Hollow candles

Candle charts allow to visually compare the current price with previous price by coloring them.

Candles are filled/left as hollow based on the following criteria.

<!-- markdownlint-disable MD033 -->

States	Description
Filled	candle sticks are filled when the close value is lesser than the open value
Unfilled	candle sticks are unfilled when the close value is greater than the open value

The color of the candle will be defined by comparing with previous values. Bear color will be applied when the current closing value is greater than the previous closing value. Bull color will be applied when the current closing value is less than the previous closing value.

By default, bullFillColor is set as red and bearFillColor is set as green.

Solid candles

[enableSolidCandles](#) is used to enable/disable the solid candles. By default is set to be false. The fill color of the candle will be defined by its opening and closing values.

[bearFillColor](#) will be applied when the opening value is less than the closing value.

[bullFillColor](#) will be applied when the opening value is greater than closing value.

Box and Whisker in React Chart component

Box and Whisker

To render a box and whisker chart, use series [type](#) as `BoxAndWhisker` and inject

`BoxAndWhiskerSeries` services. The field `y` requires n number of data or it should contains minimum of five values to plot a segment.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
BoxAndWhiskerSeries, Category } from '@syncfusion/ej2-react-charts';
function App() {
    const data = [
        { x: 'Development', y: [22, 22, 23, 25, 25, 25, 26, 27, 27, 28, 28,
29, 30, 32, 34, 32, 34, 36, 35, 38] },

Histogram in React Chart component

Histogram Series

Histogram type charts can provide a visual display of large amounts of data that are difficult to understand in a tabular or spreadsheet form.

To render a histogram chart, use series [type](#) as `Histogram` and inject `HistogramSeries` module into the services.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, HistogramSeries } from
"@syncfusion/ej2-react-charts";
function App() {
    const chartData = [];
    const points = [5.250, 7.750, 0, 8.275, 9.750, 7.750, 8.275, 6.250,

Error Bar in React Chart component

Error Bar

Error bars are graphical representations of the variability of data and used on graphs to indicate the error or uncertainty in a reported measurement. To render the error bar for the series, set [visible](#) as `true` and inject `ErrorBar` module into the `services`.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, LineSeries, ErrorBar } from '@syncfusion/ej2-react-
charts';
function App() {
    const data = [
        { x: 2006, y: 7.8 }, { x: 2007, y: 7.2 },
        { x: 2008, y: 6.8 }, { x: 2009, y: 10.7 },
        { x: 2010, y: 10.8 }, { x: 2011, y: 9.8 }
    ];
    const primaryxAxis = { minimum: 2005, maximum: 2012, interval: 1, title:
'Year' };
    const primaryyAxis = { minimum: 3, maximum: 12, interval: 1, title:
'Percentage', labelFormat: '{value}%' };
    const marker;
    const errorbar = { visible: true };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='Unemployment rate (%)'>
        <Inject services={[LineSeries, Legend, Category, ErrorBar]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={data} xName='x' yName='y' width={2}
name='India' type='Line' marker={marker} errorBar={errorbar}>
                </SeriesDirective>
            </SeriesCollectionDirective>
        </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
{% endraw %}
```

```

Error Bar Type

To change the error bar rendering type using [type](#) option of error bar. To change the error bar line length you can use [verticalError](#) property.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, LineSeries, ErrorBar } from '@syncfusion/ej2-react-
charts';
import { data } from 'datasource.ts';
function App() {
  const primaryxAxis = { minimum: 2005, maximum: 2012, interval: 1, title:
'Year' };
  const primaryyAxis = { minimum: 3, maximum: 12, interval: 1, title:
'Percentage', labelFormat: '{value}%' };
  const marker;
  const errorbar = { visible: true, type: 'Percentage', verticalError: 4
};
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='Unemployment rate (%)'>
    <Inject services={[LineSeries, Legend, Category, ErrorBar]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={data} xName='x' yName='y' width={2}
name='India' type='Line' marker={marker} errorBar={errorbar}>
      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>
};
ReactDOM.render(<App />, document.getElementById("charts"));
{% endraw %}

```

```

    </ChartComponent>;
  }
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
SeriesDirective, Inject,
    Legend, Category, Tooltip, DataLabel, Zoom, Crosshair, LineSeries,
Selection, ErrorBar }
from '@syncfusion/ej2-react-charts';
import { data } from 'datasource.ts';
function App() {
    const primaryxAxis: AxisModel = { minimum: 2005, maximum: 2012, interval:
1, title: 'Year' };
    const primaryyAxis: AxisModel = { minimum: 3, maximum: 12, interval: 1,
title: 'Percentage', labelFormat: '{value}%' };
    const marker: { visible: true };
    const errorbar = { visible: true, type: 'Percentage', verticalError: 4 };
    return <ChartComponent id='charts'
        primaryXAxis={primaryxAxis}
        primaryYAxis={primaryyAxis}
        title='Unemployment rate (%)'>
        <Inject services={[LineSeries, Legend, Category, ErrorBar]} />
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={data} xName='x' yName='y' width={2}
name='India' type='Line'

export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
{% endraw %}

```

Customizing error bar type

To customize the error bar type, set error bar [type](#) as **Custom** and then change the horizontal/vertical positive and negative error of error bar.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, LineSeries, ErrorBar } from '@syncfusion/ej2-react-
charts';
import { data } from 'datasource.ts';

```

```
function App() {
  const primaryxAxis = { minimum: 2005, maximum: 2012, interval: 1, title:
'Year' };
  const primaryyAxis = { minimum: 3, maximum: 12, interval: 1, title:
'Percentage', labelFormat: '{value}%' };
  const marker;
  const errorbar = {
    visible: true,
    type: 'Custom',
    mode: 'Both',
    verticalPostiveError: 3,
    horizontalPositiveError: 2,
    verticalNegativeError: 3,
    horizontalNegativeError: 2
  };
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='Unemployment rate (%)'>
    <Inject services={[LineSeries, Legend, Category, ErrorBar]}/>
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={data} xName='x' yName='y' width={2}
name='India' type='Line' marker={marker} errorBar={errorbar}>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
SeriesDirective, Inject,
  Legend, Category, Tooltip, DataLabel, Zoom, Crosshair, LineSeries,
Selection, ErrorBar }
from '@syncfusion/ej2-react-charts';
import { data } from 'datasource.ts';
function App() {
  const primaryxAxis: AxisModel = { minimum: 2005, maximum: 2012, interval:
1, title: 'Year' };
  const primaryyAxis: AxisModel = { minimum: 3, maximum: 12, interval: 1,
title: 'Percentage', labelFormat: '{value}%' };
  const marker: { visible: true };
  const errorbar = {
    visible: true,
    type: 'Custom',
    mode: 'Both',

Vertical Chart in React Chart component

Vertical

In EJ2 chart, you can draw a chart in vertical manner by changing orientation of the axis. All series types support this feature. You can use `isTransposed` property in chart to render a chart in vertical manner.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, SplineSeries } from '@syncfusion/ej2-
react-charts';
```

```

import { splineData } from 'datasource.ts';
function App() {
  const primaryxAxis = { title: 'Month', valueType: 'Category' };
  const primaryyAxis = { minimum: -5, maximum: 35, interval: 5, title:
'Temperature in Celsius', labelFormat: '{value}C' };
  const marker;
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='CO2 - Intensity Analysis'
isTransposed={true}>
    <Inject services={[SplineSeries, Legend, Tooltip,
DataLabel, Category]}/>
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={splineData} xName='x'
yName='y' width={2} name='London' type='Spline' marker={marker}>
      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
{% endraw %}

```

Pareto in React Chart component

Pareto

Pareto charts are used to find the cumulative values of data in different categories. It is a combination of Column and Line series.

The initial values are represented by column chart and the cumulative values are represented by Line chart.

To render a pareto chart, use series [type](#) as

Pareto and inject `ParetoSeries` `ColumnSeries` and `LineSeries` module.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ParetoSeries, ColumnSeries, LineSeries, Legend, Category, Tooltip, DataLabel
} from '@syncfusion/ej2-react-charts';
function App() {
    const chartData = [
        { x: 'Traffic', y: 56 }, { x: 'Child Care', y: 44.8 },
        { x: 'Transport', y: 27.2 }, { x: 'Weather', y: 19.6 },
        { x: 'Emergency', y: 6.6 }
    ];
    const primaryxAxis = { title: 'Defects', valueType: 'Category' };
    const primaryyAxis = { title: 'Frequency', minimum: 0, maximum: 150,
interval: 30 };
    const tooltipsettings = { enable: true };
    const marker = { visible: true, width: 10, height: 10 };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} tooltip={tooltipsettings} title='Defect vs
Frequency'>
        <Inject services={[ColumnSeries, LineSeries,
ParetoSeries, Legend, Tooltip, Category, DataLabel]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={chartData} xName='x'
yName='y' name='Defect' type='Pareto' marker={marker}>
                </SeriesDirective>
            </SeriesCollectionDirective>
        </ChartComponent>;
    }
    ;
    export default App;
    ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import {
  AxisModel, ChartComponent, SeriesCollectionDirective, SeriesDirective,
  Inject,
  ChartTheme, LegendSettingsModel, TooltipSettingsModel, ParetoSeries, ColumnSeries,
  LineSeries,
  Legend, Category, Tooltip, ILoadedEventArgs, DataLabel
} from '@syncfusion/ej2-react-charts';
function App() {
  const chartData: any[]=[
    { x: 'Traffic', y: 56 }, { x: 'Child Care', y: 44.8 },
    { x: 'Transport', y: 27.2 }, { x: 'Weather', y: 19.6 },
    { x: 'Emergency', y: 6.6 }
  ];

Technical indicators in React Chart component

A technical indicator is a mathematical calculation based on historic price, volume or open interest information that aims to forecast financial market direction.

Chart supports 10 types of technical indicators.

Accumulation Distribution

Accumulation Distribution combines price and volume to show how money may be flowing into or out of stock. To render a Accumulation Distribution Indicator, use indicator [type](#) as `AccumulationDistribution` and inject `AccumulationDistributionIndicator` into services. To calculate the signal line [volume](#) field is additionally added with `dataSource`.

Bollinger Band

A chart overlay that shows the upper and lower limits of normal price movements based on the standard deviation of prices.

To render a Bollinger Band, use indicator [type](#) as `BollingerBand` and inject `BollingerBands` module and `RangeAreaSeries` into services.

Bollinger band will be represented by three lines (upperLine, lowerLine, signalLine).

The default values of the Bollinger Band [period](#) is 14 and [standardDeviations](#) is 2.

Momentum

Momentum shows the speed at which the price of the stock is changing. To render a Momentum indicator, use indicator `type` as `Momentum` and inject `MomentumIndicator` module into services. Momentum indicator will be represented by two lines (upperLine, signalLine). In momentum indicator the upperBand value is always renders at the value 100.

Customization of MACD

`stroke`, `stroke-width`, and `color` of `macdLine` can be customized by using, [macdLine](#), property of indicator. The positive and negative changes of histogram can be customized by [macdPositiveColor](#) and [macdNegativeColor](#) properties. The `[macdType]` is used to define the type of MACD indicator. To customize the MACD period using [slowPeriod](#) and [fastPeriod](#) properties.

By default `macdType` as 'Both'.

Relative Strength Index (RSI)

RSI shows how strongly a stock is moving in its current direction. To render a RSI Indicator, use indicator [type](#) as `Rsi` and inject `RsiIndicator` module into services. RSI indicator will be represented by three lines (upperBand, lowerBand, signalLine). The upperBand and lowerBand values are customized by [overBought](#) and [overSold](#) properties of indicator and the signalLine is calculated by RSI formula.

Customization of StochasticIndicator

stroke, stroke-width, and color of upperLine can be customized by using [upperLine](#), the lowerLine can be customized by using [lowerLine](#) and the periodLine can be customized by using [periodLine](#) properties of indicator. To customize the period to find the average price using [kPeriod](#) and [dPeriod](#) properties.

Triangular Moving Average (TMA)

Moving average Indicators are used to define the direction of the trend. To render a TMA Indicator, use indicator [type](#) as `Tma` and inject `TmaIndicator` module into services.

Customization of Technical Indicators

stroke, stroke-width, and color of signalLine can be customized by using [fill](#), [width](#) and [dashArray](#) properties. and the [period](#) property is used to predict the data forecast calculations. The [field](#) value is used to compare the current price with previous price. It is applicable to Bollinger bands and moving averages. The [showZones](#) property is used to show/hides the overBought and overSold regions. It is applicable for RSI and stochastic indicators.

Data Source

Usually technical indicators are added along with a financial series. The [seriesName](#) represents the series, the data of which has to be analysed through indicators.

Technical indicators can also be added without series using [dataSource](#) property of indicator.

Module Dependencies

To render a Indicator, it is mandatory to inject `LineSeries` module using `Chart.Inject(LineSeries)`.

In addition to that, MACD Indicator requires `ColumnSeries` and BollingerBands requires `RangeAreaSeries`.

<!-- markdownlint-disable MD036 -->

Trend lines in React Chart component

Trendlines are used to show the direction and speed of price.

Trendlines can be generated for Cartesian type series (Line, Column, Scatter, Area, Candle, Hilo etc.) except bar type series. You can add more than one trendline to a series.

Chart supports 6 types of trendlines.

Linear

A linear trendline is a best fit straight line that is used with simpler data sets. To render a linear trendline, use trendline `type` as `Linear` and inject `Trendlines` module using `Chart.Inject(Trendlines)`.

Exponential

An exponential trendline is a curved line that is most useful when data values rise or fall at increasingly higher rates. You cannot create an exponential trendline, if your data contains zero or negative values.

To render a exponential trendline, use trendline [type](#) as **Exponential** and inject **Trendlines** module using **Chart.Inject(Trendlines)**.

```

Moving Average

A moving average trendline smoothen out fluctuations in data to show a pattern or trend more clearly.

To render a moving average trendline, use trendline [type](#) as `MovingAverage` and inject `Trendlines` module using `Chart.Inject(Trendlines)`.

`period` property defines the period to find the moving average.

Forecasting

Trendline forecasting is the prediction of future/past situations.

Forward Forecasting and Backward Forecasting are the two types of forecasting.

Forward Forecasting

The value set for forwardForecast is used to determine the distance moving towards the future trend.

Data markers in React Chart component

Data markers are used to provide information about the data points in the series. You can add a shape to adorn each data point.

<!-- markdownlint-disable MD036 -->

Marker

<!-- markdownlint-disable MD036 -->

Markers can be added to points by enabling the [visible](#) option of the marker property. By default, distinct markers will be enabled for each series in the chart.

function App() {
  const primaryxAxis = { valueType: 'DateTime' };
  const marker = {
    visible: true,
    fill: 'Red', height: 10, width: 10,
    border: { width: 2, color: 'blue' },
  };
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}>
    <Inject services={[LineSeries, Legend, Tooltip, DataLabel,
DateTime]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={data} xName='x' yName='y' width={2}
name='Warmest' type='Line' marker={marker}>
      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
SeriesDirective, Inject,

```

```

    Legend, DateTime, Tooltip, DataLabel, LineSeries}
from '@syncfusion/ej2-react-charts';
function App() {
    const primaryxAxis: AxisModel = { valueType: 'DateTime' };
    const marker = {
        visible: true,
        fill: 'Red', height: 10, width: 10,
        border: { width: 2, color: 'blue' },
    };
    const data: any[] = [
        { x: new Date(2016, 0, 1), y: -7.1 }, { x: new Date(2016, 1, 1), y: -3.7 },
        { x: new Date(2016, 2, 1), y: 0.8 }, { x: new Date(2016, 3, 1), y: 6.3 },
        { x: new Date(2016, 4, 1), y: 13.3 }, { x: new Date(2016, 5, 1), y: 18.0 },
        { x: new Date(2016, 6, 1), y: 19.8 }, { x: new Date(2016, 7, 1), y: 18.1 },
        { x: new Date(2016, 8, 1), y: 13.1 }, { x: new Date(2016, 9, 1), y: 4.1 },
        { x: new Date(2016, 10, 1), y: -3.8 }, { x: new Date(2016, 11, 1), y: -6.8 }
    ];
    return <ChartComponent id='charts'
        primaryXAxis={primaryxAxis}>
        <Inject services={[LineSeries, Legend, Tooltip, DataLabel, DateTime]} />
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={data} xName='x' yName='y' width={2}
            name='Warmest'
                type='Line' marker={marker}>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Customizing specific point

You can also customize the specific marker and label using [pointRender](#) event. The `pointRender` event allows you to change the shape, color and border for a point.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, DateTime, Tooltip, DataLabel, LineSeries } from '@syncfusion/ej2-
react-charts';
import { data } from 'datasource.ts';
function App() {
    const pointRender = (args) => {
        if (args.point.index === 3) {
            args.fill = 'red';
        }
    };
};

```

```

const primaryxAxis = { valueType: 'DateTime' };
const marker = { visible: true, height: 10, width: 10 };
return <ChartComponent id='charts' pointRender={pointRender}
primaryXAxis={primaryxAxis}>
    <Inject services={[LineSeries, Legend, Tooltip, DataLabel,
DateTime]}/>
    <SeriesCollectionDirective>
        <SeriesDirective dataSource={data} xName='x' yName='y' width={2}
name='Warmest' type='Line' marker={marker}>
        </SeriesDirective>
    </SeriesCollectionDirective>
</ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
SeriesDirective, Inject, IPointRenderEventArgs,
Legend, DateTime, Tooltip, DataLabel, LineSeries }

Data labels in React Chart component

Data label can be added to a chart series by enabling the [visible](#) option in the dataLabel. By default, the labels will arrange smartly without overlapping.

{% endraw %}

```

Text Mapping

Text from the data source can be mapped using `name` property.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, ColumnSeries } from '@syncfusion/ej2-
react-charts';
import { mapData } from 'datasource.ts';
function App() {
  const primaryxAxis = { valueType: 'Category' };
  const marker = { dataLabel: { visible: true, name: 'text' } };
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]}/>
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={mapData} xName='x' yName='y'
type='Column' marker={marker}>
    </SeriesDirective>
  </SeriesCollectionDirective>
</ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, ColumnSeries}
from '@syncfusion/ej2-react-charts';
function App() {
  const primaryxAxis: AxisModel = { valueType: 'Category' };
  const marker = { dataLabel: { visible: true, name: 'text' } };
  const mapData: any[] = [{ x: 'Jan', y: 12, text: 'January : 12°C' }, { x:
'Feb', y: 8, text: 'February : 8°C' },
{ x: 'Mar', y: 11, text: 'March : 11°C' }, { x: 'Apr', y: 6, text: 'April
: 6°C' }];

```

```

return <ChartComponent id='charts'
  primaryXAxis={primaryXAxis}>
  <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]} />
  <SeriesCollectionDirective>
    <SeriesDirective dataSource={mapData} xName='x' yName='y'
      type='Column' marker={marker}>
    </SeriesDirective>
  </SeriesCollectionDirective>
</ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Format

Data label for the chart can be formatted using [format](#) property. You can use the global formatting options, such as 'n', 'p', and 'c'.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, ColumnSeries } from '@syncfusion/ej2-
react-charts';
import { mapData } from 'datasource.ts';
class App extends React.Component {
  primaryXAxis = { valueType: 'Category' };
  marker = { dataLabel: { visible: true, format: 'n2' } };
  render() {
    return <ChartComponent id='charts' primaryXAxis={this.primaryXAxis}>
      <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]} />
      <SeriesCollectionDirective>
        <SeriesDirective dataSource={mapData} xName='x' yName='y'
          type='Column' marker={this.marker}>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>;
  }
}
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
SeriesDirective, Inject,
  Legend, Category, Tooltip, DataLabel, ColumnSeries}
from '@syncfusion/ej2-react-charts';
class App extends React.Component<{}, {}> {
  public primaryXAxis: AxisModel = { valueType: 'Category' };

```

```

    public marker = { dataLabel: { visible: true, format: 'n2' } };
    public mapData: any[] = [{ x: 'Jan', y: 12, text: 'January : 12°C' }, { x:
'Feb', y: 8, text: 'February : 8°C' },
    { x: 'Mar', y: 11, text: 'March : 11°C' }, { x: 'Apr', y: 6, text:
'April : 6°C' }];
    render() {
        return <ChartComponent id='charts'
            primaryXAxis={this.primaryxAxis}>
            <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]} />
            <SeriesCollectionDirective>
                <SeriesDirective dataSource={this.mapData} xName='x' yName='y'
                    type='Column' marker={this.marker}>
                </SeriesDirective>
            </SeriesCollectionDirective>
        </ChartComponent>
    }
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Value	Format	Resultant Value	Description
1000	n1	1000.0	The number is rounded to 1 decimal place.
1000	n2	1000.00	The number is rounded to 2 decimal places.
1000	n3	1000.000	The number is rounded to 3 decimal place.
0.01	p1	1.0%	The number is converted to percentage with 1 decimal place.
0.01	p2	1.00%	The number is converted to percentage with 2 decimal place.
0.01	p3	1.000%	The number is converted to percentage with 3 decimal place.
1000	c1	\$1000.0	The currency symbol is appended to number and number is rounded to 1 decimal place.
1000	c2	\$1000.00	The currency symbol is appended to number and number is rounded to 2 decimal place.

Margin

margin for data label can be applied to using left, right, bottom and top properties.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, ColumnSeries } from '@syncfusion/ej2-
react-charts';
import { columnData } from 'datasource.ts';
function App() {
    const primaryxAxis = { valueType: 'Category' };
    const marker = {

```

```

        dataLabel: {
            visible: true, border: { width: 1, color: 'red' },
            margin: {
                left: 5,
                right: 5,
                top: 5,
                bottom: 5
            }
        }
    };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}>

};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Customization

stroke and border of data label can be customized using fill and border properties. Rounded corners can be customized using rx and ry properties. The data label can be customized by using the color, fontFamily, fontWeight, size properties in the font property of the data label.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";

```

```

import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, ColumnSeries } from '@syncfusion/ej2-
react-charts';
import { columnData } from 'datasource.ts';
function App() {
    const primaryxAxis = { valueType: 'Category' };
    const marker = {
        dataLabel: {
            visible: true, font: { color: "blue", fontWeight: "500" },
border: { width: 2, color: 'red' },
            rx: 10, ry: 10
        }
    };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={columnData} xName='country'
yName='gold' type='Column' marker={marker}>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, ColumnSeries}
from '@syncfusion/ej2-react-charts';
function App() {
    const primaryxAxis: AxisModel = { valueType: 'Category' };
    const marker = {
        dataLabel: {
            visible: true, font: { color: "blue", fontWeight: "500" }, border: {
width: 2, color: 'red' },
            rx: 10, ry: 10
        }
    };
    const columnData: any[] = [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
    ];
    return <ChartComponent id='charts'
        primaryXAxis={primaryxAxis}>

```

```

    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={columnData} xName='country'
yName='gold'
        type='Column' marker={marker}>
      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Note: **rx** and **ry** properties requires **border** values not to be null.

Customizing Specific Point

You can also customize the specific marker and label using [pointRender](#) and [textRender](#) event. **pointRender** event allows you to change the shape, color and border for a point, whereas the **textRender** event allows you to change the text for the point.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, LineSeries } from '@syncfusion/ej2-
react-charts';
import { data } from 'datasource.ts';
function App() {
  const pointRender = (args) => {
    if (args.point.index === 6) {
      args.fill = 'red';
    }
  };

};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Show percentage based on each series points

You can calculate the percentage value based on the sum for each series using the `seriesRender` and `textRender` events in the chart. In `seriesRender` calculate the sum of each series y values and In `textRender` calculate percentage value based on the sum value and modify the text.

Chart annotations in React Chart component

Annotations are used to mark the specific area of interest in the chart area with texts, shapes or images.

<!-- markdownlint-disable MD033 -->

You can add annotations to the chart by using the `<code>annotations</code> option. By using the content option of annotation object, you can specify the id of the element that needs to be displayed in the chart area.`

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";

Legend in React Chart component

Legend provides information about the series rendered in the chart.

To get start quickly with Legends in React Charts, you can check on this video:

Position and Alignment

By using the [position](#) property, you can position the legend at left, right, top or bottom of the chart. The legend is positioned at the bottom of the chart, by default.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, ColumnSeries } from '@syncfusion/ej2-
react-charts';

Legend Size

By default, legend takes 20% - 25% of the chart's height horizontally, when it is placed on top or bottom position and 20% - 25% of the chart's width vertically, when placed on left or right position of the chart. You can change this default legend size by using the [width](#) and [height](#) property of the `legendSettings`.

Legend Title

You can set title for legend using `title` property in `legendSettings`. You can also customize the `fontStyle`, `size`, `fontWeight`, `color`, `textAlignment`, `fontFamily`, `opacity` and `textOverflow` of legend title. `titlePosition` is used to set the legend position in `Top`, `Left` and `Right` position. `maximumTitleWidth` is used to set the width of the legend title. By default, it will be `100px`.

