1000.0	The Currency symbol is appended to number and number is rounded to 1 decimal place.
1000	c2	\$1000.00	The Currency symbol is appended to number and number is rounded to 2 decimal place.

Grouping separator

To separate the y-axis labels to groups of thousands, set the [useGroupingSeparator](#) property to **true** in the 3D chart.

INDEX.JS

```
var chartData = [
  { x: 10, y: 7000 }, { x: 20, y: 1000 }, { x: 30, y: 12000 }, { x: 40, y:
  14000 }, { x: 50, y: 11000 }, { x: 60, y: 5000 },
  { x: 70, y: 7300 }, { x: 80, y: 9000 }, { x: 90, y: 12000 }, { x: 100,
  y: 14000 }, { x: 110, y: 11000 }, { x: 120, y: 5000 }
];
var chart3D = new ej.charts.Chart3D({
  useGroupingSeparator: true,
  series: [
    {
      type: 'Column', xName: 'x', yName: 'y', columnSpacing: 0.1,
      dataSource: chartData
    }
  ],
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
```

```
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Custom label format

The axis supports custom label format using placeholder like **{value}°C**, in which the value represent the axis label e.g 20°C.

INDEX.JS

```
var chartData = [
    { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 }, { x: 4, y: 14 }, { x: 5,
y: 1 }, { x: 6, y: 10 },
    { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 }, { x: 10, y: 10 }, { x:
11, y: 16 }, { x: 12, y: 6 },
    { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 }, { x: 16, y: 2 }, {
x: 17, y: 14 }, { x: 18, y: 7 },
    { x: 19, y: 7 }, { x: 20, y: 10 }
];
var chart3D = new ej.charts.Chart3D({
    primaryYAxis: {
        // Custom label format
        labelFormat: '${value}K'
    },
    series: [
        {
            type: 'Column', xName: 'x', yName: 'y', columnSpacing: 0.1,
            dataSource: chartData
        }
    ],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
}, '#element');

<!-- markdownlint-disable MD036 -->

DateTime axis in EJ2 JavaScript 3D Chart control

DateTime axis

DateTime axis uses date time scale and displays the date time values as axis labels in the specified format.

INDEX.JS

```

var chartData = [
    { x: new Date(2000, 6, 11), y: 10 },
    { x: new Date(2002, 3, 7), y: 30 },
    { x: new Date(2004, 3, 6), y: 15 },
    { x: new Date(2006, 3, 30), y: 65 },
    { x: new Date(2008, 3, 8), y: 90 },
    { x: new Date(2010, 3, 8), y: 85 }
];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        // Date time scale in primary X Axis
        valueType: 'DateTime',
    },
    series:[{
        dataSource: chartData,
        xName: 'x', yName: 'y',
        type: 'Column'
    }],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>

```

```

<meta charset="utf-8">
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<meta name="description" content="Typescript UI Controls">
<meta name="author" content="Syncfusion">
<link href="index.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Note: To use datetime axis, we need to inject `DateTime3D` module using `Chart3D.Inject(DateTime3D)` method and set the [valueType](#) of axis to `DateTime`.

DateTime category axis

DateTime category axis is used to display the date time values with non-linear intervals. For example, the business days alone have been depicted in a week here.

INDEX.JS

```

var chartData = [
    { x: new Date(2017, 11, 20), y: 21 }, { x: new Date(2017, 11, 21), y: 24 },
    { x: new Date(2017, 11, 22), y: 24 }, { x: new Date(2017, 11, 26), y: 70 },
    { x: new Date(2017, 11, 27), y: 75 }, { x: new Date(2018, 0, 2), y: 82 },
    { x: new Date(2018, 0, 3), y: 53 }, { x: new Date(2018, 0, 4), y: 54 },
    { x: new Date(2018, 0, 5), y: 53 }, { x: new Date(2018, 0, 8), y: 45 }
];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'DateTimeCategory',
        skeleton: 'Ed',
    },
    series: [
        {
            type: 'Column', xName: 'x', yName: 'y',
            dataSource: chartData
        }
    ]
});

```

```

    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
  }, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Note: To use datetime category axis, we need to inject `DateTimeCategory3D` module using the `Chart3D.Inject(DateTimeCategory3D)` method and set the [valueType](#) of axis to **DateTimeCategory**.

Range

Range of an axis will be calculated automatically based on the provided data. You can also customize the range of an axis using [minimum](#), [maximum](#) and [interval](#) properties.

INDEX.JS

```

var chartData = [
  { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
  { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
  { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'DateTime',
    minimum: new Date(2000, 6, 1),

```

```

        maximum: new Date(2010, 6, 1), interval: 1
    },
    series: [
        {
            type: 'Column', xName: 'x', yName: 'y',
            dataSource: chartData
        }
    ],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Interval customization

Date time intervals can be customized by using the [interval](#) and [intervalType](#) properties of the axis. For example, when you set [interval](#) as **2** and [intervalType](#) as **Years**, it considers 2 years as interval.

DateTime axis supports following interval types,

- Auto
- Years
- Months
- Days

- Hours
- Minutes
- Seconds

INDEX.JS

```

var chartData = [
  { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
  { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
  { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'DateTime',
    intervalType: 'Years'
  },
  series: [
    {
      type: 'Column', xName: 'x', yName: 'y',
      dataSource: chartData
    }
  ],
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
```

```
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Applying padding to the range

Padding can be applied to the minimum and maximum extremes of the range by using the [rangePadding](#) property. DateTime axis supports the following types of padding,

- None
- Round
- Additional

DateTime - None

When the [rangePadding](#) is set to **None**, minimum and maximum of an axis is based on the data.

INDEX.JS

```
var chartData = [
  { x: new Date(2017, 11, 20), y: 21 }, { x: new Date(2017, 11, 21), y: 24 },
  { x: new Date(2017, 11, 22), y: 24 }, { x: new Date(2017, 11, 26), y: 70 },
  { x: new Date(2017, 11, 27), y: 75 }, { x: new Date(2018, 0, 2), y: 82 },
  { x: new Date(2018, 0, 3), y: 53 }, { x: new Date(2018, 0, 4), y: 54 },
  { x: new Date(2018, 0, 5), y: 53 }, { x: new Date(2018, 0, 8), y: 45 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'DateTime',
    rangePadding: 'None'
  },
  series: [
    {
      type: 'Column', xName: 'x', yName: 'y',
      dataSource: chartData
    }
  ],
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');
```

DateTime - Round

When the [rangePadding](#) is set to **Round**, minimum and maximum will be rounded to the nearest possible value, which is divisible by interval. For example, when the minimum is **15th Jan**, interval is **1** and interval type is **Month**, then the axis minimum will be **Jan 1st**.

INDEX.JS

```

var chartData = [
    { x: new Date(2017, 11, 20), y: 21 }, { x: new Date(2017, 11, 21), y: 24 },

Label format

The date can be formatted and parsed to all globalize format using the [labelFormat](#) property in an axis.

INDEX.JS

```

var chartData = [
  { x: new Date(2017, 11, 20), y: 21 }, { x: new Date(2017, 11, 21), y: 24
},
  { x: new Date(2017, 11, 22), y: 24 }, { x: new Date(2017, 11, 26), y: 70
},
  { x: new Date(2017, 11, 27), y: 75 }, { x: new Date(2018, 0, 2), y: 82
},
  { x: new Date(2018, 0, 3), y: 53 }, { x: new Date(2018, 0, 4), y: 54 },
  { x: new Date(2018, 0, 5), y: 53 }, { x: new Date(2018, 0, 8), y: 45 }
];
var chart3D = new ej.charts.Chart3D({

```

```

primaryXAxis: {
    valueType: 'DateTime',
    labelFormat: 'yMd'
},
series: [
    {
        type: 'Column', xName: 'x', yName: 'y',
        dataSource: chartData
    }
],
wallColor: 'transparent',
enableRotation: true,
rotation: 7,
tilt: 10,
depth: 100
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>

    ele.style.visibility = "visible";
}
    </script>
    <script src="index.js" type="text/javascript"></script>
</body></html>

```

The following table describes the result of applying some common date time formats to the **labelFormat** property.

<!-- markdownlint-disable MD033 -->

Label Value	Label Format Property Value	Result	Description
new Date(2000, 03, 10)	EEEE	Monday	The Date is displayed in day format.

new Date(2000, 03, 10)	yMd	04/10/2000	The Date is displayed in month/date/year format.
new Date(2000, 03, 10)	MMM	Apr	The Shorthand month for the date is displayed.
new Date(2000, 03, 10)	hm	12:00 AM	Time of the date value is displayed as label.
new Date(2000, 03, 10)	hms	12:00:00 AM	The Label is displayed in hours:minutes:seconds format.

Custom label format

Axis also supports custom label format using placeholder like {value}°C, in which the value represent the axis label e.g 20°C.

INDEX.JS

```
var chartData = [
  { x: new Date(2017, 11, 20), y: 21 }, { x: new Date(2017, 11, 21), y: 24 },
  { x: new Date(2017, 11, 22), y: 24 }, { x: new Date(2017, 11, 26), y: 70 },
  { x: new Date(2017, 11, 27), y: 75 }, { x: new Date(2018, 0, 2), y: 82 },
  { x: new Date(2018, 0, 3), y: 53 }, { x: new Date(2018, 0, 4), y: 54 },
  { x: new Date(2018, 0, 5), y: 53 }, { x: new Date(2018, 0, 8), y: 45 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'DateTimeCategory'
  },
  primaryYAxis: {
    labelFormat: '${value}K'
  },
  series: [
    {
      type: 'Column', xName: 'x', yName: 'y',
      dataSource: chartData
    }
  ],
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');

Logarithmic axis in EJ2 JavaScript 3D Chart control

Logarithmic axis uses logarithmic scale and it is very useful in visualizing data, when it has numerical values in both lower order of magnitude (eg: 10^{-6}) and higher order of magnitude (eg: 10^6).

INDEX.JS

```

var chartData = [
    { x: new Date(1995, 0, 1), y: 80 }, { x: new Date(1996, 0, 1), y: 200 },
    { x: new Date(1997, 0, 1), y: 400 }, { x: new Date(1998, 0, 1), y: 600
},
    { x: new Date(1999, 0, 1), y: 700 }, { x: new Date(2000, 0, 1), y: 1400
},
    { x: new Date(2001, 0, 1), y: 2000 }, { x: new Date(2002, 0, 1), y: 4000
},
    { x: new Date(2003, 0, 1), y: 6000 }, { x: new Date(2004, 0, 1), y: 8000
},
    { x: new Date(2005, 0, 1), y: 11000 }
];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'DateTime'
    },
    primaryYAxis:
    {
        valueType: 'Logarithmic'
    },
    series: [
        {
            type: 'Column', xName: 'x', yName: 'y',
            dataSource: chartData
        }
    ]
}

```

```

    ],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
  }, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Note: To use logarithmic axis, we need to inject **Logarithmic3D** module using the **Chart3D.Inject(Logarithmic3D)** method and set the [valueType](#) of the axis to **Logarithmic**.

Range

The range of an axis will be calculated automatically based on the provided data and it can also be customized by using the [minimum](#), [maximum](#) and [interval](#) properties of the axis.

INDEX.JS

```

var chartData = [
  { x: new Date(1995, 0, 1), y: 80 }, { x: new Date(1996, 0, 1), y: 200 },
  { x: new Date(1997, 0, 1), y: 400 }, { x: new Date(1998, 0, 1), y: 600
},
  { x: new Date(1999, 0, 1), y: 700 }, { x: new Date(2000, 0, 1), y: 1400
},
  { x: new Date(2001, 0, 1), y: 2000 }, { x: new Date(2002, 0, 1), y: 4000
},

```

```

    { x: new Date(2003, 0, 1), y: 6000 }, { x: new Date(2004, 0, 1), y: 8000
  },
  { x: new Date(2005, 0, 1), y: 11000 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'DateTime'
  },
  primaryYAxis:
  {
    valueType: 'Logarithmic',
    minimum: 100,
    maximum: 10000,
    interval: 1000
  },
  series: [
    {
      type: 'Column', xName: 'x', yName: 'y',
      dataSource: chartData
    }
  ],
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

if(ele) {
  ele.style.visibility = "visible";
}
  </script>
<script src="index.js" type="text/javascript"></script>

```

```
</body></html>
```

Logarithmic base

Logarithmic base can be customized by using the [logBase](#) property of the axis. For example when the **logBase** is 5, the axis values follows 5^{-2} , 5^{-1} , 5^0 , 5^1 , 5^2 etc.

INDEX.JS

```
var chartData = [
  { x: new Date(1995, 0, 1), y: 80 }, { x: new Date(1996, 0, 1), y: 200 },
  { x: new Date(1997, 0, 1), y: 400 }, { x: new Date(1998, 0, 1), y: 600 },
  { x: new Date(1999, 0, 1), y: 700 }, { x: new Date(2000, 0, 1), y: 1400 },
  { x: new Date(2001, 0, 1), y: 2000 }, { x: new Date(2002, 0, 1), y: 4000 },
  { x: new Date(2003, 0, 1), y: 6000 }, { x: new Date(2004, 0, 1), y: 8000 },
  { x: new Date(2005, 0, 1), y: 11000 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'DateTime'
  },
  primaryYAxis: {
    valueType: 'Logarithmic',
    logBase: 2
  },
  //Initializing Chart Series
  series: [
    {
      type: 'Column', xName: 'x', yName: 'y', columnSpacing: 0.1,
      dataSource: chartData
    }
  ],
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">
```

```

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>

Axis labels in EJ2 JavaScript 3D Chart control

Axis labels are the labels that are positioned adjacent to the y-axis and beneath the x-axis. It provides descriptive information about the axis.

Smart axis labels

When the axis labels overlap with each other, [labelIntersectAction](#) property in the axis can be used to place them smartly.

Case 1: When setting `labelIntersectAction` as `Hide`.

INDEX.JS

```

var chartData = [
  { x: "South Korea", y: 39.4 },
  { x: "India", y: 61.3 },
  { x: "Pakistan", y: 20.4 },
  { x: "Germany", y: 65.1 },

```

Edge label placement

Labels with long text at the edges of an axis may appear partially in the 3D chart. To avoid this, use the [edgeLabelPlacement](#) property in axis, which moves the label inside the chart area for better appearance or hides it.

INDEX.JS

```

var chartData = [
    { country: "USA", gold: 50, silver: 70, bronze: 45 },
    { country: "China", gold: 40, silver: 60, bronze: 55 },

Axis customization in EJ2 JavaScript 3D Chart control

Title

The title for the axis can be added by using the [title](#) property. It helps to provide quick information to the user about the data plotted in the axis. Title style can be customized using [titleStyle](#) property of the axis.

INDEX.JS

```
var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },
  { country: "Germany", gold: 40, silver: 30, bronze: 22 },
  { country: "Italy", gold: 40, silver: 35, bronze: 37 },
  { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: "Category",
    title: 'Countries',
    //Axis title text style
    titleStyle: {
      size: '16px', color: 'grey',
      fontFamily : 'Segoe UI', fontWeight : 'bold'
    }
  },
  series: [
    {
      type: 'Column',
      dataSource: chartData,
      xName: 'country',
      yName: 'gold'
    }
  ],
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>

Multiple panes in EJ2 JavaScript 3D Chart control

The chart area can be divided into multiple panes using [rows](#) and [columns](#).

Rows

To split the chart area vertically into number of rows, use [rows](#) property of the 3D chart.

- The space for each row can be allocated by using the [height](#) property. The value can be either in percentage or in pixel.
- To associate a vertical axis to a particular row, specify its index to [rowIndex](#) property of the axis.

INDEX.JS

```

var chartData = [
  { x: 'Jan', y: 15, y1: 33 }, { x: 'Feb', y: 20, y1: 31 }, { x: 'Mar', y:
35, y1: 30 },
  { x: 'Apr', y: 40, y1: 28 }, { x: 'May', y: 80, y1: 29 }, { x: 'Jun', y:
70, y1: 30 },
  { x: 'Jul', y: 65, y1: 33 }, { x: 'Aug', y: 55, y1: 32 }, { x: 'Sep', y:
50, y1: 34 },
  { x: 'Oct', y: 30, y1: 32 }, { x: 'Nov', y: 35, y1: 32 }, { x: 'Dec', y:
35, y1: 31 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    title: 'Months',
    valueType: 'Category',
    interval: 1
  },
  primaryYAxis: {
    minimum: 0, maximum: 90, interval: 20,
    title: 'Temperature (Fahrenheit)',
    labelFormat: '{value}°F'
  },
  // Rows for chart axis
  rows:[
    {
      height: '50%'
    },{
      height: '50%'
    }
  ],
  axes:[
    {
      majorGridLines: { width: 0 },
      rowIndex: 1, opposedPosition: true,
      minimum: 24, maximum: 36, interval: 4,
      name: 'yAxis', title: 'Temperature (Celsius)',
      labelFormat: '{value}°C'
    }
  ],
  series:[{
    dataSource: chartData,
    xName: 'x', yName: 'y',
    name: 'Germany', type: 'Column'
  },{
    dataSource: chartData,
    xName: 'x', yName: 'y1', yAxisName: 'yAxis',

```

Cylindrical column chart

To render a cylindrical column chart, set the [columnFacet](#) property to **Cylinder** in the chart series.

INDEX.JS

```

var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
  },
  series: [
    {
      type: 'Column', columnFacet: 'Cylinder', xName: 'x', yName: 'y',
      columnWidth: 0.9,
      dataSource: [{ x: 'Czechia', y: 1.11 }, { x: 'Spain', y: 1.66 },
        { x: 'USA', y: 1.56 }, { x: 'Germany', y: 3.1 }, { x: 'Russia', y: 1.35 },
        { x: 'Slovakia', y: 1 }, { x: 'South Korea', y: 3.16 }, { x: 'France', y:
        0.92 }],
    },
  ],
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');

```

INDEX.HTML

Series customization

The following properties can be used to customize the **column** series.

- [fill](#) – Specifies the color of the series.
- [opacity](#) – Specifies the opacity of the [fill](#) color.

INDEX.JS

```
var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },
  { country: "Germany", gold: 40, silver: 30, bronze: 22 },
  { country: "Italy", gold: 40, silver: 35, bronze: 37 },
  { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
  },
  series: [
    {
      dataSource: chartData,
      xName: 'country', yName: 'gold',
      type: 'Column', fill: 'red'
    },
  ],
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');
```

Stacked column chart in EJ2 JavaScript 3D Chart control

Stacked column chart

To render a stacked column series, use series [type](#) as `StackingColumn` and inject `StackingColumnSeries3D` module using `Chart3D.Inject(StackingColumnSeries3D)` method.

INDEX.JS

```

var stackedData = [
    { x: 2000, y: 0.61, y1: 0.03, y2: 0.48 }, { x: 2001, y: 0.81, y1: 0.05,
y2: 0.53 },
    { x: 2002, y: 0.91, y1: 0.06, y2: 0.57 }, { x: 2003, y: 1, y1: 0.09, y2:
0.61 }, { x: 2004, y: 1.19, y1: 0.14, y2: 0.63 },
    { x: 2005, y: 1.47, y1: 0.20, y2: 0.64 }, { x: 2006, y: 1.74, y1: 0.29,
y2: 0.66 }, { x: 2007, y: 1.98, y1: 0.46, y2: 0.76 },
    { x: 2008, y: 1.99, y1: 0.64, y2: 0.77 }, { x: 2009, y: 1.70, y1: 0.75,
y2: 0.55 }
];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Category',
    },
    series: [
        {
            dataSource: stackedData, xName: 'x', yName: 'y',
            //Series type as stacked column
            type: 'StackingColumn'
        }, {
            dataSource: stackedData, xName: 'x', yName: 'y1',

```

```

        type: 'StackingColumn'
    }, {
        dataSource: stackedData, xName: 'x', yName: 'y2',
        type: 'StackingColumn'
    }
],
wallColor: 'transparent',
enableRotation: true,
rotation: 7,
tilt: 10,
depth: 100
}, '#element');

```

INDEX.HTML

Series customization

The following properties can be used to customize the **bar** series.

- [fill](#) – Specifies the color of the series.
- [opacity](#) – Specifies the opacity of the [fill](#) color.

INDEX.JS

```

var numData = [
  { x: 2005, y: 28 }, { x: 2006, y: 25 },
  { x: 2007, y: 26 }, { x: 2008, y: 27 },
  { x: 2009, y: 32 }, { x: 2010, y: 35 }, { x: 2011, y: 30 }];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
  },
  series: [
    {
      dataSource: numData,
      xName: 'x',
      yName: 'y',
      opacity: 0.5,
      fill: 'blue',
      // Series type as bar series
      type: 'Bar',
    },
  ],
});

```

```

    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
  }, '#element');

```

INDEX.HTML

Stacked bar chart in EJ2 JavaScript 3D Chart control

Stacked bar chart

To render a stacked bar series, use series [type](#) as `StackingBar` and inject `StackingBarSeries3D` module using `Chart3D.Inject(StackingBarSeries3D)` method.

INDEX.JS

```

var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category'
  },
  //Initializing Primary Y Axis
  primaryYAxis: {
    {
      interval: 20
    }
  },
  //Initializing Chart Series
  series: [

```

```

    {
      type: 'StackingBar',
      dataSource: [
        { x: 'Sochi', y: 9 },
        { x: 'Rio', y: 46 },
        { x: 'Pyeongchang', y: 9 },
        { x: 'Tokyo', y: 39 },
        { x: 'Beijing', y: 8 },
      ],
      name: 'America',
      xName: 'x',
      yName: 'y'
    },
    {
      type: 'StackingBar',
      dataSource: [
        { x: 'Sochi', y: 10 },
        { x: 'Rio', y: 4 },
        { x: 'Pyeongchang', y: 11 },
        { x: 'Tokyo', y: 7 },
        { x: 'Beijing', y: 4 },],
      name: 'Canada',
      xName: 'x',
      yName: 'y'
    },
    {
      type: 'StackingBar',
      dataSource: [
        { x: 'Sochi', y: 4 },
        { x: 'Rio', y: 10 },
        { x: 'Pyeongchang', y: 5 },
        { x: 'Tokyo', y: 10 },
        { x: 'Beijing', y: 5 },],
      name: 'France',
      xName: 'x',
      yName: 'y'
    }
  ],
  enableRotation: true,
  rotation: 22,
  depth: 100,
  legendSettings: {
    enableHighlight: true

Data labels in EJ2 JavaScript 3D Chart control

Data labels are fields that includes information about the sample point connected to an output. It can be added to a chart series by enabling the [visible](#) property in the [dataLabel](#). By default, the labels will arrange smartly without overlapping.

INDEX.JS

```

var chartData = [
    { country: "USA", gold: 50, silver: 70, bronze: 45 },
    { country: "China", gold: 40, silver: 60, bronze: 55 },
    { country: "Japan", gold: 70, silver: 60, bronze: 50 },
    { country: "Australia", gold: 60, silver: 56, bronze: 40 },
    { country: "France", gold: 50, silver: 45, bronze: 35 },
    { country: "Germany", gold: 40, silver: 30, bronze: 22 },
    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Category',
    },
    series:[{
        dataSource: chartData,
        xName: 'country', yName: 'gold',
        // Series type as column series
        type: 'Column',
        dataLabel: {
            visible: true
        }
    }
]
},

```

```

    title: 'Olympic Medals',
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
  }, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>

```

Format

Data label for the chart can be formatted using the [format](#) property. The global formatting options can be used as 'n', 'p', and 'c'.

INDEX.JS

```

var chartData = [
    { country: "USA", gold: 50, silver: 70, bronze: 45 },
    { country: "China", gold: 40, silver: 60, bronze: 55 },
    { country: "Japan", gold: 70, silver: 60, bronze: 50 },
    { country: "Australia", gold: 60, silver: 56, bronze: 40 }
];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Category',
    },
    series:[{
        dataSource: chartData,
        xName: 'country', yName: 'gold',
        // Series type as column series
        type: 'Column',
        dataLabel: {
            visible: true,
            format: 'n2'
        }
    }],
    title: 'Olympic Medals',
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
}, '#element');

```

```

Value	Format	Resultant Value	Description
1000	n1	1000.0	The number is rounded to 1 decimal place.
1000	n2	1000.00	The number is rounded to 2 decimal places.
1000	n3	1000.000	The number is rounded to 3 decimal place.
0.01	p1	1.0%	The number is converted to percentage with 1 decimal place.
0.01	p2	1.00%	The number is converted to percentage with 2 decimal place.
0.01	p3	1.000%	The number is converted to percentage with 3 decimal place.
1000	c1	\$1000.0	The currency symbol is appended to number and number is rounded to 1 decimal place.
1000	c2	\$1000.00	The currency symbol is appended to number and number is rounded to 2 decimal place.

Margin

The [margin](#) for data label can be applied by using [left](#), [right](#), [bottom](#) and [top](#) properties.

INDEX.JS

```

var chartData = [
    { country: "USA", gold: 50, silver: 70, bronze: 45 },
    { country: "China", gold: 40, silver: 60, bronze: 55 },
    { country: "Japan", gold: 70, silver: 60, bronze: 50 },

```

```

    { country: "Australia", gold: 60, silver: 56, bronze: 40 }
  ];
  var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
      valueType: 'Category',
    },
    series:[{
      dataSource: chartData,
      xName: 'country', yName: 'gold',
      type: 'Column',
      dataLabel: {
        visible: true,
        border:{
          width: 1,
          color : 'red'
        },
        margin:{
          left:5,
          right:5,
          top:5,
          bottom:5
        }
      }
    }
  ]},
  title: 'Olympic Medals',
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

```

    ele.style.visibility = "visible";
  }
  </script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Customization

The **stroke** and **border** of data label can be customized using [fill](#) and [border](#) properties.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
  },
  series:[{
    dataSource: chartData,
    xName: 'country', yName: 'gold',
    type: 'Column',
    dataLabel: {
      visible: true,
      border:{ width: 2, color : 'red'},
    }
  }],
  title: 'Olympic Medals',
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">

  ="text/javascript"></script>
</head>
<body>

```

```

    <div id="container">
      <div id="element"></div>
    </div>
</script>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Customizing specific label

A specific label can be customized by using the [textRender](#) event. The `textRender` event allows you to change the label text for the point.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 }
];
var chart3D = new ej.charts.Chart3D({
  textRender: (args) => {
    if (args.point.index === 2) {
      args.text = 'Label';
    }
    else {
      args.cancel = true;
    }
  },
  primaryXAxis: {
    valueType: 'Category',
  },
  series:[{
    dataSource: [{ x: 'USA', y: 46 }, { x: 'GBR', y: 27 }, { x: 'CHN',
y: 26 }],
    xName: 'country', yName: 'gold',
    type: 'Column',
    dataLabel: {
      visible: true
    }
  }],
  title: 'Olympic Medals',
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

<!-- markdownlint-disable MD036 -->

Legend in EJ2 JavaScript 3D Chart control

<!-- markdownlint-disable MD036 -->

Legend provides information about the series rendered in the 3D chart.

Position and alignment

By using the [position](#) property, the legend can be positioned at left, right, top or bottom of the 3D chart. The legend is positioned at the bottom of the 3D chart, by default.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },
  { country: "Germany", gold: 40, silver: 30, bronze: 22 },
  { country: "Italy", gold: 40, silver: 35, bronze: 37 },
  { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
    title: 'Countries'
  },

```

```

primaryYAxis: {
    minimum: 0, maximum: 80,
    interval: 20, title: 'Medals'
},
series:[{
    dataSource: chartData,
    xName: 'country', yName: 'gold',
    name: 'Gold', type: 'Column'
}, {
    dataSource: chartData,
    xName: 'country', yName: 'silver',
    name: 'Silver', type: 'Column'
}, {
    dataSource: chartData,
    xName: 'country', yName: 'bronze',
    name: 'Bronze', type: 'Column'
}],
title: 'Olympic Medals',
legendSettings: {
    visible: true,
    //Legend position as top
    position:'Top'
},
wallColor: 'transparent',
enableRotation: true,
rotation: 7,
tilt: 10,
depth: 100,
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}

```

```

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

The custom position helps you to position the legend anywhere in the 3D chart using x and y coordinates.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },

```

Legend size

By default, legend takes 20% - 25% of the 3D chart's height horizontally, when it is placed on top or bottom position and 20% - 25% of the 3D chart's width vertically, when it is placed on left or right position. You can change this default legend size by using the [height](#) and [width](#) properties of the `legendSettings`.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },

Note: To use the legend feature, we need to inject the **Legend3D** module using **Chart3D.Inject(Legend3D)** method.

Tooltip in EJ2 JavaScript 3D Chart control

<!-- markdownlint-disable MD036 -->

The 3D Chart will display details about the points through tooltip, when the mouse is moved over the specific point.

Default tooltip

By default, tooltip is not visible. The tooltip can be enabled by setting the **enable** property in **tooltipSettings** to **true** and by injecting **Tooltip3D** module using **Chart3D.Inject(Tooltip3D)**.

INDEX.JS

```

var chartData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart3D = new ej.charts.Chart3D({
  tooltip: { enable: true },
  primaryXAxis: {
    valueType: 'Category',
    labelRotation: -45,
    labelPlacement: 'BetweenTicks'
  },
  series:[{
    dataSource: chartData,
    xName: 'month',
    yName: 'sales',
    type: 'Column'

Selection in EJ2 JavaScript 3D Chart control

The 3D chart provides selection support for the series and its data points on mouse click.

When mouse is clicked on the data points, the corresponding series legend will also be selected.

We have different types of selection mode for selecting a data.

- None

- Point
- Series
- Cluster

Point

To select a point, set the [selectionMode](#) property to **Point**.

INDEX.JS

```
var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },
  { country: "Germany", gold: 40, silver: 30, bronze: 22 },
  { country: "Italy", gold: 40, silver: 35, bronze: 37 },
  { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
  },
  series:[{
    dataSource: chartData,
    xName: 'country', yName: 'gold',
    name: 'Gold', type: 'Column'
  }, {
    dataSource: chartData,
    xName: 'country', yName: 'silver',
    name: 'Silver', type: 'Column'
  }, {
    dataSource: chartData,
    xName: 'country', yName: 'bronze',
    name: 'Bronze', type: 'Column'
  }],
  title: 'Olympic Medals',

Selection during initial loading

In a 3D chart, selecting a point or series during initial loading can only be done programmatically. The [selectedDataIndexes](#) property can be used for this.

INDEX.JS

```

var chartData = [
    { country: "USA", gold: 50, silver: 70, bronze: 45 },
    { country: "China", gold: 40, silver: 60, bronze: 55 },
    { country: "Japan", gold: 70, silver: 60, bronze: 50 },
    { country: "Australia", gold: 60, silver: 56, bronze: 40 },
    { country: "France", gold: 50, silver: 45, bronze: 35 },
    { country: "Germany", gold: 40, silver: 30, bronze: 22 },
    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Category',
    },
    series:[{
        dataSource: chartData,
        xName: 'country', yName: 'gold',
        name: 'Gold', type: 'Column'
    }, {
        dataSource: chartData,
        xName: 'country', yName: 'silver',
        name: 'Silver', type: 'Column'
    }, {
        dataSource: chartData,
        xName: 'country', yName: 'bronze',
        name: 'Bronze', type: 'Column'
    }],
    title: 'Olympic Medals',
    selectionMode: 'Point',
    isMultiSelect: true,
    selectedDataIndexes: [
        { series: 0, point: 1}, { series: 2, point: 3}
    ],
    wallColor: 'transparent',
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

Print and Export in EJ2 JavaScript 3D Chart control

Print

The rendered 3D chart can be printed directly from the browser by calling the public method [print](#). The ID of the 3D chart's div element must be passed as the input parameter to that method.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },
  { country: "Germany", gold: 40, silver: 30, bronze: 22 },
  { country: "Italy", gold: 40, silver: 35, bronze: 37 },
  { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
  },
  series:[{
    dataSource: chartData,
    xName: 'country', yName: 'gold',
    // Series type as column series
    type: 'Column'
  }],
  title: 'Olympic Medals',
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');
document.getElementById('print').onclick = () => {
  chart.print();
};

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>

Appearance in EJ2 JavaScript 3D Chart control

Custom color palette

The default color of series or points can be customized by providing a custom color palette of your choice by using the [palettes](#) property.

INDEX.JS

```

var chartData = [
    { country: "USA", gold: 50, silver: 70, bronze: 45 },
    { country: "China", gold: 40, silver: 60, bronze: 55 },
    { country: "Japan", gold: 70, silver: 60, bronze: 50 },
    { country: "Australia", gold: 60, silver: 56, bronze: 40 },
    { country: "France", gold: 50, silver: 45, bronze: 35 },
    { country: "Germany", gold: 40, silver: 30, bronze: 22 },
    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart3D = new ej.charts.Chart3D({
    primaryXAxis: {
        valueType: 'Category',
    },
    series:[{
        dataSource: chartData,
        xName: 'country', yName: 'gold',
        name: 'Gold', type: 'Column'
    }, {
        dataSource: chartData,
        xName: 'country', yName: 'silver',
        name: 'Silver', type: 'Column'
    }, {
        dataSource: chartData,
        xName: 'country', yName: 'bronze',

```

```

        name: 'Bronze', type: 'Column'
    }],
    title: 'Olympic Medals',
    wallColor: 'transparent',
    palettes: ["#E94649", "#F6B53F", "#6FAAB0", "#C4C24A"],
    enableRotation: true,
    rotation: 7,
    tilt: 10,
    depth: 100
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

```

Data point customization

The color of an individual data point can be customized using the below options.

Point color mapping

The color for the points can be bound from the [dataSource](#) for the series by utilizing the [pointColorMapping](#) property.

INDEX.JS

```

var chart3D = new ej.charts.Chart3D({
  primaryXAxis: {
    valueType: 'Category',
  },
  series:[{

```

```

    pointColorMapping: "color",
    dataSource: [
      { x: 'Jan', y: 6.96, color: "#ed4c40" },
      { x: 'Feb', y: 8.9, color: "#3285f3"},
      { x: 'Mar', y: 12, color: "#1dd7f3"},
      { x: 'Apr', y: 17.5, color: "#fe1684" },
      { x: 'May', y: 22.1, color: "#4633f2" }
    ], xName: 'x', yName: 'y', type: 'Column',
  }],
  title: 'Olympic Medals',
  wallColor: 'transparent',
  enableRotation: true,
  rotation: 7,
  tilt: 10,
  depth: 100
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Point level customization

The data label and fill color of each data point can be customized using the [pointRender](#) and [textRender](#) events.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },

```

```

    { country: "China", gold: 40, silver: 60, bronze: 55 },

Title customization

The [titleStyle](#) property of the 3D chart provides options to customize the title by using the following properties.

- [size](#) - Specifies the size of the title.
- [color](#) - Specifies the color for the title.
- [fontFamily](#) - Specifies the font family for the title.
- [fontWeight](#) - Specifies the font weight of the title.
- [fontStyle](#) - Specifies the font style for the title.
- [opacity](#) - Specifies the opacity for the color of the title.
- [textAlignment](#) - Specifies the alignment of the title.
- [textOverflow](#) - Specifies the overflow of the title.

INDEX.JS

Accessibility in EJ2 JavaScript 3D Chart control

Accessibility is achieved in the 3D chart control through WAI-ARIA standard and keyboard navigation. The 3D chart features can be effectively accessed through assistive technologies such as screen readers.

WAI-ARIA

WAI-ARIA (Accessibility Initiative – Accessible Rich Internet Applications) defines a way to increase the accessibility of web pages, dynamic content, and user interface components developed with AJAX, HTML, JavaScript, and related technologies. ARIA provides additional semantics to describe the role, state, and functionality of web components.

- img (role)
- button (role)
- region (role)

- aria-label (attribute)
- aria-hidden (attribute)
- aria-pressed (attribute)

Keyboard navigation

All the 3D chart actions can be controlled via keyboard keys. The applicable key combinations and their relative functionalities are listed below.

Interaction Keys | Description

Tab | Moves the focus to the next element in the chart.

Shift + Tab | Moves the focus to the previous element in the chart.

DownArrow | Moves the focus to the data point left side from the selected point.

UpArrow | Moves the focus to the data point right side from the selected point.

Left Arrow | Moves the focus to the next series in the chart.

Right Arrow | Moves the focus to the previous series in the chart.

ESC | Cancel the tooltip for the data point.

Enter/Space | Selects the data point in the series.

Down/Left Arrow | Moves the focus to the legend left side from the selected legend.

Up/Right Arrow | Moves the focus to the legend right side from the selected legend.

Enter/Space | Toggles the visibility of the corresponding series.

Ctrl + P | Print the chart.

Accordion

Expand mode in ##Platform_Name## Accordion control

- Single
- Multiple

Single

The property enables to expand only one Accordion item at a time. If you expand any new item, the previously expanded one is collapsed and new item changed to expanded state.

You can also choose which accordion pane is expanded state at initial rendering by enabling the [expanded](#) property on accordion items.

INDEX.JS

```
ej.base.enableRipple(true);
//Initialize Accordion component
var accordion = new ej.navigations.Accordion({
  expandMode: 'Single',
  items: [
```

```

    { header: 'ASP.NET', expanded: true, content: 'Microsoft ASP.NET is a
    set of technologies in the Microsoft .NET Framework for building Web
    applications and XML Web services.' },
    { header: 'ASP.NET MVC', content: 'The Model-View-Controller (MVC)
    architectural pattern separates an application into three main components:
    the model, the view, and the controller.' },
    { header: 'JavaScript', content: 'JavaScript (JS) is an interpreted
    computer programming language. It was originally implemented as part of web
    browsers so that client-side scripts could interact with the user, control
    the browser, communicate asynchronously, and alter the document content that
    was displayed.' },
  ]
});
//Render initialized Accordion component
accordion.appendTo('#element');

```

INDEX.HTML

var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Multiple

Default [expandMode](#) of the Accordion is **Multiple**. It enables you to expand more than one Accordion item at a time. Expand/collapse action can also be toggled by clicking on it again. For example, expanded item is collapsed when you click on it again.

INDEX.JS

```

ej.base.enableRipple(true);
//Initialize Accordion component
var accordion = new ej.navigations.Accordion({
  expandMode: 'Multiple',
  items: [
    { header: 'ASP.NET', content: 'Microsoft ASP.NET is a set of
technologies in the Microsoft .NET Framework for building Web applications
and XML Web services.' },
    { header: 'ASP.NET MVC', content: 'The Model-View-Controller (MVC)
architectural pattern separates an application into three main components:
the model, the view, and the controller.' },
    { header: 'JavaScript', content: 'JavaScript (JS) is an interpreted
computer programming language. It was originally implemented as part of web
browsers so that client-side scripts could interact with the user, control
the browser, communicate asynchronously, and alter the document content that
was displayed.' },
  ]
});
//Render initialized Accordion component
accordion.appendTo('#element');

```

Accessibility in ##Platform_Name## Accordion control

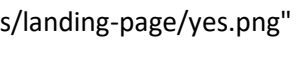

The Accordion control has been designed keeping in mind the [WAI-ARIA](#) specifications, by applying the prompt WAI-ARIA roles, states, and properties along with the keyboard support. Thus, making it usable for people who use assistive WAI-ARIA Accessibility supports that is achieved through the attributes like `aria-labelledby`. It helps to provides information about the elements in a document for assistive technology. The control implements the keyboard navigation support by following the [WAI-ARIA practices](#) and tested in major screen readers.

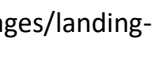

The accessibility compliance for the Accordion control is outlined below.

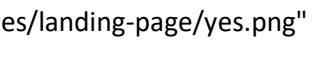

| Accessibility Criteria | Compatibility |

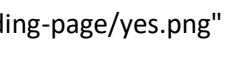

| -- | -- |

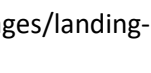

| [WCAG 2.2](#) Support |  |

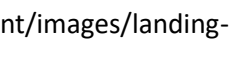

| [Section 508](#) Support |  |

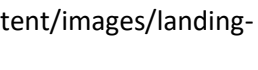

| Screen Reader Support |  |

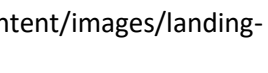

| Right-To-Left Support |  |

| Color Contrast |  |

| Mobile Device Support |  |

| Keyboard Navigation Support |  |

| [Accessibility Checker](#) Validation |  |

| [Axe-core](#) Accessibility Validation |  |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

}

</style>

<div> - All features of the control meet the requirement.</div>

<div> - Some features of the control do not meet the requirement.</div>

<div> - The control does not meet the requirement.</div>

ARIA attributes

| Roles and Attributes | Functionalities

| role | **Button:** Attribute is set to the Accordion header elements to indicate that the element can be used to toggle the visibility of the associated content section, describing the actual role of the element.
 Region: Attribute is set to the Accordion panel elements to create a landmark region that contains the currently expanded accordion panel, describing the actual role of the element.
|

| aria-labelledby | Attribute is set to content (panel) and it points to the corresponding Accordion header. |

| aria-controls | Attribute is set to the header and it points to the corresponding Accordion content. |

| aria-expanded | Attribute is set to the Accordion header elements to indicates the expand state of the Accordion Item. Default value of this attribute is **false**. If an item is expanded, the attribute value changes to 'true'. |

| aria-hidden | Attribute is set to the Accordion panel elements to indicates the content visible state of the Accordion Item. Default value of this attribute is **true**. If an item content is visible, the attribute value changes to **false**. |

| aria-disabled | It indicates the disabled state of the Accordion and its items. |

Keyboard interaction

Keyboard navigation is enabled by default. Possible keys are:

Key	Description	
Space or Enter	When focus is on the Accordion header, click on the focused element makes the element to expand and collapse.	
Down Arrow	Focus the next Accordion header.	
Up Arrow	Focus the previous Accordion header.	
Home	Focus the first Accordion header.	
End	Focus the last Accordion header.	
Tab	To Move focus through the interactive elements.	

| Shift + Tab | To Move focus through the interactive elements. |

Ensuring accessibility

The Accordion control accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Accordion control is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Accordion control with accessibility tools.

Style in ##Platform_Name## Accordion control

The following content provides the exact CSS structure that can be used to modify the control's appearance based on user preference.

Customizing Accordion

Use the following CSS to customize the Accordion.

```
`css
.e-accordion {
border: 5px solid rgb(173, 255, 47);
}
`
```

Customizing the list items

Use the following CSS to customize the items of Accordion.

```
`css
.e-accordion .e-acrdn-item {
text-align: center;
color: pink;
background-color: #2fa1ff;
}
`
```

Customizing Accordion's header

Use the following CSS to customize the header of Accordion control.

```
`css
.e-accordion .e-acrdn-item.e-select > .e-acrdn-header {
background: #2fa1ff !important;
justify-content: center;
}
`
```

,

Customizing Accordion's expand and collapse icons

Use the following CSS to customize the expand and collapse icons of Accordion control.

```
`css
.e-accordion .e-acrdn-item .e-acrdn-header .e-toggle-icon .e-icons {
color: pink;
}
,
```

Customizing the hover state of Accordion control

Use the following CSS to customize the accordion item when hovering.

```
`css
.e-accordion .e-acrdn-item .e-acrdn-header:hover {
border: 2px solid gray;
}
,
```

Customizing selected item of Accordion control

Use the following CSS to customize the selected accordion item.

```
`css
.e-accordion .e-acrdn-item.e-select.e-active>.e-acrdn-header,
.e-accordion .e-acrdn-item.e-select.e-item-focus>.e-acrdn-header {
background-color: rgb(0, 15, 100) !important;
}
,
```

Use the following CSS to customize the selected accordion item text.

```
`css
.e-accordion .e-acrdn-item.e-select.e-active>.e-acrdn-header .e-acrdn-header-content,
.e-accordion .e-acrdn-item.e-select.e-item-focus>.e-acrdn-header .e-acrdn-header-content {
color: #2fa1ff !important;
}
,
```

How To

Set the nested accordion in ##Platform_Name## Accordion control

Accordion supports to render **nested** level of Accordion by using content property. You can give nested Accordion content inside the parent Accordion content property by using **id** of nested element. The nested Accordion can be rendered with the use of provided events, such as [clicked](#) and [expanding](#).

INDEX.JS

```

ej.base.enableRipple(true);
//Initialize Accordion component
var nestAcrdn_vid;
var nestAcrdn_mus;
var nestAcrdn_musNew;
var nestAcrdn_img;
var accordion = new ej.navigations.Accordion({
    expanding: expanding,
    items: [
        { header: 'Video', content: '<div id="nested_video"></div>' },
        { header: 'Music', content: '<div id="nested_music"></div>' },
        { header: 'Images', content: '<div id="nested_images"></div>' },
    ]
});
//Render initialized Accordion component
accordion.appendTo('#element');
function clicked(e) {
    var ele = e.originalEvent.target;
    if (ele.querySelectorAll('.e-accordion').length > 0) {
        return;
    }
    if (!document.getElementById("nested_musicNew").classList.contains("e-accordion")) {
        nestAcrdn_musNew = new ej.navigations.Accordion({
            items: [
                { header: 'New Track1' },
                { header: 'New Track2' }
            ]
        }, '#nested_musicNew');
    }
}
function expanding(e) {
    if (e.isExpanded && [].indexOf.call(this.items, e.item) === 0) {
        if (e.element.querySelectorAll('.e-accordion').length > 0) {
            return;
        }
        nestAcrdn_vid = new ej.navigations.Accordion({
            items: [
                { header: 'Video Track1' },
                { header: 'Video Track2' }
            ]
        }, '#nested_video');
    }
    if (e.isExpanded && [].indexOf.call(this.items, e.item) === 1) {
        if (e.element.querySelectorAll('.e-accordion').length > 0) {
            return;
        }
        nestAcrdn_mus = new ej.navigations.Accordion({
            clicked: clicked,
            items: [
                { header: 'Music Track1' },
                { header: 'Music Track2' },
                { header: 'Music New', content: '<div id="nested_musicNew"></div>' }
            ]
        }, '#nested_music');
    }
}

```

```

    }
    if (e.isExpanded && [].indexOf.call(this.items, e.item) === 2) {
        if (e.element.querySelectorAll('.e-accordion').length > 0) {
            return;
        }
        nestAcrdn_img = new ej.navigations.Accordion({
            items: [
                { header: 'Track1' },
                { header: 'Track2' },
            ]
        }, '#nested_images');
    }
}

```

Load content through post in ##Platform_Name## Accordion control

Accordion supports to load external contents through **AJAX** library. Refer the below steps.

- Import the **Ajax** module from **ej2-base** and initialize with URL path.
- Get data from the Ajax Success event to initialize Accordion with retrieved external path data.

INDEX.JS

```

ej.base.enableRipple(true);
var ajax = new ej.base.Ajax('./ajax.html', 'GET', true);
ajax.send().then();
ajax.onSuccess = function (data) {
    var ctn2 = data;
    //Initialize Accordion component
    var accordion = new ej.navigations.Accordion({
        items: [
            { header: 'Department', content: '#acrdnContent1' },
            { header: 'Platform', content: '#acrdnContent2' },
            { header: 'Employee Details', content: ctn2 }
        ]
    });
    //Render initialized Accordion component
    accordion.appendTo('#element');
}

```

INDEX.HTML

Set custom animation in ##Platform_Name## Accordion control

Accordion supports custom animations for both expand and collapse actions from the provided animation option of [Animation](#) library. The [animation](#) property also allows you to set [easing](#), [duration](#), and various other effects of your choice.

Default animation is given as [SlideDown](#) for expanding the panel using [expand](#) animation property and [SlideUp](#) for collapsing the panel using [collapse](#) animation property. You can also disable the animation by setting animation [effect](#) as [none](#).

The sample demonstrates some types of animation that suits for Accordion. You can check all the animation effects [here](#).

INDEX.JS

```

ej.base.enableRipple(true);
//Initialize Accordion component
var accordion = new ej.navigations.Accordion({
    items: [
        { header: 'ASP.NET', expanded: 'true', content: 'Microsoft ASP.NET
is a set of technologies in the Microsoft .NET Framework for building Web
applications and XML Web services.' },
        { header: 'ASP.NET MVC', content: 'The Model-View-Controller (MVC)
architectural pattern separates an application into three main components:
the model, the view, and the controller.' },
        { header: 'JavaScript', content: 'JavaScript (JS) is an interpreted
computer programming language. It was originally implemented as part of web
browsers so that client-side scripts could interact with the user, control
the browser, communicate asynchronously, and alter the document content that
was displayed.' },

```

To keep single pane open always in ##Platform_Name## Accordion control

By default, all Accordion panels are collapsible. You can customize the Accordion to keep one panel as expanded state always. This is applicable for **Single** expand mode.

INDEX.JS

```

ej.base.enableRipple(true);
//Initialize Accordion component
var clickEle;
var accordion = new ej.navigations.Accordion({
    expandMode: 'Single',
    clicked: clicked,
    expanding: beforeExpand,
    items: [
        { header: 'ASP.NET', expanded: 'true', content: 'Microsoft ASP.NET is a set of technologies in the Microsoft .NET Framework for building Web applications and XML Web services.' },
        { header: 'ASP.NET MVC', content: 'The Model-View-Controller (MVC) architectural pattern separates an application into three main components: the model, the view, and the controller.' },
        { header: 'JavaScript', content: 'JavaScript (JS) is an interpreted computer programming language. It was originally implemented as part of web browsers so that client-side scripts could interact with the user, control

```

```

the browser, communicate asynchronously, and alter the document content that
was displayed.' },
]
});
//Render initialized Accordion component
accordion.appendTo('#element');
function clicked (e) {
    clickEle = e.originalEvent.target.closest('.e-acrdn-header');
}
function beforeExpand (e) {
    var expandCount = this.element.querySelectorAll('.e-selected').length;
    var ele = this.element.querySelectorAll('.e-selected')[0];
    if (ele) {
        ele = ele.firstChild
    }
    if (expandCount === 1 && ele === clickEle) {
        e.cancel = true;
    }
}
}

```

Create wizard using accordion in `##Platform_Name##` Accordion control

Accordion items can be disabled dynamically by passing the index and boolean value with the [enableItem](#) method and also dynamically expand the item using [expandItem](#) method.

The below Wizard sample is designed for Online Shopping model. In this, each Accordion item is integrated with required components to fill

the details and designed for getting user details and making payment at the end. Each field is provided with validation for all mandatory

option to enable/disable to next Accordion. In below sample, accordion items can be disabled dynamically with [enableItem](#) method using [created](#) event.

INDEX.JS

```
ej.base.enableRipple(true);

Load accordion with data source in ##Platform_Name## Accordion control

You can bind any data object to Accordion items, by mapping it to [header](#) and [content](#) property.

In the below demo, Data is fetched from an OData service using DataManager. The result data is formatted as a JSON object with [header](#) and [content](#) fields, which is set to items property of Accordion.

INDEX.JS

```

var itemsData = [];
var mapping = { header: 'FirstName', content: 'Notes' };
const SERVICE_URI =
'https://services.odata.org/V4/Northwind/Northwind.svc/Employees';
new ej.data.DataManager({ url: SERVICE_URI, adaptor: new
ej.data.ODataV4Adaptor, crossDomain: true })
    .executeQuery(new ej.data.Query().range(1, 4)).then(function (e) {
        var result = e.result;
        for(var i = 0; i < result.length; i++) {
            itemsData.push({ header: result[i][mapping.header], content:
result[i][mapping.content] });
        }
        //Initialize Accordion component
        var accordion = new ej.navigations.Accordion({
            items: itemsData
        });
        //Render initialized Accordion component
        accordion.appendTo('#element');
    });

```

INDEX.HTML

```

```

Load accordion items dynamically in ##Platform_Name## Accordion control

Accordion items can be added dynamically by passing the item and index value with the [addItem](#) method.

In the following demo, new items are added dynamically when you expand an Accordion header using [expanded](#) event.

- Data is fetched from the data source and it is formatted as a JSON object with **header** and **content** fields.
- Here last index is calculated to append the new Accordion item at the end and the number of items are limited to 10, since the data bound have only 10 items.

INDEX.JS

```
ej.base.enableRipple(true);
//Initialize Accordion component
var dbFlag = 0;
var dynamciAcrdnCount = 2;
var accordionData = [
    {

Add font awesome in ##Platform_Name## Accordion control

We can customize the Accordion component items by using font awesome icons.

- Need to add font awesome CDN reference link in your sample to use font awesome icons.

