

USER GUIDE

Essential Studio for EJ2 React

Version - v25.1.35 | Release Date - March 15, 2024

Toolbar	16
Getting Started.....	16
Dependencies.....	16
Setup for Local Development.....	16
Adding Syncfusion packages	17
Adding CSS reference.....	17
Initialize the Toolbar with commands	17
Initialize the Toolbar using HTML elements	18
See Also	20
Item configuration in React Toolbar component	20
Button	20
Separator.....	21
Input.....	27
See Also	43
Responsive mode in React Toolbar component	43
Scrollable.....	43
Popup	51
Template configuration in React Toolbar component.....	58
Stateless template	64
Popup customization	68
Integrate menu component.....	75
Accessibility in React Toolbar component.....	79
ARIA attributes.....	80
Keyboard interaction	81
Ensuring accessibility	81
See also	81
Style in React Toolbar component.....	81
Customizing Toolbar	81
Customizing the Toolbar items	82
Customizing Toolbar's item icon	82
Customizing the hover state of Toolbar control.....	82
Customizing selected item of Toolbar control.....	83
How To	83
Set command customization in React Toolbar component.....	83
Set tool tip to the commands in React Toolbar component.....	89

Set item wise custom template in React Toolbar component	95
Add toggle button in React Toolbar component	98
How to customize toolbar scroll step in React Toolbar component	104
Add link to toolbar item in React Toolbar component	113
Render other components in toolbar using template in React Toolbar component	115
Ej1 api migration in React Toolbar component	117
Accessibility and Localization.....	117
DataSource.....	117
Items	118
Common.....	121
Tooltip	123
Getting Started.....	123
Dependencies.....	123
Installation and configuration.....	123
Adding Syncfusion packages	124
Adding CSS Reference	124
Initialize the Tooltip on a single element.....	124
Run the application	125
Initialize Tooltip within a container	127

Content in React Tooltip component.....	131
Template content.....	131
Dynamic content via Fetch.....	133
Position in React Tooltip component.....	135
Tip pointer positioning.....	137
Dynamic positioning.....	137
Mouse trailing.....	139
Setting offset values.....	140
Open mode in React Tooltip component.....	141
Custom open mode.....	144
Sticky mode.....	145
Open/Close Tooltip with delay	146
Animation in React Tooltip component.....	147

Animation effects.....	148
Animating via open/close methods	148
Apply transition.....	149
Customization in React Tooltip component	152
Tip pointer customization	152
Tooltip customization	153
Style in React Tooltip component.....	153
Customizing the tooltip.....	153
Customizing the tooltip popup	154
Customizing the tooltip content	154
Customizing the tooltip arrow tip.....	154
Customizing the tooltip inner tip	155
Customizing the tooltip outer tip.....	155
Accessibility in React Tooltip component	156
WAI-ARIA attributes.....	157
Keyboard interaction	158
Ensuring accessibility	158
See also	158
Ej1 api migration in React Tooltip component	158
How To	160
Show tooltip on disabled elements and disable tooltip in React Tooltip component.....	160
Dynamic tooltip content with html elements in React Tooltip component	164
Tooltip open or display modes in React Tooltip component.....	167
Fancy tooltip customization in React Tooltip component	174
Display tooltip on svg and canvas elements in React Tooltip component	182
Create and show tooltip on multiple targets in React Tooltip component	192
TreeGrid	197
Getting Started.....	197
Getting started	197
Getting Started with the TreeGrid Component in the Preact Framework	248
Data Binding.....	253
Data binding in React Treegrid component.....	253
Local data in React Treegrid component	272
Remote data in React Treegrid component.....	275
Immutable mode in React Treegrid component.....	305

Limitations.....	696

Toolbar

Getting Started

This section explains you the steps required to create a simple Toolbar and demonstrate the basic usage of the Toolbar control.

Dependencies

Below is the list of minimum dependencies required to use the Toolbar component.

```
`javascript
|-- @syncfusion/ej2-react-navigations
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-react-base
|-- @syncfusion/ej2-navigations
|-- @syncfusion/ej2-buttons
|-- @syncfusion/ej2-popups
`
```

Setup for Local Development

To set-up a React application, choose any of the following ways. The best and easiest way is to use the [create-react-app](#). It sets up your development environment in JavaScript and improvise your application for production. Refer to the [installation instructions](#) of `create-react-app`.

```
`bash
npx create-react-app my-app
cd my-app
npm start
`
```

or

```
`bash
yarn create react-app my-app
cd my-app
yarn start
`
```

To set-up a React application in `TypeScript` environment, run the following command.

```
`bash
npx create-react-app my-app --template typescript
cd my-app
npm start
```

`

Besides using the [npm](#) package runner tool, also create an application from the `npm init`. To begin with the `npm init`, upgrade the `npm` version to `npm 6+`.

```
`bash
```

```
npm init react-app my-app
```

```
cd my-app
```

```
npm start
```

Adding Syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](https://www.npmjs.com) public registry.

To install Accordion component, use the following command

`

```
npm install @syncfusion/ej2-react-navigations --save
```

`

Adding CSS reference

Add components style as given below in `src/App.css`.

```
`css
```

```
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
```

```
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
```

```
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
```

```
@import '../node_modules/@syncfusion/ej2-react-navigations/styles/material.css';
```

`

To refer `App.css` in the application then import it in the `src/App.tsx` file.

Initialize the Toolbar with commands

The Toolbar can be rendered by defining an array of [items](#). An item is rendered with text by defining the default item type as a `Button`. For more information about item configuration, refer the [Item Configuration](#) section.

- Import the Toolbar component to your `src/App.tsx` file using following code.

```
`ts
```

```
import { ItemDirective, ItemsDirective, ToolbarComponent } from '@syncfusion/ej2-react-navigations';
```

```
import * as React from "react";
```

```
const ReactApp = () => {
```

```
  return (
```

```
    <ToolbarComponent id='toolbar'>
```

```
      <ItemsDirective>
```

```

<ItemDirective text="Cut" />
<ItemDirective text="Copy" />
<ItemDirective text="Paste" />
<ItemDirective type="Separator" />
<ItemDirective text="Bold" />
<ItemDirective text="Italic" />
<ItemDirective text="Underline" />
</ItemsDirective>
</ToolbarComponent>
);
}
export default ReactApp;
`

```

- Now, run the application in the browser using the following command.

```

`bash
npm start
`

```

Initialize the Toolbar using HTML elements

The Toolbar component can be rendered based on the given HTML element using `<ToolbarComponent>`. You need to follow the below structure of HTML elements to render the Toolbar inside the `<ToolbarComponent>` tag.

```

<ToolbarComponent> --> Root Toolbar Element
<div> --> Toolbar Items Container
<div> --> Toolbar Item Element
</div>
</div>
</ToolbarComponent>
`

```

INDEX.JSX

```

import { ToolbarComponent } from '@syncfusion/ej2-react-navigations';
import * as React from "react";
import * as ReactDOM from 'react-dom';
const ReactApp = () => {
  return (<ToolbarComponent>

```

```

    <div>
      <div><button className='e-btn e-tbar-btn'>Cut</button> </div>
      <div><button className='e-btn e-tbar-btn'>Copy</button> </div>
      <div><button className='e-btn e-tbar-btn'>Paste</button> </div>
      <div className='e-separator'> </div>
      <div><button className='e-btn e-tbar-btn'>Bold</button> </div>
      <div><button className='e-btn e-tbar-btn'>Italic</button> </div>
    </div>
  </ToolbarComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('toolbar'));
root.render(<ReactApp />);

```

INDEX.TSX

```

import { ToolbarComponent } from '@syncfusion/ej2-react-navigations';
import * as React from "react";
import * as ReactDOM from 'react-dom';
const ReactApp = () => {
  return (
    <ToolbarComponent>
      <div>
        <div><button className='e-btn e-tbar-btn'>Cut</button> </div>
        <div><button className='e-btn e-tbar-btn'>Copy</button> </div>
        <div><button className='e-btn e-tbar-btn'>Paste</button> </div>
        <div className='e-separator'> </div>
        <div><button className='e-btn e-tbar-btn'>Bold</button> </div>
        <div><button className='e-btn e-tbar-btn'>Italic</button> </div>
      </div>
    </ToolbarComponent>
  );
}
const root = ReactDOM.createRoot(document.getElementById('toolbar'));
root.render(<ReactApp />);

```

- [How to add Toggle Button](#)

Note: You can refer to our [React Toolbar](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Toolbar Example](#) that shows you how to render the Toolbar in React.

Item configuration in React Toolbar component

The Toolbar can be rendered by defining an array of [items](#). Items can be constructed with the following built-in command types or item template.

Button

Button is the default command [type](#), and it can be rendered by using the [text](#) property.

Properties of the button command type:

Property	Description
----------	-------------

text	The text to be displayed for button.
----------------------	--------------------------------------

[id](#) | The ID of the button to be rendered. If the ID is not given, auto ID is generated.

[prefixIcon](#) | Defines the class used to specify an icon for the button. The icon is positioned before the text if text is available or the icon alone button is rendered.

[suffixIcon](#) | Defines the class used to specify an icon for the button. The icon is positioned after the text if text is available. If both [prefixIcon](#) and [suffixIcon](#) are specified, only [prefixIcon](#) is considered.

[width](#) | Used to set the [width](#) of the button.

[align](#) | Specifies the location for aligning Toolbar items.

Separator

The **Separator** type adds a vertical separation between the Toolbar single/multiple commands.

INDEX.JSX

```
import { ItemDirective, ItemsDirective, ToolbarComponent } from
 '@syncfusion/ej2-react-navigations';
import * as React from "react";
import * as ReactDOM from "react-dom";
const ReactApp = () => {
  return (<ToolbarComponent>
    <ItemsDirective>
      <ItemDirective text="Cut"/>
      <ItemDirective text="Copy"/>
      <ItemDirective type="Separator"/>
      <ItemDirective text="Paste"/>
      <ItemDirective type="Separator"/>
      <ItemDirective text="Undo"/>
      <ItemDirective text="Redo"/>
    </ItemsDirective>
  </ToolbarComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('toolbar'));
root.render(<ReactApp />);
```

INDEX.TSX

```
import { ItemDirective, ItemsDirective, ToolbarComponent } from

<body>
    <div id='toolbar'>
        <div id='loader'>Loading...</div>
    </div>
</body>
</html>

```

If **Separator** is added as first or last item, it is not visible.

Input

The **Input** type is only applicable for adding **template** elements when the **template** property is defined as an **object**. Input type creates an **input element** internally that acts as the container for **Syncfusion** input based components.

Note: Set toolbar item **type** property value as **Input** only for Input components.

NumericTextBox

E.g. The following code explains about how to add **NumericTextBox** component to the Toolbar.

- The **NumericTextBox** component can be included by importing the **NumericTextBox** module from ej2-inputs.
- Initialize the **NumericTextBox** in template property, in which the Toolbar item type set as **Input**.
- Related **NumericTextBox** component properties are also can be configured like as below.

```
`javascript
```

```
new NumericTextBox( { format: 'c2' } )
```

```
,
```

DropDownList

E.g. The following code explains about how to add **DropDownList** component to the Toolbar.

- The **DropDownList** component can be included by importing the **DropDownList** module from ej2-dropdowns.
- Initialize the **DropDownList** in template property, in which the Toolbar item type set as **Input**.
- Related **DropDownList** component properties are also can be configured like as below.

```
`javascript
```

```
new DropDownList({ width:100 })
```

```
,
```

CheckBox

E.g. The following code explains about how to add **CheckBox** component to the Toolbar.

- The `CheckBox` component can be included by importing the `CheckBox` module from `ej2-buttons`.
- Initialize the `CheckBox` in template property, in which the Toolbar item type set as `Input`.
- Related `CheckBox` component properties are also can be configured like as below.

```
`javascript
```

```
new CheckBox({ label: 'Checkbox', checked: true })
```

```
,
```

RadioButton

E.g. The following code explains about how to add `RadioButton` component to the Toolbar.

- The `RadioButton` component can be included by importing the `RadioButton` module from `ej2-buttons`.
- Initialize the `RadioButton` in template property, in which the Toolbar item type set as `Input`.
- Related `RadioButton` component properties are also can be configured like as below.

```
`javascript
```

```
new RadioButton({ label: 'Radio', name: 'default', checked: true })
```

```
,
```

Above steps applicable for all 'Syncfusion' input based components.

INDEX.JSX

```

</head>
<body>
  <div id='toolbar'>
    <div id='loader'>Loading....</div>
  </div>
</body>
</html>

```

Enabling tab key navigation in Toolbar

The [tabIndex](#) property of a Toolbar item is used to enable tab key navigation for the item. By default, the user can switch between items using the arrow keys, but the [tabIndex](#) property allows you to switch between items using the Tab and Shift+Tab keys as well.

To use the [tabIndex](#) property, you need to set it for each Toolbar item that you want to enable tab key navigation. The [tabIndex](#) property should be set to a positive integer value. A value of 0 or a negative value will disable tab key navigation for the item.

For example, to enable tab key navigation for two Toolbar items, you can use the following code:

```

`ts
import { ItemDirective, ItemsDirective, ToolbarComponent } from '@syncfusion/ej2-react-navigations';
import * as React from "react";
import * as ReactDOM from "react-dom";
const ReactApp = () {
  return (

```

```

<ToolbarComponent id='toolbar'>
  <ItemsDirective>
    <ItemDirective text="Item 1" tabIndex={1} />
    <ItemDirective text="Item 2" tabIndex={2} />
  </ItemsDirective>
</ToolbarComponent>
);
}

const root = ReactDOM.createRoot(document.getElementById('toolbar'));
root.render(<ReactApp />);
`

```

With the above code, the user can switch between the two Toolbar items using the Tab and Shift+Tab keys, in addition to using the arrow keys. The items will be navigated in the order specified by the [tabIndex](#) values.

If you set the [tabIndex](#) value to 0 for all Toolbar items, tab key navigation will be based on the element order rather than the [tabIndex](#) values. For example:

```

`ts
import { ItemDirective, ItemsDirective, ToolbarComponent } from '@syncfusion/ej2-react-navigations';
import * as React from "react";
import * as ReactDOM from "react-dom";

const ReactApp = () {
  return (
    <ToolbarComponent id='toolbar'>
      <ItemsDirective>
        <ItemDirective text="Item 1" tabIndex={0} />
        <ItemDirective text="Item 2" tabIndex={0} />
      </ItemsDirective>
    </ToolbarComponent>
  );
}

const root = ReactDOM.createRoot(document.getElementById('toolbar'));
root.render(<ReactApp />);
`

```

In this case, the user can switch between the two Toolbar items using the Tab and Shift+Tab keys, and the items will be navigated in the order in which they appear in the DOM.

Example:

Here is an example of how you can use the [tabIndex](#) property to enable tab key navigation for a Toolbar component:

INDEX.JSX

```
import { ItemDirective, ItemsDirective, ToolbarComponent } from
'@syncfusion/ej2-react-navigations';
import * as React from "react";
import * as ReactDOM from "react-dom";
const ReactApp = () => {
    return (<ToolbarComponent width="300" overflowMode="Scrollable">
        <ItemsDirective>
            <ItemDirective text="Cut" prefixIcon="e-cut-icon tb-icons"
tabIndex={0}/>
            <ItemDirective text="Copy" prefixIcon="e-copy-icon tb-icons"
tabIndex={0}/>
            <ItemDirective text="Paste" prefixIcon="e-paste-icon tb-icons"
tabIndex={0}/>
            <ItemDirective type="Separator"/>
            <ItemDirective text="Bold" prefixIcon="e-bold-icon tb-icons"
tabIndex={0}/>
            <ItemDirective text="Underline" prefixIcon="e-underline-icon tb-
icons" tabIndex={0}/>
            <ItemDirective text="Italic" prefixIcon="e-italic-icon tb-icons"
tabIndex={0}/>
            <ItemDirective text="Color-Picker" prefixIcon="e-color-icon tb-
icons" tabIndex={0}/>
            <ItemDirective type="Separator"/>
            <ItemDirective text="A-Z Sort" prefixIcon="e-ascending-icon tb-
icons" tabIndex={0}/>
            <ItemDirective text="Z-A Sort" prefixIcon="e-descending-icon tb-
icons" tabIndex={0}/>
            <ItemDirective text="Clear" prefixIcon="e-clear-icon tb-icons"
tabIndex={0}/>
        </ItemsDirective>
    </ToolbarComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('toolbar'));
root.render(<ReactApp />);
```

INDEX.TSX

```
import { ItemDirective, ItemsDirective, ToolbarComponent } from
'@syncfusion/ej2-react-navigations';
import * as React from "react";
import * as ReactDOM from "react-dom";
const ReactApp = () => {
    return (
        <ToolbarComponent width="300" overflowMode="Scrollable">
            <ItemsDirective>
                <ItemDirective text="Cut" prefixIcon="e-cut-icon tb-icons"
tabIndex={0} />
            </ItemsDirective>
        </ToolbarComponent>
    );
}
```

```

        <ItemDirective text="Copy" prefixIcon="e-copy-icon tb-icons"
tabIndex={0} />
        <ItemDirective text="Paste" prefixIcon="e-paste-icon tb-icons"
tabIndex={0} />
        <ItemDirective type="Separator" />
        <ItemDirective text="Bold" prefixIcon="e-bold-icon tb-icons"
tabIndex={0} />
        <ItemDirective text="Underline" prefixIcon="e-underline-icon tb-
icons" tabIndex={0} />
        <ItemDirective text="Italic" prefixIcon="e-italic-icon tb-icons"
tabIndex={0} />
        <ItemDirective text="Color-Picker" prefixIcon="e-color-icon tb-
icons" tabIndex={0} />
        <ItemDirective type="Separator" />
        <ItemDirective text="A-Z Sort" prefixIcon="e-ascending-icon tb-
icons" tabIndex={0} />
        <ItemDirective text="Z-A Sort" prefixIcon="e-descending-icon tb-
icons" tabIndex={0} />
        <ItemDirective text="Clear" prefixIcon="e-clear-icon tb-icons"
tabIndex={0} />
    </ItemsDirective>
</ToolbarComponent>
);
}
const root = ReactDOM.createRoot(document.getElementById('toolbar'));
root.render(<ReactApp />);

```

Responsive mode in React Toolbar component

This section explains the supported display modes of the Toolbar when the content exceeds the viewing area. Possible modes are:

- Scrollable
- Popup

Scrollable

The default overflow mode of the Toolbar is **Scrollable**. Scrollable display mode supports display of commands in a single line with horizontal scrolling enabled when commands overflow to available space.

- The right and left navigation arrows are added to the start and end of the Toolbar to navigate to hidden commands.
- You can also see the hidden commands using touch swipe action.
- By default, if navigation icon in the **left** side is disabled, you can see the hidden commands by moving to the **right**.
- By clicking the arrow or by holding the arrow continuously, hidden commands will become visible.
- If device navigation icons are not available, you can touch swipe to see the hidden commands of the Toolbar.

- Once the Toolbar reaches the last or first command, the corresponding navigation icon will be disabled and you can move to the opposite direction.

- You can continuously scroll the Toolbar content by holding the navigation icon.

Popup

Popup is another type of [overflowMode](#) in which the Toolbar container holds the commands that can be placed in the available space. The rest of the overflowing commands that do not fit within the viewing area moves to the overflow popup container.

The commands placed in the popup can be viewed by opening the popup using the drop down icon given at the end of the Toolbar.

If the popup content overflows the height of the page, then the rest of the commands will be hidden.

Priority of commands

Default popup priority is set as **none** and when the commands of Toolbar overflows, the ones that are listed at last in it will be moved into the popup.

User can customize the priority of commands to be displayed in the Toolbar and popup by using the [overflow](#) property.

Possible options:

Property	Description
Both	Button Text is visible in both Toolbar and Popup .
Overflow	Button Text is only visible in Popup .
Toolbar	Button Text is only visible in the Toolbar .

In below sample text only visible at popup container not in the Toolbar container.

INDEX.JSX

```
import { ItemDirective, ItemsDirective, ToolbarComponent } from

```

Template configuration in React Toolbar component

The Toolbar can be rendered by item based collection and by HTML elements. To render it based on the given HTML element, use `id` as the `target` property. To render the Toolbar, follow the below structure of the HTML elements:

```

\
<div id='template_toolbar'> --> Root Toolbar Element
<div> --> Toolbar Items Container
<div> --> Toolbar Item Element
</div>
</div>
</div>
\

```

Here, the template ID, `#template_toolbar` is directly appended to the Toolbar.

INDEX.JSX

```

import { ToolbarComponent } from '@syncfusion/ej2-react-navigations';
import * as React from "react";
import * as ReactDOM from "react-dom";
const ReactApp = () => {
    return (<ToolbarComponent>
        <div id='template_toolbar'>

```

```

    <div> <button className="e-btn e-tbar-btn">Cut</button> </div>
    <div> <button className="e-btn e-tbar-btn">Copy</button> </div>
    <div> <button className="e-btn e-tbar-btn">Paste</button> </div>
    <div className="e-separator"/>
    <div> <button className="e-btn e-tbar-btn">Bold</button> </div>
    <div> <button className="e-btn e-tbar-btn">Italic</button> </div>
  </div>
</ToolbarComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('toolbar'));
root.render(<ReactApp />);

```

INDEX.TSX

```

import { ToolbarComponent } from '@syncfusion/ej2-react-navigations';
import * as React from "react";
import * as ReactDOM from "react-dom";
const ReactApp = () => {
  return (
    <ToolbarComponent>
      <div id='template_toolbar'>
        <div> <button className="e-btn e-tbar-btn">Cut</button> </div>
        <div> <button className="e-btn e-tbar-btn">Copy</button> </div>
        <div> <button className="e-btn e-tbar-btn">Paste</button> </div>
        <div className="e-separator" />
        <div> <button className="e-btn e-tbar-btn">Bold</button> </div>
        <div> <button className="e-btn e-tbar-btn">Italic</button> </div>
      </div>
    </ToolbarComponent>
  );
}
const root = ReactDOM.createRoot(document.getElementById('toolbar'));
root.render(<ReactApp />);

```

Stateless template

In React, a state is an object that contains data or information about the component. The component state can be used in React component templates to determine a component's behavior and render information to the user. The state can change based on user input, data from a server, the result of a calculation, or system-generated events.

Whenever the state changes, the component will automatically re-render to display the updated information to the user. This allows for a dynamic and interactive user experience.

For specific needs of the application, users don't want to re-render components during state updates. This can be achieved using the `statelessTemplates` property.

Toolbar template property are defined in `ItemDirective` tag of the toolbar component. So, you have to pass the `statelessTemplates` property array value as `directiveTemplates` to prevent the toolbar component from re-rendering while the state is being updated.

Popup customization

Popup is one of the supported responsive modes of the Toolbar. The Toolbar commands, popup mode priority and button text mode customizations are achieved in the item based rendering through property declaration. For more information on popup mode, refer [here](#)

The above behavior can also be achieved with template rendering by defining equivalent class names instead of property declaration.

Equivalent class names listed below are needed to add the Toolbar items' **div** element.

Priority

Class	Description
e-popup-text	Button Text is only visible in the Popup .
e-toolbar-text	Button Text is only visible on the Toolbar .

INDEX.JSX

```

import { ToolbarComponent } from '@syncfusion/ej2-react-navigations';
import * as React from "react";
import * as ReactDOM from "react-dom";
const ReactApp = () => {
  return (<ToolbarComponent width="300" overflowMode="Popup">
    <div>
      <div className="e-overflow-show e-popup-text"><button className="e-
      btn e-tbar-btn"><span className="e-cut-icon tb-icons e-icons e-btn-
      icon"/><div className="e-tbar-btn-text">Cut</div></button> </div>

Integrate menu component

You can integrate menu component as toolbar item in Toolbar using [template](#) property. Menu can be populated with items as needed.

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ToolbarComponent, MenuComponent, ItemsDirective, ItemDirective }
from '@syncfusion/ej2-react-navigations';
const data = [
  {
    text: 'Appliances',
    items: [
      {
        text: 'Kitchen',
        items: [
          { text: 'Electric Cookers' },
          { text: 'Coffee Makers' },
          { text: 'Blenders' },
        ],
      },
      {
        text: 'Washing Machine',
        items: [{ text: 'Fully Automatic' }, { text: 'Semi
Automatic' }],
      },
      {
        text: 'Air Conditioners',
        items: [
          { text: 'Inverter ACs' },
          { text: 'Split ACs' },
          { text: 'Window ACs' },
        ],
      },
    ],
  },
  {
    text: 'Accessories',
    items: [
      {
        text: 'Mobile',
        items: [
          { text: 'Headphones' },
          { text: 'Memory Cards' },
          { text: 'Power Banks' },
        ],
      },
      {
        text: 'Computer',
        items: [
          { text: 'Pendrives' },
          { text: 'External Hard Disks' },
        ],
      },
    ],
  },
]
```

```

        { text: 'Monitors' },
      ],
    },
  ],
},

Accessibility in React Toolbar component

The Toolbar component has been designed, keeping in mind the [WAI-ARIA](#) specifications, and applying the WAI-ARIA roles, states, and properties along with keyboard support for people who use assistive devices. WAI-ARIA accessibility support is achieved through attributes like `aria-label`, and `aria-orientation`. It provides information about elements in a document for assistive technology. The component implements keyboard navigation support by following the [WAI-ARIA practices](#), and has been tested in major screen readers.

The accessibility compliance for the Toolbar component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

```

| Section 508 Support |  |

| Screen Reader Support |  |

| Right-To-Left Support |  |

| Color Contrast |  |

| Mobile Device Support |  |

| Keyboard Navigation Support |  |

| Accessibility Checker Validation |  |

| Axe-core Accessibility Validation |  |

<style>

.post .post-content img {
display: inline-block;
margin: 0.5em 0;
}

</style>

<div> - All
features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

```

ARIA attributes

Toolbar component is designed by considering [WAI-ARIA](#) standard. Toolbar is supported with ARIA Accessibility which is accessible by on-screen readers, and other assistive technology devices. The following list of attributes are added in the Toolbar.

| Property | Functionalities |

```

| --- | --- |

| role="toolbar" | Attribute is set to the ToolBar element describes the actual role of the element. |

| aria-orientation | Attribute is set to the ToolBar element to indicates the ToolBar orientation. Default
value is horizontal. |

| aria-label | Attribute is set to ToolBar element describes the purpose of the set of toolbar. |

```

| aria-expanded | Attribute is set to the ToolBar Popup element to indicates the expanded state of the popup. |

| aria-haspopup | Attribute is set to the popup element to indicates the popup mode of the Toolbar. Default value is false. When popup mode is enabled, attribute value has to be changed to `true`. |

| aria-disabled | Attribute set to the ToolBar element to indicates the disabled state of the ToolBar. |

Keyboard interaction

Keyboard navigation is enabled by default. Possible keys are

Key	Description
Left	Focuses the previous element.
Right	Focuses the next element.
Enter	When focused on a ToolBar command, clicking the key triggers the click of Toolbar element. When popup drop-down icon is focused, the popup opens.
Esc(Escape)	Closes popup.
Down	Focuses the next popup element.
Up	Focuses the previous popup element.
Home	Moves focus to the first Toolbar.
End	Moves focus to the last Toolbar.
Tab	To Move focus through the interactive elements.
Shift + Tab	To Move focus through the interactive elements.

Ensuring accessibility

The Toolbar component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Toolbar component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Toolbar component with accessibility tools.

Style in React Toolbar component

The following content provides the exact CSS structure that can be used to modify the control's appearance based on user preference.

Customizing Toolbar

Use the following CSS to customize the Toolbar.

```
`css
.e-toolbar {
```

```
border: 5px solid rgb(173, 255, 47);  
}
```

,

Customizing the Toolbar items

Use the following CSS to customize the items of Toolbar.

```
`css  
.e-toolbar .e-toolbar-item {  
background: #add8e6;  
border: 1px solid #5a70cc;  
}
```

,

Use the following CSS to customize the button in the items of Toolbar.

```
`css  
.e-toolbar .e-tbar-btn {  
background: #add8e6;  
border: 1px solid #5a70cc;  
}
```

,

Customizing Toolbar's item icon

Use the following CSS to customize the item icon of Toolbar control.

```
`css  
.e-toolbar .e-tbar-btn .e-icons {  
background: #185655;  
color: #d7f9d4;  
}
```

,

Customizing the hover state of Toolbar control

Use the following CSS to customize the toolbar item when hovering.

```
`css  
.e-toolbar .e-tbar-btn:hover {  
background: #c0e3a1;  
border: 1px solid green;  
}
```

,

Customizing selected item of Toolbar control

Use the following CSS to customize the selected toolbar item.

```
`css
.e-toolbar .e-tbar-btn:focus {
background: #add8e6;
border: 1px solid #5a70cc;
}
`
```

How To

Set command customization in React Toolbar component

The [htmlAttributes](#) property of the Toolbar item is used to set the HTML attributes ('ID', 'class', 'style', 'role') for the commands.

When style attributes are added, if the same attributes were already present, they will be replaced. This is not so in the case of `class` attribute. Classes will be added to the element instead of replacing the existing ones.

Single or multiple CSS classes can be added to the Toolbar commands using the Toolbar item [cssClass](#) property.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ToolbarComponent, ItemsDirective, ItemDirective } from
'@syncfusion/ej2-react-navigations';
const ReactApp = () => {
  let boldAttribute = {
    'class': 'custom_bold', 'id': 'itemId'
  };
  const italicAttribute = { 'class': 'custom_italic' };
  const underAttribute = { 'class': 'custom_underline' };
  return (<ToolbarComponent width="300">
    <ItemsDirective>
      <ItemDirective text="Bold" htmlAttributes={boldAttribute}/>
      <ItemDirective text="Italic" htmlAttributes={italicAttribute}/>
      <ItemDirective text="Underline" htmlAttributes={underAttribute}/>
      <ItemDirective type="Separator"/>
      <ItemDirective text="Uppercase" cssClass="e-txt-casing"/>
    </ItemsDirective>
  </ToolbarComponent>);
}
const root = ReactDOM.createRoot(document.getElementById('toolbar'));
root.render(<ReactApp />);
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
```

```
import { ToolbarComponent, ItemsDirective, ItemDirective } from

Set tool tip to the commands in React Toolbar component

The [tooltipText](#) property of the Toolbar item is used to set the HTML Tooltip to the commands that can be viewed as hint texts on mouse hover.

To change the [tooltipText](#) to ej2-tooltip component:

- Import the **Tooltip** module from **ej2-popups**, and initialize the Tooltip with the Toolbar target. Refer to the following code example:

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { Tooltip } from '@syncfusion/ej2-popups';
import { ToolbarComponent, ItemsDirective, ItemDirective } from '@syncfusion/ej2-react-navigations';
const ReactApp = () => {
    React.useEffect(() => {
        let tooltip = new Tooltip({
            target: '#toolbar [title]',
        });
        tooltip.appendTo('#Tooltip');
    }, []);
    return (<div id="Tooltip">
        <ToolbarComponent width="300">

```

```

        <ItemsDirective>
          <ItemDirective text="Cut" tooltipText="Cut"/>
          <ItemDirective text="Copy" tooltipText="Copy"/>
          <ItemDirective text="Paste" tooltipText="Paste"/>
          <ItemDirective text="Undo" tooltipText="Undo"/>
          <ItemDirective text="Redo" tooltipText="Redo"/>
        </ItemsDirective>
      </ToolbarComponent></div>;
    }
    const root = ReactDOM.createRoot(document.getElementById('toolbar'));
    root.render(<ReactApp />);

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { Tooltip } from '@syncfusion/ej2-popups';
import { ToolbarComponent, ItemsDirective, ItemDirective } from
 '@syncfusion/ej2-react-navigations';
const ReactApp = () => {
  React.useEffect(() => {
    let tooltip: Tooltip = new Tooltip({
      target: '#toolbar [title]',
    });
    tooltip.appendTo('#Tooltip');
  }, []);
  return (
    <div id="Tooltip">
      <ToolbarComponent width="300">
        <ItemsDirective>
          <ItemDirective text="Cut" tooltipText="Cut" />
          <ItemDirective text="Copy" tooltipText="Copy" />
          <ItemDirective text="Paste" tooltipText="Paste" />
          <ItemDirective text="Undo" tooltipText="Undo" />
          <ItemDirective text="Redo" tooltipText="Redo" />
        </ItemsDirective>
      </ToolbarComponent></div>
    );
  }
}
const root = ReactDOM.createRoot(document.getElementById('toolbar'));
root.render(<ReactApp />);

```

Set item wise custom template in React Toolbar component

The Toolbar supports adding template commands using the `template` property. Template property can be given as the `HTML element` that is either a `string` or a `query selector`.

As string

The HTML element tag can be given as a string for the template property. Here, the checkbox is rendered as a HTML template.

```
`ts
```

```
template: "<div><input type='checkbox' id='check1' checked=''>Accept</input></div>"
```

```
,
```

As selector

The template property also allows getting template content through query selector. Here, checkbox 'ID' attribute is specified in the template.

```
`ts
```

```
template: "#Template"
```

```
,
```

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ToolbarComponent, ItemsDirective, ItemDirective } from

```

Add toggle button in React Toolbar component

Toolbar supports to add a toggle Button by using the [template](#) property. Refer below steps

- By using Toolbar template property, pass required HTML String to render toggle button.

`ts

```
<ItemDirective template='<button class="e-btn" id="media_btn"></button>' />
```

,

- Now render the toggle Button into the targeted element in Toolbar [created](#) event handler and bind click event for it. On clicking the toggle Button, change the required icon and content based on current active state.

INDEX.JSX

```

import * as ReactDOM from 'react-dom';
import * as React from 'react';

How to customize toolbar scroll step in React Toolbar component

Toolbar supports to customize the scrolling distance when you click the left and right side navigation icons. we can customize **ScrollStep** property for scrolling distance. Refer to the following code example.

By using Toolbar scrollStep property, pass a required value to customize toolbar scrollStep.

INDEX.JSX

```

import * as ReactDOM from 'react-dom';
import * as React from 'react';
import { ToolbarComponent, ItemsDirective, ItemDirective } from
 '@syncfusion/ej2-react-navigations';
const ReactApp = () => {
    const divMargin = { margin: '25px 0' };
    return (<div className='control-pane'>
        <div className='control-section tbar-control-section'>
            <div className='control toolbar-sample tbar-sample'
style={divMargin}>
                <ToolbarComponent id="ej2Toolbar" width="600px" scrollStep={50}>
                    <ItemsDirective>
                        <ItemDirective prefixIcon='e-cut-icon tb-icons'
tooltipText='Cut' />
                        <ItemDirective prefixIcon='e-copy-icon tb-icons'

Add link to toolbar item in React Toolbar component

You can add link inside Toolbar using React **template**. Follow the below guidelines for add link as template in Toolbar.

- Declare a template within the function which returns jsx element. If the template does not need any arguments, then no need to pass the properties.
- Assign the function as value for the **template** option of toolbar item.

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ToolbarComponent, ItemsDirective, ItemDirective } from
 '@syncfusion/ej2-react-navigations';
const App = () => {
  const AnchorTemplate = () => {
    return (
      <div>
        <a target="_blank"
href="https://ej2.syncfusion.com/react/documentation/toolbar/getting-
started/">
          Anchor Toolbar Link
        </a>
      </div>
    );
  }
  return (
    <div id="container">
      <ToolbarComponent id="ej2Toolbar">
        <ItemsDirective>
          <ItemDirective text="Cut"/>
          <ItemDirective text="Copy"/>
          <ItemDirective type="Separator"/>
          <ItemDirective text="Paste"/>
          <ItemDirective type="Separator"/>
          <ItemDirective template={AnchorTemplate}/>
        </ItemsDirective>
      </ToolbarComponent>
    </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

INDEX.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ToolbarComponent, ItemsDirective, ItemDirective } from
 '@syncfusion/ej2-react-navigations';
const App = () => {
  const AnchorTemplate = (): JSX.Element => {
    return (
      <div>
        <a
          target="_blank"
href="https://ej2.syncfusion.com/react/documentation/toolbar/getting-
started/"
```

```

        >
        Anchor Toolbar Link
      </a>
    </div>
  );
}
return (
  <div id='container'>
    <ToolbarComponent id="ej2Toolbar">
      <ItemsDirective>
        <ItemDirective text="Cut" />
        <ItemDirective text="Copy" />
        <ItemDirective type="Separator" />
        <ItemDirective text="Paste" />
        <ItemDirective type="Separator" />
        <ItemDirective template={AnchorTemplate} />
      </ItemsDirective>
    </ToolbarComponent>
  </div>

Render other components in toolbar using template in React Toolbar component

You can render other components inside Toolbar using React **template**. Through this, we can add content as other components directly with all functionalities to our Toolbar. Follow the below guidelines for using the other components as template in Toolbar.

- Declare a template within the function returns jsx element. If the template does not need arguments no need to pass the properties.
- Assign the function as value for the template property.

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ToolbarComponent, ItemsDirective, ItemDirective } from
 '@syncfusion/ej2-react-navigations';
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
const App = () => {
  const buttonComponent = () => {
    return (<ButtonComponent>Click me</ButtonComponent>);
  }
  const datePickerTemplate = () => {
    return (<DatePickerComponent></DatePickerComponent>);
  }
  return (<div id='container'>
    <ToolbarComponent id="toolbar">
      <ItemsDirective>
        <ItemDirective template={buttonComponent} />
        <ItemDirective template={datePickerTemplate} />
        <ItemDirective text="Cut" />
        <ItemDirective text="Copy" />
        <ItemDirective text="Paste" />
        <ItemDirective type="Separator" />
        <ItemDirective text="Bold" />
        <ItemDirective text="Italic" />
        <ItemDirective text="Underline" />
      </ItemsDirective>
    </ToolbarComponent>
  </div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

Ej1 api migration in React Toolbar component

This article describes the API migration process of Toolbar component from Essential JS 1 to Essential JS 2.

Accessibility and Localization

<!-- markdownlint-disable MD033 -->

| Behavior | Property in Essential JS 1 | Property in Essential JS 2 |

| ----- | ----- | ----- |

| Localization | **Not Applicable** | **Property** : locale
 <ToolbarComponent id='toolbar' locale='fr-BE'></ToolbarComponent> |

| Right to left | **Property**: enableRTL
 <EJ.Toolbar id="toolbar" enableRTL={true}></EJ.Toolbar> | **Property**: enableRTL
 <ToolbarComponent id='toolbar' enableRTL={true}></ToolbarComponent> |

DataSource

<!-- markdownlint-disable MD033 -->

| Behavior | Property in Essential JS 1 | Property in Essential JS 2 |

| ----- | ----- | ----- |

| DataSource | **Property** : dataSource
 <EJ.Toolbar id="toolbar" dataSource={this.items}></EJ.Toolbar> | **Not Applicable** |

| Query | **Property** : query
 <EJ.Toolbar id="toolbar" query={this.query}></EJ.Toolbar> | **Not Applicable** |

| Fields | **Property**: fields
 <EJ.Toolbar id="toolbar" fields={this.fields}></EJ.Toolbar> | **Not Applicable** |

| Group | **Property** : group
 <EJ.Toolbar id="toolbar" fields={this.fields}></EJ.Toolbar>

constructor(props: {}) {
 this.fields = { group: " " }; } | **Not Applicable** |

| HtmlAttributes | **Property** : htmlAttributes
 <EJ.Toolbar id="toolbar" fields={this.fields}></EJ.Toolbar>

constructor(props: {}) {
 this.fields = { htmlAttributes: { } }; } | **Not Applicable** |

| Id | **Property** : id
 <EJ.Toolbar id="toolbar" fields={this.fields}></EJ.Toolbar>

constructor(props: {}) {
 this.fields = { id: " " }; } | **Not Applicable** |

|ImageAttributes | **Property:** imageAttributes
 <EJ.Toolbar id="toolbar" fields={this.fields}></EJ.Toolbar>

 constructor(props: {}) {
 this.fields = { imageAttributes: { } };}| Not Applicable |

|ImageUrl | **Property:** imageUrl
 <EJ.Toolbar id="toolbar" fields={this.fields}></EJ.Toolbar>

 constructor(props: {}) {
 this.fields = { imageUrl: " " };}| Not Applicable |

|SpriteCssClass | **Property:** spriteCssClass
 <EJ.Toolbar id="toolbar" fields={this.fields}></EJ.Toolbar>

 constructor(props: {}) {
 this.fields = { spriteCssClass: " " };}| Not Applicable |

|Text | **Property:** text
 <EJ.Toolbar id="toolbar" fields={this.fields}></EJ.Toolbar>

 constructor(props: {}) {
 this.fields = { text: " " };}| Not Applicable |

|TooltipText | **Property:** tooltipText
 <EJ.Toolbar id="toolbar" fields={this.fields}></EJ.Toolbar>

 constructor(props: {}) {
 this.fields = { tooltipText: " " };}| Not Applicable |

|Template | **Property:** template
 <EJ.Toolbar id="toolbar" fields={this.fields}></EJ.Toolbar>

 constructor(props: {}) {
 this.fields = { template: " " };}| Not Applicable |

Items

<!-- markdownlint-disable MD033 -->

| **Behavior** | **Property in Essential JS 1** | **Property in Essential JS 2** |

| ----- | ----- | ----- |

|Default | <**Property** : items
 <EJ.Toolbar id="toolbar" items={this.items}> </EJ.Toolbar> |
Property : items
 <ToolbarComponent id="toolbar" items={this.items}>
 </ToolbarComponent> |

|Align | Not Applicable | **Property** : items[0].Align
 <ToolbarComponent id="toolbar" items={this.items}> </ToolbarComponent>

 constructor(props: {}) {
 this.items = { align: 'center'};}|

|Custom class | Not Applicable | **Property** : items[0].cssClass
 <ToolbarComponent id="toolbar" items={this.items}> </ToolbarComponent>

 constructor(props: {}) {
 this.items = { cssClass: 'e-class'}; }|

|Group Name| **Property** : items[0].group
 <EJ.Toolbar id="toolbar" items={this.items}></EJ.Toolbar>

 constructor(props: {}) {
 this.items = { group: " " };}| Not Applicable |

|HtmlAttributes | **Property** : items[0].htmlAttributes
 <EJ.Toolbar id="toolbar" items={this.items}> </EJ.Toolbar> </EJ.Toolbar>

 constructor(props: {}) {
 this.items = { htmlAttributes: { } };}| **Property** : items[0].htmlAttributes
 <ToolbarComponent id="toolbar" items={this.items}> </ToolbarComponent>

 constructor(props: {}) {
 this.items = { htmlAttributes: { } };}|

| Id | **Property** : items[0].id
 <EJ.Toolbar id="toolbar" items={this.items}> </EJ.Toolbar>

 constructor(props: {}) {
 this.items = { id: " "; } | **Property** : items[0].id

 <ToolbarComponent id="toolbar" items={this.items}> </ToolbarComponent>

Tooltip

Getting Started

This section briefly explains how to create a simple [Link to the Video](#) component and configure its available functionalities in React.

To get start quickly with React Tooltip, you can check on this video:

Tooltips can be initialized on,

- A single element (or)
- A container that has more than one sub-element within it and the sub-elements are considered as targets.

Dependencies

The following list of dependencies are required to use the Tooltip component in your application.

```
`javascript
|-- @syncfusion/ej2-react-popups
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-react-base
|-- @syncfusion/ej2-popups
|-- @syncfusion/ej2-buttons
`,`
```

Installation and configuration

You can use [Create-react-app](#) to setup the applications. To install `create-react-app` run the following command.

```
`
npm install -g create-react-app
```

`

To set-up a React application in TypeScript environment, run the following command.

`

```
npx create-react-app my-app --template typescript
cd my-app
npm start
```

`

To set-up a React application in JavaScript environment, run the following command.

`

```
npx create-react-app my-app
cd my-app
npm start
```

`

Adding Syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](https://www.npmjs.com) public registry.

Install the below required dependency package in order to use the **Tooltip** component in your application.

```
`bash
npm install @syncfusion/ej2-react-popups --save
```

`

Adding CSS Reference

To render the Tooltip component, need to import Tooltip and its dependent component's styles as given below in **src/App.css**.

```
`css
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-react-popups/styles/material.css";
```

`

Note: If you want to refer the combined component styles, please make use of our [CRG](#) (Custom Resource Generator) in your application.

Initialize the Tooltip on a single element

Import the Tooltip component to your **src/App.tsx** file using following code.

```
`javascript
import * as React from 'react';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
import './App.css';
```

```
function App() {
  let style: object = {
    display: 'inline-block',
    margin: '60px'
  };
  return (
    <TooltipComponent content="Tooltip Content" style={style}>
      Show Tooltip
    </TooltipComponent>
  );
}
`ts
import * as React from 'react';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
import './App.css';
function App() {
  let style = {
    display: 'inline-block',
    margin: '60px'
  };
  return (<TooltipComponent content="Tooltip Content" style={style}>
    Show Tooltip
  </TooltipComponent>);
}
```

Run the application

Now, use the `npm start` command to run the application in the browser.

```
npm start
```

The output will be as follows:

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    return (<div id="container">
        <TooltipComponent position="TopCenter" content="Tooltip Content"
        target="#target">
            <button className="e-btn tooltipElement" id="target" >Show
            Tooltip</button>
        </TooltipComponent>
    </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    return (
        <div id="container">
            <TooltipComponent position="TopCenter" content="Tooltip Content"
            target="#target">
                <button className="e-btn tooltipElement" id="target" >Show
                Tooltip</button>
            </TooltipComponent>
        </div>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.HTML

```
<!DOCTYPE html>
<html lang="en">
<head>
    <title>Syncfusion React Tooltip</title>
    <meta charset="utf-8" />
    <meta name="viewport" content="width=device-width, initial-scale=1.0" />
    <meta name="description" content="Essential JS 2 for React Components"

src="https://cdnjs.cloudflare.com/ajax/libs/systemjs/0.19.38/system.js"></sc
ript>
    <script src="systemjs.config.js"></script>
</head>
<body>
    <div id='sample'>
        <div id='loader'>Loading....</div>
    </div>
</body>
</html>

```

Initialize Tooltip within a container

You can create Tooltips on multiple targets within a container. To do so, you have to define specific target elements to the `target` property so that the Tooltip is initialized only on matched targets within a container. In this case, the Tooltip content is assigned from the `title` attribute of the target element.

Refer to the following code example to create a Tooltip on multiple targets within a container.

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
function App() {
    return (<div id='container'>
        <TooltipComponent id="details" target='.e-info'
position='RightCenter'>
            <form id="details" role="form">
                <table>
                    <tbody>
                        <tr>
                            <td className="info">User Name</td>
                            <td>
                                <input type="text" className="e-info"
name="firstname" title="Please enter your name"/> </td>
                            </tr>
                        <tr>
                            <td className="info">Email Address</td>
                            <td>
                                <input type="text" className="e-info"
name="email" title="Enter a valid email address"/>
                            </td>
                        </tr>
                        <tr>
                            <td className="info">Password</td>
                            <td>
                                <input type="password" className="e-info"
name="password" title="Be at least 8 characters length"/>
                            </td>
                        </tr>
                    </tbody>
                </table>
            </form>
        </TooltipComponent>
    </div>);
}

```

```

        <td className="info">Confirm Password</td>
        <td>
            <input type="password" className="e-info"
name="Cpwd" title="Re-enter your password"/>
        </td>
    </tr>
    <tr>
        <td>
            <ButtonComponent id="sample" className="center"
content="Submit"/>
        </td>
        <td>
            <ButtonComponent id="reset" className="center"
content="Reset"/>
        </td>
    </tr>
</tbody>
</table>
</form>
</TooltipComponent>
</div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
function App() {
    return (
        <div id='container'>
            <TooltipComponent id="details" target='.e-info'
position='RightCenter'>
                <form id="details" role="form">
                    <table>
                        <tbody>
                            <tr>
                                <td className="info">User Name</td>
                                <td>
                                    <input type="text" className="e-info"
name="firstname" title="Please enter your name" /> </td>
                                </tr>
                                <tr>
                                    <td className="info">Email Address</td>
                                    <td>
                                        <input type="text" className="e-info"
name="email" title="Enter a valid email address" />
                                    </td>
                                </tr>
                                <tr>
                                    <td className="info">Password</td>
                                    <td>

```

```

        <input type="password" className="e-info"
name="password" title="Be at least 8 characters length" />
      </td>
    </tr>
    <tr>
      <td className="info">Confirm Password</td>
      <td>
        <input type="password" className="e-info"
name="Cpwd" title="Re-enter your password" />
      </td>
    </tr>
    <tr>
      <td>
        <ButtonComponent id="sample" className="center"
content="Submit"/>
      </td>
      <td>
        <ButtonComponent id="reset" className="center"
content="Reset"/>
      </td>
    </tr>
  </tbody>
</table>
</form>
</TooltipComponent>
</div>
);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

In the above sample, `details` refers to the container's id, and the target `.e-info` refers to the target elements available within that container.

Setting dimension in React Tooltip component

Height and width

The Tooltip can either be assigned auto height and width values or specific pixel values. The `width` and `height` properties are used to set the outer dimension of the Tooltip element. The default value for both the properties is `auto`. It also accepts string and number values in pixels.

The following sample explains how to set dimensions for the Tooltip.

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {

```

```

    return (<TooltipComponent width="180px" height="40px" content="This
tooltip has 180px width and 40px height">
    <div id='target'>Show Tooltip</div>
    </TooltipComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    return (
        <TooltipComponent width="180px" height="40px" content="This tooltip has
180px width and 40px height">
        <div id='target'>Show Tooltip</div>
        </TooltipComponent>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

Scroll mode

When **height** is specified with a certain pixel value and the Tooltip content overflows, the scrolling mode gets enabled.

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    function content() {
        return (<span id='tooltipContent'>
            <p><strong>Environmentally friendly</strong> or <strong>environment-
friendly</strong>, <i>(also referred to as eco-friendly, nature-friendly,
and green)</i> are marketing and sustainability terms referring to goods and
services, laws, guidelines and policies that inflict reduced, minimal, or no
harm upon ecosystems or the environment.</p></span>);
    }
    let style = {
        display: 'inline-block',
        padding: '5px'
    };
    return (<p>A green home is a type of house designed to be
        <TooltipComponent width="300px" height="60px" isSticky={true}
content={content} style={style}>
            <a><u>environmentally friendly</u></a>
        </TooltipComponent> and sustainable. And also focuses on the
efficient use of "energy, water, and building materials." As green homes
have become more prevalent we have also seen the emergence of
green affordable housing.
        </p>);
}

```

```

}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
  function content() {
    return (
      <span id='tooltipContent'>
        <p><strong>Environmentally friendly</strong> or <strong>environment-
friendly</strong>, <i>(also referred to as eco-friendly, nature-friendly,
and green)</i> are marketing and sustainability terms referring to goods and
services, laws, guidelines and policies that inflict reduced, minimal, or no
harm upon ecosystems or the environment.</p></span>
      )
    );
    let style: object = {
      display: 'inline-block',
      padding : '5px'
    };
    return (
      <TooltipComponent width="300px" height="60px" isSticky={true}
content={content} style={style}>
        <p>A green home is a type of house designed to be
        <a><u>environmentally friendly</u></a>
        and sustainable. And also focuses on the efficient use of
        "energy, water, and building materials." As green homes
        have become more prevalent we have also seen the emergence
        of green affordable housing.</p>
      </TooltipComponent>
    );
  }
  export default App;
  ReactDOM.render(<App />, document.getElementById('sample'));
}

```

The scrolling mode can best be seen when the sticky mode of the Tooltip is enabled. To enable sticky mode, set the `isSticky` property to true.