Arrow Page Navigation

By default, the page number will be enabled while legend paging. Now, you can disable that page number and also you can get left and right arrows for page navigation. You have to set `false` value to `enablePages` to get this support.

Note: To use legend feature, we need to inject **Legend** module into the **services**.

See Also

- [Customize each shape in legend](#)

Tooltip in React Chart component

Chart will display details about the points through tooltip, when the mouse is moved over the point

<!-- markdownlint-disable MD036 -->

Default tooltip

<!-- markdownlint-disable MD012 -->

By default, tooltip is not visible. You can enable the tooltip by setting [enable](#) property to **true** and by injecting **Tooltip** module into the **services**.

      type='StepLine' marker={marker}>
    </SeriesDirective>
  </SeriesCollectionDirective>
</ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Format the tooltip

By default, tooltip shows information of x and y value in points. In addition to that, you can show more information in tooltip. For example the format `${series.name} ${point.x}` shows series name and point x value.

Zooming in React Chart component

To get start quickly with React Chart Zooming and Panning, you can check on this video:

Enable zooming

Chart can be zoomed in three ways.

- Selection - By setting [enableSelectionZooming](#)

property to true in `zoomSettings`, you can zoom the chart by using the rubber band selection.

- Mousewheel - By setting [enableMouseWheelZooming](#) property to true in `zoomSettings`, you can zoomin and zoomout the chart by scrolling the mouse wheel.
- Pinch - By setting [enablePinchZooming](#) property to true in `zoomSettings`, you can zoom the chart through pinch gesture in touch enabled devices.

Note: Pinch zooming is supported only in browsers that support multi-touch gestures. Currently IE11, Chrome and Opera browsers support multi-touch in desktop devices.

  const legendSettings: LegendSettingsModel = { visible: false };
  const zoomsettings: ZoomSettingsModel = {
    enableMouseWheelZooming: true, enablePinchZooming: true,
    enableSelectionZooming: true
  };
  const border = { width: 0.5, color: '#00bdae' };
  const animation = { enable: false };
  return <ChartComponent id='charts'
    primaryXAxis={primaryxAxis}
    legendSettings={legendSettings}
    zoomSettings={zoomsettings}
    title='Sales History of Product X'>
    <Inject services={[AreaSeries, Legend, Tooltip, DataLabel, Zoom,
DateTime]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={zoomData} xName='x' yName='y'
opacity={0.3} name='Product X' type='Area'
border={border} animation={animation}>
      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>
</App>
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

After zooming the chart, a zooming toolbar will appear with **zoom**, **zoomin**, **zoomout**, **pan** and **reset** buttons. Selecting the Pan option will allow to pan the chart and selecting the Reset option will reset the zoomed chart.

Modes

The [mode](#) property in zoomSettings specifies whether the chart is allowed to scale along the horizontal axis or vertical axis. The default value of the mode is XY (both axis).

There are three types of mode.

- X - Allows us to zoom the chart horizontally.
- Y - Allows us to zoom the chart vertically.
- XY - Allows us to zoom the chart both vertically and horizontally.

```

Enable scrollbar

Using the [enableScrollbar](#) property, you can add a scrollbar to a zoomed chart. This scrollbar allows you to zoom or pan the chart. The appearance of the scrollbar can be customized using properties in [scrollbarSettings](#). For example, you can use [trackColor](#) and [trackRadius](#) properties to customize the track of the scrollbar, and [scrollbarRadius](#) and [scrollbarColor](#) properties to customize the scroller. The ability to zoom through the scrollbar can be enabled or disabled using the [enableZoom](#) property in

[scrollbarSettings](#). Additionally, you can change the color of the grip and height of the scrollbar using the [gripColor](#) and [height](#) properties.

Note: To use zooming feature, we need to inject **Zoom** module into the **services**.

<!-- markdownlint-disable MD036 -->

Data editing in React Chart component

Enable Data Editing

We can use the data editing through inject the **DataEditing** module in the chart. It provides drag and drop support to the rendered points. Now, we can change the location or value of the point based on its **y** value. To enable the data editing, set the **enable** property to true in the drag settings of the series. Also, we can set color using **fill** property and set the data editing minimum and maximum range using **minY** and **maxY** properties.

INDEX.JSX

Cross hair and track ball in React Chart component

Crosshair has a vertical and horizontal line to view the value of the axis at mouse or touch position.

Crosshair lines can be enabled by using [enable](#) property in the `crosshair`. Likewise tooltip label for an axis can be enabled by using [enable](#) property of `crosshairTooltip` in the corresponding axis.

  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Note: To use crosshair feature, we need to inject **Crosshair** module into the **services**.

Trackball

Trackball is used to track a data point closest to the mouse or touch position. Trackball marker indicates the closest point and trackball tooltip displays the information about the point. To use trackball feature, we need to inject **Crosshair** and **Tooltip** module into the **services**.

Trackball can be enabled by setting the [enable](#) property of the crosshair to true and [shared](#) property in **tooltip** to true in chart.

Synchronized Charts in React Chart component

Tooltip synchronization

The tooltip can be synchronized across multiple charts using the [showTooltip](#) and [hideTooltip](#) methods. When we hover over a data point in one chart, we call the [showTooltip](#) method for the other charts to display related information in other connected charts simultaneously.

In the [showTooltip](#) method, specify the following parameters programmatically to enable tooltip for a particular chart:

- **x** - Data point x-value or x-coordinate value.
- **y** - Data point y-value or y-coordinate value.

Crosshair synchronization

The crosshair can be synchronized across multiple charts using the [showCrosshair](#) and [hideCrosshair](#) methods. When we hover over one chart, we call the [showCrosshair](#) method for the other charts to align with data points in other connected charts, simplifying data comparison and analysis.

In the [showCrosshair](#) method, specify the following parameters programmatically to enable crosshair for a particular chart:

- **x** - Specifies the x-value of the point or x-coordinate.
- **y** - Specifies the y-value of the point or y-coordinate.

Zooming synchronization

You can maintain constant zoom levels across multiple charts using the [zoomComplete](#) event. In the [zoomComplete](#) event, obtain the [zoomFactor](#) and [zoomPosition](#) values of the particular chart, and then apply those values to the other charts.

INDEX.JSX

```
{% raw %}
import * as ReactDOM from "react-dom";
import { Chart, SplineAreaSeries, LineSeries, DateTime, Zoom,
IZoomCompleteEventArgs, Selection, ChartComponent,
SeriesCollectionDirective, SeriesDirective, Inject } from '@syncfusion/ej2-
react-charts';

Selection synchronization

You can select the data across multiple charts using the [selectionComplete](#) event. In the [selectionComplete](#) event, obtain the selected values of the particular chart, and then apply those values to the other charts.

Selection in React Chart component

Chart provides selection support for the series and its data points on mouse click.

When Mouse is clicked on the data points, the corresponding series legend will also be selected.

We have different type of selection mode for selecting the data. They are,

- None
- Point
- Series
- Cluster
- DragXY
- DragX
- DragY

Point

You can select a point, by setting `selectionMode` to point.

Rectangular selection

DragXY, DragX and DragY

To fetch the collection of data under a particular region, you have to set `selectionMode` as `DragXY`.

- DragXY - Allows us to select data with respect to horizontal and vertical axis.
- DragX - Allows us to select data with respect to horizontal axis.
- DragY - Allows us to select data with respect to vertical axis.

The selected data's are returned as an array collection in the [dragComplete](#) event.

```

Selection on Load

You can able to select a point or series programmatically on a chart using [selectedDataIndexes](#) property.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, ColumnSeries, Selection } from
 '@syncfusion/ej2-react-charts';
import { selectionData } from 'datasource.ts';
function App() {
    const selectedData = [{ series: 0, point: 1 }, { series: 2, point: 3 }];
```

```

const primaryxAxis = { valueType: 'Category' };
const animation = { enable: false };
return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
title='Olympic Medals' selectedDataIndexes={selectedData}
isMultiSelect={true} selectionMode='Point'>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Selection, Category]}>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={selectionData} xName='country'
yName='gold' name='Gold' type='Column' selectionStyle='chartSelection1'
animation={animation}></SeriesDirective>
            <SeriesDirective dataSource={selectionData} xName='country'
yName='silver' name='Silver' type='Column' selectionStyle='chartSelection2'
animation={animation}></SeriesDirective>
            <SeriesDirective dataSource={selectionData} xName='country'
yName='bronze' name='Bronze' type='Column' selectionStyle='chartSelection3'
animation={animation}></SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";

</ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Selection through on legend

You can able to select a point or series through on legend using [toggleVisibility](#) property. Also, use [enableHighlight](#) property for highlighting the series through legend.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, ColumnSeries, Highlight, Selection }
from '@syncfusion/ej2-react-charts';
function App() {
    const primaryxAxis = { valueType: 'Category' };
    const legendSettings = { visible: true, toggleVisibility: false,
enableHighlight: true };
    const selectionData = [
        { country: "USA", gold: 50, silver: 70, bronze: 45 },
        { country: "China", gold: 40, silver: 60, bronze: 55 },
        { country: "Japan", gold: 70, silver: 60, bronze: 50 },
        { country: "Australia", gold: 60, silver: 56, bronze: 40 },
        { country: "France", gold: 50, silver: 45, bronze: 35 },
        { country: "Germany", gold: 40, silver: 30, bronze: 22 },
        { country: "Italy", gold: 40, silver: 35, bronze: 37 },
        { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
    ];
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
legendSettings={legendSettings} title='Olympic Medals'
selectionMode='Cluster'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel, Selection,
Category, Highlight]} />

{% endraw %}

```

Customization for selection

You can apply custom style to selected points or series with [selectionStyle](#) property.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, ColumnSeries, Selection } from
'@syncfusion/ej2-react-charts';
import { selectionData } from 'datasource.ts';
function App() {
    const primaryxAxis = { valueType: 'Category', title: 'Countries' };
    const primaryyAxis = { minimum: 0, maximum: 80, interval: 20, title:
'Medals' };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='Olympic Medals' isMultiSelect={true}
selectionMode='Point'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Selection, Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={selectionData} xName='country'
yName='gold' name='Gold' type='Column'
selectionStyle='chartSelection1'></SeriesDirective>
            <SeriesDirective dataSource={selectionData} xName='country'
yName='silver' name='Silver' type='Column'
selectionStyle='chartSelection2'></SeriesDirective>
            <SeriesDirective dataSource={selectionData} xName='country'
yName='bronze' name='Bronze' type='Column'
selectionStyle='chartSelection3'></SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```

Export

The rendered chart can be exported to JPEG, PNG, SVG, PDF, XLSX, or CSV format using the export method in chart. The input parameters for this method are type for format and fileName for result.

The optional parameters for this method are,

- orientation - either portrait or landscape mode during PDF export,
- controls - pass collections of controls for multiple export,
- width - width of chart export, and
- height - height of chart export.

INDEX.JSX

```

import * as React from "react";

Adding header and footer in PDF export

In the export method, specify the following parameters to add a header and footer text to the exported PDF document:

- **header** - Specify the text that should appear at the top of the exported PDF document.
- **footer** - Specify the text that should appear at the bottom of the exported PDF document.

Multiple chart export

You can export the multiple charts in single page by passing the multiple chart objects in the export method of chart. To export multiple charts in a single page, follow the given steps:

Initially, render more than one chart to export, and then add button to export the multiple charts. In button click, call the export method in charts, and then pass the multiple chart objects in the export method.

Exporting chart using base64 string

The chart can be exported as an image in the form of a base64 string by utilizing HTML canvas. This process involves rendering the chart onto a canvas element and then converting the canvas content to a base64 string.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Category } from '@syncfusion/ej2-react-charts';

Chart appearance in React Chart component

Custom color palette

You can customize the default color of series or points by providing a custom color palette of your choice by using the [palettes](#) property.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, ColumnSeries } from '@syncfusion/ej2-
react-charts';
function App() {
  const data = [
    { country: "USA", gold: 50, silver: 70, bronze: 45 },
    { country: "China", gold: 40, silver: 60, bronze: 55 },
    { country: "Japan", gold: 70, silver: 60, bronze: 50 },
    { country: "Australia", gold: 60, silver: 56, bronze: 40 },
    { country: "France", gold: 50, silver: 45, bronze: 35 },
    { country: "Germany", gold: 40, silver: 30, bronze: 22 },
    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "Sweden", gold: 30, silver: 25, bronze: 27 }
  ];
  const palette = ["#E94649", "#F6B53F", "#6FAAB0", "#C4C24A"];
  const primaryxAxis = { valueType: 'Category', title: 'Countries' };
  const primaryyAxis = { minimum: 0, maximum: 80, interval: 20, title:
'Medals' };
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} palettes={palette} title='Olympic Medals'>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]}/>
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={data} xName='country' yName='gold'
name='Gold' legendShape='Circle' type='Column'>
    </SeriesDirective>
      <SeriesDirective dataSource={data} xName='country' yName='silver'
type='Column' name='Silver' legendShape='Rectangle'>
    </SeriesDirective>
      <SeriesDirective dataSource={data} xName='country' yName='bronze'
name='Bronze' legendShape='Rectangle' type='Column'>
    </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";

      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Data point customization

The color of individual data point or data points within a range can be customized using the options below.

Point color mapping

You can bind the color for the points from [dataSource](#) for the series using [pointColorMapping](#) property.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Category } from '@syncfusion/ej2-react-charts';
function App() {
  const data = [
    { x: 'Jan', y: 6.96, color: "red" },
    { x: 'Feb', y: 8.9, color: "blue" },
    { x: 'Mar', y: 12, color: "orange" },
    { x: 'Apr', y: 17.5, color: "aqua" },
    { x: 'May', y: 22.1, color: "grey" }
  ];
  return <ChartComponent id='charts' primaryXAxis={{ valueType:
'Category', majorGridLines: { width: 0 } }} primaryYAxis={{ lineStyle: {
width: 0 },
majorTickLines: { width: 0 },
minorTickLines: { width: 0 },
labelFormat: '{value}°C' }} title="USA CLIMATE - WEATHER BY
MONTH" chartArea={{ border: { width: 0 } }}>
    <Inject services={[ColumnSeries, Category]}>
    <SeriesCollectionDirective>
      <SeriesDirective pointColorMapping="color"
dataSource={data} name='USA' xName='x' yName='y' type='Column' animation={{
enable: false }} cornerRadius={{
topLeft: 10, topRight: 10
}}>
    </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Category, Selection, Legend, RangeColorSettingsDirective,
RangeColorSettingDirective } from '@syncfusion/ej2-react-charts';
function App() {
  const data: any[] = [
    { x: 'Jan', y: 6.96, color: "red" },
    { x: 'Feb', y: 8.9, color: "blue" },
    { x: 'Mar', y: 12, color: "orange" },
    { x: 'Apr', y: 17.5, color: "aqua" },
    { x: 'May', y: 22.1, color: "grey" }
  ]
}
```

```

];
return <ChartComponent id='charts' primaryXAxis={{ valueType: 'Category',
majorGridLines: { width: 0 } }} primaryYAxis={{ lineStyle: { width: 0 },
majorTickLines: { width: 0 },
minorTickLines: { width: 0 },
labelFormat: '{value}°C' }} title="USA CLIMATE - WEATHER BY
MONTH" chartArea={{ border: { width: 0 } }}>
    <Inject services={[ColumnSeries, Category]}>
    <SeriesCollectionDirective>
        <SeriesDirective pointColorMapping="color"
dataSource={data} name='USA' xName='x' yName='y' type='Column' animation={{

Render methods in React Chart component

Chart uses following two rendering methods.

- SVG
- Canvas

SVG

SVG is used to render Chart by default for all browsers except IE8 and old versions.

Canvas

You can switch between SVG and Canvas rendering by using the `enableCanvas` option. The canvas mode rendering is used in the following scenarios,

- Plotting large number of data points.
- Performing high frequency live updates.

Limitations

- Animation is not supported.

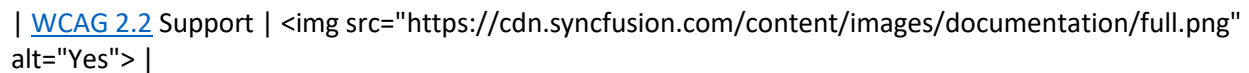

Accessibility in React Chart component

The Chart component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Chart component is outlined below.

| Accessibility Criteria | Compatibility |

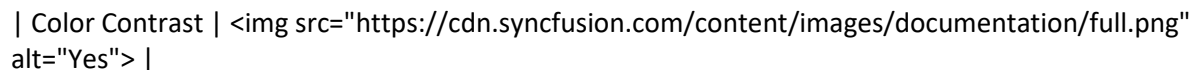

| -- | -- |

| [WCAG 2.2](#) Support |  |

| [Section 508](#) Support |  |

| Screen Reader Support |  |

| Right-To-Left Support |  |

| Color Contrast |  |

| Mobile Device Support |  |

| Keyboard Navigation Support |  |

| [Accessibility Checker](#) Validation |  |

| [Axe-core](#) Accessibility Validation |  |

<style>

```
.post .post-content img {
```

```
display: inline-block;
```

```
margin: 0.5em 0;
```

```
}
```

</style>

<div> - All features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

WAI-ARIA attributes

The Chart component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Chart component:

- img (role)
- button (role)
- region (role)
- aria-label (attribute)
- aria-hidden (attribute)
- aria-pressed (attribute)

Keyboard interaction

The Chart component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Chart component.

| Press | To do this |

| --- | --- |

| Alt + J | Moves the focus to the chart element. |

| Tab | Moves the focus to the next element in the chart. |

| Shift + Tab | Moves the focus to the previous element in the chart. |

| Down Arrow | Moves the focus to the data point left side from the selected point. |

| Up Arrow | Moves the focus to the data point right side from the selected point. |

| Left Arrow | Moves the focus to the next series in the chart. |

| Right Arrow | Moves the focus to the previous series in the chart. |

| ESC | Cancel the tooltip for the data point. |

| Enter/Space | Selects the data point in the series. |

| Down/Left Arrow | Moves the focus to the legend left side from the selected legend. |

| Up/Right Arrow | Moves the focus to the legend right side from the selected legend. |

| Enter/Space | Toggles the visibility of the corresponding series. |

| Ctrl + + | Zoom in the chart. |

| Ctrl + - | Zoom out the chart. |

| Down/Up Arrow | Pan the chart vertically. |

| Left/Right Arrow | Pan the chart horizontally. |

| R | Reset the zoomed chart. |

| Ctrl + P | Prints the Chart. |

Ensuring accessibility

The Chart component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Chart component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Chart component with accessibility tools.

- [Accessibility in Syncfusion React components](#)

Internationalization in React Chart component

Chart provide supports for internationalization for below chart elements.

- Datalabel.
- Axis label.
- Tooltip.

For more information about number and date formatter you can refer [internationalization](#).

<!-- markdownlint-disable MD036 -->

Globalization

Globalization is the process of designing and developing an component that works in different cultures/locales. Internationalization library is used to globalize number, date, time values in Chart component using `labelFormat` property in axis.

Numeric Format

In the below example axis, point and tooltip labels are globalized to EUR.

    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Localization in React Chart component

Localization library allows to localize the default text content of Chart. In Chart component, it has the static text on some features(like zooming toolbars) and this can be changed to any other culture(Arabic, Deutsch, French, etc) by defining the locale value and translation object.

<!-- markdownlint-disable MD033 -->

Locale key words	Text to display
Zoom	Zoom
ZoomIn	ZoomIn
ZoomOut	ZoomOut
Reset	Reset
Pan	Pan
ResetZoom	Reset Zoom

To load translation object in an application use load function of L10n class.

For more information about localization, refer this [localization](#)

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Zoom, DataLabel } from '@syncfusion/ej2-react-charts';

How To

Live chart in React Chart component

You can update a chart with live data by using the set interval.

To update live data in a chart, follow the given steps:

Step 1:

Initialize the chart with series.

Step 2:

Update the data to series using set interval, and shift the data in the series to make the series look like moving.

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
LineSeries } from '@syncfusion/ej2-react-charts';
function App() {
    var chart;
    var intervalId;
    var series1 = [];
    var value = 10;
    var setTimeoutValue = 100;
    for (var i = 0; i < 50; i++) {
        if (Math.random() > 0.5) {
            value += Math.random() * 2.0;
        }
        series1[i] = { x: i, y: value };
    }
    chart = chart;
    function loaded(args) {
        intervalId = setTimeout(() => {
            if (chart === null) {
                clearInterval(intervalId);
            }
            else {
                if (Math.random() > 0.5) {
                    value += Math.random() * 2.0;
                }
                i++;
                series1.push({ x: i, y: value });
                series1.shift();
                args.chart.series[0].dataSource = series1;
            }
        }, setTimeoutValue);
    }
    return (<ChartComponent id='charts' loaded={loaded.bind(this)}>
        <Inject services={[LineSeries]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={series1} xName='x' yName='y'
type='Line'></SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));
```

INDEX.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, LineSeries, ILoadedEventArgs }
from '@syncfusion/ej2-react-charts';
```

```

import { getElement } from '@syncfusion/ej2-charts';
function App() {
  var chart;
  var intervalId;
  var series1 = [];
  var value = 10;
  var setTimeoutValue = 100;
  for (var i = 0; i < 50; i++) {
    if (Math.random() > 0.5) {
      value += Math.random() * 2.0;
    }
    series1[i] = { x: i, y: value };
  }
  chart = chart;

        <SeriesDirective dataSource={series1} xName='x' yName='y'
type='Line'></SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));

```

Prevent data label in React Chart component

To prevent the chart data label when the data value is 0, follow the given steps:

Step 1:

Get the point value and check whether the `args.point.y` value is zero or not by using the [textRender](#) event. If the value is zero, then set the `args.cancel` to true.

The output will appear as follows,

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";

```

```

import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, DateTime, Tooltip, DataLabel, LineSeries } from '@syncfusion/ej2-
react-charts';
function App() {
    const data = [
        { x: new Date(2005, 0, 1), y: 21 }, { x: new Date(2006, 0, 1), y: 24
    },
        { x: new Date(2007, 0, 1), y: 0 }, { x: new Date(2008, 0, 1), y: 38
    },
        { x: new Date(2009, 0, 1), y: 54 }, { x: new Date(2010, 0, 1), y: 57
    },
    ];

    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Tool tip format in React Chart component

Using [tooltipRender](#) event, you can able to format the datetime value instead of rendered value.

To format the datetime value, please follow the steps below

Step 1:

By using [tooltipRender](#) event we can able to get the current point x value. Using this value to format the tooltip by using `formatDate` method.

The output will appear as follows,

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, DateTime, Tooltip, DataLabel, LineSeries } from '@syncfusion/ej2-
react-charts';
import { Internationalization } from '@syncfusion/ej2-base';
function App() {
  const data = [
    { x: new Date(2005, 0, 1), y: 21 }, { x: new Date(2006, 0, 1), y: 24
  },
    { x: new Date(2007, 0, 1), y: 30 }, { x: new Date(2008, 0, 1), y: 38
  },
    { x: new Date(2009, 0, 1), y: 54 }, { x: new Date(2010, 0, 1), y: 57
  },
  ];
  const primaryxAxis = { valueType: 'DateTime' };
  const marker = { visible: true, height: 10, width: 10, dataLabel: {
visible: true } };
  const tooltip = { enable: true };
  const tooltipRender = (args) => {
    let intl = new Internationalization();

```

```

        let formattedString = intl.formatDate(new Date(args.point.x), {
skeleton: 'yMd' });
        args.text = formattedString;
    };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
title='Inflation - Consumer Price' tooltipRender={tooltipRender}
tooltip={tooltip}>
        <Inject services={[LineSeries, Legend, Tooltip, DataLabel,

```

```

    </SeriesDirective>
  </SeriesCollectionDirective>
</ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Add series in React Chart component

You can add or remove the chart series dynamically by using the `addSeries` or `removeSeries` method.

To add or remove the series dynamically, follow the given steps:

Step 1:

To add a new series to chart dynamically, pass the series value to the `addSeries` method.

To remove the new series from chart dynamically, pass the series index to the `removeSeries` method.

INDEX.JSX

Stacking total in React Chart component

By using the [annotation](#), you can show any element in desired view.

To show the total value in data points, follow the given steps:

Step 1:

Define annotation for each x point in chart, now change the annotation value in chart by using the [annotationRender](#) event.

In this event, assign the stacked value of the last series to the annotation to show the total value of the stacking series.

Selected data grid in React Chart component

By using the [dragComplete](#), you can get the selected data values for range selection.

To display the selected data value, follow the given steps:

Step 1:

Get the selected data point values and display the values through grid component by using the [dragComplete](#) event.

Marker customization in React Chart component

By using the [pointRender](#), you can customize the marker shape.

To Customize the marker shape, follow the given steps:

Step 1:

Customize the marker shape in each data point by using the [pointRender](#) event.

Using this event, you can set the **shape** value to the argument.

INDEX.JSX

Tool tip table in React Chart component

You can show the tooltip as table by using template property in tooltip.

Follow the given steps to show the table tooltip,

Step 1:

Initialize the tooltip template div as shown in the following html page,

```
<div id='templateWrap'>
```

Female

<code>\$(x):</code>	<code>\$(y)</code>
---------------------	--------------------

`</div>`

,

Step 2:

To show that tooltip template, set the element id to the `template` property in tooltip.

INDEX.JSX

```
{% raw %}

Footer in React Chart component

By using `annotation`, you can place any html elements to chart in a desired view.