```

<link rel="stylesheet" href="https://cdnjs.cloudflare.com/ajax/libs/font-awesome/4.7.0/css/font-awesome.min.css" />

```

You can add the font awesome icons to the Accordion header using '[iconCss](#)' property. The following sample illustrates how to use font awesome in Accordion component.

INDEX.JS

```

ej.base.enableRipple(true);
//Initialize Accordion component
var accordion = new ej.navigations.Accordion({
    items: [
        { header: 'Twitter', expanded: 'true', iconCss: 'fa fa-twitter',
        content: 'Twitter is an online social networking service that enables users
        to send and read short 140-character messages called "tweets".' },
        { header: 'Facebook', iconCss: 'fa fa-facebook', content: 'Facebook
        is an online social networking service headquartered in Menlo Park,
        California. Its website was launched on February 4, 2004, by Mark Zuckerberg
        with his Harvard College roommates.' },
        { header: 'WhatsApp', iconCss: 'fa fa-whatsapp', content: 'WhatsApp
        is an American freeware, cross-platform messaging and Voice over IP (VoIP)
        service owned by Facebook, Inc.' },
    ]
});
//Render initialized Accordion component

```

```
accordion.appendTo('#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 Accordion</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript Toolbar Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/material.css"
rel="stylesheet">
  <link rel="stylesheet"
href="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.7/css/bootstrap.min.css"
>
  <link rel="stylesheet"
href="https://cdnjs.cloudflare.com/ajax/libs/font-awesome/4.7.0/css/font-
awesome.min.css">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
    <br><br>
    <div id="result"></div>
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Customization

Use following CSS to customize the accordion items header icons.

```
`css
.e-accordion .e-acrdn-item .e-acrdn-header .e-acrdn-header-icon {
display: inline-block;
padding: 0 10px 0 0 !important;
}
`
```

Use following CSS to customize the selected accordion item content icons.

```
`css
.e-accordion .e-acrdn-item.e-select .e-acrdn-panel .e-acrdn-content .e-content-icon {
color: rgba(0, 0, 0, 0.54) !important;
}
`
```

Customize expand collapse actions in ##Platform_Name## Accordion control

Accordion component supports customizing the expand or collapse animation action behavior. You can manually change the expand animation action performed after the collapse animation operation performed on already expand pane when the expand icons are clicked.

By default, the Accordion component pane is expanded or collapsed, when click the expand or collapse icon. It is not affected on already expand pane.

The following sample demonstrates, how to expand the collapsed Accordion item after collapse animation performed on the expanded Accordion item using [created](#), [expanding](#), and [expanded](#) event. In the Expanding event, get the previously expanded item index and prevent the expanding behavior using `args.cancel` option. Expand the Accordion item dynamically based on specifying the `index` value using the [expandItem](#) public method and [expanded](#) event.

INDEX.JS

```
ej.base.enableRipple(true);
//Initialize Accordion component
var expandIndex;
var isCollapsed = false;
var initialLoad = true;
var accordion = new ej.navigations.Accordion({
  expandMode: 'Single',
  expanding: onExpanding,
  expanded: onExpanded,
  created: onCreate,
  items: [
    { header: 'ASP.NET', expanded: 'true', content: 'Microsoft ASP.NET is a set of technologies in the Microsoft .NET Framework for building Web applications and XML Web services. ASP.NET pages execute on the server and generate markup such as HTML, WML, or XML that is sent to a desktop or mobile browser. ASP.NET pages use a compiled, event-driven programming model that improves performance and enables the separation of application logic and user interface.' },
    { header: 'ASP.NET MVC', content: 'The Model-View-Controller (MVC) architectural pattern separates an application into three main components: the model, the view, and the controller. The ASP.NET MVC framework provides an alternative to the ASP.NET Web Forms pattern for creating Web applications. The ASP.NET MVC framework is a lightweight, highly testable presentation framework that (as with Web Forms-based applications) is integrated with existing ASP.NET features, such as master pages and membership-based authentication.' },
    { header: 'JavaScript', content: 'JavaScript (JS) is an interpreted computer programming language. It was originally implemented as part of web browsers so that client-side scripts could interact with the user, control the browser, communicate asynchronously, and alter the document content that
```

```

was displayed. More recently, however, it has become common in both game
development and the creation of desktop applications.' },
]
});
//Render initialized Accordion component
accordion.appendTo('#element');
function onCreate() {
    initialLoad = false;
}
function onExpanding(e) {
    if (e.isExpanded && !initialLoad && !isCollapsed) {
        e.cancel = true;
        expandIndex = accordion.items.indexOf (e.item);
        isCollapsed = true;
    }
}
function onExpanded(e) {
    if (!e.isExpanded && !initialLoad && isCollapsed) {
        accordion.expandItem(true, expandIndex);
        isCollapsed = false;
    }
}
}
}

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

Integrate treeview inside the accordion in ##Platform_Name## Accordion control

Accordion supports to render other Essential JS 2 Components by using content property. You can give content as an element string like below, for initializing the component.

```
`js
```

```
content: '<div id="element"> </div>'
```

```
,
```

The other component can be rendered with the use of provided events, such as [clicked](#) and [expanding](#).

The following procedure is to render a TreeView within the Accordion,

- Import the **TreeView** module from **ej2-navigations**, for adding TreeView. Please refer the [TreeView initialization steps](#)
- You can initialize the TreeView component in [expanding](#) event, by getting the element and defining the required TreeView properties.

INDEX.JS

```

ej.base.enableRipple(true);
var DocDB = [
  {
    nodeId: '03', nodeText: 'Documents', icon: 'folder',
    nodeChild: [
      { nodeId: '03-01', nodeText: 'Environment Pollution.docx',
        icon: 'docx' },
      { nodeId: '03-02', nodeText: 'Global Water, Sanitation, &
        Hygiene.docx', icon: 'docx' },
      { nodeId: '03-03', nodeText: 'Global Warming.ppt', icon:
        'ppt' },
      { nodeId: '03-04', nodeText: 'Social Network.pdf', icon:
        'pdf' },
      { nodeId: '03-05', nodeText: 'Youth Empowerment.pdf', icon:
        'pdf' },
    ]
  },
]

var DownloadDB = [
  {
    nodeId: '05', nodeText: 'Downloads', icon: 'folder',
    nodeChild: [
      { nodeId: '05-01', nodeText: 'UI-Guide.pdf', icon: 'pdf' },
      { nodeId: '05-02', nodeText: 'Tutorials.zip', icon: 'zip' },
      { nodeId: '05-03', nodeText: 'Game.exe', icon: 'exe' },
      { nodeId: '05-04', nodeText: 'TypeScript.7z', icon: 'zip' },
    ]
  }
]

```

```

var PicDB = [
    {
        nodeId: '04', nodeText: 'Pictures', icon: 'folder', expanded:
true,
        nodeChild: [
            {
                nodeId: '04-01', nodeText: 'Camera Roll', icon:
'folder', expanded: true,
                nodeChild: [
                    { nodeId: '04-01-01', nodeText:

AccumulationChart

Pie dough nut in ##Platform_Name## Accumulation chart control

Pie Chart

To render a pie series, use the series [type](#) as `Pie` and inject the `PieSeries` module using `AccumulationChart.Inject(PieSeries)` method. If the `PieSeries` module is not injected, this module will be loaded by default.

INDEX.JS

```
var piechart = new ej.charts.AccumulationChart({
  series: [
    {
      dataSource: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x:
'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
      { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x: 'Jul', y: 26 },
{ x: 'Aug', y: 25 },
      { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
      radius: '100%',
      xName: 'x',
      yName: 'y'
    }
  ],
  tooltip:{enable: true}
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Radius Customization

By default, radius of the pie series will be 80% of the size (minimum of chart width and height). You can customize this using [radius](#) property of the series.

INDEX.JS

```
var piechart = new ej.charts.AccumulationChart({
  series: [
    {
      dataSource: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x:
'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
      { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x: 'Jul', y: 26 },
{ x: 'Aug', y: 25 },
      { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
      radius: '100%',
      xName: 'x',
      yName: 'y'
    }
  ],
  tooltip: { enable: true }
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>

if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Pie Center

The center position of the pie can be changed by Center X and Center Y. By default, center value of the pie series x and y is 50%. You can customize this using [center](#) property of the series.

INDEX.JS

```
var piechart = new ej.charts.AccumulationChart({
  series: [
    {
      dataSource: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x:
'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
      { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x: 'Jul', y: 26 },
{ x: 'Aug', y: 25 },
      { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
      radius: '100%',
      xName: 'x',
      yName: 'y',
      enter: {x: '60%', y: '60%'},
    }
  ],
  tooltip:{enable: true}
}, '#element');
```

INDEX.HTML

  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Various Radius Pie Chart

You can use radius mapping to render the slice with different [radius](#) pie and also use [border](#), [fill](#) properties to customize the point. `dataLabel` is used to represent individual data and its value.

INDEX.JS

```
var piechart = new ej.charts.AccumulationChart({
  series: [
    {
      dataSource: [
        { x: 'Argentina', y: 505370, r: '100' },
        { x: 'Belgium', y: 551500, r: '118.7' },
        { x: 'Cuba', y: 312685, r: '124.6' },
        { x: 'Dominican Republic', y: 350000, r: '137.5' },
        { x: 'Egypt', y: 301000, r: '150.8' },
        { x: 'Kazakhstan', y: 300000, r: '155.5' },
        { x: 'Somalia', y: 357022, r: '160.6' }
      ],
      dataLabel: {
        visible: true, position: 'Outside',
        name: 'x'
      },
      radius: 'r', xName: 'x',
      yName: 'y', innerRadius: '20%'
    },
  ],
  enableSmartLabels: true,
  legendSettings: {
    visible: true,
  },
  enableAnimation: true,
  title: 'Countries compared by population density and total area'
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Doughnut Chart

To achieve a doughnut in pie series, customize the [innerRadius](#) property of the series. By setting value greater than 0%, a doughnut will appear. The `innerRadius` property takes value from 0% to 100% of the pie radius.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x:
'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
            { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x: 'Jul', y: 26 },
{ x: 'Aug', y: 25 }],
            innerRadius: '40%',
            xName: 'x',
            yName: 'y'
        }
    ]
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">

    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

    <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
    <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}

```

```

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Start and End angles

You can customize the start and end angle of the pie series using the [startAngle](#) and [endAngle](#) properties. The default value of `startAngle` is 0 degree, and `endAngle` is 360 degrees. By customizing this, you can achieve a semi pie series.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
  series: [
    {
      dataSource: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
      dataLabel: { visible: true, name: 'text', position: 'Outside'
},
      startAngle: 270,
      endAngle: 90,
      xName: 'x',
      yName: 'y'
    }
  ],
  '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Color & Text Mapping

The fill color and the text in the data source can be mapped to the chart using `pointColorMapping` in series and `name` in datalabel respectively.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [
                { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
                { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
                { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
                { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
                { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
            dataLabel: { visible: true, name: 'text', position: 'Outside'
        },
        {
            startAngle: 270,
            endAngle: 90,
            xName: 'x',
            yName: 'y'
        }
    ]
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">

Customization

Individual points can be customized using the `pointRender` event.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [
                { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
                { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
                { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
                { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
                { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' },
                { x: 'Nov', y: 9, text: 'Nov: 9' }, { x: 'Dec', y: 3.5,
text: 'Dec: 3.5' }],
            dataLabel: { visible: true, name: 'text', position: 'Outside' },
            groupTo: '11',
            xName: 'x',
            yName: 'y'
        }
    ],
    textRender: (args) => {
        if (args.text.indexOf('Others') > -1) {
            args.color = 'red';
            args.border.width = 1;
        }
    },
    pointRender: (args) => {
        if ((args.point.x).indexOf('Others') > -1) {
            args.fill = '#D3D3D3';
        }
    },
}, '#element');

```

Hide pie or doughnut border

By default, the border will appear in the pie/doughnut chart while mouse hover on the chart. You can disable the the border by setting `enableBorderOnMouseMove` property is `false`.

INDEX.JS

```

var dataMapping = [{ x: 'Jan', y: 3, fill: '#498fff', text: 'January' }, { x:
'Feb', y: 3.5, fill: '#ffa060', text: 'February' },
  { x: 'Mar', y: 7, fill: '#ff68b6', text: 'March' }, { x: 'Apr', y: 13.5,
fill: '#81e2a1', text: 'April' }];
var chart = new ej.charts.AccumulationChart({
  enableBorderOnMouseMove: false,
  series: [
    {
      dataSource: dataMapping,
      xName: 'x',
      yName: 'y',
    }
  ]
}, '#element');

```

INDEX.HTML

Multi-level pie chart

You can achieve a multi-level drill down in pie and doughnut charts using [pointClick](#) event. If user clicks any point in the chart, that corresponding data will be shown in the next level and so on based on point clicked.

You can also achieve drill-up (back to the initial state) by using [chartMouseClicked](#) event. In below sample, you can drill-up by clicking back button in the center of the chart.

INDEX.JS

```

window.pointIndex = -1;
var data = [
    {
        x: 'SUV',
        y: 25,
        z: [
            {
                title: 'Automobile Sales in the SUV Segment',
                x: 'Toyota',
                y: 8,
                z: [
                    { x: '2000', y: 20 },
                    { x: '2001', y: 30 },
                    { x: '2002', y: 40 },
                ],
            },
            { x: 'Ford', y: 12 },
            { x: 'GM', y: 17 },
            { x: 'Renault', y: 6 },
        ],
    },
],

```

```

Pyramid in ##Platform_Name## Accumulation chart control

To render a pyramid series, use the series [type](#) as `Pyramid` and inject `PyramidSeries` module using the `AccumulationChart.Inject(PyramidSeries)` method.

INDEX.JS

```

var chart = new ej.charts.AccumulationChart({
    width: '600px',
    series: [{
        type: 'Pyramid',
        dataSource: [{ x: 'Australia', y: 20, text: 'Australia 20%' },

Smart Data Label

It provides the data label smart arrangement of the funnel and pyramid series. The overlap data label will be placed on left side of the funnel/pyramid series.

INDEX.JS

```

var data = [

```

Note: To use the data label feature, inject the `DataLabel` using the `Chart.Inject(DataLabel)` method.

Positioning

Accumulation chart provides support for placing the data label either `inside` or `outside` the chart.

INDEX.JS

```
var piechart = new ej.charts.AccumulationChart({
  enableSmartLabels: true,
  series: [
    {
      dataSource: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
      dataLabel: { visible: true, name: 'text', position: 'Outside',
template: '<div>${point.x}</div><div>${point.y}</div>' },
      xName: 'x',
      yName: 'y'
    }
  ],
  '#element');

```

INDEX.HTML

Smart labels

Data labels will be arranged smartly without overlapping with each other. You can enable or disable this feature using the [enableSmartLabels](#) property.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
  enableSmartLabels: true,
  series: [
    {
      dataSource: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
      dataLabel: { visible: true, name: 'text', position: 'Outside' },
      xName: 'x',
      yName: 'y'
    }
  ]
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

}

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Data Label Template

Label content can be formatted by using the template option. Inside the template, you can add the placeholder text `${point.x}` and `${point.y}` to display corresponding data points x & y value. Using [template](#) property, you can set data label template in chart.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    enableSmartLabels: true,
    series: [
        {
            dataSource: [
                { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
                { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
                { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
                { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
                { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
            dataLabel: { visible: true, name: 'text', position: 'Outside',
template: '<div>${point.x}</div><div>${point.y}</div>' },
            xName: 'x',
            yName: 'y'
        }
    ]
}, '#element');

```

```

Connector Line

Connector line will be visible when the data label is placed outside the chart. The connector line can be customized using the `type`, `color`, `width`, `length` and `dashArray` properties

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
  enableSmartLabels: true,
  series: [
    {
      dataSource: [
        { x: 'Jan', y: 13, text: 'Jan: 13' },
        { x: 'Feb', y: 13, text: 'Feb: 13' },
        { x: 'Mar', y: 17, text: 'Mar: 17' },
        { x: 'Apr', y: 13.5, text: 'Apr: 13.5' }],
      dataLabel: {
        visible: true, name: 'text', position: 'Outside',
        connectorStyle: {
          //Length of the connector line in pixels
          length: '50px',
          //Width of the connector line in pixels
          width: 2,
          //dashArray of the connector line
          dashArray: '5,3',
          //Color of the connector line
          color: '#f4429e',
          //Specifies the type of the connector line either Line
          or Curve
          type: 'Curve'
        }
      },
      xName: 'x',
      yName: 'y'
    }
  ],
  '#element');

```

```

Text Mapping

Text from the data source can be mapped to data label using `name` property.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [
                { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
                { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
                { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
                { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
                { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
            dataLabel: { visible: true, name: 'text', position: 'Outside'
},
            startAngle: 270,
            endAngle: 90,
            xName: 'x',
            yName: 'y'
        }
    ]
}, '#element');

```

```

Value	Format	Resultant Value	Description
1000	n1	1000.0	The number is rounded to 1 decimal place.
1000	n2	1000.00	The number is rounded to 2 decimal places.
1000	n3	1000.000	The number is rounded to 3 decimal place.
0.01	p1	1.0%	The number is converted to percentage with 1 decimal place.
0.01	p2	1.00%	The number is converted to percentage with 2 decimal place.
0.01	p3	1.000%	The number is converted to percentage with 3 decimal place.
1000	c1	\$1000.0	The currency symbol is appended to number and number is rounded to 1 decimal place.
1000	c2	\$1000.00	The currency symbol is appended to number and number is rounded to 2 decimal place.

Customization

Individual text can be customized using the `textRender` event.

INDEX.JS

```
var piechart = new ej.charts.AccumulationChart({
  series: [
    {
      dataSource: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' },
        { x: 'Nov', y: 9, text: 'Nov: 9' }, { x: 'Dec', y: 3.5,
text: 'Dec: 3.5' }],
      dataLabel: { visible: true, name: 'text', position: 'Outside' },
      groupTo: '11',
      xName: 'x',
      yName: 'y'
    }
  ],
  textRender: (args) => {
    if (args.text.indexOf('Others') > -1) {
      args.color = 'red';
      args.border.width = 1;
    }
  },
  pointRender: (args) => {
    if ((args.point.x).indexOf('Others') > -1) {
      args.fill = '#D3D3D3';
    }
  },
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
```

```
<body>

  <div id="container">
    <div id="element"></div>
  </div>
</script>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Text wrap

When the data label text exceeds the container, the text can be wrapped by using [textWrap](#) property. End user can also wrap the data label text based on [maxWidth](#) property.

INDEX.JS

```
var piechart = new ej.charts.AccumulationChart({
  enableSmartLabels: true,
  series: [
    {
      dataSource: [
        { x: 'Chrome', y: 100, text: 'Chrome (100M)<br>40%',
        tooltipMappingName: '40%' },
        { x: 'UC Browser', y: 40, text: 'UC Browser (40M)<br>16%',
        tooltipMappingName: '16%' },
        { x: 'Opera', y: 30, text: 'Opera (30M)<br>12%',
        tooltipMappingName: '12%' },
        { x: 'Safari', y: 30, text: 'Safari (30M)<br>12%',
        tooltipMappingName: '12%' },
        { x: 'Firefox', y: 25, text: 'Firefox (25M)<br>10%',
        tooltipMappingName: '10%' },
        { x: 'Others', y: 25, text: 'Others (25M)<br>10%',
        tooltipMappingName: '10%' }
      ],
      xName: 'x',
      yName: 'y',
      startAngle: 270,
      endAngle: 90,
      explode: true, radius: '100%',
      innerRadius: '40%', tooltipMappingName: 'tooltipMappingName',
      dataLabel: {
        visible: true, position: 'Inside'
      },
      maxWidth: 100, textWrap: 'Wrap',
      name: 'text', enableRotation: true,
    }
  ],
}, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

```

Show percentages in data labels of pie chart

You can show the percentages in data labels of pie chart using `textRender` event and `template` option.

Using textRender event

You can customize the data label of pie chart using `textRender` event as follows to show percentage..

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
  enableSmartLabels: true,
  series: [
    {
      dataSource: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
      dataLabel: { visible: true },
      xName: 'x',
      yName: 'y'
    }
  ],

```

```

    textRender: function(args) {
        args.text = args.point.percentage + "%";
    }
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">

    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Using template

You can display the percentage values in data label of pie chart using `template` option.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    enableSmartLabels: true,
    series: [
        {
            dataSource: [
                { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
                { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
                { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
                { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
                { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' }],

```

```

        dataLabel: { visible: true, template: "<div
id='dataLabelTemplate'>${point.percentage}%</div>" },
        xName: 'x',
        yName: 'y'
    }
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>

    </script>
    <script src="index.js" type="text/javascript"></script>
</body></html>

```

Grouping in ##Platform_Name## Accumulation chart control

You can club/group few points of the series based on

[groupTo](#) property. For example, if the club

value is 11, then the points with value less than 11 is grouped together and will be showed as a single point with label **others**. The property also takes value in percentage (percentage of total data points value).

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [
                { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },

```

```

        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' },
        { x: 'Nov', y: 9, text: 'Nov: 9' }, { x: 'Dec', y: 3.5,
text: 'Dec: 3.5' }],
        dataLabel: { visible: true, name: 'text', position: 'Outside' },
        groupTo: '11',
        xName: 'x',
        yName: 'y'
    }
},
textRender: (args) => {
    if (args.text.indexOf('Others') > -1) {
        args.color = 'red';
        args.border.width = 1;
    }
},
pointRender: (args) => {
    if ((args.point.x).indexOf('Others') > -1) {
        args.fill = '#D3D3D3';
    }
},
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

    <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
    <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
    <script>

if(ele) {
    ele.style.visibility = "visible";
}
    </script>

```

```
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Group Mode

Slice can also be grouped based on number of points by specifying the `groupMode` to `Point`. For example, if the group to value is 11, accumulation chart will show 1st 11 points and will group remaining entries in the collection as a single point.

INDEX.JS

```
var piechart = new ej.charts.AccumulationChart({
  series: [
    {
      dataSource: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' },
        { x: 'Nov', y: 9, text: 'Nov: 9' }, { x: 'Dec', y: 3.5,
text: 'Dec: 3.5' }],
      dataLabel: { visible: true, name: 'text', position: 'Outside' },
      groupTo: '4',
      groupMode: 'Point',
      xName: 'x',
      yName: 'y'
    }
  ],
  textRender: (args) => {
    if (args.text.indexOf('Others') > -1) {
      args.color = 'red';
      args.border.width = 1;
    }
  },
  pointRender: (args) => {
    if ((args.point.x).indexOf('Others') > -1) {
      args.fill = '#D3D3D3';
    }
  },
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

Empty points in ##Platform_Name## Accumulation chart control

The data points those uses the **null** or **undefined** as value are considered as empty points. The empty data points are ignored and not plotted in the chart. You can customize those points, using the **emptyPointSettings** property in series. The default mode of the empty point is **Gap**. Other supported modes are **Average** and **Zero**.

INDEX.TS

```

import { AccumulationChart, AccumulationDataLabel } from '@syncfusion/ej2-
charts';
AccumulationChart.Inject(AccumulationDataLabel);
let piechart: AccumulationChart = new AccumulationChart({
  series: [
    {
      dataSource: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x:
'Mar', y: undefined }, { x: 'Apr', y: 13.5 },
      { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x: 'Jul', y: null
}, { x: 'Aug', y: 25 },
      { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
      xName: 'x',
      yName: 'y',
      emptyPointSettings: { mode: 'Zero', fill: 'pink'},
      dataLabel: { visible: true, position: 'Outside' }
    }
  ]
}

```

```
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Customization

Specific color for an empty point can be set by using the `fill` property in `emptyPointSettings` and the border for an empty point can be set by using the `border` property.

INDEX.TS

```
import { AccumulationChart } from '@syncfusion/ej2-charts';
let piechart: AccumulationChart = new AccumulationChart({
  series: [
    {
      dataSource: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x:
'Mar', y: undefined }, { x: 'Apr', y: 13.5 },
      { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x: 'Jul', y: null
}, { x: 'Aug', y: 25 },
      { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
      emptyPointSettings: { mode: 'Average', fill: 'pink' },
      xName: 'x',
      yName: 'y'
    }
  ]
}, '#element');
```

Annotation in ##Platform_Name## Accumulation chart control

The annotations are used to mark the specific area of interest in the chart area with texts, shapes or images.

<!-- markdownlint-disable MD033 -->

By using the `<code>content</code>` option of annotation property, you can specify the Id of the element that needs to be displayed in the chart area

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
  series: [
    {
      dataSource: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
      xName: 'x',

```

```

        yName: 'y'
    }
],
annotations:[{
    content: 'Feb-3.5',
    region: 'Series',
    coordinateUnits: 'Point',
    x: 'Feb',
    y: 3.5
}],
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

Tooltip in ##Platform_Name## Accumulation chart control

Tooltip for the accumulation chart can be enabled by using the [enable](#) property.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
  series: [
    {
      dataSource: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x:
'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
      { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x: 'Jul', y: 26 },
{ x: 'Aug', y: 25 },
      { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
      radius: '100%',
      xName: 'x',
      yName: 'y'
    }
  ],
  tooltip:{enable: true}
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Note: To use tooltip feature, inject the `AccumulationTooltip` using the `Chart.Inject(AccumulationTooltip)` method.

Header

We can specify header for the tooltip using [header](#) property.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x:
'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
            { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x: 'Jul', y: 26 },
{ x: 'Aug', y: 25 },
            { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
            radius: '100%',
            xName: 'x',
            yName: 'y'
        }
    ],
    tooltip: { enable: true, header: "Pie Chart" }
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

    <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"

<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');

```

```

if(ele) {
    ele.style.visibility = "visible";
}

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Format

By default, tooltip shows information of x and y value in points. In addition to that, you can show more information in tooltip. For example the format `${series.name} ${point.x}` shows series name and point x value.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x:
'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
            { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x: 'Jul', y: 26 },
{ x: 'Aug', y: 25 },
            { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
            radius: '100%',
            xName: 'x',
            yName: 'y'
        }
    ],
    tooltip: { enable: true, format: '${point.x} : <b>${point.y}%</b>' }
}, '#element');

```

if(ele) {
    ele.style.visibility = "visible";

```

```

}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Tooltip format

Any HTML element can be displayed in the tooltip by using the [template](#) property.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
  series: [
    {
      dataSource: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x:
'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
      { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x: 'Jul', y: 26 },
{ x: 'Aug', y: 25 },
      { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
      radius: '100%',
      xName: 'x',
      yName: 'y'
    }
  ],
  tooltip: {
    enable: true,
    template: "<div id='templateWrap' style='background-
color:#bd18f9;border-radius: 3px; float: right;padding: 2px;line-height:
20px;text-align: center;'>" +
      "<img src='sun_annotation.png' />" +
      "<div style='color:white; font-family:Roboto; font-style:
medium; font-size:14px;float: right;padding: 2px;line-height: 20px;text-
align: center;padding-right:6px'><span>${y}</span></div></div>"
  }
}, '#element');

```

INDEX.HTML

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Customization

The [fill](#) and [border](#) properties are used to customize the background color and border of the tooltip respectively. The [textStyle](#) property in the tooltip is used to customize the font of the tooltip text. The [highlightColor](#) property can be used to change the color of the data point when hovering.

INDEX.JS

```
var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x:
'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
            { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x: 'Jul', y: 26 },
{ x: 'Aug', y: 25 },
            { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
            radius: '100%',
            xName: 'x',
            yName: 'y'
        }
    ],
    highlightColor: 'red',
    tooltip: {
        enable: true,
        format: '${series.name} ${point.x} : ${point.y}',
        //fill for tooltip
        fill: '#7bb4eb',
        //border for tooltip
        border: {
            width: 2,
            color: 'grey'
        }
    }
}, '#element');
```

Legend in ##Platform_Name## Accumulation chart control

As like a chart, the legend is also available for accumulation charts, which gives information about the points. By default, the legend will be placed on the right, if the width of the chart is high or will be placed on the bottom, if the height of the chart is high. Other customization features regarding the legend element are same as the [chart legend](#). Here, the legend for a point can be collapsed by giving the empty string to the x value of the point.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [
                { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
                { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
                { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
                { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
                { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
            xName: 'x',
            yName: 'y'
        }
    ],
    legendSettings: {
        position: 'Right',
        visible: true,

```

```

        height: '40',
        width: '160'
    }
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>

if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Note: To use the legends feature, inject the `AccumulationLegend` using the `Chart.Inject(AccumulationLegend)` method.

Position and Alignment

By using the position property, you can position the legend at the `left`, `right`, `top` or `bottom` of the chart. You can also align the legend to `center`, `far` or `near` of the chart using the alignment property.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
  series: [
    {
      dataSource: [
        { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
        { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
        { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },

```

```

        { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
        { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' } ],
        xName: 'x',
        yName: 'y'
    }
],
legendSettings: {
    position: 'Right',
    visible: true,
    height: '40',
    width: '160'
}
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

```

Legend Reverse

You can reverse the order of the legend items by using the [reverse](#) property. By default, legend for the first series in the collection will be placed first.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
  series: [
    {

```

```

        dataSource: [
            { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
            { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
            { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
            { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
            { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' }],
        xName: 'x',
        yName: 'y'
    }
],
    legendSettings: {
        visible: true,
        reverse: true
    }
}, '#element');

```

Legend Item Size

You can customize the size of the legend items by using the `shapeHeight` and `shapeWidth` properties.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [
                { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
                { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
                { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
                { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
                { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' }],
            xName: 'x',
            yName: 'y'
        }
    ],
    legendSettings: {
        position: 'Right',
        visible: true,
        height: '40',
        width: '160'
    }
}, '#element');

```

```

Paging for Legend

Paging will be enabled by default, when the legend items exceeds the legend bounds. You can view the each legend item by navigating between the pages using the navigation buttons.

INDEX.JS

```
var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [
                { x: 'Jan', y: 3, text: 'Jan: 3' }, { x: 'Feb', y: 3.5,
text: 'Feb: 3.5' },
                { x: 'Mar', y: 7, text: 'Mar: 7' }, { x: 'Apr', y: 13.5,
text: 'Apr: 13.5' },
                { x: 'May', y: 19, text: 'May: 19' }, { x: 'Jun', y: 23.5,
text: 'Jun: 23.5' },
                { x: 'Jul', y: 26, text: 'Jul: 26' }, { x: 'Aug', y: 25,
text: 'Aug: 25' },
                { x: 'Sep', y: 21, text: 'Sep: 21' }, { x: 'Oct', y: 15,
text: 'Oct: 15' }],
            xName: 'x',
            yName: 'y'
        }
    ],
    legendSettings: {
        position: 'Right',
        visible: true,
        height: '40',
        width: '160'
    }
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Legend Text Wrap

When the legend text exceeds the container, the text can be wrapped by using `textWrap` Property. End user can also wrap the legend text based on the `maximumLabelWidth` property.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [
                { 'x': 'Net-tution', y: 21, text: '21%' },
                { 'x': 'Private Gifts', y: 8, text: '8%' },
                { 'x': 'All Other', y: 9, text: '9%' },
                { 'x': 'Local Revenue', y: 4, text: '4%' },
                { 'x': 'State Revenue', y: 21, text: '21%' },
                { 'x': 'Federal Revenue', y: 16, text: '16%' },
                { 'x': 'Self-supporting Operations', y: 21, text: '21%' },
            ],
            xName: 'x',
            yName: 'y',
            startAngle: 0,
            endAngle: 360,
            innerRadius: '40%',
        }
    ],
    //Initializing Legend
    legendSettings: {
        visible: true,
        position: 'Right',
        height: '44%',
        width: '64%',
        textWrap: 'Wrap',
        maximumLabelWidth: 60,
    },
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">

```

Legend Title

You can set title for legend using `title` property in `legendSettings`. You can also customize the `fontStyle`, `size`, `fontWeight`,

`color`, `textAlignment`, `fontFamily`, `opacity` and `textOverflow` of legend title. `titlePosition` is used to set the legend position in `Top`, `Left` and `Right` position. `maximumTitleWidth` is used to set the width of the legend title. By default, it will be `100px`.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
  series: [
    {
      dataSource: [{ x: 'Jan', y: 13, text: 'Jan: 13' }, { x: 'Feb',
y: 13, text: 'Feb: 13' },
      { x: 'Mar', y: 17, text: 'Mar: 17' }, { x: 'Apr', y: 13.5, text:
'Apr: 13.5' }],
      xName: 'x',
      yName: 'y',
      type: 'Pie'
    }
  ],
  legendSettings: { visible: true, title: 'Months', position: 'Bottom' }
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

Center label in ##Platform_Name## Accumulation chart control

Using [centerLabel](#) it is now possible to place a label at the center of a pie or doughnut chart. To configure the default text rendered on the center label for the pie and doughnut charts, use the [text](#) property in the [centerLabel](#).

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [
                { x: 'Chrome', y: 61.3, text: 'Chrome: 61.3%' },
                { x: 'Safari', y: 24.6, text: 'Safari: 24.6%' },
                { x: 'Edge', y: 5.0, text: 'Edge: 5.0%' },
                { x: 'Samsung Internet', y: 2.7, text: 'Samsung Internet: 2.7%' },
                { x: 'Firefox', y: 2.6, text: 'Firefox: 2.6%' },
                { x: 'Others', y: 3.6, text: 'Others: 3.6%' }],
            innerRadius: '65%',
            xName: 'x',
            yName: 'y'
        }
    ],
    centerLabel: {
        text : 'Mobile<br>Browsers<br>Statistics'
    }
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>

```

Export

The rendered chart can be exported to **Image**(jpeg or png) or **SVG** or **PDF** format by using the export method.

Input parameters for this method are **Export Type** for **format** and **fileName** of result.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
  series: [
    {
      dataSource: [{ x: 'Jan', y: 3 }, { x: 'Feb', y: 3.5 }, { x:
'Mar', y: 7 }, { x: 'Apr', y: 13.5 },
      { x: 'May', y: 19 }, { x: 'Jun', y: 23.5 }, { x: 'Jul', y: 26 },
{ x: 'Aug', y: 25 },
      { x: 'Sep', y: 21 }, { x: 'Oct', y: 15 }],
      radius: '100%',

```

```

        xName: 'x',
        yName: 'y'
    }
]
}, '#element');
document.getElementById('print').onclick = () => {
    chart.export('PNG', 'result');
};

```

INDEX.HTML

```

Accessibility in ##Platform_Name## Accumulation chart control

The Accumulation chart control followed the accessibility guidelines and standards, including [ADA](#), [Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Accumulation chart control is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

```

| Section 508 Support |  |

| Screen Reader Support |  |

| Right-To-Left Support |  |

| Color Contrast |  |

| Mobile Device Support |  |

| Keyboard Navigation Support |  |

| Accessibility Checker Validation |  |

| Axe-core Accessibility Validation |  |

<style>

.post .post-content img {
display: inline-block;
margin: 0.5em 0;
}

</style>

<div> - All
features of the control meet the requirement.</div>

<div> - Some features of the control do not meet the requirement.</div>

<div> - The control does not meet the requirement.</div>

```

WAI-ARIA attributes

The Accumulation chart control followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Accumulation chart control:

- `img` (role)
- `button` (role)
- `region` (role)
- `aria-label` (attribute)
- `aria-hidden` (attribute)
- `aria-pressed` (attribute)

Keyboard interaction

The Accumulation chart control followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Accumulation chart control.

- | Press | To do this |
- | --- | --- |
- | Alt + J | Moves the focus to the Accumulation chart element. |
- | Tab | Moves the focus to the next element in the Accumulation chart. |
- | Shift + Tab | Moves the focus to the previous element in the Accumulation chart. |
- | Down Arrow | Moves the focus to the data point left side from the selected point. |
- | Up Arrow | Moves the focus to the data point right side from the selected point. |
- | Down/Left Arrow | Moves the focus to the legend left side from the selected legend. |
- | Up/Right Arrow | Moves the focus to the legend right side from the selected legend. |
- | Enter/Space | Toggles the visibility of the corresponding series. |
- | Ctrl + P | Prints the Accumulation chart. |

Ensuring accessibility

The Accumulation chart control's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Accumulation chart control is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Accumulation chart control with accessibility tools.

Ej1 api migration in ##Platform_Name## Accumulation chart control

This article describes the API migration process of Chart component from Essential JS 1 to Essential JS 2.

Accumulation Chart

<!-- markdownlint-disable MD033 -->

Behaviour	API in Essential JS 1	API in Essential JS 2
annotations	Property:annotations\$("#chart").ejChart({ annotations: [{}]});	Property:annotationslet pie: AccumulationChart = new AccumulationChart({annotations: [{}]});pie.appendTo('#chart');
background	Property:background\$("#chart").ejChart({ background: '#DDCCEE'});	Property:backgroundlet pie: AccumulationChart = new AccumulationChart({

		<code>background: 'DDCCEE');pie.appendTo('#chart');</code>
border	<code>Property:border\$("#chart").ejChart({ border: { color: 'red' , width: 2, opacity: 0.5}});</code>	<code>Property:borderlet pie: AccumulationChart = new AccumulationChart({ border: { color: 'red', width: 2}});pie.appendTo('#chart');</code>
dataSource	Not applicable	<code>Property:borderlet pie: AccumulationChart = new AccumulationChart({ dataSource: []);});pie.appendTo('#chart');</code>
Animation after legend click	Not applicable	<code>Property:enableAnimationlet pie: AccumulationChart = new AccumulationChart({ enableAnimation: true});pie.appendTo('#chart');</code>
Persisting component's state between page reloads.	Not applicable	<code>Property:enablePersistancellet pie: AccumulationChart = new AccumulationChart({ enablePersistancel: true});pie.appendTo('#chart');</code>
Enabling smart labels	<code>Property:series.enableSmartLabels\$("#chart").ejChart({ series: [{ enableSmartLabels: true}]});</code>	<code>Property:enableSmartLabelslet pie: AccumulationChart = new AccumulationChart({ enableSmartLabels: true});pie.appendTo('#chart');</code>
Height of Chart	<code>Property:size.height\$("#chart").ejChart({ size: { height: '400' }});</code>	<code>Property:heightlet pie: AccumulationChart = new AccumulationChart({ height: '400'});pie.appendTo('#chart');</code>
Multi selection	<code>Property:selectionSettings.type\$("#chart").ejChart({ selectionSettings: { type: 'multiple' }});</code>	<code>Property:isMultiSelectlet pie: AccumulationChart = new AccumulationChart({ isMultiSelect: true});pie.appendTo('#chart');</code>
legend Settings	<code>Property:legend\$("#chart").ejChart({ legend: { }});</code>	<code>Property:legendSettingslet pie: AccumulationChart = new AccumulationChart({ legendSettings: { }});pie.appendTo('#chart');</code>

Margin for the chart	Property:margin\$("#chart").ejChart({ margin: { top: 20, bottom: 23, right: 15, left: 10 }});	Property:marginlet pie: AccumulationChart = new AccumulationChart({ margin: { top: 20, bottom: 23, right: 15, left: 10 }});pie.appendTo('#chart');
SelectedDataIndexes	Property:selectedDataPointIndexes \$("#chart").ejChart({ selectedDataPointIndexes : [{}]});	Property:selectedDataIndexes let pie: AccumulationChart = new AccumulationChart({ selectedDataIndexes : [{ series: 0, point: 1}]});pie.appendTo('#chart') ;
Selection Mode	Property:selectionSettings.mode\$("#chart"). ejChart({ selectionSettings: { mode: 'Point'}});	Property:selectionMode let pie: AccumulationChart = new AccumulationChart({ selectionMode : 'Point'});pie.appendTo('#chart');
Series	Property:series\$("#chart").ejChart({ series: []});	Property:serieslet pie: AccumulationChart = new AccumulationChart({ series: []});pie.appendTo('#chart');
Title text	Property:title.text\$("#chart").ejChart({ title: { text: 'Pie Chart' }});	Property:titlelet pie: AccumulationChart = new AccumulationChart({ title: 'Pie Chart'});pie.appendTo('#chart');
Title Styles	Property:title\$("#chart").ejChart({ title: { text: 'Pie Chart' }});	Property:titleStylelet pie: AccumulationChart = new AccumulationChart({ titleStyle: { fontFamily: 'SegoeUI'}});pie.appendTo('#chart');
Sub Title text	Property:subTitle.text\$("#chart").ejChart({ subTitle: { text: 'Pie Chart' }});	Property:subTitlelet pie: AccumulationChart = new AccumulationChart({ subTitle: 'Pie Chart'});pie.appendTo('#chart');
Sub title Styles	Property:title\$("#chart").ejChart({ title: { text: 'Pie Chart' }});	Property:subTitleStylelet pie: AccumulationChart = new AccumulationChart({ subTitleStyle: { fontFamily: 'SegoeUI'}});pie.appendTo('#chart');

tooltip	Property:series.toolTip\$("#chart").ejChart({ series: [{ tooltip: { } }] });	Property:tooltiplet pie: AccumulationChart = new AccumulationChart({ tooltip: { } });pie.appendTo('#chart');
Width of Chart	Property:size.width\$("#chart").ejChart({ size: { width: '400' } });	Property:widthlet pie: AccumulationChart = new AccumulationChart({ width: '400' });pie.appendTo('#chart');

Annotation

<!-- markdownlint-disable MD033 -->

Behaviour	API in Essential JS 1	API in Essential JS 2
annotations	Property:annotations\$("#chart").ejChart({ annotations: [{}];});	Property:annotationslet pie: AccumulationChart = new AccumulationChart({ annotations: [{}];});pie.appendTo('#chart');
content	Property:annotations\$("#chart").ejChart({ annotations: [{content: 'Pie Chart'}];});	Property:annotationslet pie: AccumulationChart = new AccumulationChart({ annotations: [{content: 'Pie Chart'}];});pie.appendTo('#chart');
coordinateUnits	Property:annotations\$("#chart").ejChart({ annotations: [{coordinateUnit: 'Pixel'}];});	Property:annotationslet pie: AccumulationChart = new AccumulationChart({ annotations: [{coordinateUnit: 'Pixel'}];});pie.appendTo('#chart');
description	Not Applicable	Property:descriptionlet pie: AccumulationChart = new AccumulationChart({ annotations: [{description: 'Pixel'}];});pie.appendTo('#chart');
horizontalAlignment for annotation	Property:annotations.horizontalAlignment\$("#container").ejChart({ annotations :[{ horizontalAlignment : "middle" }] });	Property:annotations.horizontalAlignmentlet chart: AccumulationChart = new AccumulationChart({ annotations: [{ horizontalAlignment: 'Center' }] });chart.appendTo('#chart');

margin for annotation	Property:annotations.margin \$("#container").ejChart({ annotations :[{ margin { right: 5, left: 5, top: 5, bottom: 5}}]});	Not applicable
Opacity for annotation	Property:annotations.opacity \$("#container").ejChart({ annotations :[{ opacity: 0.4 }]});	Not applicable
Region for annotation with respect to chart or series	Property:annotations.region \$("#container").ejChart({ annotations :[{ region : "chart"}]});	Property:annotations.region let chart: AccumulationChart = new AccumulationChart({ annotations : [{ region: 'Chart'}]}); chart.appendTo('#chart');
verticalAlignment for annotation	Property:annotations.verticalAlignment \$("#container").ejChart({ annotations :[{ verticalAlignment : "middle"}]});	Property:annotations.verticalAlignment let chart: AccumulationChart = new AccumulationChart({ annotations : [{ verticalAlignment: 'Center'}]}); chart.appendTo('#chart');
Visibility of annotations	Property:annotations.visible \$("#container").ejChart({ annotations :[{ visible: true }]});	Not applicable
X offset for annotation	Property:annotations.x \$("#container").ejChart({ annotations :[{ x : "100"}]});	Property:annotations.x let chart: AccumulationChart = new AccumulationChart({ annotations : [{ x: '100'}]}); chart.appendTo('#chart');
Y offset for annotation	Property:annotations.y \$("#container").ejChart({ annotations :[{ y : "100"}]});	Property:annotations.y let chart: AccumulationChart = new AccumulationChart({ annotations : [{ y: '100'}]}); chart.appendTo('#chart');

Series

<!-- markdownlint-disable MD033 -->

Behaviour	API in Essential JS 1	API in Essential JS 2
series	Property:series \$("#chart").ejChart({ series: [{ }]});	Property:series let pie: AccumulationChart = new AccumulationChart({ series: [{ }]}); pie.appendTo('#chart');

animation for series	Property:enableAnimation\$("#chart").ejChart({ series: [{ enableAnimation: true}]});	Property:animation.enablelet pie: AccumulationChart = new AccumulationChart({ series: [{ animation: { enable: true } }]});pie.appendTo('#chart');
animation duration for series	Property:animationDuration\$("#chart").ejChart({ series: [{ animationDuration: 1000}]});	Property:animation.durationlet pie: AccumulationChart = new AccumulationChart({ series: [{ animation: { duration: 1000 } }]});pie.appendTo('#chart');
animation delay for series	Not Applicable	Property:animation.durationlet pie: AccumulationChart = new AccumulationChart({ series: [{ animation: { delay: 100 } }]});pie.appendTo('#chart');
Border for series	Property:border\$("#chart").ejChart({ series: [{ border: { color: 'pink', width: 2, dashArray: '10,4' } }]});	Property:borderlet pie: AccumulationChart = new AccumulationChart({ series: [{ border: { color: 'red', width: 2 } }]});pie.appendTo('#chart');

Fires before rendering the Chart sub title.	<code>Property:subTitleRendering\$("#chart").ejChart({ subTitleRendering: () { }});</code>	Not applicable
Fires before rendering the tooltip.	<code>Property:toolTipInitialize\$("#chart").ejChart({ toolTipInitialize: () { }});</code>	<code>Property:tooltipRender let chart: AccumulationChart = new AccumulationChart({ tooltipRender : () => { }});chart.appendTo('#chart');</code>

AppBar

Size and color in `##Platform_Name##` AppBar control

Size

The size of the AppBar can be set using the [mode](#) property. The available types of the AppBar are as follows:

- Regular AppBar
- Prominent AppBar
- Dense AppBar

Regular AppBar

This mode is the default one in which the AppBar is displayed with the default height.

INDEX.JS

```
var defaultAppBarObj = new ej.navigations.AppBar({
  colorMode: 'Primary'
});
defaultAppBarObj.appendTo("#defaultAppBar");
var defaultButtonMenuObj = new ej.buttons.Button({ cssClass: 'e-inherit',
iconCss: 'e-icons e-menu' });
defaultButtonMenuObj.appendTo('#defaultButtonMenu');
var defaultButtonLoginObj = new ej.buttons.Button({ cssClass: 'e-inherit',
content: 'FREE TRIAL' });
defaultButtonLoginObj.appendTo('#defaultButtonLogin');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>

if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Prominent AppBar

This height mode can be set to the AppBar by setting **Prominent** to the property [mode](#). The prominent AppBar is displayed with a longer height and can be used for larger titles, images, or texts. It is also longer than the regular AppBar. In the following example, we have customized the prominent text using align-self and white-space CSS properties. You can change the prominent AppBar height if larger titles, images, or texts are used.

INDEX.JS

```

var defaultAppBarObj = new ej.navigations.AppBar({
  cssClass: 'prominent-appbar',
  colorMode: 'Primary',
  mode: 'Prominent'
});
defaultAppBarObj.appendTo("#defaultAppBar");
var defaultButtonMenuObj = new ej.buttons.Button({ cssClass: 'e-inherit',
  iconCss: 'e-icons e-menu' });
defaultButtonMenuObj.appendTo('#defaultButtonMenu');
var defaultButtonLoginObj = new ej.buttons.Button({ cssClass: 'e-inherit',
  content: 'FREE TRIAL' });
defaultButtonLoginObj.appendTo('#defaultButtonLogin');

```

```

Dense AppBar

This height mode can be set to the AppBar by setting **Dense** to the property [mode](#). Dense AppBar is displayed with shorter height which is denser to accommodate all the AppBar content.

INDEX.JS

```

var defaultAppBarObj = new ej.navigations.AppBar({
    colorMode: 'Primary',
    mode: 'Dense'
});
defaultAppBarObj.appendTo("#defaultAppBar");
var defaultButtonMenuObj = new ej.buttons.Button({ cssClass: 'e-inherit',
iconCss: 'e-icons e-menu' });
defaultButtonMenuObj.appendTo('#defaultButtonMenu');
var defaultButtonLoginObj = new ej.buttons.Button({ cssClass: 'e-inherit',
content: 'FREE TRIAL' });
defaultButtonLoginObj.appendTo('#defaultButtonLogin');

```

Color

The background and font colors can be set using the [colorMode](#) property. The available types of background color for the AppBar are as follows:

- Light AppBar
- Dark AppBar
- Primary AppBar
- Inherit AppBar

Light AppBar

This color mode is the default one in which the AppBar can be displayed with a light background and its corresponding font color.

INDEX.JS

```
var defaultAppBarObj = new ej.navigations.AppBar({});
defaultAppBarObj.appendTo("#defaultAppBar");
var defaultButtonLoginObj = new ej.buttons.Button({ isPrimary: true,
content: 'FREE TRIAL' });
defaultButtonLoginObj.appendTo('#defaultButtonLogin');
```

Accessibility in ##Platform_Name## AppBar control

The AppBar control followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the AppBar control is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

| [Section 508](#) Support | `` |

| Screen Reader Support | `` |

| Right-To-Left Support | `` |

| Color Contrast | `` |

| Mobile Device Support | `` |

| Keyboard Navigation Support | `` |

| [Accessibility Checker](#) Validation | `` |

| [Axe-core](#) Accessibility Validation | `` |

`<style>`

```
.post .post-content img {
display: inline-block;
margin: 0.5em 0;
}
```

`</style>`

`<div>` - All features of the control meet the requirement.`</div>`

`<div>` - Some features of the control do not meet the requirement.`</div>`

`<div>` - The control does not meet the requirement.`</div>`

Keyboard interaction

The AppBar control provides the focus element navigation based on its's tab key order.

Ensuring accessibility

The AppBar control accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the AppBar control is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the AppBar control with accessibility tools.

- [Accessibility in Syncfusion components](#)

Position in ##Platform_Name## AppBar control

The position of the AppBar can be set using the [position](#) and [isSticky](#) property. The AppBar provides the following options for setting its position:

- Top AppBar
- Bottom AppBar
- Sticky AppBar

Top AppBar

The top AppBar is the default one in which it positions the AppBar at the top of the content.

INDEX.JS

```
var defaultAppBarObj = new ej.navigations.AppBar({
    colorMode: 'Primary'
});
defaultAppBarObj.appendTo("#defaultAppBar");
var defaultButtonMenuObj = new ej.buttons.Button({ cssClass: 'e-inherit',
    iconCss: 'e-icons e-menu' });
defaultButtonMenuObj.appendTo('#defaultButtonMenu');
var defaultButtonLoginObj = new ej.buttons.Button({ cssClass: 'e-inherit',
    content: 'FREE TRIAL' });
defaultButtonLoginObj.appendTo('#defaultButtonLogin');
```

```

Bottom AppBar

This position can be set to the AppBar by setting **Bottom** to the property [position](#). The bottom AppBar positions the AppBar at the bottom of the content.

INDEX.JS

```

var defaultAppBarObj = new ej.navigations.AppBar({
  colorMode: 'Primary',
  position: 'Bottom'
});
defaultAppBarObj.appendTo("#defaultAppBar");
var defaultButtonMenuObj = new ej.buttons.Button({ cssClass: 'e-inherit',
iconCss: 'e-icons e-menu' });
defaultButtonMenuObj.appendTo('#defaultButtonMenu');

```

```
var defaultButtonLoginObj = new ej.buttons.Button({ cssClass: 'e-inherit',
content: 'FREE TRIAL' });
defaultButtonLoginObj.appendTo('#defaultButtonLogin');
```

Design in ##Platform_Name## AppBar control

Spacer

Spacer is used to provide spacing between the AppBar contents which gives additional space to the content layout.