Content in React Tooltip component

A text or a piece of information assigned to the Tooltip's `content` property will be displayed as the main text stream of the Tooltip.

It can be a string or a template content. If the `content` property is not provided with any specific value, then it takes the value assigned to the `title` attribute of the target element on which the Tooltip was initialized. The content can also dynamically be assigned to the Tooltip via Fetch.

Template content

Any text or image can be added to the Tooltip, by default. To customize the Tooltip layout or to create your own visualized element on the Tooltip, template can be used.

Refer to the following code example to add formatted HTML content to the Tooltip.

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    function content() {
        return (<span id='tooltipContent'>
            <p><strong>Environmentally friendly</strong> or <strong>environment-
friendly</strong>, <i>(also referred to as eco-friendly, nature-friendly,
and green)</i> are marketing and sustainability terms referring to goods and
services, laws, guidelines and policies that inflict reduced, minimal, or no
harm upon ecosystems or the environment.</p></span>);
    }
    let style = {
        display: 'inline-block',
        padding: '5px'
    };
    return (<div>A green home is a type of house designed to be
        <TooltipComponent isSticky={true} content={content}
style={style}>
            <a><u>environmentally friendly</u></a>
        </TooltipComponent> and sustainable. And also focuses on the
efficient use of "energy, water, and building materials." As green homes
        have become more prevalent we have also seen the emergence of
green affordable housing.
        </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    function content() {
        return (
            <span id='tooltipContent'>
                <p><strong>Environmentally friendly</strong> or <strong>environment-
friendly</strong>, <i>(also referred to as eco-friendly, nature-friendly,
and green)</i> are marketing and sustainability terms referring to goods and
services, laws, guidelines and policies that inflict reduced, minimal, or no
harm upon ecosystems or the environment.</p></span>
            )
    }
    let style: object = {

    have become more prevalent we have also seen the emergence of
    green affordable housing.
  </div>
);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

Dynamic content via Fetch

The Tooltip content can be dynamically loaded by making use of the Fetch call. The Fetch request is usually made within the `beforeRender` event of the Tooltip, and then the Tooltip's `content` is assigned the value retrieved on it's success.

Note: The Tooltip `target` property includes a unique identifier used to associate Tooltips with specific elements on a webpage or application interface. When setting the Tooltip `target` value as a GUID (Globally Unique Identifier), it's important to note that the GUID must start with a combination of **letters** before the numeric portion of the GUID. For example, `target: '# + 'tooltip'+ '96ad88bd-294c-47c3-999b-a9daa3285a05'`.

}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

Position in React Tooltip component

Tooltips can be attached to 12 static locations around the target. On initializing the Tooltip, you can set the position property with any one of the following values:

- TopLeft
- TopCenter
- TopRight
- BottomLeft
- BottomCenter
- BottomRight
- LeftTop
- LeftCenter
- LeftBottom
- RightTop
- RightCenter
- RightBottom

By default, Tooltip is placed at the **TopCenter** of the target element.

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
  let dropElement;
  let tooltipInstance;
  function change() {
    tooltipInstance.position = dropElement.value;
  }
  return (
    <div id='container'>

      </select>
    </div>
  </div>;
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent, Position } from '@syncfusion/ej2-react-popups';
function App() {
  let dropElement: HTMLSelectElement;
  let tooltipInstance: TooltipComponent;
  function change(): void {
    tooltipInstance.position = dropElement.value as Position;
  }
  return (
    <div id='container'>
      <TooltipComponent ref={t => tooltipInstance = t}
        className="tooltip-box" content='Tooltip Content' target='#tooltip'>
        <div id="tooltip">Show Tooltip</div>
      </TooltipComponent>
      <div className='ddl'>
        <select id="positions" ref={d => dropElement = d}
          onChange={change.bind(this)} className="form-control drop-inline"
          value="TopCenter">
          <option value="TopLeft">Top Left</option>
          <option value="TopCenter">Top Center</option>
          <option value="TopRight">Top Right</option>
          <option value="BottomLeft">Bottom Left</option>
          <option value="BottomCenter">Bottom Center</option>
          <option value="BottomRight">Bottom Right</option>
          <option value="LeftTop">Left Top</option>
          <option value="LeftCenter">Left Center</option>
          <option value="LeftBottom">Left Bottom</option>
          <option value="RightTop">Right Top</option>
          <option value="RightCenter">Right Center</option>
          <option value="RightBottom">Right Bottom</option>
        </select>
      </div>
    </div>
  );
}
export default App;

```

```
ReactDOM.render(<App />, document.getElementById('sample'));
```

Tip pointer positioning

The Tooltip pointer can be attached or detached from the Tooltip by using the `showTipPointer` property.

Pointer positions can be adjusted using the `tipPointerPosition` property that can be assigned to one of the following values:

- Auto
- Start
- Middle
- End

The following code example illustrates how to set the pointer to the start position of the Tooltip.

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    return (<TooltipComponent className="tooltip-box" content='Tooltip Content' tipPointerPosition='Start' target='#target'>
        <button className="e-btn" id='target'>Show Tooltip</button>
    </TooltipComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    return (
        <TooltipComponent className="tooltip-box" content='Tooltip Content'
            tipPointerPosition='Start' target='#target'>
            <button className="e-btn" id='target'>Show Tooltip</button>
        </TooltipComponent>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

By default, tip pointers are auto adjusted so that the arrow does not point outside the target element.

Dynamic positioning

The Tooltip and its tip pointer can be positioned dynamically based on the target's location. This can be achieved by using the `refresh` method, which auto adjusts the Tooltip over the target.

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
import { Draggable } from '@syncfusion/ej2-base';
function App() {
    React.useEffect(() => {
        rendereComplete();
    }, []);
    let tooltipInstance;
    let tooltipAnimation = {
        open: { effect: 'None' },
        close: { effect: 'None' }
    };
    function rendereComplete() {
        let ele = document.getElementById('demoSmart');
        let drag = new Draggable(ele, {
            clone: false,
            dragArea: '#targetContainer',

                    tooltipInstance.open(args.element);
                }
                else {
                    tooltipInstance.refresh(args.element);
                }
            },
            dragStart: (args) => {
                if (args.element.getAttribute('data-tooltip-id') === null) {
                    tooltipInstance.open(args.element);
                }
            },
            dragStop: (args) => {
                tooltipInstance.close();
            }
        });
    };
    return (<div id='targetContainer'>
        <TooltipComponent ref={t => tooltipInstance = t}
        target='#demoSmart' content='Drag me !!!' animation={tooltipAnimation}>
        <div id='demoSmart'>
            </div>
        </TooltipComponent>
    </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

```

    }, []);
    let tooltipInstance: TooltipComponent;
    let tooltipAnimation: Object = {
      open: { effect: 'None' },
      close: { effect: 'None' }
    };
    function rendereComplete() {
      let ele: HTMLElement = document.getElementById('demoSmart');
      let drag: Draggable = new Draggable(ele, {
        clone: false,
        dragArea: '#targetContainer',
        drag: (args: any) => {
          if (args.element.getAttribute('data-tooltip-id') === null) {
            tooltipInstance.open(args.element);
          } else {
            tooltipInstance.refresh(args.element);
          }
        },
        dragStart: (args: any) => {
          if (args.element.getAttribute('data-tooltip-id') === null) {
            tooltipInstance.open(args.element);
          }
        },
        dragStop: (args: any) => {
          tooltipInstance.close();
        }
      });
    }
    return (<div id='targetContainer'>
      <TooltipComponent ref={t => tooltipInstance = t}
        target='#demoSmart' content='Drag me !!!' animation={tooltipAnimation}>
        <div id='demoSmart'>
          </div>
        </TooltipComponent>
      </div>
    );
  }
  export default App;
  ReactDOM.render(<App />, document.getElementById('sample'));

```

Mouse trailing

Tooltips can be positioned relative to the mouse pointer. This behavior can be enabled or disabled by using the `mouseTrail` property.

By default, it is set to `false`.

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
  return (<TooltipComponent className="tooltip-box" content='Tooltip
Content' mouseTrail={true} showTipPointer={false}>
    <div id='target'>Show Tooltip</div>
  </TooltipComponent>);
}

```

```

}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    return (
        <TooltipComponent className="tooltip-box" content='Tooltip Content'
        mouseTrail={true} showTipPointer={false}>
            <div id='target'>Show Tooltip</div>
        </TooltipComponent>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

When mouse trailing option is enabled, the tip pointer position gets auto adjusted based on the target, and

other position values like start, end, and middle are not applied (to prevent the pointer from moving out of target).

Setting offset values

Offset values are set to specify the distance between the target and tooltip element. `offsetX` and `offsetY` properties are used to specify the offset left and top values.

- `offsetX` specifies the distance between the target and Tooltip element in X axis.
- `offsetY` specifies the distance between the target and Tooltip element in Y axis.

The following code example illustrates how to set offset values.

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    return (<TooltipComponent className="tooltip-box" offsetX={30}
    offsetY={30} showTipPointer={false} mouseTrail={true} content='Tooltip
    Content'>
        <div id='target'>Show Tooltip</div>
    </TooltipComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';

```

```
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
  return (
    <TooltipComponent className="tooltip-box" offsetX={30} offsetY={30}
    showTipPointer={false} mouseTrail={true} content='Tooltip Content'>
      <div id='target'>Show Tooltip</div>
    </TooltipComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

By default, collision is handled automatically and therefore when collision is detected the Tooltip fits horizontally and flips vertically.

Open mode in React Tooltip component

You can decide the mode on which the Tooltip is to be opened on a page, i.e., on hovering, focusing, or clicking on the target elements.

On mobile devices, Tooltips appear when you tap and hold the element, even if the `opensOn` option is assigned with `Hover`.

Tooltips are also displayed as long as you continue to tap and hold the element. On lift, it disappears in the next 1.5 seconds.

If there is another action before that time ends, then the Tooltip disappears.

The `opensOn` property can take either a single or a combination of multiple values, separated by space from the following options.

The table below explains how the Tooltip opens on both desktop and mobile based on the value(s) assigned to the `opensOn` property.

By default, it takes `Auto` value.

Values	Desktop	Mobile
<code>Auto</code>	Tooltip appears when you hover over the target or when the target element receives the focus.	Tooltip opens on tap and hold of the target element.
<code>Hover</code>	Tooltip appears when you hover over the target.	Tooltip opens on tap and hold of the target element.
<code>Click</code>	Tooltip appears when you click a target element.	Tooltip appears when you single tap the target element.
<code>Focus</code>	Tooltip appears when you focus (say through tab key) on a target element.	Tooltip appears with a single tap on the target element.
<code>Custom</code>	Tooltip is not triggered by any default action. So, you have to bind your own events and use either <code>open</code> or <code>close</code> public methods. Same as Desktop.	

To open the Tooltip for multiple actions, say while hovering over or clicking on a target element, the `opensOn` property can be assigned with multiple values, separated by space as `hover click`.

Auto value cannot be used with any combination for multiple values.

The following code example shows how to set the open mode for Tooltips.

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    let buttonElement;
    let tooltipInstance;
    function handleClick() {
        if (buttonElement.getAttribute('data-tooltip-id')) {
            tooltipInstance.close();
        }
        else {
            tooltipInstance.open(buttonElement);
        }
    }
    ;
    let style = {
        margin: '150px auto 0 auto', transform: 'translateY(-50%)'
    };
    let margin = {
        margin: '40px'
    };
    return (<div id='container'>
        <table style={style}>
            <tbody>
                <tr>
                    <td>
                        <TooltipComponent content='Tooltip from hover'
opensOn='Hover' target='#hoverButton'>
                            <button style={margin} id='hoverButton'
className="e-btn blocks">Hover Me !(Default)</button>
                        </TooltipComponent>
                    </td>
                    <td>
                        <TooltipComponent content='Tooltip from click'
opensOn='Click' target='#clickButton'>
                            <button style={margin} id='clickButton'
className="e-btn blocks">Click Me !</button>
                        </TooltipComponent>
                    </td>
                </tr>
                <tr>
                    <td>
                        <TooltipComponent content='Tooltip from focus'
opensOn='Focus' target='#tooltipfocus'>
                            <span style={margin} id="textbox"
className="e-float-input blocks">
                                <input id="tooltipfocus" type="text"
placeholder="Focus and blur"/>
                            </span>
                        </TooltipComponent>
                    </td>
                </tr>
            </tbody>
        </table>
    </div>);
}
```

```

        <td>
          <TooltipComponent className="wrap" ref={t =>
tooltipInstance = t} opensOn='custom' content='Tooltip from custom mode'>
            <input id="box" type="button" className="e-
btn" ref={d => buttonElement = d} onClick={handleClick.bind(this)}
value="Click to open tooltip manually"/>
          </TooltipComponent>
        </td>
      </tr>
    </tbody>
  </table>
</div>;
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
  let buttonElement: HTMLElement;
  let tooltipInstance: TooltipComponent;
  function handleClick(): void {
    if (buttonElement.getAttribute('data-tooltip-id')) {
      tooltipInstance.close();
    } else {
      tooltipInstance.open(buttonElement);
    }
  };
  let style: object = {
    margin: '150px auto 0 auto', transform: 'translateY(-50%)'
  };
  let margin: object = {
    margin: '40px'
  };
  return (
    <div id='container'>

className="e-btn blocks">Click Me !(Default)</button>
              </TooltipComponent>
            </td>
          </tr>
        </tbody>
      </table>
    </div>
  );
}

```

```

        </tr>
        <tr>
            <td>
                <TooltipComponent content='Tooltip from focus'
opensOn='Focus' target='#tooltipfocus'>
                    <span style={margin} id="textbox"
className="e-float-input blocks">
                        <input id="tooltipfocus" type="text"
placeholder="Focus and blur" />
                    </span>
                </TooltipComponent>
            </td>
            <td>
                <TooltipComponent className="wrap" ref={t =>
tooltipInstance = t} opensOn='custom' content='Tooltip from custom mode'>
                    <input id="box" type="button" className="e-
btn" ref={d => buttonElement = d} onClick={handleClick.bind(this)}
value="Click to open tooltip manually" />
                </TooltipComponent>
            </td>
        </tr>
    </tbody>
</table>
</div>
);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

Custom open mode

Other than the above specified options, the custom mode makes the Tooltip appear on screen for user-defined custom actions such as right-click, double-click, and so on. Here, the tooltip is not triggered by any default action, and you have to bind your own events and use either `open` or `close` public methods to show or hide the Tooltips.

The following code example shows how to define custom open mode for the Tooltip.

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    let buttonElement;
    let tooltipInstance;
    function handleDoubleClick() {
        if (buttonElement.getAttribute('data-tooltip-id')) {
            tooltipInstance.close();
        }
        else {
            tooltipInstance.open(buttonElement);
        }
    }
}
;
```

```

    return (<TooltipComponent className="wrap" ref={t => tooltipInstance =
t} opensOn='custom' content='Tooltip from custom mode'>
      <input id="box" type="button" ref={d => buttonElement = d}
onDoubleClick={handleDoubleClick.bind(this)} value="Double click to open
tooltip"/>
    </TooltipComponent>);
  }
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
  let buttonElement: HTMLElement;
  let tooltipInstance: TooltipComponent;
  function handleDoubleClick(): void {
    if (buttonElement.getAttribute('data-tooltip-id')) {
      tooltipInstance.close();
    } else {
      tooltipInstance.open(buttonElement);
    }
  };
  return (
    <TooltipComponent className="wrap" ref={t => tooltipInstance = t}
opensOn='custom' content='Tooltip from custom mode'>
      <input id="box" type="button" ref={d => buttonElement = d}
onDoubleClick={handleDoubleClick.bind(this)} value="Double click to open
tooltip" />
    </TooltipComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

Sticky mode

With this mode set to **true**, Tooltips can be made to show up on the screen as long as the close icon is pressed. In this mode, close icon is attached to the Tooltip located at the top right corner. This mode can be enabled or disabled using the **isSticky** property.

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
  return (<TooltipComponent className="tooltip-box" isSticky={true}
content='Click close icon to close me'>
    <div id='target'>Show Tooltip</div>
  </TooltipComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    return (
        <TooltipComponent className="tooltip-box" isSticky={true}
        content='Click close icon to close me'>
            <div id='target'>Show Tooltip</div>
        </TooltipComponent>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

Open/Close Tooltip with delay

The Tooltips can be opened or closed after some delay by using the `openDelay` and `closeDelay` properties.

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    return (<TooltipComponent className="tooltip-box" content='Tooltip with
    delay' openDelay={1000} closeDelay={1000}>
        <div id='target'>Show Tooltip</div>
    </TooltipComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    return (
        <TooltipComponent className="tooltip-box" content='Tooltip with delay'
        openDelay={1000} closeDelay={1000}>
            <div id='target'>Show Tooltip</div>
        </TooltipComponent>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

Animation in React Tooltip component

To animate the Tooltip, a set of specific animation effects are available, and it can be controlled using the `animation` property.

The animation property also allows you to set delay, duration, and various other effects of your choice.

`AnimationModel` is derived from base to apply the chosen animation effect, duration, etc. on Tooltips.

By default, Tooltip entrance occurs over 150 ms using the `ease-out` timing function. It exits also at 150 ms, but uses `ease-in` timing function.

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
  let TooltipAnimation = {
    open: { effect: 'ZoomIn', duration: 1000, delay: 0 },
    close: { effect: 'ZoomOut', duration: 500, delay: 0 }
  };
  return (
    <TooltipComponent className="tooltip-box" content='Tooltip
animation effect' animation={TooltipAnimation}>
      <div id='target'>Show Tooltip</div>
    </TooltipComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
  let TooltipAnimation: Object = {
    open: { effect: 'ZoomIn', duration: 1000, delay: 0 },
    close: { effect: 'ZoomOut', duration: 500, delay: 0 }
  };
  return (
    <TooltipComponent className="tooltip-box" content='Tooltip animation
effect' animation={TooltipAnimation}>
      <div id='target'>Show Tooltip</div>
    </TooltipComponent>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

The default animation effect for the Tooltip is set to `FadeIn` for its open action, and `FadeOut` for its close action.

The default `duration` is set to 150 ms and `delay` is set to 0.

Animation effects

The animation effects that are applicable to Tooltips are:

- FadeIn
- FadeOut
- FadeZoomIn
- FadeZoomOut
- FlipXDownIn
- FlipXDownOut
- FlipXUpIn
- FlipXUpOut
- FlipYLeftIn
- FlipYLeftOut
- FlipYRightIn
- FlipYRightOut
- ZoomIn
- ZoomOut
- None

When the `effect` is specified as `none`, no effect will be applied to the Tooltip, and animation is considered to be set to `off`.

Some of the above animation effects suits the Tooltip better when its tip pointer is hidden.

This can be achieved by setting the `showTipPointer` to false.

Animating via open/close methods

Animations can also be applied on Tooltips dynamically through `open` and `close` methods. These methods accept the animation model as an optional parameter. If you pass `TooltipAnimationSettings`, animation takes this model; otherwise, it takes the values from the `animation` property. It is also possible to pass different animations for Tooltips on each target.

Refer to the code snippet below to apply animations using public methods.

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
  let tooltipInstance;
  function handleClick() {
    if (tooltipInstance.element.getAttribute('data-tooltip-id')) {
      let closeAnimation = { effect: 'FadeOut', duration: 1000 };
      tooltipInstance.close(closeAnimation);
    }
    else {
      let openAnimation = { effect: 'FadeIn', duration: 1000 };
      tooltipInstance.open(tooltipInstance.element, openAnimation);
    }
  }
}
```

```

    return (<TooltipComponent className="tooltip-box" content='Tooltip
content' opensOn='custom' ref={t => tooltipInstance = t}>
    <div id='target' onClick={handleClick.bind(this)}>Click
Here</div>
    </TooltipComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent, TooltipAnimationSettings } from '@syncfusion/ej2-react-popups';
function App() {
    let tooltipInstance: TooltipComponent;
    function handleClick(): void {
        if (tooltipInstance.element.getAttribute('data-tooltip-id')) {
            let closeAnimation: TooltipAnimationSettings = { effect:
'FadeOut', duration: 1000 };
            tooltipInstance.close(closeAnimation);
        } else {
            let openAnimation: TooltipAnimationSettings = { effect:
'FadeIn', duration: 1000 };
            tooltipInstance.open(tooltipInstance.element, openAnimation);
        }
    };
    return (
        <TooltipComponent className="tooltip-box" content='Tooltip content'
opensOn='custom' ref={t => tooltipInstance = t}>
        <div id='target' onClick={handleClick.bind(this)}>Click
Here</div>
        </TooltipComponent>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

Apply transition

The transition effect can be applied on Tooltips by using the `beforeRender` event as given in the following work-around code example.

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    let tooltipInstance;
    let TooltipAnimation = {
        open: { effect: 'ZoomIn', duration: 500 },
        close: { effect: 'ZoomOut', duration: 500 }
    };
    function onBeforeRender(args) {

```

```

        if (args.element) {
            tooltipInstance.animation = { open: { effect: 'None' } };
            args.element.style.display = 'block';
            args.element.style.transitionProperty = 'left,top';
            args.element.style.transitionDuration = '1000ms';
        }
    };
    ;
    function onAfterClose(args) {
        tooltipInstance.animation = TooltipAnimation;
    }
    ;
    let c1 = {
        top: '18%',
        left: '5%'
    };
    let c2 = {
        top: '30%',
        left: '30%'
    };
    let c3 = {
        top: '80%',
        left: '80%'
    };
    let c4 = {
        top: '65%',
        left: '50%'
    };
    let c5 = {
        top: '75%',
        left: '15%'
    };
    let c6 = {
        top: '30%',
        left: '70%'
    };
    ;
    return (<div className='wrap'>
        <h3> Transition effect </h3>
        <TooltipComponent className='circle-container' target='.circle-tool'
animation={TooltipAnimation} closeDelay={1000} ref={t => tooltipInstance =
t} beforeRender={onBeforeRender.bind(this)}
afterClose={onAfterClose.bind(this)}>
            <div className="circle-tool" style={c1} title="This is Turtle
!!!"></div>
            <div className="circle-tool" style={c2} title="This is Snake
!!!"></div>
            <div className="circle-tool" style={c3} title="This is Croc
!!!"></div>
            <div className="circle-tool" style={c4} title="This is String
Ray !!!"></div>
            <div className="circle-tool" style={c5} title="This is Blob Fish
!!!"></div>
            <div className="circle-tool" style={c6} title="This is Mammoth
!!!"></div>
        </TooltipComponent>
    </div>);
}

```

```
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent, TooltipEventArgs } from '@syncfusion/ej2-react-popups';
function App() {
    let tooltipInstance: TooltipComponent;
    let TooltipAnimation: Object = {
        open: { effect: 'ZoomIn', duration: 500 },
        close: { effect: 'ZoomOut', duration: 500 }
    };
    function onBeforeRender(args: TooltipEventArgs): void {
        if (args.element) {
            tooltipInstance.animation = { open: { effect: 'None' } };
            args.element.style.display = 'block';
            args.element.style.transitionProperty = 'left,top';
            args.element.style.transitionDuration = '1000ms';
        }
    };
    function onAfterClose(args: TooltipEventArgs): void {
        tooltipInstance.animation = TooltipAnimation;
    };
    let c1: Object = {
        top: '18%',
        left: '5%'
    };
    let c2: Object = {
        top: '30%',
        left: '30%'
    };
    let c3: Object = {
        top: '80%',
        left: '80%'
    };
    let c4: Object = {
        top: '65%',
        left: '50%'
    };
    let c5: Object = {
        top: '75%',
        left: '15%'
    };
    let c6: Object = {
        top: '30%',
        left: '70%'
    };
    return (
        <div className='wrap'>
            <h3> Transition effect </h3>
            <TooltipComponent className='circle-container' target='.circle-tool'
            animation={TooltipAnimation} closeDelay={1000} ref={t => tooltipInstance =
```

```

t} beforeRender={onBeforeRender.bind(this)}
afterClose={onAfterClose.bind(this)}>
  <div className="circle-tool" style={c1} title="This is Turtle
!!!"></div>
  <div className="circle-tool" style={c2} title="This is Snake
!!!"></div>
  <div className="circle-tool" style={c3} title="This is Croc
!!!"></div>
  <div className="circle-tool" style={c4} title="This is String
Ray !!!"></div>
  <div className="circle-tool" style={c5} title="This is Blob Fish
!!!"></div>
  <div className="circle-tool" style={c6} title="This is Mammoth
!!!"></div>
  </TooltipComponent>
</div>
);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

Customization in React Tooltip component

The Tooltip can be customized by using the `cssClass` property, which accepts custom CSS class names that define specific user-defined styles and themes to be applied on the Tooltip element.

Tip pointer customization

Styling the tip pointer's size, background, and border colors can be done using the `cssClass` property, as given below.

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
  return (<TooltipComponent className="tooltip-box" content='Tooltip arrow
customized' cssClass='customtip'>
    <div id='target'>Show Tooltip</div>
  </TooltipComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
  return (
    <TooltipComponent className="tooltip-box" content='Tooltip arrow
customized' cssClass='customtip'>
      <div id='target'>Show Tooltip</div>
    </TooltipComponent>
  );
}

```

```
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

Tooltip customization

The complete look and feel of the Tooltip can be customized by changing its background color, opacity, content font, etc. The following code example shows the way to achieve it.

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    return (<TooltipComponent className="tooltip-box" content='Tooltip
customized' cssClass='customtooltip'>
        <div id="target">Show Tooltip</div>
    </TooltipComponent>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
function App() {
    return (
        <TooltipComponent className="tooltip-box" content='Tooltip customized'
cssClass='customtooltip'>
            <div id="target">Show Tooltip</div>
        </TooltipComponent>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

Style in React Tooltip component

The following content provides the exact CSS structure that can be used to modify the control's appearance based on the user preference.

Customizing the tooltip

Use the following CSS to customize the tooltip.

```
`css
.e-tooltip-wrap {
border-radius: 4px;
opacity: 1;
}
```

Customizing the tooltip popup

Use the following CSS to customize the tooltip popup properties.

```
`css
.e-tooltip-wrap.e-popup {
background-color: #fff;
border: 2px solid #000;
}
`
```

Customizing the tooltip content

Use the following CSS to customize the tooltip content.

```
`css
.e-tooltip-wrap .e-tip-content {
color: red;
font-size: 12px;
line-height: 20px;
}
`
```

Customizing the tooltip arrow tip

Use the following CSS to customize the tooltip arrow tip.

```
`css
/ To customize the arrow tip at bottom /
.e-tooltip-wrap .e-arrow-tip.e-tip-bottom {
height: 12px;
left: 50%;
top: 100%;
width: 24px;
}
/ To customize the arrow tip at top /
.e-tooltip-wrap .e-arrow-tip.e-tip-top {
height: 12px;
left: 50%;
top: -9px;
width: 24px;
}
`
```

```
/ To customize the arrow tip at left /
.e-tooltip-wrap .e-arrow-tip.e-tip-left {
height: 24px;
left: -9px;
top: 48%;
width: 12px;
}

/ To customize the arrow tip at right /
.e-tooltip-wrap .e-arrow-tip.e-tip-right {
height: 24px;
left: 100%;
top: 50%;
width: 12px;
}
`
```

Customizing the tooltip inner tip

Use the following CSS to customize the tooltip inner tip.

```
`css
.e-tooltip-wrap .e-arrow-tip-inner.e-tip-right,
.e-tooltip-wrap .e-arrow-tip-inner.e-tip-left,
.e-tooltip-wrap .e-arrow-tip-inner.e-tip-bottom,
.e-tooltip-wrap .e-arrow-tip-inner.e-tip-top {
color: #fff;
font-size: 25.9px;
}
`
```

Customizing the tooltip outer tip

Use the following CSS to customize the tooltip outer tip.

```
`css

/ To customize the arrow tip at bottom /
.e-tooltip-wrap .e-arrow-tip-outer.e-tip-bottom {
border-left: 12px solid transparent;
border-right: 14px solid transparent;
border-top: 12px solid #000;
}
```

```

}
/ To customize the arrow tip at top /
.e-tooltip-wrap .e-arrow-tip-outer.e-tip-top {
border-bottom: 12px solid #000;
border-left: 12px solid transparent;
border-right: 12px solid transparent;
}
/ To customize the arrow tip at left /
.e-tooltip-wrap .e-arrow-tip-outer.e-tip-left {
border-bottom: 12px solid transparent;
border-right: 12px solid #000;
border-top: 12px solid transparent;
}
/ To customize the arrow tip at right /
.e-tooltip-wrap .e-arrow-tip-outer.e-tip-right {
border-bottom: 12px solid transparent;

Accessibility in React Tooltip component

The Tooltip component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Tooltip component is outlined below.

Accessibility Criteria	Compatibility
--	--
WCAG 2.2 Support	
Section 508 Support	
Screen Reader Support	
Right-To-Left Support	

| Color Contrast | |

| Mobile Device Support | |

| Keyboard Navigation Support | |

| [Accessibility Checker](#) Validation | |

| [Axe-core](#) Accessibility Validation | |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

}

</style>

<div> - All features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

WAI-ARIA attributes

The Tooltip component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Tooltip component.

| Attributes | Description |

| --- | --- |

| role="tooltip" | The element that serves as the container for the tooltip has the ARIA role of **tooltip**. |

| aria-describedby | This attribute is added to the target element on which the Tooltip gets opened, when focusing or hovering over it. It usually holds the randomly generated **Id** value of the Tooltip element.

 In case, the target element already holds an **aria-describedby** attribute with **Id** value of some other component, then the Tooltip **Id** value can be additionally appended to the existing **aria-describedby** attribute separated by a space as shown in the example below.

 For example:
 aria-describedby = "my-text my-tooltip"
 my-text is the **Id** of some other component.
 my-tooltip is the **id** of Tooltip component.

 When the Tooltip is closed, the **aria-describedby** attribute is removed from the target. |

| aria-hidden | This attribute is assigned to the Tooltip element whose default value is true.

 When **true**, it denotes that the Tooltip element is in a hidden or a closed state. When the Tooltip appears on the screen, it's value changes to **false**. |

Keyboard interaction

The Tooltip component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Tooltip component.

Keys	Description
Esc	Closes or dismisses the Tooltip.
Tab	A form control receiving focus (say through tab key), opens the Tooltip, and on focus out closes it.

1. When the Tooltip is being displayed on the target element, focus continues to stay on it.
2. If the Tooltip opens on mouse entering into the target element space, then it should be dismissed only when the mouse leaves that target.
3. If the Tooltip opens on the target element that receives focus, then it should be closed only when the focus moves out of that target element.

Likewise, if the Tooltip opens on a click, then it should be closed only on another click action.

Ensuring accessibility

The Tooltip component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Tooltip component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Tooltip component with accessibility tools.

{% endraw %}
```

How To

Show tooltip on disabled elements and disable tooltip in React Tooltip component

By default, Tooltips will not be displayed on disabled elements. However, it is possible to enable this behavior by following the steps below.

1. Add a disabled element like the `button` element into a div whose display style is set to `inline-block`.
2. Set the pointer event as `none` for the disabled element (button) through CSS.
3. Now, initialize the Tooltip for outer div element that holds the disabled button element.

APP.JSX

```
import * as React from 'react';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
import { ButtonComponent, SwitchComponent } from '@syncfusion/ej2-react-buttons';
function App() {
  let tooltip = null;
  function change(args) {
    if (!args.checked) {
      tooltip.destroy();
    }
    else {
      tooltip.render();
    }
  }
  let box = {
    display: "inline-block"
  };
  let position = {
    position: "relative",
    top: "75px",
    transform: "translateX(-10%)"
  };
  let padding = {
    padding: "0 25px 0 0"
  };
  let inline = {
```

```

        display: "inline-block "
    };
    let margin = {
        margin: "50px"
    };
    return (<div id="container">
        <div id="box" style={box}>
            <TooltipComponent id="box" content="Tooltip from disabled element">
                <ButtonComponent id="disabledbutton" disabled={true}>
                    Disabled button
                </ButtonComponent>
            </TooltipComponent>
        </div>
        <div style={position}>
            <TooltipComponent content="Tooltip Content" target="#tooltip"
style={inline} ref={d => (tooltip = d)}>
                <ButtonComponent id="tooltip" style={margin}>
                    Show Tooltip
                </ButtonComponent>
            </TooltipComponent>
            <div className="switchContainer">
                <label htmlFor="checked" style={padding}>
                    Enable Tooltip
                </label>
                <SwitchComponent id="checked" checked={true}
change={change.bind(this)} />
            </div>
        </div>
    </div>);
}
export default App;

```

APP.TSX

```

import * as React from 'react';

      </div>
    </div>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('sample'));
```

Dynamic tooltip content with html elements in React Tooltip component

Tooltip loads HTML pages via HTML tags such as iframe, video, and map using the [content](#) property, which supports both string and HTML tags.

To load an `iframe` element in tooltip, set the required iframe in the `content` of tooltip while initializing the tooltip component. Refer to the following code.

`ts

```
content: '<iframe
src="https://ej2.syncfusion.com/showcase/typescript/expensetracker/#/dashboard"></iframe>'
,
```

Use the following steps to render **ej2-map** in tooltip:

1. Initialize the map component and create an element. After initialization, append the map object to the element.
2. Set the rendered map element to the content of tooltip component. Refer to the following sample.

APP.JSX

```
import * as React from 'react';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
function App() {
  function iFrame() {
    return <iframe src="https://www.syncfusion.com/products/essential-
js2"/>;
  }
  return (<div id="container">
    <TooltipComponent target="#iframeContent" content={iFrame}
opensOn="Click" position="BottomCenter">
      <div id="tooltipContent">
        <div className="content">
          <ButtonComponent className="text" id="iframeContent">
            Embedded Iframe
          </ButtonComponent>
        </div>
      </div>
    </TooltipComponent>
  </div>);
}
export default App;
```

Tooltip open or display modes in React Tooltip component

The open mode property of tooltip can be defined on a target that is hovering, focusing, or clicking.

Tooltip component have the following types of open mode:

- Auto
- Hover
- Click
- Focus
- Custom

Auto

Tooltip appears when you hover over the target or when the target element receives the focus.

Hover

Tooltip appears when you hover over the target.

Click

Tooltip appears when you click a target element.

Focus

Tooltip appears when you focus (say through tab key) on a target element.

Custom

Tooltip is not triggered by any default action. So, bind your own events and use either open or close public methods.

APP.JSX

```

{% raw %}
import * as React from 'react';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
function App() {
  let customTooltip = null;
  function handleDoubleClick(args) {
    if (args.target.getAttribute("data-tooltip-id")) {
      customTooltip.close();
    }
    else {
```

```

        customTooltip.open(args.target);
    }
}
return (<div id="showTooltip">
    <div id="first">
        <TooltipComponent opensOn="Hover" content="Tooltip from hover"
position="BottomCenter">
            <ButtonComponent className="blocks" id="tooltiphover" cssClass="e-
outline" isPrimary={true}>
                Hover me
            </ButtonComponent>
        </TooltipComponent>
        <TooltipComponent opensOn="Click" content="Tooltip from click"
position="BottomCenter">
            <ButtonComponent className="blocks" id="tooltipclick" cssClass="e-
outline" isPrimary={true}>
                Click me
            </ButtonComponent>
        </TooltipComponent>
    </div>
    <br />
    <br />
    <div id="second">
        <TooltipComponent content="Click close icon to close me"
position="BottomCenter" isSticky={true}>
            <ButtonComponent className="blocks" id="tooltipclick" cssClass="e-
outline" isPrimary={true}>
                Sticky mode
            </ButtonComponent>
        </TooltipComponent>
        <TooltipComponent content="Opens and closes Tooltip with delay of
<i>1000 milliseconds</i>" position="BottomCenter" openDelay="1000"
closeDelay="1000">
            <ButtonComponent className="blocks" id="tooltipclick" cssClass="e-
outline" isPrimary={true}>
                Tooltip with delay
            </ButtonComponent>
        </TooltipComponent>
    </div>
    <br />
    <br />
    <div id="third">

```

Fancy tooltip customization in React Tooltip component

The arrow of the tooltip can be customized as needed by customizing CSS in the sample-side.

The EJ2 tooltip component is achieved through CSS3 format and positioned the tip arrow according to the tooltip positions like **TopCenter**, **BottomLeft**, **RightTop**, and more.

Here, the tip arrow is customized as Curved tooltip and Bubble tooltip.

Curved tip

The content for the tip pointer arrow has been added. To customize the curved tip arrow, override the following CSS class of tip arrow.

`ts

```

<TooltipComponent content='Tooltip Content' cssClass='curvetips e-tooltip-css'>
</TooltipComponent>

```

,

`css

```

.e-arrow-tip-outer.e-tip-bottom,
.e-arrow-tip-outer.e-tip-top {

```

```
border-left: none !important;
border-right: none !important;
border-top: none !important;
}
.e-arrow-tip.e-tip-top {
transform: rotate(170deg);
}
,
```

Bubble tip

The two `div`s (inner div and outer div) have been added to achieve the bubble tip arrow. To customize the bubble tip arrow, override the following CSS class of tip arrow.

```
`ts
<TooltipComponent content='Tooltip Content' cssClass='bubbletip e-tooltip-css'>
</TooltipComponent>
,

`css
.e-arrow-tip-outer.e-tip-bottom, .e-arrow-tip-outer.e-tip-top
{
border-radius: 50px;
height: 10px;
width: 10px;
}
.e-arrow-tip-inner.e-tip-bottom, .e-arrow-tip-inner.e-tip-top
{
border-radius: 50px;
height: 10px;
width: 10px;
}
,
```

These tip arrow customizations have been achieved through CSS changes in the sample level. The tooltip position can be changed by using the radio button click event.

The arrow tip pointer can also be disabled by using the [showTipPointer](#) property in a tooltip.

Display tooltip on svg and canvas elements in React Tooltip component

Tooltip can be displayed on both SVG and Canvas elements. You can directly attach the `<svg>` or `<canvas>` elements to show tooltips on data visualization elements.

SVG

Create the SVG square element and refer to the following code snippet to render the tooltip on SVG square.

```
`ts
```

```
<TooltipComponent content='SVG Square' cssClass='e-tooltip-css' target= '#square'>
```

```
</TooltipComponent>
```

```
,
```

Canvas

Create the canvas circle element and refer to the following code snippet to render the tooltip on Canvas circle.

```
`ts
```

```
<TooltipComponent content='Canvas Circle' cssClass='e-tooltip-css' target= '#circle'>
```

```
</TooltipComponent>
```

Create and show tooltip on multiple targets in React Tooltip component

Tooltip can be created and shown on multiple targets within a container by defining the specific target elements to the target property. So, the tooltip is initialized only on matched targets within a container.

APP.JSX

```

import * as React from 'react';
import { TooltipComponent } from '@syncfusion/ej2-react-popups';
import { Ajax } from '@syncfusion/ej2-base';
function App() {
  let tooltip = null;
  function beforeRender(args) {
    tooltip.content = "Loading...";
    tooltip.dataBind();
    let ajax = new Ajax("./tooltip.json", "GET", true);
    ajax.send().then((result) => {
      result = JSON.parse(result);
      for (let i = 0; i < result.length; i++) {
        if (result[i].Id == args.target.id) {
          /* tslint:disable */
          tooltip.content = result[i].Name;
          /* tslint:enable */
        }
      }
    });
    tooltip.dataBind();
  }
}

```

```

    }, (reason) => {

TreeGrid

Getting Started

Getting started

This section explains the steps required to create a simple Essential JS 2 TreeGrid and demonstrates the basic usage of the TreeGrid control in a React application.

To get start quickly with React Tree Grid, you can check on this video:

[Setup for Local Development](#)

You can use [create-react-app](#) to setup the applications.

To install **create-react-app** run the following command.

`

```
npm install -g create-react-app
```

`

- To setup basic **React** sample use following commands.

`

```
create-react-app quickstart --template typescript
```

```
cd quickstart
```

```
npm install
```

`

[Adding Syncfusion TreeGrid packages](#)

All the available Essential JS 2 packages are published in [npmjs.com](https://www.npmjs.com) public registry. To install TreeGrid component, use the following command

`

```
npm install @syncfusion/ej2-react-treegrid --save
```

`

[Adding CSS reference](#)

Add components style as given below in **src/App.css**.

```
`css
```

```
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
```

```
@import '../node_modules/@syncfusion/ej2-buttons/styles/material.css';
```

```
@import '../node_modules/@syncfusion/ej2-calendars/styles/material.css';
```

```
@import '../node_modules/@syncfusion/ej2-dropdowns/styles/material.css';
```

```
@import '../node_modules/@syncfusion/ej2-inputs/styles/material.css';
```

```
@import '../node_modules/@syncfusion/ej2-navigations/styles/material.css';
```

```
@import '../node_modules/@syncfusion/ej2-popups/styles/material.css';
```

```
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material.css';
@import '../node_modules/@syncfusion/ej2-grids/styles/material.css';
@import '../node_modules/@syncfusion/ej2-react-treegrid/styles/material.css';
`
```

To refer **App.css** in the application then import it in the **src/App.tsx** file.

Adding TreeGrid component

Now, you can start adding TreeGrid component in the application. For getting started, add the TreeGrid component in **src/App.tsx** file using following code.

Place the following treegrid code in the **src/App.tsx**.

```
`ts
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sortData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sortData} treeColumnIndex={1} childMapping= 'subtasks'>
    <ColumnsDirective>
      <ColumnDirective field='Category' headerText='Category' width='150' />
      <ColumnDirective field='orderName' headerText='Order Name' width='170' />
      <ColumnDirective field='orderDate' headerText='Order Date' width='130' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='price' headerText='Price' width='100' textAlign='Right' type='number' format='C0' />
    </ColumnsDirective>
  </TreeGridComponent>
};
export default App;
`
```

Module Injection

TreeGrid component features are segregated into individual feature-wise modules. In order to use a particular feature, you need to inject its feature service in the **App**. In the current application, we are going to use paging, sorting, filtering and exporting feature of TreeGrid. Please find relevant feature service name and description as follows.

- **Page** - Inject this service to use paging feature.
- **Sort** - Inject this service to use sorting feature.
- **Filter** - Inject this service to use filtering feature.

- **ExcelExport** - Inject this service to use Excel Export feature.
- **PdfExport** - Inject this service to use PDF Export feature.

These modules should be injected into the treegrid using the **Inject** directive.

Additional feature modules are available [here](#).

Enable Paging

The paging feature enables users to view the TreeGrid record in a paged view. It can be enabled by setting [allowPaging](#) property to true. Inject the **Page** module in **Inject.services** as follows. If the **Page** service is not injected, the pager will not be rendered in the treegrid. Pager can be customized using [pageSettings](#) property.

We also have Root level paging mode in which paging is based on the root level rows only i.e., it ignores the child rows count and it can be enabled by using the [pageSettings.pageSizeMode](#) property.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Filter, Inject, Page, Sort } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sortData } from './data';
function App() {
  const pageOptions = { pageSize: 2 };
  return <TreeGridComponent dataSource={sortData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true}>
    <ColumnsDirective>
      <ColumnDirective field='Category' headerText='Category'
width='150' />
      <ColumnDirective field='orderName' headerText='Order Name'
width='170' />
      <ColumnDirective field='orderDate' headerText='Order Date'
width='130' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='price' headerText='Price' width='100'
textAlign='Right' type='number' format='C0' />
    </ColumnsDirective>
    <Inject services={[Page, Sort, Filter]} />
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, PageSettingsModel,
 TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Filter, Inject, Page, Sort } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sortData } from './data';
function App() {
  const pageOptions: PageSettingsModel = { pageSize: 2 };
  return <TreeGridComponent dataSource={sortData} treeColumnIndex={1}
    childMapping= 'subtasks'
      allowPaging={true}>
    <ColumnsDirective>
```

```

        <ColumnDirective field='Category' headerText='Category'
width='150' />
        <ColumnDirective field='orderName' headerText='Order Name'
width='170' />
        <ColumnDirective field='orderDate' headerText='Order Date'
width='130' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='price' headerText='Price' width='100'
textAlign='Right' type='number' format='C0' />
    </ColumnsDirective>
    <Inject services={[Page, Sort, Filter]} />
</TreeGridComponent>
};
export default App;

```

DATA.JSX

```

export let sortData = [
  {
    orderID: '1',
    orderName: 'Order 1',
    orderDate: new Date('02/03/2017'),
    shippedDate: new Date('02/09/2017'),

Enable Sorting

The sorting feature enables you to order the records. It can be enabled by setting the [allowSorting](#) property as *true*. Inject the **Sort** module in the **Inject.services** as follows. If the **Sort** module is not injected, you cannot sort when a header is clicked. Sorting feature can be customized using [sortSettings](#) property.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Filter, Inject, Page, Sort } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sortData } from './data';
function App() {
  const pageOptions = { pageSize: 7 };
  const sortingOptions = {
    columns: [
      { field: 'Category', direction: 'Ascending' },
      { field: 'orderName', direction: 'Ascending' }
    ]
  };
  return <TreeGridComponent dataSource={sortData} treeColumnIndex={1}
  childMapping='subtasks' allowPaging={true} allowSorting={true}
  sortSettings={sortingOptions}>
    <ColumnsDirective>
      <ColumnDirective field='Category' headerText='Category'
width='150' />
      <ColumnDirective field='orderName' headerText='Order Name'
width='170' />
      <ColumnDirective field='orderDate' headerText='Order Date'
width='130' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='price' headerText='Price' width='100'
textAlign='Right' type='number' format='C0' />
    </ColumnsDirective>
    <Inject services={[Page, Sort, Filter]} />
  </TreeGridComponent>;
}
;
export default App;
```

Enable Filtering

The filtering feature enables you to view reduced amount of records based on filter criteria. It can be enabled by setting the [allowFiltering](#) property as true. Inject the **Filter** module in the **Inject.services** as follows. If **Filter** module is not injected, filter bar will not be rendered in TreeGrid. Filtering feature can be customized using [filterSettings](#) property.

By default, filtered records are shown along with its parent records. This behavior can be changed by using [filterSettings-hierarchyMode](#) property.

    }
  ]
};

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Getting Started with the TreeGrid Component in the Preact Framework

This article provides a step-by-step guide for setting up a [Preact](#) project and integrating the Syncfusion React TreeGrid component.

Preact is a fast and lightweight JavaScript library for building user interfaces. It's often used as an alternative to larger frameworks like React. The key difference is that Preact is designed to be smaller in size and faster in performance, making it a good choice for projects where file size and load times are critical factors.

Prerequisites

[System requirements for Syncfusion React UI components](#)

[Set up the Preact project](#)

To create a new **Preact** project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm init preact
```

```
,
```

or

```
`bash
```

```
yarn init preact
```

```
,
```

Using one of the above commands will lead you to set up additional configurations for the project, as below:

1\ Define the project name: We can specify the name of the project directly. Let's specify the name of the project as **my-project** for this article.

```
`bash
```

```
T Preact - Fast 3kB alternative to React with the same modern API
```

```
|
```

- Project directory:

```
| my-project
```

```
—
```

```
,
```

2\ Choose **JavaScript** as the framework variant to build this Preact project using JavaScript and React.

```
`bash
```

```
T Preact - Fast 3kB alternative to React with the same modern API
```

```
|
```

- Project language:

```
| > JavaScript
|   TypeScript
—
```

```
,
`
```

3\). Then configure the project as below for this article.

```
`bash
```

```
T Preact - Fast 3kB alternative to React with the same modern API
```

```
|
```

- Use router?

```
| Yes / > No
```

```
—
```

```
|
```

- Prerender app (SSG)?

```
| Yes / > No
```

```
—
```

```
|
```

- Use ESLint?

```
| Yes / > No
```

```
—
```

```
,
`
```

5\). Upon completing the aforementioned steps to create `my-project`, run the following command to jump into the project directory:

```
`bash
```

```
cd my-project
```

```
,
`
```

Now that `my-project` is ready to run with default settings, let's add Syncfusion components to the project.

Add the Syncfusion React packages

Syncfusion React component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion React components in the project, install the corresponding npm package.

This article uses the [React TreeGrid component](#) as an example. To use the React TreeGrid component in the project, the `@syncfusion/ej2-react-treegrid` package needs to be installed using the following command:

```
`bash
```

```
npm install @syncfusion/ej2-react-treegrid --save
```

```
,
```

```
or
```

```
`bash
```

```
yarn add @syncfusion/ej2-react-treegrid
```

```
,
```

Import Syncfusion CSS styles

You can import themes for the Syncfusion React component in various ways, such as using CSS or SASS styles from npm packages, CDN, CRG and [Theme Studio](#). Refer to [themes topic](#) to know more about built-in themes and different ways to refer to theme's in a React project.