To create footer and watermark for chart, follow the given steps:

Step 1:

Initialize the custom elements by using the `annotation` property.

By using the `content` option of the annotation object, you can specify the id of the element that needs to be displayed in the chart area as follow,

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ChartAnnotation, AnnotationsDirective, AnnotationDirective, Legend,
Category, Tooltip, DataLabel, SplineSeries } from '@syncfusion/ej2-react-
charts';
function App() {
  const data = [
    { x: 'Sun', y: 15 }, { x: 'Mon', y: 5 },
    { x: 'Tue', y: 32 }, { x: 'Wed', y: 15 },
    { x: 'Thu', y: 29 }, { x: 'Fri', y: 24 },
    { x: 'Sat', y: 18 }
  ];
  const primaryxAxis = { valueType: 'Category' };

```

Threshold in React Chart component

You can mark a threshold in chart by using the `stripline`.

To mark a threshold in chart, follow the given steps:

Step 1:

By using the start and end properties of `striplines` object in vertical axis, you can mark the threshold for y values of the series.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
StripLine, Legend, Category, Tooltip, DataLabel, LineSeries } from

Grid data chart in React Chart component

You can visualize the data that returned by grid in chart.

To visualize the data in chart, follow the given steps:

Step 1:

Initialize the grid with datasource.

Step 2:

By using the grid's `actionComplete` event and `getCurrentViewRecords` method, you can get the current page records.

By using the grid's `databound` event, you can update the current page records into the chart's datasource and visualize the grid data in chart.

Data label template in React Chart component

You can bind text and interior information for a point from dataSource other than x and y value. To change color for the background in the datalabel template, you can use `${point.text}`.

To use point.text, you have to bind the property from dataSource to name in the datalabel options.

Follow the given steps to show the table tooltip,

Step 1:

Initialize the datalabel template div as shown in the following html page,

```
<script id="index" type="text/x-template">
```

```
<div id='templateWrap' style="background-color: ${point.text}; border-radius:
3px;"><span>${point.y}</span></div>
```

</script>

Step 2:

To show that datalabel template, set the element id to the `template` property in datalabel.

    { x: 70, y: 7300, color: 'pink' },
    { x: 80, y: 9000, color: 'white' },
    { x: 90, y: 12000, color: 'magenta' },
    { x: 100, y: 14000, color: 'purple' },
    { x: 110, y: 11000, color: 'teal' },
    { x: 120, y: 5000, color: 'gray' },
  ];
  const template: any = chartTemplate;
  const marker = { visible: true, dataLabel: { visible: true, name: 'color',
template: template } };
  function chartTemplate(args: any) {
    return (
      <div id="templateWrap" style={{ border: '1px solid black',
background-color: 'red', padding: '3px 3px 3px 3px' }}>
        <div>{args.point.x}</div>
        <div>{args.point.y}</div>
      </div>);
  }
  return <ChartComponent id='charts'>
    <Inject services={[LineSeries, Legend, Tooltip, DataLabel, Category,
StripLine]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={data} xName='x' yName='y' type='Line'
marker={marker}>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>
  </>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
{% endraw %}
```

Check box

Getting Started

This section explains how to create a simple CheckBox, and configure its available functionalities in React, using React quickstart application.

Dependencies

The following list of dependencies are required to use the CheckBox component in your application.

```
`javascript
|-- @syncfusion/ej2-react-buttons
|-- @syncfusion/ej2-react-base
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-buttons
`,`
```

Installation and Configuration

You can use [Create-react-app](#) to setup the applications. To install `create-react-app` run the following command.

```
`bash
npm install -g create-react-app
`,`
```

To set-up a React application in TypeScript environment, run the following command.

```
`bash
npx create-react-app my-app --template typescript
cd my-app
npm start
`,`
```

To set-up a React application in JavaScript environment, run the following command.

```
`bash
npx create-react-app my-app
cd my-app
npm start
`,`
```

Adding Syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](https://www.npmjs.com) public registry.

To install CheckBox component, use the following command

```
`bash
npm install @syncfusion/ej2-react-buttons --save
`,`
```

Adding CSS Reference

Import the CheckBox component's required CSS references as follows in `src/App.css`.

```
`css
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
```

```
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";  
`
```

Adding CheckBox component to the Application

To include the CheckBox component in your application import the `CheckBoxComponent` from `ej2-react-buttons` package in `App.tsx`.

Add the CheckBox component in application as shown in below code example.

```
`ts  
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';  
import * as React from 'react';  
import './App.css';  
// Import the CheckBox.  
// To render CheckBox.  
function App() {  
  {  
    return (<div style={{marginTop: '150px'}}>  
      <CheckBoxComponent label="Default"/>  
    </div>);  
  }  
}  
export default App;  
`
```

Run the application

Run the application in the browser using the following command:

```
`  
npm start  
`
```

The following example shows a basic CheckBox component.

APP.JSX

```
import { enableRipple } from '@syncfusion/ej2-base';  
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';  
import * as React from 'react';  
import * as ReactDOM from 'react-dom';  
enableRipple(true);  
// To render CheckBox.  
function App() {  
  return (<CheckBoxComponent label="Default"/>);  
}  
export default App;
```

```
ReactDOM.render(<App />, document.getElementById('check-box'));
```

APP.TSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
// To render CheckBox.
function App() {
  return (
    <CheckBoxComponent label="Default" />
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));
```

States in React Check box component

The Essential JS 2 CheckBox contains 3 different states visually, they are:

- Checked
- Unchecked
- Indeterminate

Checked and Unchecked

The CheckBox [checked](#) property is used to handle the checked and unchecked state. In checked state a tick mark will be added to the visualization of CheckBox.

Indeterminate

The CheckBox indeterminate state can be set through [indeterminate](#) property. CheckBox indeterminate state masks the real value of CheckBox visually. The Checkbox cannot be changed to indeterminate state through the user interface, this state can be achieved only through the property.

APP.JSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
  return <ul>
    {/* checked state. */}
    <li><CheckBoxComponent label="Checked State" checked={true}/></li>
    {/* unchecked state. */}
    <li><CheckBoxComponent label="Unchecked State"/></li>
    {/* indeterminate state. */}
    <li><CheckBoxComponent label="Indeterminate State"
indeterminate={true}/></li>
  </ul>;
}
export default App;
```

```
ReactDOM.render(<App />, document.getElementById('check-box'));
```

APP.TSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
  return (
    <ul>
      {/* checked state. */}
      <li><CheckBoxComponent label="Checked State" checked={true}
    /></li>
      {/* unchecked state. */}
      <li><CheckBoxComponent label="Unchecked State" /></li>
      {/* indeterminate state. */}
      <li><CheckBoxComponent label="Indeterminate State"
    indeterminate={true} /></li>
    </ul>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));
```

Label and size in React Check box component

This section explains the different sizes and labels.

Label

The CheckBox caption can be defined using the [label](#) property. This reduces manual addition of label for CheckBox. You can customize the label position before or after the CheckBox through the [labelPosition](#) property.

APP.JSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
  return <ul>
    {/* Label position - Left. */}
    <li><CheckBoxComponent label="Left Side Label"
    labelPosition="Before"/></li>
    {/* Label position - Right. */}
    <li><CheckBoxComponent label="Right Side Label"
    checked={true}/></li>
  </ul>;
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));
```

APP.TSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    return (
        <ul>
            {/* Label position - Left. */}
            <li><CheckBoxComponent label="Left Side Label"
labelPosition="Before" /></li>
            {/* Label position - Right. */}
            <li><CheckBoxComponent label="Right Side Label" checked={true}
/></li>
        </ul>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));
```

Size

The different CheckBox sizes available are default and small. To reduce size of the default CheckBox to small, set the [cssClass](#) property to `e-small`.

APP.JSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    return <ul>
        {/* Small CheckBox. */}
        <li><CheckBoxComponent label="Small" cssClass="e-small"/></li>
        {/* Default CheckBox. */}
        <li><CheckBoxComponent label="Default"/></li>
    </ul>;
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));
```

APP.TSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    return (
        <ul>
            {/* Small CheckBox. */}
            <li><CheckBoxComponent label="Small" cssClass="e-small" /></li>
        </ul>
    );
}
```

```

        { /* Default CheckBox. */ }
        <li><CheckBoxComponent label="Default" /></li>
      </ul>
    );
  }
  export default App;
  ReactDOM.render(<App />, document.getElementById('check-box'));

```

Style and appearance in React Check box component

To modify the CheckBox appearance, you need to override the default CSS of CheckBox component. Please find the list of CSS classes and its corresponding section in CheckBox. Also, you have an option to create your own custom theme for the controls using our [Theme Studio](#).

CSS Class | Purpose of Class

- |.e-checkbox-wrapper .e-frame|To customize the checkbox frame.
- |.e-checkbox-wrapper:hover .e-frame|To customize the checkbox frame on hover.
- |.e-checkbox-wrapper .e-label|To customize the checkbox label.
- |.e-checkbox-wrapper:hover .e-label|To customize the checkbox label on hover.
- |.e-checkbox-wrapper .e-frame.e-check|To customize the checked checkbox.
- |.e-checkbox-wrapper:hover .e-frame.e-check|To customize the checked checkbox when hover

Accessibility in React CheckBox component

The CheckBox component followed the accessibility guidelines and standards, including [ADA](#), [Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the CheckBox component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

| [Section 508](#) Support | |

| Screen Reader Support | |

| Right-To-Left Support | |

| Color Contrast | |

```

| Mobile Device Support |  |

| Keyboard Navigation Support |  |

| Accessibility Checker Validation |  |

| Axe-core Accessibility Validation |  |

<style>

.post .post-content img {
display: inline-block;
margin: 0.5em 0;
}

</style>

<div> - All
features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

```

WAI-ARIA attributes

The CheckBox component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the CheckBox component:

| Attributes | Purpose |

| --- | --- |

| `aria-disabled` | Indicates that the element is perceivable but disabled, so it is not editable or otherwise operable. |

Keyboard interaction

The CheckBox component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the CheckBox component.

| Press | To do this |

| --- | --- |

| Space | When the CheckBox has focus, pressing the Space key changes the state of the CheckBox. |

Ensuring accessibility

The CheckBox component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the CheckBox component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the CheckBox component with accessibility tools.

How To

Customized checkbox in React Check box component

Customize CheckBox Appearance

You can customize the appearance of the CheckBox component using the CSS rules. Define own CSS rules according to your requirement and assign the class name to the [cssClass](#) property.

The background and border color of the CheckBox is customized through custom classes to create primary, success, warning, danger, and info type of checkbox.

APP.JSX

```
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// To customize CheckBox appearance.
function App() {
    return (
        <ul>
            {/* Refer the 'e-primary' class details in 'style.css'.*/}
            <li><CheckBoxComponent label="Primary" cssClass="e-primary"
checked={true}/></li>
            {/* Refer the 'e-success' class details in 'style.css'.*/}
            <li><CheckBoxComponent label="Success" cssClass="e-success"
checked={true}/></li>
            {/* Refer the 'e-info' class details in 'style.css'.*/}
            <li><CheckBoxComponent label="Info" cssClass="e-info"
checked={true}/></li>
            {/* Refer the 'e-warning' class details in 'style.css'.*/}
            <li><CheckBoxComponent label="Warning" cssClass="e-warning"
checked={true}/></li>
            {/* Refer the 'e-danger' class details in 'style.css'.*/}
            <li><CheckBoxComponent label="Danger" cssClass="e-danger"
checked={true}/></li>
        </ul>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));
```

APP.TSX

```
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// To customize CheckBox appearance.
function App() {
    return (
        <ul>
```

```

        { /* Refer the 'e-primary' class details in 'style.css'. */ }
        <li><CheckBoxComponent label="Primary" cssClass="e-primary"
checked={true} /></li>
        { /* Refer the 'e-success' class details in 'style.css'. */ }
        <li><CheckBoxComponent label="Success" cssClass="e-success"
checked={true} /></li>
        { /* Refer the 'e-info' class details in 'style.css'. */ }
        <li><CheckBoxComponent label="Info" cssClass="e-info"
checked={true} /></li>
        { /* Refer the 'e-warning' class details in 'style.css'. */ }
        <li><CheckBoxComponent label="Warning" cssClass="e-warning"
checked={true} /></li>
        { /* Refer the 'e-danger' class details in 'style.css'. */ }
        <li><CheckBoxComponent label="Danger" cssClass="e-danger"
checked={true} /></li>
    </ul>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));

```

Custom Frame

CheckBox frame can be customized as per the requirement by adding CSS rules.

In the following example, to-do list is displayed with round checkbox by changing **border-radius** as **100%** by adding **e-custom** class.

APP.JSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
// To customize CheckBox appearance.
function App() {
    return (
        <ul>
            <li><CheckBoxComponent label="Buy Groceries" cssClass="e-custom"
checked={true}/></li>
            <li><CheckBoxComponent label="Pay Rent" cssClass="e-custom"/></li>
            <li><CheckBoxComponent label="Make Dinner" cssClass="e-
custom"/></li>
            <li><CheckBoxComponent label="Finish To-do List Article"
cssClass="e-custom"/></li>
        </ul>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));

```

APP.TSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);

```

```
// To customize CheckBox appearance.
function App() {
  return (
    <ul>
      <li><CheckBoxComponent label="Buy Groceries" cssClass="e-custom"
checked={true} /></li>
      <li><CheckBoxComponent label="Pay Rent" cssClass="e-custom"
/></li>
      <li><CheckBoxComponent label="Make Dinner" cssClass="e-custom"
/></li>
      <li><CheckBoxComponent label="Finish To-do List Article"
cssClass="e-custom" /></li>
    </ul>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));
```

Custom Check Icon

CheckBox check icon can be customized as per the requirement by adding CSS rules.

In the following example, the check icon can be customized by changing check icon content, background and border color in focus and hovered states by adding `e-checkicon` class.

APP.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To customize CheckBox appearance.
function App() {
  return (
    <ul>
      <li><CheckBoxComponent label="Buy Groceries" cssClass="e-
checkicon" checked={true} /></li>
      <li><CheckBoxComponent label="Pay Rent" cssClass="e-
checkicon" /></li>
      <li><CheckBoxComponent label="Make Dinner" cssClass="e-
checkicon" /></li>
      <li><CheckBoxComponent label="Finish To-do List Article"
cssClass="e-checkicon" /></li>
    </ul>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));
```

APP.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To customize CheckBox appearance.
function App() {
```

```

    return (
      <ul>
        <li><CheckBoxComponent label="Buy Groceries" cssClass="e-checkicon" checked={true} /></li>
        <li><CheckBoxComponent label="Pay Rent" cssClass="e-checkicon" /></li>
        <li><CheckBoxComponent label="Make Dinner" cssClass="e-checkicon" /></li>
        <li><CheckBoxComponent label="Finish To-do List Article" cssClass="e-checkicon" /></li>
      </ul>
    );
  }
  export default App;
  ReactDOM.render(<App />, document.getElementById('check-box'));

```

Name and value in form submit in React Check box component

The [name](#) attribute of the CheckBox is used to group Checkboxes. When the Checkboxes are grouped in form, the checked items [value](#) attribute will post to the server on form submit which can be retrieved through the name. The disabled and unchecked CheckBox value will not be sent to the server on form submit.

In the following code snippet, Cricket and Hockey are in the checked state, Tennis is in [disabled](#) state and Basketball is in unchecked state. Now, the value that is in checked state only be sent on form submit.

APP.JSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { ButtonComponent, CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
// Name and Value attribute in form submit.
function App() {
  return (<form>
    <ul>
      <li><CheckBoxComponent name="Sport" value="Cricket" label="Cricket" checked={true} /></li>
      <li><CheckBoxComponent name="Sport" value="Hockey" label="Hockey" checked={true} /></li>
      <li><CheckBoxComponent name="Sport" value="Tennis" label="Tennis" disabled={true} /></li>
      <li><CheckBoxComponent name="Sport" value="Basketball" label="Basketball" /></li>
      <li><ButtonComponent isPrimary={true}>Submit</ButtonComponent></li>
    </ul>
  </form>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));

```

APP.TSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { ButtonComponent, CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
// Name and Value attribute in form submit.
function App() {
    return (
        <form>
            <ul>
                <li><CheckBoxComponent name="Sport" value="Cricket"
label="Cricket" checked={true} /></li>
                <li><CheckBoxComponent name="Sport" value="Hockey" label="Hockey"
checked={true} /></li>
                <li><CheckBoxComponent name="Sport" value="Tennis" label="Tennis"
disabled={true} /></li>
                <li><CheckBoxComponent name="Sport" value="Basketball"
label="Basketball" /></li>
                <li><ButtonComponent
isPrimary={true}>Submit</ButtonComponent></li>
            </ul>
        </form>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));
```

Right to left in React Check box component

CheckBox component has RTL support. This can be achieved by setting [enableRtl](#) as `true`.

The following example illustrates how to enable right-to-left support in CheckBox component.

APP.JSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
// To customize CheckBox appearance.
function App() {
    return (
        <ul>
            <li><CheckBoxComponent label="Default" enableRtl={true}/></li>
        </ul>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));
```

APP.TSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
```

```
// To customize CheckBox appearance.
function App() {
  return (
    <ul>
      <li><CheckBoxComponent label="Default" enableRtl={true} /></li>
    </ul>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('check-box'));
```

Ej1 api migration in React Check box component

This article describes the API migration process of Checkbox component from Essential JS 1 to Essential JS 2.

Properties

{% raw %}

| Behavior | API in Essential JS 1 | API in Essential JS 2 |

| --- | --- | --- |

| Checkbox label | **Property:** *text*

 <EJ.CheckBox id="checkbox" text="Checkbox"></EJ.CheckBox> | **Property:** *label*

 <CheckBoxComponent id="checkbox" label="Checkbox"></CheckBoxComponent> |

| Checked state | **Property:** *enableTriState and checkState*

 <EJ.CheckBox id="checkbox" enableTriState={true} text="Checked state" checkState="check"></EJ.CheckBox> | **Property:** *checked*

 <CheckBoxComponent id="checkbox" checked={true} label="Checked state"></CheckBoxComponent> |

| Indeterminate state | **Property:** *enableTriState and checkState*

 <EJ.CheckBox id="checkbox" text="Indeterminate state" enableTriState={true} checkState="indeterminate"></EJ.CheckBox> | **Property:** *indeterminate*

 <CheckBoxComponent id="checkbox" indeterminate={true} label="Intermediate state"></CheckBoxComponent> |

| Adding custom css class | **Property:** *cssClass*

 <EJ.CheckBox id="checkbox" text="Checkbox" cssClass="custom-class"></EJ.CheckBox> | **Property:** *cssClass*

 <CheckBoxComponent id="checkbox" cssClass="custom-class" label="Checkbox"></CheckBoxComponent> |

| Label position | Not applicable | **Property:** *labelPosition*

 <CheckBoxComponent id="checkbox" label="Checkbox" labelPosition="Before"></CheckBoxComponent> |

| Disabled state | **Property:** *enabled*

 <EJ.CheckBox id="checkbox" text="Checkbox" enabled={false}></EJ.CheckBox> | **Property:** *disabled*

 <CheckBoxComponent id="checkbox" label="Checkbox" disabled={true}></CheckBoxComponent> |

| State persistence | **Property:** *enablePersistence*

 <EJ.CheckBox id="checkbox" text="Checkbox" enablePersistence={true}></EJ.CheckBox> | **Property:** *enablePersistence*

 <CheckBoxComponent id="checkbox" label="Checkbox" enablePersistence={true}></CheckBoxComponent> |

| RTL | **Property:** *enableRTL*

 <EJ.CheckBox id="checkbox" text="Checkbox" enableRTL={true}></EJ.CheckBox> | **Property:** *enableRtl*

 <CheckBoxComponent id="checkbox" label="Checkbox" enableRtl={true}></CheckBoxComponent> |

| HTML Attributes | **Property:** *htmlAttributes*

 var attributes = { required:"required" };
 <EJ.CheckBox id="checkbox" text="Checkbox" htmlAttributes={attributes}></EJ.CheckBox> | Not applicable |

| Id property | **Property:** *id*

 <EJ.CheckBox id="sync"></EJ.CheckBox> | Not applicable |

| Prefix value of Id | **Property:** *idPrefix*

 <EJ.CheckBox id="checkbox" text="Checkbox" id-prefix="react"></EJ.CheckBox> | Not applicable |

| Name attribute | **Property:** *name*

 <EJ.CheckBox id="checkbox" name="conformation"></EJ.CheckBox> | **Property:** *name*

 <CheckBoxComponent id="checkbox" name="conformation"></CheckBoxComponent> |

| Value attribute | **Property:** *value*

 <EJ.CheckBox id="checkbox" name="conformation" value="Received"></EJ.CheckBox> | **Property:** *value*

 <CheckBoxComponent id="checkbox" name="conformation" value="Received"></CheckBoxComponent> |

| Show rounded corner | **Property:** *showRoundedCorner*

 <EJ.CheckBox id="checkbox" text="Checkbox" showRoundedCorner={true}></EJ.CheckBox> | Not applicable |

| Size | **Property:** *size*

 <EJ.CheckBox id="checkbox" text="Small" size="small"></EJ.CheckBox> | **Property:** *cssClass*

 <CheckBoxComponent id="checkbox" cssClass="e-small" label="Checkbox"></CheckBoxComponent> |

| Validation rules | **Property:** *validationRules*

 var rules = { required: true };
 <EJ.CheckBox id="checkbox" validationRules={rules}></EJ.CheckBox> | Not applicable |

| Validation message | **Property:** *validationMessage*

 var rules = { required: true };
 var message = { required: "Required CheckBox value" };
 <EJ.CheckBox id="checkbox" validationRules={rules} validationMessage={message}></EJ.CheckBox> | Not applicable |

Methods

| Behavior | API in Essential JS 1 | API in Essential JS 2 |

| --- | --- | --- |

| Destroy | **Method:** *destroy*

 <EJ.CheckBox id="checkbox" text="Checkbox"></EJ.CheckBox>
 var checkbox = \$('#checkbox').ejCheckBox('instance');
 checkbox.destroy(); | **Method:** *destroy*

 <CheckBoxComponent id="checkbox" label="Checkbox" ref={{(scope) => {this.checkbox = scope}}}></CheckBoxComponent>
 constructor(props: {}) {
 this.checkbox.destroy();
 } |

| Disable the Checkbox | **Method:** *disable*

 <EJ.CheckBox id="checkbox" text="Checkbox"></EJ.CheckBox>
 var checkbox = \$('#checkbox').ejCheckBox('instance');
 checkbox.disable(); | Not applicable |

| Enable the Checkbox | **Method:** *enable*

 <EJ.CheckBox id="checkbox" text="Checkbox"></EJ.CheckBox>
 var checkbox = \$('#checkbox').ejCheckBox('instance');
checkbox.enable(); | Not applicable |

| Check state of the Checkbox | **Method:** *isChecked*

 <EJ.CheckBox id="checkbox" text="Checkbox"></EJ.CheckBox>
 var checkbox = \$('#checkbox').ejCheckBox('instance');
checkbox.isChecked(); | Not applicable |

Events

| Behavior | API in Essential JS 1 | API in Essential JS 2 |

| --- | --- | --- |

| BeforeChange Event | **Events:** *beforeChange*

 <CheckBoxComponent id="checkbox" label="Checkbox" created={this.created.bind(this)}></CheckBoxComponent>
created() {
 / code block /
} |

| Destroy Event | **Events:** *destroy*

 <EJ.CheckBox id="checkbox" text="Checkbox" destroy={destroy}></EJ.CheckBox>
function destroy(args) {
 / code block */
} | Not applicable |

{% endraw %}

Chips

Getting Started

This section explains how to create a simple Chip and to configure the Chip component.

Dependencies

The list of dependencies required to use the Chip component in your application is given below:

`javascript

|-- @syncfusion/ej2-react-buttons

|-- @syncfusion/ej2-base

|-- @syncfusion/ej2-buttons

|-- @syncfusion/ej2-react-base

,

Installation and Configuration

You can use [Create-react-app](#) to setup

the applications. To install `create-react-app` run the following command.