The following example depicts the code to provide spacing between the home and pan buttons in the AppBar:

INDEX.JS

```
var defaultAppBarObj = new ej.navigations.AppBar({
    colorMode: 'Primary'
});
defaultAppBarObj.appendTo("#defaultAppBar");
var defaultButtonHomeObj = new ej.buttons.Button({ cssClass: 'e-inherit',
iconCss: 'e-icons e-home' });
defaultButtonHomeObj.appendTo('#defaultButtonHome');
var defaultButtonCutObj = new ej.buttons.Button({ cssClass: 'e-inherit',
iconCss: 'e-icons e-cut' });
defaultButtonCutObj.appendTo('#defaultButtonCut');
var defaultButtonPanObj = new ej.buttons.Button({ cssClass: 'e-inherit',
iconCss: 'e-icons e-pan' });
defaultButtonPanObj.appendTo('#defaultButtonPan');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
    <title>Essential JS 2 - AppBar</title>
    <meta charset="utf-8">

<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Separator

Separator shows a vertical line to visually group or separate the AppBar contents.

The following example depicts the code to provide a vertical line between a group of buttons in the AppBar.

INDEX.JS

```

var defaultAppBarObj = new ej.navigations.AppBar({
    colorMode: 'Primary'
});
defaultAppBarObj.appendTo("#defaultAppBar");
var defaultButtonCutObj = new ej.buttons.Button({ cssClass: 'e-inherit',
iconCss: 'e-icons e-cut' });
defaultButtonCutObj.appendTo("#defaultButtonCut");
var defaultButtonCopyObj = new ej.buttons.Button({ cssClass: 'e-inherit',
iconCss: 'e-icons e-copy' });
defaultButtonCopyObj.appendTo("#defaultButtonCopy");

```

Designing AppBar with Menu

AppBar is rendered with a Menu component in its AppBar header area. Menu component's styles are inherited from the AppBar component using the `e-inherit` CSS class.

INDEX.JS

```

var companyMenuItems = [
    {
        text : 'Company',
        items: [
            { text: 'About Us' },
            { text: 'Customers' },
            { text: 'Blog' },
            { text: 'Careers' }
        ]
    }
];
var productMenuItems = [
    {
        text : 'Products',
        items: [

```

```

        { text: 'Developer' },
        { text: 'Analytics' },
        { text: 'Reporting' },
        { text: 'Help Desk' }
    ]
}
];
var aboutMenuItems = [
    {
        text : 'About Us'
    }
];
var carrerMenuItems = [
    {
        text : 'Carrers'
    }
];
var defaultAppBarObj = new ej.navigations.AppBar({
    colorMode: 'Primary'
});
defaultAppBarObj.appendTo("#defaultAppBar");
var defaultButtonMenuObj = new ej.buttons.Button({ cssClass: 'e-inherit',
iconCss: 'e-icons e-menu' });
defaultButtonMenuObj.appendTo('#defaultButtonMenu');
var defaultMenuCompanyObj = new ej.navigations.Menu({ cssClass: 'e-inherit',
items: companyMenuItems });
defaultMenuCompanyObj.appendTo('#defaultMenuCompany');

Designing AppBar with Buttons

The AppBar is rendered with a Button and DropDownButton component in its AppBar header area.

Button and DropDownButton components' styles are inherited from the AppBar component using the `e-inherit` CSS class.

INDEX.JS

```

var productDropDownButtonItem = [
    { text: 'Developer' },
    { text: 'Analytics' },
    { text: 'Reporting' },
    { text: 'E-Signature' },
    { text: 'Help Desk' }
];
var defaultAppBarObj = new ej.navigations.AppBar({
    colorMode: 'Primary'
});
defaultAppBarObj.appendTo("#defaultAppBar");

```

```

var defaultButtonMenuObj = new ej.buttons.Button({ cssClass: 'e-inherit',
iconCss: 'e-icons e-menu' });
defaultButtonMenuObj.appendTo('#defaultButtonMenu');
var defaultDropDownButtonProductObj = new ej.splitbuttons.DropDownButton({
cssClass: 'e-inherit', items: productDropDownButtonItem });
defaultDropDownButtonProductObj.appendTo('#defaultDropDownButtonProduct');
var defaultButtonLoginObj = new ej.buttons.Button({ cssClass: 'e-inherit',
content: 'Login' });
defaultButtonLoginObj.appendTo('#defaultButtonLogin');

```

INDEX.HTML

```

```

Designing AppBar with SideBar

The AppBar is rendered with the SideBar component below the AppBar. Click on the menu icon to expand/collapse the Sidebar. In the following sample, the `toggle` method has been used to show or hide the Sidebar on the AppBar button click.

INDEX.JS

```

var data = [
    {
        nodeId: '01', nodeText: 'Installation',
    },
    {
        nodeId: '02', nodeText: 'Deployment',
    },
    {
        nodeId: '03', nodeText: 'Quick Start',
    },
    {
        nodeId: '04', nodeText: 'Components',
        nodeChild: [
            { nodeId: '04-01', nodeText: 'Calendar' },
            { nodeId: '04-02', nodeText: 'DatePicker' },
            { nodeId: '04-03', nodeText: 'DateTimePicker' },
            { nodeId: '04-04', nodeText: 'DateRangePicker' },
            { nodeId: '04-05', nodeText: 'TimePicker' },
            { nodeId: '04-06', nodeText: 'SideBar' }
        ]
    }
];

var defaultAppBarObj = new ej.navigations.AppBar({});
defaultAppBarObj.appendTo("#defaultAppBar");
var defaultButtonMenuObj = new ej.buttons.Button({ cssClass: 'e-inherit',
iconCss: 'e-icons e-menu' });
defaultButtonMenuObj.appendTo('#defaultButtonMenu');
defaultButtonMenuObj.element.addEventListener("click", toggle);
var sidebarMenu = new ej.navigations.Sidebar({
    width: '220px',
    target: '.main-content',
    mediaQuery: '(min-width: 600px)',
    isOpen: true
});
sidebarMenu.appendTo('#sideTree');
var inputObj = new ej.inputs.TextBox({
    placeholder: "Search..."
});
inputObj.appendTo("#resSearch");
var mainTreeView = new ej.navigations.TreeView({
    cssClass: "main-treeview",

```

```

    fields: { dataSource: data, id: 'nodeId', text: 'nodeText', child:
'nodeChild', iconCss: "iconCss" },
    expandOn: 'Click'
});
mainTreeView.appendTo('#mainTree');
function toggle() {
    sidebarMenu.toggle();
}

```

INDEX.HTML

      This is a graphical aid for visualising and
categorising the site, in the style of an expandable and
collapsable treeview component.
      It auto-expands to display the node(s), if any,
corresponding to the currently viewed title,
      highlighting that node(s)
      and its ancestors. Load-on-demand when expanding
nodes is available where supported (most graphical
browsers),
      falling back to a full-page reload. MediaWiki-
supported caching, aside from squid, has been considered
so that
      unnecessary re-downloads of content are avoided
where possible. The complete expanded/collapsed state of
      the treeview persists across page views in most
situations.
    </p>
  </div>

<script src="index.js" type="text/javascript"></script>
</body></html>

```

Style and appearance in ##Platform_Name## AppBar control

To modify the AppBar appearance, you need to override the default CSS of the AppBar component. Please find the list of CSS classes and their corresponding sections in the AppBar component. Also, you have an option to create your own custom theme for the controls using our [Theme Studio](#).

CSS Class	Purpose of Class
text-align: center;	Aligns text horizontally in the center of the container.
text-align: left;	Aligns text horizontally to the left of the container.
text-align: right;	Aligns text horizontally to the right of the container.
text-align: justify;	Aligns text horizontally to justify the lines (stretches or shrinks words to fill the line).
text-align: left; text-align: right;	Combines left and right alignment (e.g., for a signature block).
text-align: center; text-align: left;	Combines center and left alignment (e.g., for a centered heading with left-aligned text below it).
text-align: center; text-align: right;	Combines center and right alignment (e.g., for a centered heading with right-aligned text below it).
text-align: center; text-align: justify;	Combines center and justify alignment (e.g., for a centered heading with justified text below it).
text-align: center; text-align: left; text-align: right;	Combines center, left, and right alignment (e.g., for a centered heading with left-aligned text on the left and right-aligned text on the right).
text-align: center; text-align: justify; text-align: left;	Combines center, justify, and left alignment (e.g., for a centered heading with justified text in the middle and left-aligned text on the left).
text-align: center; text-align: justify; text-align: right;	Combines center, justify, and right alignment (e.g., for a centered heading with justified text in the middle and right-aligned text on the right).
text-align: center; text-align: justify; text-align: left; text-align: right;	Combines center, justify, left, and right alignment (e.g., for a centered heading with justified text in the middle and left-aligned text on the left and right-aligned text on the right).

— — — — —

`|.e-appbar|` To customize the appbar.

|.e-appbar.e-prominent|To customize the prominent appbar.

|.e-appbar.e-dense|To customize the dense appbar.|

|.e-appbar.e-light|To customize the light appbar.|

|.e-appbar.e-dark|To customize the dark appbar.|

|.e-appbar.e-primary|To customize the dark appbar.|

|.e-appbar.e-inherit|To customize the inherit appbar.|

Note: You can change the prominent AppBar height if larger titles, images, or texts are used.

CssClass

CssClass is used for AppBar customization based on the custom class. In the example below, the AppBar background and color are customized using the [cssClass](#) property.

INDEX.JS

```
var defaultAppBarObj = new ej.navigations.AppBar({
  colorMode: 'Primary',
  cssClass: 'custom-appbar'
});
defaultAppBarObj.appendTo("#defaultAppBar");
var defaultButtonMenuObj = new ej.buttons.Button({ cssClass: 'e-inherit',
  iconCss: 'e-icons e-home' });
defaultButtonMenuObj.appendTo('#defaultButtonMenu');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 - AppBar</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0,
user-scalable=no">
  <meta name="description" content="Essential JS 2">

</head>
<body>

  <div id="container">
    <div class="control-section default-appbar-section">
```

```

        <div class="control-container">
            <header id="defaultAppBar">
                <button id="defaultButtonMenu"></button>
            </header>
        </div>
    </div>
</div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

HtmlAttributes

It can be used for additional inline attributes by specifying as inline attributes or by specifying htmlAttributes directive. In the code example below, the aria-label of the AppBar is customized by specifying as attributes.

INDEX.JS

```

var defaultAppBarObj = new ej.navigations.AppBar({
    colorMode: 'Primary'
});
defaultAppBarObj.appendTo("#defaultAppBar");
var defaultButtonMenuObj = new ej.buttons.Button({ cssClass: 'e-inherit',
iconCss: 'e-icons e-home' });
defaultButtonMenuObj.appendTo('#defaultButtonMenu');

```

```

AutoComplete

Data binding in ##Platform_Name## Auto complete control

The AutoComplete loads the data either from local data sources or remote data services using the [dataSource](#) property. It supports the data type of array or **DataManager**.

The AutoComplete also supports different kind of data services such as OData, OData V4, Web API and data formats such as XML, JSON, JSONP with the help of DataManager Adaptors.

Fields	Type	Description
value	number or string	Specifies the hidden data value mapped to each list item that should contain a unique value.
groupBy	string	Specifies the category under which the list item has to be grouped.
iconCss	string	Specifies the icon class of each list item.

While binding complex data to AutoComplete, fields should be mapped correctly. Otherwise, the selected

item remains undefined.

Bind to local data

Local data can be represented in two ways as described below.

Array of string

The AutoComplete has support to load array of primitive data such as strings and numbers.

INDEX.JS

```

var sportsData = ['Badminton', 'Cricket', 'Football', 'Golf', 'Tennis'];

```

```
// initialize AutoComplete component
var listObj = new ej.dropdowns.AutoComplete({
  dataSource: sportsData,
  // set placeholder to AutoComplete input element
  placeholder: "Select games"});
listObj.appendTo('#atcelement');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 AutoComplete</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="styles.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
inputs/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
dropdowns/styles/material.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container" style="margin:0 auto; width:250px;">
    <input type="text" tabindex="1" id="atcelement">
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Array of object

The AutoComplete can generate its list items through an array of complex data. For this, the appropriate columns should be mapped to the [fields](#) property.

In the following example, **Game** column from complex data have been mapped to the **value** field.

INDEX.JS

```
let sportsData = [
  { Id: 'Game1', Game: 'Badminton' },
  { Id: 'Game2', Game: 'Basketball' },
  { Id: 'Game3', Game: 'Cricket' },
```

```

    { Id: 'Game4', Game: 'Football' },
    { Id: 'Game5', Game: 'Golf' },
    { Id: 'Game6', Game: 'Hockey' },
    { Id: 'Game7', Game: 'Rugby' },
    { Id: 'Game8', Game: 'Snooker' }
  ];

  // initialize AutoComplete component
  var listObj = new ej.dropdowns.AutoComplete({
    //set the data to dataSource property
    dataSource: sportsData,
    // maps the appropriate column to fields property
    fields: { value: 'Game' },
    // set placeholder to AutoComplete input element
    placeholder: "Find a game"});
  listObj.appendTo('#atcelement');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 AutoComplete</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  ="text/javascript"></script>
</head>
<body>

  <div id="container" style="margin:0 auto; width:250px;">
    <br>
    <input type="text" id="atcelement">
  </div>
  <script>
  var ele = document.getElementById('container');
  if(ele) {
    ele.style.visibility = "visible";
  }

  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Array of complex object

The AutoComplete can generate its list items through an array of complex data. For this, the appropriate columns should be mapped to the [fields](#) property.

In the following example, `Country.Name` column from complex data have been mapped to the `value` field.

INDEX.JS

```
let countriesData = [
    { Country: { Name: 'Australia' }, Code: { Id: 'AU' } },
    { Country: { Name: 'Bermuda' }, Code: { Id: 'BM' } },
    { Country: { Name: 'Canada' }, Code: { Id: 'CA' } },
    { Country: { Name: 'Cameroon' }, Code: { Id: 'CM' } },
    { Country: { Name: 'Denmark' }, Code: { Id: 'DK' } },
    { Country: { Name: 'France' }, Code: { Id: 'FR' } },
    { Country: { Name: 'Finland' }, Code: { Id: 'FI' } },
    { Country: { Name: 'Germany' }, Code: { Id: 'DE' } },
    { Country: { Name: 'Greenland' }, Code: { Id: 'GL' } },
    { Country: { Name: 'Hong Kong' }, Code: { Id: 'HK' } },
    { Country: { Name: 'India' }, Code: { Id: 'IN' } },
    { Country: { Name: 'Italy' }, Code: { Id: 'IT' } },
    { Country: { Name: 'Japan' }, Code: { Id: 'JP' } },
    { Country: { Name: 'Mexico' }, Code: { Id: 'MX' } },
    { Country: { Name: 'Norway' }, Code: { Id: 'NO' } },
    { Country: { Name: 'Poland' }, Code: { Id: 'PL' } },
    { Country: { Name: 'Switzerland' }, Code: { Id: 'CH' } },
    { Country: { Name: 'United Kingdom' }, Code: { Id: 'GB' } },
    { Country: { Name: 'United States' }, Code: { Id: 'US' } }
];

// initialize AutoComplete component
var listObj = new ej.dropdowns.AutoComplete({
    //set the data to dataSource property
    dataSource: countriesData,
    // maps the appropriate column to fields property
    fields: { value: 'Country.Name' },
    // set placeholder to AutoComplete input element
    placeholder: "Find a country"});
listObj.appendTo('#atcelement');
```

INDEX.HTML

```

Bind to remote data

The AutoComplete supports retrieval of data from remote data services with the help of **DataManager** component. The **Query** property is used to fetch data from the database and bind it to the AutoComplete.

The following sample displays the first 6 contacts from the **Customers** table of the **Northwind** data service.

INDEX.JS

```

//initiates the component
var acObject = new ej.dropdowns.AutoComplete({
    //bind the data manager instance to dataSource property
    dataSource: new ej.data.DataManager({
        url: 'https://services.odata.org/V4/Northwind/Northwind.svc/',
        adaptor: new ej.data.ODataV4Adaptor(),
        crossDomain: true
    }),
    //bind the Query instance to query property
    query: new ej.data.Query().from('Employees').select(['FirstName',
'City', 'EmployeeID']).take(6),
    //map the appropriate columns to fields property
    fields: { value: 'FirstName' },
    //set the placeholder to AutoComplete input
    placeholder: "Select an employee",
    //sort the resulted items
    sortOrder: 'Ascending'
});
//render the component
acObject.appendTo('#atcelement');

```

Templates in ##Platform_Name## Auto complete control

The AutoComplete has been provided with several options to customize each list items, group title, header and footer elements. It uses the Essential JS 2 [Template engine](#) to compile and render the elements properly.

Item template

The content of each list item within the AutoComplete can be customized with the help of [itemTemplate](#) property.

In the following sample, each list item is split into two columns to display relevant data's.

INDEX.JS

```
//initiates the component
```

```

var acObject = new ej.dropdowns.AutoComplete({
    //bind the data manager instance to dataSource property
    dataSource: new ej.data.DataManager({
        url: 'https://services.odata.org/V4/Northwind/Northwind.svc/',
        adaptor: new ej.data.ODataV4Adaptor(),
        crossDomain: true
    }),
    //bind the Query instance to query property
    query: new ej.data.Query().from('Employees').select(['FirstName',
'City', 'EmployeeID']).take(6),
    //map the appropriate columns to fields property
    fields: { value: 'FirstName' },
    //set the placeholder to AutoComplete input
    placeholder: "Select an employee",
    //sort the resulted items
    sortOrder: 'Ascending',
    //set the value to itemTemplate property
    itemTemplate: "<span><span class='name'>${FirstName}</span><span class
='city'>${City}</span></span>"
});
//render the component
acObject.appendTo('#atcelement');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>Essential JS 2 AutoComplete</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">

if(ele) {
    ele.style.visibility = "visible";
}
</script>

```

```
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Group template

The group header title under which appropriate sub-items are categorized can also be customize with the help of [groupTemplate](#) property. This template is common for both inline and floating group header template.

In the following sample, employees are grouped according to their city.

INDEX.JS

```
var groupPredicate = new ej.data.Predicate('City',
'equal','london').or('City','equal','seattle');
//initiates the component
var acObject = new ej.dropdowns.AutoComplete({
  //bind the data manager instance to dataSource property
  dataSource: new ej.data.DataManager({
    url: 'https://services.odata.org/V4/Northwind/Northwind.svc/',
    adaptor: new ej.data.ODataV4Adaptor(),
    crossDomain: true
  }),
  //bind the Query instance to query property
  query: new ej.data.Query().from('Employees').select(['FirstName',
'City','EmployeeID']).take(6).where(groupPredicate),
  //map the appropriate columns to fields property
  fields: { value: 'FirstName', groupBy: 'City'},
  //set the placeholder to AutoComplete input
  placeholder:"Select an employee",
  //sort the resulted items
  sortOrder: 'Ascending',
  //set the value to groupTemplate
  groupTemplate: "<strong>${City}</strong>"
});
//render the component
acObject.appendTo('#atcelement');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 AutoComplete</title>

<body>

    <div id="container" style="margin:0 auto; width:250px;">
        <input type="text" id="atcelement">
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Header template

The header element is shown statically at the top of the suggestion list items within the AutoComplete, and any custom element can be placed as a header element using [headerTemplate](#) property.

In the following sample, the list items and its headers are designed and displayed as two columns similar to multiple columns of the grid.

INDEX.JS

```

//initiates the component
var acObject = new ej.dropdowns.AutoComplete({
    //bind the data manager instance to dataSource property
    dataSource: new ej.data.DataManager({
        url: 'https://services.odata.org/V4/Northwind/Northwind.svc/',
        adaptor: new ej.data.ODataV4Adaptor(),
        crossDomain: true
    }),
    //bind the Query instance to query property
    query: new ej.data.Query().from('Employees').select(['FirstName',
'City', 'EmployeeID']).take(6),
    //map the appropriate columns to fields property
    fields: { value: 'FirstName'},
    //set the placeholder to AutoComplete input
    placeholder: "Select an employee",
    //sort the resulted items
    sortOrder: 'Ascending',
    //set the value to headerTemplate
    headerTemplate: "<span class='head'><span class='name'>Name</span><span
class='city'>City</span></span>",
    //set the value to item template
    itemTemplate: "<span class='item' ><span
class='name'>${FirstName}</span><span class='city'>${City}</span></span>"
});
//render the component
acObject.appendTo('#atcelement');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 AutoComplete</title>

if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Footer template

The AutoComplete has options to show a footer element at the bottom of the list items in the suggestion list. Here, you can place any custom element as a footer element using [footerTemplate](#) property.

In the following sample, footer element displays the total number of list items present in the AutoComplete.

INDEX.JS

```

var sportsData = [ "Basketball", "Cricket", "Football", "Golf"];
//initiates the component
var acObject = new ej.dropdowns.AutoComplete({
  //bind the data manager instance to dataSource property
  dataSource: sportsData ,
  //set the placeholder to AutoComplete input
  placeholder:"Select games",
  //set the value to footer template
  footerTemplate:"<span class='foot'> Total list items: "+
sportsData.length +"</span>"

```

```
});

//render the component
acObject.appendTo('#atcelement');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 AutoComplete</title>

if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

No records template

The AutoComplete is provided with support to custom design the suggestion list content when no data is found and no matches found on search with the help of [noRecordsTemplate](#) property.

In the following sample, suggestion list content displays the notification of no data available.

INDEX.JS

```
//initiates the component
var acObject = new ej.dropdowns.AutoComplete({
  //bind the data manager instance to dataSource property
  dataSource: [],
  //set the placeholder to AutoComplete input
  placeholder:"Select an item",
```

```
//set the value to noRecords template
noRecordsTemplate:"<span class='norecord'> NO DATA AVAILABLE</span>"
});
//render the component
acObject.appendTo('#atcelement');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 AutoComplete</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">

  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Action failure template

There is also an option to custom design the suggestion list content when the data fetch request fails at the remote server. This can be achieved using the [actionFailureTemplate](#) property.

In the following sample, when the data fetch request fails, the AutoComplete displays the notification.

INDEX.JS

```
//initiates the component
var acObject = new ej.dropdowns.AutoComplete({
  //bind the data manager instance to dataSource property
  dataSource: new ej.data.DataManager({
    // Here, use the wrong url to display the action failure
    template
```

```

        url: 'https://services.odata.org/V4/Northwind/Northwind.svcs/',
        adaptor: new ej.data.ODataV4Adaptor(),
        crossDomain: true
    )),
    //bind the Query instance to query property
    query: new
ej.data.Query().from('Employees').select(['FirstName']).take(6),
    //map the appropriate columns to fields property
    fields: { text: 'FirstName', value: 'EmployeeID' },
    //set the placeholder to AutoComplete input
    placeholder: "Select an employee",
    //set the value to action failure template
    actionFailureTemplate: "<span class='action-failure'> Data fetch get
fails</span>"
});
acObject.appendTo('#atcelement');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

Grouping in ##Platform_Name## Auto complete control

The AutoComplete supports wrapping nested elements into a group based on different categories. The category of each list item can be mapped through the [groupBy](#) field in the data table. The group header is displayed as both inline and fixed headers. The fixed group header content is updated dynamically on scrolling the suggestion list with its category value.

In the following sample, vegetables are grouped according on its category using `groupBy` field.

INDEX.JS

```
var vegetableData = [
  { Vegetable: 'Cabbage', Category: 'Leafy and Salad', Id: 'item1' },
  { Vegetable: 'Spinach', Category: 'Leafy and Salad', Id: 'item2' },
  { Vegetable: 'Wheat grass', Category: 'Leafy and Salad', Id: 'item3' },
  { Vegetable: 'Yarrow', Category: 'Leafy and Salad', Id: 'item4' },
  { Vegetable: 'Pumpkins', Category: 'Leafy and Salad', Id: 'item5' },
  { Vegetable: 'Chickpea', Category: 'Beans', Id: 'item6' },
  { Vegetable: 'Green bean', Category: 'Beans', Id: 'item7' },
  { Vegetable: 'Horse gram', Category: 'Beans', Id: 'item8' },
  { Vegetable: 'Garlic', Category: 'Bulb and Stem', Id: 'item9' },
  { Vegetable: 'Nopal', Category: 'Bulb and Stem', Id: 'item10' },
  { Vegetable: 'Onion', Category: 'Bulb and Stem', Id: 'item11' }
];
//initiate the AutoComplete
var vegetables = new ej.dropdowns.AutoComplete({
  //set the grouped data to dataSource property
  dataSource: vegetableData,
  // map the groupBy field with Category column
  fields: { groupBy: 'Category', value: 'Vegetable' },
  // set the placeholder to the AutoComplete input
  placeholder: "Find a vegetable"
});
//render the AutoComplete component
vegetables.appendTo('#atcelement');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 AutoComplete</title>

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Customization

The grouping header is also provided with customization option. This allows custom designing using the [groupTemplate](#) property for both inline and fixed headers as referred here:

See Also

- [Group Template support to AutoComplete.](#)

Filtering in ##Platform_Name## Auto complete control

The AutoComplete has built-in support to filter data items. The filter operation starts as soon as you start typing characters in the component.

Change the filter type

Determines on which filter type, the component needs to be considered on search action. The available [filterType](#) and its supported data types are

Filter Type	Description	Supported Types
---	---	---
StartsWith	Checks whether a value begins with the specified value.	String
EndsWith	Checks whether a value ends with specified value.	String
Contains	Checks whether a value contains with specified value.	String

The following examples shows the data filtering is done with **StartsWith** type.

INDEX.JS

```
//initiates the component
var acObject = new ej.dropdowns.AutoComplete({
```

```

//bind the data manager instance to dataSource property
dataSource: new ej.data.DataManager({
    url:
'https://services.odata.org/V4/Northwind/Northwind.svc/Customers',
    adaptor: new ej.data.ODataV4Adaptor(),
    crossDomain: true
}),
//bind the Query instance to query property
query: new ej.data.Query().select(['ContactName']),
//map the appropriate columns to fields property
fields: { value: 'ContactName'},
//set the placeholder to AutoComplete input
placeholder: "Find a customer",
//set the filterType to searching operation
filterType: 'StartsWith',
//sort the resulted items
sortOrder: 'Ascending'
});
//render the component
acObject.appendTo('#atcelement');

```

INDEX.HTML

```

  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
dropdowns/styles/material.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container" style="margin:0 auto; width:250px;">
    <br>
    <input type="text" id="atcelement">
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
<script src="index.js" type="text/javascript"></script>

```

```
</body></html>
```

Filter item count

You can specify the filter suggestion item count through [suggestionCount](#) property of AutoComplete.

The following example, to restrict the suggestion list item counts as 5.

INDEX.JS

```
//initiates the component
var acObject = new ej.dropdowns.AutoComplete({
  //bind the data manager instance to dataSource property
  dataSource: new ej.data.DataManager({
    url:
    'https://services.odata.org/V4/Northwind/Northwind.svc/Customers',
    adaptor: new ej.data.ODataV4Adaptor(),
    crossDomain: true
  }),
  //bind the Query instance to query property
  query: new ej.data.Query().select(['ContactName']),
  //map the appropriate columns to fields property
  fields: { value: 'ContactName' },
  //set the suggestionCount to show the maximum suggestion list item
  suggestionCount: 5,
  //set the placeholder to AutoComplete input
  placeholder: "Find a customer",
  //set the filterType to searching operation
  filterType: 'StartsWith',
  //sort the resulted items
  sortOrder: 'Ascending'
});
//render the component
acObject.appendTo('#atcelement');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 AutoComplete</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="styles.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
inputs/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
dropdowns/styles/material.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
```

```
<body>

  <div id="container" style="margin:0 auto; width:250px;">
    <br>
    <input type="text" id="atcelement">
  </div>
</body>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Limit the minimum filter character

You can set the limit for the character count to filter the data on the AutoComplete. This can be done by set the [minLength](#) property to AutoComplete.

In the following example, the remote request doesn't fetch the search data, until the search key contains three characters.

INDEX.JS

```
//initiates the component
var acObject = new ej.dropdowns.AutoComplete({
  //bind the data manager instance to dataSource property
  dataSource: new ej.data.DataManager({
    url:
    'https://services.odata.org/V4/Northwind/Northwind.svc/Customers',
    adaptor: new ej.data.ODataV4Adaptor(),
    crossDomain: true
  }),
  //bind the Query instance to query property
  query: new ej.data.Query().select(['ContactName']),
  //map the appropriate columns to fields property
  fields: { value: 'ContactName' },
  //set the minLength to restrict the remote request until search key
  //contains 3 characters.
  minLength: 3,
  //set the placeholder to AutoComplete input
  placeholder: "Find a customer",
  //set the filterType to searching operation
  filterType: 'StartsWith',
  //sort the resulted items
  sortOrder: 'Ascending'
});
//render the component
acObject.appendTo('#atcelement');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 AutoComplete</title>
  <meta charset="utf-8">
```

```

<meta name="viewport" content="width=device-width, initial-scale=1.0">
<meta name="description" content="Typescript UI Controls">
<meta name="author" content="Syncfusion">
<link href="styles.css" rel="stylesheet">
<link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
<link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-

type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container" style="margin:0 auto; width:250px;">
        <br>
        <input type="text" id="atcelement">
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Case sensitive filtering

Data items can be filtered either with or without case sensitivity using the DataManager. This can be done by setting the [ignoreCase](#) property of AutoComplete.

The following sample depicts how to filter the data with case-sensitive.

INDEX.JS

```

//initiates the component
var acObject = new ej.dropdowns.AutoComplete({
    //bind the data manager instance to dataSource property
    dataSource: new ej.data.DataManager({
        url:
        'https://services.odata.org/V4/Northwind/Northwind.svc/Customers',
        adaptor: new ej.data.ODataV4Adaptor(),
        crossDomain: true
    }),
    //bind the Query instance to query property
    query: new ej.data.Query().select(['ContactName']),
    //map the appropriate columns to fields property
    fields: { value: 'ContactName' },
    //set the ignoreCase as false to enable the case sensitive filtering
    ignoreCase: false,
    //set the placeholder to AutoComplete input

```

```
placeholder: "Find a customer",
//set the filterType to searching operation
filterType: 'StartsWith',
//sort the resulted items
sortOrder: 'Ascending'
});
//render the component
acObject.appendTo('#atcelement');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 AutoComplete</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="styles.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-

  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
dropdowns/styles/material.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container" style="margin:0 auto; width:250px;">
    <br>
    <input type="text" id="atcelement">
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Diacritics Filtering

An AutoComplete supports diacritics filtering which will ignore the [diacritics](#) and makes it easier to filter the results in international characters lists when the [ignoreAccent](#) is enabled.

In the following sample, data with diacritics are bound as dataSource for AutoComplete.

INDEX.JS

```
// create local data
var data = [
```

```

        'Aeróbics',
        'Aeróbics en Agua',
        'Aerografía',
        'Aerodelaje',
        'Águilas',
        'Ajedrez',
        'Ala Delta',
        'Álbumes de Música',
        'Alusivos',
        'Análisis de Escritura a Mano'];
// initialize AutoComplete component
var atcObj = new ej.dropdowns.AutoComplete({
    //set the local data to dataSource property
    dataSource: data,
    // set the placeholder to AutoComplete input element
    placeholder: 'e.g: aero',
    // enabled the ignoreAccent property for ignore the diacritics
    ignoreAccent: true
});
atcObj.appendTo('#atcelement');

```

INDEX.HTML

```

Virtualization in AutoComplete Component

AutoComplete virtualization is a technique used to efficiently render extensive lists of items while minimizing the impact on performance. This method is particularly advantageous when dealing with large datasets because it ensures that only a fixed number of DOM (Document Object Model) elements are created. When scrolling through the list, existing DOM elements are reused to display relevant data instead of generating new elements for each item. This recycling process is managed internally.

During virtual scrolling, the data retrieved from the data source depends on the popup height and the calculation of the list item height. Enabling the [enableVirtualization](#) option in a AutoComplete activates this virtualization technique.

When fetching data from the data source, the [actionBegin](#) event is triggered before data retrieval begins. Then, the [actionComplete](#) event is triggered once the data is successfully fetched.

When the enableVirtualization property is enabled, the `skip` and `take` properties provided by the user within the Query class at the initial state or during the `actionBegin` or `actionComplete` events will not be considered, since it is internally managed and calculated based on certain dimensions with respect to the popup height.

Binding local data

The AutoComplete can generate its list items through an array of complex data. For this, the appropriate columns should be mapped to the [fields](#) property. When using virtual scrolling, the list updates based on the scroll offset value, triggering a request to fetch more data from the server. As the data is being fetched, the `actionBegin` event occurs before the data retrieval starts. Once the data retrieval is successful, the `actionComplete` event is triggered, indicating that the data fetch process is complete.

In the following example, `text` column from complex data have been mapped to the `value` field.

INDEX.JS

```
var records = [];
for (var i = 1; i <= 150; i++) {
    var item = {
        id: 'id' + i,
        text: "Item " + i,
    };
    records.push(item);
}
//initiates the component
var acObject = new ej.dropdowns.AutoComplete({
    //bind the data source property
    dataSource: records,
    //map the appropriate columns to fields property
    fields: { value: 'text' },
    //set the placeholder to DropDownList input
```

```
placeholder:"Select an Item ",
//set enableVirtualization property to true
enableVirtualization: true,
//set the height of the popup element
popupHeight: '200px'
});
//render the component
acObject.appendTo('#atcelement');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 AutoComplete</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">

  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container" style="margin:0 auto; width:250px;">
    <input type="text" id="atcelement">
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Binding Remote data

The AutoComplete supports retrieval of data from remote data services with the help of **DataManager** component. When using remote data, it initially fetches all the data from the server, triggering the **actionBegin** and **actionComplete** events, and then stores the data locally. During virtual scrolling, additional data is retrieved from the locally stored data, triggering the **actionBegin** and **actionComplete** events at that time as well.

The following sample displays the OrderId from the **Orders** Data Service.

INDEX.JS

```
//initiates the component
var acObject = new ej.dropdowns.AutoComplete({
  //bind the dataSource property
  dataSource: new ej.data.DataManager({
    url: 'https://ej2services.syncfusion.com/js/development/api/orders',
    adaptor: new ej.data.WebApiAdaptor(),
    crossDomain: true
  }),
  //map the appropriate columns to fields property
  fields: { value: 'OrderID' },
  //set the placeholder to DropDownList input
  placeholder: "Select an ID ",
  //set enableVirtualization property to true
  enableVirtualization: true,
  //set the height of the popup element
  popupHeight: '200px'
});
//render the component
acObject.appendTo('#atcelement');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 AutoComplete</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="styles.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-

  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
inputs/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
dropdowns/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
notifications/styles/material.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container" style="margin:0 auto; width:250px;">
    <input type="text" id="atcelement">
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
```

```

}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Grouping with Virtualization

The AutoComplete component supports grouping with Virtualization. It allows you to organize elements into groups based on different categories. Each item in the list can be classified using the [groupBy](#) field in the data table. After grouping, virtualization works similarly to local data binding, providing a seamless user experience. When the data source is bound to remote data, an initial request is made to retrieve all data for the purpose of grouping. Subsequently, the grouped data works in the same way as local data binding virtualization, enhancing performance and responsiveness.

The following sample shows the example for Grouping with Virtualization.

INDEX.JS

```

var records = [];
for (var i = 1; i <= 150; i++) {
    var dropdownsItem = {};
    dropdownsItem.id = 'id' + i;
    dropdownsItem.text = "Item ".concat(i);
    var randomAutoGroup = Math.floor(Math.random() * 4) + 1;
    switch (randomAutoGroup) {
        case 1:
            dropdownsItem.group = 'Group D';
            break;
        case 2:
            dropdownsItem.group = 'Group C';
            break;
        case 3:
            dropdownsItem.group = 'Group B';
            break;
        case 4:
            dropdownsItem.group = 'Group A';
            break;
        default:
            break;
    }
    records.push(dropdownsItem);
}
//initiates the component
var acObject = new ej.dropdowns.AutoComplete({
    //bind the dataSorce property
    dataSource: records,
    //map the appropriate columns to fields property
    fields: { groupBy: 'group', value: 'text' },
    //set the placeholder to DropDownList input
    placeholder: "Select an Item ",
    //set enableVirtualization property to true
    enableVirtualization: true,
    //set the height of the popup element
    popupHeight: '200px'
});
//render the component

```

```
acObject.appendTo('#atcelement');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 AutoComplete</title>

</body></html>
```

Localization in ##Platform_Name## Auto complete control

The Localization library allows you to localize static text content of the [noRecordsTemplate](#) and [actionFailureTemplate](#) properties according to the culture currently assigned to the AutoComplete.

| Locale key | en-US (default) |

|-----|-----|

| noRecordsTemplate | No Records Found |

| actionFailureTemplate | The Request Failed |

Loading translations

To load translation object to your application, use load function of the **L10n** class.

In the following sample, French culture is set to the AutoComplete and no data is loaded. Hence, the `noRecordsTemplate` property displays its text in French culture initially and if the sample is run offline, the `actionFailureTemplate` property displays its text appropriately.

INDEX.JS

```
//bind the data manager instance to dataSource property
var customerData = new ej.data.DataManager({
  url: 'https://services.odata.org/V4/Northwind/Northwind.svc/Customers',
  adaptor: new ej.data.ODataV4Adaptor(),
  crossDomain: true
});
//initiates the component
var acObj = new ej.dropdowns.AutoComplete({
  //set the data to dataSource property
  dataSource: customerData,
  // set locale culture to AutoComplete
  locale: 'fr-BE',
  // map appropriate column
  fields: { value: 'ContactName' },
  // take 0 item to showcase noRecordsTemplate property.
  query: new ej.data.Query().select(['ContactName',
  'CustomerID']).take(0),
  // set placeholder to AutoComplete input element
  placeholder: 'Sélectionnez un éléments'
});
acObj.appendTo('#atcelement');
ej.base.L10n.load({
  'fr-BE': {
    'dropdowns': {
      'noRecordsTemplate': "Aucun enregistrement trouvé",
      'actionFailureTemplate': "Modèle d'échec d'action"
    }
  }
});
```

Style in ##Platform_Name## Auto complete control

The following content provides the exact CSS structure that can be used to modify the control's appearance based on the user preference.

Customizing the appearance of wrapper element

Use the following CSS to customize the appearance of wrapper element.

```

.e-ddl.e-input-group.e-control-wrapper .e-input {
font-size: 20px;
font-family: emoji;
color: #ab3243;
background: #32a5ab;
}

```

Customizing the dropdown icon's color

Use the following CSS to customize the dropdown icon's color.

```

.e-ddl.e-input-group .e-input-group-icon,.e-ddl.e-input-group.e-control-wrapper .e-input-group-
icon:hover {
color: #bb233d;
font-size: 13px;
}

```

```
}
,
```

Customizing the focus color

Use the following CSS to customize the focusing color of input element.

```
,
```

```
.e-ddl.e-input-group.e-control-wrapper.e-input-focus::before, .e-ddl.e-input-group.e-control-wrapper.e-input-focus::after {
```

```
background: #c000ff;
```

```
}
```

```
,
```

Customizing the outline theme's focus color

Use the following CSS to customize the focusing color of outline theme.

```
,
```

```
.e-outline.e-input-group.e-input-focus:hover:not(.e-success):not(.e-warning):not(.e-error):not(.e-disabled):not(.e-float-icon-left),.e-outline.e-input-group.e-input-focus.e-control-wrapper:hover:not(.e-success):not(.e-warning):not(.e-error):not(.e-disabled):not(.e-float-icon-left),.e-outline.e-input-group.e-input-focus:not(.e-success):not(.e-warning):not(.e-error):not(.e-disabled),.e-outline.e-input-group.e-control-wrapper.e-input-focus:not(.e-success):not(.e-warning):not(.e-error):not(.e-disabled) {
```

```
border-color: #b1bd15;
```

```
box-shadow: inset 1px 1px #b1bd15, inset -1px 0 #b1bd15, inset 0 -1px #b1bd15;
```

```
}
```

```
,
```

Customizing the disabled component's text color

Use the following CSS to customize the text color when the component is disabled.

```
,
```

```
.e-input-group.e-control-wrapper .e-input[disabled] {
```

```
-webkit-text-fill-color: #0d9133;
```

```
}
```

```
,
```

Customizing the float label element's focusing color

Use the following CSS to customize the focusing color of float label element.

```
,
```

```
.e-float-input.e-input-group:not(.e-float-icon-left) .e-float-line::before,.e-float-input.e-control-wrapper.e-input-group:not(.e-float-icon-left) .e-float-line::before,.e-float-input.e-input-group:not(.e-float-icon-left) .e-float-line::after,.e-float-input.e-control-wrapper.e-input-group:not(.e-float-icon-left) .e-float-line::after {
```

```
background-color: #2319b8;
}
.e-ddl.e-input-group.e-control-wrapper.e-float-input.e-input-focus .e-float-text.e-label-top, .e-float-
input.e-control-wrapper:not(.e-error).e-input-focus input ~ label.e-float-text {
color: #2319b8;
}
、
```

Customizing the color of the placeholder text

Use the following CSS to customize the text color of placeholder.

```
、
.e-ddl.e-input-group input.e-input::placeholder {
color: red;
}
、
```

Customizing the text selection color

Use the following CSS to customize the selection color of text and background.

```
、
.e-ddl.e-input-group input.e-input::selection {
color: red;
background: yellow;
}
、
```

Customizing the background color of focus, hover, and active item's

Use the following CSS to customize the background color of focus, hover and active item's.

```
、
.e-dropdownbase .e-list-item.e-item-focus, .e-dropdownbase .e-list-item.e-active, .e-dropdownbase .e-
list-item.e-active.e-hover, .e-dropdownbase .e-list-item.e-hover {
background-color: #1f9c99;
color: #2319b8;
}
、
```

Customizing the appearance of pop-up element

Use the following CSS to customize the appearance of popup element.

```
、
.e-dropdownbase .e-list-item, .e-dropdownbase .e-list-item.e-item-focus {
```

```
background-color: #29c2b8;
color: #207cd9;
font-family: emoji;
min-height: 29px;
}
,
```

Adding mandatory asterisk to placeholder and float label

You can add a mandatory asterisk(*) to placeholder and float label using `.e-input-group.e-control-wrapper.e-float-input .e-float-text::after` class.

INDEX.JS

```
var sportsData = ['Badminton', 'Cricket', 'Football', 'Golf', 'Tennis'];
// initialize AutoComplete component
var listObj = new ej.dropdowns.AutoComplete({
  dataSource: sportsData,
  // set placeholder to AutoComplete input element
  placeholder: "Select games"});
listObj.appendTo('#atcelement');
```

INDEX.HTML

Accessibility in ##Platform_Name## Auto complete control

The AutoComplete component has been designed, keeping in mind the **WAI-ARIA** specifications, and applies the **WAI-ARIA** roles, states, and properties along with **keyboard support**. This component is characterized by complete keyboard interaction support and ARIA accessibility support that makes it easy for people who use assistive technologies (AT) or those who completely rely on keyboard navigation.

The AutoComplete component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the AutoComplete component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2 Support](#) | |

| [Section 508 Support](#) | |

| [Screen Reader Support](#) | |

| [Right-To-Left Support](#) | |

| [Color Contrast](#) | |

| [Mobile Device Support](#) | |

| [Keyboard Navigation Support](#) | |

| [Accessibility Checker Validation](#) | |

| [Axe-core Accessibility Validation](#) | |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

}

```
</style>
```

```
<div> - All features of the component meet the requirement.</div>
```

```
<div> - Some features of the component do not meet the requirement.</div>
```

```
<div> - The component does not meet the requirement.</div>
```

WAI-ARIA attributes

The AutoComplete component uses the **combobox** role and each list item has an **option** role. The following ARIA Attributes denote the AutoComplete state.

| Property | Functionalities |

| --- | --- |

| aria-haspopup | Indicates whether the AutoComplete input element has a suggestion list or not. |

| aria-expanded | Indicates whether the suggestion list has expanded or not. |

| aria-selected | Indicates the selected option from the list. |

| aria-readonly | Indicates the readonly state of the AutoComplete element. |

| aria-disabled | Indicates whether the AutoComplete component is in a disabled state or not. |

| aria-activedescendent | This attribute holds the ID of the active list item to focus its descendant child element. |

| aria-owns | This attribute contains the ID of the suggestion list to indicate popup as a child element. |

| aria-autocomplete | This attribute contains the 'both' to a list of options shows and the currently selected suggestion also shows inline. |

Keyboard interaction

You can use the following key shortcuts to access the AutoComplete without interruptions.

| Keyboard shortcuts | Actions |

| --- | --- |

| Arrow Down | In popup hidden state, opens the suggestion list. In popup open state, selects the first item when no item selected else selects the item next to the currently selected item. |

| Arrow Up | In popup hidden state, opens the suggestion list. In popup open state, selects the last item when no item selected else selects the item previous to the currently selected one. |

| Page Down | Scrolls down to the next page and selects the first item when popup list opens. |

| Page Up | Scrolls up to previous page and select the first item when popup list open. |

| Enter | Selects the focused item and set to AutoComplete component. |

| Tab | Focuses on the next tab indexed element when the popup is closed. Otherwise, closes the popup list and remains the focus in component suppose if it is in an open state. |

| Shift + tab | Focuses the previous tab indexed element when the popup is closed. Otherwise, closes the popup list and remains the focus in component suppose if it is in an open state. |

| Alt + Down | Opens the popup list. |

| Alt + Up | In popup hidden state, opens the popup list. In popup open state, closes the popup list. |

| Esc(Escape) | Closes the popup list when it is in an open state then remove the selection. |

| Home | Cursor moves to before of first character in input. |

| End | Cursor moves to next of last character in input. |

In the below sample, focus the AutoComplete component using alt+t keys.

INDEX.JS

```
var gameList = [
    { id: 'Game1', game: 'Badminton' },
    { id: 'Game2', game: 'Basketball' },
    { id: 'Game3', game: 'Cricket' },
    { id: 'Game4', game: 'Football' },
    { id: 'Game5', game: 'Golf' },
    { id: 'Game6', game: 'Hockey' },
    { id: 'Game7', game: 'Rugby' },
    { id: 'Game8', game: 'Snooker' },
    { id: 'Game9', game: 'Tennis' },
];
// initialize AutoComplete component
var acObject = new ej.dropdowns.AutoComplete({
    //set the data to dataSource property
    dataSource: gameList,
    //map to colum to fields
    fields: { value: 'game' },
    // set placeholder to AutoComplete input element
    placeholder: "Select games",
    // set the popup list height
    popupHeight: '200px'
});
// render initialized AutoComplete
acObject.appendTo('#atcelement');
document.onkeyup = function (e) {
    if (e.altKey && e.keyCode === 84 /* t */) {
        // press alt+t to focus the control.
        acObject.focusIn();
    }
};
```

</body></html>

```

Ensuring accessibility

The AutoComplete component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the AutoComplete component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the AutoComplete component with accessibility tools.

How To

Autofill in ##Platform_Name## Auto complete control

The AutoComplete supports the autofill behavior with the help of [autofill](#) property. Whenever you change the input value, the AutoComplete will autocomplete your data by matching the typed character. Suppose, if no matches found then, AutoComplete doesn't suggest any item.

In the below sample, showcase that how to work [autofill](#) with AutoComplete.

INDEX.JS

```

let searchData = [
    { Name: 'Australia', Code: 'AU' },
    { Name: 'Bermuda', Code: 'BM' },

```

```

    { Name: 'Canada', Code: 'CA' },
    { Name: 'Cameroon', Code: 'CM' },
    { Name: 'Denmark', Code: 'DK' },
    { Name: 'France', Code: 'FR' },
    { Name: 'Finland', Code: 'FI' },
    { Name: 'Germany', Code: 'DE' },
    { Name: 'Greenland', Code: 'GL' },
    { Name: 'Hong Kong', Code: 'HK' },
    { Name: 'India', Code: 'IN' },
    { Name: 'Italy', Code: 'IT' },
    { Name: 'Japan', Code: 'JP' },
    { Name: 'Mexico', Code: 'MX' },
    { Name: 'Norway', Code: 'NO' },
    { Name: 'Poland', Code: 'PL' },
    { Name: 'Switzerland', Code: 'CH' },
    { Name: 'United Kingdom', Code: 'GB' },
    { Name: 'United States', Code: 'US' }
  ];
  //initiates the component
  let atcObject = new ej.dropdowns.AutoComplete({
    // bind the country data to dataSource property
    dataSource: searchData,
    // maps the appropriate column to fields property
    fields: { value: "Name" },
    //set the placeholder to AutoComplete input
    placeholder: "Find a country",
    //enable the autofill property to fill a first matched value in input
    //when press a down key
    autofill: true
  });
  atcObject.appendTo("#atcelement");

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

</body></html>

```

Icon support in ##Platform_Name## Auto complete control

You can render **icons** to the list items by mapping the `iconCss` field. This `iconCss` field create a span in the list item with mapped class name to allow styling as per your need.

In the following sample, the icon classes are mapped with `iconCss` field.

INDEX.JS

```

let sortFormatData = [
  { Class: 'asc-sort', Type: 'Sort A to Z', Id: '1' },
  { Class: 'dsc-sort', Type: 'Sort Z to A ', Id: '2' },
  { Class: 'filter', Type: 'Filter', Id: '3' },
  { Class: 'clear', Type: 'Clear', Id: '4' }
];
//initiates the component
let sortFormat = new ej.dropdowns.AutoComplete({
  //set the data to dataSource property
  dataSource: sortFormatData,
  // map the icon column to iconCSS field.
  fields: { value: 'Type', iconCss: 'Class' },
  // set placeholder to AutoComplete input element
  placeholder: 'Find a format'
});
sortFormat.appendTo('#atcelement');

```

INDEX.HTML

```

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Custom search in ##Platform_Name## Auto complete control

The AutoComplete has built-in support to highlight the searched characters on suggested list items when enabled the [highlight](#) property.

In the below sample, to customize the matched character in suggestion list by `e-highlight` class.

INDEX.JS

```

let searchData = [
    { Name: 'Australia', Code: 'AU' },
    { Name: 'Bermuda', Code: 'BM' },
    { Name: 'Canada', Code: 'CA' },
    { Name: 'Cameroon', Code: 'CM' },
    { Name: 'Denmark', Code: 'DK' },
    { Name: 'France', Code: 'FR' },
    { Name: 'Finland', Code: 'FI' },
    { Name: 'Germany', Code: 'DE' },
    { Name: 'Greenland', Code: 'GL' },
    { Name: 'Hong Kong', Code: 'HK' },
    { Name: 'India', Code: 'IN' },
    { Name: 'Italy', Code: 'IT' },
    { Name: 'Japan', Code: 'JP' },
    { Name: 'Mexico', Code: 'MX' },
    { Name: 'Norway', Code: 'NO' },
    { Name: 'Poland', Code: 'PL' },
    { Name: 'Switzerland', Code: 'CH' },
    { Name: 'United Kingdom', Code: 'GB' },
    { Name: 'United States', Code: 'US' }
];
//initiates the component
let atcObject = new ej.dropdowns.AutoComplete({
    // bind the country data to dataSource property
    dataSource: searchData,
    // maps the appropriate column to fields property
    fields: { value: "Name" },
    //set the placeholder to AutoComplete input

```

```

    placeholder: "Find a country",
    //enable the highlight property to highlight the matched character in
    suggestion list
    highlight: true
  });
  atcObject.appendTo('#atcelement');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

```

Filter in ##Platform_Name## Auto complete control

The AutoComplete data can be filtered based on both text and value fields using predicate of dataManager through filtering event. The filtered data can be again updated through updateData method.

In the following example, filtering is done based on text and value fields.

INDEX.JS

```

let searchData = [
  { Name: 'Australia', Code: 'AU' },
  { Name: 'Bermuda', Code: 'BM' },

```

```

    { Name: 'Canada', Code: 'CA' },
    { Name: 'Cameroon', Code: 'CM' },
    { Name: 'Denmark', Code: 'DK' },
    { Name: 'France', Code: 'FR' },
    { Name: 'Finland', Code: 'FI' },
    { Name: 'Germany', Code: 'DE' },
    { Name: 'Greenland', Code: 'GL' },
    { Name: 'Hong Kong', Code: 'HK' },
    { Name: 'India', Code: 'IN' },
    { Name: 'Italy', Code: 'IT' },
    { Name: 'Japan', Code: 'JP' },
    { Name: 'Mexico', Code: 'MX' },
    { Name: 'Norway', Code: 'NO' },
    { Name: 'Poland', Code: 'PL' },
    { Name: 'Switzerland', Code: 'CH' },
    { Name: 'United Kingdom', Code: 'GB' },
    { Name: 'United States', Code: 'US' }
  ];
  //initiates the component
  let atcObject = new ej.dropdowns.AutoComplete({
    // bind the country data to dataSource property
    dataSource: searchData,
    // maps the appropriate column to fields property
    fields: { value: "Code", text:"Name" },
    //set the placeholder to AutoComplete input
    //set item template
    itemTemplate:"<span><span class='name'>${Name}</span><span class
='code'>${Code}</span></span>",
    filtering: function(e)
    {
      e.preventDefaultAction=true;
      var predicate = new ej.data.Predicate('Name', 'contains', e.text);
      predicate = predicate.or('Code', 'contains', e.text);
      var query = new ej.data.Query();
      //frame the query based on search string with filter type.
      query = (e.text != "") ? query.where(predicate) : query;
      //pass the filter data source, filter query to updateData method.
      e.updateData(this.dataSource, query);
    }
  });
  atcObject.appendTo('#atcelement');
```

INDEX.HTML

<script src="index.js" type="text/javascript"></script>
</body></html>

```

Achieve virtual scrolling in ##Platform_Name## Auto complete control

The Virtual Scrolling is used to display a large amount of data without buffering the entire load of a huge database record in the AutoComplete, that is, when scrolling, the request is sent and fetch some amount of data from the server dynamically. Using the `scroll` event, get the data and generate the list add to popup using the `addItem` method.