In this article, the `Material 3` theme is applied using CSS styles, which are available in installed packages. The necessary `Material 3` CSS styles for the TreeGrid component and its dependents were imported into the `src/style.css` file.

~/SRC/STYLE.CSS

```
@import '../node_modules/@syncfusion/ej2-base/styles/material3.css';
@import '../node_modules/@syncfusion/ej2-buttons/styles/material3.css';
@import '../node_modules/@syncfusion/ej2-calendars/styles/material3.css';
@import '../node_modules/@syncfusion/ej2-dropdowns/styles/material3.css';
@import '../node_modules/@syncfusion/ej2-inputs/styles/material3.css';
@import '../node_modules/@syncfusion/ej2-navigations/styles/material3.css';
@import '../node_modules/@syncfusion/ej2-popups/styles/material3.css';
@import '../node_modules/@syncfusion/ej2-splitbuttons/styles/material3.css';
@import "../node_modules/@syncfusion/ej2-grids/styles/material3.css";
@import "../node_modules/@syncfusion/ej2-react-treegrid/styles/material3.css";
```

The order of importing CSS styles should be in line with its dependency graph.

Add the Syncfusion React component

Follow the below steps to add the React TreeGrid component to the Vite project:

1\ Before adding the TreeGrid component to your markup, import the TreeGrid component in the `src/index.jsx` file.

~/SRC/INDEX.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
```

2\ Then, define the TreeGrid component with the [dataSource](#) property and column definitions. Declare the values for the `dataSource` property.

~/SRC/INDEX.JSX

```

import { render } from 'preact';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import './style.css';
function App() {
  let sortData = [
    {

  </ColumnsDirective>
</TreeGridComponent>
</App />, document.querySelector('#app'))

```

Run the project

To run the project, use the following command:

```
`bash
```

npm run dev

,

or

`bash

yarn run dev

,

The output will appear as follows:

Category	Order Name	Order Date	Price
Foodstuffs	Order 1	03/03/2017	\$134
Protein supplement	Whey Protein	03/03/2017	\$25
Protein supplement	Glutamine Fuel	04/03/2017	\$20

Data Binding

Data binding in React Treegrid component

The TreeGrid uses [Link to the Video](#), which supports both RESTful JSON data services binding and local JavaScript object array binding. The [dataSource](#) property can be assigned either with the instance of [DataManager](#) or JavaScript object array collection.

It supports two kinds of data binding method:

- Local data
- Remote data

To get start quickly with Data Binding, you can check on this video:

Binding with ajax

You can use TreeGrid [dataSource](#) property to bind the data source to TreeGrid from external Fetch request. In the below code we have fetched the data source from the server with the help of Fetch request and provided that to [dataSource](#) property by using `onSuccess` event of the Fetch.

APP.JSX

```
import { Fetch } from '@syncfusion/ej2-base';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
function App() {
  const pageOptions = { pageSize: 7 };
  let treegridInstance;
```

```

    const handleClick = () => {
      if (treegridInstance) {
        const fetch = new
Fetch("https://ej2services.syncfusion.com/production/web-
services/api/SelfReferenceData", "GET");
        treegridInstance.showSpinner();
        const treegrid = treegridInstance;
        fetch.send();
        fetch.onSuccess = (data) => {
          treegrid.hideSpinner();
          treegrid.dataSource = data;
        };
      }
    };
    return (<div className='control-pane'>
      <div className='control-section'>
        <button onClick={handleClick}>Bind Data</button>
        <TreeGridComponent treeColumnIndex={1} idMapping='TaskID'
parentIdMapping='ParentItem' height='210' allowPaging={true}
pageSettings={pageOptions} ref={treegrid => treegridInstance = treegrid}>
          <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Task ID'
width='90' textAlign='Right' />
            <ColumnDirective field='TaskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='Duration' headerText='Duration'
width='80' textAlign='Right' />
          </ColumnsDirective>
          <Inject services={[Page]} />
        </TreeGridComponent>
      </div>
    </div>);
  }
;
export default App;

```

APP.TSX

```

import { Fetch } from '@syncfusion/ej2-base';
import { ColumnDirective, ColumnsDirective, TreeGrid, TreeGridComponent }
from '@syncfusion/ej2-react-treegrid';
import { Inject, Page, PageSettingsModel } from '@syncfusion/ej2-react-
treegrid';
import * as React from 'react';
function App() {
  const pageOptions: PageSettingsModel = { pageSize: 7 };
  let treegridInstance: TreeGridComponent | null;
  const handleClick = () => {
    if (treegridInstance) {
      const fetch = new
Fetch("https://ej2services.syncfusion.com/production/web-
services/api/SelfReferenceData", "GET");
      treegridInstance.showSpinner();
      const treegrid = treegridInstance;

```

```

        fetch.send();
        fetch.onSuccess = (data: object) => {
            treegrid.hideSpinner();
            treegrid.dataSource = data;
        };
    }
}

return (<div className='control-pane'>
    <div className='control-section'>
        <button onClick={handleClick}>Bind Data</button>
        <TreeGridComponent treeColumnIndex={1} idMapping='TaskID'
parentIdMapping='ParentItem' height='210' allowPaging={true}
pageSettings={pageOptions} ref={treegrid =>
treegridInstance=treegrid}>
            <ColumnsDirective>
                <ColumnDirective field='TaskID' headerText='Task ID'
width='90' textAlign='Right' />
                <ColumnDirective field='TaskName' headerText='Task Name'
width='180' />
                <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
                <ColumnDirective field='Duration' headerText='Duration'
width='80' textAlign='Right' />
            </ColumnsDirective>
            <Inject services={[Page]} />
        </TreeGridComponent>
    </div>
</div>);
};
export default App;

```

If you bind the `dataSource` from this way, then it acts like a local `dataSource`. So you cannot perform any server side crud actions.

Handling `expandStateMapping`

To denotes the expand status of parent row, define the `expandStateMapping` property of tree grid.

The `expandStateMapping` property maps the field name in data source, that denotes whether parent record is in expanded or collapsed state and this is useful to renders parent row in expanded or collapsed state based on this mapping property value in data source.

`ts

```

import { DataManager, UrlAdaptor } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';

function App() {
    const dataManager: DataManager = new DataManager({
        adaptor: new UrlAdaptor,
        url: "Home/DataSource",

```

```

});
return <TreeGridComponent dataSource={dataManager} treeColumnIndex={1} idMapping= 'TaskID'
parentIdMapping='ParentValue' hasChildMapping='isParent' expandStateMapping='IsExpanded'
height='400'>
<ColumnsDirective>
<ColumnDirective field='TaskID' headerText='Task ID' width='90' textAlign='Right'/>
<ColumnDirective field='TaskName' headerText='Task Name' width='180'/>
<ColumnDirective field='Duration' headerText='Duration' width='80' textAlign='Right' />
</ColumnsDirective>
</TreeGridComponent>
};
export default App;
`

```

The following code example defines `expandStateMapping` property at server end.

```

`ts
public ActionResult ExpandStateMapping()
{
return View();
}
public class TreeData
{
public static List<TreeData> tree = new List<TreeData>();
[System.ComponentModel.DataAnnotations.Key]
public int TaskID { get; set; }
public string TaskName { get; set; }
public int Duration { get; set; }
public int? ParentValue { get; set; }
public bool? isParent { get; set; }
public bool IsExpanded { get; set; }
public TreeData() { }
public static List<TreeData> GetTree()
{
if (tree.Count == 0)

```

```

{
int root = 0;
for (var t = 1; t <= 500; t++)
{
Random ran = new Random();
string math = (ran.Next() % 3) == 0 ? "High" : (ran.Next() % 2) == 0 ? "Release Breaker" : "Critical";
string progr = (ran.Next() % 3) == 0 ? "Started" : (ran.Next() % 2) == 0 ? "Open" : "In Progress";
root++;
int rootItem = root;
tree.Add(new TreeData() { TaskID = rootItem, TaskName = "Parent task " + rootItem.ToString(), isParent
= true, IsExpanded = false, ParentValue = null, Duration = ran.Next(1, 50) });
int parent = root;
for (var d = 0; d < 1; d++)
{
root++;
string value = ((parent + 1) % 3 == 0) ? "Low" : "Critical";
int par = parent + 1;
progr = (ran.Next() % 3) == 0 ? "In Progress" : (ran.Next() % 2) == 0 ? "Open" : "Validated";
int iD = root;
tree.Add(new TreeData() { TaskID = iD, TaskName = "Child task " + iD.ToString(), isParent = true,
IsExpanded = false, ParentValue = rootItem, Duration = ran.Next(1, 50) });
int subparent = root;
for (var c = 0; c < 500; c++)
{
root++;
string val = ((subparent + c + 1) % 3 == 0) ? "Low" : "Critical";
int subchild = subparent + c + 1;
string progress = (ran.Next() % 3) == 0 ? "In Progress" : (ran.Next() % 2) == 0 ? "Open" : "Validated";
int childID = root ;
tree.Add(new TreeData() { TaskID = childID, TaskName = "sub Child task " + childID.ToString(), isParent =
false, IsExpanded = false, ParentValue = subparent, Duration = ran.Next(1, 50) });
}
}
}

```

```

}
return tree;
}
}
`

```

Custom binding

It is possible to handle data processing externally and bind the result to the TreeGrid. This helps you to provide your own custom data logic. TreeGrid expects an object as the result of the custom logic and the emitted value should be an object with properties result and count.

In this context, we are going to use Fetch from our @syncfusion/ej2-base library for handling remote interaction, you can choose any HTTP client as per your choice.

```

`ts
import React, { Component } from 'react';
import { Fetch, getValue } from '@syncfusion/ej2-base';

import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject, Page, Edit, Sort,
PageSettingsModel, EditSettingsModel, DataStateChangeEventArgs } from '@syncfusion/ej2-react-treegrid';

import { DataResult } from '@syncfusion/ej2-data';

function App() {
  const fetch: Fetch = new Fetch({
    mode: true,
    onFailure: (e: Error) => false,
    type: 'GET'
  });

  /// this url is just a test url, provide the required url for fetching the data from server.
  const BASE_URL: string = 'http://localhost:51473/api/Tasks';

  const execute = (state: DataStateChangeEventArgs): Promise<DataResult> => {
    return getData(state);
  }

  const getData = (state: DataStateChangeEventArgs): Promise<DataResult> => {
    const pageQuery = `skip=${state.skip}&stop=${state.take}`;
    /// filter query for fetching only the root level records
    const treegridQuery = `filter='ParentId eq null'`;

    fetch.url = `${BASE_URL}?${pageQuery}&${treegridQuery}&$inlinecount=allpages&$format=json`;
    return fetch.send().then((response: any) => {

```

```

const data: any = response;
return {
  count: parseInt(getValue('d.count', data), 10),
  result: getValue('d.results', data)
};
});
}

let treegridObj: TreeGridComponent | null | undefined;
const pageSettings: PageSettingsModel = { pageSize: 2, pageSizeMode: 'Root' };
const editSettings: EditSettingsModel = { allowAdding: true, allowDeleting: true, allowEditing: true,
mode: 'Row' };
const getDataSource = () => {
  if(treegridObj && (treegridObj.dataSource instanceof Array
&& !(treegridObj.dataSource as object[]).length)) {
    const state = { skip: 0, take: 2 }; /// take value should always be equal to the pageSize of TreeGrid
    dataStateChange(state);
  }
}

const dataStateChange = (state : any): void => {
  execute(state).then(( treedata ) => {
    if(treegridObj) {
      treegridObj.dataSource = treedata
    }
  });
}

return (
  <div className="App">
    <TreeGridComponent dataSource={[]} dataBound={getDataSource}
    ref={treegrid => treegridObj = treegrid} hasChildMapping='isParent'
    dataStateChange={dataStateChange} id="TreeGrid" idMapping='TaskId' parentIdMapping='ParentId'
    allowPaging={true} treeColumnIndex={1} pageSettings={pageSettings} editSettings={editSettings} >
    <ColumnsDirective>
      <ColumnDirective field='TaskId' headerText='ID' width='70' textAlign='Right'
      isPrimaryKey={true}></ColumnDirective>

```

```

<ColumnDirective field='Task Name' headerText='Name' width='160'></ColumnDirective>
<ColumnDirective field='Duration' headerText='Duration' width='90' textAlign='Right' />
<ColumnDirective field='Progress' headerText='Progress' width='90' textAlign='Right' />
</ColumnsDirective>
<Inject services={[Page, Edit, Sort]} />
</TreeGridComponent>
</div>
);
}
export default App;
`

```

We have a limitation for Custom Binding feature of TreeGrid. This feature works only for Self Referential data binding with `pageSizeMode` as `Root`.

Handling child data

Using the custom binding feature you can bind the child data for a parent record as per your custom logic. When a parent record is expanded, [dataStateChange](#) event is triggered in which you can assign your custom data to the `childData` property of the `dataStateChange`(`../api/treegrid/#datastatechange`) event arguments. After assigning the child data, `childDataBind` method should be called from the [dataStateChange](#) event arguments to indicate that the data is bound.

In this context, initially we have assigned only the parent records to the treegrid `dataSource` and fetched the required child records in the [dataStateChange](#) event.

```

`ts
import React, { Component } from 'react';
import { Fetch, getValue } from '@syncfusion/ej2-base';

import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject, Page, Edit, Sort,
PageSettingsModel, EditSettingsModel, DataStateChangeEventArgs } from '@syncfusion/ej2-react-treegrid';

import { DataResult } from '@syncfusion/ej2-data';

function App() {
  const fetch: Fetch = new Fetch({
    mode: true,
    onFailure: (e: Error) => false,
    type: 'GET'
  });

  const BASE_URL: string = 'http://localhost:51473/api/Tasks';

```

```

const execute = (state: DataStateChangeEventArgs): Promise<DataResult> => {
  if (state.requestType === 'expand') {
    return getChildData(state);
  }
  else {
    return getData(state);
  }
}

const getData = (state: DataStateChangeEventArgs): Promise<DataResult> => {
  const pageQuery = `${skip}=${state.skip}&${stop}=${state.take}`;
  /// filter query for fetching only the root level records
  const treegridQuery = "$filter='ParentId eq null'";
  fetch.url = `${BASE_URL}?${pageQuery}&${treegridQuery}&${inlinecount=allpages}&${format=json}`;
  return fetch.send().then((response: any) => {
    const data: any = response;
    return {
      count: parseInt(getValue('d.count', data), 10),
      result: getValue('d.results', data)
    };
  });
}

const getChildData = (state: DataStateChangeEventArgs): Promise<DataResult> => {
  let expandQuery: any;
  if (state.requestType === 'expand') {
    /// filter query for fetching the respective child records
    expandQuery = `${filter}=${'ParentId eq ' + getValue('TaskId', state.data)}`;
  }
  fetch.url = `${BASE_URL}?&${expandQuery}&${inlinecount=allpages}&${format=json}`;
  return fetch.send().then((response: any) => {
    const data: any = response;
    return data;
  });
}

```

```

let treegridObj: TreeGridComponent | null;

const pageSettings: PageSettingsModel = { pageSize: 4, pageSizeMode: 'Root' };

const editSettings: EditSettingsModel = { allowAdding: true, allowDeleting:true, allowEditing: true,
mode: 'Row' };

const getDatasource = (): void => {
if(treegridObj && (treegridObj.dataSource instanceof Array
&& !(treegridObj.dataSource as object[]).length)) {
const state = { skip: 0, take: 4 }; /// take value should always be equal to the pageSize of TreeGrid
dataStateChange(state);
}
}

const dataStateChange = (state : any): void => {
if(state.requestType === 'expand'){
execute(state).then((childData: any) => {
state.childData = childData;
state.childDataBind();
});
} else {
execute(state).then(( treedata ) => {
if(treegridObj) {
treegridObj.dataSource = treedata
}
});
}
}

return (
<div className="App">
<TreeGridComponent dataSource={[]} dataBound={getDatasource}
ref={treegrid => treegridObj = treegrid} hasChildMapping='isParent'
dataStateChange={dataStateChange} id="TreeGrid" idMapping='TaskId' parentIdMapping='ParentId'
allowPaging={true} treeColumnIndex={1} pageSettings={pageSettings} editSettings={editSettings} >
<ColumnsDirective>
<ColumnDirective field='TaskId' headerText='ID' width='70' textAlign='Right'
isPrimaryKey={true}></ColumnDirective>

```

```

<ColumnDirective field='Task Name' headerText='Name' width='160'></ColumnDirective>
<ColumnDirective field='Duration' headerText='Duration' width='90' textAlign='Right' />
<ColumnDirective field='Progress' headerText='Progress' width='90' textAlign='Right' />
</ColumnsDirective>
<Inject services={[Page, Edit, Sort]} />
</TreeGridComponent>
</div>
);
}
export default App;
`

```

Handling Tree Grid actions

For TreeGrid actions such as paging, sorting, etc dataStateChange event will be invoked. You have to query and resolve data using Fetch in this event based on the state arguments.

```

`ts
import React, { Component } from 'react';
import { Fetch, getValue } from '@syncfusion/ej2-base';

import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject, Page, Edit, Sort,
PageSettingsModel, EditSettingsModel, DataStateChangeEventArgs } from '@syncfusion/ej2-react-treegrid';

import { DataResult } from '@syncfusion/ej2-data';

function App() {
  const fetch: Fetch = new Fetch({
    mode: true,
    onFailure: (e: Error) => false,
    type: 'GET'
  });

  const BASE_URL: string = 'http://localhost:51473/api/Tasks';

  const execute = (state: DataStateChangeEventArgs): Promise<DataResult> => {
    return getData(state);
  }

  const getData = (state: DataStateChangeEventArgs): Promise<DataResult> => {
    const pageQuery = $skip=${state.skip}&$top=${state.take};
    /// filter query for fetching only the root level records

```

```

const treegridQuery = "$filter='ParentId eq null'";
let sortQuery: string = "";
if (state && (state.sorted || []).length) {
  sortQuery = &${orderby}= + ((state).sorted as Sorts[]).map((obj: Sorts) => {
    return obj.direction === 'descending' ? ${obj.name} desc : obj.name;
  }).reverse().join(',');
}
fetch.url =
  ${BASE_URL}?${pageQuery}&${treegridQuery}&${sortQuery}&${inlinecount=allpages}&${format=
  json};
return fetch.send().then((response: any) => {
  const data: any = response;
  return {
    count: parseInt(getValue('d.count', data), 10),
    result: getValue('d.results', data)
  };
});
}
let treegridObj: TreeGridComponent | null;
const pageSettings: PageSettingsModel = { pageSize: 2, pageSizeMode: 'Root' };
const editSettings: EditSettingsModel = { allowAdding: true, allowDeleting: true, allowEditing: true,
mode: 'Row' };
const getDataSource = (): void => {
  if((treegridObj && (treegridObj.dataSource instanceof Array
  && !(treegridObj.dataSource as object[]).length)) {
    const state = { skip: 0, take: 2 }; /// take value should always be equal to the pageSize of TreeGrid
    dataStateChange(state);
  }
}
const dataStateChange = (state : any): void => {
  execute(state).then(( treedata ) => {
    if(treegridObj) {
      treegridObj.dataSource = treedata
    }
  }
}

```

```

});
}
return (
  <div className="App">
    <TreeGridComponent dataSource={[]} dataBound={getDataSource}
      ref={treegrid => treegridObj = treegrid} hasChildMapping='isParent'
      dataStateChange={dataStateChange} id="TreeGrid" idMapping='TaskId' parentIdMapping='ParentId'
      allowPaging={true} treeColumnIndex={1} pageSettings={pageSettings} editSettings={editSettings} >
      <ColumnsDirective>
        <ColumnDirective field='TaskId' headerText='ID' width='70' textAlign='Right'
          isPrimaryKey={true}></ColumnDirective>
        <ColumnDirective field='Task Name' headerText='Name' width='160'></ColumnDirective>
        <ColumnDirective field='Duration' headerText='Duration' width='90' textAlign='Right' />
        <ColumnDirective field='Progress' headerText='Progress' width='90' textAlign='Right' />
      </ColumnsDirective>
      <Inject services={[Page, Edit, Sort]} />
    </TreeGridComponent>
  </div>
);
}
export default App;
`

```

Performing CRUD actions

The [dataSourceChanged](#) event will be triggered for updating the grid data. You can perform the save operation based on the event arguments and call the `endEdit` method to indicate the completion of save operation.

```

`ts
import * as React from 'react';
import { Fetch, getValue } from '@syncfusion/ej2-base';
import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject, Page, Edit, Sort,
  PageSettingsModel, EditSettingsModel, DataSourceChangedEventArgs } from '@syncfusion/ej2-react-treegrid';
import { DataResult } from '@syncfusion/ej2-data';
import * as ReactDOM from 'react-dom';
import { DataSourceChangedEventArgs } from '@syncfusion/ej2-grids';

```

```

function App() {
  const fetch: Fetch = new Fetch({
    mode: true,
    onFailure: (e: Error) => false,
    type: 'GET'
  });

  let BASE_URL: string = 'http://localhost:51473/api/Tasks';
  const execute = (state: DataStateChangeEventArgs): Promise<DataResult> => {
    if (state.requestType === 'expand') {
      return getChildData(state);
    } else {
      return getData(state);
    }
  }

  const getData = (state: DataStateChangeEventArgs): Promise<DataResult> => {
    const pageQuery = `${skip}=${state.skip}&${top}=${state.take}`;
    /// filter query for fetching only the root level records
    const treegridQuery = "$filter='ParentId eq null'";
    fetch.url = `${BASE_URL}?${pageQuery}&${treegridQuery}&${inlinecount=allpages}&${format=json}`;
    return fetch.send().then((response: any) => {
      const data: any = response;
      return {
        count: parseInt(getValue('d.count', data), 10),
        result: getValue('d.results', data)
      };
    });
  }

  const getChildData = (state: DataStateChangeEventArgs): Promise<DataResult> => {
    let expandQuery: any;
    if (state.requestType === 'expand') {
      expandQuery = `filter=${'ParentId eq ' + getValue('TaskId', state.data)}`;
    }
    fetch.url = `${BASE_URL}?&${expandQuery}&${inlinecount=allpages}&${format=json}`;
  }
}

```

```
return fetch.send().then((response: any) => {
  const data: any = response;
  return data;
});
}

const addRecord = (state: DataSourceChangedEventArgs) : Promise<DataResult> => {
  const add: Fetch = new Fetch({
    mode: true,
    onFailure: (e: Error) => false,
    type: 'POST'
  });
  return add.send(JSON.stringify(state.data)).then((response: any) => {
    const data: any = response;
    return data;
  });
}

const updateRecord = (state: DataSourceChangedEventArgs) : Promise<DataResult> => {
  const update: Fetch = new Fetch({
    mode: true,
    onFailure: (e: Error) => false,
    type: 'PUT'
  });
  return update.send(JSON.stringify(state.data)).then((response: any) => {
    const data: any = response;
    return data;
  });
}

const deleteRecord = (state: any) : Promise<DataResult> => {
  const remove: Fetch = new Fetch({
    mode: true,
    onFailure: (e: Error) => false,
    type: 'DELETE'
  });
}
```

```

return remove.send(JSON.stringify((state.data && state.data[0]))).then((response: any) => {
const data: any = response;
return data;
});
}

let treegridObj: TreeGridComponent | null | undefined;
const pageSettings: PageSettingsModel = { pageSize: 4, pageSizeMode: 'Root' };
const editSettings: EditSettingsModel = { allowAdding: true, allowDeleting: true, allowEditing: true,
mode: 'Row' };
const getDataSource = (): void => {
if(treegridObj && (treegridObj.dataSource instanceof Array
&& !(treegridObj.dataSource as object[]).length)) {
const state = { skip: 0, take: 4 }; /// take value should always be equal to the pageSize of TreeGrid
dataStateChange(state);
}
}

const dataStateChange = (state : any): void => {
if (state.requestType === 'expand') {
execute(state).then((childData: any) => {
state.childData = childData;
state.childDataBind();
});
} else {
execute(state).then(( treedata ) => {
if(treegridObj) {
treegridObj.dataSource = treedata;
}
});
}
}

const dataSourceChanged = (state: any) => {
if (state.action === 'add') {
addRecord(state).then(() => state.endEdit());
}
}

```

```

} else if (state.action === 'edit') {
  updateRecord(state).then(() => state.endEdit());
} else if (state.requestType === 'delete') {
  deleteRecord(state).then(() => state.endEdit());
}
}
return (
  <div className="App">
    <TreeGridComponent dataSource={[]} dataBound={getDataSource} ref={treegrid => treegridObj =
treegrid} dataSourceChanged={dataSourceChanged} dataStateChange={dataStateChange} id="TreeGrid"
idMapping='TaskId' parentIdMapping='ParentId' allowPaging={true} treeColumnIndex={1}
pageSettings={pageSettings} editSettings={editSettings} hasChildMapping='isParent'>
      <ColumnsDirective>
        <ColumnDirective field='TaskId' headerText='ID' width='70' textAlign='Right' isPrimaryKey={true}/>
        <ColumnDirective field='Task Name' headerText='Name' width='160'/>
        <ColumnDirective field='Duration' headerText='Duration' width='90' textAlign='Right' />
        <ColumnDirective field='Progress' headerText='Progress' width='90' textAlign='Right' />
      </ColumnsDirective>
      <Inject services={[Page, Edit, Sort]} />
    </TreeGridComponent>
  </div>
);
}
export default App;
`

```

Calculate aggregates

The footer aggregate values should be calculated and sent along with the **dataSource** property as follows. The aggregate property of the data source should contain the aggregate value assigned to the property named in the **field – type** format. For example, the **Sum** aggregate value for the **Duration** field should be assigned to the property named as **Duration - sum**.

```

{
  result: [{..}, {..}, {..}, ...],
  count: 830,
  aggregates: { 'Freight - sum' : 450, 'EmployeeID - min': 1 }
}

```

```
}
,
```

Provide excel filter data source

The [dataStateChange](#) event will be triggered with appropriate arguments when the excel filter requests the filter choice data source. You need to resolve the excel filter data source using the **dataSource** resolver function from the state argument as follows.

```
`ts
import React, { Component } from 'react';
import { Fetch, getValue } from '@syncfusion/ej2-base';

import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject, Page, Edit, Sort,
PageSettingsModel, EditSettingsModel, FilterSettingsModel, DataStateChangeEventArgs } from
 '@syncfusion/ej2-react-treegrid';
import { DataResult } from '@syncfusion/ej2-data';

function App() {
  const fetch: Fetch = new Fetch({
    mode: true,
    onFailure: (e: Error) => false,
    type: 'GET'
  });

  /// this url is just a test url, provide the required url for fetching the data from server.
  const BASE_URL: string = 'http://localhost:51473/api/Tasks';
  const execute = (state: DataStateChangeEventArgs): Promise<DataResult> => {
    return getData(state);
  }

  const getData = (state: DataStateChangeEventArgs): Promise<DataResult> => {
    const pageQuery = `${skip}=${state.skip}&${top}=${state.take}`;
    /// filter query for fetching only the root level records
    const treegridQuery = "$filter='ParentId eq null'";
    fetch.url = `${BASE_URL}?${pageQuery}&${treegridQuery}&$inlinecount=allpages&$format=json`;
    return fetch.send().then((response: any) => {
      const data: any = response;
      return {
        count: parseInt(getValue('d.count', data), 10),
        result: getValue('d.results', data)
      };
    });
  }
}
```

```

});
}

let treegridObj: TreeGridComponent | null ;
const pageSettings: PageSettingsModel = { pageSize: 2, pageSizeMode: 'Root' };
const filterSettings: FilterSettingsModel = { type: 'Excel' };
const editSettings: EditSettingsModel = { allowAdding: true, allowDeleting:true, allowEditing: true,
mode: 'Row' };
const getDataSource = (): void => {
if(treegridObj && (treegridObj.dataSource instanceof Array
&& !(treegridObj.dataSource as object[]).length)) {
const state = { skip: 0, take: 2 }; /// take value should always be equal to the pageSize of TreeGrid
dataStateChange(state);
}
}
const dataStateChange = (state : any): void => {
if (state.action && (state.action.requestType === 'filterchoicerequest'
|| state.action.requestType === 'filtersearchbegin')) {
execute(state).then((e) => state.dataSource && state.dataSource(e.result));
}
else {
execute(state).then(( treedata ) => {
if(treegridObj) {
treegridObj.dataSource = treedata;
}
});
}
}
return (
<div className="App">
<TreeGridComponent dataSource={[]} dataBound={getDataSource}
ref={treegrid => treegridObj = treegrid} hasChildMapping='isParent'
dataStateChange={dataStateChange} id="TreeGrid" idMapping='TaskId' parentIdMapping='ParentId'
allowPaging={true} treeColumnIndex={1} pageSettings={pageSettings} editSettings={editSettings} >
<ColumnsDirective>

<ColumnDirective field='Progress' headerText='Progress' width='90' textAlign='Right' />
</ColumnsDirective>
<Inject services={[Page, Edit, Sort]} />
</TreeGridComponent>
</div>
);
}
export default App;
`

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Local data in React Treegrid component

In Local Data binding, data source for rendering the TreeGrid control is retrieved from the same application locally.

Two types of Data binding are possible with the TreeGrid control.

- Hierarchical Datasource binding
- Self-Referential Data binding (Flat Data)

To bind local data to the treegrid, you can assign a JavaScript object array to the [dataSource](#) property. The local data source can also be provided as an instance of the **DataManager**.

By default, **DataManager** uses [JsonAdaptor](#) for local data-binding.

Hierarchy data source binding

The [childMapping](#) property is used to map the child records in hierarchy data source.

The following code example shows you how to bind the hierarchical local data into the TreeGrid control.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, Page, TreeGridComponent }
  from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const pageOptions = { pageSize: 7 };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' allowPaging={true} pageSettings={pageOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskId' headerText='Task ID' width='90'
  textAlign='Right' />

```

```

        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, Page, PageSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const pageOptions: PageSettingsModel = { pageSize: 7 };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
    allowPaging={true} pageSettings={pageOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page]} />
    </TreeGridComponent>
};
export default App;

```

* Remote data binding is not supported for Hierarchy Data.

Self-Referential data binding (Flat data)

TreeGrid is rendered from Self-Referential data structures by providing two fields, ID field and parent ID field.

- **ID Field:** This field contains unique values used to identify nodes. Its name is assigned to the [idMapping](#) property.
- **Parent ID Field:** This field contains values that indicate parent nodes. Its name is assigned to the [parentIdMapping](#) property.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, Page, TreeGridComponent
} from '@syncfusion/ej2-react-treegrid';

```

```
import * as React from 'react';
import { projectData } from './datasource';
function App() {
  const pageOptions = { pageSize: 7 };
  return <TreeGridComponent dataSource={projectData} treeColumnIndex={1}
  idMapping='TaskID' parentIdMapping='parentID' allowPaging={true}
  pageSettings={pageOptions}>
    <ColumnsDirective>
      <ColumnDirective field='TaskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='TaskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='StartDate' headerText='Start Date'
      width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='Duration' headerText='Duration' width='80'
      textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Inject, Page, PageSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { projectData } from './datasource';
function App() {
  const pageOptions: PageSettingsModel = { pageSize: 7 };
  return <TreeGridComponent dataSource={projectData} treeColumnIndex={1}
  idMapping='TaskID'
  parentIdMapping='parentID' allowPaging={true}
  pageSettings={pageOptions}>
    <ColumnsDirective>
      <ColumnDirective field='TaskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='TaskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='StartDate' headerText='Start Date'
      width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='Duration' headerText='Duration' width='80'
      textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>
};
export default App;
```

Herewith we have provided list of reserved properties and the purpose used in TreeGrid. We recommend to avoid these reserved properties for Internal purpose (To get rid of conflicts).

Reserved keywords | Purpose

childRecords | Specifies the childRecords of a parentData

hasChildRecords | Specifies whether the record contains child records

hasFilteredChildRecords | Specifies whether the record contains filtered child records

expanded | Specifies whether the child records are expanded

parentItem | Specifies the parentItem of childRecords

index | Specifies the index of current record

level | Specifies the hierarchy level of record

filterLevel | Specifies the hierarchy level of filtered record

parentIdMapping | Specifies the parentId

uniqueID | Specifies the unique ID of a record

parentUniqueID | Specifies the parent Unique ID of a record

checkboxState | Specifies the checkbox state of a record

isSummaryRow | Specifies the summary of a record

taskData | Specifies the main data

primaryParent | Specifies the Primary data

Remote data in React Treegrid component

To bind remote data to TreeGrid component, assign service data as an instance of **DataManager** to the [dataSource](#) property. To interact with remote data source, provide the endpoint **url** and define the [hasChildMapping](#) property of treegrid.

The [hasChildMapping](#) property maps the field name in data source, that denotes whether current record holds any child records. This is useful internally to show expand icon while binding child data on demand.

The TreeGrid provides **Load on Demand** support for rendering remote data. The Load on demand is considered in TreeGrid for the following actions.

- Expanding root nodes.
- Navigating pages, with paging enabled in TreeGrid.

When load on demand is enabled, all the root nodes are rendered in collapsed state at initial load.

When load on demand support is enabled in TreeGrid with paging, the current or active page's root node alone will be rendered in collapsed state. On expanding the root node, the child nodes will be loaded from the remote server.

When a root node is expanded, its child nodes are rendered and are cached locally, such that on consecutive expand/collapse actions on root node, the child nodes are loaded from the cache instead from the remote server.

Similarly, if the user navigates to a new page, the root nodes of that specific page, will be rendered with request to the remote server.

Remote Data Binding supports only Self-Referential Data and by default the `pageSizeMode` for Remote Data is `Root` mode. i.e only root node's count will be shown in pager while using Remote Data

APP.JSX

```
import { DataManager, WebApiAdaptor } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, Inject, Page, TreeGridComponent }
  from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
function App() {
  const data = new DataManager({
    adaptor: new WebApiAdaptor,
    crossDomain: true,
    url: 'https://ej2services.syncfusion.com/production/web-
services/api/SelfReferenceData'
  });
  return <TreeGridComponent dataSource={data} hasChildMapping='isParent'
treeColumnIndex={1} idMapping='TaskID' parentIdMapping='ParentItem'
height='260' allowPaging={true}>
    <ColumnsDirective>
      <ColumnDirective field='TaskID' headerText='Task ID' width='90'
textAlign='Right' />
      <ColumnDirective field='TaskName' headerText='Task Name'
width='180' />
      <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='Duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { DataManager, WebApiAdaptor } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, Inject, Page, TreeGridComponent }
  from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
function App() {
  const data = new DataManager({
    adaptor: new WebApiAdaptor,
    crossDomain: true,
    url: 'https://ej2services.syncfusion.com/production/web-
services/api/SelfReferenceData'
  });
  return <TreeGridComponent dataSource={data} hasChildMapping='isParent'
treeColumnIndex={1} idMapping='TaskID' parentIdMapping='ParentItem'
height='260' allowPaging={true}>
    <ColumnsDirective>
      <ColumnDirective field='TaskID' headerText='Task ID' width='90'
textAlign='Right' />
      <ColumnDirective field='TaskName' headerText='Task Name'
width='180' />
```

```

        <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='Duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>
};
export default App;

```

By default, **DataManager** uses [ODataAdaptor](#) for remote data-binding.

Based on the RESTful web services, set the corresponding adaptor to DataManager. Refer [here](#) for more details.

Filtering and searching server-side data operations are not supported in load on demand

[LoadChildOnDemand](#)

While binding remote data to Tree Grid component, by default Tree Grid renders parent rows in collapsed state. Tree Grid provides option to load the child records also during the initial rendering itself for remote data binding by setting [loadChildOnDemand](#) as true.

When [loadChildOnDemand](#) is enabled parent records are rendered in expanded state.

The following code example describes the behavior of the loadChildOnDemand feature of Tree Grid.

```

`ts
import { DataManager, UrlAdaptor } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
function App() {
  const dataManager: DataManager = new DataManager({
    adaptor: new UrlAdaptor,
    insertUrl: "Home/Insert",
    removeUrl: "Home/Delete",
    updateUrl: "Home/Update",
    batchUrl: "Home/Remove",
    url: "Home/DataSource",
  });
  return <TreeGridComponent dataSource={dataManager} treeColumnIndex={1} idMapping= 'TaskID'
    parentIdMapping='parentID' loadChildOnDemand='true' height='270' allowPaging='true'>
    <ColumnsDirective>
    <ColumnDirective field='TaskID' headerText='Task ID' width='90' textAlign='Right' />

```

```

<ColumnDirective field='TaskName' headerText='Task Name' width='180'/>
<ColumnDirective field='StartDate' headerText='Start Date' width='90' textAlign='Right' format='yMd'
type='date' />
<ColumnDirective field='EndDate' headerText='End Date' width='90' format='yMd' textAlign='Right' />
<ColumnDirective field='Priority' headerText='Priority' width='110'/>
</ColumnsDirective>
</TreeGridComponent>
};
export default App;
`

```

Also while using **loadChildOnDemand** we need to handle the child records on server end and it is applicable to CRUD operations also.

The following code example describes handling of child records at server end.

```

`ts
public ActionResult UrlDatasource(DataManagerRequest dm)
{
    if (TreeData.tree.Count == 0)
        TreeData.GetTree();
    IEnumerable DataSource = TreeData.tree;
    DataOperations operation = new DataOperations();
    if (dm.Where != null && dm.Where.Count > 0)
    {
        DataSource = operation.PerformFiltering(DataSource, dm.Where, "and"); //perform filtering
    }
    if (dm.Sorted != null && dm.Sorted.Count > 0)
    {
        DataSource = operation.PerformSorting(DataSource, dm.Sorted); //perform sorting
    }
    var count = DataSource.ToList<TreeData>().Count();
    if (dm.Skip != 0)
    {
        DataSource = operation.PerformSkip(DataSource, dm.Skip); //Paging
    }
    if (dm.Take != 0)

```

```

{
DataSource = operation.PerformTake(DataSource, dm.Take);
}
if (dm.Where != null)
{
DataSource = CollectChildRecords(DataSource, dm); // method to collect child records
}
return dm.RequiresCounts ? Json(new { result = DataSource, count = count }) : Json(DataSource);
}

public IEnumerable CollectChildRecords(IEnumerable datasource, DataManagerRequest dm)
{
DataOperations operation = new DataOperations();
IEnumerable DataSource = TreeData.tree; // use the total DataSource here
string IdMapping = "TaskID"; // define your IdMapping field name here
int[] TaskIds = new int[0];
foreach (var rec in datasource)
{
int taskid = (int)rec.GetType().GetProperty(IdMapping).GetValue(rec);
TaskIds = TaskIds.Concat(new int[] { taskid }).ToArray(); //get the Parentrecord Ids based on IdMapping
Field
}
IEnumerable ChildRecords = null;
foreach (int id in TaskIds)
{
dm.Where[0].value = id;
IEnumerable records = operation.PerformFiltering(DataSource, dm.Where, dm.Where[0].Operator);
//perform filtering to collect the childrecords based on Ids
ChildRecords = ChildRecords == null || (ChildRecords.AsQueryable().Count() == 0) ? records :
((IEnumerable<object>)ChildRecords).Concat((IEnumerable<object>)records); //concat the
childrecords with dataSource
}
if (ChildRecords != null)
{
ChildRecords = CollectChildRecords(ChildRecords, dm); // repeat the operation for inner level child

```

```

if (dm.Sorted != null && dm.Sorted.Count > 0) // perform Sorting
{
    ChildRecords = operation.PerformSorting(ChildRecords, dm.Sorted);
}

datasource = ((IEnumerable<object>)datasource).Concat(((IEnumerable<object>)ChildRecords);
//concat the childrecords with dataSource
}

return datasource;
}
,

```

Offline mode

On remote data binding, all treegrid actions such as paging, loading child on-demand, will be processed on server-side. To avoid postback, set the treegrid to load all data on initialization and make the actions process in client-side. To enable this behavior, use the **offline** property of **DataManager**.

APP.JSX

```

import { DataManager, WebApiAdaptor } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, Inject, Page, TreeGridComponent }
from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
function App() {
    const data = new DataManager({
        adaptor: new WebApiAdaptor,
        crossDomain: true,
        offline: true,
        url: 'https://ej2services.syncfusion.com/production/web-
services/api/SelfReferenceData'
    });
    return <TreeGridComponent dataSource={data} hasChildMapping='isParent'
treeColumnIndex={1} idMapping='TaskID' parentIdMapping='ParentItem'
height='260' allowPaging={true}>
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Task ID'
width='90' textAlign='Right' />
            <ColumnDirective field='TaskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='Duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page]} />
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```
import { DataManager, WebApiAdaptor } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, Inject, Page, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
function App() {
    const data = new DataManager({
        adaptor: new WebApiAdaptor,
        crossDomain: true,
        offline: true,
        url: 'https://ej2services.syncfusion.com/production/web-services/api/SelfReferenceData'
    });
    return <TreeGridComponent dataSource={data}
    hasChildMapping='isParent' treeColumnIndex={1}
    idMapping='TaskID' parentIdMapping='ParentItem' height='260'
    allowPaging={true}>
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Task ID'
            width='90' textAlign='Right' />
            <ColumnDirective field='TaskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='StartDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='Duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page]} />
    </TreeGridComponent>
};
export default App;
```

Custom adaptor

You can create your own adaptor by extending the built-in adaptors. The following demonstrates custom adaptor approach and how to add a serial number for the records by overriding the built-in response processing using the `processResponse` method of the `ODataAdaptor`.

APP.JSX

```
import { DataManager } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { SerialNoAdaptor } from './serialNoAdaptor';
export default class App extends React.Component {
    data = new DataManager({
        adaptor: new SerialNoAdaptor,
        crossDomain: true,
        url: 'https://ej2services.syncfusion.com/production/web-services/api/SelfReferenceData'
    });
    render() {
        return <TreeGridComponent dataSource={this.data}
        hasChildMapping='isParent' treeColumnIndex={2} idMapping='TaskID'
        parentIdMapping='ParentItem' height='260'>
            <ColumnsDirective>
```

```

        <ColumnDirective field='Sno' headerText='Sno' width='90'
textAlign='Right' />
        <ColumnDirective field='TaskID' headerText='Task ID'
width='90' textAlign='Right' />
        <ColumnDirective field='TaskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='Duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
</TreeGridComponent>;
    }
}
;

```

APP.TSX

```

import { DataManager } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { SerialNoAdaptor } from './serialNoAdaptor';
export default class App extends React.Component<{}, {}>{
    public data = new DataManager({
        adaptor: new SerialNoAdaptor,
        crossDomain: true,
        url: 'https://ej2services.syncfusion.com/production/web-
services/api/SelfReferenceData'
    });
    public render() {
        return <TreeGridComponent dataSource={this.data}
hasChildMapping='isParent' treeColumnIndex={2} idMapping='TaskID'
parentIdMapping='ParentItem' height='260'>
            <ColumnsDirective>
                <ColumnDirective field='Sno' headerText='Sno' width='90'
textAlign='Right' />
                <ColumnDirective field='TaskID' headerText='Task ID'
width='90' textAlign='Right' />
                <ColumnDirective field='TaskName' headerText='Task Name'
width='180' />
                <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
                <ColumnDirective field='Duration' headerText='Duration'
width='80' textAlign='Right' />
            </ColumnsDirective>
        </TreeGridComponent>
    }
};

```

SERIALNOADAPTOR.JSX

```

import { setValue } from '@syncfusion/ej2-base';
import { ODataAdaptor } from '@syncfusion/ej2-data';
export class SerialNoAdaptor extends ODataAdaptor {
    processResponse() {

```

```

    let i = 0;
    // calling base class processResponse function
    const original = super.processResponse.apply(this, arguments);
    if (!(original instanceof Array)) {
        // adding serial number
        original.result.forEach((item) => setValue('Sno', ++i, item));
    }
    return original;
}
}

```

SERIALNOADAPTOR.TSX

```

import { setValue } from '@syncfusion/ej2-base';
import { ODataAdapter } from '@syncfusion/ej2-data';
export class SerialNoAdaptor extends ODataAdapter {
    public processResponse() {
        let i: number = 0;
        // calling base class processResponse function
        const original: any = super.processResponse.apply(this, arguments);
        if (!(original instanceof Array)) {
            // adding serial number
            original.result.forEach((item: object) => setValue('Sno', ++i,
item));
        }
        return original;
    }
}

```

Sending additional parameters to the server

To add a custom parameter to the data request, use the [addParams](#) method of [Query](#) class. Assign the [Query](#) object with additional parameters to the treegrid [query](#) property.

APP.JSX

```

import { DataManager, Query, WebApiAdaptor } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
function App() {
    const data = new DataManager({
        adaptor: new WebApiAdaptor,
        crossDomain: true,
        url: 'https://ej2services.syncfusion.com/production/web-
services/api/SelfReferenceData'
    });
    const query = new Query().addParams('ej2treegrid', 'true');
    return <TreeGridComponent dataSource={data} hasChildMapping='isParent'
treeColumnIndex={1} idMapping='TaskID' parentIdMapping='ParentItem'
height='260' query={query}>
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Task ID'
width='90' textAlign='Right' />
            <ColumnDirective field='TaskName' headerText='Task Name'
width='180' />

```

```

        <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='Duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { DataManager, Query, WebApiAdaptor } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
function App() {
    const data = new DataManager({
        adaptor: new WebApiAdaptor,
        crossDomain: true,
        url: 'https://ej2services.syncfusion.com/production/web-
services/api/SelfReferenceData'
    });
    const query = new Query().addParams('ej2treegrid', 'true');
    return <TreeGridComponent dataSource={data}
hasChildMapping='isParent' treeColumnIndex={1} idMapping='TaskID'
parentIdMapping='ParentItem' height='260' query={query}>
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Task ID'
width='90' textAlign='Right' />
            <ColumnDirective field='TaskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='Duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>
};
export default App;

```

Handling HTTP error

During server interaction from the treegrid, some server-side exceptions may occur, and you can acquire those error messages or exception details in client-side using the [actionFailure](#) event.

The argument passed to the [actionFailure](#) event contains the error details returned from the server.

APP.JSX

```

import { DataManager } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
function App() {
    let treegrid;
    const data = new DataManager({

```

```

        url: 'http://some.com/invalidUrl'
    });
    const onActionFailure = (e) => {
        const span = document.createElement('span');
        if (treegrid) {
            treegrid.element.parentNode
                .insertBefore(span, treegrid.element);
            span.style.color = "#FF0000";
            span.innerHTML = "Server exception: 404 Not found";
        }
    };
    return <TreeGridComponent dataSource={data} ref={g => treegrid = g}
    hasChildMapping='isParent' treeColumnIndex={1} idMapping='TaskID'
    parentIdMapping='ParentItem' height='260' actionFailure={onActionFailure}>
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Task ID'
width='90' textAlign='Right' />
            <ColumnDirective field='TaskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='Duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { DataManager } from '@syncfusion/ej2-data';
import { FailureEventArgs } from '@syncfusion/ej2-grids';
import { ColumnDirective, ColumnsDirective, TreeGrid, TreeGridComponent }
from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
function App() {
    let treegrid: TreeGridComponent | null;
    const data = new DataManager({
        url: 'http://some.com/invalidUrl'
    });
    const onActionFailure = (e: FailureEventArgs) => {
        const span: HTMLElement = document.createElement('span');
        if (treegrid) {
            (treegrid.element.parentNode as HTMLElement)
                .insertBefore(span, treegrid.element);
            span.style.color = "#FF0000";
            span.innerHTML = "Server exception: 404 Not found";
        }
    };
    return <TreeGridComponent dataSource={data} ref={g => treegrid = g}
    hasChildMapping='isParent' treeColumnIndex={1} idMapping='TaskID'
    parentIdMapping='ParentItem' height='260' actionFailure={onActionFailure}>
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Task ID'
width='90' textAlign='Right' />

```

```

        <ColumnDirective field='TaskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='Duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
</TreeGridComponent>
};
export default App;

```

The [actionFailure](#) event will be triggered not only for the server errors, but also when there is an exception while processing the treegrid actions.

Load on demand with virtualization

While binding remote data to Tree Grid component, by default Tree Grid renders parent rows in collapsed state. When expanding the root node, the child nodes will be loaded from the remote server.

When using virtualization with remote data binding, it helps you to improve the tree grid performance while loading a large set of data by setting [enableVirtualization](#) as true. The Tree Grid UI virtualization allows it to render only rows and columns visible within the view-port without buffering the entire datasource.

[hasChildMapping](#) property maps the field name in data source, that denotes whether current record holds any child records. This is useful internally to show expand icon while binding child data on demand.