```
`bash
```

```
npm install -g create-react-app
```

```
`
```

To set-up a React application in TypeScript environment, run the following command.

```
`
```

```
npx create-react-app my-app --template typescript
```

```
cd my-app
```

```
npm start
```

```
`
```

To set-up a React application in JavaScript environment, run the following command.

```
`
```

```
npx create-react-app my-app
```

```
cd my-app
```

```
npm start
```

```
`
```

Adding Syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](https://www.npmjs.com) public registry.

To install Chip component, use the following command

```
`bash
```

```
npm install @syncfusion/ej2-react-buttons --save
```

```
`
```

Adding CSS Reference

Import the Chip component's required CSS references as follows in `src/App.css`.

```
`css
```

```
@import "../node_modules/@syncfusion/ej2-react-buttons/styles/material.css";
```

```
`
```

Adding Chip component to the Application

To include the Chip component in your application import the `ChipListComponent` from `ej2-react-buttons` package in `App.tsx`.

Add the Chip component in application as shown in below code example.

```
`ts
```

```
import * as React from 'react';
import './App.css';
// Import the Button.
import { ChipListComponent } from '@syncfusion/ej2-react-buttons';
// To render Button.
function App() {
  return (
    <ChipListComponent text="Janet Leverling"></ChipListComponent>
  );
}
export default App;
```

Running the application

Run the application in the browser using the following command:

```
npm start
```

The following example shows a basic Chip component.

APP.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent } from '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
  return (<ChipListComponent text="Janet Leverling"></ChipListComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));
```

APP.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent } from '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
  return (
    <ChipListComponent text="Janet Leverling"></ChipListComponent>
  );
};
```

```
}  
export default App;  
ReactDOM.render(<App />, document.getElementById('chip'));
```

Types in React Chips component

The ChipList control has the following types.

- Input Chip
- Choice Chip
- Filter Chip
- Action Chip

Input Chip

Input Chip holds information in compact form. It converts user input into chips.

APP.JSX

```
import * as React from 'react';  
import * as ReactDOM from 'react-dom';  
import { ChipListComponent, ChipsDirective, ChipDirective } from  
'@syncfusion/ej2-react-buttons';  
import { enableRipple } from '@syncfusion/ej2-base';  
enableRipple(true);  
// To render Chip.  
function App() {  
    return (<ChipListComponent id="chip-avatar" enableDelete={true}  
selection="Single">  
        <ChipsDirective>  
            <ChipDirective text="Andrew"></ChipDirective>  
            <ChipDirective text="Janet"></ChipDirective>  
            <ChipDirective text="Laura"></ChipDirective>  
            <ChipDirective text="Margaret"></ChipDirective>  
        </ChipsDirective>  
    </ChipListComponent>);  
}  
export default App;  
ReactDOM.render(<App />, document.getElementById('chip'));
```

APP.TSX

```
import * as React from 'react';  
import * as ReactDOM from 'react-dom';  
import { ChipListComponent, ChipsDirective, ChipDirective } from  
'@syncfusion/ej2-react-buttons';  
import { enableRipple } from '@syncfusion/ej2-base';  
enableRipple(true);  
// To render Chip.  
function App() {  
    return (  
        <ChipListComponent id="chip-avatar" enableDelete={true}  
selection="Single">  
            <ChipsDirective>  
                <ChipDirective text="Andrew"></ChipDirective>  
                <ChipDirective text="Janet"></ChipDirective>
```

```

        <ChipDirective text="Laura"></ChipDirective>
        <ChipDirective text="Margaret"></ChipDirective>
    </ChipsDirective>
</ChipListComponent>
);
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));

```

Choice Chip

Choice Chip allows you to select a single chip from the set of ChipList/ChipCollection. It can be enabled by setting the `selection` property to `Single`.

APP.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
'@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
    return (<ChipListComponent id="chip-avatar" selection="Single">
        <ChipsDirective>
            <ChipDirective text="Small"></ChipDirective>
            <ChipDirective text="Medium"></ChipDirective>
            <ChipDirective text="Large"></ChipDirective>
            <ChipDirective text="Extra Large"></ChipDirective>
        </ChipsDirective>
    </ChipListComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));

```

APP.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
'@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
    return (
        <ChipListComponent id="chip-avatar" selection="Single">
            <ChipsDirective>
                <ChipDirective text="Small"></ChipDirective>
                <ChipDirective text="Medium"></ChipDirective>
                <ChipDirective text="Large"></ChipDirective>
                <ChipDirective text="Extra Large"></ChipDirective>
            </ChipsDirective>
        </ChipListComponent>
    );
}

```

```
}  
export default App;  
ReactDOM.render(<App />, document.getElementById('chip'));
```

Filter Chip

Filter Chip allows you to select a multiple chip from the set of ChipList/ChipCollection. It can be enabled by setting the `selection` property to `Multiple`.

APP.JSX

```
import * as React from 'react';  
import * as ReactDOM from 'react-dom';  
import { ChipListComponent, ChipsDirective, ChipDirective } from  
'@syncfusion/ej2-react-buttons';  
import { enableRipple } from '@syncfusion/ej2-base';  
enableRipple(true);  
// To render Chip.  
function App() {  
    return (<ChipListComponent id="chip-avatar" selection="Multiple">  
        <ChipsDirective>  
            <ChipDirective text="Chai"></ChipDirective>  
            <ChipDirective text="Chung"></ChipDirective>  
            <ChipDirective text="Aniseed Syrup"></ChipDirective>  
            <ChipDirective text="Ikura"></ChipDirective>  
        </ChipsDirective>  
    </ChipListComponent>);  
}  
export default App;  
ReactDOM.render(<App />, document.getElementById('chip'));
```

APP.TSX

```
import * as React from 'react';  
import * as ReactDOM from 'react-dom';  
import { ChipListComponent, ChipsDirective, ChipDirective } from  
'@syncfusion/ej2-react-buttons';  
import { enableRipple } from '@syncfusion/ej2-base';  
enableRipple(true);  
// To render Chip.  
function App() {  
    return (  
        <ChipListComponent id="chip-avatar" selection="Multiple">  
            <ChipsDirective>  
                <ChipDirective text="Chai"></ChipDirective>  
                <ChipDirective text="Chung"></ChipDirective>  
                <ChipDirective text="Aniseed Syrup"></ChipDirective>  
                <ChipDirective text="Ikura"></ChipDirective>  
            </ChipsDirective>  
        </ChipListComponent>  
    );  
}  
export default App;  
ReactDOM.render(<App />, document.getElementById('chip'));
```

Action Chip

The Action Chip triggers the event like click or delete, which helps doing action based on the event.

APP.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
    function chipClick(e) {
        alert('you have clicked ' + e.target.textContent);
    }
    return (<ChipListComponent id="chip-avatar"
onClick={chipClick.bind(this)}>
        <ChipsDirective>
            <ChipDirective text="Send a text"/>
            <ChipDirective text="Set a remainder"/>
            <ChipDirective text="Read my emails"/>
            <ChipDirective text="Set alarm"/>
        </ChipsDirective>
    </ChipListComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));
```

APP.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
    function chipClick(e: any) {
        alert('you have clicked ' + e.target.textContent);
    }
    return (
        <ChipListComponent id="chip-avatar" onClick={chipClick.bind(this)}>
            <ChipsDirective>
                <ChipDirective text="Send a text" />
                <ChipDirective text="Set a remainder" />
                <ChipDirective text="Read my emails" />
                <ChipDirective text="Set alarm" />
            </ChipsDirective>
        </ChipListComponent>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));
```

Deletable Chip

Deletable Chip allows you to delete a chip from ChipList/ChipCollection. It can be enabled by setting the `enableDelete` property to `true`.

APP.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
    function chipClick(e) {
        alert('you have clicked ' + e.target.textContent);
    }
    return (<ChipListComponent id="chip-avatar" enableDelete={true}>
        <ChipsDirective>
            <ChipDirective text="Send a text"></ChipDirective>
            <ChipDirective text="Set a remainder"></ChipDirective>
            <ChipDirective text="Read my emails"></ChipDirective>
            <ChipDirective text="Set alarm"></ChipDirective>
        </ChipsDirective>
    </ChipListComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));
```

APP.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
    function chipClick(e: any) {
        alert('you have clicked ' + e.target.textContent);
    }
    return (
        <ChipListComponent id="chip-avatar" enableDelete={true}>
            <ChipsDirective>
                <ChipDirective text="Send a text"></ChipDirective>
                <ChipDirective text="Set a remainder"></ChipDirective>
                <ChipDirective text="Read my emails"></ChipDirective>
                <ChipDirective text="Set alarm"></ChipDirective>
            </ChipsDirective>
        </ChipListComponent>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));
```

Customization in React Chips component

This section explains the customization of styles, leading icons, avatar, and trailing icons in Chip control.

Styles

The Chip control has the following predefined styles that can be defined using the `cssClass` property.

Class	Description
-----	-----
e-primary	Represents a primary chip.
e-success	Represents a positive chip.
e-info	Represents an informative chip.
e-warning	Represents a chip with caution.
e-danger	Represents a negative chip.

APP.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
    return (<ChipListComponent id="chip-avatar">
        <ChipsDirective>
            <ChipDirective text="Primary" cssClass="e-
primary"></ChipDirective>
            <ChipDirective text="Success" cssClass="e-
success"></ChipDirective>
            <ChipDirective text="Info" cssClass="e-info"></ChipDirective>
            <ChipDirective text="Warning" cssClass="e-
warning"></ChipDirective>
            <ChipDirective text="Danger" cssClass="e-
danger"></ChipDirective>
        </ChipsDirective>
    </ChipListComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));
```

APP.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
    return (
```

```

    <ChipListComponent id="chip-avatar">
      <ChipsDirective>
        <ChipDirective text="Primary" cssClass="e-
primary"></ChipDirective>
        <ChipDirective text="Success" cssClass="e-
success"></ChipDirective>
        <ChipDirective text="Info" cssClass="e-info"></ChipDirective>
        <ChipDirective text="Warning" cssClass="e-
warning"></ChipDirective>
        <ChipDirective text="Danger" cssClass="e-
danger"></ChipDirective>
      </ChipsDirective>
    </ChipListComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));

```

Leading Icon

You can add and customize the leading icon of chip using the `leadingIconCss` property.

APP.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
  return (<ChipListComponent id="chip-avatar">
    <ChipsDirective>
      <ChipDirective text="Andrew"
leadingIconCss='andrew'></ChipDirective>
      <ChipDirective text="Janet"
leadingIconCss='janet'></ChipDirective>
      <ChipDirective text="Laura"
leadingIconCss='laura'></ChipDirective>
      <ChipDirective text="Margaret"
leadingIconCss='margaret'></ChipDirective>
    </ChipsDirective>
  </ChipListComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));

```

APP.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);

```

```
// To render Chip.
function App() {
  return (
    <ChipListComponent id="chip-avatar">
      <ChipsDirective>
        <ChipDirective text="Andrew"
leadingIconCss='andrew'></ChipDirective>
        <ChipDirective text="Janet"
leadingIconCss='janet'></ChipDirective>
        <ChipDirective text="Laura"
leadingIconCss='laura'></ChipDirective>
        <ChipDirective text="Margaret"
leadingIconCss='margaret'></ChipDirective>
      </ChipsDirective>
    </ChipListComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));
```

Avatar

You can add and customize the avatar of chip using the `avatarIconCss` property.

APP.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
  return (<ChipListComponent id="chip-avatar">
    <ChipsDirective>
      <ChipDirective text="Andrew"
avatarIconCss='andrew'></ChipDirective>
      <ChipDirective text="Janet"
avatarIconCss='janet'></ChipDirective>
      <ChipDirective text="Laura"
avatarIconCss='laura'></ChipDirective>
      <ChipDirective text="Margaret"
avatarIconCss='margaret'></ChipDirective>
    </ChipsDirective>
  </ChipListComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));
```

APP.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
```

```
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
    return (
        <ChipListComponent id="chip-avatar">
            <ChipsDirective>
                <ChipDirective text="Andrew"
avatarIconCss='andrew'></ChipDirective>
                <ChipDirective text="Janet"
avatarIconCss='janet'></ChipDirective>
                <ChipDirective text="Laura"
avatarIconCss='laura'></ChipDirective>
                <ChipDirective text="Margaret"
avatarIconCss='margaret'></ChipDirective>
            </ChipsDirective>
        </ChipListComponent>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));
```

Avatar Content

You can add and customize the avatar content of chip using the `avatarText` property.

APP.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
    return (<ChipListComponent id="chip-avatar">
        <ChipsDirective>
            <ChipDirective text="Andrew" avatarText='A'></ChipDirective>
            <ChipDirective text="Janet" avatarText='J'></ChipDirective>
            <ChipDirective text="Laura" avatarText='L'></ChipDirective>
            <ChipDirective text="Margaret" avatarText='M'></ChipDirective>
        </ChipsDirective>
    </ChipListComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));
```

APP.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
```

```
// To render Chip.
function App() {
  return (
    <ChipListComponent id="chip-avatar">
      <ChipsDirective>
        <ChipDirective text="Andrew" avatarText='A'></ChipDirective>
        <ChipDirective text="Janet" avatarText='J'></ChipDirective>
        <ChipDirective text="Laura" avatarText='L'></ChipDirective>
        <ChipDirective text="Margaret" avatarText='M'></ChipDirective>
      </ChipsDirective>
    </ChipListComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));
```

Trailing Icon

You can add and customize the trailing icon of chip using the `trailingIconCss` property.

APP.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
  return (<ChipListComponent id="chip-avatar">
    <ChipsDirective>
      <ChipDirective text="Andrew" trailingIconCss='e-dlt-
btn'></ChipDirective>
      <ChipDirective text="Janet" trailingIconCss='e-dlt-
btn'></ChipDirective>
      <ChipDirective text="Laura" trailingIconCss='e-dlt-
btn'></ChipDirective>
      <ChipDirective text="Margaret" trailingIconCss='e-dlt-
btn'></ChipDirective>
    </ChipsDirective>
  </ChipListComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));
```

APP.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
```

```

return (
  <ChipListComponent id="chip-avatar">
    <ChipsDirective>
      <ChipDirective text="Andrew" trailingIconCss= 'e-dlt-
btn'></ChipDirective>
      <ChipDirective text="Janet" trailingIconCss= 'e-dlt-
btn'></ChipDirective>
      <ChipDirective text="Laura" trailingIconCss= 'e-dlt-
btn'></ChipDirective>
      <ChipDirective text="Margaret" trailingIconCss= 'e-dlt-
btn'></ChipDirective>
    </ChipsDirective>
  </ChipListComponent>
);
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));

```

Outline Chip

Outline chip has the border with the background transparent. It can be set using the `cssClass` property.

APP.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
  return (<div>
    <ChipListComponent id="chip-avatar" cssClass="e-outline">
      <ChipsDirective>
        <ChipDirective text="Chai"></ChipDirective>
        <ChipDirective text="Chang"></ChipDirective>
        <ChipDirective text="Aniseed Syrup"></ChipDirective>
        <ChipDirective text="Ikura"></ChipDirective>
      </ChipsDirective>
    </ChipListComponent>
    <ChipListComponent id="chip-avatar" cssClass="e-outline"
enableDelete={true}>
      <ChipsDirective>
        <ChipDirective text="Andrew"></ChipDirective>
        <ChipDirective text="Janet"></ChipDirective>
        <ChipDirective text="Laura"></ChipDirective>
        <ChipDirective text="Margaret"></ChipDirective>
      </ChipsDirective>
    </ChipListComponent>
  </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));

```

APP.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ChipListComponent, ChipsDirective, ChipDirective } from
 '@syncfusion/ej2-react-buttons';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
// To render Chip.
function App() {
  return (
    <div>
      <ChipListComponent id="chip-avatar" cssClass="e-outline">
        <ChipsDirective>
          <ChipDirective text="Chai"></ChipDirective>
          <ChipDirective text="Chang"></ChipDirective>
          <ChipDirective text="Aniseed Syrup"></ChipDirective>
          <ChipDirective text="Ikura"></ChipDirective>
        </ChipsDirective>
      </ChipListComponent>
      <ChipListComponent id="chip-avatar" cssClass="e-outline"
enableDelete={true}>
        <ChipsDirective>
          <ChipDirective text="Andrew"></ChipDirective>
          <ChipDirective text="Janet"></ChipDirective>
          <ChipDirective text="Laura"></ChipDirective>
          <ChipDirective text="Margaret"></ChipDirective>
        </ChipsDirective>
      </ChipListComponent>
    </div>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('chip'));

```

Style in React Chips component

The following content provides the exact CSS structure that can be used to modify the control's appearance based on the user preference.

Customizing the chip text

Use the following CSS to customize the chip text properties.

```

`css
.e-chip .e-chip-text {
font-size: 20px;
color: black;
font-weight: normal;
}
`

```

Customizing the chip icon

Use the following CSS to customize the chip icon properties.

```
`css
.e-chip .e-icon {
background-image: url('https://ej2.syncfusion.com/demos/src/chips/images/laura.png');
opacity: 0.8;
}
`
```

Customizing the chip delete button

Use the following CSS to customize the chip delete button.

```
`css
.e-chip-list .e-chip .e-chip-delete.e-dlt-btn {
color: #e3165b;
font-size: 12px;
}
`
```

Customizing the chip outline

Use the following CSS to customize the chip outline.

```
`css
.e-chip-list .e-chip.e-outline {
border-color: #e3165b;
border-width: 3px;
}
`
```

Customizing the chip on selection

Use the following CSS to customize the chip on selection.

```
`css
/ To customize single chip on selection /
.e-chip-list.e-selection .e-chip.e-active {
background-color: #ffca1c;
color: #e3165b;
}
/ To customize multiple chip on selection /
.e-chip-list .e-chip.e-active {
background-color: #e3165b;
color: white;
}
```

```
}  
`
```

Customizing the chip avatar text

Use the following CSS to customize the chip avatar text properties.

```
`css  
.e-chip-list .e-chip .e-chip-avatar {  
background-color: #d51a1a;  
color: #fafafa;  
}  
`
```

Accessibility in React Chips component

The Chips component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Chips component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

| [Section 508](#) Support | |

| Screen Reader Support | |

| Right-To-Left Support | |

| Color Contrast | |

| Mobile Device Support | |

| Keyboard Navigation Support | |

| [Accessibility Checker](#) Validation | |

| [Axe-core](#) Accessibility Validation | |

<style>

```
.post .post-content img {  
display: inline-block;
```

```
margin: 0.5em 0;
```

```
}
```

```
</style>
```

```
<div> - All features of the component meet the requirement.</div>
```

```
<div> - Some features of the component do not meet the requirement.</div>
```

```
<div> - The component does not meet the requirement.</div>
```

WAI-ARIA attributes

The Chips component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Chips component:

Attributes	Purpose
------------	---------

---	---
-----	-----

<code>role=checkbox</code>	Indicates the ChipList component wrapper element as <code>checkbox</code> .
----------------------------	---

<code>role=option</code>	Used to convey a significant and contextual message to the user(ChipList).
--------------------------	--

<code>role=button</code>	Used to convey a significant and contextual message to the user(Single Chip).
--------------------------	---

<code>aria-label</code>	Provides an accessible name for the Chip.
-------------------------	---

<code>aria-selected</code>	Indicates the element is selected.
----------------------------	------------------------------------

<code>aria-disabled</code>	Indicates element is perceivable but disabled.
----------------------------	--

<code>aria-multiselectable</code>	Indicates multiple items to be selected.
-----------------------------------	--

Keyboard interaction

The Chips component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Chips component.

Keyboard shortcuts	Actions
--------------------	---------

-----	-----
-------	-------

Enter / Space	Selects the targeted chip from the ChipList/ChipCollection.
----------------------	--

Delete / Backspace	Deletes the targeted chip from the ChipList/ChipCollection.
---------------------------	--

Ensuring accessibility

The Chips component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Chips component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Chips component with accessibility tools.

3D Circular Chart

<!-- markdownlint-disable MD036 -->

Getting started

This section explains you the steps required to create a simple 3D Circular Chart and demonstrate the basic usage of the 3D Circular Chart control.

Dependencies

Below is the list of minimum dependencies required to use the 3D Circular Chart component.

```
`javascript
|-- @syncfusion/ej2-react-charts
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-charts
|-- @syncfusion/ej2-react-base
|-- @syncfusion/ej2-pdf-export
|-- @syncfusion/ej2-file-utils
|-- @syncfusion/ej2-compression
|-- @syncfusion/ej2-svg-base
`,`
```

Installation and configuration

You can use [create-react-app](#) to setup the applications.

To install `create-react-app` run the following command.

```
`npm install -g create-react-app
`,`
```

- To set-up a React application in TypeScript environment, run the following command.

```
`create-react-app quickstart --template typescript
cd quickstart
npm start
`,`
```

- To set-up a React application in JavaScript environment, run the following command.

,

```
create-react-app quickstart
```

```
cd quickstart
```

```
npm start
```

,

- Install Syncfusion packages using below command.

,

```
npm install @syncfusion/ej2-react-charts --save
```

,

Add 3D Circular Chart to the project

Now, you can start adding 3D Circular Chart component in the application.

For getting started, add the 3D Circular Chart component in `src/App.tsx` file using following code.

INDEX.JSX

```
import { CircularChart3DComponent } from '@syncfusion/ej2-react-charts';
import * as React from 'react';
function App() {
  return (<CircularChart3DComponent />);
}
export default App;
```

INDEX.TSX

```
import { CircularChart3DComponent } from '@syncfusion/ej2-react-charts';
import * as React from 'react';
function App() {
  return (<CircularChart3DComponent />);
}
export default App;
```

Pie Series

By default, the pie series will be rendered when assigning the JSON data to the series using the `dataSource` property. Map the field names in the JSON data to the `xName` and `yName` properties of the series.

INDEX.JSX

```
{% raw %}
import { CircularChart3DComponent, CircularChart3DSeriesCollectionDirective,
CircularChart3DSeriesDirective, PieSeries3D, CircularChartDataLabel3D,
CircularChartLegend3D, Inject } from '@syncfusion/ej2-react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
```

```
function App() {
  const circularData = [
    { x: 'Chrome', y: 62.92 },
    { x: 'Internet Explorer', y: 6.12 },
    { x: 'Opera', y: 3.15 },
    { x: 'Edge', y: 5.5 },
    { x: 'Safari', y: 19.97 },
    { x: 'Others', y: 2.34 }
  ];

  return <CircularChart3DComponent id='charts' title='Browser Market
Shares in November 2023' tilt={-45} legendSettings={{ visible: true,
position: 'Right' }}>
    <Inject services={[PieSeries3D, CircularChartDataLabel3D,
CircularChartLegend3D]}/>
    <CircularChart3DSeriesCollectionDirective>
      <CircularChart3DSeriesDirective dataSource={circularData}
xName='x' yName='y' dataLabel={{ visible: true, position: 'Outside', name:
'x', font: { fontWeight: '600' }, connectorStyle: { length: '40px' } }}>
        </CircularChart3DSeriesDirective>
      </CircularChart3DSeriesCollectionDirective>
    </CircularChart3DComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import { CircularChart3DComponent, CircularChart3DSeriesCollectionDirective,
CircularChart3DSeriesDirective, PieSeries3D, CircularChartDataLabel3D,
CircularChartLegend3D, Inject } from '@syncfusion/ej2-react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  const circularData: any[] = [
    { x: 'Chrome', y: 62.92 },
    { x: 'Internet Explorer', y: 6.12 },
    { x: 'Opera', y: 3.15 },
    { x: 'Edge', y: 5.5 },
    { x: 'Safari', y: 19.97 },
    { x: 'Others', y: 2.34 }
  ];
  return <CircularChart3DComponent id='charts' title='Browser Market Shares
in November 2023' tilt={-45} legendSettings={{ visible: true, position:
'Right' }}>
    <Inject services={[PieSeries3D, CircularChartDataLabel3D,
CircularChartLegend3D]}/>
    <CircularChart3DSeriesCollectionDirective>
      <CircularChart3DSeriesDirective dataSource={circularData}
xName='x' yName='y' dataLabel={{ visible: true, position: 'Outside', name:
'x', font: { fontWeight: '600' }, connectorStyle: { length: '40px' } }}>
        </CircularChart3DSeriesDirective>
      </CircularChart3DSeriesCollectionDirective>
    </CircularChart3DComponent>
  
```

```
};  
export default App;  
ReactDOM.render(<App />, document.getElementById("charts"));  
{% endraw %}
```

Now run the `npm start` command in the console, it will run your application and open the browser window.

,

`npm start`

,

Pie and Donut in React 3D Circular Chart component

Pie chart

To render a pie series, inject the `PieSeries3D` into the service.

INDEX.JSX