Refer to the following code sample for virtual scrolling.

INDEX.JS

```

var data = new ej.data.DataManager({
    url: 'https://js.syncfusion.com/demos/ejServices/Wcf/Northwind.svc/',
    crossDomain: true
});
//initiates the component
let atcObject = new ej.dropdowns.AutoComplete({
    // bind the DataManager instance to dataSource property
    dataSource: data,
    // bind the Query instance to query property
    query: new

Avatar

Types in ##Platform_Name## Avatar control

This section explains different types of avatar.

Avatar size

The Essential JS 2 Avatar has the following predefined sizes that can be used with the `.e-avatar` class to change the appearance of the avatar.

Class Name	Description
:-----	:-----
e-avatar-xlarge	Displays xlarge size avatar.
e-avatar-large	Displays apply large size avatar.
e-avatar	Displays apply default size avatar.
e-avatar-small	Displays apply small size avatar.
e-avatar-xsmall	Displays apply xsmall size avatar.

```

Avatar types

The types of Essential JS 2 avatar are:

- Default
- Circle

Default

The default style of the avatar is rectangular shape with rounded corners, which can be applied from adding the modifier class `.e-avatar` to the target element.

How To

Avatar customization in ##Platform_Name## Avatar control

Color customization

The avatar comes with default background color (grey). This can be easily customized to desired color by adding custom class or directly selecting the avatar class from the CSS.

INDEX.JS

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 for Avatar </title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Essential JS 2 for Avatar UI Control">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
layouts/styles/material.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element">
      <span class="e-avatar e-avatar-xlarge e-avatar-circle
green">AJ</span>
      <span class="e-avatar e-avatar-xlarge e-avatar-circle
violet">JK</span>
      <span class="e-avatar e-avatar-xlarge e-avatar-circle
rose">EL</span>
      <span class="e-avatar e-avatar-xlarge e-avatar-circle
blue">SR</span>
      <span class="e-avatar e-avatar-xlarge e-avatar-circle
red">PD</span>
    </div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";

```

```

}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Customize avatar sizes

Even though the avatar comes with five predefined sizes, sometimes it's not enough. So, the avatar is designed in such a way that the width and height will be relative to font-size. By changing the font-size of the avatar element, you can change the width and height automatically.

Integrate avatar into listview in ##Platform Name## Avatar control

Avatar can be integrated into various components to make a wide variety of applications. Some of the integrations are shown in the following section.

Avatar is integrated into the listview to create contacts applications. The `xsmall` size avatar is used to match the size of the list item. Letters and images are also used as avatar content.

INDEX.JS

```
var dataSource = [
  { id: 's_01', text: 'Robert', avatar: '', pic: 'pic04' },
  { id: 's_02', text: 'Nancy', avatar: 'N', pic: '' },
  { id: 's_05', text: 'John', pic: 'pic01', avatar: '' },
  { id: 's_03', text: 'Andrew', avatar: 'A', pic: '' },
  { id: 's_06', text: 'Michael', pic: 'pic02', avatar: '' },
  { id: 's_07', text: 'Steven', pic: 'pic03', avatar: '' },
  { id: 's_08', text: 'Margaret', avatar: 'M', pic: '' }
];

var letterAvatarList = new ej.lists.ListView({
  // Bind listview datasource
  dataSource: dataSource,
  // Assign header title
  headerTitle: 'Contacts',
  // Enable header title
  showHeader: true,
  // Assign list-item template
  template: '<div class="listWrapper">' +
    '${if(avatar!=="")}' +
    '<span class="e-avatar e-avatar-small e-avatar-circle">${avatar}</span>' +
    '${else}' +
    '<span class="${pic} e-avatar e-avatar-small e-avatar-circle">' +
    '</span>' +
    '${/if}' +
    '<span class="text">' +
    '${text}' +
    '</span> </div>',
  // Assign sorting order
  sortOrder: 'Ascending'
});

letterAvatarList.appendTo('#letterAvatarList');
```

INDEX.HTML

```

Integrate avatar into badge in ##Platform_Name## Avatar control

The badge is dependent and supportive component, and it can be used with avatar to create a notification avatar.

The default avatar (.e-avatar) and circle avatar (.e-avatar-circle) have been used with notification badges (.e-badge-notification) in the following sample.

Badge

Types in ##Platform Name## Badge control

This section explains different styles and types of the badges.

Badge styles

The Essential JS 2 Badge has the following predefined styles that can be used with `.e-badge` class to change the appearance of a badge.

Class Name	Description
e-badge-primary	Represents a primary notification.
e-badge-secondary	Represents a secondary notification.

- | e-badge-success | Represents a positive notification.
- | e-badge-danger | Represents a negative notification.
- | e-badge-warning | Represents notification with caution.
- | e-badge-info | Represents an informative notification.
- | e-badge-light | Represents notification in light variant.
- | e-badge-dark | Represents notification in dark variant.

</body></html>

```

Badge types

The types of Essential JS 2 badges are as follows:

- Circle
- Pill
- Link
- Notification
- Overlap
- Dot
- Position

Circle

The circle badge style can be applied by adding the modifier class `.e-badge-circle` to the target element.

20px 10px 20px;">
        <div class="firefox svg_icons"></div>
        <span class="e-badge e-badge-danger e-badge-overlap e-badge-
dot"></span>
      </div>
    </div>
  </div>
  <script>
var ele = document.getElementById('container');

```

```

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Overlap

The overlap badge can be used with notification or dot badge, which overlaps with the target element by adding the modifier class `e-badge-overlap`. While using the overlap badge, set the parent element to `position: relative`.

</body></html>

```

Position

The default position of the notification or dot badge is top. But, the position can be changed to **bottom** using the modifier class **.e-badge-bottom**. For example, the bottom class modifier is used with dot badge to display the status in the avatar as shown in the following sample.

How To

Badge customization in **##Platform_Name##** Badge control

Colour customization

Even though badges come with **8 predefined colors**, you can also customize the colour of the badge as desired.

INDEX.JS

```

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>Essential JS 2 for Badge </title>

badge-pill green">New</span></h1>
            <h1>Color Customization <span class="e-badge e-badge-primary e-
badge-pill blue">New</span></h1>
            <h1>Color Customization <span class="e-badge e-badge-primary e-
badge-pill purple">New</span></h1>
            <h1>Color Customization <span class="e-badge e-badge-primary e-
badge-pill gradient">New</span></h1>
        </div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Customize badge size

Badges are designed to change its size based on the content. To change the size of a badge, adjust the font size of the badge.

INDEX.JS

```

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>Essential JS 2 for Badge </title>

<body>

    <div id="container">
        <div id="element">
            <h1>Badge Component <span class="e-badge e-badge-primary
size_1">New</span></h1>
            <h1>Badge Component <span class="e-badge e-badge-primary
size_2">New</span></h1>
            <h1>Badge Component <span class="e-badge e-badge-primary
size_3">New</span></h1>
        </div>
    </div>
</body>
</html>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>

```

Custom position

Even though the badges support the conventional **top** and **bottom** positions, the position of the badges can be changed as desired.

This can be done by adding a custom class to the badge element to override the default position applied from the source.

</body></html>
```

Integrate badge into listview in ##Platform_Name## Badge control

The badges can be integrated with the `listview` component to indicate new notification with colour based on priority.

In the following sample, `default` badges are used and there is no need to customize the badge size. The component will automatically adjust the size based on the container element.

INDEX.JS

```
// Datasource for listview, badge field is the class data for Badges
var dataSource = [
  { id: 'p_01', text: 'Primary', messages: '3 New', badge: 'e-badge e-
badge-primary', icons: 'primary', type: 'Primary' },
  { id: 'p_02', text: 'Social', messages: '27 New', badge: 'e-badge e-
badge-secondary', icons: 'social', type: 'Primary' },
  { id: 'p_03', text: 'Promotions', messages: '7 New', badge: 'e-badge e-
badge-success', icons: 'promotion', type: 'Primary' },
  { id: 'p_04', text: 'Updates', messages: '13 New', badge: 'e-badge e-
badge-info', icons: 'updates', type: 'Primary' },
  { id: 'p_05', text: 'Starred', messages: '', badge: '', icons:
'starred', type: 'All Labels' },
  { id: 'p_06', text: 'Important', messages: '2 New', badge: 'e-badge e-
badge-danger', icons: 'important', type: 'All Labels' },
  { id: 'p_07', text: 'Sent', messages: '', badge: '', icons: 'sent',
type: 'All Labels' },
  { id: 'p_08', text: 'Outbox', messages: '', badge: '', icons: 'outbox',
type: 'All Labels' },
  { id: 'p_09', text: 'Drafts', messages: '7 New', badge: 'e-badge e-
badge-warning', icons: 'draft', type: 'All Labels' },
];
var list = new ej.lists.ListView({
  // Bind listview datasource
  dataSource: dataSource,
  // Assign header title
  headerTitle: 'Inbox',
  // Enable header
  showHeader: true,
  // Assign template
  template: '<div class="listWrapper" style="width: inherit; height:
inherit;"><span class="${icons} list_svg">&#160;</span>' +
    '<span class="list_text">${text}</span>' +
    '<span class="${badge}" style="float: right; margin-top: 16px; font-
size: 12px;">${messages}</span></div>',
  // Map fields
  fields: { groupBy: 'type' },
  // Bind actioncomplete event
  actionComplete: () => {
    var list =
document.getElementById('lists').getElementsByClassName('e-list-group-
item')[0];
    list.style.display = 'none';
  }
});
```

```
list.appendTo('#lists');
```

INDEX.HTML

Dynamic badge content in ##Platform_Name## Badge control

Badges in real-time needs to be updated dynamically based on the requirements. The following sample demonstrates how to update the badges content dynamically. Click the increment button to change the badge value.

INDEX.JS

```
// Datasource for listview, badge field is the class data for Badges
var dataSource = [
  { id: 'p_01', text: 'Primary', messages: '3 New', badge: 'e-badge e-
badge-primary', icons: 'primary', type: 'Primary' },
```

```

    { id: 'p_02', text: 'Social', messages: '27 New', badge: 'e-badge e-
    badge-secondary', icons: 'social', type: 'Primary' },
    { id: 'p_03', text: 'Promotions', messages: '7 New', badge: 'e-badge e-
    badge-success', icons: 'promotion', type: 'Primary' },
    { id: 'p_04', text: 'Updates', messages: '13 New', badge: 'e-badge e-
    badge-info', icons: 'updates', type: 'Primary' },
    { id: 'p_05', text: 'Starred', messages: '', badge: '', icons:
    'starred', type: 'All Labels' },
    { id: 'p_06', text: 'Important', messages: '2 New', badge: 'e-badge e-
    badge-danger', icons: 'important', type: 'All Labels' },
    { id: 'p_07', text: 'Sent', messages: '', badge: '', icons: 'sent',
    type: 'All Labels' },
    { id: 'p_08', text: 'Outbox', messages: '', badge: '', icons: 'outbox',
    type: 'All Labels' },
    { id: 'p_09', text: 'Drafts', messages: '7 New', badge: 'e-badge e-
    badge-warning', icons: 'draft', type: 'All Labels' },
  ];
  var list = new ej.lists.ListView({
    // Bind listview datasource
    dataSource: dataSource,
    // Assign header title
    headerTitle: 'Inbox',
    // Enable header
    showHeader: true,
    // Assign template
    template: '<div class="listWrapper" style="width: inherit; height:
    inherit;"><span class="${icons} list_svg">&#160;</span>' +
      '<span class="list_text">${text}</span>' +
      '${if(messages !== "")}<span class="${badge}" style="float:
    right; margin-top: 16px; font-size: 12px;">${messages}</span>${/if}</div>',
    // Map fields
    fields: { groupBy: 'type' },
    // Bind actioncomplete event
    actionComplete: () => {
      badgeElements =
      Array.prototype.slice.call(document.getElementById('lists').getElementsByClassName('e-badge'));
    }
  });
  list.appendTo('#lists');
  document.getElementById('button').addEventListener('click', function
  buttonClick() {
    badgeElements.forEach((element) => {
      element.textContent = (Number(element.textContent.split(' ')[0])) +
      1 + ' New';
    })
  });
});

                </span>
            </div>
        </div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Barcode

Getting started in ##Platform_Name## Barcode control

This section explains the steps used to create a simple Barcode and demonstrates the basic usage of the barcode component using Essential JS 2

[quickstart](#) seed repository. This seed repository is pre-configured with the Essential JS 2 package.

Dependencies

Following is the list of minimum dependencies required to use the barcode.

```
|-- @syncfusion/ej2-barcode-generator
```

```
|-- @syncfusion/ej2-base
```

```
|-- @syncfusion/ej2-data
```

Setup for local development

Clone the Essential JS 2 quickstart application project from [GitHub](#), and install the necessary npm packages using the following command line scripts.

```
git clone https://github.com/syncfusion/ej2-quickstart.git quickstart
cd quickstart
npm install
```

Configuring system JS

[Syncfusion BarcodeGenerator packages](#) have to be mapped in the `system.config.js` configuration file.

```
System.config({
  paths: {
    'syncfusion:': './node_modules/@syncfusion/',
  },
  map: {
    app: 'app',
    //Syncfusion packages mapping
    "@syncfusion/ej2-base": "syncfusion:ej2-base/dist/ej2-base.umd.min.js",
    "@syncfusion/ej2-data": "syncfusion:ej2-data/dist/ej2-data.umd.min.js",
    "@syncfusion/ej2-buttons": "syncfusion:ej2-buttons/dist/ej2-buttons.umd.min.js",
    "@syncfusion/ej2-splitbuttons": "syncfusion:ej2-splitbuttons/dist/ej2-splitbuttons.umd.min.js",
    "@syncfusion/ej2-popups": "syncfusion:ej2-popups/dist/ej2-popups.umd.min.js",
    "@syncfusion/ej2-navigations": "syncfusion:ej2-navigations/dist/ej2-navigations.umd.min.js",
    "@syncfusion/ej2-inputs": "syncfusion:ej2-inputs/dist/ej2-inputs.umd.min.js",
    "@syncfusion/ej2-dropdowns": "syncfusion:ej2-dropdowns/dist/ej2-dropdowns.umd.min.js",
    "@syncfusion/ej2-calendars": "syncfusion:ej2-calendars/dist/ej2-calendars.umd.min.js",
    "@syncfusion/ej2-lists": "syncfusion:ej2-lists/dist/ej2-lists.umd.min.js",
    "@syncfusion/ej2-barcode-generator": "syncfusion:ej2-barcode-generator/dist/ej2-barcode-generator.umd.min.js",
    "@syncfusion/ej2-excel-export": "syncfusion:ej2-excel-export/dist/ej2-excel-export.umd.min.js",
    "@syncfusion/ej2-pdf-export": "syncfusion:ej2-pdf-export/dist/ej2-pdf-export.umd.min.js",
    "@syncfusion/ej2-file-utils": "syncfusion:ej2-file-utils/dist/ej2-file-utils.umd.min.js",
    "@syncfusion/ej2-compression": "syncfusion:ej2-compression/dist/ej2-compression.umd.min.js"
```

```
},  
packages: {  
  'app': { main: 'app', defaultExtension: 'js' }  
}  
});  
System.import('app');  
`
```

Adding CSS reference

Combined CSS files are available in the Essential JS 2 package root folder. This can be referenced in your [src/styles/styles.css] using the following code.

```
`  
@import '../node_modules/@syncfusion/ej2/material.css';  
`
```

Adding Barcode Generator control

You can start adding Essential JS 2 barcode-generator component to the application. To get started, add the barcode component in `app.ts` and `index.html` files using the following code.

Place the following barcode-generator code in the `app.ts`.

INDEX.JS

```
var barcode = new ej.barcodegenerator.BarcodeGenerator(  
  {  
    width: '200px',  
    height: '150px',  
    mode: 'SVG',  
    type: 'Codabar',  
    value: '123456789',  
  }  
);  
barcode.appendTo('#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>  
  <title>EJ2 Barcode-Generator</title>  
  <meta charset="utf-8">  
  <meta name="viewport" content="width=device-width, initial-scale=1.0">  
  <meta name="description" content="Typescript UI Controls">  
  <meta name="author" content="Syncfusion">  
  <link href="index.css" rel="stylesheet">  
  
  <style>  
    .barcodeStyle{  
      height: 150px;  
      width: 200px;  
      padding-left: 40%;  
    }  
  </style>  
</head><body>  
  <div id="element">  
    <ej-barcode-generator value="123456789" mode="SVG" type="Codabar">  
    </ej-barcode-generator>  
  </div>  
</body></html>
```

```

        padding-top: 9%;
    }
</style><script
src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container" class="barcodeStyle">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Now, add an HTML div element to act as the barcode element in `index.html` using the following code.

```

`html
<!DOCTYPE html>
<html lang="en">
<head>
<title>Essential JS 2</title>
<meta charset="utf-8" />
<meta name="viewport" content="width=device-width, initial-scale=1.0, user-scalable=no" />
<meta name="description" content="Essential JS 2" />
<meta name="author" content="Syncfusion" />
<link rel="shortcut icon" href="resources/favicon.ico" />
<link href="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.7/css/bootstrap.min.css" rel="stylesheet"
/>
<!--style reference from app-->
<link href="/styles/styles.css" rel="stylesheet" />
<!--system js reference and configuration-->
</head>
<body>
<!--Element which will render as Barcode-->
<div id="barcode"></div>

```

</body>

</html>

,

Adding QR Generator control

You can add the QR code in our barcode generator component.

INDEX.JS

```
var barcode = new ej.barcodegenerator.QRCodeGenerator
(
  {
    width: '200px',
    height: '150px',
    mode: 'SVG',
    value: 'Syncfusion',
  }
);
barcode.appendTo('#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Barcode-Generator</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

<style>
  .barcodeStyle{
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style><script
src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container" class="barcodeStyle">
    <div id="element"></div>
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
```

```
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Adding Datamatrix Generator control

You can add the datamatrix code in our barcode generator component.

INDEX.JS

```
var barcode = new ej.barcodegenerator.DataMatrixGenerator
(
    {
        width: '200px',
        height: '150px',
        displayText: { visibility: false },
        mode: 'SVG',
        value: 'Syncfusion',
    }
);
barcode.appendTo('#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Barcode-Generator</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

<style>
    .barcodeStyle{
        height: 150px;
        width: 200px;
        padding-left: 40%;
        padding-top: 9%;
    }
</style><script
src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container" class="barcodeStyle">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
```

```
</body></html>
```

BarcodeGenerator in ##Platform_Name## Barcode control

Code39

The Code 39 character set includes the digits 0-9, the letters A-Z (upper case only), and the symbols: space, minus (-), plus (+), period (.), dollar sign (\$), slash (/), and percent (%). A special start / stop character is placed at the beginning and ending of each barcode. The barcode can be of any length; even more than 25 characters begin to push the bounds. Code 39 is the only type of barcode that does not require a checksum for common use.

INDEX.JS

```
var barcode = new ej.barcodegenerator.BarcodeGenerator(  
    {  
        width: '200px',  
        height: '150px',  
        mode: 'SVG',  
        type: 'Code39',  
        value: 'SYNCFUSION',  
    }  
);  
barcode.appendTo('#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>  
    <title>EJ2 Barcode</title>  
    <meta charset="utf-8">  
    <meta name="viewport" content="width=device-width, initial-scale=1.0">  
    <meta name="description" content="Typescript UI Controls">  
    <meta name="author" content="Syncfusion">  
    <link href="index.css" rel="stylesheet">  
  
    <style>  
        .barcodeStyle{  
            height: 150px;  
            width: 200px;  
            padding-left: 40%;  
            padding-top: 9%;  
        }  
    </style><script  
src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"  
type="text/javascript"></script>  
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type  
="text/javascript"></script>  
</head>  
<body>  
  
    <div id="container" class="barcodeStyle">  
        <div id="element"></div>  
    </div>  
<script>  
var ele = document.getElementById('container');
```

```

if(ele) {
    ele.style.visibility = "visible";
}

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Code39 Extended

Code 39 Extended is an extended version of Code 39 that supports ASCII character set. In Code 39 Extended, you can also code 26 lower letters (a-z) and the special characters in the keyboard.

INDEX.JS

```

var barcode = new ej.barcodegenerator.BarcodeGenerator(
{
    width: '200px',
    height: '150px',
    mode: 'SVG',
    type: 'Code39Extension',
    value: 'SYNCFUSION',
}
);
barcode.appendTo('#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Barcode</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

<style>
    .barcodeStyle{
        height: 150px;
        width: 200px;
        padding-left: 40%;
        padding-top: 9%;
    }
</style><script

        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');

```

```

if(ele) {
    ele.style.visibility = "visible";
}

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Code 11

Code 11 is used primarily for labeling the telecommunication equipment's. The character set includes the digits 0 to 9, a dash (-), and a start / stop code.

INDEX.JS

```

var barcode = new ej.barcodegenerator.BarcodeGenerator(
{
    width: '200px',
    height: '150px',
    mode: 'SVG',
    type: 'Code11',
    value: '112',
}
);
barcode.appendTo('#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Barcode</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">

        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');

```

```

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Codabar

Codabar is a variable length symbol that encodes the following 20 characters:

0123456789-\$.+ABCD

The characters, A, B, C and D are used as start and stop characters. Codabar is used in libraries, blood banks, the package delivery industry and a variety of other information processing applications.

INDEX.JS

```

var barcode = new ej.barcodegenerator.BarcodeGenerator(
{
    width: '200px',
    height: '150px',
    mode: 'SVG',
    type: 'Codabar',
    value: '123456789',
}
);
barcode.appendTo('#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Barcode</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

<style>
    .barcodeStyle{
        height: 150px;
        width: 200px;
        padding-left: 40%;
        padding-top: 9%;
    }
</style><script
src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type

</head>
<body>

    <div id="container" class="barcodeStyle">
        <div id="element"></div>

```

```

    </div>
</script>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Code 32

Code 32 is mainly used for coding pharmaceuticals, cosmetics and dietetics. It is often used to encode Italian Pharmacode that has the following structure:

- 'A' character (ASCII 65), that is not really encoded.
- 8 digits for Pharmacode (It generally begins with / and prefixed with 0).
- 1 digit for checksum module 10, that is automatically calculated by barcode.

The value to be encoded must be 8 digits Pharmacode (prefix it with '0' if necessary) and the 9th digit (the checksum) is automatically calculated by barcode.

INDEX.JS

```

var barcode = new ej.barcodegenerator.BarcodeGenerator(
{
    type: 'Code32',
    value: '01234567',
    width: '200px', height: '150px',
    mode: 'SVG',
}
);
barcode.appendTo('#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Barcode</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

<style>
    .barcodeStyle{
        height: 150px;
        width: 200px;
        padding-left: 40%;
        padding-top: 9%;
    }
</style><script
src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>

```

```

<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>

<body>

    <div id="container" class="barcodeStyle">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Code 93

Code 93 is designed to complement and improve upon Code 39. It can represent the entire ASCII character set by using combinations of 2 characters. Code 93 is a continuous, variable-length symbology and produces denser code. The Standard Mode (default implementation) can encode uppercase letters (A-Z), digits (0-9), and special characters like *, -, \$, %, (Space), ., /, and +.

INDEX.JS

```

var barcode = new ej.barcodegenerator.BarcodeGenerator(
{
    type: 'Code93',
    value: '01234567',
    width: '200px', height: '150px',
    mode: 'SVG',
}
);
barcode.appendTo('#element');

```

INDEX.HTML

```

        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Code 93 Extended

The Code 93 Extended Barcode symbology is continuous, variable length, and self-checking. It is based on Code 93 Barcode. The Extended Version can encode all 128 ASCII characters.

Code 128

Code 128 is a variable length, high density, alphanumeric, linear bar code symbology, capable of encoding the full 128-character ASCII character set and extended character sets. This symbology includes a checksum digit for verification and the barcode can also be verified character-by-character by verifying the parity of each data byte.

Code 128 Code Sets

- Code Set A (or Chars Set A) includes all of the standard upper case U.S. alphanumeric keyboard characters and punctuation characters along with the control characters, (namely, characters with ASCII values from 0 to 95 inclusive), and seven special characters.
- Code Set B (or Chars Set B) includes all of the standard upper case alphanumeric keyboard characters and punctuation characters along with the lower case alphabetic characters (namely, characters with ASCII values from 32 to 127 inclusive), and seven special characters.
- Code Set C (or Chars Set C) includes the set of 100 digit pairs from 00 to 99 inclusive along with three special characters. This allows numeric data to be encoded as two data digits per symbol character, at effectively twice the density of standard data.

Code 128 Special characters

The last seven characters of Code Sets A and B (character values 96 - 102) and the last three characters of Code Set C (character values 100 - 102) are special non-data characters with no ASCII character equivalents that have a particular significance to the Barcode reading device.

INDEX.JS

```

var barcode = new ej.barcodegenerator.BarcodeGenerator (
{
    type: 'Code128',
    value: 'SYNCFUSION',

```

```

        width: '200px', height: '150px',
        mode: 'SVG',
    }
);
barcode.appendTo('#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Barcode</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <style>
    .barcodeStyle{
      height: 150px;
      width: 200px;
      padding-left: 40%;
      padding-top: 9%;
    }
  </style><script
src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container" class="barcodeStyle">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Customizing the Barcode color

A page or printed media with barcode often appears colorful in the background and surrounding region with other contents. In such cases the barcode can also be customized to suit the needs. You can achieve this by using for forecolor property .

INDEX.JS

```

var barcode = new ej.barcodegenerator.BarcodeGenerator(
{
  type: 'Code128',
  value: 'SYNCFUSION',
```

```

        width: '200px', height: '150px',
        mode: 'SVG',
        foreColor: 'red',
    }
);
barcode.appendTo('#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Barcode</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Customizing the Barcode dimension

The dimension of the barcode can be changed using the height and width property of the barcodegenerator.

INDEX.JS

```

var barcode = new ej.barcodegenerator.BarcodeGenerator (
{
  type: 'Code128',
  value: 'SYNCFUSION',
```

```

        width: '300px', height: '300px',
        mode: 'SVG',
    }
);
barcode.appendTo('#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Barcode</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">

="text/javascript"></script>
</head>
<body>

  <div id="container" class="barcodeStyle">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Customizing the text

In barcode generators you can customize the barcode text by using display text property .

INDEX.JS

```

var barcode = new ej.barcodegenerator.BarcodeGenerator(
{
  type: 'Code128',
  value: 'SYNCFUSION',
  width: '200px', height: '150px',
  mode: 'SVG',
  displayText: {text: 'text'},
```

```

    }
);
barcode.appendTo('#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Barcode</title>

<style>
  .barcodeStyle{
    height: 150px;
    width: 200px;
    padding-left: 40%;
    padding-top: 9%;
  }
</style><script
src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container" class="barcodeStyle">
    <div id="element"></div>
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Qrcodegenerator in ##Platform_Name## Barcode control

QR Code

A QR Code is a two-dimensional barcode that consists of a grid of dark and light dots or blocks that form a square. The data encoded in the barcode can be numeric, alphanumeric, or Shift Japanese Industrial Standards (JIS8) characters. The QR Code uses version from 1 to 40. Version 1 measures 21 modules x 21 modules, Version 2 measures 25 modules x 25 modules, and so on. The number of modules increases in steps of 4 modules per side up to Version 40 that measures 177 modules x 177 modules. Each version has its own capacity. By default, the barcode control automatically set the version according to the length of the input text. The QR Barcodes are designed for industrial uses and also commonly used in consumer advertising.

INDEX.JS

```
var barcode = new ej.barcodegenerator.QRCodeGenerator
(
    {
        width: '200px',
        height: '200px',
        displayText: { visibility: false },
        mode: 'SVG',
        value: 'Syncfusion',
    }
);
barcode.appendTo('#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Barcode</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

<style>
    .barcodeStyle{
        height: 150px;
        width: 200px;
        padding-left: 40%;
        padding-top: 9%;
    }
</style><script
src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container" class="barcodeStyle">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Customizing the Barcode color

A page or printed media with barcode often appears colorful in the background and surrounding region with other contents. In such cases the barcode can also be customized to suit the needs. You can achieve this by using for forecolor property .

INDEX.JS

```
var barcode = new ej.barcodegenerator.QRCodeGenerator
(
  {
    width: '200px',
    height: '200px',
    displayText: { visibility: false },
    mode: 'SVG',
    value: 'Syncfusion',
    foreColor: 'red',
  }
);
barcode.appendTo('#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Barcode</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <style>
    .barcodeStyle{
      height: 150px;
      width: 200px;
      padding-left: 40%;
      padding-top: 9%;
    }
  </style><script
src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container" class="barcodeStyle">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
<script src="index.js" type="text/javascript"></script>
```

```
</body></html>
```

Customizing the Barcode dimension

The dimension of the barcode can be changed using the height and width properties of the barcodegenerator.

INDEX.JS

```
var barcode = new ej.barcodegenerator.QRCodeGenerator
(
  {
    width: '100px',
    height: '100px',
    displayText: { visibility: false },
    mode: 'SVG',
    value: 'Syncfusion',
  }
);
barcode.appendTo('#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Barcode</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

    padding-top: 9%;
  }
</style><script
src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container" class="barcodeStyle">
    <div id="element"></div>
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
```

```
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Customizing the text

In barcode generators You can customize the barcode text by using display text property .

INDEX.JS

```
var barcode = new ej.barcodegenerator.QRCodeGenerator
(
    {
        width: '200px',
        height: '200px',
        displayText: { visibility: true },
        mode: 'SVG',
        value: 'Syncfusion',
    }
);
barcode.appendTo('#element');
```

INDEX.HTML

```

<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container" class="barcodeStyle">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
```

```
</body></html>
```

Datamatrixgenerator in ##Platform_Name## Barcode control

Data Matrix

DataMatrix Barcode is a two dimensional barcode that consists of a grid of dark and light dots or blocks forming square or rectangular symbol. The data encoded in the barcode can either be numbers or alphanumeric. They are widely used in printed media such as labels and letters. You can read it easily with the help of a barcode reader and mobile phones.

INDEX.JS

```
var barcode = new ej.barcodegenerator.DataMatrixGenerator
(
    {
        width: '200px',
        height: '150px',
        displayText: { visibility: false },
        mode: 'SVG',
        value: 'Syncfusion',
    }
);
barcode.appendTo('#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Barcode</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

    <style>
        .barcodeStyle{
            height: 150px;
            width: 200px;
            padding-left: 40%;
            padding-top: 9%;
        }
    </style><script
src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container" class="barcodeStyle">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
```

```

if(ele) {
    ele.style.visibility = "visible";
}

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Customizing the Barcode color

A page or printed media with barcode often appears colorful in the background and surrounding region with other contents. In such cases the barcode can also be customized to suit the needs. You can achieve this by using the forecolor property .

INDEX.JS

```

var barcode = new ej.barcodegenerator.DataMatrixGenerator
(
    {
        width: '200px',
        height: '200px',
        displayText: { visibility: false },
        mode: 'SVG',
        value: 'Syncfusion',
        foreColor: 'red',
    }
);
barcode.appendTo('#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Barcode</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

    <style>
        .barcodeStyle{
            height: 150px;
            width: 200px;
            padding-left: 40%;
            padding-top: 9%;
        }
    </style><script
src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"

    <div id="container" class="barcodeStyle">
        <div id="element"></div>

```

```
</div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Customizing the Barcode dimension

The dimension of the barcode can be changed using the height and width property of the barcodegenerator.

INDEX.JS

```
var barcode = new ej.barcodegenerator.DataMatrixGenerator
(
    {
        width: '100px',
        height: '100px',
        displayText: { visibility: false },
        mode: 'SVG',
        value: 'Syncfusion',
    }
);
barcode.appendTo('#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Barcode</title>

    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

</head>
<body>
    <div id="container" class="barcodeStyle">
        <div id="element"></div>
    </div>
</body>
</html>

```

```

    </div>
</script>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Export in ##Platform_Name## Barcode control

Export barcode as an image and base64 string is common for barcode,QRcode and datamatrix. The following code samples explain how to export barcode as an image and base64 string.

Export

Barcode provides the support to export its content as an image in the specified image type and downloads it in the browser.

The following code example shows how to export the barcode as an image

`ts

```

import { BarcodeGenerator, BarcodeExportType } from '@syncfusion/ej2-barcode-generator';
let barcode: BarcodeGenerator = new BarcodeGenerator({
width: '200px', height: '150px',
type: 'Code39',
value: 'BARCODE',
displayText: { text: 'ABCD' },
});
barcode.appendTo('#element');
let filename: string = 'Export';
barcode.exportImage(filename,'JPG');
`

```

The filename specifies the name of the file to be downloaded.

Export As Base64String

Barcode provides the support to export its content as an image in the specified image type and returns it as base64 string.

The following code example shows how to export the barcode as a base64 string

`ts

```

import { BarcodeGenerator, BarcodeExportType } from '@syncfusion/ej2-barcode-generator';
let barcode: BarcodeGenerator = new BarcodeGenerator({
width: '200px', height: '150px',
type: 'Code39',

```

```

value: 'BARCODE',
displayText: { text: 'ABCD' },
});
barcode.appendTo('#element');
async function () {
// Can able to store the return base64 string in variable
var data = await barcode.exportAsBase64Image('JPG');
};
`

```

Note:

Format is to specify the type or format of the exported file. You can export the barcode to the following formats:

* JPG.

* PNG.

Breadcrumb

Data binding in ##Platform_Name## Breadcrumb control

The Breadcrumb supports to generate items based on the current URL by default. You can set the [items](#) property or [url](#) property to generate the items.

Items based on current Url

The breadcrumb items can be generated based on the current URL of the page when the user does not specify the breadcrumb items using [items](#) property. The following example shows the breadcrumb items generated from the provided URL in the component.

INDEX.JS

```

ej.base.enableRipple(true);
new ej.navigations.Breadcrumb({
  enableNavigation: false
}, '#breadcrumb');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0,
user-scalable=no">
  <meta name="description" content="Essential JS 2">
  <meta name="author" content="Syncfusion">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
navigations/styles/material.css" rel="stylesheet">
  <!--style reference from app-->

```

```

<link href="styles.css" rel="stylesheet">
<!--system js reference and configuration-->

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div class="control-section">
            <nav id="breadcrumb"></nav>
        </div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

This sample is hosted in different location, so the Breadcrumb component is rendered with different location instead of the actual location.

Absolute Url

The breadcrumb items can be generated based on the [url](#) property in the component when the user does not specify the breadcrumb items using [items](#) property. The following example shows the breadcrumb items generated from the provided url in the component.

INDEX.JS

```

ej.base.enableRipple(true);
new ej.navigations.Breadcrumb({
    enableNavigation: false,
    url: "https://ej2.syncfusion.com/demos/breadcrumb/bind-to-location"
}, '#breadcrumb');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>Essential JS 2</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0,
user-scalable=no">
    <meta name="description" content="Essential JS 2">
    <meta name="author" content="Syncfusion">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
navigations/styles/material.css" rel="stylesheet">
    <!--style reference from app-->

```

```

<link href="styles.css" rel="stylesheet">
<!--system js reference and configuration-->

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div class="control-section">
            <nav id="breadcrumb"></nav>
        </div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Customize text when generated items using Url

The breadcrumb items text can be customized by using the [beforeItemRender](#) event. In the following example, **bind-to-location** text was changed as **location**.

INDEX.JS

```

ej.base.enableRipple(true);
new ej.navigations.Breadcrumb({

Icons in ##Platform_Name## Breadcrumb control

The Breadcrumb component contains an icon/image to provide a visual representation of an item.

Icon in Breadcrumb item

To load the icon/image on the breadcrumb item, set the [iconCss](#) property.

Breadcrumb with Font Icon

To place the font icon on the breadcrumb item, set the [iconCss](#) property to **e-icons** with the required icon CSS. By default, the icon is positioned to the left side of the item.

INDEX.JS

```

ej.base.enableRipple(true);
var items = [
    {
        iconCss: 'e-icons e-home',
        url: "https://ej2.syncfusion.com/demos",
    },
    {
        text: "Components",
        url: "https://ej2.syncfusion.com/demos/#/material/grid/grid-
overview",
    },
    {
        text: "Navigations",
        url:

Navigation in ##Platform_Name## Breadcrumb control

Breadcrumb navigations support you to provide relative or absolute URL for breadcrumb items, enable navigation for the last item of the Breadcrumb component, and open URL in a new tab or new page.

URL

In the Breadcrumb component, the item represents the URL. The breadcrumb items can be provided with either relative or absolute URL.

Relative URL

INDEX.JS

```
ej.base.enableRipple(true);
var items = [
    {
        text: "Home",
        url: "../"
    },
    {
        text: "Getting",
        url: "../breadcrumb/getting-started"
    },
    {
        text: "Icons",
        url: "../breadcrumb/icons"
    },
    {
        text: "Navigation",
        url: "../breadcrumb/navigation"
    },
    {
        text: "Overflow",
        url: "../breadcrumb/overflow"
    }
];
new ej.navigations.Breadcrumb({
    items: items,
    enableNavigation: false
}, '#breadcrumb');
```

Enable navigation for last Breadcrumb item

Breadcrumb enables the navigation for the last item by setting the [enableActiveItemNavigation](#) property to true. In the following example, the last item of the Breadcrumb was enabled.

INDEX.JS

```

ej.base.enableRipple(true);
var items = [
    {
        text: "Home",
        url: "https://ej2.syncfusion.com/documentation/introduction/"
    },
    {
        text: "Getting",
        url:
"https://ej2.syncfusion.com/documentation/breadcrumb/getting-started"
    },
    {
        text: "Icons",
        url: "https://ej2.syncfusion.com/documentation/breadcrumb/icons"
    },
    {
        text: "Navigation",
        url:
"https://ej2.syncfusion.com/documentation/breadcrumb/navigation"
    },
    {
        text: "Overflow",
        url:
"https://ej2.syncfusion.com/documentation/breadcrumb/overflow"
    }
];
new ej.navigations.Breadcrumb({
    items: items,
    enableNavigation: false,
    enableActiveItemNavigation: true
}, '#breadcrumb');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>Essential JS 2</title>
    <meta charset="utf-8">

Templates in ##Platform_Name## Breadcrumb control

The Breadcrumb component provides a way to customize the items using [itemTemplate](#) and the separators using [separatorTemplate](#) properties.

Item Template

In the following example, Shopping Cart details are used as breadcrumb Items and the each items is rendered as chips component using [itemTemplate](#).

INDEX.JS

```

ej.base.enableRipple(true);
var items = [

```

```

    {
        text: 'Cart'
    },
    {
        text: 'Billing'
    },
    {
        text: 'Shipping'
    },
    {
        text: 'Payment'
    }
];
new ej.navigations.Breadcrumb({
    items: items,
    enableNavigation: false,
    itemTemplate: '<div id="chip-default" class="e-lib e-chip-list e-control e-chip-set" role="listbox" aria-multiselectable="false"><div class="e-chip e-primary" tabindex="0" role="option" aria-label="Apple" aria-selected="false"><span class="e-chip-text">${text}</span></div></div>'
}, '#breadcrumb');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>Essential JS 2</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0, user-scalable=no">
    <meta name="description" content="Essential JS 2">
    <meta name="author" content="Syncfusion">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-base/styles/material.css" rel="stylesheet">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-navigations/styles/material.css" rel="stylesheet">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-buttons/styles/material.css" rel="stylesheet">

</head>
<body>

    <div id="container">
        <div class="control-section">
            <nav id="breadcrumb"></nav>
        </div>
    </div>
<script>
var ele = document.getElementById('container');

```

```

if(ele) {
    ele.style.visibility = "visible";
}

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Separator Template

In the following example, the separators are customized with icons using [separatorTemplate](#). While rendering the separator template, you can get the previous and next item using `previousItem` and `nextItem` variables, respectively.

INDEX.JS

```

ej.base.enableRipple(true);
var items = [
    {
        text: 'Cart'
    },
    {
        text: 'Billing'
    },
    {
        text: 'Shipping'
    },
    {
        text: 'Payment'
    }
];
new ej.navigations.Breadcrumb({
    items: items,
    enableNavigation: false,
    separatorTemplate: '<span class="e-icons e-bullet-arrow"></span>'
}, '#breadcrumb');

```

INDEX.HTML

```

        <div class="control-section">
            <nav id="breadcrumb"></nav>
        </div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Customize Specific Item Template

The specific breadcrumb item can be customizable using itemTemplate with conditional rendering. In the following example, added the span element only for the **breadcrumb** text in breadcrumb item.

INDEX.JS

```

ej.base.enableRipple(true);
var specificTemplateItems = [
    {
        text: "Home",
        url: "https://ej2.syncfusion.com/demos",
    },
    {
        text: "Components",
        url: "https://ej2.syncfusion.com/demos/#/material/grid/grid-
overview",
    },
    {
        text: "Navigations",
        url: "https://ej2.syncfusion.com/demos/#/material/menu/default",
    },
    {
        text: "Breadcrumb",
        url: "./breadcrumb/default",
    }
];
new ej.navigations.Breadcrumb({
    items: specificTemplateItems,
    itemTemplate: '<div>${if(text=="Breadcrumb")}<span class="e-searchfor-
text"><span style="margin-right: 5px">Search for:</span><a class="e-
breadcrumb-text" href="${url}" onclick="return
false">${text}</a></span>${else}<a class="e-breadcrumb-text" href="${url}"
onclick="return false">${text}</a>${/if}</div>',
    cssClass: 'e-specific-item-template'
}, '#breadcrumb');

```

INDEX.HTML

```

```

Overflow in ##Platform_Name## Breadcrumb control

In the Breadcrumb component, [maxItems](#) and [overflowMode](#) properties were used to limit the number of breadcrumb items to be displayed.

In the following example, the maxItems is set as 3 with overflowMode as Default. To prevent breadcrumb item navigation, the [enableNavigation](#) property has been set to false in the Breadcrumb component.

INDEX.JS

```

ej.base.enableRipple(true);
var items = [
  {

```

```

        text: "Home",
        url: "../"
    },
    {
        text: "Getting",
        url: "../breadcrumb/getting-started"
    },
    {
        text: "Data-Binding",
        url: "../breadcrumb/data-binding"
    },
    {
        text: "Icons",
        url: "../breadcrumb/icons"
    },
    {
        text: "Navigation",
        url: "../breadcrumb/navigation"
    },
    {
        text: "templates",
        url: "../breadcrumb/templates"
    },
    {
        text: "Overflow",
        url: "../breadcrumb/overflow"
    }
];
new ej.navigations.Breadcrumb({
    items: items,
    enableNavigation: false,
    maxItems: 3,
    separatorTemplate: '<span class="e-icons e-arrow"></span>'
}, '#breadcrumb');
```

INDEX.HTML

```

</body></html>
```

The following overflow modes are available in the Breadcrumb component.

- Collapsed
- Menu
- Wrap
- Scroll
- Hidden
- None

Collapsed

Collapsed mode shows the first and last Breadcrumb items and hides the remaining items with a collapsed icon. When the collapsed icon is clicked, all items become visible and navigable.

INDEX.JS

```
ej.base.enableRipple(true);
var items = [
    {
        text: "Home",
        url: "../"
    },
    {
        text: "Getting",
        url: "../breadcrumb/getting-started"
    },
    {
        text: "Data-Binding",
        url: "../breadcrumb/data-binding"
    },
    {
        text: "Icons",
        url: "../breadcrumb/icons"
    },
    {
        text: "Navigation",
```

```

        url: "./breadcrumb/navigation"
    },
    {
        text: "templates",
        url: "./breadcrumb/templates"
    },
    {
        text: "Overflow",
        url: "./breadcrumb/overflow"
    }
];
new ej.navigations.Breadcrumb({
    items: items,
    enableNavigation: false,
    maxItems: 3,
    overflowMode: 'Collapsed'
}, '#breadcrumb');
```

INDEX.HTML

```

```

None

None mode shows all the items in a single line.

Accessibility in `##Platform_Name##` Breadcrumb control

The Breadcrumb component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Breadcrumb component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support |  |

| [Section 508](#) Support |  |

| Screen Reader Support |  |

| Right-To-Left Support |  |

| Color Contrast |  |

| Mobile Device Support |  |

| Keyboard Navigation Support |  |

| [Accessibility Checker](#) Validation |  |

| [Axe-core](#) Accessibility Validation |  |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

}

</style>

<div> - All features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

WAI-ARIA attributes

The Breadcrumb component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Breadcrumb component:

| Attributes | Purpose |

| --- | --- |

| `aria-label` | Indicates the breadcrumb item text. |

| `aria-disabled` | Indicates the state of breadcrumb item whether it is disabled. |

Keyboard interaction

The Breadcrumb component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Breadcrumb component.

| Press | To do this |

| --- | --- |

| Tab | Navigate to the next item and also next item in the popup of menu type overflow. |

| Shift + Tab | Navigate to the previous item also previous item in the popup of menu type overflow. |

| Enter key in normal mode | Select the breadcrumb item. |

| Enter key in normal mode | To open the popup of menu type overflow mode when you press enter on collapsed button and It will expand the items of collapsed type overflow mode when you press enter on collapsed button. |

Ensuring accessibility

The Breadcrumb component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Breadcrumb component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Breadcrumb component with accessibility tools.

Bullet Chart

Bullet chart dimensions in ##Platform_Name## Bullet chart control

Size for Container

The size of the Bullet Chart is determined by the container size, and it can be changed inline or via CSS as following.

```
<div id='container'>
<div id='element' style="width:650px; height:350px;"></div>
</div>
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">

  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Size for Bullet Chart

The **width** and **height** properties are used to adjust the size of the Bullet Chart.

Pixel

Can set the size of the Bullet Chart in pixels as shown below.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
  width: '650', height: '350',
  dataSource: [{ value: 23, target: 22 }],
  animation: { enable: false },
  valueField: 'value',
  targetField: 'target',
  ranges: [{ end: 20 },
    { end: 25 },
    { end: 30 }
  ],
  minimum: 0, maximum: 30, interval: 5,
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

```

```

<title>EJ2 Animation</title>
<meta charset="utf-8">
<meta name="viewport" content="width=device-width, initial-scale=1.0">

</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Percentage

By setting a value in percentage, the Bullet Chart gets its dimension with respect to its container. For example, when the height is **50%**, the Bullet Chart renders to half of the container's height.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    width: '80%', height: '90%',
    dataSource: [{ value: 23, target: 22 }],
    animation: { enable: false },
    valueField: 'value',
    targetField: 'target',
    ranges: [{ end: 20 },
        { end: 25 },
        { end: 30 }
    ],
    minimum: 0, maximum: 30, interval: 5,
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
<title>EJ2 Animation</title>
<meta charset="utf-8">
<meta name="viewport" content="width=device-width, initial-scale=1.0">

<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

If the size is not specified, the Bullet Chart will be rendered with a height of **126px** and a width of the window.

Axis customization in ##Platform_Name## Bullet chart control

MajorTickLines and MinorTickLines Customization

You can customize the **width**, **color**, and **size** of minor and major tick lines using the [majorTickLines](#) and [minorTickLines](#) properties of the bullet-chart.

The following properties can be used to customize **majorTicklines** and **minorTicklines**.

- **width** - Specifies the width of ticklines.
- **height** - Specifies the height of ticklines.
- **color** - Specifies the color of ticklines.
- **useRangeColor** - Specifies the color of ticklines and represents the color from corresponding range colors.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    majorTickLines: { color: 'blue', width: 5 },
    minorTickLines: { width: 4, color: 'red' },
    dataSource: [{ value: 23, target: 22 }],
    animation: { enable: false },
    valueField: 'value',
    targetField: 'target',
    ranges: [{ end: 20 },
        { end: 25 },
        { end: 30 }
    ],
    minimum: 0, maximum: 30, interval: 5
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Label Format

Axis Label Format

Axis numeric labels can be formatted by using the [labelFormat](#) property. Axis labels support all globalize formats. The following table describes the result of applying some commonly used label formats on numeric axis values.

Axis numeric labels can be formatted by using the `labelFormat` property. Axis labels support all globalize formats.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    labelFormat: 'c',
    dataSource: [{ value: 23, target: 22 }],
    animation: { enable: false },
    valueField: 'value',
    targetField: 'target',
    ranges: [{ end: 20 },
        { end: 25 },
        { end: 30 }
    ],
    minimum: 0, maximum: 30, interval: 5,
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
<title>EJ2 Animation</title>
<meta charset="utf-8">

```

```

<meta name="viewport" content="width=device-width, initial-scale=1.0">
<meta name="description" content="Typescript UI Controls">
<meta name="author" content="Syncfusion">
<link href="index.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

The following table describes the result of applying some commonly used formats to numeric axis labels.

<!-- markdownlint-disable MD033 -->

Label Value	Label Format property value	Result	Description
1000	n1	1000.0	The Number is rounded to 1 decimal place
1000	n2	1000.00	The Number is rounded to 2 decimal place
1000	n3	1000.000	The Number is rounded to 3 decimal place
0.01	p1	1.0%	The Number is converted to percentage with 1 decimal place
0.01	p2	1.00%	The Number is converted to percentage with 2 decimal place
0.01	p3	1.000%	The Number is converted to percentage with 3 decimal place
1000	c1	\$1000.0	The Currency symbol is appended to number and number is rounded to 1 decimal place
1000	c2	\$1000.00	The Currency symbol is appended to number and number is rounded to 2 decimal place

GroupingSeparator

To separate groups of thousands, use the [enableGroupSeparator](#) property of bullet-chart.

To separate the groups of thousands, set the `enableGroupSeparator` property to `true`.

INDEX.JS

```
var chart = new ej.charts.BulletChart({
  enableGroupSeparator: true,
  title: 'Sales Rate',
  dataSource: [{ value: 1500, target: 1300 }],
  animation: { enable: false },
  valueField: 'value',
  targetField: 'target',
  ranges: [{ end: 500 },
    { end: 1500 },
    { end: 2500 }
  ],
  minimum: 0, maximum: 2500, interval: 250
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Custom Label Format

Using the `labelFormat` property, axis labels can be specified with a custom defined format in addition to the axis value. The label format uses a placeholder such as `${value}K`, which represents the axis label.