`ts

```

import { DataManager, UrlAdaptor } from '@syncfusion/ej2-data';

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent, VirtualScroll, Sort, Filter, Edit,
EditSettingsModel, Toolbar, ToolbarItems, PageSettingsModel } from '@syncfusion/ej2-react-treegrid';

import * as React from 'react';

function App() {
  const editOptions: EditSettingsModel = {
    allowAdding: true,
    allowDeleting: true,
    allowEditing: true,
    mode: 'Row',
    newRowPosition: 'Below'
  };

  const toolbarOptions: ToolbarItems[] = ['Add', 'Edit', 'Delete', 'Update', 'Cancel'];
  const pageSettings: PageSettingsModel = { pageSize: 30 };
  const dataManager: DataManager = new DataManager({
    adaptor: new UrlAdaptor,

```

```

insertUrl: "Home/Insert",
removeUrl: "Home/Delete",
updateUrl: "Home/Update",
url: "Home/DataSource",
});

return <TreeGridComponent dataSource={dataManager} treeColumnIndex={1} idMapping= 'TaskID'
parentIdMapping='ParentValue' hasChildMapping='isParent' expandStateMapping='IsExpanded'
height='400' enableVirtualization={true} editSettings={editOptions} toolbar={toolbarOptions}
allowFiltering={true} allowSorting={true} pageSettings={pageSettings}>
<ColumnsDirective>
<ColumnDirective field='TaskID' headerText='Task ID' width='90' textAlign='Right' isPrimaryKey={true}/>
<ColumnDirective field='TaskName' headerText='Task Name' width='180'/>
<ColumnDirective field='Duration' headerText='Duration' width='80' textAlign='Right' />
</ColumnsDirective>
<Inject services=[[Edit, VirtualScroll, Sort, Filter, Toolbar]] />
</TreeGridComponent>
};
export default App;

```

The following code example describes handling of Load on demand at server end.

```

`ts
public ActionResult lazyLoading()
{
TreeData.tree = new List<TreeData>();
return View();
}

public ActionResult UrlDatasource(DataManagerRequest dm)
{
List<TreeData> data = new List<TreeData>();
data = TreeData.GetTree();
DataOperations operation = new DataOperations();
IEnumerable<TreeData> DataSource = data;
List<TreeData> ExpandedParentRecords = new List<TreeData>();

```

```

if (dm.Expand != null && dm.Expand[0] == "ExpandingAction") // setting the ExpandStateMapping
property whether is true or false
{
var val = TreeData.GetTree().Where(ds => ds.TaskID == int.Parse(dm.Expand[1])).FirstOrDefault();
val.IsExpanded = true;
}
else if (dm.Expand != null && dm.Expand[0] == "CollapsingAction")
{
var val = TreeData.GetTree().Where(ds => ds.TaskID == int.Parse(dm.Expand[1])).FirstOrDefault();
val.IsExpanded = false;
}
if (!(dm.Where != null && dm.Where.Count > 1))
{
data = data.Where(p => p.ParentValue == null).ToList();
}
DataSource = data;
if (dm.Search != null && dm.Search.Count > 0) // Searching
{
DataSource = operation.PerformSearching(DataSource, dm.Search);
}

```

Load parent rows in expanded state with virtualization

Tree Grid provides an option to load the child records in the initial rendering itself for remote data binding by setting the [loadChildOnDemand](#) as true. When the `loadChildOnDemand` is enabled, parent records are rendered in expanded state.

When using virtualization with `loadChildOnDemand`, it helps you to improve the tree grid performance while loading the child records during the initial rendering for remote data binding by setting [enableVirtualization](#) as true and `loadChildOnDemand` as true.

```

`ts

Immutable mode in React Treegrid component

The immutable mode optimizes the Tree Grid re-rendering performance by using the object reference and [deep compare](#) concept. When performing the Grid actions, it will only re-render the modified or newly added rows and prevent the re-rendering of the unchanged rows.

To enable this feature, you have to set the [enableImmutableMode](#) property as **true**.

* This feature uses the primary key value for data comparison. So, you need to provide the [isPrimaryKey](#) column.

Limitations

The following features are not supported in the immutable mode:

- Frozen rows and columns
- Row Template
- Detail Template
- Column reorder
- Virtualization
- Infinite scroll

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Module in React Treegrid component

The following modules should be injected to extend treegrid's functionality.

Module	Description
-----	-----

- | [PageService](#) | Inject this module to use paging feature. |
- | [SortService](#) | Inject this module to use sorting feature. |
- | [FilterService](#) | Inject this module to use filtering feature. |
- | [EditService](#) | Inject this module to use editing feature. |
- | [AggregateService](#) | Inject this module to use aggregate feature. |
- | [ColumnMenuService](#) | Inject this module to use column menu feature. |
- | [CommandColumnService](#) | Inject this module to use command column feature. |
- | [ContextMenuService](#) | Inject this module to use context menu feature. |
- | [ResizeService](#) | Inject this module to use resize feature. |
- | [ReorderService](#) | Inject this module to use reorder feature. |
- | [PrintService](#) | Inject this module to use to use print feature and this is a default injected module. |
- | [ToolbarService](#) | Inject this module to use toolbar feature. |
- | [ExcelExportService](#) | Inject this module to use Excel export feature. |
- | [PdfExportService](#) | Inject this module to use PDF export feature. |

These modules should be injected into the treegrid using the `Inject` directive.

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Columns

Columns in React Treegrid component

The column definitions are used as the [dataSource](#) schema in the TreeGrid. This plays a vital role in rendering column values in the required format. The treegrid operations such as sorting, filtering and searching etc. are performed based on column definitions. The [field](#) property of the [columns](#) is necessary to map the data source values in TreeGrid columns.

1. If the column [field](#) is not specified in the dataSource, the column values will be empty.
2. If the [field](#) name contains “dot” operator, it is considered as complex binding.

[treeColumnIndex](#) property denotes the column that is used to expand and collapse child rows.

Format

To format cell values based on specific culture, use the [columns.format](#) property. The TreeGrid uses [Internalization](#) library to format [number](#) and [date](#) values.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { orderData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={orderData} treeColumnIndex={1}
    childMapping='subtasks' height='315'>
```

```

        <ColumnsDirective>
          <ColumnDirective field='orderID' headerText='Order ID' width='90'
textAlign='Right' />
          <ColumnDirective field='orderName' headerText='Order Name'
width='180' />
          <ColumnDirective field='unitPrice' headerText='Price Per Unit'
width='90' format='c2' textAlign='Right' type='number' />
        </ColumnsDirective>
      </TreeGridComponent>;
    }
  ;
  export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { orderData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={orderData} treeColumnIndex={1}
childMapping='subtasks' height='315'>
    <ColumnsDirective>
      <ColumnDirective field='orderID' headerText='Order ID' width='90'
textAlign='Right' />
      <ColumnDirective field='orderName' headerText='Order Name'
width='180' />
      <ColumnDirective field='unitPrice' headerText='Price Per Unit'
width='90' format='c2' textAlign='Right' type='number' />
    </ColumnsDirective>
  </TreeGridComponent>
};
export default App;

```

By default, the [number](#) and [date](#) values are formatted in **en-US** locale.

Number formatting

The number or integer values can be formatted using the below format strings.

Format | Description | Remarks

{ type:'date', format:'dd/MM/yyyy' } | 04/07/1996

{ type:'date', format:'dd.MM.yyyy' } | 04.07.1996

{ type:'date', skeleton:'short' } | 7/4/96

{ type:'dateTime', format:'dd/MM/yyyy hh:mm a' } | 04/07/1996 12:00 AM

{ type:'dateTime', format:'MM/dd/yyyy hh:mm:ss a' } | 07/04/1996 12:00:00 AM

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { orderData } from './datasource';
function App() {

```

```

    const formatOption = { type: 'date', format: 'dd/MM/yyyy' };
    return <TreeGridComponent dataSource={orderData} treeColumnIndex={1}
    childMapping='subtasks' height='315'>
      <ColumnsDirective>
        <ColumnDirective field='orderID' headerText='Order ID' width='90'
        textAlign='Right' />
        <ColumnDirective field='orderName' headerText='Order Name'
        width='180' />
        <ColumnDirective field='orderDate' headerText='Order Date'
        width='160' textAlign='Right' format={formatOption} />
        <ColumnDirective field='price' headerText='Price' width='90'
        format='c2' textAlign='Right' type='number' />
      </ColumnsDirective>
    </TreeGridComponent>;
  }
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { orderData } from './datasource';
function App() {
  const formatOption: object = {type:'date', format:'dd/MM/yyyy'};
  return <TreeGridComponent dataSource={orderData} treeColumnIndex={1}
  childMapping='subtasks' height='315'>
    <ColumnsDirective>
      <ColumnDirective field='orderID' headerText='Order ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='orderName' headerText='Order Name'
      width='180' />
      <ColumnDirective field='orderDate' headerText='Order Date'
      width='160' textAlign='Right' format={formatOption} />
      <ColumnDirective field='price' headerText='Price' width='90'
      format='c2' textAlign='Right' type='number' />
    </ColumnsDirective>
  </TreeGridComponent>
};
export default App;

```

Lock Columns

You can lock columns by using [column.lockColumn](#) property. The locked columns will be moved to the first position. Also you can't reorder its position.

In the below example, duration column is locked and its reordering functionality is disabled.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, Reorder,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import './custom.css';
import { sampleData } from './datasource';
function App() {

```

```

    const customAttributes = { class: 'customcss' };
    return <TreeGridComponent dataSource={sampleData} allowReordering={true}
allowSelection={false} treeColumnIndex={1} childMapping='subtasks'
height='315'>
      <Inject services={[Reorder]}/>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='110' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='110' lockColumn={true} textAlign='Right'
customAttributes={customAttributes} />
        <ColumnDirective field='progress' headerText='Progress'
width='180' />
      </ColumnsDirective>
    </TreeGridComponent>;
  }
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, Reorder,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const customAttributes: any = {class: 'customcss'};
  return <TreeGridComponent dataSource={sampleData} allowReordering={true}
allowSelection={false}
treeColumnIndex={1} childMapping='subtasks' height='315'>
    <Inject services={[Reorder]}/>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
width='110' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
width='110' lockColumn= {true} textAlign='Right'
customAttributes={customAttributes} />
      <ColumnDirective field='progress' headerText='Progress'
width='180' />
    </ColumnsDirective>
  </TreeGridComponent>
};
export default App;

```

Column Type

Column type can be specified using the [columns.type](#) property. It specifies the type of data the column binds.

If the [format](#) is defined for a column, the column uses [type](#) to select the appropriate format option ([number](#) or [date](#)).

TreeGrid column supports the following types:

- string
- number
- boolean
- date
- datetime

If the [type](#) is not defined, it will be determined from the first record of the [dataSource](#).

Checkbox Column

To render checkboxes in existing column, you need to set [columns.showCheckbox](#) property as **true**

It is also possible to select the rows hierarchically using checkboxes in TreeGrid by enabling [autoCheckHierarchy](#) property. When we check on any parent record checkbox then the child record checkboxes will get checked.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='315' autoCheckHierarchy={true}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='120'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' showCheckbox={true} />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='150' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='130' textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
```

```

    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks'
      height='315' autoCheckHierarchy={true}>
        <ColumnsDirective>
          <ColumnDirective field='taskID' headerText='Task ID' width='120'
            textAlign='Right' />
          <ColumnDirective field='taskName' headerText='Task Name'
            width='180' showCheckbox={true} />
          <ColumnDirective field='startDate' headerText='Start Date'
            width='150' format='yMd' textAlign='Right' type='date' />
          <ColumnDirective field='duration' headerText='Duration'
            width='130' textAlign='Right' />
        </ColumnsDirective>
      </TreeGridComponent>
    };
    export default App;

```

For hierarchy selection between the records, we need to enable the [autoCheckHierarchy](#) property.

Controlling TreeGrid actions

You can enable or disable treegrid action for a particular column by setting the [allowFiltering](#), and [allowSorting](#) properties.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Filter, Inject, Sort } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowSorting={true} allowFiltering={true}
    height='270'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' allowSorting={false} />
      <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
        width='90' format='yMd' textAlign='Right' type='date'
        allowFiltering={false} />
      <ColumnDirective field='duration' headerText='Duration' width='80'
        textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Filter, Sort]} />
  </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Filter, Inject, Sort } from '@syncfusion/ej2-react-treegrid';

```

```
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks'
    allowSorting={true} allowFiltering={true} height='270'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' allowSorting={false}/>
      <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' allowFiltering={false}
/>
      <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Filter, Sort]} />
  </TreeGridComponent>
};
export default App;
```

Show/Hide Columns by External Button

You can show or hide treegrid columns dynamically using external buttons by invoking the [showColumns](#) or [hideColumns](#) method.

APP.JSX

```
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  let treegrid;
  const show = () => {
    if (treegrid) {
      treegrid.showColumns(['Task ID', 'Duration']); // show by
HeaderText
    }
  };
  const hide = () => {
    if (treegrid) {
      treegrid.hideColumns(['Task ID', 'Duration']); // hide by
HeaderText
    }
  };
  return (<div>
    <ButtonComponent cssClass='e-flat' onClick={show}>Show</ButtonComponent>
    <ButtonComponent cssClass='e-flat'
onClick={hide}>Hide</ButtonComponent><TreeGridComponent
dataSource={sampleData} treeColumnIndex={1} childMapping='subtasks'
height='270' ref={g => treegrid = g}>
    <ColumnsDirective>
```

```

        <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
</TreeGridComponent>
</div>;
}
;
export default App;

```

APP.TSX

```

import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, Page, TreeGrid } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    let treegrid: TreeGridComponent | null;
    const show = () => {
        if (treegrid) {
            treegrid.showColumns(['Task ID', 'Duration']); // show by
HeaderText
        }
    }
    const hide = () => {
        if (treegrid) {
            treegrid.hideColumns(['Task ID', 'Duration']); // hide by
HeaderText
        }
    }
    return (<div>
        <ButtonComponent cssClass='e-flat' onClick= { show
}>Show</ButtonComponent>
        <ButtonComponent cssClass='e-flat' onClick= { hide
}>Hide</ButtonComponent><TreeGridComponent dataSource={sampleData}
treeColumnIndex={1} childMapping='subtasks' height='270' ref={g => treegrid
= g}>
            <ColumnsDirective>
                <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
                <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
                <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
                <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
            </ColumnsDirective>
            <Inject services={[Page]} />

```

```

    </TreeGridComponent>
  </div>)
};
export default App;

```

ValueAccessor

The [valueAccessor](#) is used to access/manipulate the value of display data. You can achieve custom value formatting by using the [valueAccessor](#).

APP.JSX

```

import { getValue } from '@syncfusion/ej2-base';
import { ColumnDirective, ColumnsDirective, Inject, Page, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { orderData } from './datasource';
function App() {
  const currencyFormatter = (field, data, column) => {
    return '€' + getValue('price', data);
  };
  const orderFormatter = (field, data, column) => {
    return data[field] + '-' + getValue('Category', data);
  };
  return <TreeGridComponent dataSource={orderData} treeColumnIndex={1}
  childMapping='subtasks' height='315'>
    <ColumnsDirective>
      <ColumnDirective field='orderID' headerText='Order ID'
width='90' textAlign='Right' />
      <ColumnDirective field='orderName' headerText='Order Name'
width='210' valueAccessor={orderFormatter} />
      <ColumnDirective field='orderDate' headerText='Order Date'
width='110' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='price' headerText='Price' width='80'
valueAccessor={currencyFormatter} textAlign='Right' type='number' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { getValue } from '@syncfusion/ej2-base';
import { ColumnDirective, ColumnsDirective, Inject, Page, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { orderData } from './datasource';
function App() {
  const currencyFormatter = (field: string, data: object, column: object)
=> {
    return '€' + getValue('price', data);
  }
  const orderFormatter = (field: string, data: object, column: object) =>
{

```

```

        return data[field] + '-' + getValue('Category', data);
    }
    return <TreeGridComponent dataSource={orderData} treeColumnIndex={1}
    childMapping='subtasks' height='315'>
        <ColumnsDirective>
            <ColumnDirective field='orderId' headerText='Order ID'
            width='90' textAlign='Right' />
            <ColumnDirective field='orderName' headerText='Order Name'
            width='210' valueAccessor={orderFormatter} />
            <ColumnDirective field='orderDate' headerText='Order Date'
            width='110' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='price' headerText='Price' width='80'
            valueAccessor={currencyFormatter} textAlign='Right' type='number' />
        </ColumnsDirective>
        <Inject services={[Page]} />
    </TreeGridComponent>
    };
    export default App;

```

Display Array type Columns

You can bind an array of objects in a column by using the [valueAccessor](#) property. In this example, the name field has an array of two objects, FirstName and LastName. These two objects are joined and bound to a column using the [valueAccessor](#).

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { stringData } from './datasource';
function App() {
    const orderFormatter = (field, data, column) => {
        return data[field].map((s) => {
            return s.lastName || s.firstName;
        }).join(' ');
    };
    return <TreeGridComponent dataSource={stringData} treeColumnIndex={1}
    childMapping='subtasks' height='315'>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='110'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='name' headerText='Assignee' width='150'
            textAlign='Left' valueAccessor={orderFormatter} />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { stringData } from './datasource';
function App() {
    const orderFormatter = (field: string, data: object, column: object):
string => {
        return data[field].map((s: {lastName: string, firstName: string}):
string => {
            return s.lastName || s.firstName }).join(' ');
        }
    return <TreeGridComponent dataSource={stringData} treeColumnIndex={1}
childMapping='subtasks' height='315'>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='110'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='name' headerText='Assignee' width='150'
textAlign='Left'
                valueAccessor={orderFormatter} />
            <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>
};
export default App;
```

Expression Column

You can achieve the expression column by using the [valueAccessor](#) property.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { orderData } from './datasource';
function App() {
    const totalPrice = (field, data, column) => {
        return data.units * data.unitPrice;
    };
    return <TreeGridComponent dataSource={orderData} treeColumnIndex={1}
childMapping='subtasks' height='315'>
        <ColumnsDirective>
            <ColumnDirective field='orderID' headerText='Order ID'
width='110' textAlign='Right' />
            <ColumnDirective field='orderName' headerText='Order Name'
width='210' textAlign='Left' />
            <ColumnDirective field='units' headerText='Units' width='120'
textAlign='Right' />
            <ColumnDirective field='unitPrice' headerText='Unit Price'
width='120' textAlign='Right' format='c2' type='number' />
            <ColumnDirective field='price' headerText='Total Price'
width='120' textAlign='Right' format='c2' type='number'
                valueAccessor={totalPrice} />
        </ColumnsDirective>
    </TreeGridComponent>
};
```

```

    </TreeGridComponent>;
  }
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { orderData } from './datasource';
function App() {
  const totalPrice = (field: string, data: { units: number, unitPrice:
    number }, column: object): number => {
    return data.units * data.unitPrice;
  };
  return <TreeGridComponent dataSource={orderData} treeColumnIndex={1}
    childMapping='subtasks' height='315'>
    <ColumnsDirective>
      <ColumnDirective field='orderId' headerText='Order ID'
        width='110' textAlign='Right' />
      <ColumnDirective field='orderName' headerText='Order Name'
        width='210' textAlign='Left' />
      <ColumnDirective field='units' headerText='Units' width='120'
        textAlign='Right' />
      <ColumnDirective field='unitPrice' headerText='Unit Price'
        width='120' textAlign='Right'
        format='c2' type='number' />
      <ColumnDirective field='price' headerText='Total Price'
        width='120' textAlign='Right'
        format='c2' type='number' valueAccessor= {totalPrice} />
    </ColumnsDirective>
  </TreeGridComponent>
};
export default App;

```

Render boolean value as checkbox

To render boolean values as checkbox in columns, you need to set [displayAsCheckBox](#) property as **true**.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='315'>
    <ColumnsDirective>
      <ColumnDirective field='taskId' headerText='Task ID' width='90'
        textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
      <ColumnDirective field='approved' headerText='Approved' width='90'
        format='yMd' textAlign='Right' displayAsCheckBox={true} />
    </ColumnsDirective>
  </TreeGridComponent>
};

```

```

        <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
      </ColumnsDirective>
    </TreeGridComponent>;
  }
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='315'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
      <ColumnDirective field='approved' headerText='Approved' width='90'
format='yMd' textAlign='Right' displayAsCheckBox={true} />
      <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>
};
export default App;

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Headers in React Treegrid component

Header text

By default, column header title is displayed from column [field](#) value. To override the default header title, you have to define the [headerText](#) value.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='315'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
    </ColumnsDirective>
  </TreeGridComponent>
};

```

```

        <ColumnDirective field='duration' headerText='Duration' width='80'
        textAlign='Right' />
      </ColumnsDirective>
    </TreeGridComponent>;
  }
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks'
    height='315'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
      width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration' width='80'
      textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>
};
export default App;

```

* If both the [field](#) and [headerText](#) are not defined in the column, the column renders with “empty” header text.

Header template

You can customize the header element by using the [headerTemplate](#) property.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const taskName = () => {
    return (<div>
    <b>Task Name</b></div>);
  };
  const startDate = () => {
    return (<div>
    <b>Start Date</b></div>);
  };
  const duration = () => {

```

```

        return (<div>
        <b>Duration</b></div>);
    };
    const progress = () => {
        return (<div>
        <b>Progress</b></div>);
    };
    return <TreeGridComponent dataSource={sampleData}
childMapping='subtasks' height='315'>
        <ColumnsDirective>
            <ColumnDirective field='taskName' width='220'
headerTemplate={taskName}/>
            <ColumnDirective field='startDate' headerText='Start Date'
format='yMd' type='date' textAlign='Right' headerTemplate={startDate}/>
            <ColumnDirective field='duration' textAlign='Right'
headerTemplate={duration}/>
            <ColumnDirective field='progress' headerText='progress'
textAlign='Right' headerTemplate={progress}/>
        </ColumnsDirective>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const taskName = () => {
        return (<div>
        <b>Task Name</b></div>);
    }
    const startDate = () => {
        return (<div>
        <b>Start Date</b></div>);
    }
    const duration = () => {
        return (<div>
        <b>Duration</b></div>);
    }
    const progress = () => {
        return (<div>
        <b>Progress</b></div>);
    }
    return <TreeGridComponent dataSource={sampleData}
childMapping='subtasks' height='315'>
        <ColumnsDirective>

```

```

        <ColumnDirective field='taskName' width='220'
headerTemplate={taskName}/>
        <ColumnDirective field='startDate' headerText='Start Date'
format='yMd' type='date' textAlign='Right' headerTemplate={startDate}/>
        <ColumnDirective field='duration' textAlign='Right'
headerTemplate={duration}/>
        <ColumnDirective field='progress' headerText='progress'
textAlign='Right' headerTemplate={progress}/>
    </ColumnsDirective>
</TreeGridComponent>
};
export default App;

```

Column template in React Treegrid component

The column [Link to the Video](#) has options to display custom element instead of a field value in the column.

You can check this video to learn about how to use templates for column(based on conditions) and headers in Tree Grid.

APP.JSX

```

import { getObject } from '@syncfusion/ej2-grids';
import { SparklineComponent } from '@syncfusion/ej2-react-charts';
import { ColumnDirective, ColumnsDirective, Inject, Page, TreeGridComponent }
from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { getSparkData, textdata } from './datasource';
function App() {
    const load = (args) => {
        let theme = location.hash.split('/')[1];
        theme = theme ? theme : 'Material';
        args.sparkline.theme = (theme.charAt(0).toUpperCase() +
theme.slice(1));
    };
    const taxColTemplate = (props) => {
        return (<SparklineComponent id={"spkline" + getObject('EmployeeID',
props)} fill='#3C78EF' height='50px' load={load} lineWidth={2}
valueType='Numeric' width='150px' dataSource={getSparkData('line',
+getObject('EmployeeID', props))}/>);
    };
    const dayColTemplate = (props) => {
        return (<SparklineComponent id={"spkarea" + getObject('EmployeeID',
props)} fill='#3C78EF' height='50px' load={load}
negativePointColor='#f7a816' type='Column' valueType='Numeric' width='150px'
dataSource={getSparkData('column', +getObject('EmployeeID', props))}/>);
    };
    const yearColTemplate = (props) => {
        return (<SparklineComponent id={"spkwl" + getObject('EmployeeID',
props)} fill='#3C78EF' height='50px' load={load}
negativePointColor='#f7a816' type='WinLoss' tiePointColor='darkgray'
valueType='Numeric' width='150px' dataSource={getSparkData('column',
+getObject('EmployeeID', props))}/>);
    };
    return <TreeGridComponent dataSource={textdata} treeColumnIndex={0}
childMapping='Children' allowPaging={true} height='410'>

```

```

    <ColumnsDirective>
      <ColumnDirective field='EmpID' headerText='Employee ID'
width='95' />
      <ColumnDirective field='Name' headerText='Name' width='90' />
      <ColumnDirective field='DOB' headerText='DOB' width='90'
format='yMd' textAlign='Right' />

        <Inject services={[Page]} />
    </TreeGridComponent>
};
export default App;

```

Using condition template

You can render the template elements based on condition.

In the following code, checkbox is rendered based on *Approved* field value.

APP.JSX

```

import { getObject } from '@syncfusion/ej2-grids';
import { ColumnDirective, ColumnsDirective, Inject, Page, TreeGridComponent
} from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const treegridTemplate = (props) => {
        if (getObject('approved', props)) {
            return (<div className="template_checkbox">
                <input type="checkbox" defaultChecked />
            </div>);
        }
    };
}

```

```

    }
    else {
        return (<div className="template_checkbox">
            <input type="checkbox"/>
        </div>);
    }
};
return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='315'>
    <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective headerText='approved' width='120'
template={treegridTemplate} textAlign='Center' />
        <ColumnDirective field='progress' headerText='Progress' width='80'
textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { getObject } from '@syncfusion/ej2-grids';
import { ColumnDirective, ColumnsDirective, Inject, Page, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const treegridTemplate = (props: object) => {
        if (getObject('approved', props)) {
            return (<div className="template_checkbox">
                <input type="checkbox" defaultChecked />
            </div>);
        } else {
            return (<div className="template_checkbox">
                <input type="checkbox" />
            </div>);
        }
    }
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='315'>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective headerText='approved' width='120'
template={treegridTemplate} textAlign='Center' />
            <ColumnDirective field='progress' headerText='Progress' width='80'
textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>

```

```

        <Inject services={[Page]}/>
    </TreeGridComponent>
};
export default App;

```

Complex data binding in React Treegrid component

You can achieve complex data binding in the treegrid by using the dot(.) operator in the [column.field](#).

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { complexData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={complexData} treeColumnIndex={1}
    childMapping='subtasks' height='315'>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='assignee.firstName' headerText='Assignee'
            width='90' />
            <ColumnDirective field='duration' headerText='Duration' width='80'
            textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { complexData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={complexData} treeColumnIndex={1}
    childMapping='subtasks' height='315'>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='assignee.firstName' headerText='Assignee'
            width='90' />
            <ColumnDirective field='duration' headerText='Duration' width='80'
            textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>
};
export default App;

```

Auto fit columns in React Treegrid component

The [autoFitColumns](#) method resizes the column to fit the widest cell's content without wrapping. You can autofit a specific column at initial rendering by invoking the [autoFitColumns](#) method in [dataBound](#) event.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, Resize,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  let treegrid;
  const dataBound = () => {
    if (treegrid) {
      treegrid.autoFitColumns(['taskName']);
    }
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='315' allowResizing={true}
dataBound={dataBound} ref={g => treegrid = g}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID'
width='90' textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
width='60' />
      <ColumnDirective field='startDate' headerText='Start Date'
width='120' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
width='120' textAlign='Right' />
      <ColumnDirective field='progress' headerText='Progress'
width='120' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Resize]} />
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Inject, Resize, TreeGrid,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  let treegrid: TreeGridComponent | null;
  const dataBound = () =>{
    if (treegrid) {
      treegrid.autoFitColumns(['taskName']);
    }
  }
  return <TreeGridComponent dataSource={sampleData}
treeColumnIndex={1} childMapping='subtasks'
height='315' allowResizing={true} dataBound= { dataBound }
ref={g => treegrid = g}>
```

```

        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID'
width='90' textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='60' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='120' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
width='120' textAlign='Right' />
            <ColumnDirective field='progress' headerText='Progress'
width='120' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Resize]} />
    </TreeGridComponent>
};
export default App;

```

You can autofit all columns, by invoking [autoFitColumns](#) method without column name.

Column reorder in React Treegrid component

Reordering can be done by drag and drop of a particular column header from one index to another index within the treegrid. To enable reordering, set the [allowReordering](#) to true.

To use reordering, inject the [Reorder](#) module in the treegrid.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, Reorder,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowReordering={true} height='315'>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
            <ColumnDirective field='progress' headerText='Progress' width='80'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Reorder]} />
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, Reorder,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';

```

```
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks'
    allowReordering={true} height='315'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
      <ColumnDirective field='duration' headerText='Duration' width='80'
        textAlign='Right' />
      <ColumnDirective field='progress' headerText='Progress' width='80'
        textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Reorder]} />
  </TreeGridComponent>
};
export default App;
```

You can disable reordering a particular column by setting the [columns.allowReordering](#) to false.

Reorder multiple columns

Multiple columns can be reordered at a time by using the [reorderColumns](#) method.

APP.JSX

```
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { ColumnDirective, ColumnsDirective, Inject, Reorder,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  let treegrid;
  const reorder = () => {
    if (treegrid) {
      treegrid.reorderColumns(['taskID', 'duration'], 'progress');
    }
  };
  return (<div>
    <ButtonComponent id='reorderMultipleCols' onClick={reorder}>Reorder Task
    ID and Duration to Last</ButtonComponent>

```

Column resizing in React Treegrid component

Column width can be resized by clicking and dragging the right edge of the column header. While dragging, the width of the respective column will be resized immediately. Each column can be auto resized by double-clicking the right edge of the column header to fit the width of that column based on the widest cell content. To enable column resize, set the [allowResizing](#) property to true.

To use the column resize, inject **Resize** module in the treegrid.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, Resize,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {

```

```

    return <TreeGridComponent dataSource={sampleData} allowResizing={true}
allowSelection={false} treeColumnIndex={1} childMapping='subtasks'
height='315'>
    <Inject services={[Resize]}/>
    <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
    </ColumnsDirective>
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, Resize,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData} allowResizing={true}
allowSelection={false} treeColumnIndex={1} childMapping='subtasks'
height='315'>
        <Inject services={[Resize]}/>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>
};
export default App;

```

You can disable Resizing for a particular column, by specifying [columns.allowResizing](#) to false.

In RTL mode, you can click and drag the left edge of header cell to resize the column.

Min and max width

Column resize can be restricted between minimum and maximum width by defining the [columns->minWidth](#) and [columns->maxWidth](#).

In the following sample, minimum and maximum width are defined for **Duration**, and **Task Name** columns.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, Resize,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowResizing={true} height='315'>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
minWidth='130' width='180' maxWidth='300' />
            <ColumnDirective field='duration' headerText='Duration'
minWidth='50' width='80' maxWidth='150' textAlign='Right' />
            <ColumnDirective field='progress' headerText='Progress' width='80'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Resize]} />
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Inject, Resize,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
allowResizing={true} height='315'>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name' minWidth=
'130' width='180' maxWidth='300' />
            <ColumnDirective field='duration' headerText='Duration' minWidth=
'50' width='80' maxWidth='150' textAlign='Right' />
            <ColumnDirective field='progress' headerText='Progress' width='80'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Resize]} />
    </TreeGridComponent>
};
export default App;
```

Resize stacked column

Stacked columns can be resized by clicking and dragging the right edge of the stacked column header. While dragging, the width of the respective child columns will be resized at the same time. You can disable resize for particular stacked column by setting [allowResizing](#) as **false** to its columns.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, Resize,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { orderData } from './datasource';
function App() {
    const colStack1 = [
        { field: 'orderID', headerText: 'Order ID', width: 90, textAlign:
'Right' },
        { field: 'orderName', headerText: 'Order Name', width: 170,
textAlign: 'Left' }
    ];
    const colStack2 = [
        { field: 'Category', allowResizing: false, headerText: 'Shipment
Category', width: 150, textAlign: 'Left' },
        { field: 'shippedDate', headerText: 'Shipped Date', width: 120,
textAlign: 'Right', format: 'yMd' }
    ];
    return <TreeGridComponent dataSource={orderData} treeColumnIndex={1}
childMapping='subtasks' allowResizing={true} height='260'>
        <ColumnsDirective>
            <ColumnDirective columns={colStack1} headerText='Order Details'
textAlign='Center'/>
            <ColumnDirective columns={colStack2} headerText='Shipment
Details' textAlign='Center'/>
        </ColumnsDirective>
        <Inject services={[Resize]}/>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnModel, ColumnsDirective, Inject, Resize,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { orderData } from './datasource';
function App() {
    const colStack1: ColumnModel[] = [
        { field: 'orderID', headerText: 'Order ID', width: 90, textAlign:
'Right' },
        { field: 'orderName', headerText: 'Order Name', width: 170,
textAlign: 'Left' }
    ];
    const colStack2: ColumnModel[] = [
        { field: 'Category', allowResizing: false, headerText: 'Shipment
Category', width: 150, textAlign: 'Left' },
        { field: 'shippedDate', headerText: 'Shipped Date', width: 120,
textAlign: 'Right', format: 'yMd' }
    ];
    return <TreeGridComponent dataSource={orderData} treeColumnIndex={1}
childMapping='subtasks' allowResizing={true} height='260'>
        <ColumnsDirective>
            <ColumnDirective columns={colStack1} headerText='Order Details'
textAlign='Center'/>

```

```

        <ColumnDirective columns={colStack2} headerText='Shipment
Details' textAlign='Center' />
    </ColumnsDirective>
    <Inject services={[Resize]}/>
</TreeGridComponent>
};
export default App;

```

Touch interaction

When the right edge of the header cell is tapped, a floating handler will be visible over the right border of the column. To resize the column, tap and drag the floating handler as needed.

The following screenshot represents the column resizing in touch device.

<!-- markdownlint-disable MD033 -->

<!-- markdownlint-enable MD033 -->

Column menu in React Treegrid component

The column menu has options to integrate features like sorting, filtering, and autofit. It will show a menu with the integrated feature when users click on multiple icon of the column. To enable column menu, you need to define the [showColumnMenu](#) property as true.

To use the column menu, inject the **ColumnMenu** module in the treegrid.

The default items are displayed in following table.

Item	Description
SortAscending	Sort the current column in ascending order.
SortDescending	Sort the current column in descending order.
AutoFit	Auto fit the current column.
AutoFitAll	Auto fit all columns.
Filter	Show the filter option as given in filterSettings.type

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { ColumnMenu, Filter, Sort } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const filterSettings = { type: 'Menu' };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='315' allowFiltering={true}
allowSorting={true} showColumnMenu={true} filterSettings={filterSettings}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='120'
textAlign='Right' />

```

```

        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='150' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='130' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Sort, Filter, ColumnMenu]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent }
from '@syncfusion/ej2-react-treegrid';
import { ColumnMenu, Filter, FilterSettingsModel, Sort } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const filterSettings: FilterSettingsModel = { type: 'Menu' };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='315' allowFiltering={true}
allowSorting={true} showColumnMenu={true}
filterSettings={filterSettings}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='120'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='150' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
width='130' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Sort, Filter, ColumnMenu]} />
    </TreeGridComponent>
};
export default App;

```

You can disable column menu for a particular column by defining the [columns.showColumnMenu](#) as **false**.

Responsive columns in React Treegrid component

You can toggle column visibility based on media queries which are defined at the [hideAtMedia](#). The [Link to the Video](#) accepts valid [Media Queries](#).

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';

```

```
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='315'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' hideAtMedia='(min-width:700px)' />
      // column hides when browser screen width less than 700px;
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
      width='90' format='yMd' textAlign='Right' type='date' hideAtMedia='(max-
      width:500px)' />
      // column shows when browser screen width less than or equal to
      500px;
      <ColumnDirective field='duration' headerText='Duration' width='80'
      textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='315'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' hideAtMedia='(min-width:700px)' />
      // column hides when browser screen width less than 700px;
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
      width='90' format='yMd'
      textAlign='Right' type='date' hideAtMedia = '(max-
      width:500px)' />
      // column shows when browser screen width less than or equal to
      500px;
      <ColumnDirective field='duration' headerText='Duration' width='80'
      textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>
};
export default App;
```

Row

Row in React Treegrid component

The row represents record details fetched from data source.

To get start quickly with features in Row, you can check on this video:

Customize rows

You can customize the appearance of a row by using the [rowDataBound](#) event. The [rowDataBound](#) event triggers for every row. In the event handler, you can get the [RowDataBoundEventArgs](#) that contains details of the row.

APP.JSX

```
import { getObject } from '@syncfusion/ej2-grids';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const rowDataBound = (args) => {
        if (getObject('duration', args.data) === 0) {
            args.row.style.background = '#336c12';
        }
        else if (getObject('duration', args.data) < 3) {
            args.row.style.background = '#7b2b1d';
        }
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='275' rowDataBound={rowDataBound}
    enableHover={false}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { getObject, RowDataBoundEventArgs } from '@syncfusion/ej2-grids';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const rowDataBound = (args: RowDataBoundEventArgs) => {
        if (getObject('duration', args.data) === 0) {
            (args.row as HTMLTableRowElement).style.background= '#336c12';
        } else if (getObject('duration', args.data) < 3) {
            (args.row as HTMLTableRowElement).style.background= '#7b2b1d';
        }
    }
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' />
```

```

        height='275' rowDataBound={rowDataBound} enableHover={false}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>
};
export default App;

```

Styling alternate row

You can change the treegrid's alternative rows' background color by overriding the `.e-altrow` class.

```

`css
.e-treegrid .e-altrow {
background-color: #fafafa;
}
`

```

Please refer the following example.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='275' enableHover={false}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration' width='80'
            textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='275' enableHover={false}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
  textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
  width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
  width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration' width='80'
  textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>
};
export default App;
```

Refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Row height in React Treegrid component

You can customize the row height of treegrid rows through the [rowHeight](#) property. The **rowHeight** property is used to change the row height of entire treegrid rows.

In the below example, the **rowHeight** is set as *60px*.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
export default class App extends React.Component {
  render() {
    return <TreeGridComponent dataSource={sampleData}
  treeColumnIndex={1} childMapping='subtasks' height='275' rowHeight='60'>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID'
  width='90' textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
  width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
  width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
  width='80' textAlign='Right' />
      </ColumnsDirective>
    </TreeGridComponent>;
  }
}
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
export default class App extends React.Component<{}>, {}>{
  public render() {
    return <TreeGridComponent dataSource={sampleData}
treeColumnIndex={1} childMapping='subtasks'
height='275' rowHeight='60'>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID'
width='90' textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
      </ColumnsDirective>
    </TreeGridComponent>
  }
}
```

Customize row height for particular row

TreeGrid row height for particular row can be customized using the [rowDataBound](#) event by setting the **rowHeight** in arguments for each row based on the requirement.

In the below example, the row height for the row with Task ID as 3 is set as 90px using the **rowDataBound** event.

APP.JSX

```
import { getObject } from '@syncfusion/ej2-grids';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
export default class App extends React.Component {
  rowDataBound(args) {

Row template in React Treegrid component

The [rowTemplate](#) has an option to customise the look and behavior of the treegrid rows. The [rowTemplate](#) property accepts either the template string or HTML element ID.

APP.JSX

```

{% raw %}
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { textdata } from './datasource';
export default class App extends React.Component {
  treegridTemplate(props) {
    var src = './' + props.FullName + '.png';
    return <tr>
      <td className="border" style={{ paddingLeft: '18px' }}>

```

```

        <div>{props.EmpID}</div>
      </td>
      <td className="border" style={{ padding: '10px 0px 0px 20px' }}>
        <div style={{ fontSize: '14px' }}>
          {props.Name}
          <p style={{ fontSize: '9px' }}>{props.Designation}</p>
        </div>
      </td>
      <td className="border">
        <div>
          <div style={{ position: 'relative', display: 'inline-block' }}>
            <img src={src}/>
          </div>
          <div style={{ display: 'inline-block' }}>
            <div style={{ padding: '5px' }}>{props.Address}</div>
            <div style={{ padding: '5px' }}>{props.Country}</div>
            <div style={{ padding: '5px', fontSize: '12px' }}>{props.Contact}</div>
          </div>
        </div>
      </td>
    </tr>);
  }
  template = this.treegridTemplate;
  render() {
    return <TreeGridComponent dataSource={textdata}
      childMapping='Children' rowTemplate={this.template.bind(this)}
      treeColumnIndex={0} rowHeight='83' height='291'>
      <ColumnsDirective>
        <ColumnDirective headerText='Employee ID' width='180'
          field='EmpID'></ColumnDirective>
        <ColumnDirective headerText='Employee Name' width='150'
          field='Name'></ColumnDirective>
        <ColumnDirective headerText='Employee Details' width='350'
          field='Address'></ColumnDirective>
      </ColumnsDirective>
    </TreeGridComponent>;
  }
}
{% endraw %}

```

APP.TSX

```

{% raw %}
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { textdata } from './datasource';
export default class App extends React.Component<{}, {}>{
  public treegridTemplate(props): any {
    var src = './' + props.FullName + '.png';
    return <tr>
      <td className="border" style={{paddingLeft:'18px'}}>

```

```

        <div>{props.EmpID}</div>
      </td>
      <td className="border" style={{padding: '10px 0px 0px 20px'}}>
        <div style={{fontSize: '14px'}}>
          {props.Name}
          <p style={{fontSize: '9px'}}>{props.Designation}</p>
        </div>
      </td>
      <td className="border">
        <div>
          <div style={{position: 'relative' , display: 'inline-block'}}>
            <img src ={src} />
          </div>
          <div style={{display: 'inline-block'}}>
            <div style={{padding: '5px'}}>{props.Address}</div>
            <div style={{padding: '5px'}}>{props.Country}</div>
            <div style={{padding: '5px' , fontSize:
'12px'}}>{props.Contact}</div>
          </div>
        </div>
      </td>
    </tr>;
  }
  public template: any = this.treegridTemplate;
  public render() {
    return <TreeGridComponent dataSource={textdata} childMapping =
'Children' rowTemplate={this.template.bind(this)} treeColumnIndex={0}
rowHeight = '83' height='291'>
      <ColumnsDirective>
        <ColumnDirective headerText = 'Employee ID' width = '180'
field = 'EmpID'></ColumnDirective>
        <ColumnDirective headerText = 'Employee Name' width = '150'
field = 'Name'></ColumnDirective>
        <ColumnDirective headerText = 'Employee Details' width =
'350' field = 'Address'></ColumnDirective>
      </ColumnsDirective>
    </TreeGridComponent>
  }
}
{% endraw %}

```

The [rowTemplate](#) property accepts only the TR element.

Row template with formatting

If the [rowTemplate](#) is used, the value cannot be formatted inside the template using the [columns.format](#) property. In that case, a function should be defined globally to format the value and invoke it inside the template.

APP.JSX

```

{% raw %}
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { textdata } from './datasource';

```

```

import { Internationalization } from '@syncfusion/ej2-base';
let instance = new Internationalization();
export default class App extends React.Component {
    format = (value) => {
        return instance.formatDate(value, { skeleton: 'yMd', type: 'date'
    });
};
treegridTemplate(props) {
    var src = './' + props.FullName + '.png';
    return (<tr>
        <td className="border" style={{ paddingLeft: '18px' }}>
            <div>{props.EmpID}</div>
        </td>
        <td className="border">
            <div>
                <div style={{ position: 'relative', display: 'inline-
block' }}>
                    <img src={src}/>
                </div>
                <div style={{ display: 'inline-block' }}>
                    <div style={{ padding: '5px'
}}>{props.Address}</div>
                    <div style={{ padding: '5px'
}}>{props.Country}</div>
                    <div style={{ padding: '5px', fontSize: '12px'
}}>{props.Contact}</div>
                </div>
            </td>
            <td className="border" style={{ paddingLeft: '20px' }}>
                <div>{this.format(props.DOB)}</div>
            </td>
        </tr>);
    }
    template = this.treegridTemplate;
    render() {
        return <TreeGridComponent dataSource={textdata}
childMapping='Children' rowTemplate={this.template.bind(this)}
treeColumnIndex={0} rowHeight='83' height='291'>
            <ColumnsDirective>
                <ColumnDirective headerText='Employee ID' width='180'
field='EmpID'></ColumnDirective>
                <ColumnDirective headerText='Employee Details' width='350'

'DOB'></ColumnDirective>
            </ColumnsDirective>
        </TreeGridComponent>
    }
}
{% endraw %}

```

Limitations

Row template feature is not compatible with all the features which are available in treegrid and it has limited features support. Here we have listed out the features which are compatible with row template feature.

- Filtering
- Paging
- Sorting
- Scrolling
- Searching
- Rtl
- Context Menu
- State Persistence

Detail template in React Treegrid component

The detail template provides additional information about a particular row. By expanding the parent row the child rows are expanded along with their detail template. The [detailTemplate](#) property accepts either the template string or HTML element ID.

To use detail template, inject the DetailRow module in the TreeGrid.

APP.JSX

```
{% raw %}
import { ColumnDirective, ColumnsDirective, TreeGridComponent, DetailRow,
Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { textdata } from './datasource';
import { Internationalization } from '@syncfusion/ej2-base';
let instance = new Internationalization();
export default class App extends React.Component {
  format = (value) => {
    return instance.formatDate(value, { skeleton: 'yMd', type: 'date'
});
  };
  detailtemplate(props) {
    var imag = './' + props.FullName + '.png';
    return (<div>
      <div style={{ position: 'relative', display: 'inline-block',
float: 'left', padding: '5px 4px 2px 27px' }}>
        <img src={imag}/>
      </div>
      <div style={{ paddingLeft: '10px', display: 'inline-block',
width: '66%', fontSize: '13px', fontFamily: 'Segoe UI' }}>
        <div className="e-description" style={{ marginTop: '5px'
}}>
          <b>{props.Name}</b> was born on
{this.format(props.DOB)}. Now lives at {props.Address}, {props.Country}.
{props.Name} holds a position of <b>{props.Designation}</b> in our WA
department, (Seattle USA).</div>
        <div className="e-description" style={{ marginTop: '5px'
}}>
    {% endraw %}
```

```

        <b style={{ marginRight: '10px'
    }}>Contact:</b>{props.Contact}
    </div>
  </div>
</div>);
}
template = this.detailtemplate;
render() {
  return (<div className='control-pane'>
    <div className='control-section'>
      <TreeGridComponent dataSource={textdata}
childMapping='Children' detailTemplate={this.template.bind(this)}
treeColumnIndex={0}>
        <ColumnsDirective>
          <ColumnDirective headerText='Full Name'
width='170' field='Name'></ColumnDirective>
          <ColumnDirective field='Designation'
headerText='Designation' width='180'></ColumnDirective>
          <ColumnDirective field='EmpID'
headerText='EmployeeID' width='110'></ColumnDirective>
          <ColumnDirective field='Country'
headerText='Country' width='90'></ColumnDirective>
        </ColumnsDirective>
        <Inject services={[DetailRow]}>
      </TreeGridComponent>
    </div>
  </div>);
}
}
{% endraw %}

```

APP.TSX

                    <Inject services={[DetailRow]} />
                </TreeGridComponent>
            </div>
        </div>
    )
}
}
{% enddraw %}

```

Row drag and drop in React Treegrid component

The TreeGrid rows can be reordered, dropped to another TreeGrid or custom control by enabling the [allowRowDragAndDrop](#) to true.

To use row drag and drop, inject the **RowDD** module in the TreeGrid.

Drag and drop within Tree Grid

The TreeGrid row drag and drop allows you to drag and drop TreeGrid rows on the same TreeGrid using drag icon. To enable row drag and drop, set the [allowRowDragAndDrop](#) to true. It provides the way to drop the row above, below or child to the target row with respective to the target row position.

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject, RowDD
} from '@syncfusion/ej2-react-treegrid';
import { sampleData } from './datasource';
class App extends React.Component {
  selectionSettings = { type: 'Multiple' };
  render() {
    return <TreeGridComponent dataSource={sampleData}
allowRowDragAndDrop={true} treeColumnIndex={1} childMapping='subtasks'
height='270' selectionSettings={this.selectionSettings}>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID'
width='90' textAlign='Right'></ColumnDirective>
        <ColumnDirective field='taskName' headerText='Task Name'
width='180'></ColumnDirective>
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
        <ColumnDirective field='progress' headerText='Progress'
width='80' textAlign='Right' />
      </ColumnsDirective>
      <Inject services={[RowDD]} />
    </TreeGridComponent>;
  }
}
ReactDOM.render(<App />, document.getElementById('treegrid'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject,
RowDD, RowDropSettingsModel, SelectionSettingsModel } from '@syncfusion/ej2-
react-treegrid';
import { sampleData } from './datasource';
class App extends React.Component<{}, {}>{
  public selectionSettings: SelectionSettingsModel = { type: 'Multiple' };
  render() {
    return <TreeGridComponent dataSource={sampleData}
allowRowDragAndDrop={true} treeColumnIndex={1} childMapping='subtasks'
height='270' selectionSettings={this.selectionSettings} >
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID'
width='90' textAlign='Right'></ColumnDirective>
        <ColumnDirective field='taskName' headerText='Task Name'
width='180'></ColumnDirective>
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
        <ColumnDirective field='progress' headerText='Progress'
width='80' textAlign='Right' />
      </ColumnsDirective>
      <Inject services={[RowDD]} />
    </TreeGridComponent>
  }
}

```

```
}
ReactDOM.render(<App />, document.getElementById('treegrid'));
```

- * Selection feature must be enabled for row drag and drop.
- * Multiple rows can be selected by clicking and dragging inside the treegrid.
- * For multiple row selection, the [type](#) property must be set to **multiple**.
- * The [isPrimaryKey](#) property is necessary to perform row drag and drop operation.

Drag and drop to another Tree Grid

To drag and drop between two TreeGrid, enable the [allowRowDragAndDrop](#) property and specify the target TreeGrid ID in [targetID](#) property of rowDropSettings.

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { TreeGridComponent, RowDD, ColumnsDirective, ColumnDirective, Inject
} from '@syncfusion/ej2-react-treegrid';

        <Target></Target>
    </div>
}
ReactDOM.render(<App />, document.getElementById('treegrid'));

```

Drag and drop events

The following events are triggered while drag and drop the treegrid rows.

[rowDragStartHelper](#) - Triggers when click the drag icon or treegrid row and this event is used to customize the drag element based on user criteria.

[rowDragStart](#) - Triggers when starts to drag the treegrid row.

[rowDrag](#) - Triggers while dragging the treegrid row.

[rowDrop](#) - Triggers when a drag element is dropped on the target element.

Prevent reordering a row as child to another row

You can prevent the default behavior of dropping rows as children to the target by setting the **cancel** property to **true** in [rowDrop](#) event argument. You can also change the drop position after cancelling using [reorderRows](#) method.

In the below example drop action is cancelled and dropped above to target row.