```
{% raw %}  
import {  
  CircularChart3DComponent,  
  CircularChart3DSeriesCollectionDirective,  
  CircularChart3DSeriesDirective,  
  PieSeries3D,  
  CircularChartDataLabel3D,  
  Inject,  
} from '@syncfusion/ej2-react-charts';  
import * as React from 'react';  
import * as ReactDOM from 'react-dom';  
function App() {  
  const circularData = [  
    { x: 'Chrome', y: 62.92 },  
    { x: 'Internet Explorer', y: 6.12 },  
    { x: 'Opera', y: 3.15 },  
    { x: 'Edge', y: 5.5 },  
    { x: 'Safari', y: 19.97 },  
    { x: 'Others', y: 2.34 },  
  ];  
  return (  
    <CircularChart3DComponent  
      id="charts"  
      title="Browser Market Shares in November 2023"  
      tilt={-45}  
    >  
      <Inject  
        services={[  
          PieSeries3D,  
          CircularChartDataLabel3D,  
        ]}  
      />  
      <CircularChart3DSeriesCollectionDirective>  
        <CircularChart3DSeriesDirective  
          dataSource={circularData}  
          xName="x"  

```

```

        yName="y"
      ></CircularChart3DSeriesDirective>
    </CircularChart3DSeriesCollectionDirective>
  </CircularChart3DComponent>
);
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import {
  CircularChart3DComponent,
  CircularChart3DSeriesCollectionDirective,
  CircularChart3DSeriesDirective,
  PieSeries3D,
  CircularChartDataLabel3D,
  Inject,
} from '@syncfusion/ej2-react-charts';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  const circularData: any[] = [
    { x: 'Chrome', y: 62.92 },
    { x: 'Internet Explorer', y: 6.12 },
    { x: 'Opera', y: 3.15 },
    { x: 'Edge', y: 5.5 },
    { x: 'Safari', y: 19.97 },
    { x: 'Others', y: 2.34 },
  ];
  return (
    <CircularChart3DComponent
      id="charts"
      title="Browser Market Shares in November 2023"
      tilt={-45}
    >
      <Inject
        services={[
          PieSeries3D,
          CircularChartDataLabel3D,
        ]}
      />
      <CircularChart3DSeriesCollectionDirective>
        <CircularChart3DSeriesDirective
          dataSource={circularData}
          xName="x"
          yName="y"
        ></CircularChart3DSeriesDirective>
      </CircularChart3DSeriesCollectionDirective>
    </CircularChart3DComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));

```

```
{% endraw %}
```

Radius customization

By default, the radius of the pie series will be 80% of the size, which is the minimum of the 3D Circular Chart's width and height. You can customize this by using the `radius` property of the series.

INDEX.JSX

```
{% raw %}
import {
  CircularChart3DComponent,
  CircularChart3DSeriesCollectionDirective,
  CircularChart3DSeriesDirective,
  PieSeries3D,
  CircularChartDataLabel3D,
  Inject,
} from '@syncfusion/ej2-react-charts';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  const circularData = [
    { x: 'Chrome', y: 62.92 },
    { x: 'Internet Explorer', y: 6.12 },
    { x: 'Opera', y: 3.15 },
    { x: 'Edge', y: 5.5 },
    { x: 'Safari', y: 19.97 },
    { x: 'Others', y: 2.34 },
  ];
  return (
    <CircularChart3DComponent
      id="charts"
      title="Browser Market Shares in November 2023"
      tilt={-45}
    >
      <Inject
        services={[
          PieSeries3D,
          CircularChartDataLabel3D,
        ]}
      />
      <CircularChart3DSeriesCollectionDirective>
        <CircularChart3DSeriesDirective
          dataSource={circularData}
          xName="x"
          yName="y"
          radius='80%'
        ></CircularChart3DSeriesDirective>
      </CircularChart3DSeriesCollectionDirective>
    </CircularChart3DComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import {
  CircularChart3DComponent,
  CircularChart3DSeriesCollectionDirective,
  CircularChart3DSeriesDirective,
  PieSeries3D,
  CircularChartDataLabel3D,
  Inject,
} from '@syncfusion/ej2-react-charts';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  const circularData: any[] = [
    { x: 'Chrome', y: 62.92 },
    { x: 'Internet Explorer', y: 6.12 },
    { x: 'Opera', y: 3.15 },
    { x: 'Edge', y: 5.5 },
    { x: 'Safari', y: 19.97 },
    { x: 'Others', y: 2.34 },
  ];
  return (
    <CircularChart3DComponent
      id="charts"
      title="Browser Market Shares in November 2023"
      tilt={-45}
    >
      <Inject
        services={[
          PieSeries3D,
          CircularChartDataLabel3D,
        ]}
      />
      <CircularChart3DSeriesCollectionDirective>
        <CircularChart3DSeriesDirective
          dataSource={circularData}
          xName="x"
          yName="y"
          radius='80%'
        ></CircularChart3DSeriesDirective>
      </CircularChart3DSeriesCollectionDirective>
    </CircularChart3DComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));
{% endraw %}
```

Various radius pie chart

You can assign different radii to each slice of the pie by fetching the radius from the data source and using it with the `radius` property in the `series`.

INDEX.JSX

```
{% raw %}
```

```

import {
  CircularChart3DComponent,
  CircularChart3DSeriesCollectionDirective,
  CircularChart3DSeriesDirective,
  PieSeries3D,
  CircularChartDataLabel3D,
  Inject,
} from '@syncfusion/ej2-react-charts';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  const circularData = [
    { x: 'Belgium', y: 551500, r: '110.7', text: 'Belgium' },
    { x: 'Dominican Republic', y: 312685, r: '137.5', text: 'Dominican Republic' },
    { x: 'Cuba', y: 350000, r: '124.6', text: 'Cuba' },

    { x: 'Somalia', y: 357022, r: '160.6', text: 'Somalia' },
    { x: 'Argentina', y: 505370, r: '100', text: 'Argentina' },
  ];
  return (
    <CircularChart3DComponent
      id="charts"
      title="Browser Market Shares in November 2023"
      tilt={-45}
    >
      <Inject
        services={[
          PieSeries3D,
          CircularChartDataLabel3D,
        ]}
      />
      <CircularChart3DSeriesCollectionDirective>
        <CircularChart3DSeriesDirective
          dataSource={circularData}
          xName="x"
          yName="y"
          radius='r'
        ></CircularChart3DSeriesDirective>
      </CircularChart3DSeriesCollectionDirective>
    </CircularChart3DComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import {
  CircularChart3DComponent,
  CircularChart3DSeriesCollectionDirective,
  CircularChart3DSeriesDirective,
  PieSeries3D,

```

```

CircularChartDataLabel3D,
Inject,
} from '@syncfusion/ej2-react-charts';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  const circularData: any[] = [
    { x: 'Belgium', y: 551500, r: '110.7', text: 'Belgium' },
    { x: 'Dominican Republic', y: 312685, r: '137.5', text: 'Dominican Republic' },
    { x: 'Cuba', y: 350000, r: '124.6', text: 'Cuba' },
    { x: 'Egypt', y: 301000, r: '150.8', text: 'Egypt' },
    { x: 'Kazakhstan', y: 300000, r: '155.5', text: 'Kazakhstan' },
    { x: 'Somalia', y: 357022, r: '160.6', text: 'Somalia' },
    { x: 'Argentina', y: 505370, r: '100', text: 'Argentina' },
  ];
  return (
    <CircularChart3DComponent
      id="charts"
      title="Browser Market Shares in November 2023"
      tilt={-45}
    >
      <Inject
        services={[
          PieSeries3D,
          CircularChartDataLabel3D,
        ]}
      />
      <CircularChart3DSeriesCollectionDirective>
        <CircularChart3DSeriesDirective
          dataSource={circularData}
          xName="x"
          yName="y"
          radius='r'
        ></CircularChart3DSeriesDirective>
      </CircularChart3DSeriesCollectionDirective>
    </CircularChart3DComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));
{% endraw %}

```

Donut chart

To achieve a donut in the pie series, customize the `innerRadius` property of the series. By setting a value greater than 0%, a donut will appear. The `innerRadius` property takes value from 0% to 100% of the pie radius.

INDEX.JSX

Data Label in React 3D Circular Chart component

A data label refers to a label associated with specific data points. It can be added to a 3D Circular Chart series by enabling the `visible` option in the `dataLabel` property. By default, the labels will arrange themselves smartly to avoid overlapping.

INDEX.JSX

```

{% raw %}
import {
  CircularChart3DComponent,
  CircularChart3DSeriesCollectionDirective,
  CircularChart3DSeriesDirective,
  PieSeries3D,
  CircularChartDataLabel3D,
  Inject,
} from '@syncfusion/ej2-react-charts';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  const circularData = [
    { x: 'Chrome', y: 62.92 },
    { x: 'Internet Explorer', y: 6.12 },
    { x: 'Opera', y: 3.15 },
    { x: 'Edge', y: 5.5 },
    { x: 'Safari', y: 19.97 },
    { x: 'Others', y: 2.34 },
  ];
  return (
    <CircularChart3DComponent

```

```

        id="charts"
        title="Browser Market Shares in November 2023"
        tilt={-45}
        legendSettings={{ visible: true, position: 'Right' }}
    >
    <Inject
        services={[
            PieSeries3D,
            CircularChartDataLabel3D,
        ]}
    />
    <CircularChart3DSeriesCollectionDirective>
        <CircularChart3DSeriesDirective
            dataSource={circularData}
            xName="x"
            yName="y"
            dataLabel={{
                visible: true
            }}
        ></CircularChart3DSeriesDirective>
    </CircularChart3DSeriesCollectionDirective>
</CircularChart3DComponent>
);
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import {
    CircularChart3DComponent,
    CircularChart3DSeriesCollectionDirective,
    CircularChart3DSeriesDirective,
    PieSeries3D,
    CircularChartDataLabel3D,
    Inject,
} from '@syncfusion/ej2-react-charts';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
    const circularData: any[] = [
        { x: 'Chrome', y: 62.92 },
        { x: 'Internet Explorer', y: 6.12 },
        { x: 'Opera', y: 3.15 },
        { x: 'Edge', y: 5.5 },
        { x: 'Safari', y: 19.97 },
        { x: 'Others', y: 2.34 },
    ];
    return (
        <CircularChart3DComponent
            id="charts"
            title="Browser Market Shares in November 2023"
            tilt={-45}
            legendSettings={{ visible: true, position: 'Right' }}

```

```

    >
    <Inject
      services={[
        PieSeries3D,
        CircularChartDataLabel3D,
      ]}
    />
    <CircularChart3DSeriesCollectionDirective>
      <CircularChart3DSeriesDirective
        dataSource={circularData}
        xName="x"
        yName="y"
        dataLabel={{
          visible: true
        }}
      ></CircularChart3DSeriesDirective>
    </CircularChart3DSeriesCollectionDirective>
  </CircularChart3DComponent>
);
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));
{% enddraw %}

```

To use the data label feature, inject the `CircularChartDataLabel3D` module into the services.

Positioning

Using the `position` property, we can place the data label either `inside` or `outside` the 3D Circular Chart.

INDEX.JSX

```

{% raw %}
import {
  CircularChart3DComponent,
  CircularChart3DSeriesCollectionDirective,
  CircularChart3DSeriesDirective,
  PieSeries3D,
  CircularChartDataLabel3D,

            }}
        ></CircularChart3DSeriesDirective>
    </CircularChart3DSeriesCollectionDirective>
</CircularChart3DComponent>
);
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));
{% enddraw %}

```

Connector line

The connector line will be visible when the data label is placed outside the chart. It can be customized using properties such as **color**, **width**, **length**, and **dashArray** within the **connectorStyle** property.

INDEX.JSX

{% endraw %}
```

Value	Format	Resultant Value	Description
1000	n1	1000.0	The number is rounded to 1 decimal place.

1000	n2	1000.00	The number is rounded to 2 decimal places.
1000	n3	1000.000	The number is rounded to 3 decimal place.
0.01	p1	1.0%	The number is converted to percentage with 1 decimal place.
0.01	p2	1.00%	The number is converted to percentage with 2 decimal place.
0.01	p3	1.000%	The number is converted to percentage with 3 decimal place.
1000	c1	\$1000.0	The currency symbol is appended to number and number is rounded to 1 decimal place.
1000	c2	\$1000.00	The currency symbol is appended to number and number is rounded to 2 decimal place.

Customization

Individual text for the data points in the 3D Circular Chart can be customized using the `textRender` event.

INDEX.JSX

```
{% raw %}
import {
  CircularChart3DComponent,
  CircularChart3DSeriesCollectionDirective,
  CircularChart3DSeriesDirective,
  PieSeries3D,
  CircularChartDataLabel3D,
  Inject,
} from '@syncfusion/ej2-react-charts';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  const circularData = [
    { x: 'Chrome', y: 62.92, text: 'Chrome: 40%' },
    { x: 'Internet Explorer', y: 6.12, text: 'Chrome: 15%' },
    { x: 'Opera', y: 3.15, text: 'Chrome: 8%' },
    { x: 'Edge', y: 5.5, text: 'Chrome: 15%' },
    { x: 'Safari', y: 19.97, text: 'Chrome: 20%' },
    { x: 'Others', y: 2.34, text: 'Chrome: 2%' },
  ];
  const textRender = function (args) {
    if (args.point.index === 0) {
      args.text = 'Custom Datalabel';
    }
  };
  return (
    <CircularChart3DComponent
      id="charts"
      textRender={textRender}
      title="Browser Market Shares in November 2023"
      tilt={-45}
      legendSettings={{ visible: true, position: 'Right' }}
    >
```

```

    <Inject services={[PieSeries3D, CircularChartDataLabel3D]} />
    <CircularChart3DSeriesCollectionDirective>

{% endraw %}

```

Using textRender event

You can customize the data label of a pie chart using the `textRender` event as follows to show the percentage.

INDEX.JSX

```

{% raw %}
import {
    CircularChart3DComponent,
    CircularChart3DSeriesCollectionDirective,
    CircularChart3DSeriesDirective,
    PieSeries3D,
    CircularChartDataLabel3D,
    Inject,
} from '@syncfusion/ej2-react-charts';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
    const circularData = [
        { x: 'Chrome', y: 62.92, text: 'Chrome: 40%' },
        { x: 'Internet Explorer', y: 6.12, text: 'Chrome: 15%' },
        { x: 'Opera', y: 3.15, text: 'Chrome: 8%' },
        { x: 'Edge', y: 5.5, text: 'Chrome: 15%' },
        { x: 'Safari', y: 19.97, text: 'Chrome: 20%' },
        { x: 'Others', y: 2.34, text: 'Chrome: 2%' },
    ];
    const textRender = function (args) {
        args.text = args.text + '%';
    };
    return (
        <CircularChart3DComponent
            id="charts"
            textRender={textRender}
            title="Browser Market Shares in November 2023"
            tilt={-45}
            legendSettings={{ visible: true, position: 'Right' }}
        >
            <Inject services={[PieSeries3D, CircularChartDataLabel3D]} />
            <CircularChart3DSeriesCollectionDirective>
                <CircularChart3DSeriesDirective

```

```

        dataSource={circularData}
        xName="x"
        yName="y"
        dataLabel={{
            visible: true,
            enableRotation: true,
        }}
    </CircularChart3DSeriesDirective>
</CircularChart3DSeriesCollectionDirective>
</CircularChart3DComponent>
);
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import {

        { x: 'Others', y: 2.34, text: 'Chrome: 2%' },
    ];
    const textRender = function (args) {
        args.text = args.text + '%';
    };
    return (
        <CircularChart3DComponent
            id="charts"
            textRender={textRender}
            title="Browser Market Shares in November 2023"
            tilt={-45}
            legendSettings={{ visible: true, position: 'Right' }}
        >
            <Inject services={[PieSeries3D, CircularChartDataLabel3D]} />
            <CircularChart3DSeriesCollectionDirective>
                <CircularChart3DSeriesDirective
                    dataSource={circularData}
                    xName="x"
                    yName="y"
                    dataLabel={{

```

```

        visible: true,
        enableRotation: true,
      }}
    </CircularChart3DSeriesDirective>
  </CircularChart3DSeriesCollectionDirective>
</CircularChart3DComponent>
);
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));
{% endraw %}

```

Using template

You can display the percentage values in the data label of a pie chart using the `template` option.

INDEX.JSX

```

{% raw %}
import {
  CircularChart3DComponent,
  CircularChart3DSeriesCollectionDirective,
  CircularChart3DSeriesDirective,
  PieSeries3D,
  CircularChartDataLabel3D,
  Inject,
} from '@syncfusion/ej2-react-charts';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  const circularData = [
    { x: 'Chrome', y: 62.92, text: 'Chrome: 40%' },
    { x: 'Internet Explorer', y: 6.12, text: 'Chrome: 15%' },
    { x: 'Opera', y: 3.15, text: 'Chrome: 8%' },
    { x: 'Edge', y: 5.5, text: 'Chrome: 15%' },
    { x: 'Safari', y: 19.97, text: 'Chrome: 20%' },
    { x: 'Others', y: 2.34, text: 'Chrome: 2%' },
  ];
  return (
    <CircularChart3DComponent
      id="charts"
      title="Browser Market Shares in November 2023"
      tilt={-45}
      legendSettings={{ visible: true, position: 'Right' }}
    >

Empty points in React 3D Circular Chart component

Data points containing `null` or `undefined` values are considered empty points. These empty data points are ignored and not plotted in the 3D Circular Chart. You can customize the handling of empty points using the `emptyPointSettings` property in the series. The default mode for empty points is `Gap`. Other supported modes include `Average`, `Drop`, and `Zero`.

{% endraw %}

```

To use data label feature, we need to inject `CircularChartLegend3D` module into the services.

Position and alignment

By using the `position` property, the legend can be positioned at the `left`, `right`, `top` or `bottom` of the 3D Circular Chart. By default, the legend will be positioned to the right of the 3D Circular Chart.

Additionally, you can align the legend to the `center`, `far` or `near` of the chart using the `alignment` property.

INDEX.JSX

```

{% raw %}
import {

Tooltip in React 3D Circular Chart component

The 3D Circular Chart will display details about the points through a tooltip, when the mouse is moved over a specific point. By default, the tooltip is not visible. It can be enabled by using the `enable` property in `tooltip` to `true`.

INDEX.JSX

```
{% raw %}
import {

            </CircularChart3DSeriesCollectionDirective>
        </CircularChart3DComponent>
    );
}
ReactDOM.render(<App />, document.getElementById('charts'));

```

```

    );
  }
  export default App;
  ReactDOM.render(<App />, document.getElementById('charts'));
  {% enddraw %}

```

To use data label feature, we need to inject `CircularChartTooltip3D` module into the services.

Header

You can specify a header for the tooltip by using the `header` property in `tooltip`.

INDEX.JSX

ReactDOM.render(<App />, document.getElementById('charts'));

```

```

    </CircularChart3DComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('charts'));
{% endraw %}

```

Format

By default, the tooltip shows information about the x and y values in points. Additionally, more information can be displayed in the tooltip by using the `format` property. For example, the format `${series.name} : ${point.x}` shows the series name and the point's x value.

Customization

The **fill** and **border** properties are used to customize the background color and border of the tooltip, respectively. The **textStyle** property in the tooltip is used to customize the font of the tooltip text. Additionally, the **highlightColor** property can be used to change the color of the data point when hovering.

```

Print and Export in React 3D Circular Chart component

Print

The rendered 3D Circular Chart can be printed directly from the browser by calling the public method **print**. The ID of the 3D Circular Chart div element must be passed as the input parameter to that method.

INDEX.JSX

```

{% raw %}
import { createRoot } from 'react-dom/client';
/**
 * Sample for Chart print
 */
import * as React from 'react';
import { useEffect, useRef } from 'react';
import {
  CircularChart3DSeriesDirective,
  CircularChart3DSeriesCollectionDirective,
  Inject,
  CircularChart3DComponent,
  CircularChartDataLabel3D,
  CircularChartLegend3D,
  PieSeries3D,
} from '@syncfusion/ej2-react-charts';
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
export let circularData = [
  { x: 'John', y: 10, dataLabelMappingName: '$10k' },
  { x: 'Jake', y: 12, dataLabelMappingName: '$12k' },
  { x: 'Peter', y: 18, dataLabelMappingName: '$18k' },
  { x: 'James', y: 11, dataLabelMappingName: '$11k' },
  { x: 'Mary', y: 9.7, dataLabelMappingName: '$9.7k' },
];
const Print = () => {
  useEffect(() => {
    const button = document.getElementById('chart-print');
    button.addEventListener('click', onClick);
  }, []);
  let chartInstance = useRef(null);
  const onClick = (e) => {
    chartInstance.current.print();
  };
  return (
    <div className="control-pane">
      <div className="control-section row">

```

```

<div className="col-lg-9">
  <CircularChart3DComponent
    id="charts"
    ref={chartInstance}
    title="Browser Market Shares in November 2023"
    tilt={-45}
    legendSettings={{ visible: false, position: 'Right' }}
  >
    <Inject
      services={[
        PieSeries3D,
        CircularChartDataLabel3D,
        CircularChartLegend3D,
      ]}
    />
    <CircularChart3DSeriesCollectionDirective>
      <CircularChart3DSeriesDirective
        dataSource={circularData}
        xName="x"
        yName="y"
        dataLabel={{
          visible: true,
          position: 'Inside',
          name: 'x',
          font: { fontWeight: '600', color: 'white' },
        }}
      ></CircularChart3DSeriesDirective>
    </CircularChart3DSeriesCollectionDirective>
  </CircularChart3DComponent>
</div>

          >
            <Inject
              services={[
                PieSeries3D,
                CircularChartDataLabel3D,
                CircularChartLegend3D,
              ]}
            />
            <CircularChart3DSeriesCollectionDirective>
              <CircularChart3DSeriesDirective
                dataSource={circularData}
                xName="x"
                yName="y"
                dataLabel={{
                  visible: true,
                  position: 'Inside',
                  name: 'x',
                  font: { fontWeight: '600', color: 'white' },
                }}
              ></CircularChart3DSeriesDirective>
            </CircularChart3DSeriesCollectionDirective>
          </div>
        </div>
      </div>
    </div>
  );
};

```

```

        </CircularChart3DSeriesCollectionDirective>
      </CircularChart3DComponent>
    </div>
    <div className="col-lg-3 property-section">
      <ButtonComponent
        id="chart-print"
        iconCss="e-icons e-print-icon"
        cssClass="e-flat"
        isPrimary={true}
      >
        Print
      </ButtonComponent>
    </div>
  </div>
</div>
);
};
export default Print;
createRoot(document.getElementById('charts')).render(<Print />);
{% endraw %}

```

Export

The rendered 3D Circular Chart can be exported to JPEG, PNG, or SVG format using the `export` method. Additionally, you can export the 3D Circular Chart as a PDF format using the `pdfExport` method. The input parameters for this method are `type` for the format and `fileName` for the result.

INDEX.JSX

```

{% raw %}
import { createRoot } from 'react-dom/client';
/**
 * Sample for Chart print
 */
import * as React from 'react';
import { useEffect, useRef } from 'react';
import {
  CircularChart3DSeriesDirective,
  CircularChart3DSeriesCollectionDirective,

};
export default Print;
createRoot(document.getElementById('charts')).render(<Print />);
{% endraw %}

```

Circular Gauge

Getting Started

This section explains you the steps required to create a simple circular gauge and demonstrate the basic usage of circular gauge control.

Dependencies

Following is the list of minimum dependencies required to use the Circular Gauge.

```
`ts
```

```
|-- @syncfusion/ej2-react-circulargauge
```

```
|-- @syncfusion/ej2-react-base
```

```
|-- @syncfusion/ej2-circulargauge
```

```
|-- @syncfusion/ej2-base
```

```
|-- @syncfusion/ej2-svg-base
```

```
|-- @syncfusion/ej2-paf-export  
,
```

Installation and configuration

To get started with the React application, [create-react-app](#) can be used to setup the application. To install **create-react-app** run the following command.

```
,  
  
npm install -g create-react-app  
,
```

To create basic React application, run the following command.

```
,  
  
create-react-app quickstart  
,
```

Now, the application is created in the **quickstart** folder. Run the following command to navigate to the **quickstart** folder, and install the required **npm** packages.

```
,  
  
cd quickstart  
,
```

In the **quickstart** application, the Syncfusion component is added in the JavaScript file.

Creating a React application with TypeScript

To create React application with TypeScript, use the following command.

```
,  
  
create-react-app quickstart --template typescript  
,
```

Now, the application is created in the **quickstart** folder. Run the following command to navigate to the **quickstart** folder, and install the required **npm** packages.

```
,  
  
cd quickstart  
,
```

Adding Syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](#) public registry. To install Circular Gauge package, use the following command.