INDEX.JS

```
var chart = new ej.charts.BulletChart({
  labelFormat: '${value}K',
```

```

    title: 'Sales Rate',
    dataSource: [{ value: 1500, target: 1300, category: 'Product A' }],
    animation: { enable: false },
    valueField: 'value',
    targetField: 'target',
    ranges: [{ end: 500 },
              { end: 1500 },
              { end: 2500 }
    ],
    minimum: 0, maximum: 2500, interval: 250
  }, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Label Placement

You can customize the axis labels **inside** or **outside** the bullet-chart using the [labelPosition](#) property. Label can be placed **Inside** or **Outside** of the ranges using the [labelPosition](#) property.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
  labelPosition: 'Inside',
  dataSource: [{ value: 23, target: 22 }],
  animation: { enable: false },
  valueField: 'value',
  targetField: 'target',
  ranges: [{ end: 20 },

```

```

        { end: 25 },
        { end: 30 }
    ],
    minimum: 0, maximum: 30, interval: 5,
}, '#element');

```

INDEX.HTML

```

if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Opposed Position

To place an axis opposite to its original position, set the [opposedPosition](#) property to true. To place an axis opposite to its original position, set the `opposedPosition` property to **true**.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
  majorTickLines: { color: 'blue', width: 5 },
  minorTickLines: { width: 4, color: 'red' },
  dataSource: [{ value: 23, target: 22 }],
  animation: { enable: false },
  valueField: 'value',
  targetField: 'target',
  ranges: [{ end: 20 },
    { end: 25 },
    { end: 30 }
  ],
  minimum: 0, maximum: 30, interval: 5
}, '#element');

```

INDEX.HTML

  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Category Label

The Bullet Chart supports X-axis label by specifying the property from the data source to the categoryField. It helps to understand the input data in a more efficient way.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
  title: 'Sales Rate',
  dataSource: [{ value: 1500, target: 1300, category: 'Product A' }],
  animation: { enable: false },
  valueField: 'value',
  targetField: 'target',
  categoryField: 'category',
  ranges: [{ end: 500 },
    { end: 1500 },
    { end: 2500 }
  ],
  minimum: 0, maximum: 2500, interval: 250
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>

```

```

<meta charset="utf-8">
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<meta name="description" content="Typescript UI Controls">
<meta name="author" content="Syncfusion">
<link href="index.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Category Label Customization

The label color, opacity, font size, font family, font weight, and font style can be customized by using the `categoryLabelStyle` setting for category and the `labelStyle` setting for axis label. The `useRangeColor` property specifies the color of the axis label and represents the color from the corresponding range colors.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    title: 'Sales Rate',
    dataSource: [{ value: 1500, target: 1300, category: 'Product A' }],
    animation: { enable: false },
    valueField: 'value',
    targetField: 'target',
    categoryField: 'category',
    categoryLabelStyle: { color: 'Orange' },
    ranges: [{ end: 500 },
        { end: 1500 },
        { end: 2500 }
    ],
    minimum: 0, maximum: 2500, interval: 250
}, '#element');

```

```

<!-- markdownlint-disable MD036 -->

Data binding in ##Platform_Name## Bullet chart control

The `dataSource` property accepts a collection of values as input that helps to display measures, and compares them to a target bar. To display the actual and target bar, specify the property from the datasource into the `valueField` and `targetField` respectively.

INDEX.JS

```

var localData = [
    {
        value: 5, comparativeMeasureValue: 7.5,
        category: '2001'
    },
    {
        value: 7, comparativeMeasureValue: 5,
        category: '2002'
    },
    {
        value: 10, comparativeMeasureValue: 6,
        category: '2003'
    },
    {
        value: 5, comparativeMeasureValue: 8,
        category: '2004'
    },
    {
        value: 12, comparativeMeasureValue: 5,
        category: '2005'
    },
    {
        value: 8, comparativeMeasureValue: 6,

```

```

        category: '2006'
    }
    ];
    var chart = new ej.charts.BulletChart({
        dataSource: localData,
        animation: { enable: false },
        valueField: 'value',
        targetField: 'comparativeMeasureValue',
        title: 'Profit in %',
        height: '400',
        ranges: [{ end: 5 },
            { end: 15 },
            { end: 20 }
        ],
        minimum: 0, maximum: 20, interval: 5,
    }, '#element');

```

Ranges in ##Platform_Name## Bullet chart control

Ranges represent the quality of a specific range such as **Good**, **Bad** and **Satisfactory** in the Bullet Chart scale. The ending point of a qualitative range is specified in the **end** property in **ranges**. The **minimum** value of a quantitative scale is considered the starting point of the first range or the previous range end point.

Value bar in ##Platform_Name## Bullet chart control

To display the primary data or the current value of the data being measured known as the **Feature Measure** that should be encoded as a bar. This is called as the **Actual Bar** or the **Feature Bar** in the Bullet Chart, and to display the actual bar the [valueField](#) should be mapped to the appropriate field from the data source.

INDEX.JS

```
var chart = new ej.charts.BulletChart({
  title: 'Sales Rate',
  dataSource: [
    { value: 55, target: 75, category: 'Year 1' },
  ],
  animation: { enable: false },
  valueField: 'value',
  ranges: [ { end: 35 },
    { end: 50 },
    { end: 100 }
  ],
  minimum: 0, maximum: 100, interval: 20
}, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Types of actual bar

The shape of the actual bar can be customized using the [type](#) property of the Bullet Chart. The actual bar contains **Rect** and **Dot** shapes. By default, the actual bar shape is Rect.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
  title: 'Sales Rate',
  dataSource: [
    { value: 55, target: 75, category: 'Year 1' },
  ],
  animation: { enable: false },
  valueField: 'value',
  ranges: [ { end: 35 },
    { end: 50 },
    { end: 100 }
  ],
  type: 'Dot',
  minimum: 0, maximum: 100, interval: 20
}, '#element');

```

Actual bar customization

Border customization

Using the [valueBorder](#) property of the bullet chart, you can customize the border [color](#) and [width](#) of the actual bar.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    title: 'Sales Rate',
    dataSource: [
        { value: 55, target: 75, category: 'Year 1' },
    ],
    animation: { enable: false },
    valueField: 'value',
    ranges: [ { end: 35 },
        { end: 50 },
        { end: 100 }
    ],
    valueBorder: { color: 'red', width: 3 },
    minimum: 0, maximum: 100, interval: 20
}, '#element');

```

INDEX.HTML

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Fill color and height customization

Customize the fill color and height of the actual bar using the [valueFill](#) and [valueHeight](#) properties of the bullet chart. Also, you can bind the color for the actual bar from [dataSource](#) for the bullet chart using [valueFill](#) property.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    title: 'Sales Rate',
    dataSource: [
        { value: 55, target: 75, category: 'Year 1', color: 'blue'
    },
    ],
    animation: { enable: false },
    valueField: 'value',
    ranges: [
        { end: 35 },
        { end: 50 },
        { end: 100 }
    ],
    valueFill: 'color',
    valueHeight: 15,
    minimum: 0, maximum: 100, interval: 20
}, '#element');

```

INDEX.HTML

Comparative bar in ##Platform_Name## Bullet chart control

The line marker that runs perpendicular to the orientation of the graph is known as the **Comparative Measure** and it is used as a target marker to compare against the feature measure value. This is also called as the **Target Bar** in the Bullet Chart. To display the target bar, the [targetField](#) should be mapped to the appropriate field from the datasource.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    title: 'Sales Rate',
    dataSource: [
        { value: 55, target: 75, category: 'Year 1' },
    ],
    animation: { enable: false },
    targetField: 'target',
    ranges: [ { end: 35 },
        { end: 50 },
        { end: 100 }
    ],
    minimum: 0, maximum: 100, interval: 20
}, '#element');

```

<!-- markdownlint-disable MD036 -->

Title in ##Platform_Name## Bullet chart control

Title

The title of the Bullet Chart displays the information about the data plotted by specifying it in the `title` property.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    title: 'Sales Rate',
    dataSource: [
        { value: 55, target: 75, category: 'Year 1' },
    ],
    animation: { enable: false },
    targetField: 'target',
    ranges: [ { end: 35 },
        { end: 50 },
        { end: 100 }
    ],
    minimum: 0, maximum: 100, interval: 20
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Subtitle

To show additional information about the data plotted, the Bullet Chart can also be given a subtitle using the `subtitle` property.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    title: 'Sales Rate in dollars',
    subtitle: '(in dollars $)',
    dataSource: [
        { value: 55, target: 45, category: 'Year 1' },
    ],
    animation: { enable: false },
    targetField: 'target',
    valueField: 'value',
    labelFormat: '${value}',
    ranges: [ { end: 35 },
        { end: 50 },
        { end: 100 }
    ],
    minimum: 0, maximum: 100, interval: 20
}, '#element');

```

INDEX.HTML

    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Title and SubTitle Position

The title and the subtitle positions can be customized using the `titlePosition` property. Possible positions are **Left**, **Right**, **Top**, and **Bottom**.

Position as Left

By setting the `titlePosition` to **Left**, you can display the title and subtitle at the left side of the Bullet Chart.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    title: 'Sales Rate',
    subtitle: '(in dollars $)',
    dataSource: [
        { value: 55, target: 45, category: 'Year 1' },
    ],
    animation: { enable: false },
    targetField: 'target',
    valueField: 'value',
    titlePosition: 'Left',
    labelFormat: '${value}',
    ranges: [ { end: 35 },
        { end: 50 },
        { end: 100 }
    ],
    minimum: 0, maximum: 100, interval: 20
}, '#element');

```

INDEX.HTML

```

```

Position as Top

By setting the **titlePosition** to **Top**, you can display the title and subtitle at the top of the Bullet Chart. The default title and subtitle positions of the Bullet Chart is **Top**.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    title: 'Sales Rate',
    subtitle: '(in dollars $)',
    dataSource: [
        { value: 55, target: 45, category: 'Year 1' },
    ],
    animation: { enable: false },
    targetField: 'target',
    valueField: 'value',
    titlePosition: 'Top',
    labelFormat: '${value}',
    ranges: [ { end: 35 },
        { end: 50 },
        { end: 100 }
    ],
    minimum: 0, maximum: 100, interval: 20
}, '#element');

```

Customization in ##Platform_Name## Bullet chart control

Orientation

The Bullet Chart can be rendered in different orientations such as **Horizontal** or **Vertical** via the **orientation** property. By default, the Bullet Chart is rendered in the **Horizontal** orientation.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    title: 'Sales Rate in dollars',
    subtitle: '(in dollars $)',
    dataSource: [
        { value: 55, target: 45, category: 'Year 1' },
    ],
    animation: { enable: false },
    targetField: 'target',
    valueField: 'value',
    labelFormat: '${value}',
    ranges: [ { end: 35 },
        { end: 50 },
        { end: 100 }
    ],
    width: '20%',
    orientation: 'Vertical',
    minimum: 0, maximum: 100, interval: 20
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">

```

```

<link href="index.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Right-to-left (RTL)

The Bullet Chart supports the right-to-left rendering that can be enabled by setting the `enableRtl` property to **true**.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    dataSource: [
        { value: 1500, target: 1000, category: 'Year 1' },
    ],
    animation: { enable: false },
    targetField: 'target',
    valueField: 'value',
    ranges: [{ end: 500 },
        { end: 1500 },
        { end: 2000 }
    ],
    enableRtl: true,
    minimum: 0, maximum: 2000, interval: 200
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Animation

The actual and the target bar supports the linear animation via the **animation** setting. The speed and the delay are controlled using the **duration** and **delay** properties respectively.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    dataSource: [
        { value: 1500, target: 1000, category: 'Year 1' },
    ],
    animation: { enable: true },
    targetField: 'target',
    valueField: 'value',
    ranges: [ { end: 500 },
        { end: 1500 },
        { end: 2000 }
    ],
    minimum: 0, maximum: 2000, interval: 200
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Theme

The Bullet Chart supports different type of themes via the `theme` property.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
    title: 'Profit in %',
    dataSource: [
        { value: 50, target: 45, category: 'Year 1' },
    ],
    animation: { enable: false },
    targetField: 'target',
    valueField: 'value',
    ranges: [ { end: 15 },
        { end: 50 },
        { end: 100 }
    ],
    theme: 'HighContrast',
    minimum: 0, maximum: 100, interval: 10
}, '#element');

```

Data label in ##Platform_Name## Bullet chart control

Data Labels are used to identify the value of actual bar in the Bullet Chart component. The Data Labels will be shown by specifying the `dataLabel` setting's `enable` property to **true**.

INDEX.JS

```

var localData = [
    {
        value: 5, comparativeMeasureValue: 7.5,
        category: '2001'
    },
    {
        value: 7, comparativeMeasureValue: 5,
        category: '2002'
    },
    {
        value: 10, comparativeMeasureValue: 6,
        category: '2003'
    },
    {
        value: 5, comparativeMeasureValue: 8,
        category: '2004'
    },
    {
        value: 12, comparativeMeasureValue: 5,
        category: '2005'
    },
    {
        value: 8, comparativeMeasureValue: 6,
        category: '2006'
    }
];
var chart = new ej.charts.BulletChart({
    dataSource: localData,
    animation: { enable: false },
    valueField: 'value',
    targetField: 'comparativeMeasureValue',
    title: 'Profit in percentage',
    height: '400',
    ranges: [{ end: 5 },
        { end: 15 },
        { end: 20 }
    ],
    labelFormat: '{value}%',

```

```
dataLabel: { enable: true },
minimum: 0, maximum: 20, interval: 5,
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>

Tool tip in ##Platform_Name## Bullet chart control

When the mouse is hovered over a bar in the Bullet Chart, the tooltip displays important summary about the actual and the target bar values.

Default tooltip

By setting [enable](#) the property to 'True' and by injecting `BulletTooltip` module using `BulletChart.Inject(BulletTooltip)`. The 'Tooltip' is visible in the 'Bullet chart' by default.

The tooltip is not visible by default. To make it visible, set the `enable` property in the `tooltip` to `true` and injecting `BulletTooltip` module using `BulletChart.Inject(BulletTooltip)`.

INDEX.JS

```
var localData = [
  {
    value: 5, comparativeMeasureValue: 7.5,
    category: '2001'
  },
  {
    value: 7, comparativeMeasureValue: 5,
    category: '2002'
  },
  {
    value: 10, comparativeMeasureValue: 6,

          right: 5px">Current : ${value}K </td>
        </tr>
      </table>
    </div>
  </script>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Tooltip template

Any HTML elements can be displayed in the tooltip by using the **template** property of the **tooltip**. You can use the **\${target}** and **\${value}** as place holders in the HTML element to display the value and target values from the data source of corresponding data point.

INDEX.JS

```

var chart = new ej.charts.BulletChart({
  height: '110px',
  tooltip: { enable: true, template : '#Tooltip' },
  dataSource: [{ value: 70, target: 50 }],
  valueField: 'value',
  targetField: 'target',
  animation: { enable: false },
  ranges: [{ end: 30, color: '#599C20' },
    { end: 60, color: '#EFC820' },
    { end: 100, color: '#CA4218' }
  ],
  minimum: 0, maximum: 100, interval: 10,
  title: 'Revenue YTD',
  labelFormat: '${value}K',
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

</body></html>

```

Customization of the appearance of tooltip

The [fill](#) and [border](#) properties are used to customize the background color and border of the tooltip respectively. The [textStyle](#) property in the tooltip is used to customize the font of the tooltip text.

The following properties can be used to customize the Bullet Chart tooltip.

- **fill** - Specifies the color of tooltip.
- **border** - Specifies the tooltip border color and width.
- **textStyle** - Specifies the tooltip font family, font style, font weight, color and size.

INDEX.JS

```

var piechart = new ej.charts.AccumulationChart({
    series: [
        {
            dataSource: [
                { x: 'Chrome', y: 61.3, text: 'Chrome: 61.3%' },
                { x: 'Safari', y: 24.6, text: 'Safari: 24.6%' },
                { x: 'Edge', y: 5.0, text: 'Edge: 5.0%' },

Accessibility in ##Platform_Name## Bullet chart control

The Bullet chart control followed the accessibility guidelines and standards, including [ADA](#), [Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Bullet chart control is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

| [Section 508](#) Support | |

| Screen Reader Support | |

| Right-To-Left Support | |

| Color Contrast | |

| Mobile Device Support | |

| Keyboard Navigation Support | |

| [Accessibility Checker](#) Validation | |

| [Axe-core](#) Accessibility Validation | |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

}

</style>

<div> - All features of the control meet the requirement.</div>

<div> - Some features of the control do not meet the requirement.</div>

<div> - The control does not meet the requirement.</div>

WAI-ARIA attributes

The Bullet chart control followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Bullet chart control:

- img (role)
- button (role)
- aria-label (attribute)
- aria-pressed (attribute)

Keyboard interaction

The Bullet chart control followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Bullet chart control.

| **Press** | **To do this** |

| --- | --- |

| **Tab** | Moves the focus to the next element in the Bullet chart. |

| Shift + Tab | Moves the focus to the previous element in the Bullet chart. |

| Ctrl + P | Prints the Bullet chart. |

Ensuring accessibility

The Bullet chart control's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Bullet chart control is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Bullet chart control with accessibility tools.

ButtonGroup

Getting started in ##Platform_Name## Button group control

This section explains how to create a simple ButtonGroup, and configure its available functionalities by using the Essential JS 2 [quickstart](#) seed repository.

This application is integrated with the `webpack.config.js` configuration and uses the latest version of the [webpack-cli](#). It requires node `v14.15.0` or higher. For more information about webpack and its features, refer to the [webpack documentation](#).

Dependencies

The following list of dependencies are required to use the ButtonGroup component in your application.

`js

|-- @syncfusion/ej2-splitbuttons

,

Set up development environment

Open the command prompt from the required directory, and run the following command to clone the Syncfusion JavaScript (Essential JS 2) quickstart project from [GitHub](#).

CMD

```
git clone https://github.com/SyncfusionExamples/ej2-quickstart-webpack- ej2-quickstart
```

After cloning the application in the `ej2-quickstart` folder, run the following command line to navigate to the `ej2-quickstart` folder.

CMD

```
cd ej2-quickstart
```

Add Syncfusion JavaScript packages

Syncfusion JavaScript (Essential JS 2) packages are available on the [npmjs.com](#) public registry. You can install all Syncfusion JavaScript (Essential JS 2) controls in a single [@syncfusion/ej2](#) package or individual packages for each control.

The quickstart application is preconfigured with the dependent [@syncfusion/ej2](#) package in the `~/package.json` file. Use the following command to install the dependent npm packages from the command prompt.

NPM

```
npm install
```

Import the Syncfusion CSS styles

The ButtonGroup CSS files are available in the ej2-splitbuttons package folder. This can be referenced in the `~/src/styles/styles.css` file of your application by using the following code.

STYLE.CSS

```
@import '../..../node_modules/@syncfusion/ej2-base/styles/material.css';
@import '../..../node_modules/@syncfusion/ej2-buttons/styles/material.css';
@import '../..../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
```

Add ButtonGroup to the project

Add the HTML div tag with class name as `e-btn-group` and the button elements that should group inside the div element with class name as

`e-btn` to your `index.html` file.

[src/index.html]

INDEX.HTML

```
<!DOCTYPE html>
<html lang="en">
<head>
<title>Essential JS 2</title>
<meta charset="utf-8" />
<meta name="viewport" content="width=device-width, initial-scale=1.0, user-scalable=no" />
<meta name="description" content="Essential JS 2" />
<meta name="author" content="Syncfusion" />
<link rel="shortcut icon" href="resources/favicon.ico" />
<link
href="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.7/css/bootstrap.min.css"
rel="stylesheet" />
</head>
<body>
<div>
<!--element which is going to render-->
<div class='e-btn-group'>
<button class='e-btn'>HTML</button>
<button class='e-btn'>CSS</button>
<button class='e-btn'>Javascript</button>
</div>
</div>
</body>
</html>
```

Run the application

Run the application in the browser by using the following command.

NPM

```
npm start
```

The following example shows a basic ButtonGroup component.

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Button-Group</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">

splitbuttons/styles/material.css" rel="stylesheet">
  <link href="styles.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div class="e-btn-group">
      <button class="e-btn">HTML</button>
      <button class="e-btn">CSS</button>
      <button class="e-btn">Javascript</button>
    </div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

STYLES.CSS

```
#container {
  visibility: hidden;
}
```

```
#loader {
  color: #008cff;
  height: 40px;
  left: 45%;
  position: absolute;
  top: 45%;
  width: 30%;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
```

Orientation

ButtonGroup can be arranged in a vertical and horizontal orientation. By default, it is horizontally aligned.

Vertical Orientation

ButtonGroup can be aligned vertically by using the built-in CSS class `e-vertical` to the target element.

The following example illustrates how to achieve vertical orientation in ButtonGroup.

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Button-Group</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">

  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
buttons/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
popups/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
splitbuttons/styles/material.css" rel="stylesheet">
  <link href="styles.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div class="e-btn-group e-vertical">
      <button class="e-btn">HTML</button>
      <button class="e-btn">CSS</button>
      <button class="e-btn">Javascript</button>
    </div>
  </div>
<script>
var ele = document.getElementById('container');
```

```

if(ele) {
    ele.style.visibility = "visible";
}

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

STYLES.CSS

```

#container {
    visibility: hidden;
}
#loader {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
}
.e-btn-group {
    margin: 25px 5px 20px 20px;
}

```

ButtonGroup does not support SplitButton component nesting in a vertical orientation.

Types and styles in ##Platform_Name## Button group control

This section explains about different types and styles of ButtonGroup.

ButtonGroup types

Outline ButtonGroup

An Outline ButtonGroup has a border with transparent background. To create an Outline ButtonGroup, `e-outline` class should be added to the target element and also add `e-outline` and `e-btn` class to each button elements.

The following sample illustrates how to achieve an Outline ButtonGroup.

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Button-Group</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
    <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
buttons/styles/material.css" rel="stylesheet">

```

```

<link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
popups/styles/material.css" rel="stylesheet">
<link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
splitbuttons/styles/material.css" rel="stylesheet">
<link href="styles.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div class="e-btn-group e-outline">
            <button class="e-btn e-outline">HTML</button>
            <button class="e-btn e-outline">CSS</button>
            <button class="e-btn e-outline">Javascript</button>
        </div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

STYLES.CSS

```

#container {
    visibility: hidden;
}
#loader {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
}
.e-btn-group {
    margin: 25px 5px 20px 20px;
}

```

ButtonGroup does not have support for **flat** and **round** types.

ButtonGroup styles

The Essential JS 2 ButtonGroup has the following predefined styles. This can be achieved by adding corresponding class name in each button elements.

Class	Description
-------	-------------

- | ----- | ----- |
- | e-primary | Used to represent a primary action. |
- | e-success | Used to represent a positive action. |
- | e-info | Used to represent an informative action. |
- | e-warning | Used to represent an action with caution. |
- | e-danger | Used to represent a negative action. |

The following example illustrates how to achieve predefined styles in ButtonGroup.

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Button-Group</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
buttons/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
popups/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
splitbuttons/styles/material.css" rel="stylesheet">
  <link href="styles.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div class="e-btn-group">
      <button class="e-btn e-info">View</button>
      <button class="e-btn">Edit</button>
      <button class="e-btn e-danger">Delete</button>
    </div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

STYLES.CSS

```
#container {
  visibility: hidden;
}
#loader {
  color: #008cff;
  height: 40px;
  left: 45%;
  position: absolute;
  top: 45%;
  width: 30%;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
```

Predefined ButtonGroup styles provide only the visual indication. So, ButtonGroup content should define the ButtonGroup style for the users of assistive technologies such as screen readers.

- [Create ButtonGroup with rounded corner](#)

Selection in ##Platform_Name## Button group control

Selection

Single selection

ButtonGroup supports radio type selection in which only one button can be selected. This can be achieved by adding input element along with `id` attribute with its corresponding label along with `for` attribute inside the target element. In this ButtonGroup, the type of the input element should be `radio` and `e-btn` is added to the `label` element.

The following example illustrates the single selection behavior in ButtonGroup.

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Button-Group</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-

  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
buttons/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
popups/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
splitbuttons/styles/material.css" rel="stylesheet">
  <link href="styles.css" rel="stylesheet">
```

```

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div class="e-btn-group">
            <input type="radio" id="radioleft" name="align" value="left">
            <label class="e-btn" for="radioleft">Left</label>
            <input type="radio" id="radiomiddle" name="align"
value="middle">
            <label class="e-btn" for="radiomiddle">Center</label>
            <input type="radio" id="radiatoright" name="align" value="right">
            <label class="e-btn" for="radiatoright">Right</label>
        </div>
    </div>
</body>
</html>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>

```

STYLES.CSS

```

#container {
    visibility: hidden;
}
#loader {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
}
.e-btn-group {
    margin: 25px 5px 20px 20px;
}

```

Multiple selection

ButtonGroup supports checkbox type selection in which multiple button can be selected. This can be achieved by adding input element along with `id` attribute with its corresponding label along with `for` attribute inside the target element. In this ButtonGroup, the type of the input element should be `checkbox` and `e-btn` is added to the `label` element.

The following example illustrates the multiple selection behavior in ButtonGroup.

}
```

Nesting

Nesting with other components can be possible in ButtonGroup. The following components can be nested in ButtonGroup.

- DropDownButton
- SplitButton

For nesting support, [SplitButton dependencies](#) should be configured and added in `system.config.js`.

DropDownButton

To initialize DropDownButton component, refer [DropDownButton Getting Started documentation](#).

In the following example, the DropDownButton component can be added by creating button element with ID as `dropdownnelement` in `index.html` and

import the DropDownButton in `script` file, and initialize with the `dropdownnelement`.

INDEX.JS

```
var items = [  
  {  
    text: 'Learn SQL'  
  },  
  {  
    text: 'Learn PHP'  
  },  
  {  
    text: 'Learn Bootstrap'  
  }  
];  
var menuOptions = {  
  items: items  
};  
var btnObj = new ej.splitbuttons.DropDownButton(menuOptions);  
btnObj.appendTo('#dropdownnelement');
```

INDEX.HTML

    position: absolute;
    top: 45%;
    width: 30%;
}
.e-btn-group {
    margin: 25px 5px 20px 20px;
}

```

SplitButton

To initialize SplitButton component, refer [SplitButton Getting Started documentation](#).

In the following example, the SplitButton component can be added by creating button element with ID as `splitbuttonelement` in `index.html` and

import the SplitButton in `app.ts` file, and initialize with the `splitbuttonelement`.

INDEX.JS

```

var items = [
{
    text: 'Paste'
},
{
    text: 'Paste Text'
},
{
    text: 'Paste Special'
}
];
var btnObj = new ej.splitbuttons.SplitButton({items: items});
btnObj.appendTo('#splitbuttonelement');

```

Accessibility in ##Platform_Name## Button group control

The Button group component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Button group component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

| [Section 508](#) Support | |

| Screen Reader Support | |

| Right-To-Left Support | |

| Color Contrast | |

| Mobile Device Support | |

| Keyboard Navigation Support | |

| [Accessibility Checker](#) Validation | |

| [Axe-core](#) Accessibility Validation | |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

}

</style>

<div> - All features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

Keyboard interaction

The Button group component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Button group component.

Normal behavior

| **Press** | **To do this** |

| --- | --- |

| **Tab** | **Focuses the next button in the ButtonGroup.** |

| **Enter/Space** | **Activates the focussed button in the ButtonGroup.** |

Checkbox behavior

| **Press** | **To do this** |

| --- | --- |

| **Tab** | **Focuses the next button in the ButtonGroup.** |

| **Space** | **Activates the focussed button in the ButtonGroup.** |

Radiobutton behavior

| **Press** | **To do this** |

| --- | --- |

| **Tab** | **Focuses the active button in the ButtonGroup.** |

| **Right** | **Activates next/previous button in the ButtonGroup.** |

Ensuring accessibility

The Button group component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Button group component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Button group component with accessibility tools.

How To

Create buttongroup with icons in ##Platform_Name## Button group control

To create ButtonGroup with icons, `span` element should be added inside each button element with `e-btn-icon` and `e-icon-left` along with icon classes.

The following example illustrates how to create ButtonGroup with icons.

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Button-Group</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

    position: absolute;
    top: 45%;
    width: 30%;
}
.e-btn-group {
    margin: 25px 5px 20px 20px;
}
.e-left-icon::before {
    content: '\e33a';
}
.e-right-icon::before {
    content: '\e34d';
}
.e-middle-icon::before {
    content: '\e35e';
}

```

Create buttongroup with rounded corner in ##Platform_Name## Button group control

The ButtonGroup with rounded corner has round edges on both side. In the ButtonGroup with rounded corner, **e-round-corner** class is to be

added to the target element.

The following example illustrates how to create ButtonGroup with rounded corner.

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Button-Group</title>

    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

STYLES.CSS

```

#container {
    visibility: hidden;
}
#loader {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
}
.e-btn-group {
    margin: 25px 5px 20px 20px;
}

```

Disable in ##Platform_Name## Button group control

Particular button

To disable a particular button in a ButtonGroup, [disabled](#) attribute should be added to the corresponding button element.

Whole ButtonGroup

To disable whole ButtonGroup, [disabled](#) attribute should be added to all the button elements.

The following example illustrates how to disable the particular and the whole ButtonGroup.

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Button-Group</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
buttons/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
popups/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
splitbuttons/styles/material.css" rel="stylesheet">
  <link href="styles.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div class="e-btn-group">
      <button class="e-btn">HTML</button>
      <button class="e-btn" disabled="">CSS</button>
      <button class="e-btn">Javascript</button>
    </div>
    <div class="e-btn-group">
      <button class="e-btn" disabled="">HTML</button>
      <button class="e-btn" disabled="">CSS</button>
      <button class="e-btn" disabled="">Javascript</button>
    </div>
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

STYLES.CSS

```
#container {
  visibility: hidden;
}
```

```
#loader {
  color: #008cff;
  height: 40px;
  left: 45%;
  position: absolute;
  top: 45%;
  width: 30%;
}
.e-btn-group {
  margin: 25px 5px 20px 20px;
}
```

To disable radio/checkbox type ButtonGroup, the `disabled` attribute should be added to the particular input element.

Enable ripple in `##Platform_Name##` Button group control

Ripple can be enabled by importing `rippleEffect` method from `ej2-base` and initialize `rippleEffect` with `.e-btn-group` element, and selector as `e-btn`.

The following example illustrates how to enable ripple for ButtonGroup.

<!-- markdownlint-disable MD033 -->

INDEX.JS

```
ej.base.enableRipple(true);
var button = document.querySelector('.e-btn-group');
ej.base.rippleEffect(button, { selector: '.e-btn' });
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>

            <button class="e-btn">Javascript</button>
        </div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

STYLES.CSS

```

#container {
    visibility: hidden;
}
#loader {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
}
.e-btn-group {
    margin: 25px 5px 20px 20px;
}

```

Form submit in ##Platform_Name## Button group control

The name attribute of the input element is used to group the radio/checkbox type ButtonGroup. When the radio/checkbox type are grouped in the form, the checked items value attribute will be posted to the server on form submit that can be retrieved through the name. The disabled

radio/checkbox type value will not be sent to the server on form submit.

In the following code snippet, the radio type ButtonGroup is explained with male value as checked.

Now, the value that is in checked state will be sent on form submit.

Initialize buttongroup using util function in `##Platform_Name##` Button group control

Though, it is a CSS component for easy initialization of ButtonGroup `createButtonGroup` util function can be used.

To use `createButtonGroup` util function, [SplitButton dependencies](#) should be configured and added in `system.config.js` and it should also be imported in `script` file.

Using `createButtonGroup` method, the button options, selector, and `cssClass` is passed and the corresponding classes is added to the elements.

Create basic ButtonGroup

To create a basic ButtonGroup, the target element along with the button elements should be created in `index.html` file.

Create radio type ButtonGroup

To create a radio type ButtonGroup, the target element along with the input elements should be created with type `radio` in `index.html`.

Create checkbox type ButtonGroup

Checkbox type ButtonGroup creation is similar to radio type ButtonGroup, instead the type of the input elements should be `checkbox`.

The following example illustrates how to create ButtonGroup using `createButtonGroup` function for basic, checkbox, and radio

type behaviors.

INDEX.JS

```
ej.splitbuttons.createButtonGroup('#basic', {  
  buttons: [  
    { content: 'HTML' },  
    { content: 'CSS' },  
    { content: 'Javascript' }  
  ]  
});  
ej.splitbuttons.createButtonGroup('#checkbox', {  
  buttons: [  
    { content: 'Bold' },  
    { content: 'Italic' },  
    { content: 'Undeline' }  
  ]  
});  
ej.splitbuttons.createButtonGroup('#radio', {  
  buttons: [  
    { content: 'Left' },  
    { content: 'Center' },  
    { content: 'Right' }  
  ]  
});
```

```
});
```

INDEX.HTML

```

    <h5>Normal behavior</h5>
    <div id="basic">
      <button></button>
      <button></button>
      <button></button>
    </div>
    <h5>Checkbox type behavior</h5>
    <div id="checkboxbox">
      <input type="checkbox" id="checkbold" name="font" value="bold">
      <input type="checkbox" id="checkitalic" name="font"
value="italic">
      <input type="checkbox" id="checkunderline" name="font"
value="underline">
    </div>
    <h5>Radiobutton type behavior</h5>
    <div id="radio">
      <input type="radio" id="radioleft" name="align" value="left">
      <input type="radio" id="radiomiddle" name="align"
value="middle">
      <input type="radio" id="radiatoright" name="align" value="right">
    </div>
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
```

```

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

STYLES.CSS

```

#container {
    visibility: hidden;
}
#loader {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
}
.e-btn-group {
    margin: 0 5px 5px 5px;
}

```

If null value is passed in button options, then that particular button will be skipped from processing in `createButtonGroup` util function.

Show `buttongroup` selected state on initial render in `##Platform_Name##` Button group control

To show selected state on initial render, `checked` property should be added to the corresponding input element.

The following example illustrates how to show selected state on initial render.

Button

Types and styles in ##Platform_Name## Button control

This section explains the different styles and types of Buttons.

Button styles

The Essential JS 2 Button has the following predefined styles that can be defined using the [cssClass](#) property.

Class	Description
-----	-----
e-primary	Used to represent a primary action.

- | e-success | Used to represent a positive action. |
- | e-info | Used to represent an informative action. |
- | e-warning | Used to represent an action with caution. |
- | e-danger | Used to represent a negative action. |
- | e-link | Changes the appearance of the Button like a hyperlink. |

INDEX.JS

```
ej.base.enableRipple(true);
//Primary Button - Used to represent a primary action.
var button = new ej.buttons.Button({ cssClass: `e-primary`, '#primarybtn'});
//Success Button - Used to represent a positive action.
button = new ej.buttons.Button({ cssClass: `e-success`, '#successbtn'});
//Info Button - Used to represent an informative action.
button = new ej.buttons.Button({ cssClass: `e-info`, '#infobtn'});
//Warning Button - Used to represent an action with caution.
button = new ej.buttons.Button({ cssClass: `e-warning`, '#warningbtn'});
//Danger Button - Used to represent a negative action.
button = new ej.buttons.Button({ cssClass: `e-danger`, '#dangerbtn'});
//Link Button - Changes the appearance of the Button like a hyperlink.
button = new ej.buttons.Button({ cssClass: `e-link`, '#linkbtn'});
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Button</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
buttons/styles/material.css" rel="stylesheet">
  <link href="styles.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container">
    <button id="primarybtn">Primary</button>
    <button id="successbtn">Success</button>
    <button id="infobtn">Info</button>
    <button id="warningbtn">Warning</button>
    <button id="dangerbtn">Danger</button>
    <button id="linkbtn">Link</button>
  </div>
  <script>
    let loader = document.getElementById('loader');
```

```

        let container = document.getElementById('container');
        if (loader) {
            loader.style.display = "none";
        }
        if (container) {
            container.style.visibility = "visible";
        }
    </script>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
    </script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

STYLES.CSS

```

#container {
    visibility: hidden;
}
#loader {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
}
button {
    margin: 25px 5px 20px 20px;
}

```

Predefined Button styles provide only the visual indication. So, Button content should define the Button style for the users of assistive technologies such as screen readers.

Primary action button can also be achieved by setting [isPrimary](#) property as `true`.

[Button types](#)

The types of Essential JS 2 Button are as follows:

- Basic types
- Flat Button
- Outline Button
- Round Button
- Toggle Button

[Basic types](#)

The basic Button types are explained below.

Type	Description
-----	-----

- | Button | Defines a click Button. |
- | Submit | This Button submits the form data to the server. |
- | Reset | This Button resets all the controls in the form elements to their initial values. |

INDEX.JS

```
ej.base.enableRipple(true);  
var button = new ej.buttons.Button();  
button.appendTo('#submitbtn');  
//Reset.  
button = new ej.buttons.Button();  
button.appendTo('#resetbtn');
```

INDEX.HTML

```

  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type="text/javascript"></script>  
</head>  
<body>  
  
  <div id="container">  
    <form>  
      <button type="submit" id="submitbtn">Submit</button>  
      <button type="reset" id="resetbtn">Reset</button>  
    </form>  
  </div>  
  <script>  
    let loader = document.getElementById('loader');  
    let container = document.getElementById('container');  
    if (loader) {  
      loader.style.display = "none";  
    }  
    if (container) {  
      container.style.visibility = "visible";  
    }  
  </script>  
<script>  
var ele = document.getElementById('container');  
if(ele) {  
  ele.style.visibility = "visible";
```

```

}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

STYLES.CSS

```

#container {
    visibility: hidden;
}
#loader {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
}
button {
    margin: 25px 5px 20px 20px;
}

```

Flat Button

The Flat Button is styled with no background color. To create a flat Button, set the [cssClass](#) property to `e-flat`.

Outline Button

An outline Button has a border with transparent background. To create an outline Button, set the [cssClass](#) property to `e-outline`.

Round Button

A round Button is shaped like a circle. Usually, it contains an icon representing its action. To create a round Button, set the [cssClass](#) property to `e-round`.

INDEX.JS

```

ej.base.enableRipple(true);
var button = new ej.buttons.Button({ cssClass: `e-flat`, '#flatbtn' });
//Outline Button.
button = new ej.buttons.Button({ cssClass: `e-outline`, '#outlinebtn' });
//Round Button - Icon can be loaded by setting "e-icons e-plus-icon" in
"iconCss" property.
//Use "e-icons" class name to load Essential JS 2 built-in icons.
//Use "e-plus-icon" class name to load plus icon that you can refer in
"styles.css".
button = new ej.buttons.Button({ cssClass: `e-round`, iconCss: 'e-icons e-
plus-icon', isPrimary:true }, '#roundbtn');

```

INDEX.HTML

```

#loader {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
}
/* For Round Button*/
.e-plus-icon::before {
    content: '\e823';
}
button {
    margin: 25px 5px 20px 20px;
}

```

Toggle Button

A toggle Button allows you to change between the two states. The Button is active in toggled state and can be recognized through the `e-active` class. The functionality of the toggle Button is handled by click

event. To create a toggle Button, set the [isToggle](#) property to `true`. In the following code snippet, the toggle Button text changes to play/pause based on the state of the Button with the use of click event.

INDEX.JS

```
ej.base.enableRipple(true);
var togglebtn = new ej.buttons.Button({cssClass: `e-flat`, iconCss: 'e-btn-sb-icon e-play-icon', isToggle: true, content: 'Play'}, '#togglebtn');
//Click Event.
document.getElementById('togglebtn').onclick = function () {
    if (document.getElementById('togglebtn').classList.contains('e-active')) {
        togglebtn.content = 'Pause';
        togglebtn.iconCss = 'e-btn-sb-icon e-pause-icon';
    } else {
        togglebtn.content = 'Play';
        togglebtn.iconCss = 'e-btn-sb-icon e-play-icon';
    }
};
```

}

```

Icons

Button with font icons

The Button can have an icon to provide the visual representation of the action. To place the icon on a Button, set the [iconCss](#) property with the required icon CSS. By default, the icon is positioned to the left side of the Button. You can customize the icon's position by using the [iconPosition](#) property.

INDEX.JS

```

ej.base.enableRipple(true);
//To position the icon to the left of the text on a Button.
var button = new ej.buttons.Button({iconCss: 'e-btn-sb-icon e-prev-icon'},
'#iconbutton');
//To position the icon to the right of the text on a Button.
button = new ej.buttons.Button({iconCss: 'e-btn-sb-icon e-stop-icon',
iconPosition: 'Right'}, '#iconposbtn');

```

INDEX.HTML

Button with SVG image

SVG image can be added to the Button using [iconCss](#) property.

In the following example, SVG image is added using the iconCss class `e-search-icon` by setting `height` and `width`.

INDEX.JS

```
ej.base.enableRipple(true);
```

```
var button = new ej.buttons.Button({ iconCss: 'e-search-icon' },  
'#iconbutton');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>  
  <title>EJ2 Button</title>  
  <meta charset="utf-8">  
  <meta name="viewport" content="width=device-width, initial-scale=1.0">  
  <meta name="description" content="Typescript UI Controls">

</head>  
<body>  
  
  <div id="container">  
    <button id="iconbutton"></button>  
  </div>  
  <script>  
var ele = document.getElementById('container');  
if(ele) {  
  ele.style.visibility = "visible";  
}  
  </script>  
  <script src="index.js" type="text/javascript"></script>  
</body></html>
```

STYLES.CSS

```
#container {  
  visibility: hidden;  
}  
#loader {  
  color: #008cff;  
  height: 40px;  
  left: 45%;  
  position: absolute;  
  top: 45%;  
  width: 30%;  
}  
.e-btn-icon.e-search-icon {  
  background: url('search_icon.svg');  
  height: 25px;  
  width: 25px;  
}  
button {
```

```
margin: 25px 5px 20px 20px;
}
```

The Essential JS 2 provides a set of icons that can be loaded by applying `e-icons` class name to the element. You can also use third party icons on the Button using the [iconCss](#) property.

Button size

The two types of Button sizes are default and small. To change the size of the default Button to small Button, set the [cssClass](#) property to `e-small`.

INDEX.JS

```
ej.base.enableRipple(true);
//Small Button.
var button = new ej.buttons.Button({ cssClass: `e-small`, '#smallbtn' });
//Normal Button.
button = new ej.buttons.Button();
button.appendTo('#normalbtn');
```

INDEX.HTML

```

Accessibility in ##Platform_Name## Button component

The Button component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Button component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

| [Section 508](#) Support | |

| Screen Reader Support | |

| Right-To-Left Support | |

| Color Contrast | |

| Mobile Device Support | |

| Keyboard Navigation Support | |

| [Accessibility Checker](#) Validation | |

| [Axe-core](#) Accessibility Validation | ` |`

`<style>`

`.post .post-content img {`

`display: inline-block;`

`margin: 0.5em 0;`

`}`

`</style>`

`<div> - All features of the component meet the requirement.</div>`

`<div> - Some features of the component do not meet the requirement.</div>`

`<div> - The component does not meet the requirement.</div>`

WAI-ARIA attributes

The Button component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Button component:

| Attributes | Purpose |

| --- | --- |

| **aria-label** | Provides an accessible name for the icon only button. |

Keyboard interaction

The Button component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Button component.

| **Press** | **To do this** |

| --- | --- |

| **Space** | When the button has focus, pressing the space key changes the state of the button. |

Ensuring accessibility

The Button component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Button component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Button component with accessibility tools.

How To

Add link to a button in ##Platform_Name## Button control

The appearance of the Button can be changed like a link by `e-link` class using `cssClass` property and link navigation can be handled in Button click.

In the following example, link is added in Button click by using `window.open()` method.

INDEX.JS

```
ej.base.enableRipple(true);
//To change the Button type.
var button = new ej.buttons.Button({cssClass: 'e-link'});
button.appendTo('#element');
button.element.onclick = function () {
    window.open("https://www.google.com");
}
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Button</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
buttons/styles/material.css" rel="stylesheet">
  <link href="styles.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container">
    <button id="element">Go to Google</button>
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

STYLES.CSS

```
#container {
  visibility: hidden;
```

```

}
#loader {
  color: #008cff;
  height: 40px;
  left: 45%;
  position: absolute;
  top: 45%;
  width: 30%;
}

```

Create a block button in ##Platform_Name## Button control

You can customize a Button into a Block Button that will span the entire width of its parent element. To create a Block Button, set the [cssClass](#) property to `e-block`.

INDEX.JS

```

ej.base.enableRipple(true);
//Block Button.
var button = new ej.buttons.Button({cssClass: `e-block`});
button.appendTo('#blockbtn');
//Primary Block Button.
button = new ej.buttons.Button({ isPrimary: true, cssClass: `e-block` });
button.appendTo('#primarybtn');
//Success Block Button.
button = new ej.buttons.Button({ cssClass: `e-block e-success` });
button.appendTo('#successbtn');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Button</title>
  <meta charset="utf-8">

buttons/styles/material.css" rel="stylesheet">
  <link href="styles.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container">
    <button id="blockbtn">Block Button</button>
    <button id="primarybtn">Block Button</button>
    <button id="successbtn">Block Button</button>
  </div>
  <script>

```

```

        let loader = document.getElementById('loader');
        let container = document.getElementById('container');
        if (loader) {
            loader.style.display = "none";
        }
        if (container) {
            container.style.visibility = "visible";
        }
    }
</script>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

STYLE.CSS

```

#container {
    visibility: hidden;
}
#loader {
    color: #008cff;
    height: 40px;
    left: 45%;
    position: absolute;
    top: 45%;
    width: 30%;
}
button {
    margin: 25px 0;
}

```

Customize button appearance in ##Platform_Name## Button control

You can customize the appearance of the Button by using the Cascading Style Sheets (CSS). Define the CSS according to your requirement, and assign the class name to the [cssClass](#) property. In the following code snippet the background color, text color, height, width, and sharp corner of the Button can be customized through the `e-custom` class for all states (hover, focus, and active).

INDEX.JS

```

ej.base.enableRipple(true);
var button = new ej.buttons.Button({cssClass: `e-custom`, content: 'Custom'},
'#custombtn');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

Customize input and anchor elements in ##Platform_Name## Button control

You can customize the appearance of the input and anchor elements using predefined styles through the class property. In the following code

snippet, the input element is customized as a link Button by setting the `e-btn e-link` class, and the anchor element is customized as a

primary Button by setting the `e-btn e-primary` class.

Repeat button in ##Platform_Name## Button control

The Repeat button is a type of Button in that the click event is triggered at regular time interval from the pressed state till the released state.

The following example explains about how to achieve Repeat Button in mouse and touch events.

INDEX.JS

```
ej.base.enableRipple(true);
var button = new ej.buttons.Button({cssClass: `e-small`}, '#button');
```

```

var clear = new ej.buttons.Button({cssClass: `e-small`, '#clear'});
var timeout = null;
document.getElementById('clear').onclick = () => {
    document.getElementById('eventlog').innerHTML = '';
};
document.getElementById('button').addEventListener("mousedown",
mousedownHandler);
document.getElementById('button').addEventListener("mouseup",
mouseupHandler);
function mouseUpHandler(event) {
    clearInterval(timeout);
}
function mousedownHandler(event) {
    if (event.which === 1) {
        appendSpanElement('Button click event called<hr>');
        timeout = setInterval(clickEventHandler, 200);
    }
}
function clickEventHandler() {
    ej.base.EventHandler.trigger(button.element, "click");
    appendSpanElement('Button click event called<hr>');
}
function appendSpanElement(text) {
    var span = document.createElement('span');
    span.innerHTML = text;
    var log = document.getElementById('eventlog');
    log.insertBefore(span, log.firstChild);
}
document.getElementById('loader').style.display = "none";
document.getElementById('container').style.visibility = "visible";

```

Set the disabled state in `##Platform_Name##` Button control

Button component can be enabled/disabled by giving [disabled](#) property. To disable Button component, the `disabled` property can be set as `true`.

The following example demonstrates Button in `disabled` state.

INDEX.JS

```

ej.base.enableRipple(true);
var button = new ej.buttons.Button({content: 'Disabled', disabled: true},
'#custombtn');

```

INDEX.HTML

```

    position: absolute;
    top: 45%;
    width: 30%;
}

```

Calendar

Date range in ##Platform_Name## Calendar control

Calendar provides an option to select a date value within a specified range by defining the [min](#) and [max](#) properties. The min date should always be lesser than the max date. If the value of [min](#) or [max](#) properties are changed through code behind, then update the [value](#) property to be set within the specified range, or else, if the value is out of specified date range and less than [min](#) date, value property will be updated with min date or the value is higher than max date, value property will be updated with [max](#) date.

The following example allows you to select a date within the range of 7th to 27th days in a month.

INDEX.JS

```
ej.base.enableRipple(true);

//Creates a Calendar with min and max properties.
var today = new Date();
var currentYear = today.getFullYear();
var currentMonth = today.getMonth();
var currentDay = today.getDate();
var calendar = new ej.calendars.Calendar({
  //sets the min date
  min: new Date(currentYear, currentMonth, 7),
  //sets the max date
  max: new Date(currentYear, currentMonth, 27),
  //sets the value
  value: new Date(new Date().setDate(14))
});
calendar.appendTo('#element');
```

INDEX.HTML

Multi select in ##Platform_Name## Calendar control

Calendar provides an option to select **single** or **multiple dates** by using `isMultiSelection` and `values` properties. By default, `isMultiSelection` property will be in disabled state.

| API | Type | Description |

|-----|-----|-----|

| `isMultiSelection` | **Boolean** | Enables the multi-selection option in the Calendar control |

| `values` | **Date[]** | Gets or sets the date range values in multi-selection option |

The following example demonstrates the functionality of `isMultiSelection` property and `values` properties in the Calendar control.

INDEX.JS

```
/*Initialize the calendar component*/
var calendar = new ej.calendars.Calendar({
    isMultiSelection: true,
    values: [new Date('1/1/2020'), new Date('1/15/2020'), new
Date('1/3/2020'), new Date('1/25/2020')]
});
calendar.appendTo('#element');
```

Globalization in ##Platform_Name## Calendar control

Globalization is the combination of adapting the component to various languages by means of parsing and formatting the date or number [Internationalization](#) and also by adding cultural specific customizations and translating the text [localization](#)

By default, the Calendar date format, week, and month names are specific to American English culture. It uses the [Essential JavaScript 2 Internationalization](#) package to parse and format date object based on the culture using the official [UNICODE CLDR](#) JSON data. It provides the [loadCldr](#) method to load the culture-specific CLDR JSON data.

All the Essential JS 2 component are specific to English culture ('en-US'). If you want to go with the different culture other than English, follow the below steps.

- Install the `CLDR-Data` package by using the below command (installs the CLDR JSON data). To know more about CLDR data, refer to the [CLDR-Data](#) link.

```
npm install cldr-data --save
```

Once the package is installed, the culture-specific JSON data will be available in `/node_modules/cldr-data`.

- Now, import the installed CLDR JSON data to the `app.ts` file. To import JSON data, install the JSON plugin loader. In the example, SystemJS JSON plugin loader is used.

```
npm install systemjs-plugin-json --save-dev
```

- After it is installed, configure the `system.config.js` settings as given below to map the `systemjs-plugin-json` loader.

```

`ts
System.config({
  paths: {
    'npm:': './node_modules/',
    'syncfusion:': 'npm:@syncfusion/'
  },
  map: {
    app: 'app',
    //Syncfusion packages mapping
    "@syncfusion/ej2-base": "syncfusion:ej2-base/dist/ej2-base.umd.min.js",
    "@syncfusion/ej2-data": "syncfusion:ej2-data/dist/ej2-data.umd.min.js",
    "@syncfusion/ej2-inputs": "syncfusion:ej2-inputs/dist/ej2-inputs.umd.min.js",
    "@syncfusion/ej2-buttons": "syncfusion:ej2-buttons/dist/ej2-buttons.umd.min.js",
    "@syncfusion/ej2-splitbuttons": "syncfusion:ej2-splitbuttons/dist/ej2-splitbuttons.umd.min.js",
    "@syncfusion/ej2-lists": "syncfusion:ej2-lists/dist/ej2-lists.umd.min.js",
    "@syncfusion/ej2-popups": "syncfusion:ej2-popups/dist/ej2-popups.umd.min.js",
    "@syncfusion/ej2-calendars": "syncfusion:ej2-calendars/dist/ej2-calendars.umd.min.js",
    "cldr-data": 'npm:cldr-data',
    //systemjs-plugin-json loader package mapping
    "plugin-json": "npm:systemjs-plugin-json/json.js"
  },
  meta: {
    '*.json': { loader: 'plugin-json' }
  },
  packages: {
    'app': { main: 'app', defaultExtension: 'js' },
    'cldr-data': { main: 'index.js', defaultExtension: 'js' }
  }
});
System.import('app');
`

```

- Now, use the [loadCldr](#) method to load the culture-specific CLDR JSON data from the installed location to `app.ts` file.

- Calendar displayed **Sunday** as the first day of week based on default culture ("en-US"). If you want to display the Calendar with loaded culture's first day of week, you need to import **weekdata.json** file from the **cldr-data/supplemental** as given in the code example.