INDEX.JSX

```

import * as React from 'react';
import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject, RowDD
} from '@syncfusion/ej2-react-treegrid';
import { sampleData } from './datasource';
class App extends React.Component {

```

```

    rowDrop(args) {
      if (args.dropPosition == 'middleSegment') {
        args.cancel = true;
        this.treegridInstance.reorderRows([args.fromIndex],
args.dropIndex, 'above');
      }
      render();
    }
    {
      return <TreeGridComponent ref={ (treegrid) =>
        (this.treegridInstance = treegrid)} allowRowDragAndDrop={true}
        dataSource={sampleData} treeColumnIndex={1} childMapping='subtasks'
        height='270' rowDrop={this.rowDrop.bind(this)}>
        <ColumnsDirective>
          <ColumnDirective field='taskID' headerText='Task ID'
width='90' textAlign='Right'></ColumnDirective>
          <ColumnDirective field='taskName' headerText='Task Name'
width='180'></ColumnDirective>
          <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
          <ColumnDirective field='progress' headerText='Progress'
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[RowDD]} />
      </TreeGridComponent>;
    }
  }
}
ReactDOM.render(<App />, document.getElementById('treegrid'));

```

INDEX.TSX

    </ColumnsDirective>
    <Inject services={[RowDD]} />
</TreeGridComponent>
}
}
ReactDOM.render(<App />, document.getElementById('treegrid'));

```

Indent in React Treegrid component

The Indent and Outdent feature will help to change the hierarchy level of rows in tree grid. The indent action moves the selected row as the last child of its previous row, whereas the outdent action moves the selected row as a sibling to its parent row.

To use the indent and outdent feature, inject the **RowDD** module in the Tree Grid. The tree grid toolbar has the built-in items to execute indent and outdent actions. Define this by using the toolbar property.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, RowDD, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const toolbarOptions = ['Indent', 'Outdent'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' selectedRowIndex={2} height='270'
toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true}/>
            <ColumnDirective field='taskName' headerText='Task Name'
width='180'/>
            <ColumnDirective field='priority' headerText='Priority'
width='90'/>
            <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right'/>
        </ColumnsDirective>
        <Inject services={[Toolbar, RowDD]} />
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, RowDD, Toolbar, ToolbarItems } from '@syncfusion/ej2-react-
treegrid';
import * as React from 'react';
import { sampleData } from './datasource';

```

```
function App() {
  const toolbarOptions: ToolbarItems[] = ['Indent', 'Outdent'];
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' selectedRowIndex={2} height='270'
  toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' isPrimaryKey={true}/>
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180'/>
      <ColumnDirective field='priority' headerText='Priority'
      width='90'/>
      <ColumnDirective field='duration' headerText='Duration' width='80'
      textAlign='Right'/>
    </ColumnsDirective>
    <Inject services={[Toolbar, RowDD]}/>
  </TreeGridComponent>
};
export default App;
```

Indent/Outdent a row programmatically

You can change the hierarchy level of record programmatically using `indent` and `outdent` methods.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Inject, RowDD } from '@syncfusion/ej2-react-treegrid';
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  let treegrid;
  const Indenting = () => {
    treegrid.indent(treegrid.current.getCurrentViewRecords()[2]);
  };
  const Outdenting = () => {
    treegrid.outdent(treegrid.current.getCurrentViewRecords()[2]);
  };
  return (<div>
    <ButtonComponent onClick={Indenting}>
      Indent
    </ButtonComponent>
    <ButtonComponent onClick={Outdenting}>
      Outdent
    </ButtonComponent>
    <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' selectedRowIndex={2} height='270' ref={g => treegrid
    = g}>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' isPrimaryKey={true}/>
        <ColumnDirective field='taskName' headerText='Task Name'
        width='180'/>
        <ColumnDirective field='priority' headerText='Priority'
        width='90'/>

```

```

        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
      </ColumnsDirective>
      <Inject services={[RowDD]} />
    </TreeGridComponent>
  </div>);
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, RowDD } from '@syncfusion/ej2-react-treegrid';
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  let treegrid: TreeGridComponent | null;
  const Indenting = () => {
    treegrid.indent((treegrid.current as
any).getCurrentViewRecords()[2]);
  }
  const Outdenting = () => {
    treegrid.outdent((treegrid.current as

      </ButtonComponent>
      <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' selectedRowIndex={2} height='270' ref={g => treegrid
= g}>
        <ColumnsDirective>
          <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true} />
          <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
          <ColumnDirective field='priority' headerText='Priority'
width='90' />
          <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[RowDD]} />
      </TreeGridComponent>
    </div>);
};
export default App;

```

Cell

Cell in React Treegrid component

Customize cell styles

The appearance of cells can be customized by using the [queryCellInfo](#) event. The [queryCellInfo](#) event triggers for every cell. In that event handler, you can get [QueryCellInfoEventArgs](#) that contains the details of the cell.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const customizeCell = (args) => {
        const cell = args.cell;
        if (args.column.field === 'progress' && +cell.innerHTML > 90 &&
            +cell.innerHTML <= 100) {
            cell.setAttribute('style', 'background-
color:#336c12;color:white;');
        }
        else if (+cell.innerHTML > 20 && args.column.field === 'progress') {
            cell.setAttribute('style', 'background-
color:#7b2b1d;color:white;');
        }
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='300' queryCellInfo={customizeCell}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
            <ColumnDirective field='progress' headerText='Progress'
            width='80' textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { QueryCellInfoEventArgs } from '@syncfusion/ej2-grids';
import { Column, ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const customizeCell = (args: QueryCellInfoEventArgs) => {
        const cell : HTMLTableCellElement = args.cell as
HTMLTableCellElement;
```

```

        if ((args.column as Column).field === 'progress' && +cell.innerHTML
> 90 &&
            +cell.innerHTML <= 100) {
            cell.setAttribute('style', 'background-
color:#336c12;color:white;');
        } else if (+cell.innerHTML > 20 && (args.column as Column).field ===
'progress') {
            cell.setAttribute('style', 'background-
color:#7b2b1d;color:white;');
        }
    }
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='300'
    queryCellInfo={customizeCell}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
            <ColumnDirective field='progress' headerText='Progress'
width='80' textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>
};
export default App;

```

Custom attributes

You can customize the treegrid cells by adding a CSS class to the [customAttribute](#) property of the column.

```

`css
.e-attr {
background: #d7f0f4;
}
`ts
const customAttr = {class: 'e-attr'};
<ColumnDirective
field="taskID" headerText="Task ID" customAttributes={customAttr} width="90" textAlign='Right' />

```

In the below example, we have customized the cells of *TaskID* and *StartDate* columns.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';

```

```
import './custom.css';
import { sampleData } from './datasource';
function App() {
  const customAttr = { class: 'e-attr' };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='300'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID'
      customAttributes={customAttr} width='90' textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
      customAttributes={customAttr} width='90' format='yMd' textAlign='Right'
      type='date' />
      <ColumnDirective field='duration' headerText='Duration'
      width='80' textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const customAttr = {class: 'e-attr'};
  return <TreeGridComponent dataSource={sampleData}
  treeColumnIndex={1} childMapping='subtasks' height='300'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID'
      customAttributes={customAttr} width='90' textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
      customAttributes={customAttr} width='90' format='yMd' textAlign='Right'
      type='date' />
      <ColumnDirective field='duration' headerText='Duration'
      width='80' textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>
};
export default App;
```

TreeGrid lines

The [gridLines](#) have option to display cell border and it can be defined by the [gridLines](#) property.

The available modes of grid lines are:

| Modes | Actions |

|-----|-----|

- | Both | Displays both the horizontal and vertical grid lines.
- | None | No grid lines are displayed.
- | Horizontal | Displays the horizontal grid lines only.
- | Vertical | Displays the vertical grid lines only.
- | Default | Displays grid lines based on the theme.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='300' gridLines='Both'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
  textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
  width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
  width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration' width='80'
  textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='300' gridLines='Both'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
  textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
  width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
  width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration' width='80'
  textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>
};
export default App;
```

By default, the treegrid renders with **Default** mode.

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations.

You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Content in React Treegrid component

The HTML tags can be displayed in the TreeGrid header and content by enabling the [disableHtmlEncode](#) property.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { htmlData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={htmlData} treeColumnIndex={1}
    childMapping='subtasks' height='300'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='<span> Task ID
</span>' width='160' textAlign='Right' disableHtmlEncode={true}/>
      <ColumnDirective field='taskName' headerText='<span> Task Name
</span>' width='180' disableHtmlEncode={false}/>
      <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
      <ColumnDirective field='progress' headerText='Progress'
width='80' textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { htmlData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={htmlData} treeColumnIndex={1}
    childMapping='subtasks' height='300'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='<span> Task ID
</span>' width='160' textAlign='Right' disableHtmlEncode={true}/>
      <ColumnDirective field='taskName' headerText='<span> Task Name
</span>' width='180' disableHtmlEncode={false}/>
      <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
      <ColumnDirective field='progress' headerText='Progress'
width='80' textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>
};
export default App;
```

Auto wrap in React Treegrid component

The auto wrap allows the cell content of the treegrid to wrap to the next line when it exceeds the boundary of the cell width. The Cell Content wrapping works based on the position of white space between words. To enable auto wrap, set the [allowTextWrap](#) property to **true**. You can configure the auto wrap mode by setting the [textWrapSettings.wrapMode](#) property.

There are three types of **wrapMode**. They are:

- **Both:** This value is set by default. Auto wrap will be enabled for both the content and the header.
- **Header:** Auto wrap will be enabled only for the header.
- **Content:** Auto wrap will be enabled only for the content.

Note: When a column width is not specified, then auto wrap of columns will be adjusted with respect to the treegrid's width.

In the following example, the **textWrapSettings.wrapMode** is set to *Content*.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const settings = { wrapMode: 'Content' };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='300' allowTextWrap={true}
    textWrapSettings={settings}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
        width='90' />
      <ColumnDirective field='startDate' headerText='Start Date'
        width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration' width='80'
        textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { TextWrapSettingsModel } from '@syncfusion/ej2-grids';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const settings: TextWrapSettingsModel = { wrapMode: 'Content' };
}
```

```

    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='300' allowTextWrap={true}
    textWrapSettings={settings}>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name '
        width='90' />
        <ColumnDirective field='startDate' headerText='Start Date '
        width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration' width='80'
        textAlign='Right' />
      </ColumnsDirective>
    </TreeGridComponent>
  };
  export default App;

```

Clip mode in React Treegrid component

The clip mode provides options to display its overflow cell content and it can be defined by the [columns.clipMode](#) property.

There are three types of [clipMode](#). They are:

- **Clip:** Truncates the cell content when it overflows its area.
- **Ellipsis:** Displays ellipsis when the cell content overflows its area.
- **EllipsisWithTooltip:** Displays ellipsis when the cell content overflows its area, also it will display the tooltip while hover on ellipsis is applied.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { complexData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={complexData} treeColumnIndex={1}
  childMapping='subtasks' height='300' gridLines='Both'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name '
      width='70' clipMode='Clip' />
      <ColumnDirective field='assignee.firstName' headerText='Assignee '
      width='30' textAlign='Right' clipMode='Ellipsis' />
      <ColumnDirective field='priority' headerText='Priority' width='30'
      textAlign='Right' clipMode='EllipsisWithTooltip' />
      <ColumnDirective field='duration' headerText='Duration' width='30'
      textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { complexData } from '../datasource';
function App() {
    return <TreeGridComponent dataSource={complexData} treeColumnIndex={1}
    childMapping='subtasks' height='300' gridLines='Both'>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='70' clipMode='Clip' />
            <ColumnDirective field='assignee.firstName' headerText='Assignee'
            width='30' textAlign='Right' clipMode='Ellipsis' />
            <ColumnDirective field='priority' headerText='Priority' width='30'
            textAlign='Right' clipMode='EllipsisWithTooltip' />
            <ColumnDirective field='duration' headerText='Duration' width='30'
            textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>
};
export default App;
```

By default, [columns.clipMode](#) value is **Ellipsis**.

Editing**Edit in React Treegrid component**

The TreeGrid component has options to dynamically insert, delete and update records. Editing feature is enabled by using [editSettings](#) property and it requires a primary key column for CRUD operations. To define the primary key, set [columns.isPrimaryKey](#) to [Link to the Video](#) in particular column.

To get start quickly with CRUD functionalities, you can check on this video:

To use CRUD, inject the [Edit](#) module in treegrid.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Edit, Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const editOptions = {
        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Cell'
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='270' editSettings={editOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' isPrimaryKey={true} />
        </ColumnsDirective>
    </TreeGridComponent>
};
```

```

        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='priority' headerText='Priority'
width='90' />
        <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Edit]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, EditSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Edit, Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions: EditSettingsModel = {
        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Cell'
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='270'
editSettings={editOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true} />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='priority' headerText='Priority' width='90'
/>
            <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Edit]} />
    </TreeGridComponent>
};
export default App;

```

* You can disable editing for a particular column, by specifying [columns.allowEditing](#) to false.

Toolbar with edit option

The treegrid toolbar has the built-in items to execute Editing actions. You can define this by using the [toolbar](#) property.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Edit, Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';

```

```

import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const editOptions = {
    allowAdding: true,
    allowDeleting: true,
    allowEditing: true,
    mode: 'Row'
  };
  const toolbarOptions = ['Add', 'Edit', 'Delete', 'Update', 'Cancel'];
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='270' editSettings={editOptions}
  toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' isPrimaryKey={true}/>
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180'/>
      <ColumnDirective field='priority' headerText='Priority'
      width='90'/>
      <ColumnDirective field='duration' headerText='Duration' width='80'
      textAlign='Right'/>
    </ColumnsDirective>
    <Inject services={[Edit, Toolbar]}/>
  </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, EditSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Edit, Inject, Toolbar, ToolbarItems } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const editOptions: EditSettingsModel = {
    allowAdding: true,
    allowDeleting: true,
    allowEditing: true,
    mode: 'Row'
  };
  const toolbarOptions: ToolbarItems[] = ['Add', 'Edit', 'Delete', 'Update', 'Cancel'];
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='270'
  editSettings={editOptions} toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' isPrimaryKey={true}/>
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180'/>
      <ColumnDirective field='priority' headerText='Priority' width='90'
      />
    </ColumnsDirective>
  </TreeGridComponent>;
}
;
export default App;

```

```

        <ColumnDirective field='duration' headerText='Duration' width='80'
        textAlign='Right' />
      </ColumnsDirective>
      <Inject services={[Edit,Toolbar]} />
    </TreeGridComponent>
  };
  export default App;

```

Adding row position

The TreeGrid control provides the support to add the new row in the top, bottom, above selected row, below selected row and child position of tree grid content using [editSettings.newRowPosition](#) property. By default, a new row will be added at the top of the treegrid.

The following examples shows how to set new row position as *Child* in tree grid.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const editOptions = {
    allowAdding: true,
    allowDeleting: true,
    allowEditing: true,
    mode: 'Cell',
    newRowPosition: 'Child'
  };
  const toolbarOptions = ['Add', 'Delete', 'Update', 'Cancel'];
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='270' editSettings={editOptions}
  toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' isPrimaryKey={true}/>
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
      width='130' format='yMd' textAlign='Right' type='date'
      editType='datepickeredit' />
      <ColumnDirective field='duration' headerText='Duration' width='80'
      textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Edit, Toolbar]} />
  </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';

```

```

import { Edit, EditSettingsModel, Toolbar, ToolbarItems } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions: EditSettingsModel = {
        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Cell',
        newRowPosition: 'Child'
    };
    const toolbarOptions: ToolbarItems[] = ['Add', 'Delete', 'Update',
'Cancel'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='270'
editSettings={editOptions} toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true}/>
            <ColumnDirective field='taskName' headerText='Task Name'
width='180'/>
            <ColumnDirective field='startDate' headerText='Start Date'
width='130' format='yMd' textAlign='Right' type='date'
editType='datepickeredit' />
            <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Edit, Toolbar]}/>
    </TreeGridComponent>
};
export default App;

```

Confirmation messages

Delete confirmation

The delete confirm dialog can be shown when deleting a record by defining the [showDeleteConfirmDialog](#) as **true**

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions = {
        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Cell',
        showDeleteConfirmDialog: true
    };
    const toolbarOptions = ['Add', 'Delete', 'Update', 'Cancel'];

```

```

    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='270' editSettings={editOptions}
    toolbar={toolbarOptions}>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' isPrimaryKey={true}/>
        <ColumnDirective field='taskName' headerText='Task Name'
        width='180'/>
        <ColumnDirective field='startDate' headerText='Start Date'
        width='130' format='yMd' textAlign='Right' type='date'
        editType='datepickeredit'/>
        <ColumnDirective field='duration' headerText='Duration' width='80'
        textAlign='Right'/>
      </ColumnsDirective>
      <Inject services={[Edit, Toolbar]}/>
    </TreeGridComponent>;
  }
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Edit, EditSettingsModel, Toolbar, ToolbarItems } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const editOptions: EditSettingsModel = {
    allowAdding: true,
    allowDeleting: true,
    allowEditing: true,
    mode: 'Cell',
    showDeleteConfirmDialog: true
  };
  const toolbarOptions: ToolbarItems[] = ['Add', 'Delete', 'Update',
  'Cancel'];
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='270'
  editSettings={editOptions} toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' isPrimaryKey={true}/>
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180'/>
      <ColumnDirective field='startDate' headerText='Start Date'
      width='130' format='yMd' textAlign='Right' type='date'
      editType='datepickeredit' />
      <ColumnDirective field='duration' headerText='Duration' width='80'
      textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Edit, Toolbar]}/>
  </TreeGridComponent>
};
export default App;

```

The [showDeleteConfirmDialog](#) supports all type of edit modes.

Default column values on add new

The treegrid provides an option to set the default value for the columns when adding a new record in it. To set a default value for the particular column by defining the [columns.defaultValue](#).

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const editOptions = {
        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Cell'
    };
    const toolbarOptions = ['Add', 'Delete', 'Update', 'Cancel'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='270' editSettings={editOptions}
    toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' isPrimaryKey={true}/>
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180'/>
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' textAlign='Right' editType='datepickeredit' format='yMd'
            type='date'/>
            <ColumnDirective field='priority' headerText='Priority'
            width='110' editType='dropdownedit' defaultValue='Normal'/>
        </ColumnsDirective>
        <Inject services={[Edit, Toolbar]}/>
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Edit, EditSettingsModel, Toolbar, ToolbarItems } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const editOptions: EditSettingsModel = {
        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Cell'
    };
    const toolbarOptions = ['Add', 'Delete', 'Update', 'Cancel'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='270' editSettings={editOptions}
    toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' isPrimaryKey={true}/>
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180'/>
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' textAlign='Right' editType='datepickeredit' format='yMd'
            type='date'/>
            <ColumnDirective field='priority' headerText='Priority'
            width='110' editType='dropdownedit' defaultValue='Normal'/>
        </ColumnsDirective>
        <Inject services={[Edit, Toolbar]}/>
    </TreeGridComponent>;
}
;
export default App;
```

```

    };
    const toolbarOptions: ToolbarItems[] = ['Add', 'Delete', 'Update',
    'Cancel'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='270'
    editSettings={editOptions} toolbar={toolbarOptions}>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' isPrimaryKey={true}/>
        <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
        width='90' textAlign='Right' editType='datepickeredit' format='yMd'
        type='date' />
        <ColumnDirective field='priority' headerText='Priority'
        width='110' editType='dropdownedit' defaultValue='Normal' />
      </ColumnsDirective>
      <Inject services={[Edit, Toolbar]} />
    </TreeGridComponent>
  };
  export default App;

```

Disable editing for particular column

You can disable editing for particular columns by using the [columns.allowEditing](#).

In the following demo, editing is disabled for the *Start Date* column.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const editOptions = {
    allowAdding: true,
    allowDeleting: true,
    allowEditing: true,
    mode: 'Cell'
  };
  const toolbarOptions = ['Add', 'Delete', 'Update', 'Cancel'];
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='270' editSettings={editOptions}
  toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' isPrimaryKey={true}/>
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
      width='90' allowEditing={false} textAlign='Right' editType='datepickeredit'
      format='yMd' type='date' />
      <ColumnDirective field='priority' headerText='Priority'
      width='110' editType='dropdownedit' />
    </ColumnsDirective>
  </TreeGridComponent>

```

```

        <Inject services={[Edit, Toolbar]}/>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Edit, EditSettingsModel, Toolbar, ToolbarItems } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions: EditSettingsModel = {
        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Cell'
    };
    const toolbarOptions: ToolbarItems[] = ['Add', 'Delete', 'Update',
'Cancel'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='270'
editSettings={editOptions} toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true}/>
            <ColumnDirective field='taskName' headerText='Task Name'
width='180'/>
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' allowEditing={false} textAlign='Right' editType='datepickeredit'
format='yMd' type='date' />
            <ColumnDirective field='priority' headerText='Priority'
width='110' editType='dropdownedit' />
        </ColumnsDirective>
        <Inject services={[Edit, Toolbar]}/>
    </TreeGridComponent>
};
export default App;

```

Troubleshoot: Editing works only for first row

The Editing functionalities can be performed based upon the primary key value of the selected row.

If [column.primaryKey](#) is not defined in the treegrid, then edit or delete action take places the first row.

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations.

You can also explore our [React Tree Grid example](#) to knows how to present and manipulate data.

Edit types in React Treegrid component

Cell edit type and its params

The [columns.editType](#) is used to customize the edit type of the particular column. You can set the [columns.editType](#) based on data type of the column.

- `numericedit` - [NumericTextBox](#) component for integers, double, and decimal data types.
- `defaultedit` - [TextBox](#) component for string data type.
- `dropdownedit` - [DropDownList](#) component for list data type.
- `booleanedit` - [CheckBox](#) component for boolean data type.
- `datepickeredit` - [DatePicker](#) component for date data type.
- `datetimepickeredit` - [DateTimePicker](#) component for date time data type.

Also, you can customize model of the [columns.editType](#) component through the [columns.edit.params](#).

The following table describes cell edit type component and their corresponding edit params of the column.

Component | Example

[NumericTextBox](#) | params: { decimals: 2, value: 5 }

[TextBox](#) | -

[DropDownList](#) | params: { value: 'Germany' }

[Checkbox](#) | params: { checked: true }

[DatePicker](#) | params: { format: 'dd.MM.yyyy' }

[DateTimePicker](#) | params: { value: new Date() }

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions = { allowEditing: true, allowAdding: true,
allowDeleting: true, mode: 'Row' };
    const format = { type: 'dateTime', format: 'M/d/y hh:mm a' };
    const toolbarOptions = ['Add', 'Edit', 'Delete', 'Update', 'Cancel'];

textAlign='Right' width='120' editType='numericedit' edit={numericParams}/>
        </ColumnsDirective>
    </TreeGridComponent>
```

```

        <ColumnDirective field='priority' headerText='Priority'
width='110' editType='dropdownedit' />
    </ColumnsDirective>
    <Inject services={[Edit, Toolbar]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { IEditCell } from '@syncfusion/ej2-grids';
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Edit, EditSettingsModel, Toolbar, ToolbarItems } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions: EditSettingsModel = { allowEditing: true,
allowAdding: true, allowDeleting: true, mode: 'Row' };
    const format: any = { type: 'dateTime', format: 'M/d/y hh:mm a' };
    const toolbarOptions: ToolbarItems[] = ['Add', 'Edit', 'Delete',
'Update', 'Cancel'];
    const datetimeParams: IEditCell = { params: { format: 'M/d/y hh:mm a' }
};
    const numericParams: IEditCell = { params: { format: 'n' } };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='270' editSettings={editOptions}
toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='100'
textAlign='Right' isPrimaryKey={true} />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' editType='stringedit' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='180' textAlign='Right' edit={datetimeParams}
editType='datetimepickeredit' format={format} />
            <ColumnDirective field='approved' headerText='Approved'
width='110' textAlign='Right' editType='booleanedit' type='boolean'
displayAsCheckBox={true} />
            <ColumnDirective field='progress' headerText='Progress'
textAlign='Right' width='120' editType='numericedit' edit={numericParams} />
            <ColumnDirective field='priority' headerText='Priority'
width='110' editType='dropdownedit' />
        </ColumnsDirective>
        <Inject services={[Edit, Toolbar]} />
    </TreeGridComponent>
};
export default App;

```

If edit type is not defined in the column, then it will be considered as the *stringedit* type (Textbox component).

Cell edit template

The cell edit template is used to add a custom component for a particular column by invoking the following functions:

- **create** - It is used to create the element at time of initialization.
- **write** - It is used to create custom component or assign default value at time of editing.
- **read** - It is used to read the value from component at time of save.
- **destroy** - It is used to destroy the component.

APP.JSX

```
import { DataManager } from '@syncfusion/ej2-data';
import { AutoComplete } from '@syncfusion/ej2-dropdowns';
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';

```

Cell editing in React Treegrid component

In Cell edit mode, when you double click on a cell, it is changed to edit state. You can change the cell value and save to the data source. To enable Cell edit, set the [editSettings.mode](#) as **Cell**.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Edit } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const editOptions = {
    allowAdding: true,
    allowDeleting: true,
    allowEditing: true,
    mode: 'Cell',
    newRowPosition: 'Below'
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='270' editSettings={editOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' isPrimaryKey={true}/>
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180'/>
      <ColumnDirective field='startDate' headerText='Start Date'
      width='130' format='yMd' textAlign='Right' type='date'
      editType='datepickeredit'/>
      <ColumnDirective field='duration' headerText='Duration' width='80'
      textAlign='Right'/>
    </ColumnsDirective>
    <Inject services={[Edit]}/>
  </TreeGridComponent>;

```

```

}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Edit, EditSettingsModel } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const editOptions: EditSettingsModel = {
    allowAdding: true,
    allowDeleting: true,
    allowEditing: true,
    mode: 'Cell',
    newRowPosition: 'Below'
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks'
    height='270' editSettings={editOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
  textAlign='Right' isPrimaryKey={true}/>
      <ColumnDirective field='taskName' headerText='Task Name'
  width='180'/>
      <ColumnDirective field='startDate' headerText='Start Date'
  width='130' format='yMd' textAlign='Right' type='date'

  </TreeGridComponent>
};
export default App;

```

Cell edit mode is default mode of editing.

Row editing in React Treegrid component

In Row edit mode, when you start editing the currently selected record, the entire row is changed to edit state. You can change the cell values of the row and save edited data to the data source. To enable Row edit, set the [editSettings.mode](#) as **Row**.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const editOptions = {
    allowAdding: true,

```

```

        allowDeleting: true,
        allowEditing: true,
        mode: 'Row'
    };
    const toolbarOptions = ['Add', 'Edit', 'Delete', 'Update', 'Cancel'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='270' editSettings={editOptions}
toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true}/>
            <ColumnDirective field='taskName' headerText='Task Name'
width='180'/>
            <ColumnDirective field='startDate' headerText='Start Date'
width='130' format='yMd' textAlign='Right' type='date'
editType='datepickeredit'/>
            <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right'/>
        </ColumnsDirective>
        <Inject services={[Edit, Toolbar]}/>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from

import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions: EditSettingsModel = {
        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Row'
    };
    const toolbarOptions: ToolbarItems[] = ['Add', 'Edit', 'Delete',
'Update', 'Cancel'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
        height='270' editSettings={editOptions} toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true}/>
            <ColumnDirective field='taskName' headerText='Task Name'
width='180'/>
            <ColumnDirective field='startDate' headerText='Start Date'
width='130' format='yMd' textAlign='Right' type='date'
editType='datepickeredit' />
            <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>;
}
;
export default App;

```

```

        <Inject services={[Edit, Toolbar]}/>
    </TreeGridComponent>
};
export default App;

```

Dialog editing in React Treegrid component

In Dialog edit mode, when you start editing the currently selected row, data will be shown on a dialog. You can change the cell values and save edited data to the data source. To enable Dialog edit, set the [editSettings.mode](#) as **Dialog**.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions = {
        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Dialog'
    };
    const toolbarOptions = ['Add', 'Edit', 'Delete', 'Update', 'Cancel'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='270' editSettings={editOptions}
toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true}/>
            <ColumnDirective field='taskName' headerText='Task Name'
width='180'/>
            <ColumnDirective field='startDate' headerText='Start Date'
width='130' format='yMd' textAlign='Right' type='date'
editType='datepickeredit'/>
            <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right'/>
        </ColumnsDirective>
        <Inject services={[Edit, Toolbar]}/>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Edit, EditSettingsModel, Toolbar, ToolbarItems } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions: EditSettingsModel = {

```

```

        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Dialog'
    };
    const toolbarOptions: ToolbarItems[] = ['Add', 'Edit', 'Delete',
'Update', 'Cancel'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
    height='270' editSettings={editOptions} toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true}/>
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='130' format='yMd' textAlign='Right' type='date'
editType='datepickeredit' />
            <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Edit, Toolbar]}/>
    </TreeGridComponent>
};
export default App;

```

Batch editing in React Treegrid component

In Batch edit mode, when you double-click on the treegrid cell, the target cell goes into edit state. You can bulk save (added, changed and deleted data in the single request) to data source by clicking on the toolbar's **Update** button or by externally invoking the [batchSave](#) method. To enable Batch edit, set the [editSettings.mode](#) as **Batch**.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions = {
        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Batch',
    };
    const toolbarOptions = ['Add', 'Update', 'Cancel'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='270' editSettings={editOptions}
toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true}/>
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />

```

```

        <ColumnDirective field='startDate' headerText='Start Date'
width='130' format='yMd' textAlign='Right' type='date'
editType='datepickeredit' />
        <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Edit, Toolbar]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Edit, EditSettingsModel, Toolbar, ToolbarItems } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions: EditSettingsModel = {
        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Batch',
    };
    const toolbarOptions: ToolbarItems[] = ['Add', 'Update', 'Cancel'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
height='270' editSettings={editOptions} toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true} />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='130' format='yMd' textAlign='Right' type='date'
editType='datepickeredit' />
            <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Edit, Toolbar]} />
    </TreeGridComponent>
};
export default App;

```

Template editing in React Treegrid component

Dialog template

The dialog template editing provides an option to customize the default behavior of dialog editing. Using the dialog template, you can render your own editors by defining the [editSettings.mode](#) as [Link to the Video](#) and [template](#) as SCRIPT element ID or HTML string which holds the template.

In some cases, you need to add the new field editors in the dialog which are not present in the column model. In that situation, the dialog template will help you to customize the default edit dialog.

For quick details with dialog template, you can check on this video:

In the following sample, treegrid enabled with dialog template editing.

APP.JSX

```
import { setValue } from '@syncfusion/ej2-base';
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
import { DialogFormTemplate } from './template';
function App() {
    let treegrid;
    const toolbarOptions = ['Add', 'Edit', 'Delete', 'Update', 'Cancel'];
    const dialogTemplate = (props) => {
        const obj = [props, treegrid];
        return (<DialogFormTemplate {...obj}/>);
    };
    const editOptions = {
        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Dialog',
        template: dialogTemplate
    };
    const actionComplete = (args) => {
        if ((args.requestType === 'beginEdit' || args.requestType === 'add')) {
            // Add Validation Rules
            const form = args.form;
            form.ej2_instances[0].addRules('progress', { max: 100 });
            if (args.requestType === 'beginEdit') {
                form.elements.namedItem('taskName').focus();

    }
}{{% enddraw %}}

```

The template form editors should have **name** attribute.

Template context

The template should be a React Component class. You can access the row information inside the Component class using *props*, you can bind the attribute or value based on this row information.

The following properties will be available at the time of template execution.

Property Name	Usage
isAdd	A Boolean property; it defines whether the current row should be a new record or not.

In the following code example, the *OrderID* textbox has been disabled by using the **isAdd** property.

```
,
```

```
// The disabled attributes will be added based on the isAdd property.
```

```
<input id="taskID" name="taskID" type="text" disabled={!data.isAdd} value={data.taskID}
onChange={this.onChange} />
```

```
,
```

The following code example illustrates rendering the *taskID* textbox, when a new record is added.

Get value from editor

You can read, format, and update the current editor value in the [actionBegin](#) event at the time of setting **requestType** to **save**.

In the following code example, the *progress* value has been formatted and updated.

```
`ts
```

```
const actionBegin = (args: DialogEditEventArgs) => {
  if (args.requestType === 'save') {
    // cast string to integer value.
    const val: string = ((args.form as HTMLFormElement)
      .querySelector("#progress") as HTMLInputElement).value;
    setValue('data.progress', parseFloat(val), args);
  }
}
```

```
,
```

Set focus to editor

By default, the first input element in the dialog will be focused while opening the dialog. If the first input element is in disabled or hidden state, focus the valid input element in the [actionComplete](#) event based on **requestType** as *beginEdit*.

```
`ts
```

```
const actionComplete = (args: DialogEditEventArgs) => {
  if ((args.requestType === 'beginEdit' || args.requestType === 'add')) {
    const form: HTMLFormElement = args.form as HTMLFormElement;
    if (args.requestType === 'beginEdit') {
      (form.elements.namedItem('taskName') as HTMLInputElement).focus();
    }
  }
}
```

```

}
}
}
,

```

Adding validation rules for custom editors

If you have used additional fields that are not present in the column model, then add the validation rules to them in the [actionComplete](#) event.

```

`ts
const actionComplete = (args: DialogEditEventArgs) => {
if ((args.requestType === 'beginEdit' || args.requestType === 'add')) {
// Add Validation Rules
const form: HTMLFormElement = args.form as HTMLFormElement;
form.ej2_instances[0].addRules('progress', {max: 100});
}
}
,

```

Command column editing in React Treegrid component

The command column provides an option to add CRUD action buttons in a column. This can be defined by the [column.commands](#) property.

The available built-in command buttons are:

Command Button	Actions
Edit	Edit the current row.
Delete	Delete the current row.
Save	Update the edited row.
Cancel	Cancel the edited state.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from

</TreeGridComponent>
};
export default App;

```

Validation in React Treegrid component

Column validation

Column validation allows you to validate the edited or added row data and it display errors for invalid fields before saving data. TreeGrid uses **Form Validator** component for column validation. You can set validation rules by defining the [columns.validationRules](#).

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const editOptions = {
    allowAdding: true,
    allowDeleting: true,
    allowEditing: true,
    mode: 'Cell',
    showDeleteConfirmDialog: true
  };
  const toolbarOptions = ['Add', 'Delete', 'Update', 'Cancel'];
  const format = { type: 'dateTime', format: 'M/d/y hh:mm a' };
  const datetimeParams = { params: { format: 'M/d/y hh:mm a' } };
  const numericParams = { params: { format: 'n' } };
  const taskIDRules = { required: true, number: true };
  const progressRules = { number: true, min: 0 };
  const startDateRules = { date: true };

```

```

    const priorityRules = { required: true };
    const taskNameRules = { required: true };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='270' editSettings={editOptions}
toolbar={toolbarOptions}>
    <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true} validationRules={taskIDRules}/>
        <ColumnDirective field='taskName' headerText='Task Name'
width='180' validationRules={taskNameRules}/>
        <ColumnDirective field='startDate' headerText='Start Date'
width='150' textAlign='Right' edit={datetimeParams}
editType='datetimepickeredit' format={format}
validationRules={startDateRules}/>
        <ColumnDirective field='approved' headerText='Approved'
width='110' textAlign='Right' editType='booleanedit' type='boolean'
displayAsCheckBox={true}/>
        <ColumnDirective field='progress' headerText='Progress'
textAlign='Right' width='120' editType='numericedit' edit={numericParams}
validationRules={progressRules}/>
        <ColumnDirective field='priority' headerText='Priority'
width='110' editType='dropdownedit' validationRules={priorityRules}/>
    </ColumnsDirective>
    <Inject services={[Edit, Toolbar]}/>
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { IEditCell } from '@syncfusion/ej2-grids';
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Edit, EditSettingsModel, Toolbar, ToolbarItems } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions: EditSettingsModel = {
        allowAdding: true,
        allowDeleting: true,
        allowEditing: true,
        mode: 'Cell',
        showDeleteConfirmDialog: true
    };
    const toolbarOptions: ToolbarItems[] = ['Add', 'Delete', 'Update',
'Cancel'];
    const format: any = { type: 'dateTime', format: 'M/d/y hh:mm a' };
    const datetimeParams: IEditCell = { params: { format: 'M/d/y hh:mm a' }
};
    const numericParams: IEditCell = { params: { format: 'n' } };
    const taskIDRules: object = { required: true, number: true };
    const progressRules: object = { number: true, min: 0 };
    const startDateRules: object = { date: true };
    const priorityRules: object = { required: true };

```

```

const taskNameRules: object = { required: true };
return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='270'
editSettings={editOptions} toolbar={toolbarOptions}>
  <ColumnsDirective>
    <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true} validationRules={taskIDRules}/>
    <ColumnDirective field='taskName' headerText='Task Name'
width='180' validationRules={taskNameRules}/>
    <ColumnDirective field='startDate' headerText='Start Date'
width='150' textAlign='Right' edit={datetimeParams}
editType='datetimepickeredit' format={format}
validationRules={startDateRules} />
    <ColumnDirective field='approved' headerText='Approved'
width='110' textAlign='Right' editType='booleanedit' type='boolean'
displayAsCheckBox={true} />
    <ColumnDirective field='progress' headerText='Progress'
textAlign='Right' width='120' editType='numericedit' edit={numericParams}
validationRules={progressRules} />
    <ColumnDirective field='priority' headerText='Priority'
width='110' editType='dropdownedit' validationRules={priorityRules} />
  </ColumnsDirective>
  <Inject services={[Edit, Toolbar]}/>
</TreeGridComponent>
};
export default App;

```

Custom validation

You can define your own custom validation rules for the specific columns by using **Form Validator custom rules**.

In the below demo, custom validation applied for *Priority* column.

APP.JSX

```

import { getValue } from '@syncfusion/ej2-base';
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const editOptions = {
    allowAdding: true,
    allowDeleting: true,
    allowEditing: true,
    mode: 'Cell'
  };
  const toolbarOptions = ['Add', 'Delete', 'Update', 'Cancel'];
  const customFn = (args) => {
    return getValue('value', args) <= 8;
  };
  const priorityRules = {
    minLength: [customFn, 'Value should be within 8 letters'],
    required: true
  };
};

```

```

    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='270' editSettings={editOptions}
    toolbar={toolbarOptions}>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' isPrimaryKey={true}/>
        <ColumnDirective field='taskName' headerText='Task Name'
        width='180'/>
        <ColumnDirective field='startDate' headerText='Start Date'
        width='90' textAlign='Right' editType='datepickeredit' format='yMd'
        type='date'/>
        <ColumnDirective field='duration' headerText='Duration'
        width='110' validationRules={priorityRules}/>
      </ColumnsDirective>
      <Inject services={[Edit, Toolbar]}/>
    </TreeGridComponent>;
  }
;
export default App;

```

APP.TSX

```

import { getValue } from '@syncfusion/ej2-base';
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Edit, EditSettingsModel, Toolbar, ToolbarItems } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  const editOptions: EditSettingsModel = {
    allowAdding: true,
    allowDeleting: true,
    allowEditing: true,
    mode: 'Cell'
  };
  const toolbarOptions: ToolbarItems[] = ['Add', 'Delete', 'Update',
  'Cancel'];
  const customFn = (args: { [key: string]: string }) : boolean => {
    return getValue('value', args) <= 8;
  };
  const priorityRules: object = {
    minLength: [customFn, 'Value should be within 8 letters'],
    required: true
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='270' editSettings={editOptions}
  toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' isPrimaryKey={true}/>
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180'/>
      <ColumnDirective field='startDate' headerText='Start Date'
      width='90' textAlign='Right' editType='datepickeredit' format='yMd'
      type='date'/>
    </ColumnsDirective>
  </TreeGridComponent>;
}

```

```

        <ColumnDirective field='duration' headerText='Duration'
width='110' validationRules={priorityRules}/>
        </ColumnsDirective>
        <Inject services={[Edit,Toolbar]}/>
    </TreeGridComponent>
};
export default App;

```

Persisting data in server in React Treegrid component

Edited data can be persisted in the database using the RESTful web services.

All the CRUD operations in the treegrid are done through [DataManager](#). The `DataManager` has an option to bind all the CRUD related data in server-side.

For your information, the ODataAdaptor persists data in the server as per OData protocol.

In the following section, we have explained how to perform CRUD operation in server-side using the [UrlAdaptor](#) and `RemoteSave Adaptor`.

URL adaptor

You can use the [UrlAdaptor](#) of `DataManager` when binding data source from remote data. In the initial load of treegrid, data are fetched from remote data and bound to the treegrid using `url` property of `DataManager`. You can map The CRUD operation in treegrid can be mapped to server-side Controller actions using the properties `insertUrl`, `removeUrl`, `updateUrl` and `batchUrl`.

The following code example describes the above behavior.

```

`ts
import { DataManager, UrlAdaptor } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Edit, EditSettingsModel, Inject, Toolbar, ToolbarItems } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';

function App() {
  const editOptions: EditSettingsModel = { allowEditing: true, allowAdding: true, allowDeleting: true,
mode: 'Row', newRowPosition: 'Below' };
  const toolbarOptions: ToolbarItems[] = ['Add', 'Edit', 'Delete', 'Update', 'Cancel'];
  const dataManager: DataManager = new DataManager({
    adaptor: new UrlAdaptor,
    insertUrl: "Home/Insert",
    removeUrl: "Home/Delete",
    updateUrl: "Home/Update",
    batchUrl: "Home/Remove",
    url: "Home/DataSource",

```

```

});
return <TreeGridComponent dataSource={dataManager} treeColumnIndex={1} idMapping= 'TaskID'
parentIdMapping='parentID' height='270' editSettings={editOptions}
toolbar={toolbarOptions}>
<ColumnsDirective>
<ColumnDirective field='TaskID' headerText='Task ID' width='90' textAlign='Right' isPrimaryKey={true}/>
<ColumnDirective field='TaskName' headerText='Task Name' width='180' />
<ColumnDirective field='StartDate' headerText='Start Date' width='90' textAlign='Right'
editType='datepickeredit' format='yMd' type='date' />
<ColumnDirective field='EndDate' headerText='End Date' width='90' format='yMd' textAlign='Right' />
<ColumnDirective field='Priority' headerText='Priority' width='110' editType='dropdownedit' />
</ColumnsDirective>
<Inject services={[Edit,Toolbar]}/>
</TreeGridComponent>
};
export default App;
`

```

Also, when using the `UrlAdaptor`, you need to return the data as JSON from the controller action and the JSON object must contain a property as `result` with `dataSource` as its value and one more property `count` with the `dataSource` total records count as its value.

The following code example describes the above behavior.

```

`ts
public ActionResult DataSource(DataManager dm)
{
    var DataSource = TreeData.GetTree();
    DataOperations operation = new DataOperations();
    if (dm.Where != null && dm.Where.Count > 0)
    {
        DataSource = operation.PerformFiltering(DataSource, dm.Where, "and"); //perform filtering and
        maintain child records on Expand/Collapse operation
    }
    var count = DataSource.ToList<TreeData>().Count();
    if (dm.Skip != 0)
    {

```

```

DataSource = operation.PerformSkip(DataSource, dm.Skip); //Paging
}
if (dm.Take != 0)
{
DataSource = operation.PerformTake(DataSource, dm.Take);
}
return dm.RequiresCounts ? Json(new { result = DataSource, count = count }) : Json(DataSource);
}
`

```

Insert record

Using the `insertUrl` property, you can specify the controller action mapping URL to perform insert operation on the server-side.

The following code example describes the above behavior and also we have inserted new record based on the `newRowPosition` TreeGrid editSettings as "Below".

```

`ts
public void Insert(TreeGridData value, int relationalKey)
{
var i = 0;
for (; i < TreeData.tree.Count; i++)
{
if (TreeData.tree[i].TaskID == relationalKey)
{
break;
}
}
i += FindChildRecords(relationalKey); // Inserted new record when newRowPosition API is in "Below".
TreeData.tree.Insert(i + 1, value);
}
public int FindChildRecords(int id)
{
var count = 0;
for (var i = 0; i < TreeData.tree.Count; i++)
{
if (TreeData.tree[i].ParentItem == id)

```

```

{
count++;
count += FindChildRecords(TreeData.tree[i].TaskID);
}
}
return count;
}
`

```

The newly added record details are bound to the `value` parameter and `relationalKey` contains primaryKey value of an selected record helps to find out the position of newly added record. Please refer to the following screenshot.

![[Insert]](images/insert.PNG)

Update record

Using the `updateUrl` property, the controller action mapping URL can be specified to perform save/update operation on the server-side.

The following code example describes the previous behavior.

```

`ts
public ActionResult Update(TreeGridData value)
{
var val = TreeData.tree.Where(ds => ds.TaskID == value.TaskID).FirstOrDefault();
val.TaskName = value.TaskName;
val.StartDate = value.StartDate;
val.Duration = value.Duration;
val.Priority = value.Priority;
val.Progress = value.Progress;
return Json(value);
}
`

```

The updated record details are bound to the `value` parameter. Please refer to the following screenshot.

![[Update]](images/update.PNG)

Delete record

Using the `removeUrl` and `batchUrl` property, the controller action mapping URL can be specified to perform delete operation on the server-side.

The following code example describes the previous behavior.

```

`ts

```

```

public ActionResult Delete(int key)
{
    TreeData.tree.Remove(TreeData.tree.Where(ds => ds.TaskID == key).FirstOrDefault());
}

// Remove method (batchUrl) will be triggered when we delete parent record.
public ActionResult Remove(List<TreeGridData> changed, List<TreeGridData> added,
    List<TreeGridData> deleted)
{
    for (var i = 0; i < deleted.Count; i++)
    {
        TreeData.tree.Remove(TreeData.tree.Where(ds => ds.TaskID == deleted[i].TaskID).FirstOrDefault());
    }
}

```

The deleted record primary key value is bound to the **key** parameter. Please refer to the following screenshot.

![Delete](images/remove.PNG)

While delete parent record, the parent and child records is bound to the **deleted** parameter. Please refer to the following screenshot.

![Remove](images/delete.PNG)

Remote save adaptor

You may need to perform all Tree Grid Actions in client-side except the CRUD operations, that should be interacted with server-side to persist data. It can be achieved in TreeGrid by using **RemoteSaveAdaptor**.

Datasource must be set to **json** property and set **RemoteSaveAdaptor** to the **adaptor** property. CRUD operations can be mapped to server-side using **updateUrl**, **insertUrl**, **removeUrl** and **batchUrl** properties.

You can use the following code example to use **RemoteSaveAdaptor** in TreeGrid.

```

`ts
import { DataManager, RemoteSaveAdaptor } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Edit, EditSettingsModel, Inject, Toolbar, ToolbarItems } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { projectData } from './datasource';
function App() {

```

```

const editOptions: EditSettingsModel = { allowEditing: true, allowAdding: true, allowDeleting: true,
mode: 'Row', newRowPosition: 'Below' };
const toolbarOptions: ToolbarItems[] = ['Add', 'Edit', 'Delete', 'Update', 'Cancel'];
const dataManager: DataManager = new DataManager({
adaptor: new RemoteSaveAdaptor,
insertUrl: "Home/Insert",
removeUrl: "Home/Delete",
updateUrl: "Home/Update",
batchUrl: "Home/Remove",
json: projectData,
});
return <TreeGridComponent dataSource={dataManager} treeColumnIndex={1} idMapping= 'TaskID'
parentIdMapping='parentID' height='270' editSettings={editOptions}
toolbar={toolbarOptions}>
<ColumnsDirective>
<ColumnDirective field='TaskID' headerText='Task ID' width='90' textAlign='Right' isPrimaryKey={true}/>
<ColumnDirective field='TaskName' headerText='Task Name' width='180'/>
<ColumnDirective field='StartDate' headerText='Start Date' width='90' textAlign='Right'
editType='datepickeredit' format='yMd' type='date' />
<ColumnDirective field='EndDate' headerText='End Date' width='90' format='yMd' textAlign='Right' />
<ColumnDirective field='Priority' headerText='Priority' width='110' editType='dropdownedit'/>
</ColumnsDirective>
<Inject services={[Edit,Toolbar]}/>
</TreeGridComponent>
};
export default App;
`

```

The following code example describes the CRUD operations handled at server-side.

```

`ts
public void Insert(TreeData value, int relationalKey)
{
var i = 0;
for (; i < TreeData.tree.Count; i++)
{

```

```

if (TreeData.tree[i].TaskID == relationalKey)
{
    break;
}
}
i += FindChildRecords(relationalKey); // Inserted new record when newRowPosition API is in "Below".
TreeData.tree.Insert(i + 1, value);
}
public ActionResult Update(TreeData value)
{
    var val = TreeData.tree.Where(ds => ds.TaskID == value.TaskID).FirstOrDefault();
    val.TaskName = value.TaskName;
    val.StartDate = value.StartDate;
    val.Duration = value.Duration;
    val.Priority = value.Priority;
    val.Progress = value.Progress;
    return Json(value);
}
public ActionResult Delete(int key)
{
    TreeData.tree.Remove(TreeData.tree.Where(ds => ds.TaskID == key).FirstOrDefault());
}
// Remove method (batchUrl) will be triggered when we delete parent record.
public ActionResult Remove(List<TreeGridData> changed, List<TreeGridData> added,
List<TreeGridData> deleted)
{
    for (var i = 0; i < deleted.Count; i++)
    {
        TreeData.tree.Remove(TreeData.tree.Where(ds => ds.TaskID == deleted[i].TaskID).FirstOrDefault());
    }
}
,

```

Sorting in React Treegrid component

Sorting enables you to sort data in the *Ascending* or *Descending* order. To sort a column, click the column header.

To sort multiple columns, press and hold the CTRL key and click the column header. You can clear sorting of any one of the multi-sorted columns by pressing and holding the SHIFT key and clicking the specific column header.

To enable sorting in the TreeGrid, set the [allowSorting](#) to true. Sorting options can be configured through the [sortSettings](#).