```
,  
  
npm install @syncfusion/ej2-react-circulargauge --save  
,
```

Adding Circular Gauge component to the Project

Now, the Circular Gauge component can be added in the application. To initialize the Circular Gauge control in the React application, import the Circular Gauge control in the **src/App.js** or **src/App.tsx** as per the application. Please use the below code to include the Circular Gauge component in the application.

```
`ts
import React from 'react';
import { CircularGaugeComponent } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return (<CircularGaugeComponent></CircularGaugeComponent>);
}
export default App;
`
```

Run the application

The Circular Gauge control is now included in the **quickstart** application. Use the following command to run the application.

```
`
npm start
`
```

The below example shows the basic Circular Gauge.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent } from '@syncfusion/ej2-react-circulargauge';
export function App(){
  return(<CircularGaugeComponent ></CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent } from '@syncfusion/ej2-react-circulargauge';
export function App(){
  return(<CircularGaugeComponent ></CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Set Pointer Value

You can change the pointer value in the above sample using [value](#) property in [pointers](#).

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective } from '@syncfusion/ej2-react-
circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective>
          <PointersDirective>
            <PointerDirective value={35}></PointerDirective>
          </PointersDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective } from '@syncfusion/ej2-react-
circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective>
          <PointersDirective>
            <PointerDirective value={35}></PointerDirective>
          </PointersDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Creating a Next.js Application Using Syncfusion React Components

This section provides a step-by-step guide for setting up a Next.js application and integrating the Syncfusion React Circular Gauge component.

What is Next.js?

[Next.js](#) is a React framework that makes it easy to build fast, SEO-friendly, and user-friendly web applications. It provides features such as server-side rendering, automatic code splitting, routing, and API routes, making it an excellent choice for building modern web applications.

Prerequisites

Before getting started with the Next.js application, ensure the following prerequisites are met:

- [Node.js 18.17](#) or later.
- The application is compatible with macOS, Windows, and Linux operating systems.

Create a Next.js application

To create a new Next.js application, use one of the commands that are specific to either NPM or Yarn.

NPM

```
npx create-next-app@latest
```

YARN

```
yarn create next-app
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: Users can specify the name of the project directly. Let's specify the name of the project as `ej2-nextjs-circular-gauge`.

CMD

```
√ What is your project named? » ej2-nextjs-circular-gauge
```

2. Select the required packages.

CMD

```
√ What is your project named? ... ej2-nextjs-circular-gauge
√ Would you like to use TypeScript? ... No / `Yes`
√ Would you like to use ESLint? ... No / `Yes`
√ Would you like to use Tailwind CSS? ... `No` / Yes
√ Would you like to use `src/` directory? ... No / `Yes`
√ Would you like to use App Router? (recommended) ... No / `Yes`
√ Would you like to customize the default import alias? ... `No` / Yes
Creating a new Next.js app in D:\ej2-nextjs-circular-gauge.
```

3. Once complete the above mentioned steps to create `ej2-nextjs-circular-gauge`, navigate to the directory using the below command:

CMD

```
cd ej2-nextjs-circular-gauge
```

The application is ready to run with default settings. Now, let's add Syncfusion components to the project.

Install Syncfusion React packages

Syncfusion React component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion React components in the project, install the corresponding npm package.

Here, the [React Circular Gauge component](#) is used as an example. To install the React Circular Gauge component in the project, use the following command:

NPM

```
npm install @syncfusion/ej2-react-circulargauge --save
```

YARN

```
yarn add @syncfusion/ej2-react-circulargauge
```

Add Syncfusion React component

Follow the below steps to add the React Circular gauge components to the Next.js project:

1. Define the Circular gauge component in the **src/app/page.tsx** file, as shown below:

PAGE.TSX

```
'use client'
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective } from '@syncfusion/ej2-react-
circulargauge';
export function App() {
  return (
    <CircularGaugeComponent >
    <AxesDirective>
    <AxisDirective>
    <PointersDirective>
    <PointerDirective value={35}></PointerDirective>
    </PointersDirective>
    </AxisDirective>
    </AxesDirective>
    </CircularGaugeComponent>);
}
export default App;
```

Run the application

To run the application, use the following command:

NPM

```
npm run dev
```

YARN

```
yarn run dev
```

To learn more about the functionality of the Circular Gauge component, refer to the [documentation](#).

[View the NEXT.js Circular Gauge sample in the GitHub repository.](#)

Gauge dimensions in React Circular gauge component

Size for Container

Circular gauge can render to its container size. You can set the size via inline or CSS as demonstrated below.

```
,  
  
<div id='container'>  
  
<div id='circular-container' style="width:650px; height:350px;"></div>  
  
</div>  
  
,
```

INDEX.JSX

```
{% raw %}  
import * as React from "react";  
import * as ReactDOM from "react-dom";  
import { CircularGaugeComponent } from '@syncfusion/ej2-react-circulargauge';  
export function App() {  
  return(  
    <CircularGaugeComponent >  
      </CircularGaugeComponent>;  
  )  
}  
const root = ReactDOM.createRoot(document.getElementById('container'));  
root.render(<App />);  
{% endraw %}
```

INDEX.TSX

```
{% raw %}  
import * as React from "react";  
import * as ReactDOM from "react-dom";  
import { CircularGaugeComponent } from '@syncfusion/ej2-react-circulargauge';  
export function App() {  
  return(  
    <CircularGaugeComponent >  
      </CircularGaugeComponent>;  
  )  
}  
const root = ReactDOM.createRoot(document.getElementById('container'));  
root.render(<App />);  
{% endraw %}
```

<!-- markdownlint-disable MD036 -->

[Size for Circular Gauge](#)

<!-- markdownlint-disable MD036 -->

You can also set size for the gauge directly through [width](#) and [height](#) properties.

In Pixel

You can set the size of the gauge in pixel as demonstrated below.

<<

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent width='650' height='350'>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent width='650' height='350'>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

In Percentage

By setting value in percentage, gauge gets its dimension with respect to its container. For example, when the height is '50%', gauge renders to half of the container height.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";

export function App() {
  return (
    <CircularGaugeComponent width='80%' height='50%'>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent width='80%' height='50%'>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Note: When you do not specify the size, it takes [Link to the Video](#) as the height and window size as its width.

Gauge axes in React Circular Gauge component

By default, gauge will be displayed with an axis. Each axis contains its own ranges, pointers and annotation.

The video below demonstrates how to add and customize axis in the Circular Gauge component.

<!-- markdownlint-disable MD036 -->

Axis Customization

You can customize the width and color of an axis line by using [lineStyle](#) property.

Background for an axis can be customized by using [background](#) property.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective lineStyle = {{
          width: 2,
          color: 'red'
        }} background = 'rgba(0, 128, 128, 0.3)'>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective lineStyle = {{
          width: 2,
          color: 'red'
        }} background = 'rgba(0, 128, 128, 0.3)' >
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

<!-- markdownlint-disable MD036 -->

Angles and Direction

Circular gauge axis can sweep from 0 to 360 degrees. By default start angle of an axis is 200 degree and end angle is 160 degree and you can customize this option by using [startAngle](#) and [endAngle](#) property.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective startAngle = {270} endAngle = {90}>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
```

```
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective startAngle = {270} endAngle = {90}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

<!-- markdownlint-disable MD036 -->

The [direction](#) property enables you to render the gauge axis either in **ClockWise** or in **AntiClockWise** direction.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
"@syncfusion/ej2-react-circulargauge";
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective direction = 'AntiClockWise'>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
"@syncfusion/ej2-react-circulargauge";
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective direction = 'AntiClockWise'>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
```

```
{% endraw %}
```

<!-- markdownlint-disable MD036 -->

Axis Radius

By default, radius of an axis is calculated based on the available size. You can customize this, by using [radius](#) property. It takes value either in **percentage** or in **pixel**.

In Pixel

You can set the radius of the gauge in pixel as demonstrated below,

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
"@syncfusion/ej2-react-circulargauge";
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective radius = '150'>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
"@syncfusion/ej2-react-circulargauge";
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective radius = '150'>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

<!-- markdownlint-disable MD036 -->

In Percentage

By setting value in percentage, gauge gets its dimension with respect to its available size. For example, when the radius is '50%', gauge renders to half of the available size.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
 '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective radius = '50%'>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
 '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective radius = '50%'>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

<!-- markdownlint-disable MD036 -->

Ticks

You can customize the [height](#), [color](#) and [width](#) of major ticks and minor ticks by using [majorTicks](#) and [minorTicks](#) property.

By default, [interval](#) for [majorTicks](#) will be calculated automatically and also you can customize the interval for major and minor ticks using [interval](#) property.

INDEX.JSX

```
{% raw %}
```

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
 '@syncfusion/ej2-react-circulargauge';
export function App () {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective majorTicks = {{
          interval: 10,
          color:'red',
          height: 10,
          width: 3
        }} minorTicks = {{
          interval: 5,
          color:'green',
          height: 5,
          width: 2
        }}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
 '@syncfusion/ej2-react-circulargauge';
export function App () {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective majorTicks = {{
          interval: 10,
          color:'red',
          height: 10,
          width: 3
        }} minorTicks = {{
          interval: 5,
          color:'green',
          height: 5,
          width: 2
        }}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

Tick Position

Both minor and major ticks can be moved by using [offset](#) and

[position](#) property. The [offset](#) defines the distance between the axis and ticks. By default, offset value is 0.

The [position](#) will place the ticks either inside or outside of the axis.

By default, ticks will be placed **inside** the axis.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective majorTicks = {{
          interval: 10,
          color: 'red',
          height: 10,
          width: 3,
          position: 'Inside',
          offset: 5
        }} minorTicks = {{
          interval: 5,
          color: 'green',
          height: 5,
          width: 2,
          position: 'Inside',
          offset: 5
        }} >
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
```

```

    <AxisDirective majorTicks = {{
      interval: 10,
      color: 'red',
      height: 10,
      width: 3,
      position: 'Inside',
      offset: 5
    }} minorTicks = {{
      interval: 5,
      color: 'green',
      height: 5,
      width: 2,
      position: 'Inside',
      offset: 5
    }}>
  </AxisDirective>
</AxesDirective>
</CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% enddraw %}

```

Labels

Labels of an axis can be customized by using [font](#) property in

[labelStyle](#) options.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective labelStyle = {{
          font: {
            color: 'red',
            size: '20px',
            fontWeight: 'Bold'
          }
        }}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
 '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective labelStyle = {{
          font: {
            color: 'red',
            size: '20px',
            fontWeight: 'Bold'
          }
        }}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Label Position

Labels can be moved by using [offset](#) or [position](#) property.

The [offset](#) defines the distance between the labels and ticks.

By default, offset value is 0.

The [position](#) will place the labels either inside or outside of the axis. By default, labels will be placed inside the axis.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
 '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective labelStyle = {{
          position: 'Outside',
          offset: 5
        }}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
"@syncfusion/ej2-react-circulargauge";
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective labelStyle = {{
          position: 'Outside',
          offset: 5
        }}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Auto Angle

Labels can be swept along the axis angle by enabling [autoAngle](#) property.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
"@syncfusion/ej2-react-circulargauge";
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective labelStyle = {{
          autoAngle: true
        }}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
```

```
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
 '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective labelStyle = {{
          autoAngle: true
        }}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Smart Labels

When an axis makes a complete circle, then the first and last label of the axis will get overlap with each other.

In this scenario, you can either hide 1st or last label using [hiddenLabel](#) property.

When `hiddenLabel` value is `First`, then the 1st label will be hidden and when the `hiddenLabel` value is `'Last'`,

then the last label will be hidden.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
 '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective minimum = {0} maximum = {12} startAngle = {0} endAngle =
{360}
          majorTicks = {{
            interval: 1,
            position: 'Inside',
            height: 10
          }} minorTicks = {{
            interval: 0.2,
            position: 'Inside',
            height: 5
          }} labelStyle = {{
            position: 'Inside',
            hiddenLabel: 'First'
          }}>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
```

```

}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

          }]
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

Label Format

Axis labels can be formatted by using [format](#) property in [labelStyle](#) and its supports all globalize format.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective labelStyle = [{
          format: 'p1'
        }]
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}

```

```

    </AxisDirective>
  </AxesDirective>
</CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective labelStyle = {{
          format: 'p1'
        }}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

The following table describes the result of applying some commonly used label formats on numeric values.

<!-- markdownlint-disable MD033 -->

Label Value	Label Format property value	Result	Description
1000	n1	1000.0	The Number is rounded to 1 decimal place
1000	n2	1000.00	The Number is rounded to 2 decimal place
1000	n3	1000.000	The Number is rounded to 3 decimal place
0.01	p1	1.0%	The Number is converted to percentage with 1 decimal place
0.01	p2	1.00%	The Number is converted to percentage with 2 decimal place
0.01	p3	1.000%	The Number is converted to percentage with 3 decimal place
1000	c1	\$1,000.0	The Currency symbol is appended to number and number is rounded to 1 decimal place

1000	c2	\$1,000.00	The Currency symbol is appended to number and number is rounded to 2 decimal place
------	----	------------	--

Custom Label Format

Axis labels support custom label format using placeholder like {value}°C, in which the value represent the axis label e.g 20°C.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective labelStyle = {{
          format: '{value}°C'
        }}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective labelStyle = {{
          format: '{value}°C'
        }}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Hide intersecting axis labels

When the axis labels overlap with each other, you can hide the intersected labels by setting the `hideIntersectingLabel` property to true in the axis.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {

    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective minimum = {0} maximum = {200}
          startAngle = {270} endAngle = {90}
          hideIntersectingLabel= {true}
          majorTicks = {{
            interval: 4
          }}
          minorTicks = {{
            interval: 2
          }}>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective minimum = {0} maximum = {200}
          startAngle = {270} endAngle = {90}
          hideIntersectingLabel= {true}
          majorTicks = {{
            interval: 4
          }}
          minorTicks = {{
            interval: 2
          }}>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
```

```
root.render(<App />);
{% endraw %}
```

Minimum and Maximum

The [minimum](#) and [maximum](#) properties enables you to customize the start and end values of an axis.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective minimum = {50} maximum = {250}>
      </AxisDirective>
    </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective minimum = {50} maximum = {250}>
      </AxisDirective>
    </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Multiple Axes

In addition to the default axis, you can add n number of axis to a gauge. Each axis will have its own ranges, pointers, annotations and customization options.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
```

```

import { CircularGaugeComponent, AxesDirective, AxisDirective } from
 '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective majorTicks = {{
          interval: 10,
          position: 'Inside',
          height: 10
        }} minorTicks = {{
          interval: 5,
          position: 'Inside',
          height: 5
        }} pointers = {[[]]}>
      </AxisDirective>
      <AxisDirective majorTicks = {{
        interval: 10,
        position: 'Inside',
        height: 10
      }} minorTicks = {{
        interval: 5,
        position: 'Inside',
        height: 5
      }} pointers = {[[]]}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective, PointerModel }
 from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective majorTicks = {{
          interval: 10,
          position: 'Inside',
          height: 10
        }} minorTicks = {{
          interval: 5,
          position: 'Inside',
          height: 5
        }} pointers = {[[]] as PointerModel[]}>
      </AxisDirective>
      <AxisDirective majorTicks = {{
        interval: 10,

```

```

        position: 'Inside',
        height: 10
    }} minorTicks = {{
        interval: 5,
        position: 'Inside',
        height: 5
    }} pointers = {[[] as PointerModel[]]}>
    </AxisDirective>
</AxesDirective>
</CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

Gauge ranges in React Circular gauge component

You can categories certain interval on gauge axis using [ranges](#) property.

Start and End

Start and end value of a range in an axis can be customized by using [start](#) and [end](#) properties.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
    return(
        <CircularGaugeComponent >
            <AxesDirective>
                <AxisDirective>
                    <RangesDirective>
                        <RangeDirective start = {40} end = {80}></RangeDirective>
                    </RangesDirective>
                </AxisDirective>
            </AxesDirective>
        </CircularGaugeComponent>);
    }
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
    return(
        <CircularGaugeComponent >
            <AxesDirective>

```

```

    <AxisDirective>
      <RangesDirective>
        <RangeDirective start = {40} end = {80}></RangeDirective>
      </RangesDirective>
    </AxisDirective>
  </AxesDirective>
</CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

Customization

Color and thickness of the range can be customized by using [color](#), [startWidth](#) and [endWidth](#) property.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective>
          <RangesDirective>
            <RangeDirective start = {40} end = {80} startWidth = {15}
endWidth = {15}
            color = '#ff5985'></RangeDirective>
          </RangesDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective>
          <RangesDirective>

```

```

        <RangeDirective start = {40} end = {80} startWidth = {15}
endWidth = {15}
        color = '#ff5985'></RangeDirective>
    </RangesDirective>
</AxisDirective>
</AxesDirective>
</CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

<!-- markdownlint-disable MD036 -->

Radius

You can place the range inside or outside of the axis by using [radius](#) property. The radius of the range can take value either in percentage or in pixels. By default, ranges take 100% of the axis radius.

In Pixel

You can set the radius of the range in pixel as demonstrated below,

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
    return(
        <CircularGaugeComponent >
            <AxesDirective>
                <AxisDirective>
                    <RangesDirective>
                        <RangeDirective start = {40} end = {80} radius =
'100'></RangeDirective>
                    </RangesDirective>
                </AxisDirective>
            </AxesDirective>
        </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
    return(
        <CircularGaugeComponent >

```

```

    <AxesDirective>
      <AxisDirective>
        <RangesDirective>
          <RangeDirective start = {40} end = {80} radius =
'100'></RangeDirective>
        </RangesDirective>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>;
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

<!-- markdownlint-disable MD036 -->

In Percentage

By setting value in percentage, range gets its dimension with respect to its axis radius. For example, when the radius is '50%', range renders to half of the axis radius.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective>
          <RangesDirective>
            <RangeDirective start = {40} end = {80} radius =
'50%'></RangeDirective>
          </RangesDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>

```

```

    <AxisDirective>
      <RangesDirective>
        <RangeDirective start = {40} end = {80} radius =
'50%'></RangeDirective>
      </RangesDirective>
    </AxisDirective>
  </AxesDirective>
</CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

Dragging range

The ranges can be dragged on the axis values by clicking and dragging the same. To enable or disable the range drag, use the [enableRangeDrag](#) property.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent enableRangeDrag={true} height='250px'
width='250px'>
      <AxesDirective>
        <AxisDirective>
          <RangesDirective>
            <RangeDirective start = {0} end = {100} startWidth={8}
endWidth={8} radius='108%' color='#30B32D'></RangeDirective>
          </RangesDirective>
          <PointersDirective>
            <PointerDirective value = {50}></PointerDirective>
          </PointersDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {

```

```

return (
  <CircularGaugeComponent enableRangeDrag={true} height='250px'
width='250px'>
    <AxesDirective>
      <AxisDirective>
        <RangesDirective>
          <RangeDirective start = {0} end = {100} startWidth={8}
endWidth={8} radius='108%' color='#30B32D'></RangeDirective>
        </RangesDirective>
        <PointersDirective>
          <PointerDirective value = {50}></PointerDirective>
        </PointersDirective>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

Multiple Ranges

You can add multiple ranges to an axis with the above customization as demonstrated below.

Note: You can set the range color to axis ticks and labels by enabling `useRangeColor` property in `majorTicks`, `minorTicks` and `labelStyle` object.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective majorTicks = {{ useRangeColor: true }} minorTicks = {{
useRangeColor: true }} labelStyle = {{ useRangeColor: true }}>
          <RangesDirective>
            <RangeDirective start = {0} end = {25} radius =
'108%'></RangeDirective>
            <RangeDirective start = {25} end = {50} radius =
'70%'></RangeDirective>
            <RangeDirective start = {50} end = {75} radius =
'70%'></RangeDirective>
            <RangeDirective start = {75} end = {100} radius =
'108%'></RangeDirective>
          </RangesDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective majorTicks = {{ useRangeColor: true }} minorTicks = {{
useRangeColor: true }} labelStyle = {{ useRangeColor: true }}>
          <RangesDirective>
            <RangeDirective start = {0} end = {25} radius =
'108%'></RangeDirective>
            <RangeDirective start = {25} end = {50} radius =
'70%'></RangeDirective>
            <RangeDirective start = {50} end = {75} radius =
'70%'></RangeDirective>
            <RangeDirective start = {75} end = {100} radius =
'108%'></RangeDirective>
          </RangesDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Rounded corner radius

You can customize the corner radius using the `roundedCornerRadius` property in `ranges`.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective>
          <RangesDirective>
            <RangeDirective start = {40} end = {80} radius = '50%'
roundedCornerRadius = {5}></RangeDirective>
          </RangesDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

```
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
RangesDirective, RangeDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective>
          <RangesDirective>
            <RangeDirective start = {40} end = {80} radius = '50%'
roundedCornerRadius = {5}></RangeDirective>
          </RangesDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Gradient Color

Gradient support allows to add multiple colors in the ranges and pointers of the circular gauge. The following gradient types are supported in the circular gauge.

- Linear Gradient
- Radial Gradient

Linear Gradient

Using linear gradient, colors will be applied in a linear progression. The start value of the linear gradient can be set using the [startValue](#) property. The end value of the linear gradient will be set using the [endValue](#) property. The color stop values such as color, opacity and offset are set using [colorStop](#) property.

To apply linear gradient to the range, follow the below code sample.

INDEX.JSX

```
{% raw %}
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import {
  CircularGaugeComponent,
  AxesDirective,
  AxisDirective,
  RangesDirective,
  RangeDirective,
  Annotations,

```

```

Inject,
Gradient,
PointerDirective,
PointersDirective,
AnnotationsDirective,
AnnotationDirective,
} from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent
      title="Shot Put Distance"
      titleStyle={{ size: '18px' }}
      centerY="57%"
    >
      <Inject services={[Annotations, Gradient]} />
      <AxesDirective>
        <AxisDirective
          startAngle={200}
          endAngle={130}
          radius="90%"
          minimum={0}
          maximum={14}
          lineStyle={{
            width: 0,
            color: '#1d1d1d',
          }}
          majorTicks={{ width: 0 }}
          minorTicks={{ width: 0 }}
          labelStyle={{ font: { size: '0px' } }}
        >
          <PointersDirective>

Radial Gradient

Using radial gradient, colors will be applied in circular progression. The inner circle position of the radial gradient will be set using the [innerPosition](#) property. The outer circle position of the radial gradient can be set using the [outerPosition](#) property. The color stop values such as color, opacity and offset are set using [colorStop](#) property.

To apply radial gradient to the range, follow the below code sample.

Gauge pointers in React Circular gauge component

Pointers are used to indicate values on the axis. Value of the pointer can be modified using the [value](#) property.

```

Gauge supports 3 types of pointers such as **Needle**, **RangeBar** and **Marker**. You can choose any one of the pointer by using [type](#) property.

Needle Pointers

A needle pointer contains three parts, a needle, a cap / knob and a tail. The length of the needle can be customized by using [radius](#) property.

The length of the tail can be customized by using [length](#) property.

The radius of the cap can be customized by using [radius](#)

in cap object. The needle and tail length takes value either in **percentage** or **pixel**.

RangeBar Pointer

RangeBar pointer is like ranges in an axis, that can be placed on gauge to mark the pointer value.

RangeBar starts from the beginning of the gauge and ends at the pointer value.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective } from '@syncfusion/ej2-react-
circulargauge';
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective>
          <PointersDirective>
            <PointerDirective value = {50} type = 'RangeBar' radius = '60%'>
          </PointerDirective>
        </PointersDirective>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective } from '@syncfusion/ej2-react-
circulargauge';
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective>
          <PointersDirective>
            <PointerDirective value = {50} type = 'RangeBar' radius = '60%'>
          </PointerDirective>
        </PointersDirective>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

```

    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

Customization

RangeBar can be customized in terms of color, border and thickness by using [color](#), [border](#) and [pointerWidth](#) property.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective } from '@syncfusion/ej2-react-
circulargauge';

            <RangeDirective start = {50} end = {100} radius = '108%'
roundedCornerRadius = {6}></RangeDirective>
          </RangesDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>;
  }
  const root = ReactDOM.createRoot(document.getElementById('container'));
  root.render(<App />);
  {% endraw %}

```

Marker Pointer

Different type of marker shape can be used to mark the pointer value in axis. You can change the marker shape using [markerShape](#) property in pointer. Gauge marker supports [Circle](#), [Rectangle](#), [Triangle](#), [InvertedTriangle](#) and [Diamond](#) shape.