```
`ts
```

```
//import the loadCldr from ej2-base
```

```
import { loadCldr } from '@syncfusion/ej2-base';
```

```
declare var require: any;
```

```
loadCldr(
```

```
require('cldr-data/supplemental/numberingSystems.json'),
```

```
require('cldr-data/main/de/ca-gregorian.json'),
```

```
require('cldr-data/main/de/numbers.json'),
```

```
require('cldr-data/main/de/timeZoneNames.json'),
```

```
require('cldr-data/supplemental/weekdata.json')); // To load the culture based first day of week
```

```
,
```

The [Localization](#) library allows you to localize default text content of the Calendar. The Calendar component has static text for **today** feature that can be changed to other cultures (Arabic, Deutsch, French, etc.) by defining the [locale](#) value and translation object.

Locale keywords |Text

today | Name of the button to choose Today date.

- Before changing the culture other than **English**, ensure that locale text for the concerned culture is loaded through **load** method of

[L10n](#) class.

```
`ts
```

```
//Load the L10n from ej2-base
```

```
import { L10n } from '@syncfusion/ej2-base';
```

```
//load the locale object to set the localized placeholder value
```

```
L10n.load({
```

```
'de': {
```

```
'calendar': { today: 'heute'}
```

```
}
```

```
});
```

```
,
```

- Set the culture by using the [locale](#) property. The code example initializes the Calendar component in the **German** culture.

```
`ts
import { Calendar } from '@syncfusion/ej2-calendars';
//import the loadCldr from ej2-base
import { loadCldr, L10n } from '@syncfusion/ej2-base';
declare var require: any;
loadCldr(
  require('cldr-data/supplemental/numberingSystems.json'),
  require('cldr-data/main/de/ca-gregorian.json'),
  require('cldr-data/main/de/numbers.json'));
require('cldr-data/main/de/timeZoneNames.json'));
L10n.load({
  'de': {
    'calendar': { today: 'heute' }
  }
});
let calendarObject: Calendar = new Calendar({
  //sets the locale.
  locale: 'de'
});
calendarObject.appendTo('#element');
```

The following example displays the Calendar in **German** culture.

INDEX.JS

```
ej.base.enableRipple(true);
var L10n = ej.base.L10n;
  L10n.load({
    'de': {
      'calendar': { today: 'heute' }
    }
  });
  loadCultureFiles('de');
  var calendar = new ej.calendars.Calendar({
    locale: 'de'
  });
  calendar.appendTo('#element');
  function loadCultureFiles(name) {
```

```

    var files = ['ca-gregorian.json', 'numbers.json',
'timeZoneNames.json'];
    var loader = ej.base.loadCldr;
    var loadCulture = function (prop) {
        var val, ajax;
        ajax = new
ej.base.Ajax('https://ej2.syncfusion.com/javascript/demos/' +
'src/common/cldr-data/main/' + name + '/' + files[prop], 'GET', false);
        ajax.onSuccess = function (value) {
            val = value;
        };
        ajax.send();
        loader(JSON.parse(val));
    };
    for (var prop = 0; prop < files.length; prop++) {
        loadCulture(prop);
    }
}

```

INDEX.HTML

```

    <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <!--element which is going to render the Calendar-->
        <div id="element"></div>
    </div>
    <script>
    var ele = document.getElementById('container');
    if(ele) {
        ele.style.visibility = "visible";
    }

    </script>
    <script src="index.js" type="text/javascript"></script>

```

```
</body></html>
```

Right-to-left

The Calendar supports right-to-left functionality for languages like Arabic, Hebrew, etc. to display text in the right-to-left direction. Use

[enableRtl](#) property to set the RTL direction.

The following code example initializes the Calendar component in **Arabic** culture.

```
`ts
import { Calendar } from '@syncfusion/ej2-calendars';
//import the loadCldr from ej2-base
import { loadCldr, L10n } from '@syncfusion/ej2-base';
declare var require: any;
loadCldr(
  require('cldr-data/supplemental/numberingSystems.json'),
  require('cldr-data/main/ar/ca-gregorian.json'),
  require('cldr-data/main/ar/numbers.json'));
require('cldr-data/main/ar/timeZoneNames.json'));
L10n.load({
  'ar': {
    'calendar': {
      today: 'اليوم'
    }
  }
});
let calendarObject: Calendar = new Calendar({
  //sets the locale.
  locale: 'ar'
});
calendarObject.appendTo('#element');
```

The following example displays the Calendar in **Arabic** culture in the right-to-left direction.

INDEX.JS

```
ej.base.enableRipple(true);
```

```

var L10n = ej.base.L10n;
L10n.load({
  'ar': {
    'calendar': { today: 'اليوم' }
  }
});
loadCultureFiles('ar');
var calendar = new ej.calendars.Calendar({
  locale: 'ar', enableRtl: true
});
calendar.appendTo('#element');

function loadCultureFiles(name) {
  var files = ['ca-gregorian.json', 'numbers.json',
'timeZoneNames.json'];
  if (name === 'ar') {
    files.push('numberingSystems.json');
  }
  var loader = ej.base.loadCldr;
  var loadCulture = function (prop) {
    var val, ajax;
    if (name === 'ar' && prop === files.length - 1) {
      ajax = new
ej.base.Ajax('https://ej2.syncfusion.com/javascript/demos/src/common/cldr-
data/supplemental/' + files[prop], 'GET', false);
    } else {
      ajax = new
ej.base.Ajax('https://ej2.syncfusion.com/javascript/demos/src/common/cldr-
data/main/' + name + '/' + files[prop], 'GET', false);
    }
    ajax.onSuccess = function (value) {
      val = value;
    };
    ajax.send();
    loader(JSON.parse(val));
  };
  for (var prop = 0; prop < files.length; prop++) {
    loadCulture(prop);
  }
}

```

Customization in ##Platform_Name## Calendar control

Each day cell of the Calendar can be customized by using the [renderDayCell](#)

event.

The following section demonstrates how to disable or highlight specific dates in a Calendar.

Disable weekends

You can disable weekends of every month in a Calendar by using the [renderDayCell](#) event. The [renderDayCell](#) event offers the following arguments on each day cell creation to help you disable the dates.

| **View** | **Description** |

| --- | --- |

| **date** | Defines the current date of the Calendar. |

| **isDisabled** | Specifies whether the current date is to be disabled or not. |

| **isOutOfRange** | Defines whether the current date is out of range or not. |

The following example demonstrates how to disable weekends of every month.

INDEX.JS

```

ej.base.enableRipple(true);

var calendar = new ej.calendars.Calendar({
    renderDayCell: disabledDate,
    value: new Date()
});
function disabledDate(args) {
    if (args.date.getDay() === 0 || args.date.getDay() === 6) {

```

```

        //Set 'true' to disable the weekends.
        args.isDisabled = true;
    }
}

calendar.appendTo('#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 Calendar control</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <!--style reference from the Calendar component-->
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
buttons/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
calendars/styles/material.css" rel="stylesheet">
  <!--style reference from app-->
  <link href="styles.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <!--element which is going to render the Calendar-->
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Day cell format

You can also highlight specific dates by adding custom CSS or element to the day cell by using the [renderDayCell](#) event.

You can customize the appearance of the Calendar by overriding the existing styles. The following list of CSS class names are used to customize the Calendar component.

Class Name	Description
------------	-------------

---	---
-----	-----

- | e-calendar | Applied to the Calendar. |
- | e-header | Applied to the header. |
- | e-title | Applied to the title. |
- | e-icon-container | Applied to the previous and next icon container. |
- | e-prev | Applied to the previous icon. |
- | e-next | Applied to the next icon. |
- | e-weekend | Applied to weekends. |
- | e-other-month | Applied to days of other months. |
- | e-day | Applied to each day cell. |
- | e-selected | Applied to the selected dates. |
- | e-disabled | Applied to the disabled dates. |

The following example highlights the World Health Day (every 7th April) and World Forest Day (every 21st March) by using the custom icon and ToolTip.

INDEX.JS

```
ej.base.enableRipple(true);

var calendar = new ej.calendars.Calendar({
  renderDayCell: customDates,
  value: new Date('03/10/2017')
});
function customDates(args) {
  //Defines the custom HTML element to be added.
  var span = document.createElement('span');
  //Uses "e-icons" class name to load Essential JS 2 built-in icons.
  span.setAttribute('class', 'e-icons highlight-day');
  if (+args.date.getDate() === 7 && +args.date.getMonth() == 3) {
    //Appends the span element to day cell.
    args.element.appendChild(span);
    //Sets the custom tooltip to the special dates.
    args.element.setAttribute('title', 'World health day!');
    //Uses "special" class name to highlight special dates that you can
    refer in "styles.css".
    args.element.className = 'special';
  }
  if (+args.date.getDate() === 21 && +args.date.getMonth() == 2) {
    args.element.appendChild(span);
    args.element.className = 'special';
    //Sets the custom tooltip to the special dates.
    args.element.setAttribute('title', 'World forest day');
  }
}
calendar.appendTo('#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 Calendar control</title>

Highlight weekends

You can highlight the weekends of every month in a Calendar by using the [renderDayCell](#) event. The following example demonstrates how to highlights the weekends of every month.

INDEX.JS

```

ej.base.enableRipple(true);

var calendar = new ej.calendars.Calendar({
  renderDayCell: highlightDate,
  value: new Date()
});
function highlightDate(args) {
  if (args.date.getDay() === 0 || args.date.getDay() === 6) {
    //set 'true' to disable the weekends
    args.element.classList.add('e-highlightweekend');
  }
}
calendar.appendTo('#element');

```

INDEX.HTML

Calendar views in ##Platform_Name## Calendar control

The Calendar has the following predefined views that provide a flexible way to navigate back and forth when selecting dates.

| View | Description |

| --- | --- |

| month (default) | Displays the days in a month. |

| year | Displays the months in a year. |

| decade | Displays the years in a decade. |

When view is defined to the [start](#) property of the Calendar, it allows you to set the initial view on rendering.

The following example demonstrates how to set the **year** as the start view of the Calendar.

INDEX.JS

```
ej.base.enableRipple(true);

var calendar = new ej.calendars.Calendar({
    //sets the start view.
    start: "Year",
    //sets the value.
    value: new Date()
});
calendar.appendTo('#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2 Calendar control</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <!--style reference from the Calendar component-->
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-base/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-buttons/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-calendars/styles/material.css" rel="stylesheet">
  <!--style reference from app-->
  <link href="styles.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <!--element which is going to render the Calendar-->
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
```

```

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

View restriction

Calendar view navigation can be restricted by defining the [start](#) and [depth](#) property that allows you to select the date from that view.

By defining the start and depth property with the different view, drill-down and drill-up views navigation can be limited to the user. Calendar views will be drill-down up to the view which is set in **depth** property and drill-up up to the view which is set in **start** property.

The following example displays the Calendar in **decade** view, and allows you to select a date in **month** view.

Depth view should always be smaller than the start view. If the views are the same, then the Calendar view remains unchanged.

INDEX.JS

```

ej.base.enableRipple(true);

var calendar = new ej.calendars.Calendar({
    //sets the start view.
    start: "Decade",
    //sets the depth view.
    depth: "Year"
});
calendar.appendTo('#element');

```

INDEX.HTML

```

Accessibility in ##Platform_Name## Calendar control

The Calendar component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Calendar component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2 Support](#) | |

| [Section 508 Support](#) | |

| [Screen Reader Support](#) | |

| [Right-To-Left Support](#) | |

| [Color Contrast](#) | |

| [Mobile Device Support](#) | |

| [Keyboard Navigation Support](#) | |

| [Accessibility Checker Validation](#) | |

| [Axe-core Accessibility Validation](#) | |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

```

}
</style>

<div> - All
features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The
component does not meet the requirement.</div>

```

WAI-ARIA attributes

The web accessibility makes web content and web applications more accessible for disabled people. It especially helps in dynamic content change and development of advanced user interface controls with AJAX, HTML, JavaScript, and related technologies.

Calendar provides built-in compliance with [WAI-ARIA](#) specifications. WAI-ARIA support is achieved through attributes like `aria-label`, `aria-selected`, `aria-disabled`, and `aria-activedescendant` applied for navigation buttons, disable and active day cells.

It helps disabled persons by providing the information about the widget for assistive technology in the screen readers. Calendar component contains grid role and grid cell for each day cell.

- **Aria-label:** This attribute provides text labels for an object for the previous and next month's elements. It helps the screen reader object to read.
- **Aria-selected:** Indicates the currently selected date of the Calendar component.
- **Aria-disabled:** Indicates the disabled state of the Calendar component.
- **Aria-activedescendant:** Helps in managing the current active child of the Calendar component.
- **Role:** Gives information to assistive technologies about how to handle each element in a widget.
- **Grid-cell:** Defines the individual cell that can be focused and selected.

Keyboard interaction

You can use the following keys to interact with the Calendar. This component implements keyboard navigation support by following the [WAI-ARIA practices](#).

It supports the following list of shortcut keys:

| Press | To do this |

| --- | --- |

| Upper Arrow | Focuses the same day of the previous week. |

| Down Arrow | Focuses the same day of the next week. |

| Left Arrow | Focuses the day before. |

| Right Arrow | Focuses the next day. |

| Home | Focuses the first day of the month. |

| End | Focuses the last day of the month. |

| Page Up | Focuses the same date of the previous month. |

- | Page Down | Focuses the same date of the next month. |
- | Enter | Selects the currently focused date. |
- | Shift + Page Up | Focuses the same date for the previous year. |
- | Shift + Page Down | Focuses the same date for the next year. |
- | Control + Upper Arrow | Moves to the inner level of view like month to year and year to decade. |
- | Control + Down Arrow | Moves out from the depth level view like decade to year and year to month. |
- | Control + Home | Focuses the first date of the current year. |
- | Control + End | Focuses the last date of the current year. |

To focus the Calendar component, use `alt+t` keys.

INDEX.JS

```
ej.base.enableRipple(true);

var calendar = new ej.calendars.Calendar({
});
document.onkeyup = function (e) {
  if (e.altKey && e.keyCode === 84) {
    // press alt+t to focus the control.
    calendar.element.querySelectorAll('.e-content table')[0].focus()
  }
}
calendar.appendTo('#element');
```

</body></html>

```

Ensuring accessibility

The Calendar component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Calendar component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Calendar component with accessibility tools.

Islamic calendar in ##Platform_Name## Calendar control

In addition to the Gregorian calendar, the calendar control supports displaying the Islamic calendar (Hijri calendar). **Islamic calendar** or **Hijri calendar** is a **lunar calendar** consisting of 12 months in a year of 354 or 355 days. To know more about Islamic calendar, please refer this [wikipedia](#).

Also, it consists of all Gregorian calendar functionalities as like min and max date, week number, start day of the week, multi selection, enable RTL, start and depth view, localization, highlight and customize the specific dates.

By default, calendar mode is in **Gregorian**. You can enable the Islamic mode by setting the **calendarMode** as **Islamic**. Also, need to import and injecting the **Islamic** module from **ej2-calendars** as shown below.

```

import { Islamic, Calendar } from '@syncfusion/ej2-calendars';\
Calendar.Inject(Islamic);

```

The following example demonstrates how to display the Islamic Calendar (Hijri Calendar).

INDEX.JS

```

ej.base.enableRipple(true);
var span;
var addClass = ej.base.addClass;
var calendar = new ej.calendars.Calendar({
    calendarMode: 'Islamic',
    renderDayCell: disableDate
});

```

```

calendar.appendTo('#element');
function disableDate(args) {
    /*Date need to be disabled*/
    if (args.date.getDate() === 2 || args.date.getDate() === 10 ||
args.date.getDate() === 28) {
        args.isDisabled = true;
    }
    if (args.date.getDate() === 13) {
        span = document.createElement('span');
        args.element.children[0].className += 'e-day sf-icon-cup
highlight';
        addClass([args.element], ['special', 'e-day', 'dinner']);
        args.element.setAttribute('data-val', ' Dinner !');
        args.element.appendChild(span);
    }
    if (args.date.getDate() === 23) {
        args.element.children[0].className += 'e-day sf-icon-start
highlight';
        span = document.createElement('span');
        span.setAttribute('class', 'sf-icons-star highlight');
        //use the imported method to add the multiple classes to the
given element
        addClass([args.element], ['special', 'e-day', 'holiday']);
        args.element.setAttribute('data-val', ' Holiday !');
        args.element.appendChild(span);
    }
}
}

```

Style appearance in ##Platform_Name## Calendar control

The following content provides the exact CSS structure that can be used to modify the control's appearance based on the user preference.

Customizing the background color for the Calendar

Use the following CSS to customize the background color and border for the Calendar.

```

,

/ To specify background color and border /

```

```

.e-calendar {
background-color: peachpuff;
border: 3px solid red;
}
,

```

Customizing the Calendar date elements on hovering

Use the following CSS to customize the date elements on hovering in the Calendar.

```

,

/ To specify background color, color, and border /

.e-calendar .e-content td:hover span.e-day, .e-calendar .e-content td:focus span.e-day, .e-bigger.e-small
.e-calendar .e-content td:hover span.e-day, .e-bigger.e-small .e-calendar .e-content td:focus span.e-day
{

```

```

background-color: red;
border: 2px solid;
color: #212529;
}
,

```

Customizing the border of date cell grid

Use the following CSS to add the border to the date cell grid.

```

,

/ To specify border /

```

```
.e-calendar .e-content span.e-day, .e-bigger.e-small .e-calendar .e-content span.e-day {  
border: 1px solid;  
}  
,
```

Customizing the Calendar title

Use the following CSS to customize the Calendar title.

```
,  
  
/ To specify color and font size /  
.e-calendar .e-header .e-title, .e-bigger.e-small .e-calendar .e-header .e-title {  
color: black;  
font-size: 20px;  
}  
,
```

Customizing the previous and next icon

Use the following CSS to customize the previous and next icon.

```
,  
  
/ To specify color and border /  
.e-calendar .e-header span, .e-bigger.e-small .e-calendar .e-header span {  
border: 1px solid;  
color: chocolate;  
}  
,
```

Customizing the footer button

Use the following CSS to customize the footer button.

```
,  
  
/ To specify background color, color, and border-color /  
.e-calendar .e-btn.e-today.e-flat.e-primary, .e-calendar .e-css.e-btn.e-today.e-flat.e-primary {  
background-color: red;  
border-color: black;  
color: black;  
}  
,
```

Customizing the selected date cell grid

Use the following CSS to customize the selected date cell grid in Calendar.

/ To specify background color and color /

```
.e-calendar .e-content td.e-focused-date.e-today span.e-day {
background-color: maroon;
color: #fff;
}
```

Customizing the content header in Calendar

Use the following CSS to customize the content header in Calendar.

/ To specify background /

```
.e-calendar .e-content thead, .e-bigger.e-small .e-calendar .e-content thead {
background: aquamarine;
}
```

How To

Set clear button in calendar in `##Platform_Name##` Calendar control

To configure `clear` button in Calendar UI, do the following:

1. To the `created` event of the Calendar, add the required elements to make clear button visible. In the following example, Essential JS 2 button component within `div` element is used.
2. When the `e-footer` class is used, the div tag acts as the footer.
3. Using these button, selected date can be cleared.
4. Bind the required event handler to the button tags to update the value.

Code example is as follows:

INDEX.JS

```
ej.base.enableRipple(true);
var calendar = new ej.calendars.Calendar({
  created: onCreate
});
function onCreate() {
  //creates the custom element for today button.
  var clearBtn = document.createElement('button');
  var footerElement = document.getElementsByClassName('e-footer-container')[0];
  clearBtn.className = 'e-btn e-clear e-flat';
  clearBtn.textContent = 'Clear';
  footerElement.prepend(clearBtn);
  this.element.appendChild(footerElement);
  // custom click handler to update the value property with null values.
```

```

    document.querySelector('.e-footer-container .e-
clear').addEventListener('click', function () {
    calendar.value = null;
    calendar.dataBind();
});
}
calendar.appendTo('#element');
document.getElementById('loader').style.display = "none";
document.getElementById('container').style.visibility = "visible";

```

INDEX.HTML

```

    <script src="index.js" type="text/javascript"></script>
</body></html>

```

Show dates of other months in ##Platform_Name## Calendar control

The following example demonstrates how to show dates of other months.

Using the styles below, you can bring the dates of other months to visibility from its hidden state.

,

```
.e-calendar .e-content tr.e-month-hide,
.e-calendar .e-content td.e-other-month>span.e-day {
display: block;
}

.e-calendar .e-content td.e-month-hide,
.e-calendar .e-content td.e-other-month {
pointer-events: auto;
touch-action: auto;
}
`
```

INDEX.JS

```
ej.base.enableRipple(true);

var calendar = new ej.calendars.Calendar({
});
calendar.appendTo('#element');
```

INDEX.HTML

```

Select a sequence of dates in calendar in ##Platform_Name## Calendar control

The following example demonstrates how to select the week dates of chosen date in the Calendar using [values](#) property, when [multiSelection](#) property is enabled. Methods of Moment.js is used in this sample for calculating the start and end of week from the selected date.

INDEX.JS

```

/*Initialize the calendar component*/
var calendar = new ej.calendars.Calendar({
    isMultiSelection: true,
    change: onChange
});
calendar.appendTo('#calendar');
/*selected current week dates when click the button*/
document.getElementById('workweek').addEventListener('click', function () {
    if (calendar.element.classList.contains('week')) {
        calendar.element.classList.remove('week');
    }
    calendar.element.classList.add('workweek');
});
/*selected current week dates when click the button*/
document.getElementById('week').addEventListener('click', function () {
    if (calendar.element.classList.contains('workweek')) {
        calendar.element.classList.remove('workweek');
    }
    calendar.element.classList.add('week');
});
function onChange(args) {
    var startOfWeek = moment(calendar.value).startOf('week');
    var endOfWeek = moment(calendar.value).endOf('week');
    if (calendar.element.classList.contains('workweek')) {
        getWeekArray(startOfWeek.day(1), endOfWeek.day(5));
    }
    else if (calendar.element.classList.contains("week")) {
        getWeekArray(startOfWeek, endOfWeek);
    }
}

```

```
function getWeekArray(startOfWeek, endOfWeek) {
    var days = [];
    var day = startOfWeek;
    while (day <= endOfWeek) {
        days.push(day.toDate());
        day = day.clone().add(1, 'd');
    }
    calendar.values = days;

Skip a month in calendar in ##Platform_Name## Calendar control

The following example demonstrates how to skip a month in the Calendar while clicking the previous and next icons. In the example below, the [navigated](#) event is used to skip a month with [navigateTo](#) method.

INDEX.JS

```
ej.base.enableRipple(true);

var calendar = new ej.calendars.Calendar({
  navigated: onNavigate
});
function onNavigate(args) {
  var date;
  if (args.event.currentTarget.classList.contains('e-next')) {
    //Increments the month while clicking the next icon.
    date = new Date(args.date.setMonth(args.date.getMonth() + 1));
  }
  if ((args.event.currentTarget).classList.contains('e-prev')) {
    //Decrements the month while clicking the previous icon.
    date = new Date(args.date.setMonth(args.date.getMonth() - 1));
  }
  if (args.view == 'month') {
    calendarObject.navigateTo('month', date);
  }
}

calendar.appendTo('#element');
```

Change the first day of week in ##Platform_Name## Calendar control

The Calendar provides an option to change the first day of the week by using the [firstDayOfWeek](#) property. Generally, the day of the week starts from 0 (Sunday) and ends with 6 (Saturday).

By default, the first day of the week is culture specific.

The following example shows the Calendar with **Tuesday** as the first day of the week.

INDEX.JS

```

ej.base.enableRipple(true);

var calendar = new ej.calendars.Calendar({
    //sets the first day of the week.
    firstDayOfWeek: 2
});
calendar.appendTo('#element');

```

```

Customize the calendar day header in **##Platform_Name##** Calendar control

You can change the format of the day that to be displayed in header using [dayHeaderFormat](#) property. By default, the format is **Short**.

You can find the possible formats on below.

Name	Description
----- -----	
Short	Sets the short format of day name (like Su) in day header.
Narrow	Sets the single character of day name (like S) in day header.
Abbreviated	Sets the min format of day name (like Sun) in day header.
Wide	Sets the long format of day name (like Sunday) in day header.

INDEX.JS

```

var calendarObject = new ej.calendars.Calendar({
    dayHeaderFormat: "Short"
});
calendarObject.appendTo('#element');
var formatLabel = new ej.dropdowns.DropDownList({
    // set the height of the popup element
    popupHeight: '200px',
    // bind the change event
    change: function(args) {
        calendarObject.dayHeaderFormat = args.value;
    }
});
formatLabel.appendTo('#select');

```

Card

Header content in ##Platform_Name## Card control

Header

The Card can be created with header title, sub title and images. For adding header you need to create div element with the class `e-card-header` added.

Card provides below elements and corresponding class definitions to include header.

Elements | Description

`e-card-header-caption` | To group the title and subtitle within the header which acts as wrapper.

e-card-header-title | Main title text with in the header.

e-card-sub-title | A sub-title within the header.

e-card-header-image | To include heading image within the header.

e-card-corner | To add rounded corner for the image.

Title and Subtitle

For adding header to the Card , you need to create wrapper **div** element with **e-card-header-caption** class.

- Place the **div** element with **e-card-header-title** class inside the header caption for adding main title.
- Place the **div** element with **e-card-sub-title** class inside the header caption element for adding sub-title.

Image

Card header has an option for adding images in the header. It is aligned with either before or after the header based on the HTML element positioned in the header structure.

- The header image can be added by creating a **div** element with **e-card-header-image** class which can be placed before or after the header caption wrapper element.

Card image in ##Platform_Name## Card control

Images

The Card supports to include images within the elements, you can add image as direct element anywhere inside card root by adding the `e-card-image` class to `div` element. Using the class defined, you can write CSS styles to load images to that element.

By default, card images occupies full width of its parent element.

,

```

<div class = "e-card">
<div class="e-card-image">
</div>
</div>

```

,

Title

Card image is supported to include a title or caption for the image. By default, Title is placed over the image on left-bottom position with overlay.

,

```

<div class = "e-card">
<div class="e-card-image">
<div class="e-card-title"></div>
</div>
</div>

```

,

Action buttons in ##Platform_Name## Card control

You can include Action buttons within the Card and customize them. Action button is a `div` element with `e-card-actions` class followed by button tag or anchor tag within the card root element.

- For adding action buttons you can create button or anchor tag with `e-card-btn` class within the card action element.

```

<div class = "e-card">
<div class="e-card-actions">
<button class="e-card-btn"></button>
<a href="#"></a>
</div>
</div>

```

Vertical

By default, action buttons positioned in horizontal alignment , and also it can be aligned to show in vertical alignment by adding `e-card-vertical` class.

```

<div class = "e-card">
<div class="e-card-actions e-card-vertical">
<button class="e-card-btn">More</button>
<a href="#">Share</a>
</div>
</div>

Horizontal in ##Platform_Name## Card control

By default, all the card elements are aligned vertically one after the other as in the DOM. You can achieve the element to align horizontally as well by adding the class `e-card-horizontal` in the root card element.

Stacked cards

- An horizontally aligned card can push a specific column to align vertical using `e-card-stacked` class. This will align the stacked section vertically aligned differentiating from horizontal layout.

Class | Description

`e-card-horizontal` | To align card elements horizontally.

`e-card-stacked` | To align elements vertically within the horizontal layout.

```
,
<div tabindex="0" class="e-card e-card-horizontal">
 --> Aligned in horizontal
<div class="e-card-stacked">      --> Aligned in horizontal
// Inside the element all are aligned vertical directions
</div>
</div>
,
```

Style in ##Platform_Name## Card control

The following content provides the exact CSS structure that can be used to modify the control's appearance based on user preference.

Customizing the card

Use the following CSS to customize the card properties.

```

,

.e-card {
background-color: aqua;
padding-left: 20px;
margin-bottom: 20px;
}
,

```

Customizing the Header element

Use the following CSS to customize the Header element properties.

```

,

.e-card .e-card-header {
font-family: cursive;
font-style: italic;
}
,

```

Customizing the card content

Use the following CSS to customize the card content properties.

```

,

.e-card .e-card-content {

```

```
font-size: 20px;
color: gray;
line-height: initial;
font-weight: normal;
}
`
```

Divider used to separate the elements inside the card

Use the following CSS to customize the Divider used to separate the elements inside the card properties.

```
`
.e-card .e-card-separator {
padding-bottom: 30px;
}
`
```

Including image within card element

Use the following CSS to Include image within card element.

```
`
.e-card .e-card-image {
background-image: url(images.png);
background-color: yellow;
height: 160px;
}
`
```

Including a title or caption for the image

Use the following CSS to Include a title or caption for the image.

```
`
.e-card .e-card-image .e-card-title {
font-family: cursive;
font-style: italic;
}
`
```

To include heading image within the header

Use the following CSS to Include heading image within the header.

```
`
.e-card .e-card-header .e-card-header-image {
```

```
height: 48px;
```

```
width: 48px;
```

```
}
```

```
,
```

Customizing the Header main title

Use the following CSS to Customize the Header main title.

```
,
```

```
.e-card .e-card-header .e-card-header-caption .e-card-header-title {
```

```
font-size: large;
```

```
color: aquamarine;
```

```
}
```

```
,
```

Customizing the Header subtitle

Use the following CSS to Customize the Header subtitle.

```
,
```

```
.e-card .e-card-header .e-card-header-caption .e-card-sub-title {
```

```
font-size: 20px;
```

```
font-variant: all-petite-caps;
```

```
}
```

```
,
```

Including action buttons or anchor tags

Use the following CSS to Include action buttons or anchor tags.

```
,
```

```
.e-card .e-card-actions .e-card-btn {
```

```
padding-left: 20px;
```

```
background-color: wheat;
```

```
}
```

```
,
```

To align card elements horizontally

Use the following CSS to align card elements horizontally.

```
,
```

```
.e-card .e-card-horizontal {
```

```
margin: auto;
```

```
width: inherit;
```

```
}
,
```

To align elements vertically within the horizontal layout

Use the following CSS to align elements vertically within the horizontal layout.

```
,
```

```
.e-card .e-card-horizontal .e-card-stacked {
```

```
justify-content: flex-start;
```

```
margin: initial;
```

```
}
```

```
,
```

How To

Customize the card image title position in ##Platform_Name## Card control

Card Image titles are placed as always Bottom-Left Corner only, You can manually customize to placing titles anywhere over the image by adding styles.

                                ele.style.visibility = "visible";
                                }
                                </script>
                                <script src="index.js" type="text/javascript"></script>
                                </body></html>

```

INDEX.JS

```

// initialize DropDownList component
let dropDownListObject = new ej.dropdowns.DropDownList({
    placeholder:"Select Position",
    change: changed,
});
// render initialized DropDownList
dropDownListObject.appendTo('#title_position');
function changed(e) {
    var cardEle = document.querySelector('.e-card');
    var titleEle = cardEle.querySelector('.e-card-image .e-card-title');
    titleEle.className = '';
    titleEle.classList.add('e-card-title');
    titleEle.classList.add('e-card-' + e.value);
}

```

Integrate other component inside the card in ##Platform_Name## Card control

You can integrate any component inside the card element. Here ListView component is placed inside the card for showcasing the To-Do list.

```

Carousel

Populating items in ##Platform_Name## Carousel control

In the Carousel, slides can be rendered in two ways as follows,

- Populating items using carousel item
- Populating items using data source

Populating items using carousel item

When rendering the Carousel component using items binding, you can assign templates for each item separately or assign a common template to each item. You can also customize the slide transition interval for each item separately. The following example code depicts the functionality as item property binding.

INDEX.JS

```

var carouselObj = new ej.navigations.Carousel({
  items: [
    { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },

```

```

    { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
  ]
});
carouselObj.appendTo('#carousel');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0,
user-scalable=no">
  <meta name="description" content="Essential JS 2">
  <meta name="author" content="Syncfusion">
  <link
href="https://cdn.jsdelivr.net/npm/bootstrap@5.1.3/dist/css/bootstrap.min.cs
s" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
buttons/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
navigations/styles/material.css" rel="stylesheet">

type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div class="control-section">
      <div class="control-container">
        <div id="carousel"></div>
      </div>
    </div>
  </div>

```

```

    </div>
</script>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Populating items using data source

When rendering the Carousel component using data binding, you can assign a common template only for all items using the `itemTemplate` property. You cannot set the interval for each item. The following example code depicts the functionality as data binding.

INDEX.JS

```

window.getImage = function (bird) {
    return
    `https://ej2.syncfusion.com/products/images/carousel/${bird}.png`;
};
var productItems = [
    { ID: 1, Name: "Cardinal", imageName: 'cardinal' },
    { ID: 2, Name: "Kingfisher", imageName: 'hunei' },
    { ID: 3, Name: "Keel-billed-toucan", imageName: 'costa-rica' },
    { ID: 4, Name: "Yellow-warbler", imageName: 'kaohsiung' },
    { ID: 5, Name: "Bee-eater", imageName: 'bee-eater' }
];
var carouselObj = new ej.navigations.Carousel({
    dataSource: productItems,
    itemTemplate: '<div class="fs-5"><figcaption class="img-
caption">${Name}</figcaption></div>'
});
carouselObj.appendTo('#carousel');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

        </div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Selection

The Carousel items will be populated from the first index of the Carousel items and can be customized using the following ways,

- Select an item using the property.
- Select an item using the method.

Select an item using the property

Using the [selectedIndex](#) property of the Carousel component, you can set the slide to be populated at the time of initial rendering else you can switch to the particular slide item.

INDEX.JS

```

var carouselObj = new ej.navigations.Carousel({
    items: [
        { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },

```

```

    { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
  ],
  selectedIndex: 3
});
carouselObj.appendTo('#carousel');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

</body></html>

```

Partial visible slides

The Carousel component supports to show one complete slide and a partial view of adjacent (previous and next) slides at the same time. You can enable or disable the partial slides using the [partialVisible](#) property.

INDEX.JS

```

var carouselObj = new ej.navigations.Carousel({
  items: [
    { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },

```

```

    { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
  ],
  partialVisible: true
});
carouselObj.appendTo('#carousel');

```

INDEX.HTML

```

    ele.style.visibility = "visible";
}

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Slide animation only applicable if the `partialVisible` is enabled.

The last slide will be displayed as a partial slide at the initial rendering when the `loop` and `partialVisible` properties are enabled.

The previous slide is not displayed at the initial rendering when the `loop` is disabled.

The following example code depicts the functionality of `partialVisible` and without `loop` functionalities.

INDEX.JS

```

var carouselObj = new ej.navigations.Carousel({
    items: [
        { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },

Navigators and indicators in ##Platform_Name## Carousel control

The navigators and indicators are used to transition the slides manually.

Navigators

Show or hide previous and next button

In navigators, the previous and next slide transition buttons are used to perform slide transitions manually. You can show/hide the navigators using the [buttonsVisibility](#) property. The possible property values are as follows:

- **Hidden** – the navigator's buttons are not visible.
- **Visible** – the navigator's buttons are visible.
- **VisibleOnHover** – the navigator's buttons are visible only when hovering over the carousel.

The following example depicts the code to show/hide the navigators in the carousel.

INDEX.JS

```
var carouselObj = new ej.navigations.Carousel({
  items: [
    { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
  ],
  buttonsVisibility: 'Visible'
});
carouselObj.appendTo('#carousel');
```

```

Indicators Types

Choose different types of indicators available using the [indicatorsType](#) property. The indicator types are categorized as follows:

- [Default Indicator](#)
- [Dynamic Indicator](#)
- [Fraction Indicator](#)
- [Progress Indicator](#)

Default Indicator

A default indicator in a carousel is a set of dots that indicate the current position of the slide in the carousel. The Default indicator can be achieved by setting the [indicatorsType](#) to **Default**.

INDEX.JS

```
var carouselObj = new ej.navigations.Carousel({
  items: [
    { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
  ],
  indicatorsType: "Default",
});
carouselObj.appendTo('#carousel');
```

```

Dynamic Indicator

A dynamic indicator in a carousel provides visual cues or markers that dynamically change or update to indicate the current position. The Dynamic indicator can be achieved by setting the [indicatorsType](#) to **Dynamic**.

INDEX.JS

```

var carouselObj = new ej.navigations.Carousel({
    items: [
        { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
    ],
    indicatorsType: "Dynamic",
});
carouselObj.appendTo('#carousel');
```

INDEX.HTML

```

Play button

Show or hide the play button

In the carousel, [autoPlay](#) actions have been controlled by using the [showPlayButton](#) property in the user interface. When you enable this property, the slide transitions are controlled using this play and pause button. The following example depicts the code to show the play button in the carousel.

INDEX.JS

```

var carouselObj = new ej.navigations.Carousel({
    items: [
        { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
    ],
    showPlayButton: true
});
carouselObj.appendTo('#carousel');

```

INDEX.HTML

}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Play button template

Template option is provided to customize the play button by using the [playButtonTemplate](#) property. The following example depicts the code for applying a template to play button in the carousel.

INDEX.JS

```

var carouselObj = new ej.navigations.Carousel({
    items: [
        { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
    ],
    showPlayButton: true,
    playButtonTemplate: '<div id="play"></div>'
});
carouselObj.appendTo('#carousel');
var button = new ej.buttons.Button({ cssClass: 'e-info', content: "Pause"
});
button.appendTo('#play');
button.element.onclick = function () {
    if (carouselObj.autoPlay) {
        button.content = "Play";
        carouselObj.autoPlay = false;
    } else {
        button.content = "Pause";
        carouselObj.autoPlay = true;
    }
}

```

```

    }
};

Animations and transitions in ##Platform_Name## Carousel control

Animations

Fade animation

In Carousel, two built-in animations are provided for slide transitions. You can disable animation using the [animationEffect](#) property. By default, Slide animation is applied for the transition between slides.

The following demo depicts the example for fade animation,

INDEX.JS

```
var carouselObj = new ej.navigations.Carousel({
  items: [
    { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
  ],
  animationEffect: 'Fade'
});
carouselObj.appendTo('#carousel');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0,

s" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
base/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
buttons/styles/material.css" rel="stylesheet">
  <link href="https://cdn.syncfusion.com/ej2/24.1.41/ej2-
navigations/styles/material.css" rel="stylesheet">
  <!--style reference from app-->
  <link href="styles.css" rel="stylesheet">
```

```

<!--system js reference and configuration-->

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div class="control-section">
            <div class="control-container">
                <div id="carousel"></div>
            </div>
        </div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Custom animation

In Carousel, you can use customized animation effects for slide transitions using the [Custom](#) option of the [animationEffect](#) property and apply custom animation css via [cssClass](#) property.

The following demo depicts the example for **parallax** custom animation,

INDEX.JS

```

var carouselObj = new ej.navigations.Carousel({
    items: [
        { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
    ]
});

```

```

    ],
    cssClass: 'parallax',
    animationEffect: 'Custom'
});
carouselObj.appendTo('#carousel');

```

INDEX.HTML

```

if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Intervals between slides

Using the items property, you can set different intervals for each item to transition between slides. The default interval is 5000 ms (5 seconds). The following example depicts the code for setting the different intervals between each item.

INDEX.JS

```
var carouselObj = new ej.navigations.Carousel({
  items: [
    { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>', interval: 3000 },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>', interval: 1000 },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>', interval:
2000 },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>', interval: 5000 },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>', interval: 6000 }
  ]
});
carouselObj.appendTo('#carousel');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0,

  <!--style reference from app-->
  <link href="styles.css" rel="stylesheet">
  <!--system js reference and configuration-->
```

```

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div class="control-section">
            <div class="control-container">
                <div id="carousel"></div>
            </div>
        </div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Note: Interval property can accept value in terms of milliseconds.

Auto play slides

In the carousel, all slides transitions are performed continuously after the specified or default intervals. You can enable or disable the auto slide transition using the [autoPlay](#) property. The following example depicts the code to enable or disable the auto slide transitions.

INDEX.JS

```

var carouselObj = new ej.navigations.Carousel({
    items: [
        { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
    ],

```

```

    autoPlay: true
  });
  carouselObj.appendTo('#carousel');

```

INDEX.HTML

```

  <!--system js reference and configuration-->

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div class="control-section">
      <div class="control-container">
        <div id="carousel"></div>
      </div>
    </div>
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Pause on hover

By default, Slide transitions are paused when hovering the mouse pointer over the Carousel element. You can enable or disable this functionality using the [pauseOnHover](#) property.

The following example depicts the code to play the slides when hovering the mouse pointer over the Carousel element.

INDEX.JS

```
var carouselObj = new ej.navigations.Carousel({
  items: [
    { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
  ],
  pauseOnHover: false
});
carouselObj.appendTo('#carousel');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>

if(ele) {
    ele.style.visibility = "visible";
}

</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Looping slides

In the carousel, slides transitions are repeated continuously when you reach the last slide by default. You can enable or disable the infinite slide transition using the [loop](#) property. The following example depicts the code to enable or disable the infinite slide transitions.

INDEX.JS

```

var carouselObj = new ej.navigations.Carousel({
    items: [
        { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
    ],
    loop: true
});
carouselObj.appendTo('#carousel');

```

<script src="index.js" type="text/javascript"></script>
</body></html>

```

Slide changing events

Using the [slideChanging](#) or [slideChanged](#) events of the Carousel component, you can perform sample end customization while the carousel items are switched.

The following demo depicts the example for carousel events,

INDEX.JS

```

var carouselObj = new ej.navigations.Carousel({

```

```

    items: [
      { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
      { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
      { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
      { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
      { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
    ],
    slideChanging: function (args) {
      args.currentSlide; // You can customize the slide before changing.
    },
    slideChanged: function (args) {
      args.currentSlide; // You can customize the slide after changed.
    }
  });
carouselObj.appendTo('#carousel');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2</title>

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Disable touch swiping

In the carousel, you can swipe the carousel slides using touch actions by default. The swipe action can be enabled or disabled using the [enableTouchSwipe](#) property. The following example depicts the code to disable the swipe action for the slide.

INDEX.JS

```

var carouselObj = new ej.navigations.Carousel({
    items: [
        { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
        { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
    ],
    enableTouchSwipe: false
});
carouselObj.appendTo('#carousel');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>Essential JS 2</title>

      </div>
    </div>
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Swipe Modes

In the carousel, the [swipeMode](#) property allows specifying whether the slide transition should occur while performing swiping via touch or mouse. The slide swiping is enabled or disabled using the bitwise operator.

The following are the different swipe modes available in the carousel:

- CarouselSwipeMode.Touch - Allows the user to slide the slides using touch actions.
- CarouselSwipeMode.Mouse - Allows the user to slide the slides using mouse actions.

- CarouselSwipeMode.Touch & CarouselSwipeMode.Mouse - Allows the user to slide the slides using both touch and mouse actions.
- ~CarouselSwipeMode.Touch & ~CarouselSwipeMode.Mouse - Disables both touch and mouse actions.

INDEX.JS

```
var carouselObj = new ej.navigations.Carousel({
  items: [
    { template: '<figure class="img-container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' },
    { template: '<figure class="img-container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' }
  ],
  swipeMode: ej.navigations.CarouselSwipeMode.Mouse &
ej.navigations.CarouselSwipeMode.Touch
});
carouselObj.appendTo('#carousel');
```

Accessibility in ##Platform_Name## Carousel control

The accessibility compliance for the Carousel control is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

| [Section 508](#) Support | |

| Screen Reader Support | |

| Right-To-Left Support | |

| Color Contrast | |

| Mobile Device Support | |

| Keyboard Navigation Support | |

| [Accessibility Checker](#) Validation | |

| [Axe-core](#) Accessibility Validation | |

```
<style>
.post .post-content img {
display: inline-block;
margin: 0.5em 0;
}
</style>

<div> - All
features of the control meet the requirement.</div>

<div> - Some features of the control do not meet the requirement.</div>

<div> - The
control does not meet the requirement.</div>
```

ARIA attributes

The Carousel control is designed by considering [WAI-ARIA](#) standard. Carousel is supported with ARIA Accessibility which is accessible by on-screen readers and other assistive technology devices. The following list of attributes is added to the Carousel.

| Roles and Attributes | Functionalities

----- -----	

aria-roledescription	The role description attribute has been added for the root element (carousel) and each carousel slide item (slide).
aria-label	Previous, next and play/pause buttons and all indicator elements.
aria-current	For the active item indicator element, <code>aria-current</code> is set to <code>true</code> .
aria-hidden	For all carousel elements except the currently visible item, <code>aria-hidden</code> is set to <code>true</code> .
aria-live	For carousel items element, when <code>autoPlay</code> is <code>true</code> , <code>aria-live</code> is set to <code>off</code> ; when <code>autoPlay</code> is <code>false</code> , <code>aria-live</code> is set to <code>polite</code> .
aria-role	For carousel slide item, <code>aria-role</code> has been grouped.

Keyboard interaction

By default, keyboard navigation is enabled. This control implements keyboard navigation support by following the WAI-ARIA practices. Once focused on the active Carousel element, you can use the following key combination for interacting with the Carousel.

Key	Description
-----	-----

Alt + J	Keys to focus the Carousel control (done at application end).	
Arrows	Keys to navigate between slides.	
Home	To navigate to the first slide.	
End	To navigate to the last slide.	
Space	To play/pause the slide transitions.	
Enter	To perform the respective action on its focus.	
Tab	To Move focus through the interactive elements.	
Shift + Tab	To Move focus through the interactive elements.	

Ensuring accessibility

The Carousel control accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Carousel control is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Carousel control with accessibility tools.

- [Accessibility in Syncfusion components](#)

Styles and appearance in ##Platform_Name## Carousel control

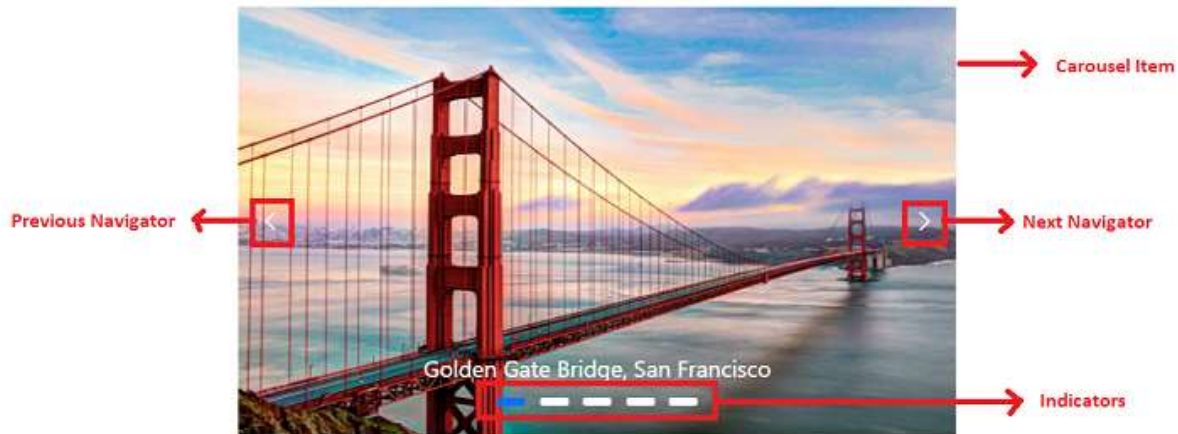

To modify the Carousel appearance, you need to override the default CSS of Carousel component. Please find the list of CSS classes and its corresponding section in Carousel component. Also, you have an option to create your own custom theme for the controls using our [Theme Studio](#).

CSS Structure in JavaScript Carousel Control

The following content provides the exact CSS structure that can be used to modify the control's appearance based on user preference.

CSS Class | Purpose of Class

.e-carousel .e-carousel-item	To customize the carousel item
.e-carousel-item.e-active	To customize the active carousel item
.e-carousel .e-carousel-indicators	To customize the indicators
.e-carousel .e-carousel-indicators .e-indicator-bars .e-indicator-bar	To customize the indicator bars
.e-carousel .e-carousel-indicators .e-indicator-bars .e-indicator-bar .e-indicator	To customize the individual indicator appearance
.e-carousel .e-carousel-navigators	To customize the navigators
.e-carousel .e-carousel-navigators .e-previous	To customize the previous button
.e-carousel .e-carousel-navigators .e-next	To customize the next button
.e-carousel .e-carousel-navigators .e-play-pause	To customize the play and pause button
.e-carousel.e-partial .e-carousel-slide-container	To customize the partial visible slides

Customizing the indicators

Use the following CSS to customize the space between indicators by overriding the `.e-indicator-bar` CSS class.

```
`css
.e-carousel .e-carousel-indicators .e-indicator-bars .e-indicator-bar {
padding: 8px;
}
```

Use the following CSS to customize the indicators appearance by overriding the `.e-indicator` CSS class.

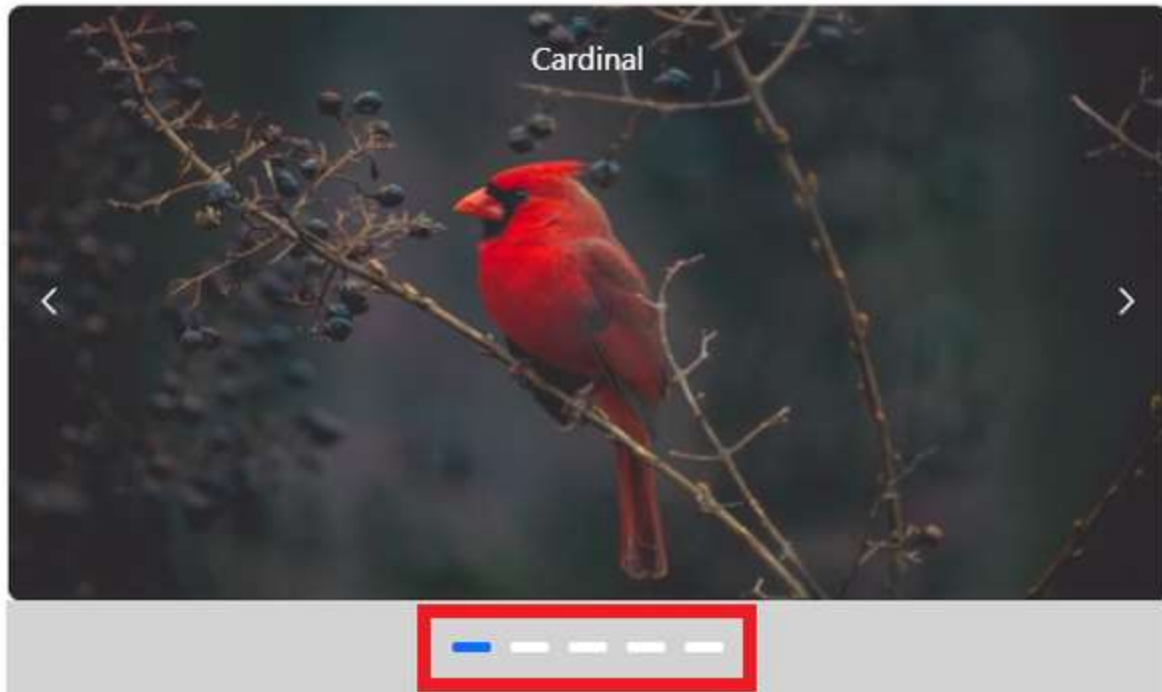

```
`css
```

```
.e-carousel .e-carousel-indicators .e-indicator-bars .e-indicator-bar .e-indicator {  
width: 20px;  
border-radius: 100%;  
}  
`css
```

Use the following CSS to render the indicators outside the carousel items by overriding the `.e-carousel-indicators` CSS class.

```
`css  
.e-carousel .e-carousel-indicators {  
bottom: auto;  
}  
`css
```

Customizing the navigators

Use the following CSS to customize the previous and next icon size and colors.

```
`css
```

```
.e-carousel .e-carousel-navigators .e-next .e-btn:not(:disabled) .e-btn-icon,  
.e-carousel .e-carousel-navigators .e-previous .e-btn:not(:disabled) .e-btn-icon  
{  
  color: greenyellow;  
  font-size: 25px;  
}
```

Use the following CSS to customize the navigators position to bottom by overriding the `.e-carousel-navigators` CSS class.

```
`css
.e-carousel .e-carousel-navigators {
top: 120px;
}
`
```

Use the following CSS to render the previous and next icon to outside the carousel items by overriding the `.e-previous` and `.e-next` CSS class.

```
`css
.e-carousel .e-carousel-navigators .e-previous,
.e-carousel .e-carousel-navigators .e-next
{
margin: -60px;
background: black;
}
`
```

Customizing partial slides size

You can customize the partial slide size by overriding the `.e-carousel-slide-container` CSS class.