To use Sorting, inject **Sort** module in TreeGrid.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, Sort, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sortData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sortData} treeColumnIndex={1}
    childMapping='subtasks' allowSorting={true} height='315'>
        <ColumnsDirective>
            <ColumnDirective field='Category' headerText='Category'
width='140' />
            <ColumnDirective field='orderName' headerText='Order Name'
width='180' />
            <ColumnDirective field='orderDate' headerText='Order Date'
width='150' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='units' headerText='Units' width='90'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Sort]} />
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Inject, Sort, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sortData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sortData} treeColumnIndex={1}
    childMapping='subtasks' allowSorting={true} height='315'>
        <ColumnsDirective>
            <ColumnDirective field='Category' headerText='Category'
width='140' />
            <ColumnDirective field='orderName' headerText='Order Name'
width='180' />
            <ColumnDirective field='orderDate' headerText='Order Date'
width='150' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='units' headerText='Units' width='90'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Sort]} />
    </TreeGridComponent>;
}
;
export default App;
```

```

        </ColumnsDirective>
        <Inject services={[Sort]}/>
    </TreeGridComponent>
};
export default App;

```

* TreeGrid columns are sorted in the **Ascending** order. If you click the already sorted column, the sort direction toggles.

* You can apply and clear sorting by invoking [sortByColumn](#) and [clearSorting](#) methods.

* To disable sorting for a particular column, set the [columns.allowSorting](#) to **false**.

Initial Sort

To sort at initial rendering, set the [field](#) and [direction](#) in the [sortSettings.columns](#).

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, Sort, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sortData } from './datasource';
function App() {
    const sortingOptions = {
        columns: [
            { field: 'Category', direction: 'Ascending' },
            { field: 'orderName', direction: 'Ascending' }
        ]
    };
    return <TreeGridComponent dataSource={sortData} treeColumnIndex={1}
    childMapping='subtasks' allowSorting={true} height='315'
    sortSettings={sortingOptions}>
        <ColumnsDirective>
            <ColumnDirective field='Category' headerText='Category'
width='140' />
            <ColumnDirective field='orderName' headerText='Order Name'
width='200' />
            <ColumnDirective field='orderDate' headerText='Order Date'
width='150' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='units' headerText='Units' width='90'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Sort]}/>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, Sort, SortSettingsModel, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sortData } from './datasource';
function App() {
    const sortingOptions: SortSettingsModel = {

```

```

        columns: [
            { field: 'Category', direction: 'Ascending' },
            { field: 'orderName', direction: 'Ascending' }
        ]
    };
    return <TreeGridComponent dataSource={sortData} treeColumnIndex={1}
    childMapping='subtasks' allowSorting={true} height='315'
    sortSettings={sortingOptions}>
        <ColumnsDirective>
            <ColumnDirective field='Category' headerText='Category'
width='140' />
            <ColumnDirective field='orderName' headerText='Order Name'
width='200' />
            <ColumnDirective field='orderDate' headerText='Order Date'
width='150' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='units' headerText='Units' width='90'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Sort]} />
    </TreeGridComponent>
    };
    export default App;

```

Sorting Events

During the sort action, the treegrid component triggers two events. The [actionBegin](#) event triggers before the sort action starts, and the [actionComplete](#) event triggers after the sort action is completed. Using these events you can perform the needed actions.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, Sort, TreeGridComponent
} from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sortData } from './datasource';
function App() {
    const actionHandler = (args) => {
        /** custom Action */
        alert(args.requestType + ' ' + args.type);
    };
    return <TreeGridComponent dataSource={sortData} treeColumnIndex={1}
    childMapping='subtasks' allowSorting={true} height='315'
    actionBegin={actionHandler} actionComplete={actionHandler}>
        <ColumnsDirective>
            <ColumnDirective field='Category' headerText='Category'
width='140' />
            <ColumnDirective field='orderName' headerText='Order Name'
width='200' />
            <ColumnDirective field='orderDate' headerText='Order Date'
width='120' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='units' headerText='Units' width='90'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Sort]} />
    </TreeGridComponent>;
}
;

```

```
export default App;
```

APP.TSX

```
import { ActionEventArgs } from '@syncfusion/ej2-grids';
import { ColumnDirective, ColumnsDirective, Inject, Sort, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sortData } from './datasource';
function App() {
    const actionHandler = (args: ActionEventArgs) => {
        /** custom Action */
        alert(args.requestType + ' ' + args.type);
    }
    return <TreeGridComponent dataSource={sortData} treeColumnIndex={1}
    childMapping='subtasks'
    allowSorting={true} height='315' actionBegin={actionHandler}
    actionComplete={actionHandler}>
        <ColumnsDirective>
            <ColumnDirective field='Category' headerText='Category'
width='140' />
            <ColumnDirective field='orderName' headerText='Order Name'
width='200' />
            <ColumnDirective field='orderDate' headerText='Order Date'
width='120' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='units' headerText='Units' width='90'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Sort]} />
    </TreeGridComponent>
};
export default App;
```

The `args.requestType` is the current action name. For example, in sorting the `args.requestType` value is *sorting*.

Custom sort comparer

You can customize the default sort action for a column by defining the [column.sortComparer](#) property. The sort comparer function has the same functionality like [Array.sort](#) sort comparer.

In the following example, custom sort comparer function was defined in the *Category* column.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, Sort, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sortData } from './datasource';
function App() {
    /** Custom comparer function */
    const sortComparer = (reference, comparer) => {
        if (reference < comparer) {
            return -1;
        }
        if (reference > comparer) {
            return 1;
        }
    };
    return <TreeGridComponent dataSource={sortData} treeColumnIndex={1}
    childMapping='subtasks'
    allowSorting={true} height='315' actionBegin={actionHandler}
    actionComplete={actionHandler}>
        <ColumnsDirective>
            <ColumnDirective field='Category' headerText='Category'
width='140' />
            <ColumnDirective field='orderName' headerText='Order Name'
width='200' />
            <ColumnDirective field='orderDate' headerText='Order Date'
width='120' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='units' headerText='Units' width='90'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Sort]} />
    </TreeGridComponent>
};
export default App;
```

```

    }
    return 0;
  };
  return <TreeGridComponent dataSource={sortData} treeColumnIndex={1}
  childMapping='subtasks' allowSorting={true} height='315'>
    <ColumnsDirective>
      <ColumnDirective field='Category' headerText='Category'
width='140' />
      <ColumnDirective field='orderName' headerText='Order Name'
sortComparer={sortComparer} width='200' />
      <ColumnDirective field='orderDate' headerText='Order Date'
width='120' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='units' headerText='Units' width='90'
textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Sort]} />
  </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, Sort, TreeGridComponent
} from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sortData } from './datasource';
function App() {
  /** Custom comparer function */
  const sortComparer = (reference: string, comparer: string) => {
    if (reference < comparer) {
      return -1;
    }
    if (reference > comparer) {
      return 1;
    }
    return 0;
  };
  return <TreeGridComponent dataSource={sortData} treeColumnIndex={1}
  childMapping='subtasks' allowSorting={true} height='315'>
    <ColumnsDirective>
      <ColumnDirective field='Category' headerText='Category'
width='140' />
      <ColumnDirective field='orderName' headerText='Order Name'
sortComparer={sortComparer} width='200' />
      <ColumnDirective field='orderDate' headerText='Order Date'
width='120' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='units' headerText='Units' width='90'
textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Sort]} />
  </TreeGridComponent>
};
export default App;

```

The sort comparer function will work only for the local data.

Touch Interaction

When you tap the treegrid header on touchscreen devices, the selected column header is sorted. A

popup  is displayed for multi-column sorting. To sort multiple columns, tap the popup , and then tap the desired treegrid headers.

The following screenshot shows treegrid touch sorting.

<!-- markdownlint-disable MD033 -->

<!-- markdownlint-enable MD033 -->

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations.

You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Filtering

Filtering in React Treegrid component

Filtering allows you to view specific or related records based on filter criteria. To enable filtering in the TreeGrid, set the [allowFiltering](#) to true. Filtering options can be configured through [filterSettings](#).

To use filter, inject the [Link to the Video](#) module in the treegrid.

To get start quickly with filtering functionalities, you can check on this video:

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Filter, Inject,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='275' allowFiltering={true}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='75'
textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Filter]} />
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Filter, Inject,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='275' allowFiltering={true}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='75'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Filter]} />
    </TreeGridComponent>
};
export default App;
```

* You can apply and clear filtering by using [filterByColumn](#) and [clearFiltering](#) methods.

* To disable filtering for a particular column, set [columns.allowFiltering](#) to **false**.

Filter hierarchy modes

TreeGrid provides support for a set of filtering modes with [filterSettings.filterHierarchyMode](#) property.

The below are the type of filter mode available in TreeGrid.

- **Parent** : This is the default filter hierarchy mode in TreeGrid. The filtered records are displayed with its parent records, if the filtered records not have any parent record then the filtered records only displayed.
- **Child** : The filtered records are displayed with its child record, if the filtered records not have any child record then the filtered records only displayed.
- **Both** : The filtered records are displayed with its both parent and child record, if the filtered records not have any parent and child record then the filtered records only displayed.
- **None** : The filtered records are only displayed.

APP.JSX

```
import { DropDownListComponent } from '@syncfusion/ej2-react-dropdowns';
import { ColumnDirective, ColumnsDirective, Filter } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    let treegrid;
    const data = ['Parent', 'Child', 'Both', 'None'];
    const onChange = (sel) => {
        const mode = sel.value.toString();
        if (treegrid) {
            treegrid.filterSettings.hierarchyMode = mode;
        }
    };
    return <div>
        <DropDownListComponent data-bbox="121 719 866 906" />
    </div>
```

```

        treegrid.clearFiltering();
    }
};
return (<div><DropDownListComponent popupHeight="250px"
dataSource={data} value="Parent" change={onChange} width="150px"/>
    <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='225' allowFiltering={true} ref={g =>
treegrid = g}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='75'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Filter]} />
    </TreeGridComponent></div>);
}
;
export default App;

```

APP.TSX

```

import { ChangeEventArgs, DropDownListComponent } from "@syncfusion/ej2-react-dropdowns";
import { ColumnDirective, ColumnsDirective, Filter, FilterHierarchyMode } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGrid, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    let treegrid: TreeGridComponent | null;
    const data: string[] = ['Parent', 'Child', 'Both', 'None'];
    const onChange = (sel: ChangeEventArgs): void => {
        const mode: FilterHierarchyMode = sel.value.toString() as FilterHierarchyMode;
        if (treegrid) {
            treegrid.filterSettings.hierarchyMode = mode;
            treegrid.clearFiltering();
        }
    }
    return (<div><DropDownListComponent popupHeight="250px" dataSource={data}
value="Parent" change={onChange} width="150px"/>
        <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='225' allowFiltering={true} ref={g =>
treegrid = g}>
            <ColumnsDirective>
                <ColumnDirective field='taskID' headerText='Task ID' width='75'
textAlign='Right' />
                <ColumnDirective field='taskName' headerText='Task Name'
width='180' />

```

```

        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Filter]}/>
</TreeGridComponent></div>
);
export default App;

```

Initial filter

To apply the filter at initial rendering, set the filter *predicate* object in [filterSettings.columns](#).

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Filter } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const FilterOptions = {
        columns: [
            { field: 'taskName', matchCase: false, operator: 'startswith',
predicate: 'and', value: 'plan' },
            { field: 'duration', matchCase: false, operator: 'equal',
predicate: 'and', value: 5 }
        ]
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='275' allowFiltering={true}
filterSettings={FilterOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='75'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Filter]}/>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Filter, FilterSettingsModel }
from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {

```

```

const FilterOptions: FilterSettingsModel = {
  columns: [
    { field: 'taskName', matchCase: false, operator: 'startswith',
    predicate: 'and', value: 'plan' },
    { field: 'duration', matchCase: false, operator: 'equal',
    predicate: 'and', value: 5 }]
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks'
    height='275' allowFiltering={true} filterSettings={FilterOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='75'
textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration' width='80'
textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Filter]} />
  </TreeGridComponent>
};
export default App;

```

Filter operators

The filter operator for a column can be defined in the [operator](#) property of [filterSettings.columns](#).

The available operators and its supported data types are:

Operator	Description	Supported Types
startswith	Checks whether the value begins with the specified value.	String
endswith	Checks whether the value ends with the specified value.	String
contains	Checks whether the value contains the specified value.	String
equal	Checks whether the value is equal to the specified value.	String | Number | Boolean | Date
notequal	Checks for values not equal to the specified value.	String | Number | Boolean | Date
greaterthan	Checks whether the value is greater than the specified value.	Number | Date
greaterthanorequal	Checks whether a value is greater than or equal to the specified value.	Number | Date
lessthan	Checks whether the value is less than the specified value.	Number | Date
lessthanorequal	Checks whether the value is less than or equal to the specified value.	Number | Date

By default, the **filterSettings.columns.operator** value is *equal*.

Diacritics

By default, treegrid ignores diacritic characters while filtering. To include diacritic characters, set the [filterSettings.ignoreAccent](#) as **true**.

In the following sample, type **aero** in *Name* column to filter diacritic characters.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Filter } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { diacritics } from './datasource';
function App() {
    const FilterOptions = {
        ignoreAccent: true
    };
    return <TreeGridComponent dataSource={diacritics} treeColumnIndex={0}
    childMapping='Children' height='275' allowFiltering={true}
    filterSettings={FilterOptions}>
        <ColumnsDirective>
            <ColumnDirective field='EmpID' headerText='Employee ID'
width='95' />
            <ColumnDirective field='Name' headerText='Name' width='180' />
            <ColumnDirective field='DOB' headerText='DOB' width='90'
format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='Country' headerText='Country'
width='100' />
        </ColumnsDirective>
        <Inject services={[Filter]} />
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Filter, FilterSettingsModel }
from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { diacritics } from './datasource';
function App() {
    const FilterOptions: FilterSettingsModel = {
        ignoreAccent: true
    };
    return <TreeGridComponent dataSource={diacritics} treeColumnIndex={0}
    childMapping='Children'
    height='275' allowFiltering={true} filterSettings={FilterOptions}>
        <ColumnsDirective>
            <ColumnDirective field='EmpID' headerText='Employee ID'
width='95' />
            <ColumnDirective field='Name' headerText='Name' width='180' />
            <ColumnDirective field='DOB' headerText='DOB' width='90'
format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='Country' headerText='Country' width='100'
/>
        />
```

```

        </ColumnsDirective>
        <Inject services={[Filter]}/>
    </TreeGridComponent>
};
export default App;

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Filter bar in React Treegrid component

By setting the [allowFiltering](#) to true, the filter bar row will render next to the header, which allows you to filter data. You can filter the records with different expressions depending upon the column type.

Filter bar expressions:

You can enter the following filter expressions (operators) manually in the filter bar.

Expression	Example	Description	Column Type
= =value	equal	Number	
!= !=value	notequal	Number	
>value	greaterthan	Number	
< <value	lessthan	Number	
= >=value	greaterthanorequal	Number	
<= <=value	lessthanorequal	Number	
/value	startswith	String	
% %value	endswith	String	
N/A	N/A	<i>Equal</i> operator will always be used for date filter.	Date
N/A	N/A	<i>Equal</i> operator will always be used for Boolean filter.	Boolean

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Filter } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='275' allowFiltering={true}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='75'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>

```

```

        <Inject services={[Filter]}/>
      </TreeGridComponent>;
    }
  };
  export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Filter } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='275' allowFiltering={true}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='75'
        textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
        width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
        width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Filter]}/>
  </TreeGridComponent>
};
export default App;

```

By default, the [filterSettings.columns.operator](#) value is *equal*.

Filterbar template with custom component

You can customize default filter bar component of a column by custom component using **filter template**.

The following example demonstrates the way to use filter template for a column when using filter bar. In the following example, the DropDownList component is used to filter **duration** column using filter template.

APP.JSX

```

import { DropDownListComponent } from '@syncfusion/ej2-react-dropdowns';
import { ColumnDirective, ColumnsDirective, Filter } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  let treegrid;
  const onChange = (args) => {
    if (treegrid) {
      if (args.value === 'All') {
        treegrid.clearFiltering();
      }
    }
  };

```

```

        else {
            treegrid.filterByColumn('duration', 'equal',
                parseInt(args.value, 0));
        }
    };
    const templateOptions = (props) => {
        const dataSource = ['All', '1', '3', '4', '5', '6', '8', '9'];
        return (<DropDownListComponent id={props.column.field}
            popupHeight='250px' dataSource={dataSource} change={onChange}/>);
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
        childMapping='subtasks' height='275' allowFiltering={true} ref={g =>
            treegrid = g}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='75'
                textAlign='Right'/>
            <ColumnDirective field='taskName' headerText='Task Name'
                width='180'/>
            <ColumnDirective field='startDate' headerText='Start Date'
                width='90' format='yMd' textAlign='Right' type='date'/>
            <ColumnDirective field='duration' headerText='Duration'
                width='80' textAlign='Right' filterTemplate={templateOptions}/>
        </ColumnsDirective>
        <Inject services={[Filter]}/>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { DropDownListComponent } from '@syncfusion/ej2-react-dropdowns';
import { ColumnDirective, ColumnsDirective, Filter } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGrid, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    let treegrid: TreeGridComponent | null;
    const onChange = (args: any): any => {
        if (treegrid) {
            if (args.value === 'All') {
                treegrid.clearFiltering();
            } else {
                treegrid.filterByColumn('duration', 'equal',
                    parseInt(args.value, 0));
            }
        }
    };
    const templateOptions = (props: any): any => {
        const dataSource: string[] = ['All', '1', '3', '4', '5', '6', '8', '9'];
        return (<DropDownListComponent id={props.column.field}
            popupHeight='250px' dataSource={dataSource} change={onChange} /> );
    };
}

```

```

    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='275' allowFiltering={true} ref={g =>
    treegrid = g}>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='75'
        textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
        width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
        width='80' textAlign='Right' filterTemplate={templateOptions} />
      </ColumnsDirective>
      <Inject services={[Filter]} />
    </TreeGridComponent>
  };
  export default App;

```

Change default filter bar operator

You can change the default filter operator by extending [filterModule.filterOperators](#) property in [dataBound](#) event.

In the following sample, we have changed the default operator for string typed columns as **contains** from **startsWith**.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Filter } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  let treegrid;
  const dataBound = () => {
    Object.assign(treegrid.grid.filterModule.filterOperators, {
      startsWith: 'contains' });
  };
  return <TreeGridComponent dataSource={sampleData} dataBound={dataBound}
  treeColumnIndex={1} childMapping='subtasks' height='275'
  allowFiltering={true} ref={g=> treegrid = g}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='75'
      textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
      width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration' width='80'
      textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Filter]} />
  </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Filter } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    let treegrid: TreeGridComponent | null;
    const dataBound = () => {
        Object.assign(treegrid.grid.filterModule.filterOperators, {
            startsWith: 'contains' });
    }
    return <TreeGridComponent dataSource={sampleData} dataBound={dataBound}
        treeColumnIndex={1} childMapping='subtasks' height='275'
        allowFiltering={true} ref={g => treegrid = g}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='75'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration' width='80'
            textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Filter]} />
    </TreeGridComponent>
</>;
export default App;
```

Filter menu in React Treegrid component

You can enable filter menu by setting the [filterSettings.type](#) as *Menu*. The filter menu UI will be rendered based on its column type, which allows you to filter data. You can filter the records with different operators.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Filter } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const FilterOptions = {
        type: 'Menu'
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
        childMapping='subtasks' height='275' allowFiltering={true}
        filterSettings={FilterOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='75'
            textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>
</>
```

```

        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Filter]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Filter } from '@syncfusion/ej2-react-treegrid';
import { FilterSettingsModel, Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const FilterOptions: FilterSettingsModel = {
        type: 'Menu'
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='275' allowFiltering={true}
filterSettings={FilterOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='75'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Filter]} />
    </TreeGridComponent>
};
export default App;

```

* [allowFiltering](#) must be set as true to enable filter menu.

* Setting [columns.allowFiltering](#) as false will prevent filter menu rendering for a particular column.

Custom component in filter menu

You can customize default filter menu component of a column by custom component using **filterTemplate**.

The following example demonstrates the way to use filter template for a column when using filter menu. In the following example, the DropDownList component is used to filter **duration** column using **filterTemplate**.

`ts

```

import { DropDownListComponent } from '@syncfusion/ej2-react-dropdowns';
import { ColumnDirective, ColumnsDirective, Filter, FilterSettingsModel } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGrid, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';

function App() {
  let treegrid: TreeGridComponent | null;
  const FilterOptions: FilterSettingsModel = {
    type: 'Menu'
  };
  const templateOptions = (props:any): any => {
    const dataSource: number[] = [1,3,4,5,6,8,9];
    return (<DropDownListComponent id={props.column.field} popupHeight='250px'
    dataSource={dataSource} /> );
  }
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  filterSettings={FilterOptions} childMapping='subtasks' height='275' allowFiltering={true} ref={g =>
  treegrid = g}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='75' textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name' width='180' />
      <ColumnDirective field='startDate' headerText='Start Date' width='90' format='yMd' textAlign='Right'
      type='date' />
      <ColumnDirective field='duration' headerText='Duration' width='80' textAlign='Right'
      filterTemplate={templateOptions} />
    </ColumnsDirective>
    <Inject services={[Filter]} />
  </TreeGridComponent>
};
export default App;

```

Enable different filter dialog for a column

You can use both *Menu* and *Excel* filter in a same TreeGrid. To do so, set the [column.filter.type](#) as *Menu* or *Excel*.

In the following sample menu filter is enabled by default and excel filter is enabled for the Task Name column using the [column.filter.type](#).

APP.JSX

```
import { ColumnDirective, ColumnsDirective } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const FilterOptions = {
        type: 'Menu'
    };
    const FilterType = {
        type: 'Excel'
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='275' allowFiltering={true}
    filterSettings={FilterOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            filter={FilterType} width='180' />
            <ColumnDirective field='duration' headerText='Duration'
            width='90' />
            <ColumnDirective field='progress' headerText='Progress'
            width='90' />
        </ColumnsDirective>
        <Inject services={[Filter]} />
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { IFilter } from '@syncfusion/ej2-grids';
import { ColumnDirective, ColumnsDirective, Filter, FilterSettingsModel }
from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const FilterOptions: FilterSettingsModel = {
        type: 'Menu'
    };
    const FilterType : IFilter = {
        type: 'Excel'
    }
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='275' allowFiltering={true}
    filterSettings={FilterOptions}>
        <ColumnsDirective>
```

```

        <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
filter={FilterType} width='180' />
        <ColumnDirective field='duration' headerText='Duration'
width='90' />
        <ColumnDirective field='progress' headerText='Progress'
width='90' />
    </ColumnsDirective>
    <Inject services={[Filter]} />
</TreeGridComponent>
};
export default App;

```

Excel like filter in React Treegrid component

You can enable Excel like filter by defining [filterSettings.type](#) as *Excel*. The excel menu contains an option such as Sorting, Clear filter, Sub menu for advanced filtering..

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Filter } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const FilterOptions = {
        type: 'Excel'
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='275' allowFiltering={true}
filterSettings={FilterOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='duration' headerText='Duration'
width='90' />
            <ColumnDirective field='progress' headerText='Progress'
width='90' />
        </ColumnsDirective>
        <Inject services={[Filter]} />
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Filter, FilterSettingsModel }
from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';

```

```
function App() {
  const FilterOptions: FilterSettingsModel = {
    type: 'Excel'
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='275' allowFiltering={true}
  filterSettings={FilterOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='duration' headerText='Duration'
      width='90' />
      <ColumnDirective field='progress' headerText='Progress'
      width='90' />
    </ColumnsDirective>
    <Inject services={[Filter]} />
  </TreeGridComponent>
};
export default App;
```

Change default filter operator

You can change the default excel-filter operator by changing the column operator as **contains** from **startsWith** in the [actionBegin](#) event

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Filter } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const FilterOptions = {
    type: 'Excel'
  };
  const actionBegin = (args) => {
    if (args.requestType === 'filtersearchbegin' && args.column.type === "string") {
      args.operator = 'contains';
    }
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='275' allowFiltering={true}
  filterSettings={FilterOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='duration' headerText='Duration'
      width='90' />
      <ColumnDirective field='progress' headerText='Progress'
      width='90' />
    </ColumnsDirective>
```

```

        <Inject services={[Filter]}/>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Filter, FilterSettingsModel }
from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const FilterOptions: FilterSettingsModel = {
        type: 'Excel'
    };
    const actionBegin = (args:any) => {
        if(args.requestType === 'filtersearchbegin' && args.column.type ===
"string")
        {
            args.operator = 'contains';
        }
    }
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='275' allowFiltering={true}
filterSettings={FilterOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='duration' headerText='Duration'
width='90' />
            <ColumnDirective field='progress' headerText='Progress'
width='90' />
        </ColumnsDirective>
        <Inject services={[Filter]}/>
    </TreeGridComponent>
};
export default App;

```

Searching in React Treegrid component

You can search records in a TreeGrid, by using the [search](#) method with search key as a parameter. This also provides an option to integrate search text box in treegrid's toolbar by adding *search* item to the [toolbar](#).

To search records, inject the **Filter** module in the grid.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Filter, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';

```

```
import { sampleData } from './datasource';
function App() {
  const toolbarOptions = ['Search'];
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='270' toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='duration' headerText='Duration'
      width='80' textAlign='Right' />
      <ColumnDirective field='progress' headerText='Progress'
      width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Filter, Toolbar]} />
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Filter, Toolbar, ToolbarItems } from '@syncfusion/ej2-react-
treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions: ToolbarItems[] = ['Search'];
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='270' toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='duration' headerText='Duration'
      width='80' textAlign='Right' />
      <ColumnDirective field='progress' headerText='Progress'
      width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Filter, Toolbar]} />
  </TreeGridComponent>
};
export default App;
```

Initial search

To apply search at initial rendering, set the [fields](#), [operator](#), [key](#), and [ignoreCase](#) in the [searchSettings](#).

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Filter, Toolbar } from '@syncfusion/ej2-react-treegrid';
```

```

import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions = ['Search'];
  const searchOptions = {
    fields: ['taskName'],
    ignoreCase: true,
    key: 'dev',
    operator: 'contains'
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='270' toolbar={toolbarOptions}
  searchSettings={searchOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='duration' headerText='Duration'
      width='80' textAlign='Right' />
      <ColumnDirective field='progress' headerText='Progress'
      width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Filter, Toolbar]} />
  </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Filter, SearchSettingsModel, Toolbar, ToolbarItems } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions: ToolbarItems[] = ['Search'];
  const searchOptions: SearchSettingsModel = {
    fields: ['taskName'],
    ignoreCase: true,
    key: 'dev',
    operator: 'contains'
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks'
  height='270' toolbar={toolbarOptions}
  searchSettings={searchOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='duration' headerText='Duration'
      width='80' textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>;
}
;
export default App;

```

```

        <ColumnDirective field='progress' headerText='Progress'
width='80' textAlign='Right' />
      </ColumnsDirective>
      <Inject services={[Filter,Toolbar]} />
    </TreeGridComponent>
  };
  export default App;

```

By default, treegrid searches all the bound column values. To customize this behavior define the [searchSettings.fields](#) property.

Search operators

The search operator can be defined in the [searchSettings.operator](#) property to configure specific searching.

The following operators are supported in searching:

Operator | Description

startsWith | Checks whether a value begins with the specified value.

endsWith | Checks whether a value ends with the specified value.

contains | Checks whether a value contains the specified value.

equal | Checks whether a value is equal to the specified value.

notEqual | Checks for values not equal to the specified value.

By default, the [searchSettings.operator](#) value is *contains*.

Search by external button

To search treegrid records from an external button, invoke the [search](#) method.

APP.JSX

```

import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Filter } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  let treegrid;
  const inputStyle = { width: '200px', display: 'inline-block' };
  const onClick = () => {
    const searchText =
document.getElementsByClassName('searchtext')[0].value;
    if (treegrid) {
      treegrid.search(searchText);
    }
  };
  return (
    <div>
      <div className='e-float-input' style={inputStyle}>
        <input type='text' className='searchtext' />
        <span className='e-float-line' />
        <label className='e-float-text'>Search text</label>
      </div>
    </div>
  );
}

```

```

    <ButtonComponent id='search' onClick={onClick}>Search</ButtonComponent>
    <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='220' ref={g => treegrid = g}>
    <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />

  );
  export default App;

```

Search Specific Columns

By default, treegrid searches all visible columns. You can search specific columns by defining the specific column's field names in the [searchSettings.fields](#) property.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Filter, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions = ['Search'];
  const searchSettings = { fields: ['taskName', 'duration'] };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='270' toolbar={toolbarOptions}
searchSettings={searchSettings}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
      <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
      <ColumnDirective field='progress' headerText='Progress'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Filter, Toolbar]}/>
  </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Filter, SearchSettingsModel, Toolbar, ToolbarItems } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions: ToolbarItems[] = ['Search'];
  const searchSettings: SearchSettingsModel = { fields: ['taskName',
'duration'] };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' height='270'

```

```

        toolbar={toolbarOptions} searchSettings={searchSettings}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name '
width='180' />
            <ColumnDirective field='duration' headerText='Duration '
width='80' textAlign='Right' />
            <ColumnDirective field='progress' headerText='Progress '
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Filter,Toolbar]} />
    </TreeGridComponent>
};
export default App;

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Paging in React Treegrid component

Paging provides an option to display TreeGrid data in page segments. To enable paging, set the [allowPaging](#) to **true**. When paging is enabled, pager component renders at the bottom of the treegrid. Paging options can be configured through the [pageSettings](#).

To use Paging, inject **Page** module in TreeGrid.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const pageSettings = { pageSize: 7 };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name '
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date '
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration '
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page]} />
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page, PageSettingsModel } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const pageSettings: PageSettingsModel = { pageSize: 7 };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks'
    allowPaging={true} pageSettings={pageSettings}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
  textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
  width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
  width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
  width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>
};
export default App;
```

You can achieve better performance by using treegrid paging to fetch only a pre-defined number of records from the data source.

Page Size Mode

Two behaviors are available in TreeGrid paging to display certain number of records in a current page. Following are the two types of [pageSizeMode](#).

- **All** : This is the default mode. The number of records in a page is based on [pageSize](#) property.
- **Root** : The number of root nodes or the 0th level records to be displayed per page is based on [pageSize](#) property.

With [pageSizeMode](#) property as **Root** only the root level or the 0th level records are considered in records count.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const pageSettings = { pageSize: 2, pageSizeMode: 'Root' };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
  height='265'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
  textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>
};
```

```

        <ColumnDirective field='taskName' headerText='Task Name'
width='160' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Page, PageSettingsModel } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const pageSettings: PageSettingsModel = { pageSize: 2, pageSizeMode:
'Root' };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true}
    pageSettings={pageSettings} height='265'>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='160' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page]} />
    </TreeGridComponent>
};
export default App;

```

Template

You can use custom elements inside the pager instead of default elements. The custom elements can be defined by using the [template](#) property. Inside this template, you can access the [currentPage](#), [pageSize](#), [pageCount](#), [totalPage](#) and [totalRecordCount](#) values.

APP.JSX

```

import { NumericTextBoxComponent } from '@syncfusion/ej2-react-inputs';
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {

```

```

let treegrid;
const pageTemplate = (props) => {
  return (<div className="e-pagertemplate">
    <div className="col-lg-12 control-section">
      <div className="content-wrapper">
        <NumericTextBoxComponent max={3} min={1} step={1}
value={props.currentPage} width={75} format='###.##' change={onChange}/>
      </div>
    </div>
    <div id="totalPages" className="e-pagertemplatemessage">
      <span className="e-pagenomsg">{props.currentPage} of
{props.totalPages} pages ({props.totalRecordsCount} items)</span>
    </div>
  </div>);
};
const pageSettings = {
  pageSize: 6,
  template: pageTemplate
};
const onChange = (args) => {
  const value = args.value;
  if (treegrid) {
    treegrid.goToPage(value);
  }
};
return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
ref={g => treegrid = g}>
  <ColumnsDirective>
    <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right'/>
    <ColumnDirective field='taskName' headerText='Task Name'
width='160'/>
    <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date'/>
    <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right'/>
  </ColumnsDirective>
  <Inject services={[Page]}/>
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ChangeEventArgs } from '@syncfusion/ej2-inputs';
import { NumericTextBoxComponent } from '@syncfusion/ej2-react-inputs';
import { ColumnDirective, ColumnsDirective, Inject, TreeGrid,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Page, PageSettingsModel } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  let treegrid: TreeGridComponent | null;
  const pageTemplate = (props: any): any => {

```

```

    return (<div className="e-pagertemplate">
      <div className="col-lg-12 control-section">
        <div className="content-wrapper">
          <NumericTextBoxComponent max={3} min={1} step={1}
value={props.currentPage} width={75} format='###.##' change={onChange}/>
        </div>
      </div>
      <div id="totalPages" className="e-pagertemplatemessage">
        <span className="e-pagenomsg">{props.currentPage} of
{props.totalPages} pages ({props.totalRecordsCount} items)</span>
      </div>
    </div>);
  }
  const pageSettings: any = {
    pageSize: 6,
    template: pageTemplate
  };
  const onChange = (args: ChangeEventArgs) => {
    const value: number = args.value as number;
    if (treegrid) {
      treegrid.goToPage(value);
    }
  }
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
allowPaging={true} pageSettings={pageSettings} ref={g => treegrid =
g}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
width='160' />
      <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>
</div>);
};
export default App;

```

Pager with Page Size Dropdown

The pager Dropdown allows you to change the number of records in the TreeGrid dynamically. It can be enabled by defining the [pageSettings.pageSize](#) property as **true**.

`ts

```
const pageSettings: PageSettingsModel = { pageSize: 7, pageSizees: true };
```

,

How to render Pager at the Top of the TreeGrid

By default, Pager will be rendered at the bottom of the TreeGrid. You can also render the Pager at the top of the TreeGrid by using the [dataBound](#) event.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  let treegrid;
  const pageSettings = { pageSize: 7, pageSizes: true };
  let initialGridLoad = true;
  const dataBound = () => {
    if (initialGridLoad) {
      initialGridLoad = false;
      const pager = document.getElementsByClassName('e-gridpager');
      let topElement;
      if (treegrid && treegrid.toolbar) {
        topElement = document.getElementsByClassName('e-toolbar');
      }
      else {
        topElement = document.getElementsByClassName('e-
gridheader');
      }
      topElement[0].before(pager[0]);
    }
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
  dataBound={dataBound} ref={g => treegrid = g}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
  textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
  width='180' />
    </ColumnsDirective>
  </TreeGridComponent>

```

```

        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGrid,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Page, PageSettingsModel } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    let treegrid: TreeGridComponent | null;
    const pageSettings: PageSettingsModel = { pageSize: 7, pageSizes: true
};
    let initialGridLoad: boolean = true;
    const dataBound = () => {
        if (initialGridLoad) {
            initialGridLoad = false;
            const pager = document.getElementsByClassName('e-gridpager');
            let topElement;
            if (treegrid && treegrid.toolbar) {
                topElement = document.getElementsByClassName('e-toolbar');
            } else {
                topElement = document.getElementsByClassName('e-
gridheader');
            }
            topElement[0].before(pager[0]);
        }
        return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
dataBound={dataBound} ref={g => treegrid = g}>
            <ColumnsDirective>
                <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
                <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
                <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
                <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
            </ColumnsDirective>
            <Inject services={[Page]} />
        </TreeGridComponent>
    };
    export default App;

```

During the paging action, the pager component triggers the below three events.

- * The [created](#) event triggers when Pager is created.
- * The [click](#) event triggers when the numeric items in the pager is clicked.
- * The [dropDownChanged](#) event triggers when pageSize DropDownList value is selected.

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Selection

Selection in React Treegrid component

Selection provides an option to highlight a row or cell. Selection can be done through simple Mouse down or Arrow keys. To disable selection in the TreeGrid, set the [allowSelection](#) to [Link to the Video](#).

To get start quickly with Selection, you can check on this video:

The treegrid supports two types of selection that can be set by using the [selectionSettings.type](#). They are:

- **Single** - It is set by default. Allows you to select only a single row or cell.
- **Multiple** - Allows you to select multiple rows or cells.

To perform the multi-selection, press and hold CTRL key and click the desired rows or cells.

To select range of rows or cells, press and hold the SHIFT key and click the rows or cells.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  const settings = { type: 'Multiple' };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true} selectionSettings={settings}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
        width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
        width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page, SelectionSettingsModel } from '@syncfusion/ej2-react-
 treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const settings: SelectionSettingsModel = { type: 'Multiple' };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
 childMapping='subtasks' allowPaging={true} selectionSettings={settings}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
 textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
 width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
 width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
 width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page]} />
    </TreeGridComponent>
};
export default App;
```

Selection mode

TreeGrid supports three types of selection mode which can be set by using [selectionSettings.mode](#). They are:

- **Row** - It is set by default. Allows you to select rows only.
- **Cell** - Allows you to select cells only.
- **Both** - Allows you to select rows and cells at the same time.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const settings = { mode: 'Both' };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
 childMapping='subtasks' allowPaging={true} selectionSettings={settings}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
 textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
 width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
 width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
 width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page]} />
    </TreeGridComponent>
};
```

```

    </TreeGridComponent>;
  }
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page, SelectionSettingsModel } from '@syncfusion/ej2-react-
 treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const settings: SelectionSettingsModel = { mode: 'Both' };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
 childMapping='subtasks' allowPaging={true} selectionSettings={settings}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
 textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
 width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
 width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
 width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>
};
export default App;

```

Touch interaction

When you tap a treegrid row on touchscreen device, the tapped row is selected. It also shows a popup [\[Multi Row selection\]\(images/selection.jpg\)](#) for multi-row selection. To select multiple rows or cells, tap the popup [\[Multi Row or Cells\]\(images/mselection.jpg\)](#) and then tap the desired rows or cells.

Multi-selection requires the selection [type](#) to be **Multiple**.

The following screenshot represents a treegrid touch selection in the device.

```
<!-- markdownlint-disable MD033 -->
```

```

```

```
<!-- markdownlint-enable MD033 -->
```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations.

You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Cell selection in React Treegrid component

Cell Selection can be done through simple Mouse down or Arrow keys(up, down, left and right).

TreeGrid supports two types of cell selection mode which can be set by using [selectionSettings.cellSelectionMode](#). They are:

- **Flow** - It is set by default.

Select range of cells between the start index and end index which includes in between cells of rows.

- **Box** - Select range of cells within the start and end column indexes which includes

in between cells of rows within the range.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const settings = {
    cellSelectionMode: 'Box',
    mode: 'Cell',
    type: 'Multiple'
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' allowPaging={true} selectionSettings={settings}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
  textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
  width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'

Row selection in React Treegrid component

Select row at initial rendering

To select a row at initial rendering, set the [selectedRowIndex](#) value.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} selectedRowIndex={1}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name '
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date '
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration '
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page]} />
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {

```

```

    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true} selectedRowIndex={1}>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
        width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
        width='80' textAlign='Right' />
      </ColumnsDirective>
      <Inject services={[Page]} />
    </TreeGridComponent>
  };
  export default App;

```

Get selected row indexes

You can get the selected row indexes by using the [getSelectedRowIndexes](#) method.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  let treegrid;
  const settings = { type: 'Multiple' };
  const rowSelected = () => {
    if (treegrid) {
      /** Get the selected row indexes */
      const selectedRowIndex = treegrid.getSelectedRowIndexes();
      /** Get the selected records. */
      const selectedRecords = treegrid.getSelectedRecords();
      alert(selectedRowIndex + " : " +
        JSON.stringify(selectedRecords));
    }
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' selectionSettings={settings} height={270}
  rowSelected={rowSelected} ref={g => treegrid = g}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='150' />
      <ColumnDirective field='startDate' headerText='Start Date'
      width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
      width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>;
}

```

```
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page, SelectionSettingsModel, TreeGrid } from '@syncfusion/ej2-
react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  let treegrid: TreeGridComponent | null;
  const settings: SelectionSettingsModel = { type: 'Multiple' };
  const rowSelected = () => {
    if (treegrid) {
      /** Get the selected row indexes */
      const selectedrowindex: number[] =
treegrid.getSelectedRowIndexes();
      /** Get the selected records. */
      const selectedrecords: object[] = treegrid.getSelectedRecords();
      alert(selectedrowindex + " : " +
JSON.stringify(selectedrecords));
    }
  }
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
selectionSettings={settings} height={270} rowSelected={rowSelected}
ref={g => treegrid = g}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
width='150' />
      <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>
</ref>
};
export default App;
```

Multiple selection based on condition

You can select multiple treegrid rows based on condition by using the [selectRows](#) method.

In the following code, the rows which contains *taskID* value as 3 and 5 are selected at initial rendering.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
```

```
function App() {
  let treegrid;
  const settings = { type: 'Multiple' };
  const dataBound = () => {
    if (treegrid) {
      const rowIndexes = [];
      treegrid.dataSource.forEach((dat, index) => {
        if (dat.taskID === 3 || dat.taskID === 5) {
          rowIndexes.push(index);
        }
      });
      treegrid.selectRows(rowIndexes);
    }
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' selectionSettings={settings} height={270}
  dataBound={dataBound} ref={g => treegrid = g}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='150' />
      <ColumnDirective field='startDate' headerText='Start Date'
      width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
      width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Page, SelectionSettingsModel, TreeGrid } from '@syncfusion/ej2-
react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  let treegrid: TreeGridComponent | null;
  const settings: SelectionSettingsModel = { type: 'Multiple' };
  const dataBound = () => {
    if (treegrid) {
      const rowIndexes : number[]=[];
      (treegrid.dataSource as object[]).forEach((dat: any,index) => {
        if (dat.taskID === 3 || dat.taskID === 5) {
          rowIndexes.push(index);
        }
      });
      treegrid.selectRows(rowIndexes);
    }
  }
}
```

```

    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks'
    selectionSettings={settings} height={270} dataBound={dataBound} ref={g
=> treegrid = g}>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
width='150' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
      </ColumnsDirective>
      <Inject services={[Page]} />
    </TreeGridComponent>
  };
  export default App;

```

Toggle selection

The Toggle selection allows to perform selection and unselection of the particular row or cell. To enable toggle selection, set

`[enableToggle]`(<https://ej2.syncfusion.com/react/documentation/api/treegrid/selectionSettings/#enable-toggle>) property of the selectionSettings as true. If you click on the selected row or cell then it will be unselected and vice versa.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const settings = { enableToggle: true };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} selectionSettings={settings}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page, SelectionSettingsModel } from '@syncfusion/ej2-react-
 treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  const settings: SelectionSettingsModel = { enableToggle: true };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
 childMapping='subtasks' allowPaging={true} selectionSettings={settings}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
 textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
 width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
 width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
 width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>
};
export default App;
```

If multi selection is enabled, then first click on any selected row (without pressing Ctrl key), it will clear the multi selection and in second click on the same row, it will be unselected.

Check box selection in React Treegrid component

Checkbox Selection provides an option to select multiple TreeGrid records with help of checkbox in each row.

To render checkbox in each treegrid row, you need to use checkbox column with type as **CheckBox** using column [type](#) property.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={2}
 childMapping='subtasks' allowPaging={true}>
    <ColumnsDirective>
      <ColumnDirective type='checkbox' width='50' />
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
 textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
 width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
 width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
 width='80' textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>
};
```

```

        <Inject services={[Page]}/>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={2}
    childMapping='subtasks' allowPaging={true}>
        <ColumnsDirective>
            <ColumnDirective type='checkbox' width='50' />
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page]}/>
    </TreeGridComponent>
};
export default App;

```

By default selection is allowed by clicking a treegrid row or checkbox in that row. To allow Selection only through checkbox, you can set

[selectionSettings.checkboxOnly](#) property to **true**.

Selection can be persisted on all the operations

using [selectionSettings.persistSelection](#) property.

For persisting selection on the TreeGrid, any one of the column should be defined as a primary key using [columns.isPrimaryKey](#) property.

Checkbox selection mode

In checkbox selection, selection can also be done by clicking on rows. This selection provides two types of Checkbox Selection mode which can be set by using the following API, [selectionSettings.checkboxMode](#). The modes are;

- **Default:** This is the default value of the checkboxMode. In this mode, user can select multiple rows by clicking rows one by one.
- **ResetOnRowClick:** In ResetOnRowClick mode, when user clicks on a row it will reset previously selected row. Also you can perform multiple-selection in this mode by press and hold CTRL key

and click the desired rows. To select range of rows, press and hold the SHIFT key and click the rows.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const settings = { checkboxMode: 'ResetOnRowClick' };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={2}
    childMapping='subtasks' allowPaging={true} selectionSettings={settings}>
        <ColumnsDirective>
            <ColumnDirective type='checkbox' width='50' />
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page]} />
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page, SelectionSettingsModel } from '@syncfusion/ej2-react-
treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const settings: SelectionSettingsModel = { checkboxMode:
    'ResetOnRowClick' };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={2}
    childMapping='subtasks' allowPaging={true} selectionSettings={settings}>
        <ColumnsDirective>
            <ColumnDirective type='checkbox' width='50' />
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page]} />
    </TreeGridComponent>;
}
```

```

    </TreeGridComponent>
  };
  export default App;

```

Checkbox Selection feature is intended for row selection only; it is not compatible with cell selection mode.

Scrolling in React Treegrid component

The scrollbar will be displayed in the treegrid when content exceeds the element [width](#) or [height](#). The vertical and horizontal scrollbars will be displayed based on the following criteria:

- The vertical scrollbar appears when the total height of rows present in the treegrid exceeds its element height.
- The horizontal scrollbar appears when the sum of columns width exceeds the treegrid element width.
- The [height](#) and [width](#) are used to set the treegrid height and width, respectively.

The default value for [height](#) and [width](#) is *auto*.

Set width and height

To specify the [width](#) and [height](#) of the scroller in the pixel, set the pixel value to a number.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='315' width='400'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
        width='120' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
        width='110' textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {

```

```

    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks'
      height='315' width='400'>
        <ColumnsDirective>
          <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
          <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
          <ColumnDirective field='startDate' headerText='Start Date'
            width='120' format='yMd' textAlign='Right' type='date' />
          <ColumnDirective field='duration' headerText='Duration'
            width='110' textAlign='Right' />
        </ColumnsDirective>
      </TreeGridComponent>
    };
    export default App;

```

Responsive with parent container

Specify the [width](#) and [height](#) as **100%** to make the treegrid element fill its parent container. Setting the [height](#) to **100%** requires the treegrid parent element to have explicit height.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' height='100%' width='100%'>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
        width='120' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
        width='110' textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks'
    height='100%' width='100%'>

```

```

        <ColumnsDirective>

width='110' textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>
};
export default App;

```

Scroll to selected row

You can scroll the treegrid content to the selected row position by using the [rowSelected](#) event.

APP.JSX

```

import { NumericTextBoxComponent } from '@syncfusion/ej2-react-inputs';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    let treegrid;
    let numeric;
    const onChange = () => {
        if (treegrid && numeric) {
            treegrid.selectRow(parseInt(numeric.getText(), 10));
        }
    };
    const rowSelected = (args) => {
        if (treegrid) {
            const rowHeight =
treegrid.getRows()[treegrid.getSelectedRowIndex()][0].scrollHeight;
            treegrid.getContent().children[0].scrollTop = rowHeight *
treegrid.getSelectedRowIndex()[0];
        }
    };
    return (<div>

Frozen in React Treegrid component

Frozen rows and columns

Frozen rows and columns provides an option to make rows and columns always visible in the top and left side of the tree grid while scrolling.

To use frozen rows and columns support, inject the **Freeze** module in the tree grid.

In this demo, the [frozenColumns](#) is set as '2' and the [frozenRows](#) is set as '3'. Hence, the left two columns and top three rows are frozen.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent, Freeze,
Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData}
    childMapping='subtasks' treeColumnIndex={1} height='310' frozenRows={3}
    frozenColumns={2} allowSelection={false}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='120'
            textAlign='Right'></ColumnDirective>
            <ColumnDirective field='taskName' headerText='Task Name'
            width='230'></ColumnDirective>
            <ColumnDirective field='startDate' headerText='Start Date'
            width='120' format='yMd' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='endDate' headerText='End Date'
            width='120' format='yMd' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='duration' headerText='Duration'
            width='110' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='progress' headerText='Progress'
            width='110' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='priority' headerText='Priority'
            width='110'></ColumnDirective>
            <ColumnDirective field='approved' headerText='Approved'
            textAlign='Center' width='110'></ColumnDirective>
        </ColumnsDirective>
        <Inject services={[Freeze]}>
    </TreeGridComponent>;
}
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent, Freeze,
Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData} childMapping =
    'subtasks' treeColumnIndex={1} height='310' frozenRows={3} frozenColumns={2}
    allowSelection={false}>
        <ColumnsDirective>
```

```

        <ColumnDirective field='taskID' headerText='Task ID' width='120'
textAlign='Right'></ColumnDirective>
        <ColumnDirective field='taskName' headerText='Task Name'
width='230'></ColumnDirective>
        <ColumnDirective field='startDate' headerText='Start Date'
width='120' format='yMd' textAlign='Right'></ColumnDirective>
        <ColumnDirective field='endDate' headerText='End Date'
width='120' format='yMd' textAlign='Right'></ColumnDirective>
        <ColumnDirective field='duration' headerText='Duration'
width='110' textAlign='Right'></ColumnDirective>
        <ColumnDirective field='progress' headerText='Progress'
width='110' textAlign='Right'></ColumnDirective>
        <ColumnDirective field='priority' headerText='Priority'
width='110'></ColumnDirective>
        <ColumnDirective field='approved' headerText='Approved'
textAlign='Center' width='110'></ColumnDirective>
    </ColumnsDirective>
    <Inject services={[Freeze]} />
</TreeGridComponent>
};
export default App;

```

Freeze particular columns

You can use [isFrozen](#) property to freeze selected columns in tree grid.