We can use image instead of rendering marker shape to denote the pointer value. It can be achieved by setting [markerShape](#) to Image and assigning image path to [imageUrl](#) in pointer.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective } from '@syncfusion/ej2-react-
circulargauge';
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective>
          <PointersDirective>
            <PointerDirective value = {90} type = 'Marker' markerShape =
'InvertedTriangle'
              radius = '100%' markerHeight = {15} markerWidth = {15}>
            </PointerDirective>
          </PointersDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>;
  )
  const root = ReactDOM.createRoot(document.getElementById('container'));
  root.render(<App />);
  {% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";

```

```
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective } from '@syncfusion/ej2-react-
circulargauge';
export function App() {
  return (
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective>
          <PointersDirective>
            <PointerDirective value = {90} type = 'Marker' markerShape =
'InvertedTriangle'
              radius = '100%' markerHeight = {15} markerWidth = {15}>
          </PointerDirective>

'Triangle' radius = '100%'
              color = 'white' border= {{
                color: '#007DD1',
                width: 2
              }} markerHeight = {15} markerWidth = {15}>
          </PointerDirective>
        </PointersDirective>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Dragging pointer

The pointers can be dragged over the axis values by clicking and dragging the same. To enable or disable the pointer drag, use the [enablePointerDrag](#) property.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective } from '@syncfusion/ej2-react-
circulargauge';
export function App() {
  return (
    <CircularGaugeComponent enablePointerDrag={true} height='250px'
width='250px'>
      <AxesDirective>
        <AxisDirective>
          <PointersDirective>
            <PointerDirective value = {50}></PointerDirective>
          </PointersDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
```

```

}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));

```

```
root.render(<App />);
{% endraw %}
```

Animation

Pointer will get animate on loading the gauge, this can be handled by using [animation](#) property in pointer.

The [enable](#) property in animation allows you to enable or disable the animation.

The [duration](#) property specify the duration of the animation in milliseconds.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective } from '@syncfusion/ej2-react-
circulargauge';

      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

```

    </PointersDirective>
  </AxisDirective>
</AxesDirective>
</CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

Gradient Color

Gradient support allows to add multiple colors in the ranges and pointers of the circular gauge. The following gradient types are supported in the circular gauge.

- Linear Gradient
- Radial Gradient

Linear Gradient

Using linear gradient, colors will be applied in a linear progression. The start value of the linear gradient can be set using the [startValue](#) property. The end value of the linear gradient will be set using the [endValue](#) property. The color stop values such as color, opacity and offset are set using [colorStop](#) property.

The linear gradient can be applied to all pointer types like marker, range bar and needle. To do so, follow the below code sample.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective, Gradient, Inject } from
"@syncfusion/ej2-react-circulargauge";
export function App() {
  return (
    <CircularGaugeComponent >
      <Inject services={[ Gradient ]}/>
      <AxesDirective>
        <AxisDirective radius='90%' startAngle={270} endAngle={90} minimum={0}

Gauge annotations in React Circular gauge component

Annotations are used to mark a specific area of interest in the gauge with texts, shapes or images.

Content

You can place any custom element on the axis area by assigning the id of the element to [content](#) property of [annotation](#) object.

Note: To use annotation feature, we need to inject Annotations module into the services.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective, Inject, Annotations,
AnnotationsDirective, AnnotationDirective } from '@syncfusion/ej2-react-
circulargauge';
export function App() {
  return (
    <CircularGaugeComponent>
      <Inject services={[ Annotations ]}/>
      <AxesDirective>
        <AxisDirective>
          <PointersDirective>
            <PointerDirective value = {50}></PointerDirective>
          </PointersDirective>
          <AnnotationsDirective>
            <AnnotationDirective content='<div><div><span>Pointer Value :
50</span></div></div>' zIndex='1'/>
          </AnnotationsDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective, Inject, Annotations,

```

```

AnnotationsDirective, AnnotationDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent>
      <Inject services={[ Annotations ]}/>
      <AxesDirective>
        <AxisDirective>
          <PointersDirective>
            <PointerDirective value = {50}></PointerDirective>
          </PointersDirective>
          <AnnotationsDirective>
            <AnnotationDirective content='<div><div><span>Pointer Value :
50</span></div></div>' zIndex='1'/>
          </AnnotationsDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

Position

Annotation can be placed around the axis by using [radius](#)

and [angle](#) property. For example, if the angle is 90 degree and the radius is 110%, then the annotation, will be placed at the right side of the axis.

Radius of the annotation takes value either in pixel or percentage. By setting value in percentage, annotation gets its position with respect to its axis radius.

- [Tooltip for Annotation](#)

Animation in React Circular Gauge component

All of the elements in the Circular Gauge, such as the axis lines, ticks, labels, ranges, pointers, and annotations, can be animated sequentially by using the [animationDuration](#) property. The animation for the Circular Gauge is enabled when the `animationDuration` property is set to an appropriate value in milliseconds, providing a smooth rendering effect for the component. If the `animationDuration` property is set to `0`, which is the default value, the animation effect is disabled. If the animation is enabled, the component will behave in the following order.

1. The axis line will be animated in the rendering direction (clockwise or anticlockwise).
2. Each tick line and label will then be animated.
3. If available, ranges will be animated.
4. If available, pointers will be animated in the same way as [pointer animation](#).
5. If available, annotations will be animated.

The animation of the Circular Gauge is demonstrated in the following example.

Only the pointer of the Circular Gauge can be animated individually, not the axis lines, ticks, labels, ranges, and annotations. You can refer this [link](#) to enable only pointer animation.

Gauge legend in React Circular gauge component

Legend provides valuable information for interpreting what the circular gauge axis range displays, and they can be represented in various colors, shapes, and other identifiers based on the data. It gives a breakdown of what each symbol represents in the axis range of circular gauge.

You can add the legend for circular gauge ranges by setting the visible property of `legendSettings` to true.

Legend customization

Customization option is also provided for the legend shape, alignment, and position.

Position and alignment

The position of the legend is used to place legend in various positions. You can use the `position` property in `legendSettings`. Based on the position, the legend item will be aligned. The following options are available to customize the legend position:

- Top
- Bottom
- Left
- Right
- Custom
- Auto

The legend alignment is used to align the legend items in specific location. You can use the alignment property in `legendSettings` to align the legend items. The following options are available to customize the legend alignment:

- Near
- Center
- Far

The legends can also be positioned to absolute position using the `location.x` and `location.y` properties available in `legendSettings`.

Legend size

The legend size can be modified using the height and width properties in `legendSettings`.

Legend opacity

To specify the transparency for legend shape, set the opacity property in legendSettings.

Legend shape

To change the legend item shape, specify the desired shape in the shape property of the legend. By default, the shape of the legend is circle.

It also supports the following shapes:

- Rectangle
- Diamond
- Triangle
- InvertedTriangle
- Image
- Circle

You can customize a shape using the shapeWidth and shapeHeight properties.

Legend padding

You can control the spacing between the legend items using the padding option of the legend. The default value of padding is 5.

Legend border

You can customize the legend border using the border option in the legend. The legend border can be customized using the border color and width properties.

<!-- markdownlint-disable MD009 -->

Font of the legend text

The font of the legend item text can be customized using the following properties:

- fontFamily
- fontStyle
- fontWeight
- opacity
- color
- size

The following code example shows how to add legend in the gauge.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, Legend, AxesDirective, AxisDirective,
RangesDirective, RangeDirective, Inject } from '@syncfusion/ej2-react-
circulargauge';
export function App() {
  return (
    <CircularGaugeComponent
      legendSettings={{
        visible: true,
        shapeWidth: 30,
```

```

        shapeHeight:30,
        padding:15,
        border: {
            color:'green',
            width:3
        }
    }>
    <Inject services=[ Legend ]/>
    <AxesDirective>
        <AxisDirective minimum={0} maximum={100} majorTicks = {{ useRangeColor:
true }} minorTicks = {{ useRangeColor: true }} labelStyle = {{ useRangeColor:
true }}>
            <RangesDirective>
                <RangeDirective start = {0} end = {25} radius =
'108%'></RangeDirective>
                <RangeDirective start = {25} end = {50} radius =
'108%'></RangeDirective>
                <RangeDirective start = {50} end = {75} radius =
'108%'></RangeDirective>
                <RangeDirective start = {75} end = {100} radius =
'108%'></RangeDirective>
            </RangesDirective>
        </AxisDirective>
    </AxesDirective>
</CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, Legend, AxesDirective, AxisDirective,
RangesDirective, RangeDirective, Inject } from '@syncfusion/ej2-react-
circulargauge';
export function App() {
    return(
        <CircularGaugeComponent
            legendSettings={{
                visible: true,
                shapeWidth:30,
                shapeHeight:30,
                padding:15,
                border: {
                    color:'green',
                    width:3
                }
            }}>
            <Inject services=[ Legend ]/>
            <AxesDirective>
                <AxisDirective minimum={0} maximum={100} majorTicks = {{ useRangeColor:
true }} minorTicks = {{ useRangeColor: true }} labelStyle = {{ useRangeColor:
true }}>

```

```

        <RangesDirective>
            <RangeDirective start = {0} end = {25} radius =
'108% '></RangeDirective>
            <RangeDirective start = {25} end = {50} radius =
'108% '></RangeDirective>
            <RangeDirective start = {50} end = {75} radius =
'108% '></RangeDirective>
            <RangeDirective start = {75} end = {100} radius =
'108% '></RangeDirective>
        </RangesDirective>
    </AxisDirective>
</AxesDirective>
</CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

Toggle option in legend

The toggle option has been provided for legend. So, if you toggle the legend, the given color will be changed to the corresponding circular gauge range. You can enable the toggle option using `toggleVisibility` in the `legendSettings` property.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, Legend, Inject, AxesDirective,
AxisDirective, RangesDirective, RangeDirective } from '@syncfusion/ej2-react-
circulargauge';
export function App() {
    return(
        <CircularGaugeComponent
            legendSettings={{
                visible: true,
                toggleVisibility: true
            }}>
            <Inject services=[ Legend ]/>
            <AxesDirective>
                <AxisDirective minimum={0} maximum={100} majorTicks = {{ useRangeColor:
true }} minorTicks = {{ useRangeColor: true }} labelStyle = {{ useRangeColor:
true }} >
                    <RangesDirective>

root.render(<App />);
{% endraw %}
```

legendRendering event will be triggered before rendering each legend item, using this event you can customize needed legend items using following arguments.

Argument name	Description
fill	Specifies the legend shape color
text	Specifies the current legend text
shape	Customize the shape of the legends
name	Specifies the name of the event
cancel	Set to true, to cancel the event status

Gauge user interaction in React Circular gauge component

Tooltip for pointers

Circular gauge will displays the pointer details through [tooltip](#), when the mouse is moved over the pointer.

<!-- markdownlint-disable MD036 -->

Tooltip for ranges

Circular gauge displays the information about the ranges through tooltip when hovering the mouse over the ranges. You can enable this feature by setting the type property of tooltip to 'Range' in the array collection.

Tooltip customization for ranges

To customize the range tooltip, use the `rangeSettings` property in tooltip. The following options are available to customize the range tooltip:

- `fill` - Specifies the range tooltip fill color.
- `textStyle` - Specifies the range tooltip text style.
- `format` - Specifies the range content format.
- `template` - Specifies the custom template for tooltip.
- `enableAnimation` - Animates as it moves from one point to another.
- `border` - Specifies the tooltip border.
- `showMouseAtPosition` - Displays the position of the tooltip on the cursor position.

Tooltip for annotation

Circular gauge displays the information about the annotations through tooltip when hovering the mouse over the annotation. You can enable this feature by setting the type property of tooltip to 'Annotation' in the array collection.

Tooltip customization for annotation

To customize the annotation tooltip, use the `annotationSettings` property in tooltip. The following options are available to customize the annotation tooltip:

- `fill` - Specifies the annotation tooltip fill color.
- `textStyle` - Specifies the annotation tooltip text style.
- `format` - Specifies the annotation content format.
- `template` - Specifies the tooltip content with custom template.
- `enableAnimation` - Animates as it moves from one point to another.
- `border` - Specifies the tooltip border.

The following code example shows the tooltip for the pointers, ranges and annotation.

INDEX.JSX

<!-- markdownlint-disable MD036 -->

Template

Any HTML elements can be displayed in the tooltip by using the [template](#) property of the tooltip.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective, Inject, GaugeTooltip } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent tooltip= {{
      enable: true,
      template: '<div id="templateWrap"><div style="float: right; padding-
left:10px; line-height:30px;"><span>Pointer &#160;&#160;:&#160;
${value}</span></div></div>'
    }}>
    <Inject services=[ GaugeTooltip ]/>
    <AxesDirective>
      <AxisDirective>
        <PointersDirective>
          <PointerDirective value = {70}></PointerDirective>
        </PointersDirective>
      </AxisDirective>
    </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective, Inject, GaugeTooltip } from

        </PointersDirective>
      </AxisDirective>
    </AxesDirective>
    </CircularGaugeComponent>);
}
```

```

}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

Pointer Drag

Pointers can be dragged over the axis value. This can be achieved by clicking and dragging the pointer. To enable or disable the pointer drag, you can use [enablePointerDrag](#) property.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective, Inject, GaugeTooltip } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent enablePointerDrag = {true} tooltip= {{
      enable: true,
      template: '<div id="templateWrap"><div style="float: right; padding-
left:10px; line-height:30px;"><span>Pointer &#160;&#160;:&#160;
${value}</span></div></div>'
    }}>
      <Inject services={[ GaugeTooltip ]}/>
      <AxesDirective>
        <AxisDirective>
          <PointersDirective>
            <PointerDirective value = {70}></PointerDirective>
          </PointersDirective>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective, Inject, GaugeTooltip } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent enablePointerDrag = {true} tooltip= {{
      enable: true,
      template: '<div id="templateWrap"><div style="float: right; padding-
left:10px; line-height:30px;"><span>Pointer &#160;&#160;:&#160;
${value}</span></div></div>'
    }}>

```

```

    <Inject services={[ GaugeTooltip ]}/>
    <AxesDirective>
      <AxisDirective>
        <PointersDirective>
          <PointerDirective value = {70}></PointerDirective>
        </PointersDirective>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>;
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

Gauge print and export in React Circular gauge component

Print

To use the print functionality, we should inject the **Print** module into **services** and set the **allowPrint** property to **true**. The rendered circular gauge can be printed directly from the browser by calling the method [print](#).

INDEX.JSX

```

{% raw %}
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { CircularGaugeComponent, Print, Inject } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  var gaugeInstance;
  function clickHandler() {
    gaugeInstance.print();
  }
  return (<div>
    <ButtonComponent onClick={clickHandler}>
      print
    </ButtonComponent>
    <CircularGaugeComponent
      id="circulargauge"
      allowPrint={true}
      ref={(g) => (gaugeInstance = g)}
    >
      <Inject services={[Print]} />
    </CircularGaugeComponent>
  </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from 'react';

```

```
import * as ReactDOM from 'react-dom';
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { CircularGaugeComponent, Print, Inject } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  let gaugeInstance : CircularGaugeComponent;
  function clickHandler() {
    gaugeInstance.print();
  }
  return (<div>
    <ButtonComponent onClick={clickHandler}>
      print
    </ButtonComponent>
    <CircularGaugeComponent
      id="circulargauge"
      allowPrint={true}
      ref={ (g) => (gaugeInstance = g) }
    >
      <Inject services={[Print]} />
    </CircularGaugeComponent>
  </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Export

Image Export

To use the image export functionality, we should inject the `ImageExport` module into `services` and set the `allowImageExport` property to `true`. The rendered circular gauge can be exported as an image using the `export` method. The method requires two parameters: image type and file name. The circular gauge can be exported as an image in the following formats.

- JPEG
- PNG
- SVG

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { CircularGaugeComponent, ImageExport, Inject } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  var gaugeInstance;
  function clickHandler() {
    gaugeInstance.export('PNG', 'Gauge');
  }
  return (<div>
    <ButtonComponent onClick= {clickHandler}>Export</ButtonComponent>
  </div>
  );
}
```

```

    <CircularGaugeComponent allowImageExport={true} ref={g => gaugeInstance
= g}>
      <Inject services={[ImageExport]} />
    </CircularGaugeComponent>
  </div>;
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { CircularGaugeComponent, ImageExport, Inject } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  let gaugeInstance : CircularGaugeComponent;
  function clickHandler() {
    gaugeInstance.export('PNG', 'Gauge');
  }
  return (<div>
    <ButtonComponent onClick= {clickHandler}>Export</ButtonComponent>
    <CircularGaugeComponent allowImageExport={true} ref={g => gaugeInstance
= g}>
      <Inject services={[ImageExport]} />
    </CircularGaugeComponent>
  </div>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

We can get the image file as base64 string for the JPEG and PNG formats. The circular gauge can be exported to image as a base64 string using the [export](#) method. There are four parameters required: image type, file name, orientation of the exported PDF document which must be set as **null** for image export and finally **allowDownload** which should be set as **false** to return base64 string.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { PdfPageOrientation } from '@syncfusion/ej2-pdf-export';
import { CircularGaugeComponent, ImageExport, Inject } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  var gaugeInstance;
  function clickHandler() {
    gaugeInstance.export('PNG', 'Gauge', PdfPageOrientation.Landscape,
false).then((data)=>{
      document.writeln(data);
    });
  }
}

```

```

    })
  }
  return (<div>
    <ButtonComponent onClick= { clickHandler}>Export</ButtonComponent>
    <CircularGaugeComponent allowImageExport={true} ref={g => gaugeInstance
= g}>
      <Inject services={[ImageExport]} />
    </CircularGaugeComponent>
  </div>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { CircularGaugeComponent, ImageExport, Inject } from '@syncfusion/ej2-
react-circulargauge';
export function App() {
  let gaugeInstance: CircularGaugeComponent;
  function clickHandler() {
    gaugeInstance.export('PNG', 'Gauge', null, false).then((data)=>{
      document.writeln(data);
    })
  }
  return (<div>
    <ButtonComponent onClick= { clickHandler}>Export</ButtonComponent>
    <CircularGaugeComponent allowImageExport={true} ref={g => gaugeInstance
= g}>
      <Inject services={[ImageExport]} />
    </CircularGaugeComponent>
  </div>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

PDF Export

To use the PDF export functionality, we should inject the PdfExport module into services and set the [allowPdfExport](#) property to **true**. The rendered circular gauge can be exported as PDF using the [export](#) method. The [export](#) method requires three parameters: file type, file name and orientation of the PDF document. The orientation setting is optional and "0" indicates portrait and "1" indicates landscape.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { CircularGaugeComponent, PdfExport, Inject } from '@syncfusion/ej2-
react-circulargauge';

```

```

export function App() {
  var gaugeInstance;
  function clickHandler() {
    gaugeInstance.export('PDF', 'Gauge', 0);
  }
  return (<div>
    <ButtonComponent onClick= {clickHandler}>Export</ButtonComponent>
    <CircularGaugeComponent allowPdfExport={true} ref={g => gaugeInstance =
g}>
      <Inject services={[PdfExport]} />
    </CircularGaugeComponent>
  </div>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { CircularGaugeComponent, PdfExport, Inject } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  let gaugeInstance : CircularGaugeComponent;
  function clickHandler() {
    gaugeInstance.export('PDF', 'Gauge', 0);
  }
  return (<div>
    <ButtonComponent onClick= {clickHandler}>Export</ButtonComponent>
    <CircularGaugeComponent allowPdfExport={true} ref={g => gaugeInstance =
g}>
      <Inject services={[PdfExport]} />
    </CircularGaugeComponent>
  </div>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

Note: The exporting of the circular gauge as base64 string is not supported in the PDF export.

Gauge appearance in React Circular gauge component

Gauge Title

Circular gauge can be given a title by using [title](#) property, to show the information about the gauge. Title can be customized by using [titleStyle](#) property in gauge.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent } from '@syncfusion/ej2-react-circulargauge';

```

```
export function App() {
  return(
    <CircularGaugeComponent title= 'Speedometer'
      titleStyle= {{
        color: '#27d5ff'
      }}>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent title= 'Speedometer'
      titleStyle= {{
        color: '#27d5ff'
      }}>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Gauge Position

<!-- markdownlint-disable MD036 -->

Gauge can be positioned anywhere in the container with the help of [centerX](#) and [centerY](#) property and it accepts values either in percentage or in pixels.

The default value of the [centerX](#) and [centerY](#) property is 50%, which means gauge will get rendered to the centre of the container.

In Pixel

You can set the mid point of the gauge in pixel as demonstrated below,

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent centerX= '20' centerY= '20'>
      <AxesDirective>
        <AxisDirective lineStyle= {{
          width: 2,

```

```

        color: '#F8F8F8'
      }} startAngle= {90} endAngle= {180}>
    </AxisDirective>
  </AxesDirective>
</CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
"@syncfusion/ej2-react-circulargauge";
export function App() {
  return (
    <CircularGaugeComponent centerX= '20' centerY= '20'>
      <AxesDirective>
        <AxisDirective lineStyle= {{
          width: 2,
          color: '#F8F8F8'
        }} startAngle= {90} endAngle= {180}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

<!-- markdownlint-disable MD036 -->

In Percentage

By setting the value in percentage, gauge gets its mid point with respect to its plot area. For example, when the [centerX](#) value as '0%' and [centerY](#) value is '50%', gauge will get positioned at the top left corner of the plot area.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
"@syncfusion/ej2-react-circulargauge";
export function App() {
  return (
    <CircularGaugeComponent centerX= '10%' centerY= '50%'>
      <AxesDirective>
        <AxisDirective lineStyle= {{
          width: 2,
          color: '#F8F8F8'
        }} startAngle= {0} endAngle= {180}>

```

```

    </AxisDirective>
  </AxesDirective>
</CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent centerX= '10%' centerY= '50%'>
      <AxesDirective>
        <AxisDirective lineStyle= {{
          width: 2,
          color: '#F8F8F8'
        }} startAngle= {0} endAngle= {180}>
        </AxisDirective>
      </AxesDirective>
    </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

<!-- markdownlint-disable MD036 -->

Area Customization

Customize the gauge background

Using [background](#) and [border](#) properties, you can change the background color and border of the circular gauge.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective, RangesDirective, RangeDirective } from
'@syncfusion/ej2-react-circulargauge';
export function App() {
  return (
    <CircularGaugeComponent background= 'skyblue' border= {{
      color: "#FF0000", width: 2
    }}>
      <AxesDirective>
        <AxisDirective radius= '90%' maximum= {120} startAngle= {230}
endAngle= {130} majorTicks= {{
          width: 1, color: '#8c8c8c'

```

```

    }} lineStyle= {{ width: 2 }} minorTicks= {{
      width: 1, color: '#8c8c8c'
    }}>
    <PointersDirective>
      <PointerDirective value= {60} radius= '60%'>
      </PointerDirective>
    </PointersDirective>
    <RangesDirective>
      <RangeDirective start= {0} end= {70} radius=
'110%'></RangeDirective>
      <RangeDirective start= {70} end= {110} radius=
'110%'></RangeDirective>
      <RangeDirective start= {110} end= {120} radius=
'110%'></RangeDirective>
    </RangesDirective>
  </AxisDirective>
</AxesDirective>
</CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}

```

INDEX.TSX

```

root.render(<App />);
{% endraw %}

```

Radius calculation based on angles

Render semi or quarter circular gauges by modifying the start and end angles. By enabling the radius based on angle option, the radius of circular gauge will be calculated based on the start and end angles to avoid excess white space.

{% endraw %}
```

Accessibility in React Circular Gauge component

Circular Gauge has built-in accessibility features like screen reading and WAI-ARIA attributes.

WAI-ARIA attributes

The Circular Gauge component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Circular Gauge component:

| Attributes | Purpose |

| --- | --- |

| **role=region** | It is specified in the pointer where the interactive drag and drop function is supported to update the pointer value. |

| **aria-label** | Provides an accessible name for the axis labels, legend title, legend item label, text pointer and annotation. |

Screen reading in Circular Gauge

Accessibility in the Circular Gauge component ensures that all users, regardless of ability or disability, can use screen reading. The following Circular Gauge elements will be read aloud using screen reading software, such as Narrator for Windows.

Elements	Description
---	---
Axis labels	Reads the axis labels of the Circular Gauge.
Legend title	Reads the title of the legend in the Circular Gauge.
Legend item label	Reads the label of the legend item in the Circular Gauge.
Text pointer	Reads the text content shown as a pointer in Circular Gauge.
Annotation	Reads the content specified in the annotation.

Ensuring accessibility

The Circular Gauge component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Circular Gauge component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Circular Gauge component with accessibility tools.

Internationalization in React Circular Gauge component

Circular Gauge provides internationalization support for below elements.

- Axis Labels
- Tooltip

For more information about number formatter, you can refer [internationalization](#).

Globalization

Globalization is the process of designing and developing a component that works in different cultures/locales.