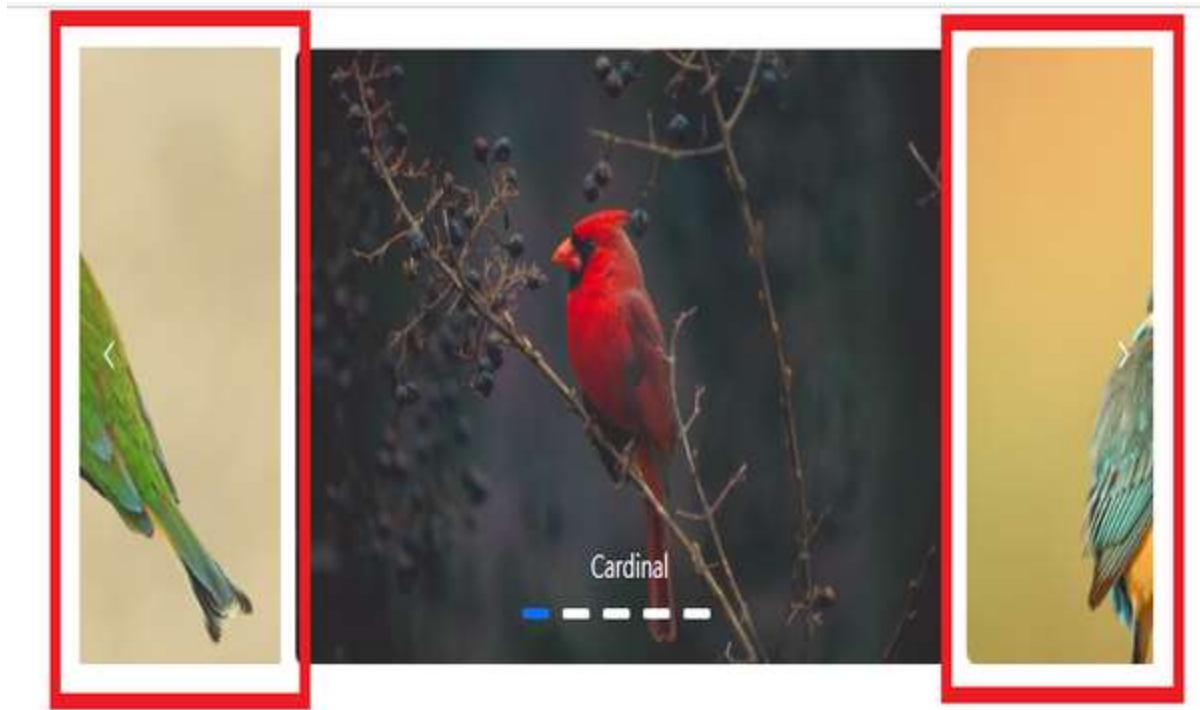

```
`css
```

```
.e-carousel.e-partial .e-carousel-slide-container{
```

```
padding: 0 150px;
```

```
}
```

```
`
```

Chart

<!-- markdownlint-disable MD036 -->

Working with data in ##Platform_Name## Chart control

Chart can visualise data bound from local or remote data.

Local Data

You can bind a simple JSON data to the chart using [dataSource](#) property in series. Now map the fields in JSON to [xName](#) and [yName](#) properties.

INDEX.JS

```
var chartData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Category'
  },
  series: [{
    dataSource: chartData,
    xName: 'month',
    yName: 'sales',
    type: 'Column'
  }]
}, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Remote Data

You can also bind remote data to the chart using DataManager. The **DataManager** requires minimal information like webservice URL, adaptor and crossDomain to interact with service endpoint properly. Assign the instance of DataManager to the [dataSource](#) property in series and map the fields of data to [xName](#) and

[yName](#) properties. You can also use the [query](#) property of the series to filter the data.

INDEX.JS

```

var dataManager = new ej.data.DataManager({
  url: 'https://services.syncfusion.com/js/production/api/orders'
});
var query = new ej.data.Query().take(5).where('Estimate', 'lessThan', 3,
false);
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Category'
  },
  primaryYAxis:
  {
    title: 'Freight rate in U.S. dollars'
  },
  series: [

```

```

        {
            type: 'Column',
            dataSource: dataManager,
            xName: 'CustomerID', yName: 'Freight', query: query
        }
    ],
    title: 'Container freight rate'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

    <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
    type="text/javascript"></script>
    <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
    ="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
    <script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
    </script>
    <script src="index.js" type="text/javascript"></script>
</body></html>

```

Binding Data Using ODataAdaptor

OData is a standardized protocol for creating and consuming data. You can retrieve data from OData service using the DataManager. Refer to the following code example for remote Data binding using OData service.

INDEX.JS

```

var query = new ej.data.Query();
var data = new ej.data.DataManager({
    url: 'https://services.syncfusion.com/js/production/api/orders',
    adaptor: new ej.data.ODataAdaptor()
});
var chart = new ej.charts.Chart({
    //Initializing Primary X Axis
    primaryXAxis: {
        valueType: 'Category',

```

```

    },
    //Initializing Chart Sample
    series: [
        {

```

Lazy loading

Lazy loading allows you to load data for chart on demand. Chart will fire the scrollEnd event, in that we can get the minimum and maximum range of the axis, based on this, we can upload the data to chart.

INDEX.JS

```

var intl = new ej.base.Internationalization();
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Day',
    valueType: 'DateTime',
    edgeLabelPlacement: 'Shift',
    skeleton: 'yMMM',

```

```

        skeletonType: 'Date',
        scrollbarSettings: {
            range: {
                minimum: new Date(2009, 0, 1),
                maximum: new Date(2014, 0, 1)
            },
            enable: true,
        }
    },
    primaryYAxis: {
        title: 'Server Load',
        labelFormat: '{value}MB'
    },
    series: [{
        dataSource: GetDateTimeData(new Date(2009, 0, 1), new Date(2009, 8,
1)),
        xName: 'x', yName: 'y',
        type: 'Line', animation: { enable: false },
    }],
    height: '450',
    title: 'Network Load',
    crosshair: { enable: true, lineType: 'Vertical' },
    tooltip: { enable: true, shared: true },
    legendSettings: { visible: true },
    scrollEnd: function (args) {
        if (lazymode.value === 'Range') {
            chart.series[0].dataSource =
GetDateTimeData(args.currentRange.minimum, args.currentRange.maximum);
        }
        chart.dataBind();
    },
}, '#element');

```

Empty points

The Data points that uses the `null` or `undefined` as value are considered as empty points. Empty data points are ignored and not plotted in the Chart. When the data is provided by using the points property, By using `emptyPointSettings` property in series, you can customize the empty point. Default `mode` of the empty point is `Gap`.

INDEX.JS

```

var chartData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: null }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: undefined },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Category'
  }
});

```

```

    },
    series:[{
        dataSource: chartData,

```

Chart dimensions in ##Platform_Name## Chart control

Size for Container

Chart can render to its container size. You can set the size via inline or CSS as demonstrated below.

```

<div id='container'>

<div id='element' style="width:650px; height:350px;"></div>

</div>

```

INDEX.JS

```

var chartData = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        valueType: 'Category'
    },
    series:[{
        dataSource: chartData,
        xName: 'month',
        yName: 'sales',
        type: 'Line'
    }],
    // Width and height for chart in pixel
    width: '650', height: '350'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">

```

```

<meta name="viewport" content="width=device-width, initial-scale=1.0">

<script src="index.js" type="text/javascript"></script>
</body></html>

```

<!-- markdownlint-disable MD036 -->

Size for Chart

<!-- markdownlint-disable MD036 -->

You can also set size for chart directly through [width](#) and [height](#) properties.

In Pixel

You can set the size of chart in pixel as demonstrated below.

INDEX.JS

```

var chartData = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        valueType: 'Category'
    },
    series:[{
        dataSource: chartData,
        xName: 'month',
        yName: 'sales',
        type: 'Line'
    }],
    // Width and height for chart in pixel

```

```
width: '650', height: '350'
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

In Percentage

By setting value in percentage, chart gets its dimension with respect to its container. For example, when the height is '50%', chart renders to half of the container height.

INDEX.JS

```
var chartData = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Category'
  },
  series:[{
    dataSource: chartData,
    xName: 'month',
    yName: 'sales',
```

```

        type: 'Line'
    }],
    // Width and height for chart in percentage
    width: '80%', height: '90%'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Note: When you do not specify the size, it takes 450px as the height and window size as its width.

Category axis in ##Platform_Name## Chart control

<!-- markdownlint-disable MD036 -->

Category axis are used to represent, the string values instead of numbers.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },
  { country: "Germany", gold: 40, silver: 30, bronze: 22 },
  { country: "Italy", gold: 40, silver: 35, bronze: 37 },
  { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart = new ej.charts.Chart({

```

```

primaryXAxis: {
    //Category in primary X Axis
    valueType: 'Category',
    title: 'Countries'
},
primaryYAxis: {
    minimum: 0, maximum: 80,
    interval: 20, title: 'Medals'
},
series:[{
    dataSource: chartData,
    xName: 'country', yName: 'gold',
    name: 'Gold', type: 'Column'
}, {
    dataSource: chartData,
    xName: 'country', yName: 'silver',
    name: 'Silver', type: 'Column'
}, {
    dataSource: chartData,
    xName: 'country', yName: 'bronze',
    name: 'Bronze', type: 'Column'
}],
title: 'Olympic Medals'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Note: To use category axis, we need to inject `Category` module using `Chart.Inject(Category)` method and set the `valueType` of axis to `Category`.

Labels Placement

By default, category labels are placed between the ticks in an axis, this can also be placed on ticks using `[labelPlacement](../api/chart/axis/)` property.

INDEX.JS

```
var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },
  { country: "Germany", gold: 40, silver: 30, bronze: 22 },
  { country: "Italy", gold: 40, silver: 35, bronze: 37 },
  { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Category',
    // label placement as on ticks
    labelPlacement: 'OnTicks',
    title: 'Countries'
  },
  primaryYAxis: {
    minimum: 0, maximum: 80,
    interval: 20, title: 'Medals'
  },
  series:[{
    dataSource: chartData,
    xName: 'country', yName: 'gold',
    name: 'Gold', type: 'Column'
  }, {
    dataSource: chartData,
    xName: 'country', yName: 'silver',
    name: 'Silver', type: 'Column'
  }, {
    dataSource: chartData,
    xName: 'country', yName: 'bronze',
    name: 'Bronze', type: 'Column'
  }],
  title: 'Olympic Medals'
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>

Indexed category axis

Category axis also can be rendered based on the index values of data source. This can be achieved by defining the `isIndexed` property to `true` in the axis.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },

```

Range

Range of an axis, will be calculated automatically based on the provided data, you can also customize the range of the axis using [minimum](#), [maximum](#) and [interval](#) property of the axis.

INDEX.JS

```

var chartData = [
  { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 },
  { x: 4, y: 14 }, { x: 5, y: 1 }, { x: 6, y: 10 },
  { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 },
  { x: 10, y: 10 }, { x: 11, y: 16 }, { x: 12, y: 6 },
  { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 },
  { x: 16, y: 2 }, { x: 17, y: 14 }, { x: 18, y: 7 },
  { x: 19, y: 7 }, { x: 20, y: 10 }];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Double',
    // Numeric axis range
    minimum: 1,
    maximum: 20,
    interval: 5,
    title: 'Overs'
  },
  primaryYAxis: {
    title: 'Runs',
    minimum: 0,
    maximum: 20,
    interval: 10
  },
  series: [{
    dataSource: chartData,
    xName: 'x', yName: 'y',
    name: 'England', type: 'Area'
  }],
  title: 'England - Run Rate'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Range Padding

Padding can be applied to the minimum and maximum extremes of an axis range by using the [rangePadding](#) property. Numeric axis supports the following types of padding.

- None
- Round
- Additional
- Normal
- Auto

Numeric - None

When the [rangePadding](#) is set to **None**, minimum and maximum of the axis is based on the data.

INDEX.JS

```

var chartData = [
    { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 },
    { x: 4, y: 14 }, { x: 5, y: 1 }, { x: 6, y: 10 },
    { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 },
    { x: 10, y: 10 }, { x: 11, y: 16 }, { x: 12, y: 6 },
    { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 },
    { x: 16, y: 2 }, { x: 17, y: 14 }, { x: 18, y: 7 },
    { x: 19, y: 7 }, { x: 20, y: 10 }];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        valueType: 'Double',
        title: 'Overs'
    },
    primaryYAxis: {
        valueType: 'Double',
        title: 'Runs',
        //RangePadding as none in Y Axis
        rangePadding: 'None'
    },
    series:[{
        dataSource: chartData,

```

```

        xName: 'x', yName: 'y', width: 3,
        name: 'England', type: 'Line'
    }},
    title: 'England - Run Rate'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>

if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Numeric - Round

When the [rangePadding](#) is set to **Round**, minimum and maximum will be rounded to the nearest possible value, which is divisible by interval. For example, when the minimum is 3.5 and the interval is 1, then the minimum will be rounded to 3.

INDEX.JS

```

var chartData = [
  { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 },
  { x: 4, y: 14 }, { x: 5, y: 1 }, { x: 6, y: 10 },
  { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 },
  { x: 10, y: 10 }, { x: 11, y: 16 }, { x: 12, y: 6 },
  { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 },
  { x: 16, y: 2 }, { x: 17, y: 14 }, { x: 18, y: 7 },
  { x: 19, y: 7 }, { x: 20, y: 10 }];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Double',
    title: 'Overs'
  }
});

```

```

    },
    primaryYAxis: {
        valueType: 'Double',
        title: 'Runs',
        //RangePadding as round in Y Axis
        rangePadding: 'Round'
    },
    series:[{
        dataSource: chartData,
        xName: 'x', yName: 'y', width: 3,
        name: 'England', type: 'Line'
    }],
    title: 'England - Run Rate'
}, '#element');

```

INDEX.HTML

```

<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

The following table describes the result of applying some commonly used label formats on numeric values.

<!-- markdownlint-disable MD033 -->

Label Value	Label Format property value	Result	Description
1000	n1	1000.0	The Number is rounded to 1 decimal place
1000	n2	1000.00	The Number is rounded to 2 decimal place
1000	n3	1000.000	The Number is rounded to 3 decimal place
0.01	p1	1.0%	The Number is converted to percentage with 1 decimal place
0.01	p2	1.00%	The Number is converted to percentage with 2 decimal place
0.01	p3	1.000%	The Number is converted to percentage with 3 decimal place

1000	c1	\$1000.0	The Currency symbol is appended to number and number is rounded to 1 decimal place
1000	c2	\$1000.00	The Currency symbol is appended to number and number is rounded to 2 decimal place

GroupingSeparator

To separate groups of thousands, use [useGroupingSeparator](#) property in chart.

INDEX.JS

```
var chart = new ej.charts.Chart({
  series: [{
    dataSource: numericData,
    xName: 'x', yName: 'y',
    type: 'Column'
  }],
  useGroupingSeparator: true
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Custom Label Format

Axis also supports custom label format using placeholder like {value}°C, in which the value represent the axis label e.g 20°C.

INDEX.JS

```

var chartData = [
    { country: "USA", gold: 50, silver: 70, bronze: 45 },
    { country: "China", gold: 40, silver: 60, bronze: 55 },
    { country: "Japan", gold: 70, silver: 60, bronze: 50 },
    { country: "Australia", gold: 60, silver: 56, bronze: 40 },
    { country: "France", gold: 50, silver: 45, bronze: 35 },
    { country: "Germany", gold: 40, silver: 30, bronze: 22 },
    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart= new ej.charts.Chart({
    primaryXAxis: {
        valueType: 'Category',
        title: 'Countries'
    },
    primaryYAxis: {
        minimum: 0, maximum: 80,
        interval: 20, title: 'Medals',
        // Custom label format
        labelFormat: '${value}K'
    },
    series:[{
        dataSource: chartData,
        xName: 'country', yName: 'gold',
        name: 'Gold', type: 'Column'
    }, {
        dataSource: chartData,
        xName: 'country', yName: 'silver',
        name: 'Silver', type: 'Column'
    }, {
        dataSource: chartData,
        xName: 'country', yName: 'bronze',
        name: 'Bronze', type: 'Column'
    }],
    title: 'Olympic Medals'
}, '#element');

```

<!-- markdownlint-disable MD036 -->

Date time axis in ##Platform_Name## Chart control

DateTime Axis

Date time axis uses date time scale and displays the date time values as axis labels in the specified format.

INDEX.JS

```

var chartData = [
  { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
  { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
  { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    // Date time scale in primary X Axis
    valueType: 'DateTime',
    title: 'Sales Across Years',
    labelFormat: 'yMMM'
  },
  primaryYAxis: {
    title: 'Sales Amount in millions(USD)'
  },
  series:[{
    dataSource: chartData,
    xName: 'x', yName: 'y',
    name: 'Sales', type: 'Line'
  }],
  title: 'Average Sales Comparison'
}, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

```

```

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Note: To use datetime axis, we need to inject DateTime using `Chart.Inject(DateTime)` method and set the [valueType](#) of axis to DateTime.

DateTimeCategory Axis

Date-time category axis is used to display the date-time values with non-linear intervals. For example, the business days alone have been depicted in a week here.

INDEX.JS

```

var chartData = [
    { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
    { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
    { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        // Date time scale in primary X Axis
        valueType: 'DateTime',
        title: 'Sales Across Years',
        labelFormat: 'yMMM'
    },
    primaryYAxis: {
        title: 'Sales Amount in millions(USD)'
    },
    series:[{
        dataSource: chartData,
        xName: 'x', yName: 'y',
        name: 'Sales', type: 'Line'
    }],
    title: 'Average Sales Comparison'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

```

```

<title>EJ2 Animation</title>
<meta charset="utf-8">
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<meta name="description" content="Typescript UI Controls">
<meta name="author" content="Syncfusion">
<link href="index.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Note: To use `dateTimeCategory` axis, we need to inject `DateTimeCategory` using `Chart.Inject(DateTimeCategory)` method and set the [valueType](#) of axis to `DateTimeCategory`.

Range

Range of an axis will be calculated automatically based on the provided data, you can also customize the range of the axis using [minimum](#), [maximum](#) and [interval](#) property

of the axis.

INDEX.JS

```

var chartData = [
    { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
    { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
    { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        // Date time range in primary X Axis
        valueType: 'DateTime',
        title: 'Sales Across Years',
        labelFormat: 'yMMM',
        minimum: new Date(2000, 6, 1),
        maximum: new Date(2010, 6, 1)
    },
    primaryYAxis: {
        title: 'Sales Amount in millions(USD)'
    },
    series:[{

```

```

        dataSource: chartData,
        xName: 'x', yName: 'y',
        name: 'Sales', type: 'Line'
    }],
    title: 'Average Sales Comparison'
}, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Interval Customization

Date time intervals can be customized by using the [interval](#) and [intervalType](#) properties of the axis. For example, when you set interval as 2 and intervalType as years, it considers 2 years as interval. Datetime axis supports following interval types,

- Auto
- Years
- Months
- Days
- Hours
- Minutes
- Seconds

INDEX.JS

```
var chartData = [
```

```

    { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
    { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
    { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
  ];
  var chart = new ej.charts.Chart({
    primaryXAxis: {
      valueType: 'DateTime',
      title: 'Sales Across Years',
      labelFormat: 'yMMM',
      minimum: new Date(2000, 6, 1),
      maximum: new Date(2010, 6, 1),
      interval: 2,
      //interval type as years in primary x axis
      intervalType: 'Years'
    },
    primaryYAxis: {
      title: 'Sales Amount in millions(USD)'
    },
    series:[{
      dataSource: chartData,
      xName: 'x', yName: 'y',
      name: 'Sales', type: 'Line'
    }],
    title: 'Average Sales Comparison'
  }, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
  var ele = document.getElementById('container');
  if(ele) {
    ele.style.visibility = "visible";
  }
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Applying Padding to the Range

Padding can be applied to the minimum and maximum extremes of the range by using the [rangePadding](#) property. Date time axis supports the following types of padding,

- None
- Round
- Additional

Datetime - None

When the [rangePadding](#) is set to **None**, minimum and maximum of an axis is based on the data.

INDEX.JS

```
var chartData = [
  { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
  { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
  { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'DateTime',
    title: 'Sales Across Years',
    labelFormat: 'yMMM',
    //Range padding as none
    rangePadding: 'None'
  },
  primaryYAxis: {
    title: 'Sales Amount in millions(USD)'
  },
  series:[{
    dataSource: chartData,
    xName: 'x', yName: 'y',
    name: 'Sales', type: 'Line'
  }],
  title: 'Average Sales Comparison'
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>
```

```

<div id="container">
  <div id="element"></div>
</div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Datetime - Round

When the [rangePadding](#) is set to **Round**, minimum and maximum will be rounded to the nearest possible value, which is divisible by interval. For example, when the minimum is 15th Jan, interval is 1 and the interval type is 'month', then the axis minimum will be Jan 1st.

INDEX.JS

```

var chartData = [
  { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
  { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
  { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'DateTime',
    title: 'Sales Across Years',
    labelFormat: 'yMMM',
    //Range padding as round
    rangePadding: 'Round'
  },
  primaryYAxis: {
    title: 'Sales Amount in millions(USD)'
  },
  series:[{
    dataSource: chartData,
    xName: 'x', yName: 'y',
    name: 'Sales', type: 'Line'
  }],
  title: 'Average Sales Comparison'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Datetime - Additional

When the [rangePadding](#) is set to **Additional**, interval of an axis will be padded to the minimum and maximum of the axis.

INDEX.JS

```

var chartData = [
    { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
    { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
    { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
];
var chart= new ej.charts.Chart({
    primaryXAxis: {
        valueType: 'DateTime',
        title: 'Sales Across Years',
        labelFormat: 'yMMM',
        //Range padding as additional
        rangePadding: 'Additional'
    },
    primaryYAxis: {
        title: 'Sales Amount in millions(USD)'
    },
    series:[{
        dataSource: chartData,
        xName: 'x', yName: 'y',
        name: 'Sales', type: 'Line'
    }],
    title: 'Average Sales Comparison'
}, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>

```

Label Format

You can format and parse the date to all globalize format using [labelFormat](#) property in an axis.

INDEX.JS

```

var chartData = [
    { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
    { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
    { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        valueType: 'DateTime',
        title: 'Sales Across Years',
        //Label format as yMd
        labelFormat: 'yMd'
    },
    primaryYAxis: {
        title: 'Sales Amount in millions(USD)'
    },
    series:[{
        dataSource: chartData,
        xName: 'x', yName: 'y',
        name: 'Sales', type: 'Line'
    }],
    title: 'Average Sales Comparison'
}, '#element');

```

INDEX.HTML

```

```

The following table describes the result of applying some common date time formats to the **labelFormat** property

<!-- markdownlint-disable MD033 -->

Label Value	Label Format Property Value	Result	Description
new Date(2000, 03, 10)	EEEE	Monday	The Date is displayed in day format
new Date(2000, 03, 10)	yMd	04/10/2000	The Date is displayed in month/date/year format
new Date(2000, 03, 10)	MMM	Apr	The Shorthand month for the date is displayed
new Date(2000, 03, 10)	hm	12:00 AM	Time of the date value is displayed as label
new Date(2000, 03, 10)	hms	12:00:00 AM	The Label is displayed in hours:minutes:seconds format

Custom Label Format

Axis also supports custom label format using placeholder like {value}°C, in which the value represent the axis label e.g 20°C.

INDEX.JS

```
var chartData = [
```

```

    { country: "USA", gold: 50, silver: 70, bronze: 45 },
    { country: "China", gold: 40, silver: 60, bronze: 55 },
    { country: "Japan", gold: 70, silver: 60, bronze: 50 },
    { country: "Australia", gold: 60, silver: 56, bronze: 40 },
    { country: "France", gold: 50, silver: 45, bronze: 35 },
    { country: "Germany", gold: 40, silver: 30, bronze: 22 },
    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart= new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Category',
    title: 'Countries'
  },
  primaryYAxis: {
    minimum: 0, maximum: 80,
    interval: 20, title: 'Medals',
    // Custom label format
    labelFormat: '${value}K'
  },
  series:[{
    dataSource: chartData,
    xName: 'country', yName: 'gold',
    name: 'Gold', type: 'Column'
  }, {
    dataSource: chartData,
    xName: 'country', yName: 'silver',
    name: 'Silver', type: 'Column'
  }, {
    dataSource: chartData,
    xName: 'country', yName: 'bronze',
    name: 'Bronze', type: 'Column'
  }],
  title: 'Olympic Medals'
}, '#element');
```

Logarithmic axis in ##Platform_Name## Chart control

<!-- markdownlint-disable MD033 -->

Logarithmic axis uses logarithmic scale and it is very useful in visualizing data, when it has numerical values in both lower order of magnitude (eg: 10⁻⁶) and higher order of magnitude (eg: 10⁶).

INDEX.JS

```

var chartData= [
    { x: new Date(1995, 0, 1), y: 80 }, { x: new Date(1996, 0, 1), y: 200 },
    { x: new Date(1997, 0, 1), y: 400 }, { x: new Date(1998, 0, 1), y: 600
},
    { x: new Date(1999, 0, 1), y: 700 }, { x: new Date(2000, 0, 1), y: 1400
},
    { x: new Date(2001, 0, 1), y: 2000 }, { x: new Date(2002, 0, 1), y: 4000
},
    { x: new Date(2003, 0, 1), y: 6000 }, { x: new Date(2004, 0, 1), y: 8000
},
    { x: new Date(2005, 0, 1), y: 11000 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        valueType: 'DateTime',
        title: 'Years',
        labelFormat: 'y'
    },
    primaryYAxis: {
        // Logarithmic scale in primary X Axis
        valueType: 'Logarithmic',
        title: 'Profit'
    },
    series:[{
        dataSource: chartData,
        xName: 'x', yName: 'y',
        name: 'Product X', type: 'Line'
    }],
    title: 'Product X Growth [1995-2005]'
}, '#element');

```

<script src="index.js" type="text/javascript"></script>
</body></html>

```

Note: To use log axis, we need to inject **Logarithmic** using method **Chart.Inject(Logarithmic)** and set the **valueType** of axis to **Logarithmic**.

Range

Range of an axis, will be calculated automatically based on the provided data, you can also customize the range of an axis using **minimum**, **maximum** and **interval** property of the axis.

INDEX.JS

```

var chartData = [
    { x: new Date(1995, 0, 1), y: 80 }, { x: new Date(1996, 0, 1), y: 200 },
    { x: new Date(1997, 0, 1), y: 400 }, { x: new Date(1998, 0, 1), y: 600
},
    { x: new Date(1999, 0, 1), y: 700 }, { x: new Date(2000, 0, 1), y: 1400
},
    { x: new Date(2001, 0, 1), y: 2000 }, { x: new Date(2002, 0, 1), y: 4000
},
    { x: new Date(2003, 0, 1), y: 6000 }, { x: new Date(2004, 0, 1), y: 8000
},
    { x: new Date(2005, 0, 1), y: 11000 }
];
var chart= new ej.charts.Chart({
    primaryXAxis: {
        valueType: 'DateTime',
        title: 'Years',
        labelFormat: 'y'
    },
    primaryYAxis: {
        //Logarithmic scale range in primary X Axis
        valueType: 'Logarithmic',
        title: 'Profit',

```

```

        minimum: 100,
        maximum: 10000
    },
    series:[{
        dataSource: chartData,
        xName: 'x', yName: 'y',
        name: 'Product X', type: 'Line'
    }],
    title: 'Product X Growth [1995-2005]'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Logarithmic Base

Logarithmic base can be customized by using the [logBase](#) property of the axis. For example when the logBase is 5, the axis values follows 5^{-2} , 5^{-1} , 5^0 , 5^1 , 5^2 etc.

INDEX.JS

```

var chartData= [
  { x: new Date(1995, 0, 1), y: 80 }, { x: new Date(1996, 0, 1), y: 200 },
  { x: new Date(1997, 0, 1), y: 400 }, { x: new Date(1998, 0, 1), y: 600
},
  { x: new Date(1999, 0, 1), y: 700 }, { x: new Date(2000, 0, 1), y: 1400
},

```

```

    { x: new Date(2001, 0, 1), y: 2000 }, { x: new Date(2002, 0, 1), y: 4000
  },
  { x: new Date(2003, 0, 1), y: 6000 }, { x: new Date(2004, 0, 1), y: 8000
  },
  { x: new Date(2005, 0, 1), y: 11000 }
];
let chart= new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'DateTime',
    title: 'Years',
    labelFormat: 'y'
  },
  primaryYAxis: {
    valueType: 'Logarithmic',
    title: 'Profit',
    // logBase for logarithmic scale
    logBase: 2
  },
  series:[{
    dataSource: chartData,
    xName: 'x', yName: 'y',
    name: 'Product X', type: 'Line'
  }],
  title: 'Product X Growth [1995-2005]'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type

if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Logarithmic Interval

Logarithmic axis interval can be customized by using the [interval](#) property of the axis. When the logarithmic base is 10 and logarithmic interval is 2, then the axis labels are placed at an interval of 10^2 . The default value of the interval is 1.

INDEX.JS

```
var chartData = [
  { x: new Date(1995, 0, 1), y: 80 }, { x: new Date(1996, 0, 1), y: 200 },
  { x: new Date(1997, 0, 1), y: 400 }, { x: new Date(1998, 0, 1), y: 600 },

Axis labels in ##Platform_Name## Chart control

Smart Axis Labels

When the axis labels overlap with each other, you can use [labelIntersectAction](#) property in the axis, to place them smartly.

When setting `labelIntersectAction` as `Hide`

INDEX.JS

```

var chartData = [
  { x: "South Korea", y: 39.4 }, { x: "India", y: 61.3 }, { x: "Pakistan", y: 20.4 },
  { x: "Germany", y: 65.1 }, { x: "Australia", y: 15.8 }, { x: "Italy", y: 29.2 },
  { x: "United Kingdom", y: 44.6 }, { x: "Saudi Arabia", y: 9.7 }, { x: "Russia", y: 40.8 },
  { x: "Mexico", y: 31 }, { x: "Brazil", y: 75.9 }, { x: "China", y: 51.4 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Countries',
    valueType: 'Category',
    //label intersect as hide
    labelIntersectAction: 'Hide'
  },

  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
<script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Multilevel Labels

Any number of levels of labels can be added to an axis using the `multiLevelLabels` property. This property can be configured using the following properties:

- Categories
- Overflow
- Alignment
- Text style
- Border

Note: To use multilevel label feature, we need to inject `MultiLevelLabel` using `Chart.Inject(MultiLevelLabel)` method.

Categories

Using the categories property, you can configure the `start`, `end`, `text`, and `maximumTextWidth` of multilevel labels.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },

```

```

    { country: "Australia", gold: 60, silver: 56, bronze: 40 },
    { country: "France", gold: 50, silver: 45, bronze: 35 },
    { country: "Germany", gold: 40, silver: 30, bronze: 22 },
    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
  ];
  var chart = new ej.charts.Chart({
    primaryXAxis: {
      valueType: 'Category',
      // label placement as on ticks
      labelPlacement: 'OnTicks',
      title: 'Countries'
    },
    primaryYAxis: {
      minimum: 0, maximum: 80,
      interval: 20, title: 'Medals'
    },
    series:[{
      dataSource: chartData,
      xName: 'country', yName: 'gold',
      name: 'Gold', type: 'Column'
    }, {
      dataSource: chartData,
      xName: 'country', yName: 'silver',
      name: 'Silver', type: 'Column'
    }, {
      dataSource: chartData,
      xName: 'country', yName: 'bronze',
      name: 'Bronze', type: 'Column'
    }],
    title: 'Olympic Medals'
  }, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Edge Label Placement

Labels with long text at the edges of an axis may appear partially in the chart. To avoid this, use [edgeLabelPlacement](#) property in axis, which moves the label inside the chart area for better appearance or hides it.

INDEX.JS

```

var chartData = [
    { country: "USA", gold: 50, silver: 70, bronze: 45 },
    { country: "China", gold: 40, silver: 60, bronze: 55 },
    { country: "Japan", gold: 70, silver: 60, bronze: 50 },
    { country: "Australia", gold: 60, silver: 56, bronze: 40 },
    { country: "France", gold: 50, silver: 45, bronze: 35 },
    { country: "Germany", gold: 40, silver: 30, bronze: 22 },
    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        valueType: 'Category',
        // label placement as on ticks
        labelPlacement: 'OnTicks',
        title: 'Countries'
    },
    primaryYAxis: {
        minimum: 0, maximum: 80,
        interval: 20, title: 'Medals'
    },
    series:[{
        dataSource: chartData,
        xName: 'country', yName: 'gold',
        name: 'Gold', type: 'Column'
    }, {
        dataSource: chartData,
        xName: 'country', yName: 'silver',

```

```

        name: 'Silver', type: 'Column'
    }, {
        dataSource: chartData,
        xName: 'country', yName: 'bronze',
        name: 'Bronze', type: 'Column'
    }],
    title: 'Olympic Medals'
}, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Sorting

The chart's data source can be sorted using the `sort` method of chart. The arguments that are required to pass to sort method are data of chart. The fields depend on which sorting is performed either `x` or `y`, and the `isDescending` with which data source values are sorted in either `ascending` or `descending`.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },
  { country: "Germany", gold: 40, silver: 30, bronze: 22 },
  { country: "Italy", gold: 40, silver: 35, bronze: 37 },
  { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
]
```

```

];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Category',
    // label placement as on ticks
    labelPlacement: 'OnTicks',
    title: 'Countries'
  },
  primaryYAxis: {
    minimum: 0, maximum: 80,
    interval: 20, title: 'Medals'
  },
  series:[{
    dataSource: chartData,
    xName: 'country', yName: 'gold',
    name: 'Gold', type: 'Column'
  }, {
    dataSource: chartData,
    xName: 'country', yName: 'silver',
    name: 'Silver', type: 'Column'
  }, {
    dataSource: chartData,
    xName: 'country', yName: 'bronze',
    name: 'Bronze', type: 'Column'
  }],
  title: 'Olympic Medals'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

  </script>
<script src="index.js" type="text/javascript"></script>

```

```
</body></html>
```

Labels Customization

Border of the axis labels can be customized using `width`, `color` and `typr` property of the axis.

INDEX.JS

```
var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },
  { country: "Germany", gold: 40, silver: 30, bronze: 22 },
  { country: "Italy", gold: 40, silver: 35, bronze: 37 },
  { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Category',
    // label placement as on ticks
    labelPlacement: 'OnTicks',
    title: 'Countries'
  },
  primaryYAxis: {
    minimum: 0, maximum: 80,
    interval: 20, title: 'Medals'
  },
  series:[{
    dataSource: chartData,
    xName: 'country', yName: 'gold',
    name: 'Gold', type: 'Column'
  }, {
    dataSource: chartData,
    xName: 'country', yName: 'silver',
    name: 'Silver', type: 'Column'
  }, {
    dataSource: chartData,
    xName: 'country', yName: 'bronze',
    name: 'Bronze', type: 'Column'
  }],
  title: 'Olympic Medals'
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">
```

```

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"

="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Customizing Specific Point

You can customize the specific text in the axis labels using `axisLabelRender` event.

INDEX.JS

```

var chartData = [
    { country: "USA", gold: 50, silver: 70, bronze: 45 },
    { country: "China", gold: 40, silver: 60, bronze: 55 },
    { country: "Japan", gold: 70, silver: 60, bronze: 50 },
    { country: "Australia", gold: 60, silver: 56, bronze: 40 },
    { country: "France", gold: 50, silver: 45, bronze: 35 },
    { country: "Germany", gold: 40, silver: 30, bronze: 22 },
    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        valueType: 'Category',
        // label placement as on ticks
        labelPlacement: 'OnTicks',
        title: 'Countries'
    },
    primaryYAxis: {
        minimum: 0, maximum: 80,
        interval: 20, title: 'Medals'
    },
    series:[{
        dataSource: chartData,
        xName: 'country', yName: 'gold',
        name: 'Gold', type: 'Column'
    }, {
        dataSource: chartData,
        xName: 'country', yName: 'silver',
        name: 'Silver', type: 'Column'
    }, {
        dataSource: chartData,
        xName: 'country', yName: 'bronze',

```

```

        name: 'Bronze', type: 'Column'
    }],
    title: 'Olympic Medals'
}, '#element');
```

INDEX.HTML

Line break support

Line break feature used to customize the long axis label text into multiple lines by using tag. Refer the below example in that dataSource x value contains long text, it breaks into two lines by using `
` tag.

INDEX.JS

```

var chart = new ej.charts.Chart({
  //Initializing Primary X Axis
  primaryXAxis: {
    title: 'Country',
    valueType: 'Category',
    majorGridLines: { width: 0 },
    enableTrim: false
  },
  //Initializing Primary Y Axis
  primaryYAxis: {
    minimum: 0,
    maximum: 800,
    labelFormat: '{value}M',
  },
});
```

```

series: [
  {
    type: 'Bar', tooltipMappingName: 'country',
    dataSource: [
      { x: 'Germany', y: 72, country: 'GER: 72' },
      { x: 'Russia', y: 103.1, country: 'RUS: 103.1' },
      { x: 'Brazil', y: 139.1, country: 'BRZ: 139.1' },
      { x: 'India', y: 462.1, country: 'IND: 462.1' },
      { x: 'China', y: 721.4, country: 'CHN: 721.4' },

Maximum Labels

MaximumLabels property is set, then the labels will be rendered based on the count in the property per 100 pixel. If you have set range (minimum, maximum, interval) and maximumLabels, then the priority goes to range only. If you haven't set the range, then we have considered priority to maximumLabels property.

INDEX.JS

```

var chart = new ej.charts.Chart({
    //Initializing Primary X Axis
    primaryXAxis: {
        title: 'Country',

```

Axis customization in ##Platform_Name## Chart control

Axis Crossing

An axis can be positioned in the chart area using `crossesAt` and `crossesInAxis` properties. The `crossesAt` property specifies the values (datetime, numeric, or logarithmic) at which the axis line has to be intersected with the vertical axis or vice-versa, and the `crossesInAxis` property specifies the axis name with which the axis line has to be crossed.

INDEX.JS

```

var chartData = [

```

```

    { country: "USA", gold: 50, silver: 70, bronze: 45 },
    { country: "China", gold: 40, silver: 60, bronze: 55 },
    { country: "Japan", gold: 70, silver: 60, bronze: 50 },
    { country: "Australia", gold: 60, silver: 56, bronze: 40 },
    { country: "France", gold: 50, silver: 45, bronze: 35 },
    { country: "Germany", gold: 40, silver: 30, bronze: 22 },
    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Category',
    // label placement as on ticks
    labelPlacement: 'OnTicks',
    title: 'Countries'
  },
  primaryYAxis: {
    minimum: 0, maximum: 80,
    interval: 20, title: 'Medals'
  },
  series:[{
    dataSource: chartData,
    xName: 'country', yName: 'gold',
    name: 'Gold', type: 'Column'
  }, {
    dataSource: chartData,
    xName: 'country', yName: 'silver',
    name: 'Silver', type: 'Column'
  }, {
    dataSource: chartData,
    xName: 'country', yName: 'bronze',
    name: 'Bronze', type: 'Column'
  }],
  title: 'Olympic Medals'
}, '#element');
```

INDEX.HTML

Inversed Axis

<!-- markdownlint-disable MD033 -->

When an axis is inversed, highest value of the axis comes closer to origin and vice versa. To place an axis in inversed manner set this property

[isInversed](#) to true.

INDEX.JS

```

var chart = new ej.charts.Chart({
    //Initializing Primary X Axis
    primaryXAxis: {
        valueType: 'Category',
        title: 'Years',
        opposedPosition: true,
        isInversed: true
    },
    //Initializing Primary Y Axis
    primaryYAxis: {
        title: 'Exchange rate (INR per USD)',
        edgeLabelPlacement: 'Shift',
        labelIntersectAction: 'Rotate45',
        isInversed: true
    },
    series: [
        {
            type: 'Column',
            dataSource: [
                { x: 2008, y: 15.1 }, { x: 2009, y: 16 }, { x: 2010, y:
21.4 },
                { x: 2011, y: 18 }, { x: 2012, y: 16.2 }, { x: 2013, y:
11 },
                { x: 2014, y: 7.6 }, { x: 2015, y: 1.5 }
            ],
            marker: { dataLabel: { visible: true } },
            xName: 'x',
            yName: 'y', name: 'Years',
        },
    ],
    title: 'Exchange rate',
}, '#element');

```

<!-- markdownlint-disable MD036 -->

Strip line in ##Platform_Name## Chart control

<!-- markdownlint-disable MD036 -->

EJ2 chart supports horizontal and vertical strip lines and customization of stripline in both orientation. To use strip line in axis, we need to inject `StripLine` module using `Chart.Inject(StripLine)` method

Horizontal Strip lines

You can create Horizontal stripline by adding the `stripline` in the vertical axis and set `visible` option to true. Striplines are rendered in the specified start to end range and you can add more than one stripline for an axis.

INDEX.JS

```

var chartData = [
    {x: 1, y: 20}, {x: 2, y: 22}, {x: 3, y: 0}, {x: 4, y: 12}, {x: 5, y: 5},
    {x: 6, y: 15}, {x: 7, y: 6}, {x: 8, y: 12}, {x: 9, y: 20}, {x: 10, y: 7},
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        title: 'Overs'
    },
    primaryYAxis: {
        title: 'Runs',
        stripLines:[
            { start: 15, end: 22, text: 'Good', color: '#ff512f', visible:
true, zIndex: 'Behind', opacity: 0.5 },
            { start: 8, end: 15, text: 'Medium', color: 'pink', opacity:
0.5, visible: true, zIndex: 'Behind' },
            { start: 0, end: 8, text: 'Not enough', color: 'skyblue',
opacity: 0.5, visible: true, zIndex: 'Behind' }]
        },
    series:[{
        dataSource: chartData,
        xName: 'x', yName: 'y',
        type: 'Column',
        marker: { dataLabel: { visible: true}}
    }],
    title: 'India Vs Australia 1st match',
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>

```

```
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Vertical Striplines

You can create vertical stripline by adding the `stripline` in the horizontal axis and set `visible` option to `true`. Striplines are rendered in the specified start to end range and you can add more than one stripline for an axis.

INDEX.JS

```
var chartData = [
  {x: 1, y: 20}, {x: 2, y: 22}, {x: 3, y: 0}, {x: 4, y: 12}, {x: 5, y: 5},
  {x: 6, y: 15}, {x: 7, y: 6}, {x: 8, y: 12}, {x: 9, y: 34}, {x: 10, y: 7},
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Overs',
    stripLines: [
      {start: 0, end: 5, text: 'powerplay 1', color: 'red', visible:
true, opacity: 0.5, rotation: 45, textStyle: { size: 20, color: 'black' }},
      {start: 5, end: 10, text: 'powerplay 2', color: 'blue', visible:
true, opacity: 0.5, rotation: 45, textStyle: { size: 20, color: 'black' }},
    ]
  },
  primaryYAxis: {
    title: 'Runs'
  },
  series: [{
    dataSource: chartData,
    xName: 'x', yName: 'y',
    type: 'Column',
    marker: { dataLabel: { visible: true } }
  }],
  title: 'India Vs Australia 1st match',
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

  <div id="container">
```

```

        <div id="element"></div>
    </div>
</script>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Customize the strip line

Starting value in specific strip line can be customized by **start** property in strip line. Similarly, ending value is customized by **end**. It can be also set for starting from the corresponding origin of the axis by **startFromOrigin**. Size of the strip line is customized by **size**. Border for the stripline is customized by **border**. Order of the strip line such that whether it should be rendered in behind or over the series elements is customized by **zIndex**.

INDEX.JS

```

var chartData = [
    {x: 1, y: 20}, {x: 2, y: 22}, {x: 3, y: 0}, {x: 4, y: 12}, {x: 5, y: 5},
    {x: 6, y: 15}, {x: 7, y: 6}, {x: 8, y: 12}, {x: 9, y: 34}, {x: 10, y: 7},
];
var chart= new ej.charts.Chart({
    primaryXAxis: {
        title: 'Overs',
        stripLines:[
            { startFromOrigin: true, size: 4, zIndex: 'Behind', opacity:
0.5}
        ]
    },
    primaryYAxis: {
        title: 'Runs'
    },
    series:[{
        dataSource: chartData,
        xName: 'x', yName: 'y',
        type: 'Column',
        marker: { dataLabel:{ visible: true }}
    }],
    title: 'India Vs Australia 1st match',
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta name="description" content="Typescript UI Controls">
    <meta name="author" content="Syncfusion">
    <link href="index.css" rel="stylesheet">

```

```

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>

if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Customize the stripline text

You can customize the text rendered in stripline by `textStyle` property. Rotation of the strip line text can be changed by `rotation` property.

Horizontal and Vertical alignment of stripline text can be changed by `horizontalAlignment` and `verticalAlignment` property.

INDEX.JS

```

var chartData = [
    {x: 1, y: 20}, {x: 2, y: 22}, {x: 3, y: 0}, {x: 4, y: 12}, {x: 5, y: 5},
    {x: 6, y: 15}, {x: 7, y: 6}, {x: 8, y: 12}, {x: 9, y: 34}, {x: 10, y: 7},
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        title: 'Overs',
        stripLines: [
            { startFromOrigin: true, size: 4, zIndex: 'Behind', opacity:
0.5, text: 'Good', verticalAlignment: 'Middle', horizontalAlignment:
'Middle', rotation: 90, textStyle: { size: 15 } },
            { start: 5, end: 8, verticalAlignment: 'Start',
horizontalAlignment: 'End', rotation: 45, text: 'Poor' }
        ]
    },
    primaryYAxis: {
        title: 'Runs'
    },
    series: [{
        dataSource: chartData,
        xName: 'x', yName: 'y',
        type: 'Column',
        marker: { visible: true }
    }],
    title: 'India Vs Australia 1st match',
}, '#element');

See Also

- [Mark the threshold in chart](#)

Multiple panes in ##Platform_Name## Chart control

Chart area can be divided into multiple panes using [rows](#) and [columns](#).

Rows

To split the chart area vertically into number of rows, use [rows](#) property of the chart.

- You can allocate space for each row by using the [height](#) property. The value can be either percentage or in pixel.
- To associate a vertical axis to a particular row, specify its index to [rowIndex](#) property of the axis.
- To customize each row's bottom line, use [border](#) property.

```

Columns

To split the chart area horizontally into number of columns, use [columns](#) property of the chart.

- You can allocate space for each column by using the [width](#) property. The given width can be either

percentage or in pixel.

- To associate a horizontal axis to a particular column, specify its index to [columnIndex](#) property of the axis.
- To customize each column's bottom line, use [border](#) property.

INDEX.JS

```
var chartData = [
  { x: 'Jan', y: 15, y1: 33 }, { x: 'Feb', y: 20, y1: 31 }, { x: 'Mar', y:
35, y1: 30 },
  { x: 'Apr', y: 40, y1: 28 }, { x: 'May', y: 80, y1: 29 }, { x: 'Jun', y:
70, y1: 30 },
  { x: 'Jul', y: 65, y1: 33 }, { x: 'Aug', y: 55, y1: 32 }, { x: 'Sep', y:
50, y1: 34 },
  { x: 'Oct', y: 30, y1: 32 }, { x: 'Nov', y: 35, y1: 32 }, { x: 'Dec', y:
35, y1: 31 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Category',
    interval: 1
  },
  primaryYAxis: {
    minimum: 0, maximum: 90, interval: 10,
    lineStyle: { width: 0 },
    title: 'Temperature (Fahrenheit)',
    labelFormat: '{value}°F'
  },
  // Columns for chart axis
  columns: [
    {
      width: '50%'
    }, {
      width: '50%'
    }
  ],
  axes: [
    {
      majorGridLines: { width: 0 },
      columnIndex: 1,
      valueType: 'Category',
      lineStyle: { width: 0 },
      name: 'xAxis'
    }
  ],
  series: [{
    dataSource: chartData,
```

```

        xName: 'x', yName: 'y',
        name: 'Germany', type: 'Column'
    }, {
        dataSource: chartData, width: 2,
        xName: 'x', yName: 'y1', xAxisName: 'xAxis',

Chart Types

Line Chart in ##Platform_Name## control

Line

To render a line series, use series [type](#) as `Line` and inject `LineSeries` module using `Chart.Inject(LineSeries)` method.

INDEX.JS

```

var chartData = [
    { x: 2005, y: 28 }, { x: 2006, y: 25 }, { x: 2007, y: 26 }, { x: 2008, y:
27 },
    { x: 2009, y: 32 }, { x: 2010, y: 35 }, { x: 2011, y: 30 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        title: 'Year',
        minimum: 2004, maximum: 2012, interval: 1
    },
    primaryYAxis: {
        minimum: 20, maximum: 40, interval: 5,
        title: 'Efficiency',
        labelFormat: '{value}%'
    },
    series:[{
        dataSource: chartData, width:2,
        xName: 'x', yName: 'y',
        name: 'India',
        //Series type as line
        type: 'Line'
    }],
    title: 'Efficiency of oil-fired power production'
}, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
    <title>EJ2 Animation</title>

```

```

<meta charset="utf-8">
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<meta name="description" content="Typescript UI Controls">
<meta name="author" content="Syncfusion">
<link href="index.css" rel="stylesheet">

<script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
type="text/javascript"></script>
<script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
="text/javascript"></script>
</head>
<body>

    <div id="container">
        <div id="element"></div>
    </div>
<script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Multicolored line

To render a multicolored line series, use the series type as `MultiColoredLine`, and inject the `MultiColoredLineSeries` module using `Chart.Inject(MultiColoredLineSeries)` method. Here, the individual colors to the data can be mapped by using `pointColorMapping`.

INDEX.JS

```

var chartData = [
    { x: 2005, y: 28 }, { x: 2006, y: 25 }, { x: 2007, y: 26 }, { x: 2008, y:
27 },
    { x: 2009, y: 32 }, { x: 2010, y: 35 }, { x: 2011, y: 30 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        title: 'Year',
        minimum: 2004, maximum: 2012, interval: 1
    },
    primaryYAxis: {
        minimum: 20, maximum: 40, interval: 5,
        title: 'Efficiency',
        labelFormat: '{value}%'
    },
    series:[{
        dataSource: chartData, width:2,
        xName: 'x', yName: 'y',
        name: 'India',
        //Series type as line
        type: 'Line'
    }],
    title: 'Efficiency of oil-fired power production'

```

```
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">

  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Series customization

The following properties can be used to customize the **line** series.

- [fill](#) – Specifies the color of the series.
- [opacity](#) – Specifies the opacity of [fill](#).
- [dashArray](#) – Specifies the dashes for series.
- [width](#) – Specifies the width for series.