In this demo, the columns with field name `taskName` and `startDate` is frozen using the `isFrozen` property.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent, Freeze,
Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData}
childMapping='subtasks' height='310' allowSelection={false}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='110'
textAlign='Right'></ColumnDirective>
            <ColumnDirective field='taskName' headerText='Task Name'
width='230' isFrozen='true'></ColumnDirective>
            <ColumnDirective field='startDate' headerText='Start Date'
width='120' format='yMd' textAlign='Right'
isFrozen='true'></ColumnDirective>
            <ColumnDirective field='endDate' headerText='End Date'
width='120' format='yMd' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='duration' headerText='Duration'
width='110' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='progress' headerText='Progress'
width='110' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='priority' headerText='Priority'
width='110'></ColumnDirective>
            <ColumnDirective field='approved' headerText='Approved'
textAlign='Center' width='110'></ColumnDirective>
        </ColumnsDirective>
    </TreeGridComponent>

```

```

        <Inject services={[Freeze]}/>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent, Freeze,
Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData} childMapping =
'subtasks' height='310' allowSelection={false} >
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='110'
textAlign='Right'></ColumnDirective>
            <ColumnDirective field='taskName' headerText='Task Name'
width='230' isFrozen='true'></ColumnDirective>
            <ColumnDirective field='startDate' headerText='Start Date'
width='120' format='yMd' textAlign='Right'
isFrozen='true'></ColumnDirective>
            <ColumnDirective field='endDate' headerText='End Date'
width='120' format='yMd' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='duration' headerText='Duration'
width='110' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='progress' headerText='Progress'
width='110' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='priority' headerText='Priority'
width='110'></ColumnDirective>
            <ColumnDirective field='approved' headerText='Approved'
textAlign='Center' width='110'></ColumnDirective>
        </ColumnsDirective>
        <Inject services={[Freeze]} />
    </TreeGridComponent>
};
export default App;

```

Freeze direction

You can freeze the tree grid columns on the left or right side by using the [column.freeze](#) freeze property and the remaining columns will be movable. The tree grid will automatically move the columns to the left or right position based on the [column.freeze](#) value.

Types of the [column.freeze](#) directions:

- **Left:** Allows you to freeze the columns at the left.
- **Right:** Allows you to freeze the columns at the right.

In this demo, the **Task Name** column is frozen at the left and the **Priority** column is frozen at the right side of the content table.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent, Freeze,
Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData}
childMapping='subtasks' height='310' treeColumnIndex={1}
allowSelection={false}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='110'
textAlign='Right'></ColumnDirective>
            <ColumnDirective field='taskName' headerText='Task Name'
width='230' freeze='Left'></ColumnDirective>
            <ColumnDirective field='startDate' headerText='Start Date'
width='120' format='yMd' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='endDate' headerText='End Date'
width='120' format='yMd' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='duration' headerText='Duration'
width='110' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='progress' headerText='Progress'
width='110' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='priority' headerText='Priority'
width='110' freeze='Right'></ColumnDirective>
            <ColumnDirective field='approved' headerText='Approved'
textAlign='Center' width='110'></ColumnDirective>
        </ColumnsDirective>
        <Inject services={[Freeze]}></Inject>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent, Freeze,
Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    return <TreeGridComponent dataSource={sampleData} childMapping =
'subtasks' height='310' treeColumnIndex={1} allowSelection={false} >
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='110'
textAlign='Right'></ColumnDirective>
            <ColumnDirective field='taskName' headerText='Task Name'
width='230' freeze='Left'></ColumnDirective>
            <ColumnDirective field='startDate' headerText='Start Date'
width='120' format='yMd' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='endDate' headerText='End Date'
width='120' format='yMd' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='duration' headerText='Duration'
width='110' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='progress' headerText='Progress'
width='110' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='priority' headerText='Priority'
width='110' freeze='Right'></ColumnDirective>

```

```

        <ColumnDirective field='approved' headerText='Approved'
        textAlign='Center' width='110'></ColumnDirective>
      </ColumnsDirective>
      <Inject services={[Freeze]} />
    </TreeGridComponent>
  };
  export default App;

```

* Freeze Direction is not compatible with the [isFrozen](#) and [frozenColumns](#) properties.

Limitations of frozen tree grid

The following features are not supported in frozen rows and columns:

- Row Template
- Detail Template
- Cell Editing

Freeze Direction feature has the below limitations, along with the above mentioned limitations.

- Infinite scroll cache mode
- Freeze direction in the stacked header is not compatible with column reordering.

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Virtual scroll in React Treegrid component

TreeGrid allows you to load large amount of data without performance degradation. To use virtualization, you need to inject [VirtualScrollService](#) in TreeGrid.

Row virtualization

Row virtualization allows you to load and render rows only in the content viewport. It is an alternative way of paging in which the rows will be appended while scrolling vertically. To setup the row virtualization, you need to define [enableVirtualization](#) as true and content height by [height](#) property.

The number of records displayed in the TreeGrid is determined implicitly by height of the content area and a buffer records will be maintained in the TreeGrid content in addition to the original set of rows.

Expand and Collapse state of any child record will be persisted.

APP.JSX

```

import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject,
VirtualScroll } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { dataSource, virtualData } from './datasource';
function App() {
  dataSource();
  return <TreeGridComponent dataSource={virtualData} childMapping='Crew'
  enableVirtualization={true} treeColumnIndex={1} height='291'>
    <ColumnsDirective>
      <ColumnDirective field='TaskID' headerText='Player Jersey'
      width='120' textAlign='Right'></ColumnDirective>

```

```

        <ColumnDirective field='FIELD1' headerText='Player Name'
width='120'></ColumnDirective>
        <ColumnDirective field='FIELD2' headerText='Year' width='100'
textAlign='Right'></ColumnDirective>
        <ColumnDirective field='FIELD3' headerText='Stint' width='120'
textAlign='Right'></ColumnDirective>
        <ColumnDirective field='FIELD4' headerText='TMID' width='120'
textAlign='Right'></ColumnDirective>
    </ColumnsDirective>
    <Inject services={[VirtualScroll]}/>
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject,
VirtualScroll } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { dataSource, virtualData } from './datasource';
function App() {
    dataSource();
    return <TreeGridComponent dataSource={virtualData} childMapping = 'Crew'
enableVirtualization={true} treeColumnIndex={1} height='291'>
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Player Jersey'
width='120' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='FIELD1' headerText='Player Name'
width='120'></ColumnDirective>
            <ColumnDirective field='FIELD2' headerText='Year' width='100'
textAlign='Right'></ColumnDirective>
            <ColumnDirective field='FIELD3' headerText='Stint' width='120'
textAlign='Right'></ColumnDirective>
            <ColumnDirective field='FIELD4' headerText='TMID' width='120'
textAlign='Right'></ColumnDirective>
        </ColumnsDirective>
        <Inject services={[VirtualScroll]} />
    </TreeGridComponent>
};
export default App;

```

Column virtualization

Column virtualization allows you to virtualize columns. It will render column only in the current view port and all other columns are rendered on demand during horizontal scrolling.

To setup the column virtualization, set the [enableVirtualization](#) and [enableColumnVirtualization](#) properties as **true**.

APP.JSX

```

import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject,
VirtualScroll } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { dataSource, virtualData } from './datasource';

```

```

function App() {
  dataSource();
  return <TreeGridComponent dataSource={virtualData} childMapping='Crew'
enableVirtualization={true} enableColumnVirtualization={true}
treeColumnIndex={1} height='291'>
  <ColumnsDirective>

        <ColumnDirective field='FIELD30' headerText='PostdRebounds'
width='120' textAlign='Right'></ColumnDirective>
    </ColumnsDirective>
    <Inject services={[VirtualScroll]} />
</TreeGridComponent>
};
export default App;

```

Column's [width](#) is required for column virtualization.

If column's width is not defined then tree grid will consider its value as **200px**.

Limitations for virtualization

- Due to the element height limitation in browsers, the maximum number of records loaded by the treegrid is limited by the browser capability.
- Cell selection will not be persisted in row.
- Virtual scrolling is not compatible with detail template, editing and row drag and drop features.

- The page size provided must be two times larger than the number of visible rows in the TreeGrid. If the page size is failed to meet this condition then the size will be determined by TreeGrid.
- The virtual height of the treegrid content is calculated using the row height and total number of records in the data source and hence features which changes row height such as text wrapping are not supported. If you want to increase the row height to accommodate the content then you can specify the row height as below to ensure all the table rows are in same height.

```
`css
```

```
.e-treegrid .e-row {
height: 2em;
}
```

```
`
```

- Programmatic selection using the **selectRows** method is not supported in virtual scrolling.
- Virtual scrolling is not compatible with Batch editing, clipboard functionality and detail template.
- When virtualization is active in a tree grid, the editCell method is unusable for records outside the currently visible viewport.

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Infinite scroll in React Treegrid component

Infinite scrolling is used to load a huge amount of data without degrading the Tree Grid performance. This feature works like the lazy loading concept, which means the buffer data is loaded only when the scrollbar reaches the end of the scroller.

To enable Infinite scrolling, set `enableInfiniteScrolling` property as true and inject **InfiniteScroll** module in Tree Grid.

* In this feature, Tree Grid will not make a new data request when you visit the same page again.

APP.JSX

```
import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject,
InfiniteScroll } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { dataSource, virtualData } from './datasource';
function App() {
  dataSource();
  return <TreeGridComponent dataSource={virtualData} childMapping='Crew'
enableInfiniteScrolling={true} treeColumnIndex={1} height='291'>
    <ColumnsDirective>
      <ColumnDirective field='TaskID' headerText='Player Jersey'
width='120' textAlign='Right'></ColumnDirective>
      <ColumnDirective field='FIELD1' headerText='Player Name'
width='120'></ColumnDirective>
      <ColumnDirective field='FIELD2' headerText='Year' width='100'
textAlign='Right'></ColumnDirective>
      <ColumnDirective field='FIELD3' headerText='Stint' width='120'
textAlign='Right'></ColumnDirective>
    </ColumnsDirective>
  </TreeGridComponent>
```

```

        <ColumnDirective field='FIELD4' headerText='TMID' width='120'
        textAlign='Right'></ColumnDirective>
      </ColumnsDirective>
      <Inject services={[InfiniteScroll]}/>
    </TreeGridComponent>;
  }
;
export default App;

```

APP.TSX

```

import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject,
InfiniteScroll } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { dataSource, virtualData } from './datasource';
function App() {
  dataSource();
  return <TreeGridComponent dataSource={virtualData} childMapping = 'Crew'
  enableInfiniteScrolling={true} treeColumnIndex={1} height='291'>
    <ColumnsDirective>
      <ColumnDirective field='TaskID' headerText='Player Jersey'
width='120' textAlign='Right'></ColumnDirective>
      <ColumnDirective field='FIELD1' headerText='Player Name'
width='120'></ColumnDirective>
      <ColumnDirective field='FIELD2' headerText='Year' width='100'
textAlign='Right'></ColumnDirective>
      <ColumnDirective field='FIELD3' headerText='Stint' width='120'
textAlign='Right'></ColumnDirective>
      <ColumnDirective field='FIELD4' headerText='TMID' width='120'
textAlign='Right'></ColumnDirective>
    </ColumnsDirective>
    <Inject services={[InfiniteScroll]} />
  </TreeGridComponent>
};
export default App;

```

InitialBlocks

You can define the initial loading pages count by using `infiniteScrollSettings.initialBlocks` property. By default, this feature loads three pages in initial rendering.

In the below demo, we have changed this property value to load five page records instead of three.

APP.JSX

```

import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject,
InfiniteScroll } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { dataSource, virtualData } from './datasource';
function App() {
  const pageSettings = { pageSize: 50 };
  const infiniteOptions = { initialBlocks: 5 };
  dataSource();
  return <TreeGridComponent dataSource={virtualData} childMapping='Crew'
height={300} enableInfiniteScrolling={true}
infiniteScrollSettings={infiniteOptions} pageSettings={pageSettings}
treeColumnIndex={1}>

```

```

        <Inject services={[InfiniteScroll]} />
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Player Jersey'
width='120' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='FIELD1' headerText='Player Name'
width='120'></ColumnDirective>
            <ColumnDirective field='FIELD2' headerText='Year'
width='100' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='FIELD3' headerText='Stint'
width='120' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='FIELD4' headerText='TMID'
width='120' textAlign='Right'></ColumnDirective>
        </ColumnsDirective>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject,
InfiniteScroll, InfiniteScrollSettingsModel, PageSettingsModel } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { dataSource, virtualData } from './datasource';
function App() {
    const pageSettings: PageSettingsModel = { pageSize: 50 };
    const infiniteOptions: InfiniteScrollSettingsModel = { initialBlocks: 5 };
    dataSource();
    return <TreeGridComponent dataSource={virtualData} childMapping = 'Crew'
height={300} enableInfiniteScrolling={true} infiniteScrollSettings={
infiniteOptions } pageSettings={ pageSettings } treeColumnIndex={1}>
        <Inject services={[InfiniteScroll]} />
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Player Jersey'
width='120' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='FIELD1' headerText='Player Name'
width='120'></ColumnDirective>
            <ColumnDirective field='FIELD2' headerText='Year'
width='100' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='FIELD3' headerText='Stint'
width='120' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='FIELD4' headerText='TMID'
width='120' textAlign='Right'></ColumnDirective>
        </ColumnsDirective>
    </TreeGridComponent>
};
export default App;

```

Cache Mode

Cache is used to store the loaded rows object in the Tree Grid instance which can be reused for creating the row elements whenever you scroll to already visited page. Also, this mode maintains row elements based on the `infiniteScrollSettings.maxBlocks` count value, once this limit exceeds then it will remove row elements from DOM for new rows.

To enable the cache mode in Infinite scrolling, set `infiniteScrollSettings.enableCache` property as true.

APP.JSX

```
import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject,
InfiniteScroll } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { dataSource, virtualData } from './datasource';
function App() {
    const pageSettings = { pageSize: 50 };
    const infiniteOptions = { enableCache: true };
    dataSource();
    return <TreeGridComponent dataSource={virtualData} childMapping='Crew'
height={300} enableInfiniteScrolling={true}
infiniteScrollSettings={infiniteOptions} pageSettings={pageSettings}
treeColumnIndex={1}>
        <Inject services={[InfiniteScroll]} />
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Player Jersey'
width='120' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='FIELD1' headerText='Player Name'
width='120'></ColumnDirective>
            <ColumnDirective field='FIELD2' headerText='Year'
width='100' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='FIELD3' headerText='Stint'
width='120' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='FIELD4' headerText='TMID'
width='120' textAlign='Right'></ColumnDirective>
        </ColumnsDirective>
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { TreeGridComponent, ColumnsDirective, ColumnDirective, Inject,
InfiniteScroll, InfiniteScrollSettingsModel, PageSettingsModel } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { dataSource, virtualData } from './datasource';
function App() {
    const pageSettings: PageSettingsModel = { pageSize: 50 };
    const infiniteOptions: InfiniteScrollSettingsModel = { enableCache: true
};
    dataSource();
    return <TreeGridComponent dataSource={virtualData} childMapping = 'Crew'
height={300} enableInfiniteScrolling={true} infiniteScrollSettings={
infiniteOptions } pageSettings={ pageSettings } treeColumnIndex={1}>
        <Inject services={[InfiniteScroll]} />
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Player Jersey'
width='120' textAlign='Right'></ColumnDirective>
            <ColumnDirective field='FIELD1' headerText='Player Name'
width='120'></ColumnDirective>
            <ColumnDirective field='FIELD2' headerText='Year'
width='100' textAlign='Right'></ColumnDirective>
        </ColumnsDirective>
    </TreeGridComponent>
```

```

        <ColumnDirective field='FIELD3' headerText='Stint'
width='120' textAlign='Right'></ColumnDirective>
        <ColumnDirective field='FIELD4' headerText='TMID'
width='120' textAlign='Right'></ColumnDirective>
    </ColumnsDirective>
</TreeGridComponent>
};
export default App;

```

Limitations for Infinite Scrolling

- Due to the element height limitation in browsers, the maximum number of records loaded by the tree grid is limited due to the browser capability.
- Initial loading rows total height must be greater than the viewport height.
- Cell selection will not be persisted in cache mode.
- Infinite scrolling is not compatible with batch editing, cell editing, detail template.
- The aggregated information and total group items are displayed based on the current view items. To get these information regardless of the view items, refer to the
- Programmatic selection using the [selectRows](#) and [selectRow](#) method is not supported in infinite scrolling.

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Aggregates

Aggregates in React Treegrid component

Aggregate values are displayed in the TreeGrid footer and in parent row footer for child row aggregate values. It can be configured through [aggregates](#) property. [field](#) and [type](#) are the minimum properties required to represent an aggregate column.

To use the aggregate feature, you have to inject the **Aggregate** module.

By default, the aggregate value can be displayed in the treegrid footer, and footer of child rows. To show the aggregate value in one of the cells, use the [Link to the Video](#).

To get start quickly with aggregates functionalities, you can check on this video:

Built-in aggregate types

The aggregate type should be specified in the [type](#) property to configure an aggregate column.

The built-in aggregates are,

- Sum
- Average
- Min
- Max
- Count
- Truecount
- Falsecount

* Multiple aggregates can be used for an aggregate column by setting the [type](#) property

with an array of aggregate types.

* Multiple types for a column is supported only when one of the aggregate templates is used.

Child aggregate

Aggregate value is calculated for child rows, and it is displayed in the parent row footer. Use the [showChildSummary](#) property to render the child rows aggregate value.

APP.JSX

```
import { getObject } from '@syncfusion/ej2-grids';
import { Aggregate, AggregatesDirective, ColumnDirective, ColumnsDirective,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { AggregateColumnDirective, AggregateColumnsDirective,
AggregateDirective, Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { summaryRowData } from './datasource';
function App() {
    const footerSum = (props) => {
        return (<span>Minimum: {getObject('Min', props)}</span>);
    };
    const footerSum2 = (props) => {
        return (<span>Maximum: {getObject('Max', props)}</span>);
    };
    return <TreeGridComponent dataSource={summaryRowData}
treeColumnIndex={0} childMapping='children' height='260'>
        <ColumnsDirective>

Footer aggregate in React Treegrid component

Footer aggregate value is calculated for all the rows, and it is displayed in the footer cells. Use the [footerTemplate](#) property to render the aggregate value in footer cells.

APP.JSX

```

import { getObject } from '@syncfusion/ej2-grids';
import { Aggregate, AggregatesDirective, ColumnDirective, ColumnsDirective,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { AggregateColumnDirective, AggregateColumnsDirective,
AggregateDirective, Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { summaryRowData } from './datasource';

```

```
function App() {
  const footerSum = (props) => {
    return (<span>Minimum: {getObject('Min', props)}</span>);
  };
  const footerSum2 = (props) => {
    return (<span>Maximum: {getObject('Max', props)}</span>);
  };
  return <TreeGridComponent dataSource={summaryRowData}
treeColumnIndex={0} childMapping='children' height='260'>
    <ColumnsDirective>
      <ColumnDirective field='FreightID' headerText='Freight ID'
width='130'>/>
      <ColumnDirective field='FreightName' headerText='Freight Name'
width='180'>/>
      <ColumnDirective field='UnitWeight' headerText='Weight Per Unit'
width='130' textAlign='Right' type='number'>/>
      <ColumnDirective field='TotalUnits' headerText='Total Units'
type='number' width='125' textAlign='Right'>/>
    </ColumnsDirective>
    <AggregatesDirective>
      <AggregateDirective showChildSummary={false}>
        <AggregateColumnsDirective>
          <AggregateColumnDirective field='TotalUnits'
columnName='TotalUnits' type='Min' footerTemplate={footerSum}>/>
          <AggregateColumnDirective field='UnitWeight'
columnName='UnitWeight' type='Max' footerTemplate={footerSum2}>/>
        </AggregateColumnsDirective>
      </AggregateDirective>
    </AggregatesDirective>
    <Inject services={[Aggregate]}>/>
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { getObject } from '@syncfusion/ej2-grids';
import { Aggregate, AggregatesDirective, ColumnDirective, ColumnsDirective,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { AggregateColumnDirective, AggregateColumnsDirective,
AggregateDirective, Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { summaryRowData } from './datasource';
function App() {
  const footerSum = (props: object) => {
    return (<span>Minimum: {getObject('Min', props)}</span>)
  }
  const footerSum2 = (props: object) => {
    return (<span>Maximum: {getObject('Max', props)}</span>)
  }
  return <TreeGridComponent dataSource={summaryRowData}
treeColumnIndex={0} childMapping='children' height='260'>
    <ColumnsDirective>
      <ColumnDirective field='FreightID' headerText='Freight ID'
width='130'>/>
```

```

        <ColumnDirective field='FreightName' headerText='Freight Name'
width='180' />
        <ColumnDirective field='UnitWeight' headerText='Weight Per Unit'
width='130' textAlign='Right' type='number' />
        <ColumnDirective field='TotalUnits' headerText='Total Units'
type='number' width='125' textAlign='Right' />
    </ColumnsDirective>
    <AggregatesDirective>
    <AggregateDirective showChildSummary={false}>
        <AggregateColumnsDirective>
        <AggregateColumnDirective field='TotalUnits'
columnName='TotalUnits' type='Min'
        footerTemplate={footerSum} />
        <AggregateColumnDirective field='UnitWeight'
columnName='UnitWeight' type='Max'
        footerTemplate={footerSum2} />
        </AggregateColumnsDirective>
    </AggregateDirective>
    </AggregatesDirective>
    <Inject services={[Aggregate]} />
</TreeGridComponent>
};
export default App;

```

The aggregate values must be accessed inside the template using their corresponding [type](#) name.

How to format aggregate value

You can format the aggregate value result by using the [format](#) property.

APP.JSX

```

import { getObject } from '@syncfusion/ej2-grids';
import { Aggregate, AggregatesDirective, ColumnDirective, ColumnsDirective,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { AggregateColumnDirective, AggregateColumnsDirective,
AggregateDirective, Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { summaryData } from './datasource';
function App() {
    const footerSum = (props) => {
        return (<span>Total: {getObject('Sum', props)}</span>);
    };
    return <TreeGridComponent dataSource={summaryData} treeColumnIndex={0}
childMapping='subtasks' height='260'>
        <ColumnsDirective>
        <ColumnDirective field='category' headerText='Category'
width='160' />
        <ColumnDirective field='units' headerText='Total Units'
width='130' type='number' textAlign='Right' />
        <ColumnDirective field='unitPrice' headerText='Unit Price($)'
width='110' textAlign='Right' type='number' format='C2' />
        <ColumnDirective field='price' headerText='Price($)'
type='number' width='160' textAlign='Right' format='C2' />
        </ColumnsDirective>
        <AggregatesDirective>
        <AggregateDirective showChildSummary={true}>

```

```

        <AggregateColumnsDirective>
        <AggregateColumnDirective field='price' columnName='price'
type='Sum' footerTemplate={footerSum} format='C2' />
        </AggregateColumnsDirective>
        </AggregateDirective>
    </AggregatesDirective>
    <Inject services={[Aggregate]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { getObject } from '@syncfusion/ej2-grids';
import { Aggregate, AggregatesDirective, ColumnDirective, ColumnsDirective,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { AggregateColumnDirective, AggregateColumnsDirective,
AggregateDirective, Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { summaryData } from '../datasource';
function App() {
    const footerSum = (props: object) => {
        return(<span>Total: {getObject('Sum', props)}</span>)
    }
    return <TreeGridComponent dataSource={summaryData} treeColumnIndex={0}
childMapping='subtasks' height='260'>
        <ColumnsDirective>
            <ColumnDirective field='category' headerText='Category'
width='160' />
            <ColumnDirective field='units' headerText='Total Units'
width='130' type='number' textAlign='Right' />
            <ColumnDirective field='unitPrice' headerText='Unit Price($)'
width='110' textAlign='Right' type='number' format='C2' />
            <ColumnDirective field='price' headerText='Price($)'
type='number' width='160' textAlign='Right' format='C2' />
        </ColumnsDirective>
        <AggregatesDirective>
            <AggregateDirective showChildSummary={true}>
                <AggregateColumnsDirective>
                    <AggregateColumnDirective field='price' columnName='price'
type='Sum'
                        footerTemplate={footerSum} format='C2' />
                </AggregateColumnsDirective>
            </AggregateDirective>
        </AggregatesDirective>
        <Inject services={[Aggregate]} />
    </TreeGridComponent>
};
export default App;

```

Custom aggregate in React Treegrid component

To calculate the aggregate value with your own aggregate functions, use the custom aggregate option. To use custom aggregation, specify the [type](#) as **Custom**, and provide the custom aggregate function in the [customAggregate](#) property.

APP.JSX

```

import { getObject } from '@syncfusion/ej2-grids';
import { Aggregate, AggregatesDirective, ColumnDirective, ColumnsDirective,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { AggregateColumnDirective, AggregateColumnsDirective,
AggregateDirective, Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { summaryData } from '../datasource';
function App() {
    const footerSum = (props) => {
        return (<span>Total: {getObject('Sum', props)}</span>);
    };
    const customAggregateFn = (row) => {
        const sampleData = getObject('result', row);
        let countLength = 0;
        sampleData.filter((item) => {
            const data = getObject('category', item);
            const value = 'Frozen seafood';
            if (data === value) {
                countLength++;
            }
        });
        return countLength;
    };
    const custom = (props) => {
        return (<span> Count of Frozen seafood: {getObject('Custom',
props)}</span>);
    };
    return <TreeGridComponent dataSource={summaryData} treeColumnIndex={0}
childMapping='subtasks' height='260'>
        <ColumnsDirective>
            <ColumnDirective field='category' headerText='Category'
width='160' />
            <ColumnDirective field='units' headerText='Total Units'
width='130' type='number' textAlign='Right' />
            <ColumnDirective field='unitPrice' headerText='Unit Price($)'
width='90' textAlign='Right' type='number' format='C2' />
            <ColumnDirective field='price' headerText='Price($)'
type='number' width='160' textAlign='Right' format='C' />
        </ColumnsDirective>
        <AggregatesDirective>
            <AggregateDirective showChildSummary={false}>
                <AggregateColumnsDirective>
                    <AggregateColumnDirective field='price'
columnName='category' type='Custom' customAggregate={customAggregateFn}
footerTemplate={custom} />
                </AggregateColumnsDirective>
            </AggregateDirective>
        </AggregatesDirective>
        <Inject services={[Aggregate]} />
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { getObject } from '@syncfusion/ej2-grids';
import { Aggregate, AggregatesDirective, ColumnDirective, ColumnsDirective,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { AggregateColumnDirective, AggregateColumnsDirective,
AggregateDirective, Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { summaryData } from '../datasource';
function App() {
    const footerSum = (props:object) => {
        return(<span>Total: {getObject('Sum', props)}</span>)
    }
    const customAggregateFn = (row: object) => {
        const sampleData: object[] = getObject('result', row);
        let countLength: number = 0;
        sampleData.filter((item: object) => {
            const data: string = getObject('category', item);
            const value: string = 'Frozen seafood';
            if (data === value) {
                countLength++;
            }
        });
        return countLength;
    }
    const custom = (props: object) => {
        return(<span> Count of Frozen seafood: {getObject('Custom',
props)}</span>)
    }
    return <TreeGridComponent dataSource={summaryData} treeColumnIndex={0}
childMapping='subtasks' height='260'>
        <ColumnsDirective>
            <ColumnDirective field='category' headerText='Category'
width='160' />
            <ColumnDirective field='units' headerText='Total Units'
width='130' type='number' textAlign='Right' />
            <ColumnDirective field='unitPrice' headerText='Unit Price($)'
width='90' textAlign='Right' type='number' format='C2' />
            <ColumnDirective field='price' headerText='Price($)'
type='number' width='160' textAlign='Right' format='C' />
        </ColumnsDirective>
        <AggregatesDirective>
            <AggregateDirective showChildSummary={false}>
                <AggregateColumnsDirective>
                    <AggregateColumnDirective field='price'
columnName='category' type='Custom'
                        customAggregate = {customAggregateFn}
                    />
                </AggregateColumnsDirective>
            </AggregateDirective>
        </AggregatesDirective>
        <Inject services={ [Aggregate]} />
    </TreeGridComponent>
};
export default App;

```

To access the custom aggregate value inside the template, use the key as **Custom**.

Print in React Treegrid component

To print the TreeGrid, use the [print](#) method from treegrid instance. The print option can be displayed on the [toolbar](#) by adding the **Print** toolbar item.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const toolbarOptions = ['Print'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='265' toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Toolbar]} />
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, Toolbar, ToolbarItems } from '@syncfusion/ej2-react-
treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const toolbarOptions: ToolbarItems[] = ['Print'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks'
    height='265' toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
    </TreeGridComponent>
```

```

    <Inject services={[Toolbar]}/>
  </TreeGridComponent>
};
export default App;

```

Page setup

Some of the print options cannot be configured through JavaScript code. So, you have to customize the layout, paper size, and margin options using the browser page setup dialog. Please refer to the following links to know more about the browser page setup:

- [Chrome](#)
- [Firefox](#)
- [Safari](#)
- [IE](#)

Print using an external button

To print the treegrid from an external button, invoke the [print](#) method.

APP.JSX

```

import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  let treegrid;
  const clickHandler = () => {
    if (treegrid) {
      treegrid.print();
    }
  };
  return (
    <div><ButtonComponent
      onClick={clickHandler}>Print</ButtonComponent>
      <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
      childMapping='subtasks' height='265' ref={g => treegrid = g}>
        <ColumnsDirective>
          <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
          <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
          <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
          <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Toolbar]}/>
      </TreeGridComponent></div>);
}
;
export default App;

```

APP.TSX

```
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, Toolbar, TreeGrid } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    let treegrid: TreeGridComponent | null;
    const clickHandler = () => {
        if (treegrid) {
            treegrid.print();
        }
    }
    return (
        <div>
            <ButtonComponent onClick={clickHandler}>Print</ButtonComponent>
            <TreeGridComponent
                dataSource={sampleData}
                treeColumnIndex={1}
                childMapping='subtasks'
                height='265'
                ref={g => treegrid = g}
                <ColumnsDirective>
                    <ColumnDirective
                        field='taskID'
                        headerText='Task ID'
                        width='90'
                        textAlign='Right'
                    />
                    <ColumnDirective
                        field='taskName'
                        headerText='Task Name'
                        width='180'
                    />
                    <ColumnDirective
                        field='startDate'
                        headerText='Start Date'
                        width='90'
                        format='yMd'
                        textAlign='Right'
                        type='date'
                    />
                    <ColumnDirective
                        field='duration'
                        headerText='Duration'
                        width='80'
                        textAlign='Right'
                    />
                </ColumnsDirective>
                <Inject services={[Toolbar]} />
            </TreeGridComponent>
        </div>
    );
}
export default App;
```

Print the visible page

By default, the treegrid prints all the pages. To print the current page alone, set the [printMode](#) to **CurrentPage**.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, Page, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const toolbarOptions = ['Print'];
    const pageSettings = { pageSize: 8 };
    return (
        <TreeGridComponent
            dataSource={sampleData}
            treeColumnIndex={1}
            childMapping='subtasks'
            height='220'
            toolbar={toolbarOptions}
            allowPaging={true}
            pageSettings={pageSettings}
            printMode='CurrentPage'
            <ColumnsDirective>
                <ColumnDirective
                    field='taskID'
                    headerText='Task ID'
                    width='90'
                    textAlign='Right'
                />
            </ColumnsDirective>
        </TreeGridComponent>
    );
}
```

```

        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Toolbar, Page]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Inject, Page, PageSettingsModel, Toolbar, ToolbarItems } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const toolbarOptions: ToolbarItems[] = ['Print'];
    const pageSettings: PageSettingsModel = { pageSize: 8 };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
    height='220' toolbar={toolbarOptions} allowPaging={true}
pageSettings={pageSettings}
    printMode='CurrentPage'>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Toolbar, Page]} />
    </TreeGridComponent>
};
export default App;

```

Print large number of columns

By default, the browser uses A4 as page size option to print pages and to adapt the size of the page the browser print preview will auto-hide the overflowed contents. Hence treegrid with large number of columns will cut off to adapt the print page.

To show large number of columns when printing, adjust the scale option from print option panel based on your content size.

Show or Hide columns while Printing

You can show a hidden column or hide a visible column while printing the treegrid using [toolbarClick](#) and [printComplete](#) events.

In the [toolbarClick](#) event, based on **args.item.text** as *Print*. We can show or hide columns by setting [column.visible](#) property to *true* or *false* respectively.

In the [printComplete](#) event, We have reversed the state back to the previous state.

In the below example, we have **Duration** as a hidden column in the treegrid. While printing, we have changed **Duration** to visible column and **StartDate** as hidden column.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  let treegrid;
  const toolbarOptions = ['Print'];
  const toolbarClick = (args) => {
    if (treegrid && args.item.text === 'Print') {
      const cols = treegrid.grid.columns;
      for (const col of cols) {
        if (col.field === "duration") {
          col.visible = true;
        }
        else if (col.field === "startDate") {
          col.visible = false;
        }
      }
    }
  };
  const printComplete = (args) => {
    if (treegrid) {
```

```

        const cols = treegrid.grid.columns;
        for (const col of cols) {
            if (col.field === "duration") {
                col.visible = false;
            }
            else if (col.field === "StartDate") {
                col.visible = true;
            }
        }
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='265' toolbar={toolbarOptions}
    toolbarClick={toolbarClick} ref={g => treegrid = g}
    printComplete={printComplete}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' visible={false} />
        </ColumnsDirective>

      width='80' textAlign='Right' visible={false} />
    </ColumnsDirective>
    <Inject services={[Toolbar]} />
  </TreeGridComponent>
  };
export default App;

```

Limitations of Printing Large Data

When treegrid contains large number of data, printing all the data at once is not a best option for the browser performance. Because to render all the DOM elements in one page will produce performance issues in the browser. It leads to browser slow down or browser hang.

If printing of all the data is still needed, we suggest to Export the treegrid to **Excel** or **CSV** or **Pdf** and then print it from another non-web based application.

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Adaptive in React Treegrid component

The Grid user interface (UI) was redesigned to provide an optimal viewing experience and improve usability on small screens. This interface will render the filter, sort, and edit dialogs adaptively and have an option to render the Tree Grid row elements in the horizontal direction.

Render adaptive dialogs

When you enable the [enableAdaptiveUI](#) property, the grid will render the filter, sort, and edit dialogs in full screen for a better user experience. The following demo demonstrates this behaviour.

APP.JSX

```

Please refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to learn how to present and manipulate data.

Loading animation in React Treegrid component

The Tree Grid displays a loading indicator while the data is being fetched and bound to the tree grid during initial rendering, refreshing, and after performing any tree grid actions like sorting, filtering, and more.

The tree grid supports two indicator types, which can be enabled by setting the `loadingIndicator.indicatorType` property to `Spinner` or `Shimmer`. The default value of the indicator type is `Spinner`.

In the following sample, the Shimmer indicator is displayed while the tree grid is loading and refreshing when using the remote data.

APP.JSX

```

{% raw %}
import { DataManager, WebApiAdaptor } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, Inject, Page, TreeGridComponent,
Sort } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
function App() {
    const pageSettings = { pageCount: 3 };
    const data = new DataManager({
        adaptor: new WebApiAdaptor,

State Persistence

State persistence in React Treegrid component

State persistence refers to the TreeGrid's state maintained in the browser's [localStorage](#) even if the browser is refreshed or if you move to the next page within the browser.

State persistence stores treegrid's model object in the local storage when the [enablePersistence](#) is defined as true.

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Get or set local storage value in React Treegrid component

If the [enablePersistence](#) property is set to true, the treegrid property value is saved in the **window.localStorage** for reference. You can get/set the localStorage value by using the **getItem/setItem** method in the **window.localStorage**.

```
`ts
// get the TreeGrid model.
const value: string = window.localStorage.getItem('treegridTreeGrid') as string;
// "treegridTreeGrid" is component name + component id.
const model: object = JSON.parse(value);
`
`ts
// set the TreeGrid model.
// "treegridTreeGrid" is component name + component id.
window.localStorage.setItem('treegridTreeGrid', JSON.stringify(model));
`
```

Tool Bar

Tool bar in React Treegrid component

The TreeGrid provides Toolbar support to handle treegrid actions. The [toolbar](#) property accepts either the collection of built-in toolbar items and [ItemModel](#) objects for custom toolbar items or HTML element ID for toolbar template.

To use Toolbar, inject **Toolbar** module in the treegrid.

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Tool bar items in React Treegrid component

Built-in toolbar items

Built-in toolbar items execute standard actions of the treegrid, and it can be added by defining the [toolbar](#)

as a collection of built-in items. It renders the button with icon and text.

The following table shows built-in toolbar items and its actions.

Built-in Toolbar Items Actions	
----- -----	
ExpandAll	Expands all the rows.
CollapseAll	Collapses all the rows.
Add	Adds a new record.
Edit	Edits the selected record.
Update	Updates the edited record.
Delete	Deletes the selected record.
Cancel	Cancels the edit state.
Search	Searches the records by the given key.
Print	Prints the treegrid.
ExcelExport	Exports the treegrid to Excel.
PdfExport	Exports the treegrid to PDF.
WordExport	Exports the treegrid to Word.
Indent	Indents the record to one level of hierarchy.
Outdent	Outdents the record to one level of hierarchy.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Filter, Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  const toolbarOptions = ['Print', 'Search'];
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' height='265' toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
        width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
        width='80' textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>
}
```

```

        </ColumnsDirective>
        <Inject services={[Toolbar, Filter]}/>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Filter, Inject, Toolbar, ToolbarItems } from '@syncfusion/ej2-
 react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const toolbarOptions: ToolbarItems[] = ['Print', 'Search'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks'
        height='265' toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Toolbar, Filter]}/>
    </TreeGridComponent>
};
export default App;

```

* The [toolbar](#) has options to define both built-in and custom toolbar items.

Custom toolbar items

Custom toolbar items can be added by defining the [toolbar](#) as a collection of [ItemModels](#). Actions for this customized toolbar items are defined in the [toolbarClick](#) event.

By default, Custom toolbar items are in position **Left**. You can change the position by using the [align](#) property. In the below sample, we have applied position **Right** for the **Quick Filter** toolbar item.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Filter, Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    let treegrid;
    const toolbarOptions = [
        { text: 'Quick Filter', tooltipText: 'Quick Filter', id:
        'toolbarfilter', align: 'Right' }
    ];

```

```

];
const toolbarClick = (args) => {
  if (treegrid && args.item.text === 'Quick Filter') {
    treegrid.filterByColumn("taskName", "startswith", "Testing");
  }
};
return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowFiltering={true} height='220'
toolbar={toolbarOptions} toolbarClick={toolbarClick} ref={g => treegrid =
g}>
  <ColumnsDirective>
    <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
    <ColumnDirective field='taskName' headerText='Task Name'
width='160' />
    <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
    <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
  </ColumnsDirective>
  <Inject services={[Toolbar, Filter]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Filter, Inject, Toolbar, TreeGrid } from '@syncfusion/ej2-react-
treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  let treegrid: TreeGridComponent | null;
  const toolbarOptions: object[] = [
    { text: 'Quick Filter', tooltipText: 'Quick Filter', id:
'toolbarfilter', align: 'Right' }
  ];
  const toolbarClick = (args: ClickEventArgs): void => {
    if (treegrid && args.item.text === 'Quick Filter') {
      treegrid.filterByColumn("taskName", "startswith", "Testing");
    }
  }
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
allowFiltering={true} height='220' toolbar={toolbarOptions}
toolbarClick={toolbarClick}
ref={g => treegrid = g}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
width='160' />

```

```

        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Toolbar,Filter]}/>
</TreeGridComponent>
};
export default App;

```

* The [toolbar](#) has options to define both built-in and custom toolbar items.

* If a toolbar item does not match the built-in items, it will be treated as a custom toolbar item.

Built-in and custom items in toolbar

TreeGrid have an option to use both built-in and custom toolbar items at same time.

In the below example, **ExpandAll**, **CollapseAll** are built-in toolbar items and *Click* is custom toolbar item.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    let treegrid;
    const toolbarOptions = [
        'ExpandAll', 'CollapseAll',
        { text: 'Click', tooltipText: 'Click', id: 'Click', prefixIcon: 'e-
time' }
    ];
    const toolbarClick = (args) => {
        if (treegrid && args.item.text === 'Click') {
            alert("Custom toolbar click...");
        }
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' ref={g => treegrid = g} toolbar={toolbarOptions}
toolbarClick={toolbarClick}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='160' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Toolbar]}/>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```
import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, Toolbar, TreeGrid } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    let treegrid: TreeGridComponent | null;
    const toolbarOptions: any[] = [
        'ExpandAll', 'CollapseAll',
        { text: 'Click', tooltipText: 'Click', id: 'Click', prefixIcon: 'e-
time' }
    ];
    const toolbarClick = (args: ClickEventArgs): void => {
        if (treegrid && args.item.text === 'Click') {
            alert("Custom toolbar click...");
        }
    }
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
    ref={g => treegrid = g} toolbar={toolbarOptions}
toolbarClick={toolbarClick}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='160' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Toolbar]} />
    </TreeGridComponent>
};
export default App;
```

Enable or disable toolbar items

You can enable/disable toolbar items by using the `enableItems` method.

APP.JSX

```
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { ColumnDirective, ColumnsDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Filter, Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    let treegrid;
    const toolbarOptions = ['QuickFilter', 'ClearFilter'];
    const enable = () => {
        if (treegrid) {
            // Enable toolbar items.
            treegrid.toolbarModule

```

```

        .enableItems([treegrid.element.id +
'_gridcontrol_QuickFilter', treegrid.element.id +
'_gridcontrol_ClearFilter'], true);
    }
};
const disable = () => {
    if (treegrid) {
        // Disable toolbar items.
        treegrid.toolbarModule
            .enableItems([treegrid.element.id +
'_gridcontrol_QuickFilter', treegrid.element.id +

Pdf Export

Pdf export in React Treegrid component

PDF export allows exporting TreeGrid data to PDF document. You need to use the [pdfExport](#) method for exporting. To enable PDF export in the treegrid, set the [allowPdfExport](#) as [Link to the Video](#).

To get start quickly with exporting functionalities, you can check on this video:

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const toolbarOptions = ['PdfExport'];
    const pageSettings = { pageSize: 7 };
    let treegrid;
    const toolbarClick = (args) => {
        if (treegrid && args.item.text === 'PDF Export') {
            treegrid.pdfExport();
        }
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
    allowPdfExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
    treegrid = g} toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page, Toolbar, PdfExport]} />
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { ColumnDirective, ColumnsDirective, Page, PageSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar, ToolbarItems, TreeGrid } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const toolbarOptions: ToolbarItems[] = ['PdfExport'];
```

```

const pageSettings: PageSettingsModel = { pageSize: 7 };
let treegrid: TreeGridComponent | null;
const toolbarClick = (args: ClickEventArgs): void => {
  if (treegrid && args.item.text === 'PDF Export') {
    treegrid.pdfExport();
  }
}
return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
allowPaging={true} pageSettings={pageSettings} allowPdfExport={true}
height='220'
toolbarClick={toolbarClick} ref={g => treegrid = g}
toolbar={toolbarOptions}>
  <ColumnsDirective>
    <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
    <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
    <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
    <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
  </ColumnsDirective>
  <Inject services={[Page, Toolbar, PdfExport]} />
</TreeGridComponent>
};
export default App;

```

Custom data source

PDF export provides an option to define datasource dynamically before exporting. To export data dynamically, define the `dataSource` in `PdfExportProperties`.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions = ['PdfExport'];
  const pageSettings = { pageSize: 7 };
  let treegrid;
  const toolbarClick = (args) => {
    if (treegrid) {
      const exportProperties = {
        dataSource: sampleData,
      };
      treegrid.pdfExport(exportProperties);
    }
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
allowPdfExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
treegrid = g} toolbar={toolbarOptions}>
    <ColumnsDirective>

```

```

        <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page, Toolbar, PdfExport]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { PdfExportProperties } from '@syncfusion/ej2-grids';
import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { ColumnDirective, ColumnsDirective, Page, PageSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar, ToolbarItems, TreeGrid } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const toolbarOptions: ToolbarItems[] = ['PdfExport'];
    const pageSettings: PageSettingsModel = { pageSize: 7 };
    let treegrid: TreeGridComponent | null;
    const toolbarClick = (args: ClickEventArgs): void => {
        if (treegrid) {
            const exportProperties: PdfExportProperties = {
                dataSource: sampleData,
            };
            treegrid.pdfExport(exportProperties);
        }
    }
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
allowPaging={true} pageSettings={pageSettings} allowPdfExport={true}
height='220'
toolbarClick={toolbarClick} ref={g => treegrid = g}
toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page, Toolbar, PdfExport]} />
    </TreeGridComponent>
};

```

```
export default App;
```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Pdf export options in React Treegrid component

Export hidden columns

PDF export provides an option to export hidden columns of TreeGrid by defining the `includeHiddenColumn` as **true**.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  const toolbarOptions = ['PdfExport'];
  const pageSettings = { pageSize: 7 };
  let treegrid;
  const toolbarClick = (args) => {
    if (treegrid) {
      const exportProperties = {
        includeHiddenColumn: true
      };
      treegrid.pdfExport(exportProperties);
    }
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
    allowPdfExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
      treegrid = g} toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
        width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' visible={false}
        headerText='Duration' width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page, Toolbar, PdfExport]} />
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { PdfExportProperties } from '@syncfusion/ej2-grids';
import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { ColumnDirective, ColumnsDirective, Page, PageSettingsModel,
  TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
```

```

import { Inject, PdfExport, Toolbar, ToolbarItems, TreeGrid } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  const toolbarOptions: ToolbarItems[] = ['PdfExport'];
  const pageSettings: PageSettingsModel = { pageSize: 7 };
  let treegrid: TreeGridComponent | null;
  const toolbarClick = (args: ClickEventArgs): void => {
    if (treegrid) {
      const exportProperties: PdfExportProperties = {
        includeHiddenColumn: true
      };
      treegrid.pdfExport(exportProperties);
    }
  }
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks'
    allowPaging={true} pageSettings={pageSettings} allowPdfExport={true}
  height='220'
    toolbarClick={toolbarClick} ref={g => treegrid = g}
  toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
  textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
  width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
  width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' visible={false}
  headerText='Duration' width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page, Toolbar, PdfExport]} />
  </TreeGridComponent>
</>
};
export default App;

```

Show or hide columns on exported PDF

You can show a hidden column or hide a visible column while exporting the treegrid using [toolbarClick](#) and [pdfExportComplete](#) events.

In the [toolbarClick](#) event, based on **args.item.text** as **PDF Export**. We can show or hide columns by setting [column.visible](#) property to **true** or **false** respectively.

In the pdfExportComplete event, We have reversed the state back to the previous state.

In the below example, we have *Duration* as a hidden column in the treegrid. While exporting, we have changed *Duration* to visible column and *StartDate* as hidden column.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';

```

```
function App() {
  const toolbarOptions = ['PdfExport'];
  const pageSettings = { pageSize: 7 };
  let treegrid;
  const toolbarClick = (args) => {
    if (treegrid) {
      const cols = treegrid.grid.columns;
      cols[2].visible = false;
      cols[3].visible = true;
      treegrid.pdfExport();
    }
  };
  const pdfExportComplete = () => {
    if (treegrid) {
      const cols = treegrid.grid.columns;
      cols[3].visible = false;
      cols[2].visible = true;
    }
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
  allowPdfExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
  treegrid = g} toolbar={toolbarOptions}
  pdfExportComplete={pdfExportComplete}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
      width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' visible={false}
      headerText='Duration' width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page, Toolbar, PdfExport]} />
  </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { Column, ColumnDirective, ColumnsDirective, Page, PageSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar, ToolbarItems, TreeGrid } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  const toolbarOptions: ToolbarItems[] = ['PdfExport'];
  const pageSettings: PageSettingsModel = { pageSize: 7 };
  let treegrid: TreeGridComponent | null;
  const toolbarClick = (args: ClickEventArgs): void => {
    if (treegrid) {
      const cols: Column[] = treegrid.grid.columns as Column[];
```

```

        cols[2].visible = false;
        cols[3].visible = true;
        treegrid.pdfExport();
    }
}
const pdfExportComplete = (): void => {
    if (treegrid) {
        const cols: Column[] = treegrid.grid.columns as Column[];
        cols[3].visible = false;
        cols[2].visible = true;
    }
}
return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'

toolbar={toolbarOptions} pdfExportComplete={pdfExportComplete}>
    <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' visible={false}
headerText='Duration' width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page, Toolbar, PdfExport]} />
</TreeGridComponent>
};
export default App;

```

How to change page orientation

Page orientation can be changed Landscape(Default Portrait) for the exported document using the PdfExportProperties.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const toolbarOptions = ['PdfExport'];
    const pageSettings = { pageSize: 7 };
    let treegrid;
    const toolbarClick = (args) => {
        if (treegrid) {
            const pdfExportProperties = {
                pageOrientation: 'Landscape'
            };
            treegrid.pdfExport(pdfExportProperties);
        }
    };
};

```

```

    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
    allowPdfExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
    treegrid = g} toolbar={toolbarOptions}>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
        width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
        width='80' textAlign='Right' />
      </ColumnsDirective>
      <Inject services={[Page, Toolbar, PdfExport]} />
    </TreeGridComponent>;
  }
;
export default App;

```

APP.TSX

```

import { PdfExportProperties } from '@syncfusion/ej2-grids';
import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { ColumnDirective, ColumnsDirective, Page, PageSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar, ToolbarItems, TreeGrid } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions: ToolbarItems[] = ['PdfExport'];
  const pageSettings: PageSettingsModel = { pageSize: 7 };
  let treegrid: TreeGridComponent | null;
  const toolbarClick = (args: ClickEventArgs): void => {
    if (treegrid) {
      const pdfExportProperties: PdfExportProperties = {
        pageOrientation: 'Landscape'
      };
      treegrid.pdfExport(pdfExportProperties);
    }
  }
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks'
    allowPaging={true} pageSettings={pageSettings} allowPdfExport={true}
  height='220'
    toolbarClick={toolbarClick} ref={g => treegrid = g}
  toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'

width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page, Toolbar, PdfExport]} />
</TreeGridComponent>
};
export default App;

```

How to change page size

Page size can be customized for the exported document using the PdfExportProperties.

Supported page sizes are:

- Letter
- Note
- Legal
- A0
- A1
- A2
- A3
- A5
- A6
- A7
- A8
- A9
- B0
- B1
- B2
- B3
- B4
- B5
- ArchA
- ArchB
- ArchC
- ArchD
- ArchE
- FlsA
- HalfLetter
- Letter11x17
- Ledger

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';

  const toolbarClick = (args: ClickEventArgs): void => {
    if (treegrid) {
      const pdfExportProperties: PdfExportProperties = {
        pageSize: 'Letter'
      };
      treegrid.pdfExport(pdfExportProperties);
    }
  }
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
allowPaging={true} pageSettings={pageSettings} allowPdfExport={true}
height='220'

```

```

        toolbarClick={toolbarClick} ref={g => treegrid = g}
      toolbar={toolbarOptions}>
        <ColumnsDirective>
          <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
          <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
          <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
          <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page, Toolbar, PdfExport]} />
      </TreeGridComponent>
    };
    export default App;

```

To customize PDF export

PDF export provides an option to customize mapping of treegrid to exported PDF document.