Internationalization library is used to globalize number in Circular Gauge component using [format](#) property in [labelStyle](#).

<!-- markdownlint-disable MD036 -->

Numeric Format

In the below example, axis labels are globalized to **EUR**.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
"@syncfusion/ej2-react-circulargauge";
import { setCulture, setCurrencyCode } from "@syncfusion/ej2-base";
setCulture('de');
setCurrencyCode('EUR');
```

```
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective labelStyle = {{
          //Label format set as currency.
          format: 'c'
        }}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective } from
'@syncfusion/ej2-react-circulargauge';
import { setCulture, setCurrencyCode } from '@syncfusion/ej2-base';
setCulture('de');
setCurrencyCode('EUR');
export function App() {
  return(
    <CircularGaugeComponent >
      <AxesDirective>
        <AxisDirective labelStyle = {{
          //Label format set as currency.
          format: 'c'
        }}>
      </AxisDirective>
    </AxesDirective>
  </CircularGaugeComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('container'));
root.render(<App />);
{% endraw %}
```

Right-to-left

Circular Gauge can render its elements from right to left, which improves the user experience for certain language users. To do so, set the [enableRtl](#) property to **true**. When this property is enabled, elements such as the tooltip and legend will be rendered from right to left. Meanwhile, the axis can be rendered from right to left by setting the [direction](#) property to **AntiClockWise**. For more information on axis, click [here](#).

The following example illustrates the right to left rendering of the Circular Gauge.

INDEX.JSX

```
{% raw %}
import * as React from "react";
```

```

import * as ReactDOM from "react-dom";
import { CircularGaugeComponent, AxesDirective, AxisDirective,
PointersDirective, PointerDirective, RangesDirective, RangeDirective,
GaugeTooltip, Legend, Inject } from '@syncfusion/ej2-react-circulargauge';
export function App() {
  return(
    <CircularGaugeComponent
      enableRtl="true"
      tooltip={{
        type: ['Pointer', 'Range'],
        format: 'Pointer : {value} ',
        enable: true,
        enableAnimation: false,
      }}
      legendSettings={{
        visible: true,
      }}
    >
    <Inject services=[[GaugeTooltip, Legend]] />
    <AxesDirective>
      <AxisDirective
        minimum={0}
        maximum={120}
        startAngle={210}
        endAngle={150}

`>function drawpointers(args) {}` | Not Applicable |

{% endraw %}

ColorPicker

Getting Started

The following section explains the required steps to build the ColorPicker component with its basic usage in step-by-step procedure.

Dependencies

The following list of dependencies are required to use the ColorPicker component in your application.

```
`javascript
```

```
|-- @syncfusion/ej2-react-inputs
```

```
|-- @syncfusion/ej2-react-base
```

```
|-- @syncfusion/ej2-base
```

```
|-- @syncfusion/ej2-inputs
```

```
|-- @syncfusion/ej2-popups
```

```
|-- @syncfusion/ej2-splitbuttons
```

```
,
```

Installation and configuration

You can use [Create-react-app](#) to setup the applications.

To install `create-react-app` run the following command.

```
`bash
```

```
npm install -g create-react-app
```

`

To set-up a React application in TypeScript environment, run the following command.

```
`bash
npx create-react-app my-app --template typescript
cd my-app
npm start
`
```

To set-up a React application in JavaScript environment, run the following command.

```
`bash
npx create-react-app my-app
cd my-app
npm start
`
```

Adding Syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](https://www.npmjs.com) public registry.

You can choose the component that you want to install. For this application, we are going to use ColorPicker component.

To install ColorPicker component, use the following command

```
`bash
npm install @syncfusion/ej2-react-inputs --save
`
```

Adding CSS reference

Import the ColorPicker component's required CSS references as follows in `src/App.css`.

```
`css
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
`
```

Adding ColorPicker to the application

Now, you can start adding ColorPicker component to the application. We have added ColorPicker component in `src/App.tsx` file using following code.

```
`ts
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
import './App.css';
// initializes ColorPicker component
function App() {
  return ( <div style={{marginTop: '150px'}}>
    <div id='container'>
      <div className='wrap'>
        <h4>Choose Color</h4>
        <ColorPickerComponent id='color-picker' />
      </div>
    </div>
  </div>
);
};
export default App;
```

Run the application

Use the `npm run start` command to run the application in the browser.

```
npm run start
```

The following example shows the default ColorPicker.

INDEX.JSX

```
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
// initializes ColorPicker component.
function App() {
  return (
    <div id='container'>
      <div className='wrap'>
        <h4>Choose Color</h4>
        <ColorPickerComponent id='color-picker' />
      </div>
    </div>
  );
}
```

```
;
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
// initializes ColorPicker component.
function App() {
    return (
        <div id='container'>
            <div className='wrap'>
                <h4>Choose Color</h4>
                <ColorPickerComponent id='color-picker' />
            </div>
        </div>
    );
};
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

Mode and value in React Color picker component

Inline

By default, the ColorPicker will be rendered using SplitButton and open the pop-up to access the ColorPicker. To render the ColorPicker container alone and to access it directly, render it as inline. It can be achieved by setting the [inline](#) property to `true`.

The following sample shows the inline type rendering of ColorPicker.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
//To render component as inline.
function App() {
    return (<div id='container'>
        <div className='wrap'>
            <h4>Choose Color</h4>
            <ColorPickerComponent inline={true}
showButtons={false}></ColorPickerComponent>
        </div>
    </div>);
};
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
//To render component as inline.
function App() {
    return (
        <div id='container'>
            <div className='wrap'>
                <h4>Choose Color</h4>
                <ColorPickerComponent inline={true}
showButtons={false}></ColorPickerComponent>
            </div>
        </div>
    );
};
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

> The `showButtons` property is disabled in this sample because the control buttons are not needed for inline type. To know about the control buttons functionality, refer to the [showButtons](#) sample.

Rendering palette at initial load

By default, the `Picker` area will be rendered at initial load. To render the Palette area while opening the ColorPicker pop-up, and specify the `mode` property as `Palette`.

In the following sample, it will render the `Palette` at initial load.

INDEX.JSX

```
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
//To render palette at initial load.
function App() {
    return (<div id='container'>
        <div className='wrap'>
            <h4>Choose Color</h4>
            <ColorPickerComponent mode="Palette"/>
        </div>
    </div>);
};
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
//To render palette at initial load.
function App() {
```

```

    return (
      <div id='container'>
        <div className='wrap'>
          <h4>Choose Color</h4>
          <ColorPickerComponent mode="Palette"/>
        </div>
      </div>
    );
  };
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

Color value

The [value](#) property can be used to specify the color value to the ColorPicker. It supports either **three** or **six** digit hex codes. To include **opacity**, set the color value as **four** or **eight** digit hex code.

In the following sample, the color value sets as **four** digit hex code, the last digit represents the **opacity** value.

INDEX.JSX

```

import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
//To set color value.
function App() {
  return (<div id='container'>
    <div className='wrap'>
      <h4>Choose Color</h4>
      <ColorPickerComponent value="035a"/>
    </div>
  </div>);
}
;
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
//To set color value.
function App() {
  return (
    <div id='container'>
      <div className='wrap'>
        <h4>Choose Color</h4>
        <ColorPickerComponent value="035a"/>
      </div>
    </div>
  );
};
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

> The [value](#) property supports hex code with or without # prefix.

Localization in React Color picker component

Localization

The **Localization** library allows you to localize default text content of the ColorPicker. The ColorPicker component has static text for control buttons (apply / cancel) and mode switcher that can be changed to other cultures (Arabic, Deutsch, French, etc.) by defining the [locale](#) value and translation object.

The following list of properties and its values are used in the ColorPicker.

Locale key words | Text

Apply | Apply

Cancel | Cancel

ModeSwitcher | Switch Mode

Loading translations

To load translation object in an application use **load** function of **L10n** class.

The below example demonstrates the ColorPicker in **Deutsch** culture.

INDEX.JSX

```
import { L10n } from '@syncfusion/ej2-base';
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
L10n.load({
  'de-DE': {
    'colorpicker': {
      'Apply': 'Anwenden',
      'Cancel': 'Abbrechen',
      'ModeSwitcher': 'Modus wechseln'
    }
  }
});
function App() {
  return (<div id='container'>
    <div className='wrap'>
      <h4>Choose Color</h4>
      <ColorPickerComponent locale='de-DE' />
    </div>
  </div>);
}
export default App;
```

```
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { L10n } from '@syncfusion/ej2-base';
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
L10n.load({
  'de-DE': {
    'colorpicker': {
      'Apply': 'Anwenden',
      'Cancel': 'Abbrechen',
      'ModeSwitcher': 'Modus wechseln'
    }
  }
});
function App() {
  return (
    <div id='container'>
      <div className='wrap'>
        <h4>Choose Color</h4>
        <ColorPickerComponent locale='de-DE' />
      </div>
    </div>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

Right to Left - RTL

ColorPicker component has **RTL** support. It helps to render the ColorPicker from right-to-left direction.

It improves the user experiences and accessibility for users who use right-to-left languages(Arabic, Farsi, Urdu, etc). This can be achieved by setting the [enableRtl](#) property to **true**.

The following example illustrates how to enable right-to-left support in ColorPicker component.

INDEX.JSX

```
import { L10n } from '@syncfusion/ej2-base';
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
L10n.load({
  'ar-AE': {
    'colorpicker': {
      'Apply': 'تطبيق',
      'Cancel': 'إلغاء',
      'ModeSwitcher': 'مفتاح كهربائي الوضع'
    }
  }
});
function App() {
  return (<div id='container'>
    <div className='wrap'>
```

```

        <h4>Choose Color</h4>
        <ColorPickerComponent enableRtl={true} locale='ar-AE' />
      </div>
    </div>);
  }
  export default App;
  ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { L10n } from '@syncfusion/ej2-base';
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
L10n.load({
  'ar-AE': {
    'colorpicker': {
      'Apply': 'تطبيق',
      'Cancel': 'إلغاء',
      'ModeSwitcher': 'مفتاح كهربائي الوضع'
    }
  }
});
function App() {
  return (
    <div id='container'>
      <div className='wrap'>
        <h4>Choose Color</h4>
        <ColorPickerComponent enableRtl={true} locale='ar-AE' />
      </div>
    </div>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

Accessibility in React ColorPicker component

The ColorPicker component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the ColorPicker component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

| [Section 508](#) Support | |

```

| Screen Reader Support |  |

| Right-To-Left Support |  |

| Color Contrast |  |

| Mobile Device Support |  |

| Keyboard Navigation Support |  |

| Accessibility Checker Validation |  |

| Axe-core Accessibility Validation |  |

<style>
.post .post-content img {
display: inline-block;
margin: 0.5em 0;
}
</style>

<div> - All
features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

```

WAI-ARIA attributes

The ColorPicker component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the ColorPicker component:

Attributes	Purpose
role	Indicates the ColorPicker component as <code>color</code> and the tiles as <code>gridcell</code> in the color palette.
aria-label	Indicates the accessible name for the tiles.
aria-selected	Indicates the current selected state of the tile.
aria-haspopup	Indicates the availability of the popup element.
aria-expanded	Indicates whether the popup can be expanded or collapsed, as well as indicates whether its current state is expanded or collapsed.

| **aria-owns** | Identifies an elements in order to define a visual, functional, or contextual parent/child relationship between DOM elements where the DOM hierarchy cannot be used to represent the relationship. |

| **aria-disabled** | Indicates that the element is perceivable but disabled, so it is not editable or otherwise operable. |

Keyboard interaction

The ColorPicker component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the ColorPicker component.

| **Press** | **To do this** |

| --- | --- |

| **Up Arrow** | Moves the handler/tile up from the current position. |

| **Down Arrow** | Moves the handler/tile down from the current position. |

| **Left Arrow** | Moves the handler/tile left from the current position. |

| **Right Arrow** | Moves the handler/tile right from the current position. |

| **Enter** | Apply the selected color value. |

| **Tab** | To focus the next focusable element in the ColorPicker popup. |

Ensuring accessibility

The ColorPicker component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the ColorPicker component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the ColorPicker component with accessibility tools.

- [Accessibility in Syncfusion React components](#)

Style and appearance in React Color picker component

To modify the ColorPicker appearance, you need to override the default CSS of ColorPicker component. Please find the list of CSS classes and its corresponding section in ColorPicker component. Also, you have an option to create your own custom theme for the controls using our [Theme Studio](#).

CSS Class | Purpose of Class

|.e-custom-picker .e-container .e-handler|To customized Color Picker selection handler

|.color-picker.e-dropdown-popup ul .e-container|To customize the Color Picker container

|.color-picker.e-dropdown-popup ul .e-item.e-palette-item|To customize the Color Picker pallete item

|.color-picker.e-dropdown-popup .e-container .e-switch|To customize the Color Picker switch control

|.color-picker.e-dropdown-popup .e-container .e-slider-preview|To customize the Color Picker slider control

How To

Hide control buttons in React Color picker component

ColorPicker can be rendered without control buttons (Apply/Cancel). In this case, while selecting a color, the

ColorPicker pop-up is closed and selected colors can be applied directly. To hide control buttons, set the [showButtons](#) property to `false`.

INDEX.JSX

```
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
//To hide control buttons.
function App() {
    return (<div id='container'>
        <div className='wrap'>
            <h4>Choose Color</h4>
            <ColorPickerComponent showButtons={false}/>
        </div>
    </div>);
}
;
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
//To hide control buttons.
function App() {
    return (
        <div id='container'>
            <div className='wrap'>
                <h4>Choose Color</h4>
                <ColorPickerComponent showButtons={false} />
            </div>
        </div>
    );
};
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

Render palette alone in React Color picker component

To render the `Palette` alone in ColorPicker, specify the [mode](#) property as `Palette`, and set the [modeSwitcher](#) property to `false`.

In the following sample, the [showButtons](#) property is disabled to hide the control buttons and it renders only the `Palette` area.

INDEX.JSX

```
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
```

```
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  return (<div id='container'>
    <div className='wrap'>
      <h4>Choose Color</h4>
      <ColorPickerComponent mode="Palette" modeSwitcher={false}
showButtons={false}></ColorPickerComponent>
    </div>
  </div>);
}
;
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  return (
    <div id='container'>
      <div className='wrap'>
        <h4>Choose Color</h4>
        <ColorPickerComponent mode = "Palette" modeSwitcher={false}
showButtons ={false}></ColorPickerComponent>
      </div>
    </div>
  );
};
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

> To render **Picker** alone specify the [mode](#) property as 'Picker'.

Colorpicker in dropdownbutton in React Color picker component

This section explains about how to render the ColorPicker in DropDownButton. The [target](#) property of the DropDownButton helps to achieve this scenario. To know about the usage of **target** property refer to [Popup templating](#) section.

In the below sample, the color picker is rendered as inline type by setting [inline](#) property as **true** and the rendered color picker wrapper is passed as a **target** to the DropDownButton to achieve the above scenario.

INDEX.JSX

```
{% raw %}
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import { DropDownButtonComponent } from '@syncfusion/ej2-react-splitbuttons';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  let ddb;
  let cp;
```

```

function onChange(args) {
    ddb.element.children[0].style.backgroundColor =
args.currentValue.rgba;
    closePopup();
}
function closePopup() {
    ddb.toggle();
}
function onCreated() {
    const parentElem = cp.element.parentElement;
    const cancelBtn = parentElem.querySelector('.e-cancel');
    cancelBtn.addEventListener('click', closePopup.bind(this));
}
function open() {
    var zIndex = (document.getElementsByClassName('e-color-picker-
tooltip')[0]).style.zIndex;
    var zIndexIntValue = parseInt(zIndex) + 2;
    (document.getElementsByClassName('e-color-picker-
tooltip')[0]).style.zIndex = zIndexIntValue.toString();
}
return (<div id='container'>
    <div className='wrap'>
        <h4>Choose Color</h4>
        <ColorPickerComponent ref={ (scope) => { cp = scope; }}
id='colorpicker' inline={true} change={onChange}/>
        <DropDownButtonComponent id='dropdownbtn' open={open} target='.e-
colorpicker-wrapper' ref={ (scope) => { ddb = scope; }} iconCss='e-
dropdownbtn-preview' created={onCreated}/>
    </div>
</div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import { ColorPickerComponent, ColorPickerEventArgs } from '@syncfusion/ej2-
react-inputs';
import { DropDownButtonComponent } from '@syncfusion/ej2-react-splitbuttons';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    let ddb: DropDownButtonComponent;
    let cp: ColorPickerComponent;
    function onChange(args: ColorPickerEventArgs): void {
        (ddb.element.children[0] as HTMLElement).style.backgroundColor =
args.currentValue.rgba;
        closePopup();
    }
    function closePopup(): void {
        ddb.toggle();
    }
    function onCreated() {
        const parentElem = cp.element.parentElement as HTMLElement;

```

```

    const cancelBtn = parentElem.querySelector('.e-cancel') as
    HTMLElement;
    cancelBtn.addEventListener('click', closePopup.bind(this));
  }
  function open() {
    var zIndex = (document.getElementsByClassName('e-color-picker-
    tooltip')[0] as HTMLElement).style.zIndex;
    var zIndexIntValue = parseInt(zIndex) + 2;
    (document.getElementsByClassName('e-color-picker-tooltip')[0] as
    HTMLElement).style.zIndex = zIndexIntValue.toString();
  }
  return (
    <div id='container'>
      <div className='wrap'>
        <h4>Choose Color</h4>
        <ColorPickerComponent ref={ (scope) => { cp = scope as
        ColorPickerComponent; }} id='colorpicker' inline={true} change={onChange}/>
        <DropDownButtonComponent id='dropdownbtn' open={open} target='.e-
        colorpicker-wrapper' ref={ (scope) => { ddb = scope as
        DropDownButtonComponent; }} iconCss='e-dropdownbtn-preview'
        created={onCreated}/>
      </div>
    </div>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
{% enddraw %}

```

Customize colorpicker in React Color picker component

Custom palette

By default, the Palette will be rendered with default colors. To load custom colors in the palette, specify the colors in the [presetColors](#) property. To customize the color palette, add a custom class to palette tiles using [BeforeTileRender](#) event.

The following sample demonstrates the above functionalities.

INDEX.JSX

```

import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  let presets = {
    'custom1': ['#ef9a9a', '#e57373', '#ef5350',
      '#f44336', '#f48fb1', '#f06292',
      '#ec407a', '#e91e63', '#ce93d8',

        args.element.classList.add("e-icons");
        args.element.classList.add("e-custom-tile");
    }
    // riggers while selecting colors from palette.
    function change(args: ColorPickerEventArgs): void {

```

```

        (document.getElementById('preview') as
HTMLInputElement).style.backgroundColor = args.currentValue.hex;
    }
    return (
        <div id='container'>
        <div className='wrap'>
            <div id="preview"/>
            <h4>Select Color</h4>
            <ColorPickerComponent id='element' mode='Palette'
modeSwitcher={false} inline={true} showButtons={false} columns={4}
presetColors={presets} beforeTileRender={tileRender} change = {change}/>
        </div>
        </div>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

Hide input area from picker

By default, the input area will be rendered in ColorPicker. To hide the input area from it, add `e-hide-value` class to ColorPicker using the [cssClass](#) property.

In the following sample, the ColorPicker is rendered without input area.

INDEX.JSX

```

import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
// To hide the input area
function App() {
    return (<div id='container'>
        <div className='wrap'>
            <h4>Choose Color</h4>
            <ColorPickerComponent cssClass="e-hide-value"
modeSwitcher={false}/>
        </div>
        </div>);
}
;
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
// To hide the input area
function App() {
    return (
        <div id='container'>
        <div className='wrap'>
            <h4>Choose Color</h4>
            <ColorPickerComponent cssClass="e-hide-value"
modeSwitcher={false} />

```

```

        </div>
      </div>
    );
  };
  export default App;
  ReactDOM.render(<App />, document.getElementById('element'));

```

Custom handle

Color picker handle shape and UI can be customized. Here, we have customized the handle as **svg icon**. The same way you can customize the handle based on your requirement.

The following sample show the customized color picker handle.

INDEX.JSX

```

import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  return (<div id='container'>
    <div className='wrap'>
      <h4>Choose Color</h4>
      <ColorPickerComponent id='colorpicker' value='#344aae'
cssClass='e-custom-picker' modeSwitcher={false}/>
    </div>
  </div>);
}
;
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  return (
    <div id='container'>
      <div className='wrap'>
        <h4>Choose Color</h4>
        <ColorPickerComponent id='colorpicker' value='#344aae'
cssClass='e-custom-picker' modeSwitcher={false}/>
      </div>
    </div>
  );
};
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

Custom primary button

By default, the applied color will be updated in primary button of the color picker. You can customize that as **icon**.

In the following sample, the `picker` icon is added to primary button and using [change](#) event the selected color will be updated in bottom portion of the icon.

INDEX.JSX

```
import { addClass } from '@syncfusion/ej2-base';
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    let previewIcon;
    let cp;
    let onCreated = onCreated.bind(this);
    let onChange = onChange.bind(this);
    function onChange(args) {
        previewIcon.style.borderBottomColor = args.currentValue.rgba;
    }
    function onCreated() {
        const elem = cp.element.nextElementSibling;
        previewIcon = elem.querySelector('.e-selected-color');
        addClass([previewIcon], 'e-icons');
    }
    return (<div id='container'>
        <div className='wrap'>
            <h4>Choose Color</h4>
            <ColorPickerComponent ref={(scope) => cp = scope}
id='colorpicker' created={onCreated} change={onChange}/>
        </div>
    </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { addClass } from '@syncfusion/ej2-base';
import { ColorPickerComponent, ColorPickerEventArgs } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    let previewIcon: HTMLElement;
    let cp: ColorPickerComponent;
    let onCreated: any = onCreated.bind(this);
    let onChange: any = onChange.bind(this);
    function onChange (args: ColorPickerEventArgs): void {
        previewIcon.style.borderBottomColor = args.currentValue.rgba;
    }
    function onCreated() {
        const elem = cp.element.nextElementSibling as HTMLElement;
        previewIcon = elem.querySelector('.e-selected-color') as HTMLElement;
        addClass([previewIcon], 'e-icons');
    }
    return (
        <div id='container'>
            <div className='wrap'>
```

```

        <h4>Choose Color</h4>
        <ColorPickerComponent ref= { (scope) => cp = scope as
ColorPickerComponent } id='colorpicker' created={onCreated}
change={onChange}/>
      </div>
    </div>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

> The Essential JS 2 provides a set of icons that can be loaded by applying **e-icons** class name to the element. You can also use third party icon to customize the primary button.

Display hex code in input

The color picker input element can be showcased in the place of primary button. The applied color hex code will be updated in the primary button input.

The following sample shows the color picker with input.

INDEX.JSX

```

import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  let colorPicker;
  let onCreated = onCreated.bind(this);
  function onCreated() {
    const cpElem = colorPicker.element.nextElementSibling;
    cpElem.insertBefore(colorPicker.element, cpElem.children[1]);
  }
  return (<div id='container'>
    <div className='wrap'>
      <h4>Choose Color</h4>
      <ColorPickerComponent ref={ (scope) => colorPicker = scope }
id='colorpicker' type='text' created={onCreated} className='e-input' />
    </div>
  </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  let colorPicker: ColorPickerComponent;
  let onCreated: any = onCreated.bind(this);
  function onCreated(): void {
    const cpElem = colorPicker.element.nextElementSibling as HTMLElement;
    cpElem.insertBefore(colorPicker.element, cpElem.children[1]);
  }
  return (

```

```

        <div id='container'>
          <div className='wrap'>
            <h4>Choose Color</h4>
            <ColorPickerComponent ref={(scope) => colorPicker = scope as
ColorPickerComponent} id='colorpicker' type='text' created={onCreated}
className='e-input' />
          </div>
        </div>
      );
    }
  }
  export default App;
  ReactDOM.render(<App />, document.getElementById('element'));

```

Custom UI

The color picker UI can be customized in all possible ways. The following sample shows the excel like UI customization with help of SplitButton and Dialog component. In that by clicking the more colors option from color palette, the dialog contains color picker will open.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ColorPickerComponent, PaletteTileEventArgs, ColorPickerEventArgs }
from '@syncfusion/ej2-react-inputs';
import { DialogComponent } from '@syncfusion/ej2-react-popups';
import { SplitButtonComponent, BeforeOpenCloseMenuEventArgs,
OpenCloseMenuEventArgs } from '@syncfusion/ej2-react-splitbuttons';
function App() {
  let splitIcon;
  let colorPicker;
  let pickerDlg;

  let animationSettings = { effect: 'Zoom' };

  function content(data) {
    function onPickerChange(args) {
      onPaletteChange(args);
      pickerDlg.hide();
    }

    return (
      <div className="dialogContent">
        <ColorPickerComponent id='picker' inline={true}