INDEX.JS

```
var chartData = [
  { x: 2005, y: 28 }, { x: 2006, y: 25 }, { x: 2007, y: 26 }, { x: 2008, y:
27 },
  { x: 2009, y: 32 }, { x: 2010, y: 35 }, { x: 2011, y: 30 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Year',
    minimum: 2004, maximum: 2012, interval: 1
  },
  primaryYAxis: {
    minimum: 20, maximum: 40, interval: 5,
```

```

        title: 'Efficiency',
        labelFormat: '{value}%'
    },
    series:[{
        dataSource: chartData,
        //fill for chart series
        fill: 'red',
        //line width as 4 for chart series
        width:4,
        //dash array value as 5,5
        dashArray: '5,5',
        xName: 'x', yName: 'y',
        name: 'India', type: 'Line'
    }],
    title: 'Efficiency of oil-fired power production'
}, '#element');

```

Range area Chart in ##Platform_Name## control

Range area

To render a range area series, use series [type](#) as `RangeArea` and inject `RangeAreaSeries` module using `Chart.Inject(RangeAreaSeries)` method.

Since the `RangeArea` series requires two y values for a point, you have to add the high and low value. High and Low value specifies the maximum and minimum range of the points.

INDEX.JS

```

var series= [];
var value = 70;
var point;
for (var i = 1; i < 70; i++) {
    if (Math.random() > .5) {
        value += Math.random();
    } else {
        value -= Math.random();
    }
    point = { x: new Date(1930 + i, 5, i), high: value, low: value - 14 };
    series.push(point);
}
var chart = new ej.charts.Chart({
    primaryXAxis: {
        title: 'Month',
        valueType: 'DateTime',
        edgeLabelPlacement: 'Shift',

Stack column Chart in ##Platform_Name## control

Stacked column

To render a stacked column series, use series [type](#) as `StackingColumn` and inject `StackingColumnSeries` module using `Chart.Inject(StackingColumnSeries)` method.

INDEX.JS

```

var chartData = [
  { x: '2014', y: 111.1, y1: 76.9, y2: 66.1, y3: 34.1 },
  { x: '2015', y: 127.3, y1: 99.5, y2: 79.3, y3: 38.2 },
  { x: '2016', y: 143.4, y1: 121.7, y2: 91.3, y3: 44.0 },
  { x: '2017', y: 159.9, y1: 142.5, y2: 102.4, y3: 51.6 },
  { x: '2018', y: 175.4, y1: 166.7, y2: 112.9, y3: 61.9 },
  { x: '2019', y: 189.0, y1: 182.9, y2: 122.4, y3: 71.5 },
  { x: '2020', y: 202.7, y1: 197.3, y2: 120.9, y3: 82.0 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Years',
    interval: 1,
    valueType: 'Category'
  },
  primaryYAxis: {
    title: 'Sales in Billions',
    minimum: 0,
    maximum: 700,
    interval: 100,
    labelFormat: '{value}B',
  },
  series: [

100% Cylindrical stacked column chart

To render a 100% cylindrical stacked column chart, set the [columnFacet](#) property to **Cylinder** in the chart series.

INDEX.JS

```

var cylindricalData = [
  { x: new Date(2006, 0, 1), y: 900, y1: 190, y2: 250, y3: 150 },
  { x: new Date(2007, 0, 1), y: 544, y1: 226, y2: 145, y3: 120 },
  { x: new Date(2008, 0, 1), y: 880, y1: 194, y2: 190, y3: 115 },
  { x: new Date(2009, 0, 1), y: 675, y1: 250, y2: 220, y3: 125 },
  { x: new Date(2010, 0, 1), y: 765, y1: 222, y2: 225, y3: 132 },
  { x: new Date(2011, 0, 1), y: 679, y1: 181, y2: 135, y3: 137 },
  { x: new Date(2012, 0, 1), y: 770, y1: 128, y2: 152, y3: 110 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Years',
    interval: 1,
    valueType: 'DateTime',
    labelFormat: 'y'
  },
  primaryYAxis: {
    {
      title: 'GDP (%) Per Annum',
      rangePadding: 'None',
      labelFormat: '{value}%',
    },
    //Series type as 100% stacked column series with cylindrical shape
    series: [
      {
        dataSource: cylindricalData, xName: 'x', yName: 'y',
        type: 'StackingColumn100', columnFacet: 'Cylinder', name: 'UK'
      },
      {
        dataSource: cylindricalData, xName: 'x', yName: 'y1',

Polar Chart in ##Platform_Name## control

Polar Chart

To render a polar series, use series [type](#) as **Polar** and inject **PolarSeries** module using **Chart.Inject(PolarSeries)** method.

Draw Types

Polar drawType property is used to change the series plotting type to line, column, area, range column, spline, scatter, stacking area and stacking column. The default value of drawType is **Line**.

Line

To render a line draw type, use series [drawType](#) as **Line** and inject **LineSeries** module using **Chart.Inject(LineSeries)** method.

[isClosed](#) property specifies whether to join start and end point of a line series used in polar chart to form a closed path. Default value of isClosed is true.

INDEX.JS

```
var chartData = [
    { x: 2005, y: 28 }, { x: 2006, y: 25 }, { x: 2007, y: 26 }, { x: 2008, y:
27 },
    { x: 2009, y: 32 }, { x: 2010, y: 35 }, { x: 2011, y: 30 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        title: 'Year',
        minimum: 2004, maximum: 2012, interval: 1
    },
    primaryYAxis: {
        minimum: 20, maximum: 40, interval: 5,
        title: 'Efficiency',
        labelFormat: '{value}%'
    },
    series:[{
        dataSource: chartData, width:2,
        xName: 'x', yName: 'y',
        name: 'India',
        //Series type as polar
        type: 'Polar',
        // Series draw type as line
        drawType: 'Line'
    }],
    title: 'Efficiency of oil-fired power production'
}, '#element');
```

INDEX.HTML

```

Series customization

The following properties can be used to customize the **hilo** series.

- [fill](#) – Specifies the color of the series.
- [opacity](#) – Specifies the opacity of [fill](#).

INDEX.JS

```

var chartData = [
  { x: 'Jan', low: 87, high: 200 }, { x: 'Feb', low: 45, high: 135 },
  { x: 'Mar', low: 19, high: 85 }, { x: 'Apr', low: 31, high: 108 },
  { x: 'May', low: 27, high: 80 }, { x: 'June', low: 84, high: 130 },
  { x: 'July', low: 77, high: 150 }, { x: 'Aug', low: 54, high: 125 },
  { x: 'Sep', low: 60, high: 155 }, { x: 'Oct', low: 60, high: 180 },
  { x: 'Nov', low: 88, high: 180 }, { x: 'Dec', low: 84, high: 230 }
];
var chart = new ej.charts.Chart({

```

```

primaryXAxis: {
    valueType: 'Category',
    title: 'Months'
},
primaryYAxis:
{
    labelFormat: '{value}mm',
    edgeLabelPlacement: 'Shift',
    title: 'Rainfall',
},
series:[
    {
        dataSource: chartData, width:2,
        xName: 'x', high: 'high', low: 'low',
        name: 'India', fill: 'blue',
        //Series type as Hilo
        type: 'Hilo'
    }
],
title: 'Maximum and Minimum Rainfall'
}, '#element');

High low open close Chart in `##Platform_Name##` control

High Low Open Close

HiloOpenClose series is used to represent the low, high, open and closing values over time. To render a HiloOpenClose series, use series [type](#) as `HiloOpenClose` and inject `HiloOpenCloseSeries` module using `Chart.Inject(HiloOpenCloseSeries)` method.

HiloOpenClose series requires 5 fields (x, high, low, open and close) to show the high, low, open and close price values in the stock.

INDEX.JS

```
var chartData = [
  { x: 'Jan', open: 120, high: 160, low: 100, close: 140 },
  { x: 'Feb', open: 150, high: 190, low: 130, close: 170 },
  { x: 'Mar', open: 130, high: 170, low: 110, close: 150 },
  { x: 'Apr', open: 160, high: 180, low: 120, close: 140 },
  { x: 'May', open: 150, high: 170, low: 110, close: 130 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Date',
    valueType: 'Category',
  },
  primaryYAxis: {
    title: 'Price in Dollar', minimum: 100, maximum: 200, interval: 20,
  },
  series:[
    {
      dataSource: chartData, width:2,
      xName: 'x', open: 'open', close: 'close', high: 'high', low:
'low',
      name: 'SHIRPUR-G',

Hollow Candles

Candle charts allow to visually compare the current price with previous price by coloring them.

Candles are filled/left as hollow based on the following criteria.

<!-- markdownlint-disable MD033 -->

States	Description
Filled	candle sticks are filled when the close value is lesser than the open value
Unfilled	candle sticks are unfilled when the close value is greater than the open value

The color of the candle will be defined by comparing with previous values. Bear color will be applied when the current closing value is greater than the previous closing value. Bull color will be applied when the current closing value is less than the previous closing value.

By default, bullFillColor is set as red and bearFillColor is set as green.

Solid Candles

[enableSolidCandles](#) is used to enable/disable the solid candles. By default is set to be false. The fill color of the candle will be defined by its opening and closing values.

[bearFillColor](#) will be applied when the opening value is less than the closing value.

[bullFillColor](#) will be applied when the opening value is greater than closing value.

INDEX.JS

```
var chartData = [
  { x: 'Jan', open: 120, high: 160, low: 100, close: 140 },

Waterfall Chart in ##Platform_Name## control

Waterfall Chart

Waterfall chart helps to understand the cumulative effect of the sequentially introduced positive and negative values. To render a Waterfall series, use series [type](#) as [Waterfall](#) and inject [WaterfallSeries](#) module using [Chart.Inject\(WaterfallSeries\)](#) method. [intermediateSumIndexes](#) property of waterfall is used to represent the in between sum values and [sumIndexes](#) is used to represent the cumulative sum values.

INDEX.JS

```

var chartData = [
  { x: 'Income', y: 4711 }, { x: 'Sales', y: -1015 },
  { x: 'Development', y: -688 },
  { x: 'Revenue', y: 1030 }, { x: 'Balance' },
  { x: 'Administrative', y: -780 },
  { x: 'Expense', y: -361 }, { x: 'Tax', y: -695 },
  { x: 'Net Profit' }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Category',
  },
  series: [
    {
      dataSource: chartData,
      xName: 'x', yName: 'y', intermediateSumIndexes: [4], sumIndexes:
[8],
      //Series type as Waterfall
      type: 'Waterfall',
    }
  ],
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

```

Series customization

The negative changes of waterfall charts are represented by using `negativeFillColor` and the summary changes are represented by using `summaryFillColor` properties respectively. By default, the `negativeFillColor` is **green** and the `summaryFillColor` is **black**.

INDEX.JS

```
var chartData = [
  { x: 'Income', y: 4711 }, { x: 'Sales', y: -1015 },
  { x: 'Development', y: -688 },
  { x: 'Revenue', y: 1030 }, { x: 'Balance', y: 0 },
  { x: 'Administrative', y: -780 },
  { x: 'Expense', y: -361 }, { x: 'Tax', y: -695 },
  { x: 'Net Profit', y: 0 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    valueType: 'Category',
    majorGridLines: {width: 0},
  },
  primaryYAxis: {
    labelFormat: '${value}M',

Error bar Chart in `##Platform_Name##` control

Error Bar

Error bars are graphical representations of the variability of data and used on graphs to indicate the error or uncertainty in a reported measurement. To render the error bar for the series, set [visible](#) as `true` and inject `ErrorBar` module using `Chart.Inject(ErrorBar)` method.

INDEX.JS

```
var chartData = [
  { x: 2006, y: 7.8 }, { x: 2007, y: 7.2 },
  { x: 2008, y: 6.8 }, { x: 2009, y: 10.7 },
  { x: 2010, y: 10.8 }, { x: 2011, y: 9.8 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    minimum: 2005, maximum: 2012, interval: 1,
    title: 'Year'
  },
  primaryYAxis: {
    minimum: 3, maximum: 12,
    interval: 1, title: 'Percentage',
    labelFormat: '{value}%'
  },
  series: [{
    dataSource: chartData,
    xName: 'x', yName: 'y',
    errorBar: {
      visible: true,
    }, marker: {
      visible: true,
    }, animation: { enable: false },
    name: 'India',
    type: 'Line'
  }],
  title: 'Unemployment rate (%)',
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

<body>

    <div id="container">
        <div id="element"></div>
    </div>
</script>
var ele = document.getElementById('container');
if(ele) {
    ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>

```

Customizing Error Bar

To customize the error bar type, set error bar [type](#) as **Custom** and then change the horizontal/vertical positive and negative error of error bar.

INDEX.JS

```

var chartData = [
    { x: 2006, y: 7.8 }, { x: 2007, y: 7.2 },
    { x: 2008, y: 6.8 }, { x: 2009, y: 5.7 },
    { x: 2010, y: 8.8 }, { x: 2011, y: 9.8 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        minimum: 2005, maximum: 2012, interval: 1,
        title: 'Year'
    },
    primaryYAxis: {
        minimum: 3, maximum: 12,
        interval: 1, title: 'Percentage',
        labelFormat: '{value}%'
    },
    series: [{
        dataSource: chartData,
        xName: 'x', yName: 'y',
        errorBar: {
            visible: true,
            type: 'Custom',
            mode: 'Both',
            verticalPostiveError: 3,
            horizontalPositiveError: 2,
            verticalNegativeError: 3,
            horizontalNegativeError: 2
        }, marker: {
            visible: true,
        }, animation: { enable: false },
        name: 'India',
        type: 'Line'
    }],
    title: 'Unemployment rate (%)',

```

```
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Error Bar Mode

Error bar mode is used to define whether the error bar line has to be drawn horizontally, vertically or in both side. To change the error bar mode use [mode](#) option.

INDEX.JS

```
var chartData = [
  { x: 2006, y: 7.8 }, { x: 2007, y: 7.2 },
  { x: 2008, y: 6.8 }, { x: 2009, y: 5.7 },
  { x: 2010, y: 8.8 }, { x: 2011, y: 9.8 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    minimum: 2005, maximum: 2012, interval: 1,
    title: 'Year'
  },
  primaryYAxis: {
    minimum: 3, maximum: 12,
    interval: 1, title: 'Percentage',
    labelFormat: '{value}%'
  },
  series: [{
    dataSource: chartData,
```

```

        xName: 'x', yName: 'y',
        errorBar: {
            visible: true,
            mode: 'Horizontal'
        }, marker: {
            visible: true,
        }, animation: { enable: false },
        name: 'India',
        type: 'Line'
    }],
    title: 'Unemployment rate (%)',
}, '#element');

```

INDEX.HTML

```

```

Customizing Error Bar Color

To customise the error bar color for individual errors, use the `errorBarColorMapping` property. You can also customize the vertical error, horizontal error, horizontal negative and positive error and vertical negative and positive error for an individual point using [verticalError](#), [horizontalError](#), [horizontalNegativeError](#), [horizontalPositiveError](#), [verticalNegativeError](#) and [verticalPositiveError](#) properties.

INDEX.JS

```

var chartData = [
    { x: 2006, y: 7.8, color: 'red', error: 4 }, { x: 2007, y: 7.2, color:
'blue', error: 3 },
    { x: 2008, y: 6.8, color: 'green', error: 1 }, { x: 2009, y: 10.7,
color: 'orange', error: 5 },
    { x: 2010, y: 10.8, color: 'yellow', error: 7 }, { x: 2011, y: 9.8,
color: 'grey', error: 2 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        minimum: 2005, maximum: 2012, interval: 1,
        title: 'Year'
    },
    primaryYAxis: {
        minimum: 3, maximum: 12,
        interval: 1, title: 'Percentage',
        labelFormat: '{value}%'
    },
    series: [{
        dataSource: chartData,
        xName: 'x', yName: 'y',
        errorBar: {
            visible: true,
            errorBarColorMapping: 'color',
            verticalError: 'error'
        }, marker: {
            visible: true,
        }, animation: { enable: false },
        name: 'India',
        type: 'Line'
    }],
    title: 'Unemployment rate (%)',
}, '#element');

```

Vertical Chart in ##Platform_Name## control

Vertical chart

In EJ2 chart, you can draw a chart in vertical manner by changing orientation of the axis. All series types support this feature.

You can use `isTransposed` property in chart to render a chart in vertical manner.

INDEX.JS

```

var chartData = [
  { x: 'Jan', y: -1 }, { x: 'Feb', y: -1 }, { x: 'Mar', y: 2 },
  { x: 'Apr', y: 8 }, { x: 'May', y: 13 }, { x: 'Jun', y: 18 },
  { x: 'Jul', y: 21 }, { x: 'Aug', y: 20 }, { x: 'Sep', y: 16 },
  { x: 'Oct', y: 10 }, { x: 'Nov', y: 4 }, { x: 'Dec', y: 0 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Month',
    valueType: 'Category'
  },
  primaryYAxis: {
    minimum: -5, maximum: 25, interval: 10,

```

```

        labelFormat: '{value}°C',
        majorGridLines: { width : 0}
    },
    series:[{
        dataSource: chartData, width:2,
        xName: 'x', yName: 'y',
        name: 'London',
        // Series type as spline series
        type: 'Spline',
        marker: { visible: true}
    }],
    isTransposed: true,
    title: 'Climate Graph-2012'
}, '#element');

```

INDEX.HTML

Pare to Chart in `##Platform_Name##` control

Pareto

Pareto charts are used to find the cumulative values of data in different categories. It is a combination of Column and Line series.

The initial values are represented by column chart and the cumulative values are represented by Line chart. To render a pareto chart, use series `type` as Pareto and inject `ParetoSeries` `ColumnSeries` and `LineSeries` module using `Chart.Inject(ParetoSeries, LineSeries, ColumnSeries)` method.

INDEX.JS

```
/**
 * Sample for Pareto chart
 */
var chart = new ej.charts.Chart({
  //Initializing Primary X Axis
  primaryXAxis: {
    interval: 1,
    valueType: 'Category', labelIntersectAction: 'Rotate45',
    majorGridLines: { width: 0 }, minorGridLines: { width: 0 },
    majorTickLines: { width: 0 }, minorTickLines: { width: 0 },
    lineStyle: { width: 0 },
  },
  //Initializing Primary Y Axis
  primaryYAxis: {
    title: 'Frequency of Occurence',
    minimum: 0,
    maximum: 25,
    interval: 5,
    lineStyle: { width: 0 },
    majorTickLines: { width: 0 }, majorGridLines: { width: 1 },
    minorGridLines: { width: 1 }, minorTickLines: { width: 0 }
  },
  chartArea: {
    border: {
      width: 0
    }
  },
  //Initializing Chart Series
  series: [
    {
      type: 'Pareto',
      dataSource: [
        { x: 'Button Defect', y: 23 }, { x: 'Pocket Defect', y: 16 },
        { x: 'Collar Defect', y: 10 }, { x: 'Cuff Defect', y: 7 },
        { x: 'Sleeve Defect', y: 6 }
      ], marker: { visible: true },
      xName: 'x', yName: 'y', name: 'Defect', width: 2
    }
  ],
  width: ej.base.Browser.isDevice ? '100%' : '75%',
  //Initializing Chart Title
  title: 'Pareto chart - Defects in Shirts',
  legendSettings: { visible: false },
});
```

```
//Initializing Tooltip
tooltip: {
    enable: true,
    shared: false
},
});
chart.appendTo('#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Pareto customization

The pareto line series can be customized by using the [marker](#), [width](#), [dashArray](#), and [fill](#) properties in the [paretoOptions](#). The secondary axis for the pareto series can be shown or hidden using the [showAxis](#) property.

INDEX.JS

```
/**
 * Sample for Pareto chart
 */
var chart = new ej.charts.Chart({
  //Initializing Primary X Axis
  primaryXAxis: {
    interval: 1,
    valueType: 'Category', labelIntersectAction: 'Rotate45',
    majorGridLines: { width: 0 }, minorGridLines: { width: 0 },
    majorTickLines: { width: 0 }, minorTickLines: { width: 0 },
```

```

        lineStyle: { width: 0 },
    },
    //Initializing Primary X Axis
    primaryYAxis: {
        title: 'Frequency of Occurence',
        minimum: 0,
        maximum: 25,
        interval: 5,
        lineStyle: { width: 0 },
        majorTickLines: { width: 0 }, majorGridLines: { width: 1 },
        minorGridLines: { width: 1 }, minorTickLines: { width: 0 }
    },
    chartArea: {
        border: {
            width: 0
        }
    },
    //Initializing Chart Series
    series: [
        {

Polar radar in ##Platform_Name## Chart control

Polar Chart

To render a polar series, use series [type](#) as **Polar** and inject **PolarSeries** module using **Chart.Inject(PolarSeries)** method.

Draw Types

Polar drawType property is used to change the series plotting type to line, column, area, range column, spline, scatter, stacking area and stacking column. The default value of drawType is **Line**.

Line

To render a line draw type, use series [drawType](#) as **Line** and inject **LineSeries** module using **Chart.Inject(LineSeries)** method.

[isClosed](#) property specifies whether to join start and end point of a line series used in polar chart to form a closed path. Default value of isClosed is true.

INDEX.JS

```
var chartData = [
```

```

    { x: 2005, y: 28 }, { x: 2006, y: 25 }, { x: 2007, y: 26 }, { x: 2008, y:
27 },
    { x: 2009, y: 32 }, { x: 2010, y: 35 }, { x: 2011, y: 30 }
  ];
  var chart = new ej.charts.Chart({
    primaryXAxis: {
      title: 'Year',
      minimum: 2004, maximum: 2012, interval: 1
    },
    primaryYAxis: {
      minimum: 20, maximum: 40, interval: 5,
      title: 'Efficiency',
      labelFormat: '{value}%'
    },
    series:[{
      dataSource: chartData, width:2,
      xName: 'x', yName: 'y',
      name: 'India',
      //Series type as polar
      type: 'Polar',
      // Series draw type as line
      drawType: 'Line'
    }],
    title: 'Efficiency of oil-fired power production'
  }, '#element');
```

INDEX.HTML

```

```

Column

To render a column draw type, use series [drawType](#) as **Column**.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50 },
  { country: "China", gold: 40 },
```

```

        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
    ];
    var chart = new ej.charts.Chart({
        primaryXAxis: {
            valueType: 'Category',
            title: 'Countries'
        },
        primaryYAxis: {
            minimum: 0, maximum: 80,
            interval: 20, title: 'Medals'
        },
        series:[{
            dataSource: chartData,
            xName: 'country', yName: 'gold',
            name: 'Gold',
            // Series type as polar series
            type: 'Polar',
            // Series draw type as column series
            drawType: 'Column'
        }],
        title: 'Olympic Medals'
    }, '#element');

```

INDEX.HTML

```

Stacked Column

To render a stacked column draw type, use series [drawType](#) as `StackingColumn`.

INDEX.JS

```
var chartData = [
  { x: '2014', y: 111.1, y1: 76.9, y2: 66.1, y3: 34.1 },
  { x: '2015', y: 127.3, y1: 99.5, y2: 79.3, y3: 38.2 },
  { x: '2016', y: 143.4, y1: 121.7, y2: 91.3, y3: 44.0 },
  { x: '2017', y: 159.9, y1: 142.5, y2: 102.4, y3: 51.6 },
  { x: '2018', y: 175.4, y1: 166.7, y2: 112.9, y3: 61.9 },
  { x: '2019', y: 189.0, y1: 182.9, y2: 122.4, y3: 71.5 },
  { x: '2020', y: 202.7, y1: 197.3, y2: 120.9, y3: 82.0 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Years',
    interval: 1,
    valueType: 'Category'
  },
  primaryYAxis: {
    title: 'Sales in Billions',
    minimum: 0,
    maximum: 700,
    interval: 100,
    labelFormat: '{value}B',
  },
  series: [
    {
      dataSource: chartData, xName: 'x', yName: 'y',
      type: 'Polar',
      //Series draw type as stacked column
      drawType: 'StackingColumn',
      name: 'UK',
    }, {
      dataSource: chartData, xName: 'x', yName: 'y1',
      type: 'Polar',
      drawType: 'StackingColumn', name: 'Germany',
    }, {
      dataSource: chartData, xName: 'x', yName: 'y2',
      type: 'Polar',
      drawType: 'StackingColumn', name: 'France',
    }, {
      dataSource: chartData, xName: 'x', yName: 'y3',
      type: 'Polar',
      drawType: 'StackingColumn', name: 'Italy',
    }
  ],
  title: 'Mobile Game Market by Country'
}, '#element');
```

INDEX.HTML

```

Range Column

To render a range column draw type, use series [drawType](#) as **RangeColumn**.

INDEX.JS

```

var data = [
  { x: 'Jan', low: 0.7, high: 6.1 }, { x: 'Feb', low: 1.3, high: 6.3 }, {
x: 'Mar', low: 1.9, high: 8.5 },
  { x: 'Apr', low: 3.1, high: 10.8 }, { x: 'May', low: 5.7, high: 14.40 },
{ x: 'Jun', low: 8.4, high: 16.90 },
  { x: 'Jul', low: 10.6,high: 19.20 }, { x: 'Aug', low: 10.5,high: 18.9 },
{ x: 'Sep', low: 8.5, high: 16.1 },
  { x: 'Oct', low: 6.0, high: 12.5 }, { x: 'Nov', low: 1.5, high: 6.9 },
{ x: 'Dec', low: 5.1, high: 12.1 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Months',
    valueType: 'Category'
  },
  primaryYAxis:
  {
    title: 'Temperature(Celsius)',
  },
  series: [
    {
      type: 'Polar',
      // Series draw type as range column series

```

```

        drawType: 'RangeColumn',
        name: 'India',
        dataSource: data, xName: 'x', high: 'high', low: 'low',
    },
],
title: 'Maximum and Minimum Temperature'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Scatter

To render a scatter draw type, use series [DrawType](#) as `Scatter` and inject `ScatterSeries` module using `Chart.Inject(ScatterSeries)` method.

INDEX.JS

```

var chartData = [
  { x: 'Jan', y: -1 }, { x: 'Feb', y: -1 }, { x: 'Mar', y: 2 },
  { x: 'Apr', y: 8 }, { x: 'May', y: 13 }, { x: 'Jun', y: 18 },
  { x: 'Jul', y: 21 }, { x: 'Aug', y: 20 }, { x: 'Sep', y: 16 },
  { x: 'Oct', y: 10 }, { x: 'Nov', y: 4 }, { x: 'Dec', y: 0 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Month',
    valueType: 'Category'
  },

```

```

primaryYAxis: {
    minimum: -5, maximum: 35, interval: 10,
    title: 'Temperature in Celsius',
    labelFormat: '{value}C'
}
series:[{
    dataSource: chartData, width:2,
    xName: 'x', yName: 'y',
    name: 'London',
    // Series type as Polar series
    type: 'Polar'
    // Series draw type as scatter
    drawType: 'Scatter'
}],
title: 'Climate Graph-2012'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

</body></html>

```

Radar Chart

To render a radar series, use series [type](#) as **Radar** and inject **PolarSeries** module using **Chart.Inject(RadarSeries)** method.

Draw Type

similar to Polar drawType, Radar draw property is used to change the series plotting type to line, column, area, range column, spline, scatter, stacking area and stacking column. The default value of drawType is Line.

INDEX.JS

```
var chartData = [
  { x: 2005, y: 28 }, { x: 2006, y: 25 }, { x: 2007, y: 26 }, { x: 2008, y:
27 },
  { x: 2009, y: 32 }, { x: 2010, y: 35 }, { x: 2011, y: 30 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Year',
    minimum: 2004, maximum: 2012, interval: 1
  },
  primaryYAxis: {
    minimum: 20, maximum: 40, interval: 5,
    title: 'Efficiency',
    labelFormat: '{value}%'
  },
  series:[{
    dataSource: chartData, width:2,
    xName: 'x', yName: 'y',
    name: 'India',
    //Series type as polar
    type: 'Radar',
    // Series draw type as line
    drawType: 'Line'
  }],
  title: 'Efficiency of oil-fired power production'
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>

```

Customization

Start Angle

You can customize the start angle of the polar series using [startAngle](#) property. By default, `startAngle` is 0 degree.

INDEX.JS

```

var chartData = [
    { country: "USA", gold: 50 },
    { country: "China", gold: 40 },
    { country: "Japan", gold: 70 },
    { country: "Australia", gold: 60 },
    { country: "France", gold: 50 },
    { country: "Germany", gold: 40 },
    { country: "Italy", gold: 40 },
    { country: "Sweden", gold: 30 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        valueType: 'Category',
        title: 'Countries',
        startAngle: 90,
    },
    primaryYAxis: {
        minimum: 0, maximum: 80,
        interval: 20, title: 'Medals'
    },
    series:[{
        dataSource: chartData,
        xName: 'country', yName: 'gold',
        name: 'Gold',
        // Series type as polar series
        type: 'Polar',
        // Series draw type as column series
        drawType: 'Column'
    }],
    title: 'Olympic Medals'
}, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

Enable Complex Property in Series

By setting `enableComplexProperty` value as `true` in series you can bind complex data to the chart.

INDEX.JS

```

var chartData = [
  { x: '2005', y: 1.2, y1: 0.5, y2: 0.7, y3: -0.8, y4: 1.5 },

Technical indicators in ##Platform_Name## Chart control

A technical indicator is a mathematical calculation based on historic price, volume or open interest information that aims to forecast financial market direction.

Chart supports 10 types of technical indicators.

Accumulation Distribution

Accumulation Distribution combines price and volume to show how money may be flowing into or out of stock. To render a Accumulation Distribution Indicator, use indicator [type](#) as `AccumulationDistribution` and inject

`AccumulationDistributionIndicator` module using `Chart.Inject(AccumulationDistributionIndicator)`. To calculate the signal line [volume](#) field is additionally added with `dataSource`.

Average True Range (ATR)

ATR measures the stock volatility by comparing the current value with the previous value. To render a Average True Range (ATR) Indicator,

use indicator [type](#) as `Atr` and inject `AtrIndicator` module using `Chart.Inject(AtrIndicator)`.

Bollinger Band

A chart overlay that shows the upper and lower limits of normal price movements based on the standard deviation of prices. To render a Bollinger Band, use indicator [type](#) as `BollingerBand` and inject `BollingerBands` module using `Chart.Inject(BollingerBands)` method. Bollinger band will be represented by three lines (upperLine, lowerLine, signalLine). The default values of the Bollinger Band [period](#) is 14 and [standardDeviations](#) is 2.

Exponential Moving Average (EMA)

Moving average Indicators are used to define the direction of the trend. To render a EMA Indicator, use indicator [type](#) as `Ema` and inject `EmaIndicator` module using `Chart.Inject(EmaIndicator)`.

Momentum

Momentum shows the speed at which the price of the stock is changing. To render a Momentum indicator, use indicator [type](#) as `Momentum` and inject `MomentumIndicator` module using `Chart.Inject(MomentumIndicator)` method. Momentum indicator will be represented by two lines (upperLine, signalLine). In momentum indicator the upperBand value is always renders at the value 100.

Customization of MomentumIndicator

stroke, stroke-width, and color of upperLine can be customized by using [upperLine](#) property of indicator.

Moving Average Convergence Divergence (MACD)

MACD is based on the difference between two EMA's. To render a MACD Indicator, use indicator [type](#) as

Macd and inject **MacdIndicator** module using **Chart.Inject(MacdIndicator)**. MACD indicator will be represented by MACD line, signal line, MACD histogram. MACD histogram is used to differentiate MACD line and signal line.

Customization of MACD

stroke, stroke-width, and color of macdLine can be customized by using [macdLine](#),

property of indicator. The positive and negative changes of histogram can be customized by [macdPositiveColor](#) and [macdNegativeColor](#) properties. The `[macdType]` is used to define the type of MACD indicator. To customize the MACD period using [slowPeriod](#) and [fastPeriod](#) properties.

By default `macdType` as 'Both'.

Relative Strength Index (RSI)

RSI shows how strongly a stock is moving in its current direction. To render a RSI Indicator, use indicator [type](#) as `Rsi` and inject `RsiIndicator` module using `Chart.Inject(RsiIndicator)`. RSI indicator will be represented

by three lines (upperBand, lowerBand, signalLine). The upperBand and lowerBand values are customized by [overBought](#) and [overSold](#) properties of indicator and the signalLine is calculated by RSI formula.

Stochastic

It shows how a stock is, when compared to previous state. To render a Stochastic indicator, use indicator [type](#) as **Stochastic** and inject **StochasticIndicator** module using **Chart.Inject(StochasticIndicator)** method.

stochastic indicator will be represented by four lines (upperLine, lowerLine, periodLine, signalLine). In stochastic indicator the upperBand value and lowerBand value is customized by [overBought](#) and [overSold](#) properties of indicators and the periodLine and signalLine is render based on stochastic formula.

Customization of StochasticIndicator

stroke, stroke-width, and color of upperLine can be customized by using [upperLine](#),

the lowerLine can be customized by using [lowerLine](#) and the periodLine can be customized by using [periodLine](#) properties of indicator. To customize the period to find the average price using [kPeriod](#) and [dPeriod](#)

properties.

Triangular Moving Average (TMA)

Moving average Indicators are used to define the direction of the trend. To render a TMA Indicator, use indicator [type](#) as `Tma` and inject `TmaIndicator` module using `Chart.Inject(TmaIndicator)`.

Customization of Technical Indicators

stroke, stroke-width, and color of signalLine can be customized by using fill, width and dashArray properties. and the period property is used to predict the data forecast calculations. The field value is used to compare the current price with previous price. It is applicable to Bollinger bands and moving

averages. The [showZones](#) property is used to shows/Hides the overBought and overSold regions. It is applicable for RSI and stochastic indicators.

Data Source

Usually technical indicators are added along with a financial series. The [seriesName](#) represents the series, the data of which has to be analysed through indicators.

Technical indicators can also be added without series using [dataSource](#) property of indicator.

Trend lines in ##Platform_Name## Chart control

Trendlines are used to show the direction and speed of price.

Trendlines can be generated for Cartesian type series (Line, Column, Scatter, Area, Candle, Hilo etc.) except bar type series. You can add more than one trendline to a series.

Chart supports 6 types of trendlines.

Linear

A linear trendline is a best fit straight line that is used with simpler data sets. To render a linear trendline, use trendline [type](#) as `Linear` and inject `Trendlines` module using `Chart.Inject(Trendlines)`.

Exponential

An exponential trendline is a curved line that is most useful when data values rise or fall at increasingly higher rates. You cannot create an exponential trendline, if your data contains zero or negative values.

To render an exponential trendline, use trendline [type](#) as **Exponential** and inject **Trendlines** module using **Chart.Inject(Trendlines)**.

INDEX.JS

```

var data = [];
var yValue = [7.66, 8.03, 8.41, 8.97, 8.77, 8.20, 8.16, 7.89, 8.68, 9.48,
10.11, 11.36, 12.34, 12.60, 12.95, 13.91, 16.21, 17.50, 22.72, 28.14, 31.26,
31.39, 32.43, 35.52, 36.36,
41.33, 43.12, 45.00, 47.23, 48.62, 46.60, 45.28, 44.01, 45.17, 41.20,
43.41, 48.32, 45.65, 46.61, 53.34, 58.53];
var point;
var i; var j = 0;
for (i = 1973; i <= 2013; i++) {
    point = { x: i, y: yValue[j] };
    data.push(point);
    j++;
}
var chart = new ej.charts.Chart({
    primaryXAxis: {

Power

A power trendline is a curved line that is best used with data sets that compare measurements that increase at a specific rate.

To render a power trendline, use trendline [type](#) as **Power** and inject **Trendlines** module using `Chart.Inject(Trendlines)`.

INDEX.JS

```

var powerData= [
    { x: 1, y: 10 }, { x: 2, y: 50 }, { x: 3, y: 80 }, { x: 4, y: 110 },
    { x: 5, y: 180 }, { x: 6, y: 220 }, { x: 7, y: 300 }, { x: 8, y: 370 },
    { x: 9, y: 490 }, { x: 10, y: 500 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        title: 'Months',
    },
    primaryYAxis: {
        title: 'Rupees against Dollars',
        interval: 50
    },
    tooltip:{enable:true},
    chartArea: { border: { width: 0 } },
    series: [{
        dataSource: powerData,
        xName: 'x', yName: 'y',
        name: 'Apple Inc',
        fill: '#0066FF',
        //Series type as scatter
        type: 'Scatter',
        trendlines: [{ type: 'Power' }]
    }],
    title: 'Historical Indian Rupee Rate (INR USD) ',
}, '#element');
```

Data markers in ##Platform_Name## Chart control

Data markers are used to provide information about the data points in the series. You can add a shape to adorn each data point.

<!-- markdownlint-disable MD036 -->

Marker

<!-- markdownlint-disable MD036 -->

Markers can be added to points by enabling the [visible](#) option of the marker property. By default, distinct markers will be enabled for each series in the chart.

INDEX.JS

```
var numData = [{ x: 2005, y: 28, y1: 18 }, { x: 2006, y: 25, y1: 10 }, { x:
2007, y: 26, y1: 20 }, { x: 2008, y: 47, y1: 35 },
{ x: 2009, y: 32, y1: 23 }, { x: 2010, y: 35, y1: 25 }, { x: 2011, y:
30, y1: 15 }];
var chart = new ej.charts.Chart({
    series: [
        {
            type: 'Line',
            dataSource: numData, xName: 'x', yName: 'y',
            marker: {
                visible: true
            }
        },
        {
            type: 'Line',
            dataSource: numData, xName: 'x', yName: 'y1',
            marker: {

```

Customizing specific point

You can also customize the specific marker and label using [pointRender](#) event. The `pointRender` event allows you to change the shape, color and border for a point.

INDEX.JS

```
var chartData = [
  { x: 'Jan', y: -7.1 }, { x: 'Feb', y: -3.7 },
  { x: 'Mar', y: 2 }, { x: 'Apr', y: 6.3 },
  { x: 'May', y: 13.3 }, { x: 'Jun', y: 18.0 },
  { x: 'Jul', y: 19.8 }, { x: 'Aug', y: 18.1 },
  { x: 'Sep', y: 13.1 }, { x: 'Oct', y: 4.1 },
  { x: 'Nov', y: -3.8 }, { x: 'Dec', y: -6.8 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Months',
    valueType: 'Category'
  },
  primaryYAxis: {
    title: 'Temperature (Celsius)',
    minimum: -20, maximum: 25, interval: 5,
    edgeLabelPlacement: 'Shift',
    labelFormat: '{value}°C'
  },
  series: [
    {
      type: 'Line', name: 'Warmest', width: 2,
      dataSource: chartData, xName: 'x', yName: 'y',
      marker: {
        visible: true,
        height: 10, width: 10,
        shape: 'Pentagon',
        dataLabel: { visible: true }
      }
    }
  ],
  title: 'Alaska Weather Statistics - 2016',
  // pointRender event for chart
  pointRender: (args) => {
    if (args.point.index === 6) {
      args.fill = 'red'
    }
  },
  textRender: (args) => {
    if (args.point.index === 6) {
      args.text = 'Maximum Temperature';
      args.color = 'red';
    }
  }
}, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>

- [Customize the marker with different shape](#)

Data labels in ##Platform_Name## Chart control

Data label can be added to a chart series by enabling the [visible](#) option in the dataLabel. By default, the labels will arrange smartly without overlapping.

INDEX.JS

```

var chartData = [
  { x: new Date(2016, 0, 1), y: -7.1 }, { x: new Date(2016, 1, 1), y: -3.7
},

```

```

    { x: new Date(2016, 2, 1), y: 0.8 }, { x: new Date(2016, 3, 1), y: 6.3
  },
  { x: new Date(2016, 4, 1), y: 13.3 }, { x: new Date(2016, 5, 1), y: 18.0
  },
  { x: new Date(2016, 6, 1), y: 19.8 }, { x: new Date(2016, 7, 1), y: 18.1
  },
  { x: new Date(2016, 8, 1), y: 13.1 }, { x: new Date(2016, 9, 1), y: 4.1
  },
  { x: new Date(2016, 10, 1), y: -3.8 }, { x: new Date(2016, 11, 1), y: -
6.8 }
  ];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Months',
    valueType: 'DateTime', labelFormat: 'yMMM',
    edgeLabelPlacement: 'Shift'
  },
  primaryYAxis:
  {
    title: 'Temperature (Celsius)',
    minimum: -20, maximum: 20, interval: 10,
    edgeLabelPlacement: 'Shift',
    labelFormat: '{value}°C'
  },
  series: [
    {
      type: 'Line', name: 'Warmest', width: 2,
      dataSource: chartData, xName: 'x', yName: 'y',
      marker: {
        visible: true,
        height: 10, width: 10,
        shape: 'Pentagon',
        //Data label for chart series
        dataLabel: { visible: true }
      }
    }
  ],
  title: 'Alaska Weather Statistics - 2016'
}, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

if(ele) {
  ele.style.visibility = "visible";
}
</script>
<script src="index.js" type="text/javascript"></script>
</body></html>
```

Note: To use data label feature, we need to inject `DataLabel` using `Chart.Inject(DataLabel)` method.

Position

Using [position](#) property, you can place the label either on `Top`, `Middle`, `Bottom` or `Outer` (outer is applicable for column and bar type series).

INDEX.JS

```
var chartData = [
  { x: 'Jan', y: -7.1 }, { x: 'Feb', y: -3.7 },
  { x: 'Mar', y: 2 }, { x: 'Apr', y: 6.3 },
  { x: 'May', y: 13.3 }, { x: 'Jun', y: 18.0 },
  { x: 'Jul', y: 19.8 }, { x: 'Aug', y: 18.1 },
  { x: 'Sep', y: 13.1 }, { x: 'Oct', y: 4.1 },
  { x: 'Nov', y: -3.8 }, { x: 'Dec', y: -6.8 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Months',
    valueType: 'Category'
  },
  primaryYAxis: {
    title: 'Temperature (Celsius)',
    minimum: -20, maximum: 25, interval: 5,
    edgeLabelPlacement: 'Shift',
    labelFormat: '{value}°C'
  },
  series: [
    {
      type: 'Column', name: 'Warmest',
      dataSource: chartData, xName: 'x', yName: 'y',
      marker: {
        visible: true,
        height: 10, width: 10,
        shape: 'Pentagon',
        //Data label position as middle
        dataLabel: { visible: true, position: 'Middle' }
      }
    }
  ],
  title: 'Alaska Weather Statistics - 2016'
```

```
}, '#element');
```

INDEX.HTML

```
<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>
  <script src="https://cdn.syncfusion.com/ej2/syncfusion-helper.js" type
  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>
```

Note: The position **Outer** is applicable for column and bar type series.

Data Label Template

Label content can be formatted by using the template option. Inside the template, you can add the placeholder text `${point.x}` and `${point.y}` to display corresponding data points x & y value. Using [template](#) property, you can set data label template in chart.

INDEX.JS

```
var chartData = [
  { x: 'Jan', y: -7.1 }, { x: 'Feb', y: -3.7 },
  { x: 'Mar', y: 2 }, { x: 'Apr', y: 6.3 },
  { x: 'May', y: 13.3 }, { x: 'Jun', y: 18.0 },
  { x: 'Jul', y: 19.8 }, { x: 'Aug', y: 18.1 },

```

Format

Data label for the chart can be formatted using [format](#) property. You can use the global formatting options, such as 'n', 'p', and 'c'.

INDEX.JS

```

var chartData = [
  { x: new Date(2016, 0, 1), y: -7 }, { x: new Date(2016, 1, 1), y: -3 },
  { x: new Date(2016, 2, 1), y: 8 }, { x: new Date(2016, 3, 1), y: 6 },
  { x: new Date(2016, 4, 1), y: 13 }, { x: new Date(2016, 5, 1), y: 18 },
  { x: new Date(2016, 6, 1), y: 19 }, { x: new Date(2016, 7, 1), y: 18 },
  { x: new Date(2016, 8, 1), y: 13 }, { x: new Date(2016, 9, 1), y: 4 },
  { x: new Date(2016, 10, 1), y: -3 }, { x: new Date(2016, 11, 1), y: -6 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Months',
    valueType: 'DateTime', labelFormat: 'yMMM',
    edgeLabelPlacement: 'Shift'
  },
  primaryYAxis: {
    {
      title: 'Temperature (Celsius)',
      minimum: -20, maximum: 20, interval: 10,
      edgeLabelPlacement: 'Shift',
      labelFormat: '{value}°C'
    }
  },
  series: [
    {
      type: 'Line', name: 'Warmest', width: 2,
      dataSource: chartData, xName: 'x', yName: 'y',
      marker: {
        visible: true,
        height: 10, width: 10,
        shape: 'Pentagon', isFilled: true,
        //Data label for chart series
        dataLabel: { visible: true , format:"n2"}
      }
    }
  ],
  title: 'Alaska Weather Statistics - 2016'
}, '#element');

```

INDEX.HTML

```

```

Value	Format	Resultant Value	Description
1000	n1	1000.0	The number is rounded to 1 decimal place.
1000	n2	1000.00	The number is rounded to 2 decimal places.
1000	n3	1000.000	The number is rounded to 3 decimal place.
0.01	p1	1.0%	The number is converted to percentage with 1 decimal place.
0.01	p2	1.00%	The number is converted to percentage with 2 decimal place.
0.01	p3	1.000%	The number is converted to percentage with 3 decimal place.
1000	c1	\$1000.0	The currency symbol is appended to number and number is rounded to 1 decimal place.
1000	c2	\$1000.00	The currency symbol is appended to number and number is rounded to 2 decimal place.

Margin

margin for data label can be applied to using left, right, bottom and top properties.

INDEX.JS

```

var chartData = [
  { x: 'Jan', y: -7.1 }, { x: 'Feb', y: -3.7 },
  { x: 'Mar', y: 2 }, { x: 'Apr', y: 6.3 },
  { x: 'May', y: 13.3 }, { x: 'Jun', y: 18.0 },
  { x: 'Jul', y: 19.8 }, { x: 'Aug', y: 18.1 },
  { x: 'Sep', y: 13.1 }, { x: 'Oct', y: 4.1 },
  { x: 'Nov', y: -3.8 }, { x: 'Dec', y: -6.8 }
];
var chart = new ej.charts.Chart({
  primaryXAxis: {
    title: 'Months',
    valueType: 'Category'
  },
  primaryYAxis: {
    title: 'Temperature (Celsius)',

<script src="index.js" type="text/javascript"></script>
</body></html>

```

Customization

stroke and border of data label can be customized using fill and border properties. Rounded corners can be customized using rx and ry properties.

INDEX.JS

```

var chartData = [
    { x: 'Jan', y: -7.1 }, { x: 'Feb', y: -3.7 },
    { x: 'Mar', y: 2 }, { x: 'Apr', y: 6.3 },
    { x: 'May', y: 13.3 }, { x: 'Jun', y: 18.0 },
    { x: 'Jul', y: 19.8 }, { x: 'Aug', y: 18.1 },
    { x: 'Sep', y: 13.1 }, { x: 'Oct', y: 4.1 },
    { x: 'Nov', y: -3.8 }, { x: 'Dec', y: -6.8 }
];
var chart = new ej.charts.Chart({
    primaryXAxis: {
        title: 'Months',
        valueType: 'Category'
    },
    primaryYAxis: {
        title: 'Temperature (Celsius)',
        minimum: -20, maximum: 25, interval: 5,
        edgeLabelPlacement: 'Shift',
        labelFormat: '{value}°C'
    },
    series: [
        {
            type: 'Column', name: 'Warmest',
            dataSource: chartData, xName: 'x', yName: 'y',
            marker: {
                visible: true,
                height: 10, width: 10,
                shape: 'Pentagon',
                //Data label position as middle
                dataLabel: { visible: true, position: 'Middle', margin:{
                    left:5, right:5, top:5, bottom:5 } }
            }
        }
    ],
    title: 'Alaska Weather Statistics - 2016'
}, '#element');

```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>
  <title>EJ2 Animation</title>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta name="description" content="Typescript UI Controls">
  <meta name="author" content="Syncfusion">
  <link href="index.css" rel="stylesheet">

  <script src="https://cdn.syncfusion.com/ej2/24.1.41/dist/ej2.min.js"
  type="text/javascript"></script>

  ="text/javascript"></script>
</head>
<body>

  <div id="container">
    <div id="element"></div>
  </div>
  <script>
var ele = document.getElementById('container');
if(ele) {
  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Note: `rx` and `ry` properties requires `border` values not to be null.

Customizing Specific Point

You can also customize the specific marker and label using [pointRender](#) and [textRender](#) event. `pointRender` event allows you to change the shape, color and border for a point, whereas the `textRender` event allows you to change the text for the point.

INDEX.JS

```

var chartData = [
  { x: 'Jan', y: -7.1 }, { x: 'Feb', y: -3.7 },
  { x: 'Mar', y: 2 }, { x: 'Apr', y: 6.3 },

Show percentage based on each series points

You can calculate the percentage value based on the sum for each series using the `seriesRender` and `textRender` events in the chart. In `seriesRender` calculate the sum of each series y values and In `textRender` calculate percentage value based on the sum value and modify the text.

INDEX.JS

```
var total = [];
var chart = new ej.charts.Chart({
  //Initializing Primary X Axis
  primaryXAxis: {
    valueType: 'Category', interval: 1, majorGridLines: { width: 0 }
  },
  chartArea: { border: { width: 0 } },

Chart annotations in ##Platform_Name## Chart control

Annotations are used to mark the specific area of interest in the chart area with texts, shapes or images.

<!-- markdownlint-disable MD033 -->

You can add annotations to the chart by using the `annotations` option. By using the [content](#) option of annotation object, you can specify either the id of the element or directly specify the element in the content that needs to be displayed in the chart area.

INDEX.JS

```

var chartData = [

  ele.style.visibility = "visible";
}
  </script>
  <script src="index.js" type="text/javascript"></script>
</body></html>

```

Set the label color based on series color

You can set the legend label color based on series color by using chart's [loaded](#) event.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },
  { country: "Japan", gold: 70, silver: 60, bronze: 50 },
  { country: "Australia", gold: 60, silver: 56, bronze: 40 },
  { country: "France", gold: 50, silver: 45, bronze: 35 },

```

```

    { country: "Germany", gold: 40, silver: 30, bronze: 22 },
    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
  ];
  // declare the series colors
  var colors = ['#00BDAE', '#404041', '#357CD2'];
  var chart = new ej.charts.Chart({
    primaryXAxis: {
      valueType: 'Category',
      title: 'Countries'
    },
    primaryYAxis: {
      minimum: 0, maximum: 80,
      interval: 20, title: 'Medals'
    },
    series:[{
      dataSource: chartData,
      xName: 'country', yName: 'gold',
      name: 'Gold', type: 'Column'
    }, {
      dataSource: chartData,
      xName: 'country', yName: 'silver',
      name: 'Silver', type: 'Column'
    }, {
      dataSource: chartData,
      xName: 'country', yName: 'bronze',
      name: 'Bronze', type: 'Column'
    }],
    title: 'Olympic Medals',
    loaded: (args) => {
      let chart = document.querySelector('.e-chart');
      let legendTextCol =
chart.querySelectorAll('[id*="chart_legend_text_"]');
      for (let i = 0; i < legendTextCol.length; i++) {
        //set the color to legend label
        legendTextCol[i].setAttribute('fill', colors[i]);
      }
    },
  }, '#element');
```

INDEX.HTML

```

<!DOCTYPE html><html lang="en"><head>

```

Legend Title

You can set title for legend using `title` property in `legendSettings`. You can also customize the `fontStyle`, `size`, `fontWeight`,

`color`, `textAlignment`, `fontFamily`, `opacity` and `textOverflow` of legend title. `titlePosition` is used to set the legend position in `Top`, `Left` and `Right` position. `maximumTitleWidth` is used to set the width of the legend title. By default, it will be `100px`.

INDEX.JS

```

var chartData = [
  { country: "USA", gold: 50, silver: 70, bronze: 45 },
  { country: "China", gold: 40, silver: 60, bronze: 55 },

Tooltip in ##Platform_Name## Chart control

<!-- markdownlint-disable MD036 -->

Chart will display details about the points through tooltip, when the mouse is moved over the point.

Default tooltip

By default, tooltip is not visible. You can enable the tooltip by setting `enable` property to `true` and by injecting `Tooltip` module using `Chart.Inject(Tooltip)`.