File name for exported document

You can assign the file name for the exported document by defining `fileName` property in `PdfExportProperties`

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions = ['PdfExport'];
  const pageSettings = { pageSize: 7 };
  let treegrid;
  const toolbarClick = (args) => {
    if (treegrid) {
      const exportProperties = {
        fileName: "new.pdf"
      };
      treegrid.pdfExport(exportProperties);
    }
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
    allowPdfExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
      treegrid = g} toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
        width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
        width='80' textAlign='Right' />
    </ColumnsDirective>
  </TreeGridComponent>

```

```

        </ColumnsDirective>
        <Inject services={[Page, Toolbar, PdfExport]}/>
    </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { PdfExportProperties } from '@syncfusion/ej2-grids';
import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { ColumnDirective, ColumnsDirective, Page, PageSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar, ToolbarItems, TreeGrid } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const toolbarOptions: ToolbarItems[] = ['PdfExport'];
    const pageSettings: PageSettingsModel = { pageSize: 7 };
    let treegrid: TreeGridComponent | null;
    const toolbarClick = (args: ClickEventArgs): void => {
        if (treegrid) {
            const exportProperties: PdfExportProperties = {
                fileName: "new.pdf"
            };
            treegrid.pdfExport(exportProperties);
        }
    }
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
    allowPaging={true} pageSettings={pageSettings} allowPdfExport={true}
height='220'
    toolbarClick={toolbarClick} ref={g => treegrid = g}
toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page, Toolbar, PdfExport]}/>
    </TreeGridComponent>
};
export default App;

```

Default fonts for PDF exporting

By default, treegrid uses **Helvetica** font in the exported document. You can change the default font by using `PdfExportProperties.theme` property. The available default fonts are,

- Helvetica
- TimesRoman
- Courier
- Symbol
- ZapfDingbats

The code example for changing default font,

```
`ts
```

```
import { PdfFontFamily, PdfFontStyle, PdfStandardFont } from '@syncfusion/ej2-pdf-export';
```

```
...
```

```
const pdfExportProperties: PdfExportProperties = {
```

```
  theme: {
```

```
    header: {font: new PdfStandardFont(PdfFontFamily.TimesRoman, 11, PdfFontStyle.Bold)},
```

```
    record: { font: new PdfStandardFont(PdfFontFamily.TimesRoman, 10) }
```

```
  }
```

```
}
```

```
,
```

[Add custom font for PDF exporting](#)

You can change the default font of TreeGrid header, content and caption cells in the exported document by using `PdfExportProperties.theme` property.

In the following example, we have used Advent Pro font to export the treegrid with Hungarian fonts.

APP.JSX

```
import { PdfTrueTypeFont } from '@syncfusion/ej2-pdf-export';
import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
import { adventProFont } from '../font';

function App() {
  const toolbarOptions = ['PdfExport'];
  const pageSettings = { pageSize: 7 };
  let treegrid;
  const toolbarClick = (args) => {
    if (treegrid) {
      const pdfExportProperties = {
        theme: {
          header: { font: new PdfTrueTypeFont(adventProFont, 12)
        },
        record: { font: new PdfTrueTypeFont(adventProFont, 9) }
      };
      treegrid.pdfExport(pdfExportProperties);
    }
  };
};
```

```

    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
    allowPdfExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
    treegrid = g} toolbar={toolbarOptions}>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID'
width='90' textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
      </ColumnsDirective>
      <Inject services={[Page, Toolbar, PdfExport]} />
    </TreeGridComponent>;
  }
;
export default App;

```

APP.TSX

```

import { PdfExportProperties } from '@syncfusion/ej2-grids';
import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { PdfTrueTypeFont } from '@syncfusion/ej2-pdf-export';
import { ColumnDirective, ColumnsDirective, Page, PageSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar, ToolbarItems, TreeGrid } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
import { adventProFont } from '../font';
function App() {
  const toolbarOptions: ToolbarItems[] = ['PdfExport'];
  const pageSettings: PageSettingsModel = { pageSize: 7 };
  let treegrid: TreeGridComponent | null;
  const toolbarClick = (args: ClickEventArgs): void => {

PdfTrueTypeFont accepts base 64 format of the Custom Font.

Pdf cell style customization in React Treegrid component

Conditional cell formatting

TreeGrid cells in the exported PDF can be customized or formatted using [pdfQueryCellInfo](#) event. In this event, we can format the treegrid cells of exported PDF document based on the column cell value.

In the below sample, we have set the background color for *Duration* column in the exported document by **args.cell** and *backgroundColor* property.

APP.JSX

```
import { getObject } from '@syncfusion/ej2-grids';
import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions = ['PdfExport'];
  const pageSettings = { pageSize: 7 };
  let treegrid;
  const toolbarClick = (args) => {
    if (treegrid) {
      treegrid.pdfExport();
    }
  };
  const pdfQueryCellInfo = (args) => {
    if (args.column.field === 'duration') {
      if (getObject('duration', args.data) === 0) {
        args.style = { backgroundColor: '#336c12' };
      }
      else if (getObject('duration', args.data) < 3) {
        args.style = { backgroundColor: '#7b2b1d' };
      }
    }
  };
  const queryCellInfo = (args) => {
    if (args.column.field === 'duration') {
      if (getObject('duration', args.data) === 0) {
        args.cell.style.background = '#336c12';
      }
      else if (getObject('duration', args.data) < 3) {
```

```

        args.cell.style.background = '#7b2b1d';
    }
}
};
return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
allowPdfExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
treegrid = g} toolbar={toolbarOptions} pdfQueryCellInfo={pdfQueryCellInfo}
queryCellInfo={queryCellInfo}>
    <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page, Toolbar, PdfExport]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { Column, getObject, PdfQueryCellInfoEventArgs,
QueryCellInfoEventArgs } from '@syncfusion/ej2-grids';
import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { ColumnDirective, ColumnsDirective, Page, PageSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar, ToolbarItems, TreeGrid } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const toolbarOptions: ToolbarItems[] = ['PdfExport'];
    const pageSettings: PageSettingsModel = { pageSize: 7 };
    let treegrid: TreeGridComponent | null;
    const toolbarClick = (args: ClickEventArgs): void => {
        if (treegrid) {
            treegrid.pdfExport();
        }
    }
    const pdfQueryCellInfo = (args: PdfQueryCellInfoEventArgs): void => {
        if((args.column as Column).field === 'duration'){
            if(getObject('duration', args.data) === 0) {
                args.style = {backgroundColor: '#336c12'};
            }
            else if(getObject('duration', args.data) < 3) {
                args.style = {backgroundColor: '#7b2b1d'};
            }
        }
    }
    const queryCellInfo = (args: QueryCellInfoEventArgs): void => {

```

```

        if ((args.column as Column).field === 'duration') {
            if (getObject('duration', args.data) === 0) {
                (args.cell as HTMLTableCellElement).style.background=
                '#336c12';
            } else if (getObject('duration', args.data) < 3) {
                (args.cell as HTMLTableCellElement).style.background=
                '#7b2b1d';
            }
        }
    }
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks'
        allowPaging={true} pageSettings={pageSettings} allowPdfExport={true}
    height='220'
        toolbarClick={toolbarClick} ref={g => treegrid = g}
        toolbar={toolbarOptions} pdfQueryCellInfo={pdfQueryCellInfo}
    queryCellInfo={queryCellInfo}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
    textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
    width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
    width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
    width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page, Toolbar, PdfExport]} />
    </TreeGridComponent>
};
export default App;

```

Theme

PDF export provides an option to include theme for exported PDF document.

To apply theme in exported PDF, define the `theme` in `PdfExportProperties`.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const toolbarOptions = ['PdfExport'];
    const pageSettings = { pageSize: 7 };
    let treegrid;
    const toolbarClick = (args) => {
        if (treegrid) {
            const exportProperties = {
                theme: {
                    header: {
                        bold: true,
                        border: { color: '#64FA50' },

```

```

        fontColor: '#64FA50', fontName: 'Calibri', fontSize:
17
        },
        record: {
            bold: true, fontColor: '#64FA50', fontName:
'Calibri', fontSize: 17
        }
    };
    treegrid.pdfExport(exportProperties);
}
};
return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
allowPdfExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
treegrid = g} toolbar={toolbarOptions}>
    <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page, Toolbar, PdfExport]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { PdfExportProperties } from '@syncfusion/ej2-grids';
import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { ColumnDirective, ColumnsDirective, Page, PageSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar, ToolbarItems, TreeGrid } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
    const toolbarOptions: ToolbarItems[] = ['PdfExport'];
    const pageSettings: PageSettingsModel = { pageSize: 7 };
    let treegrid: TreeGridComponent | null;
    const toolbarClick = (args: ClickEventArgs): void => {
        if (treegrid) {
            const exportProperties: PdfExportProperties = {
                theme: {
                    header: {
                        bold: true,
                        border: { color: '#64FA50' },
                        fontColor: '#64FA50', fontName: 'Calibri', fontSize: 17
                    },
                    record: {

```

```

        bold: true, fontColor: '#64FA50', fontName: 'Calibri',
        fontSize: 17
    }
    };
    treegrid.pdfExport(exportProperties);
}
}
return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
allowPaging={true} pageSettings={pageSettings} allowPdfExport={true}
height='220'
toolbarClick={toolbarClick} ref={g => treegrid = g}
toolbar={toolbarOptions}>
    <ColumnsDirective>
        <ColumnDirective field='taskId' headerText='Task ID' width='90'
textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page, Toolbar, PdfExport]} />
</TreeGridComponent>
};
export default App;

```

By default, material theme is applied to exported PDF document.

Adding header and footer in React Treegrid component

You can customize text, page number, line, page size and changing orientation in header and footer.

How to write a text in header or footer

You can add text either in Header or Footer of exported PDF document.

```
`ts
```

```

const exportProperties: PdfExportProperties = {
header: {
contents: [
{
position: { x: 0, y: 50 },
style: { textBrushColor: '#000000', fontSize: 13 },
type: 'Text',
value: "Task Details"
}
],

```

```

fromTop: 0,
height: 130
}
}
`

```

How to draw a line in header or footer

you can add line either in Header or Footer of the exported PDF document.

Supported line styles:

- dash
- dot
- dashdot
- dashdotdot
- solid

```

`ts
const exportProperties: PdfExportProperties = {
header: {
contents: [
{
type: 'Line',
style: { penColor: '#000080', penSize: 2, dashStyle: 'Solid' },
points: { x1: 0, y1: 4, x2: 685, y2: 4 }
}
],
fromTop: 0,
height: 130
}
}
`

```

Add page number in header or footer

you can add page number either in Header or Footer of exported PDF document.

Supported page number types:

- LowerLatin - a, b, c,
- UpperLatin - A, B, C,
- LowerRoman - i, ii, iii,
- UpperRoman - I, II, III,

- Number - 1,2,3.

```
`ts
const exportProperties: PdfExportProperties = {
  header: {
    contents: [
      {
        format: 'Page {$current} of {$total}', // optional
        pageNumberType: 'Arabic',
        position: { x: 0, y: 25 },
        style: { textBrushColor: '#ffff80', fontSize: 15, hAlign: 'Center' },
        type: 'PageNumber'
      }
    ],
    fromTop: 0,
    height: 130
  }
},
`
```

Insert an image in header or footer

Image (Base64 string) can be added in the exported document in header/footer using the PdfExportProperties.

```
`ts
let exportProperties: PdfExportProperties = {
  header: {
    fromTop: 0,
    height: 130,
    contents: [
      {
        type: 'Image',
        src: image,
        position: { x: 40, y: 10 },
        size: { height: 100, width: 250 },
      }
    ]
  }
},
`
```

```

]
}
}
,

```

The below code illustrates the pdf export customization.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, PdfExport, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
import { image } from './image';
function App() {
    const toolbarOptions = ['PdfExport'];
    const pageSettings = { pageSize: 7 };
    let treegrid;
    const toolbarClick = (args) => {
        if (treegrid) {
            const pdfExportProperties = {
                footer: {
                    contents: [
                        {
                            format: 'Page {$current} of {$total}',
                            pageNumberType: 'Arabic',
                            position: { x: 0, y: 25 },
                            style: { textBrushColor: '#ffff80', fontSize: 15
                        },
                        type: 'PageNumber'
                    ]
                },
                fromBottom: 160,
                height: 150
            },
            header: {
                contents: [
                    {
                        position: { x: 40, y: 10 },
                        size: { height: 100, width: 250 },
                        src: image,
                        type: 'Image'
                    }
                ],
                fromTop: 0,
                height: 130
            }
        };
        treegrid.pdfExport(pdfExportProperties);
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}

```

```

allowPdfExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
treegrid = g} toolbar={toolbarOptions}>
  <ColumnsDirective>
    <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
    <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
    <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
    <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
  </ColumnsDirective>
  <Inject services={[Page, Toolbar, PdfExport]} />
</TreeGridComponent>;
}
;
export default App;

```

Exporting tree grid in server in React Tree Grid component

The Tree Grid have an option to export the data to PDF in server side using tree grid server export library.

Server dependencies

The Server side export functionality is shipped in the Syncfusion.EJ2.TreeGridExport package, which is available in Essential Studio and [nuget.org](https://www.nuget.org/packages/Syncfusion.EJ2.TreeGridExport). The following list of dependencies is required for tree grid server side PDF exporting action.

- Syncfusion.EJ2
- Syncfusion.EJ2.TreeGridExport

Server configuration

The following code snippet shows server configuration using ASP.NET Core Controller Action.

To Export the tree grid in server side, You need to call the [serverPdfExport](#) method for passing the tree grid properties to server exporting action.

`ts

```
public IActionResult ServerSideExporting()
```

 $\{$

```
var order = TreeData.GetDefaultData();
```

```
ViewBag.dataSource = order;
```

```
return View();
```

}

```
public IActionResult PdfExport(string treeGridModel)
```

 $\{$

```
if (treeGridModel == null)
```

 $\{$

```
return View();
```

}

```
TreeGridPdfExport exp = new TreeGridpdfExport();
```

```
Syncfusion.EJ2.TreeGrid.TreeGrid gridProperty = ConvertTreeGridObject(treeGridModel);
```

```
return exp.ExportToPdf<TreeData>(gridProperty, TreeData.GetDefaultData());
```

}

```

private Syncfusion.EJ2.TreeGrid.TreeGrid ConvertTreeGridObject(string gridProperty)
{
    Syncfusion.EJ2.TreeGrid.TreeGrid TreeGridModel =
    (Syncfusion.EJ2.TreeGrid.TreeGrid)Newtonsoft.Json.JsonConvert.DeserializeObject(gridProperty,
    typeof(Syncfusion.EJ2.TreeGrid.TreeGrid));

    TreeGridColumnModel cols =
    (TreeGridColumnModel)Newtonsoft.Json.JsonConvert.DeserializeObject(gridProperty,
    typeof(TreeGridColumnModel));

    TreeGridModel.Columns = cols.columns;

    return TreeGridModel;
}

public class TreeGridColumnModel
{
    public List<TreeGridColumn> columns { get; set; }
}
`ts

import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';

import { ExcelExport, Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';

function App() {
    const toolbarOptions = ['PdfExport'];
    const pageSettings = { pageSize: 7 };
    let treegrid;

    const toolbarClick = (args) => {
        if (grid && args.item.id === 'Treegrid_pdfexport') {
            grid.serverExcelExport('Home/PdfExport');
        }
    };

    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1} childMapping='subtasks'
    allowPaging={true} pageSettings={pageSettings} allowExcelExport={true} height='220'
    toolbarClick={toolbarClick} ref={g => treegrid = g} toolbar={toolbarOptions}>
    <ColumnsDirective>

```

```

<ColumnDirective field='taskId' headerText='Task ID' width='90' textAlign='Right'/>
<ColumnDirective field='taskName' headerText='Task Name' width='180'/>
<ColumnDirective field='startDate' headerText='Start Date' width='90' format='yMd' textAlign='Right'
type='date'/>
<ColumnDirective field='duration' headerText='Duration' width='80' textAlign='Right'/>
</ColumnsDirective>
<Inject services={[Page, Toolbar, PdfExport]}/>
</TreeGridComponent>;
}
;
export default App;
`

```

Rotate a header text to a certain degree in the exported tree grid on the server side

The Tree Grid has support to customize the column header styles such as changing text orientation, the font color, and so on in the exported PDF file. To achieve this requirement, define the **BeginCellLayout** event of the **PdfExportProperties** with an event handler to perform the required action.

The **PdfHeaderCellRendering** will be triggered when creating a column header for the pdf document to be exported. Collect the column header details in this event and handle the custom in the **BeginCellLayout** event handler.

In the following demo, the **DrawString** method from the **Graphics** is used to rotate the header text of the column header inside the **BeginCellLayout** event handler.

A PDF exporting is not supported to rotate the column header on the client side.

```

`ts
public IActionResult PdfExport(string treeGridModel)
{
    if (treeGridModel == null)
    {
        return View();
    }
    TreeGridPdfExport exp = new TreeGridPdfExport();
    TreeGrid gridProperty = ConvertTreeGridObject(treeGridModel);
    gridProperty.PdfHeaderCellRendering = PdfHeaderQueryCellInfo;
    PdfGrid grid = new PdfGrid();
    Syncfusion.EJ2.TreeGridExport.PdfExportProperties pdfExportProperties = new
    Syncfusion.EJ2.TreeGridExport.PdfExportProperties();

```

```

pdfExportProperties.IsRepeatHeader = true;
exp.BeginCellLayout = new PdfGridBeginCellLayoutEventHandler(BeginCellEvent);
System.Collections.IEnumerable data = Syncfusion.EJ2.Base.Data.DataTableToJson(ViewBag.dataSource);
var result = exp.PdfExport<dynamic>(gridProperty, data, pdfExportProperties);
return View();
}

public void BeginCellEvent(object sender, PdfGridBeginCellLayoutEventArgs args)
{
    PdfGrid grid = (PdfGrid)sender;
    var brush = new PdfSolidBrush(new PdfColor(Color.DimGray));
    args.Graphics.Save();
    args.Graphics.TranslateTransform(args.Bounds.X + 50, args.Bounds.Height + 40); // give the value for
    bounds x and Y by the user
    args.Graphics.RotateTransform(-60); // give the rotate degree value by the user
    // Draw the text at particular bounds.
    args.Graphics.DrawString(headerValues[args.CellIndex], new PdfStandardFont(PdfFontFamily.Helvetica,
    10), brush, new PointF(0, 0));
    if (args.IsHeaderRow)
    {
        grid.Headers[0].Cells[args.CellIndex].Value = string.Empty;
    }
    args.Graphics.Restore();
}

private void PdfHeaderQueryCellInfo(object pdf)
{
    Syncfusion.EJ2.TreeGridExport.PdfHeaderCellEventArgs name =
    (Syncfusion.EJ2.TreeGridExport.PdfHeaderCellEventArgs)pdf;
    PdfGrid grid = new PdfGrid();
    headerValues.Add(name.Column.HeaderText);
    var longestString = headerValues.Where(s => s.Length == headerValues.Max(m => m.Length)).First();
    PdfFont font = new PdfStandardFont(PdfFontFamily.Helvetica, 6);
   .SizeF size = font.MeasureString(longestString);
    name.Headers[0].Height = size.Width * 2;
}

```

Excel Export

Excel export in React Treegrid component

The excel export allows exporting TreeGrid data to Excel document. You need to use the [excelExport](#) method for exporting. To enable Excel export in the treegrid, set the [allowExcelExport](#) as **true**.

To use excel export, You need to inject the [Link to the Video](#) module in treegrid.

To get start quickly with exporting functionalities, you can check on this video:

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { ExcelExport, Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const toolbarOptions = ['ExcelExport'];
    const pageSettings = { pageSize: 7 };
    let treegrid;
    const toolbarClick = (args) => {
        if (treegrid && args.item.text === 'Excel Export') {
            treegrid.excelExport();
        }
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
    allowExcelExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
    treegrid = g} toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page, Toolbar, ExcelExport]} />
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { ColumnDirective, ColumnsDirective, Page, PageSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { ExcelExport, Inject, Toolbar, ToolbarItems, TreeGrid } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
```

```
import { sampleData } from './datasource';
function App() {
  const toolbarOptions: ToolbarItems[] = ['ExcelExport'];
  const pageSettings: PageSettingsModel = { pageSize: 7 };
  let treegrid: TreeGridComponent | null;
  const toolbarClick = (args: ClickEventArgs): void => {
    if (treegrid && args.item.text === 'Excel Export') {
      treegrid.excelExport();
    }
  }
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks'
    allowPaging={true} pageSettings={pageSettings}
  allowExcelExport={true} height='220'
    toolbarClick={toolbarClick} ref={g => treegrid = g}
  toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
      <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page, Toolbar, ExcelExport]} />
  </TreeGridComponent>
};
export default App;
```

Persist collapsed state

You can persist the collapsed state in the exported document by defining `isCollapsedStatePersist` property as true in `TreeGridExcelExportProperties` parameter of [excelExport](#) method.

APP.JSX

```
{% raw %}
import * as React from 'react';
import { TreeGridComponent, ColumnsDirective, ColumnDirective, Page,
Toolbar, ExcelExport, Inject } from '@syncfusion/ej2-react-treegrid';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions = ['ExcelExport'];
  let treegridInstance;
  const toolbarClick = (args) => {
    if (args.item.text === 'Excel Export') {
      let excelExportProperties = {
        isCollapsedStatePersist: true
      };
      treegridInstance.excelExport(excelExportProperties);
    }
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' allowPaging={true} pageSettings={{ pageSize: 7 }}
  %}
```

```

allowExcelExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
treegridInstance = g} toolbar={toolbarOptions}>
  <ColumnsDirective>
    <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right'></ColumnDirective>
    <ColumnDirective field='taskName' headerText='Task Name'
width='180'></ColumnDirective>
    <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
    <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
  </ColumnsDirective>
  <Inject services={[Page, Toolbar, ExcelExport]} />
</TreeGridComponent>;
}
;
export default App;
{% endraw %}

```

APP.TSX

```

{% raw %}
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { TreeGridComponent, ColumnsDirective, ColumnDirective, Page,
Toolbar, ExcelExport, TreeGridExcelExportProperties, Inject } from
'@syncfusion/ej2-react-treegrid';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions: any = ['ExcelExport'];
  let treegridInstance: TreeGridComponent;
  const toolbarClick = (args: ClickEventArgs): void => {
    if (args.item.text === 'Excel Export') {
      let excelExportProperties: TreeGridExcelExportProperties = {
        isCollapsedStatePersist: true
      };
      treegridInstance.excelExport(excelExportProperties);
    }
  }
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} pageSettings={{ pageSize: 7 }}
allowExcelExport={true} height='220'
toolbarClick={toolbarClick} ref={g => treegridInstance = g}
toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right'></ColumnDirective>
      <ColumnDirective field='taskName' headerText='Task Name'
width='180'></ColumnDirective>
      <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page, Toolbar, ExcelExport]} />

```

```

    </TreeGridComponent>
  };
  export default App;
  {% endraw %}

```

Custom data source

The excel export provides an option to define datasource dynamically before exporting. To export data dynamically, define the `dataSource` in `ExcelExportProperties`.

APP.JSX

```

{% raw %}
import * as React from 'react';
import { TreeGridComponent, ColumnsDirective, ColumnDirective, Page,
  Toolbar, ExcelExport, Inject } from '@syncfusion/ej2-react-treegrid';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions = ['ExcelExport'];
  let treegrid;
  const toolbarClick = (args) => {
    if (args.item.text === 'Excel Export') {
      let excelExportProperties = {
        isCollapsedStatePersist: true
      };
      treegrid.excelExport(excelExportProperties);
    }
  };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true} pageSettings={{ pageSize: 7 }}
    allowExcelExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
      treegrid = g} toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right'></ColumnDirective>
      <ColumnDirective field='taskName' headerText='Task Name'
        width='180'></ColumnDirective>
      <ColumnDirective field='startDate' headerText='Start Date'
        width='90' format='yMd' textAlign='Right' type='date'></ColumnDirective>
      <ColumnDirective field='duration' headerText='Duration'
        width='80' textAlign='Right'></ColumnDirective>
    </ColumnsDirective>
    <Inject services={[Page, Toolbar, ExcelExport]}></Inject>
  </TreeGridComponent>;
}
;
export default App;
{% endraw %}

```

APP.TSX

```

{% raw %}
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ClickEventArgs } from '@syncfusion/ej2-navigations';

```

```
import { TreeGridComponent, ColumnsDirective, ColumnDirective, Page,
Toolbar, ExcelExport, TreeGridExcelExportProperties, Inject } from
'@syncfusion/ej2-react-treegrid';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions: any = ['ExcelExport'];
  let treegrid: TreeGridComponent | null;
  const toolbarClick = (args: ClickEventArgs): void => {
    if (args.item.text === 'Excel Export') {
      let excelExportProperties: TreeGridExcelExportProperties = {
        isCollapsedStatePersist: true
      };
      treegrid.excelExport(excelExportProperties);
    }
  }
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} pageSettings={{ pageSize: 7 }}
allowExcelExport={true} height='220'
  toolbarClick={toolbarClick} ref={g => treegrid = g}
  toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right'></ColumnDirective>
      <ColumnDirective field='taskName' headerText='Task Name'
width='180'></ColumnDirective>
      <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page, Toolbar, ExcelExport]}>/>
  </TreeGridComponent>
</App>
};
export default App;
{% endraw %}
```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Excel export options in React Treegrid component

To customize excel export

The excel export provides an option to customize mapping of the treegrid to excel document.

[Export hidden columns](#)

The excel export provides an option to export hidden columns of treegrid by defining `includeHiddenColumn` as `true`.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
import { ExcelExport, Inject, Toolbar } from '@syncfusion/ej2-react-
treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
```

```

const toolbarOptions = ['ExcelExport'];
const pageSettings = { pageSize: 7 };
let treegrid;
const toolbarClick = (args) => {
  if (treegrid && args.item.text === 'Excel Export') {
    const excelExportProperties = {
      includeHiddenColumn: true
    };
    treegrid.excelExport(excelExportProperties);
  }
};
return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
allowExcelExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
treegrid = g} toolbar={toolbarOptions}>
  <ColumnsDirective>
    <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' />
    <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
    <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
    <ColumnDirective field='duration' visible={false}
headerText='Duration' width='80' textAlign='Right' />
  </ColumnsDirective>
  <Inject services={[Page, Toolbar, ExcelExport]} />
</TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ExcelExportProperties } from '@syncfusion/ej2-grids';
import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { ColumnDirective, ColumnsDirective, Page, PageSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { ExcelExport, Inject, Toolbar, ToolbarItems, TreeGrid } from
'@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions: ToolbarItems[] = ['ExcelExport'];
  const pageSettings: PageSettingsModel = { pageSize: 7 };
  let treegrid: TreeGridComponent;
  const toolbarClick = (args: ClickEventArgs): void => {
    if (treegrid && args.item.text === 'Excel Export') {
      const excelExportProperties: ExcelExportProperties = {
        includeHiddenColumn: true
      };
      (treegrid as any).excelExport(excelExportProperties);
    }
  }
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'

```

```

        allowPaging={true} pageSettings={pageSettings}
        allowExcelExport={true} height='220'
        toolbarClick={toolbarClick} ref={g => treegrid = g}
        toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' visible={false}
            headerText='Duration' width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page, Toolbar, ExcelExport]} />
    </TreeGridComponent>
  };
  export default App;

```

Show or hide columns on exported excel

You can show a hidden column or hide a visible column while printing the treegrid using [toolbarClick](#) and [excelExportComplete](#) events.

In the [toolbarClick](#) event, based on **args.item.text** as **Excel Export**. We can show or hide columns by setting [column.visible](#) property to **true** or **false** respectively.

In the [excelExportComplete](#) event, We have reversed the state back to the previous state.

In the below example, we have *Duration* as a hidden column in the treegrid. While exporting, we have changed *Duration* to visible column and *StartDate* as hidden column.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { ExcelExport, Inject, Toolbar } from '@syncfusion/ej2-react-
 treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const toolbarOptions = ['ExcelExport'];
  const pageSettings = { pageSize: 7 };
  let treegrid;
  const toolbarClick = (args) => {
    if (treegrid && args.item.text === 'Excel Export') {
      const cols = treegrid.grid.columns;
      cols[2].visible = false;
      cols[3].visible = true;
      treegrid.excelExport();
    }
  };
  const excelExportComplete = () => {
    if (treegrid) {
      const cols = treegrid.grid.columns;
      cols[3].visible = false;
      cols[2].visible = true;
    }
  };

```

```

    }
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
    allowExcelExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
    treegrid = g} toolbar={toolbarOptions}>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' />
        <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
        width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' visible={false}
        headerText='Duration' width='80' textAlign='Right' />
      </ColumnsDirective>
      <Inject services={[Page, Toolbar, ExcelExport]} />
    </TreeGridComponent>;
  }
;
export default App;

```

APP.TSX

```

import { ClickEventArgs } from '@syncfusion/ej2-navigations';
import { ColumnDirective, ColumnsDirective, Page, PageSettingsModel,
TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Column, ExcelExport, Inject, Toolbar, ToolbarItems, TreeGrid } from
'@syncfusion/ej2-react-treegrid';

Excel cell style customization in React Treegrid component

Conditional cell formatting

TreeGrid cells in the exported Excel can be customized or formatted using [excelQueryCellInfo](#) event. In this event, we can format the treegrid cells of exported PDF document based on the column cell value.

In the below sample, we have set the background color for *Duration* column in the exported excel by **args.cell** and **backgroundColor** property.

APP.JSX

```
import { getValue } from '@syncfusion/ej2-base';
import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
```

```

import { ExcelExport, Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const toolbarOptions = ['ExcelExport'];
    const pageSettings = { pageSize: 7 };
    let treegrid;
    const toolbarClick = (args) => {
        if (treegrid && args.item.text === 'Excel Export') {
            treegrid.excelExport();
        }
    };
    const excelQueryCellInfo = (args) => {
        if (args.column.field === 'duration') {
            if (getValue('data.duration', args) === 0) {
                args.style = { backgroundColor: '#336c12' };
            }
            else if (getValue('data.duration', args) < 3) {
                args.style = { backgroundColor: '#7b2b1d' };
            }
        }
    };
    const queryCellInfo = (args) => {
        if (args.column.field === 'duration') {
            if (getValue('data.duration', args) === 0) {
                args.cell.style.backgroundColor = '#336c12';
            }
            else if (getValue('data.duration', args) < 3) {
                args.cell.style.backgroundColor = '#7b2b1d';
            }
        }
    };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
    allowExcelExport={true} height='220' toolbarClick={toolbarClick} ref={g =>
    treegrid = g} toolbar={toolbarOptions} queryCellInfo={queryCellInfo}

Exporting tree grid in Server in React Tree Grid Component

The Tree Grid have an option to export the data to Excel in server side using tree grid server export library.

Server dependencies

The Server side export functionality is shipped in the Syncfusion.EJ2.TreeGridExport package, which is available in Essential Studio and nuget.org. The following list of dependencies is required for tree grid server side Excel exporting action.

- Syncfusion.EJ2
- Syncfusion.EJ2.TreeGridExport

Server configuration

The following code snippet shows server configuration using ASP.NET Core Controller Action.

To Export the tree grid in server side, You need to call the [serverExcelExport](#) method for passing the tree grid properties to server exporting action.

```

`ts
public IActionResult ExcelExport(string treeGridModel)
{
    if (treeGridModel == null)

```

```

{
return View();
}

TreeGridExcelExport exp = new TreeGridExcelExport();
Syncfusion.EJ2.TreeGrid.TreeGrid gridProperty = ConvertTreeGridObject(treeGridModel);
return exp.ExportToExcel<TreeData>(gridProperty, TreeData.GetDefaultData());
}

private Syncfusion.EJ2.TreeGrid.TreeGrid ConvertTreeGridObject(string gridProperty)
{
Syncfusion.EJ2.TreeGrid.TreeGrid TreeGridModel =
(Syncfusion.EJ2.TreeGrid.TreeGrid)Newtonsoft.Json.JsonConvert.DeserializeObject(gridProperty,
typeof(Syncfusion.EJ2.TreeGrid.TreeGrid));

TreeGridColumnModel cols =
(TreeGridColumnModel)Newtonsoft.Json.JsonConvert.DeserializeObject(gridProperty,
typeof(TreeGridColumnModel));

TreeGridModel.Columns = cols.columns;
return TreeGridModel;
}

public class TreeGridColumnModel
{
public List<TreeGridColumn> columns { get; set; }
}
`ts

import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';

import { ExcelExport, Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';

function App() {
const toolbarOptions = ['ExcelExport'];
const pageSettings = { pageSize: 7 };
let treegrid;
const toolbarClick = (args) => {
if (grid && args.item.id === 'Treegrid_excelexport') {

```

```

grid.serverExcelExport('Home/ExcelExport');
}
};

return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1} childMapping='subtasks'
allowPaging={true} pageSettings={pageSettings} allowExcelExport={true} height='220'
toolbarClick={toolbarClick} ref={g => treegrid = g} toolbar={toolbarOptions}>
<ColumnsDirective>
<ColumnDirective field='taskId' headerText='Task ID' width='90' textAlign='Right'/>
<ColumnDirective field='taskName' headerText='Task Name' width='180'/>
<ColumnDirective field='startDate' headerText='Start Date' width='90' format='yMd' textAlign='Right'
type='date'/>
<ColumnDirective field='duration' headerText='Duration' width='80' textAlign='Right'/>
</ColumnsDirective>
<Inject services={[Page, Toolbar, ExcelExport]}/>
</TreeGridComponent>;
}
;
export default App;
`

```

CSV Export in server side

You can export the tree grid to CSV format by using the [serverCsvExport](#) method which will pass the tree grid properties to server.

In the below demo, we have invoked the above method inside the [toolbarClick](#) event. In server side, we have deserialized the tree grid properties and passed to the [ExportToCsv](#) method which will export the properties to CSV format.

```

`ts
public IActionResult ServerSideExporting()
{
var order = TreeData.GetDefaultData();
ViewBag.dataSource = order;
return View();
}

public IActionResult CsvExport(string treeGridModel)
{
if (treeGridModel == null)

```

```

{
return View();
}

TreeGridExcelExport exp = new TreeGridExcelExport();
Syncfusion.EJ2.TreeGrid.TreeGrid gridProperty = ConvertTreeGridObject(treeGridModel);
return exp.ExportToCsv<TreeData>(gridProperty, TreeData.GetDefaultData());
}

private Syncfusion.EJ2.TreeGrid.TreeGrid ConvertTreeGridObject(string gridProperty)
{
Syncfusion.EJ2.TreeGrid.TreeGrid TreeGridModel =
(Syncfusion.EJ2.TreeGrid.TreeGrid)Newtonsoft.Json.JsonConvert.DeserializeObject(gridProperty,
typeof(Syncfusion.EJ2.TreeGrid.TreeGrid));

TreeGridColumnModel cols =
(TreeGridColumnModel)Newtonsoft.Json.JsonConvert.DeserializeObject(gridProperty,
typeof(TreeGridColumnModel));

TreeGridModel.Columns = cols.columns;
return TreeGridModel;
}

public class TreeGridColumnModel
{
public List<TreeGridColumn> columns { get; set; }
}
`ts

import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { ExcelExport, Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
const toolbarOptions = ['CsvExport'];
const pageSettings = { pageSize: 7 };
let treegrid;
const toolbarClick = (args) => {
if (grid && args.item.id === 'Treegrid_csvexport') {

```

```

grid.serverCsvExport('Home/CsvExport');
}
};

return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1} childMapping='subtasks'
allowPaging={true} pageSettings={pageSettings} allowExcelExport={true} height='220'
toolbarClick={toolbarClick} ref={g => treegrid = g} toolbar={toolbarOptions}>
<ColumnsDirective>
<ColumnDirective field='taskId' headerText='Task ID' width='90' textAlign='Right'/>
<ColumnDirective field='taskName' headerText='Task Name' width='180'/>
<ColumnDirective field='startDate' headerText='Start Date' width='90' format='yMd' textAlign='Right'
type='date'/>
<ColumnDirective field='duration' headerText='Duration' width='80' textAlign='Right'/>
</ColumnsDirective>
<Inject services={[Page, Toolbar]}/>
</TreeGridComponent>;
}
;
export default App;
`

```

Rotate a header text to a certain degree in the exported grid on the server side

The TreeGrid has support to customize the column header styles such as changing text orientation, the font color, and so on in the exported Excel file. To achieve this requirement, use the `ExcelHeaderCellRendering` event of the tree grid.

The `ExcelHeaderCellRendering` will be triggered when creating a column header for the excel document to be exported in the server side. Customize the column header in this event.

In the following demo, using the `HeaderCellRotate` method of the `TreeGridExcelExport` class in the `ExcelHeaderCellRendering` event, you can rotate the header text of the column header in the excel exported document.

```

`ts
public IActionResult ExcelExport(string treeGridModel)
{
if (treeGridModel == null)
{
return View();
}
TreeGridExcelExport exp = new TreeGridExcelExport();

```

```

Syncfusion.EJ2.TreeGrid.TreeGrid gridProperty = ConvertTreeGridObject(treeGridModel);
gridProperty.ExcelHeaderCellRendering = ExcelHeaderQueryCellInfo;
return (ActionResult)exp.ExcelExport<TreeGridItems>(gridProperty, TreeGridItems.GetDefaultData());
}

private void ExcelHeaderQueryCellInfo(object excel)
{
    Syncfusion.EJ2.TreeGridExport.ExcelHeaderCellEventArgs name =
    (Syncfusion.EJ2.TreeGridExport.ExcelHeaderCellEventArgs)excel;
    List<string> headerValues = new List<string>();
    headerValues.Add(name.Column.HeaderText);
    var longestString = headerValues.Where(s => s.Length == headerValues.Max(m => m.Length)).First();
    TreeGridExcelExport exp = new TreeGridExcelExport();
    var size = exp.ExcelTextSize(name.Style.Font.FontName, (float)name.Style.Font.Size, longestString);
    name.Cell.RowHeight = size.Width;
    exp.HeaderCellRotate(name, 45); // Give the rotate degree value by the user.
    name.Style.Borders.LineStyle = Syncfusion.XlsIO.ExcelLineStyle.None;
}

```

Global local in React Treegrid component

Localization

The [Localization](#) library allows you to localize default text content of the TreeGrid. The treegrid component has static text on some features (like toolbar area text, filter menu text, pager information text, etc.) that can be changed to other cultures (Arabic, Deutsch, French, etc.) by defining the

[locale](#) value and translation object.

The following list of properties and its values are used in the treegrid.

Locale keywords | Text

EmptyRecord | No records to display

True | true

False | false

ExpandAll | Expand All

CollapseAll | Collapse All

RowIndent | Indent

RowOutdent | Outdent

InvalidFilterMessage | Invalid Filter Data

FilterbarTitle | \s filter bar cell

Add | Add

Edit| Edit

Cancel| Cancel

Update| Update

Delete | Delete

Print | Print

Pdfexport | PDF Export

Excelexport | Excel Export

Wordexport | Word Export

Csvexport | CSV Export

Search | Search

Save | Save

EditOperationAlert | No records selected for edit operation

DeleteOperationAlert | No records selected for delete operation

SaveButton | Save

OKButton | OK

CancelButton | Cancel

EditFormTitle | Details of

AddFormTitle | Add New Record

ConfirmDelete | Are you sure you want to Delete Record?

SearchColumns | search columns

Matches | No Matches Found

FilterButton | Filter

ClearButton | Clear

StartsWith | Starts With

EndsWith | Ends With

Contains | Contains

Equal | Equal

NotEqual | Not Equal

LessThan | Less Than

LessThanOrEqual | Less Than Or Equal

GreaterThan | Greater Than

GreaterThanOrEqualTo | Greater Than Or Equal

ChooseDate | Choose a Date

EnterValue | Enter the value

autoFitAll | Auto Fit all columns

autoFit | Auto Fit this column

Export | Export

FirstPage | First Page

LastPage | Last Page

PreviousPage | Previous Page

NextPage | Next Page

SortAscending | Sort Ascending

SortDescending | Sort Descending

OR | OR

ShowRowsWhere | Show rows where:

currentPageInfo | {0} of {1} pages

totalItemsInfo | ({0} items)

firstPageTooltip | Go to first page

lastPageTooltip | Go to last page

nextPageTooltip | Go to next page

previousPageTooltip | Go to previous page

nextPagerTooltip | Go to next pager

previousPagerTooltip | Go to previous pager

pagerDropDown | Items per page

pagerAllDropDown | Items

All | All

Loading translations

To load translation object in an application, use [load](#) function of the [L10n](#) class.

The following example demonstrates the TreeGrid in *Deutsch* culture.

APP.JSX

```
import { L10n } from '@syncfusion/ej2-base';
import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Filter, Inject, Toolbar } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
L10n.load({
  'de-DE': {
    'pager': {
      'currentPageInfo': '{0} von {1} Seiten',
      'firstPageTooltip': 'Zur ersten Seite',
      'lastPageTooltip': 'Zur letzten Seite',
      'nextPageTooltip': 'Zur nächsten Seite',
      'nextPagerTooltip': 'Zum nächsten Pager',
      'previousPageTooltip': 'Zurück zur letzten Seit',
      'previousPagerTooltip': 'Zum vorherigen Pager',
      'totalItemsInfo': '({0} Beiträge)'
    },
    'treegrid': {
      'ClearButton': 'klar',
      'Collapse All': 'Alles einklappen',
      'Contains': 'Enthält',
      'EmptyRecord': 'Keine Aufzeichnungen angezeigt',
      'EndsWith': 'Endet mit',
      'EnterValue': 'Geben Sie den Wert ein',
      'Equal': 'Gleich',
      'Excelexport': 'Excel-Export',
      'Expand All': 'Alle erweitern',
    }
  }
});
```

```

        "FilterButton": "Filter",
        "FilterMenu": "Filter",
        "GreaterThan": "Größer als",
        "GreaterThanOrEqual": "Größer als oder gleich",
        "LessThan": "Weniger als",
        "LessThanOrEqual": "Weniger als oder gleich",
        "NotEqual": "Nicht gleich",
        "Pdfexport": "PDF-Export",
        "Print": "Drucken",
        "StartsWith": "Beginnt mit",
        "Wordexport": "Word-Export"
    }
}
});
function App() {
    const FilterOptions = {
        type: 'Menu'
    };
    const pageSettings = { pageSize: 7 };
    const toolbarOptions = ['Print'];
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}

```

In the above sample, Price column is formatted by **NumberFormatOptions**.*

* By default, [locale](#) value is *en-US. If you want to change the en-US* culture to a different culture, you have to change the [locale](#) accordingly.

Right to left (RTL)

RTL provides an option to switch the text direction and layout of the TreeGrid component from right to left. It improves the user experiences and accessibility for users who use right-to-left languages (Arabic, Farsi, Urdu, etc.). To enable RTL Grid, set the [enableRtl](#) to **true**.

Accessibility in React Treegrid component

The Tree Grid component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Tree Grid component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

| [Section 508](#) Support | |

| Screen Reader Support | |

| Right-To-Left Support | |

| Color Contrast | |

| Mobile Device Support | |

| Keyboard Navigation Support | |

| [Accessibility Checker](#) Validation | |

| [Axe-core](#) Accessibility Validation | |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

}

</style>

<div> - All features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

WAI-ARIA attributes

The Tree Grid component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Tree Grid component:

| Attributes | Purpose |

| --- | --- |

| **role=treegrid** | Used to convey a significant and contextual message to the user. |

| **aria-selected** | Accurately reflect the selection state, whether it's single-select or multi-select. |

| **aria-expanded** | It can be used to show whether a node is expanded or collapsed, making it easier for screen reader users to navigate and understand the hierarchy. |

| **aria-sort** | Indicate the current sorting order of a table column for users with disabilities, facilitating accessible data presentation and interaction. |

| **aria-busy** | Loading state to improve accessibility for users, particularly those relying on screen readers. |

| **aria-invalid** | To indicate whether the user's input in a form field is valid or invalid, aiding users, including those with disabilities, in understanding and correcting their input. |

- | `aria-grabbed` | Provides accessibility information for users interacting with draggable elements |
- | `aria-owns` | Establishing relationships between an element and the elements it owns or controls. |
- | `aria-label` | Provides an accessible name for the close icon. |

Keyboard interaction

The Tree Grid component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the Tree Grid component.

Interaction Keys | Description

- PageDown** | Goes to the next page.
- PageUp** | Goes to the previous page.
- Ctrl + Alt + PageDown** | Goes to the last page.
- Ctrl + Alt + PageUp** | Goes to the first page.
- Alt + PageDown** | Goes to the next page.
- Alt + PageUp** | Goes to the previous page.
- Home** | Goes to the first cell.
- End** | Goes to the last cell.
- Ctrl + Home** | Goes to the first row.
- Ctrl + End** | Goes to the last row.
- DownArrow** | Moves the cell focus downward.
- UpArrow** | Moves the cell focus upward.
- LeftArrow** | Moves the cell focus left side.
- RightArrow** | Moves the cell focus right side.
- Shift + DownArrow** | Extends the row/cell selection downwards.
- Shift + UpArrow** | Extends the row/cell selection upwards.
- Shift + LeftArrow** | Extends the cell selection to the left side.
- Shift + RightArrow** | Extends the cell selection to the right side.
- Enter** | Moves the row/cell selection downward. If current cell is in edit state, then completes the editing. If the current cell is a header then performs sorting.
- Shift + Enter** | Moves the row/cell selection upward. If the current cell is a header then clears sorting for the selected column.
- Ctrl + Enter** | If the current cell is a header then performs multi-sorting.
- Tab** | Moves the cell selection right side.
- Shift + Tab** | Moves the cell selection left side.

Esc | Deselects all the rows/cells.

Ctrl + A | Selects all the rows/cells.

UpArrow | Moves up a row/cell selection.

DownArrow | Moves down a row/cell selection.

RightArrow | Moves to the right cell selection.

LeftArrow | Moves to the left cell selection.

Ctrl + Shift + DownArrow | Expands the selected group.

Ctrl + DownArrow | Expands all the visible groups.

Ctrl + Shift + UpArrow | Collapses the selected group.

Ctrl + UpArrow | Collapses all the visible groups.

Ctrl + P | Prints the TreeGrid.

Ensuring accessibility

The Tree Grid component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Tree Grid component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Tree Grid component with accessibility tools.

Clipboard in React Treegrid component

The clipboard provides an option to copy selected rows or cells data into the clipboard.

The following list of keyboard shortcuts is supported in the Tree Grid to copy selected rows or cells data into the clipboard.

Interaction keys | Description

Ctrl + C | Copy selected rows or cells data into clipboard.

Ctrl + Shift + H | Copy selected rows or cells data with header into clipboard.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from '../datasource';
function App() {
  const settings = { type: 'Multiple', mode: 'Row' };
}
```

```

    const pageSettings = { pageSize: 10 };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
    childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
    selectionSettings={settings}>
      <ColumnsDirective>
        <ColumnDirective field='taskID' headerText='Task ID' width='90'
        textAlign='Right' isPrimaryKey={true}/>
        <ColumnDirective field='taskName' headerText='Task Name'
        width='180' />
        <ColumnDirective field='startDate' headerText='Start Date'
        width='90' format='yMd' textAlign='Right' type='date' />
        <ColumnDirective field='duration' headerText='Duration'
        width='80' textAlign='Right' />
      </ColumnsDirective>
      <Inject services={[Page]} />
    </TreeGridComponent>;
  }
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Page, SelectionSettingsModel, PageSettingsModel } from
 '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const settings: SelectionSettingsModel = { type: 'Multiple', mode: 'Row'
  };
  const pageSettings: PageSettingsModel = { pageSize: 10 };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
  childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
  selectionSettings={settings}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' isPrimaryKey={true}/>
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
      width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
      width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page]} />
  </TreeGridComponent>
};
export default App;

```

Copy to clipboard by external buttons

To copy selected rows or cells data into the clipboard with help of external buttons, you need to invoke the [copy](#) method.

APP.JSX

```

import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { ColumnDirective, ColumnsDirective, Inject, Page, TreeGridComponent
} from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    let treegrid;
    const settings = { type: 'Multiple', mode: 'Row' };
    const copy = () => {
        if (treegrid) {
            treegrid.copy();
        }
    };
    const copyHeader = () => {
        if (treegrid) {
            treegrid.copy(true);
        }
    };
    return (<div>
        <ButtonComponent onClick={copy}>Copy</ButtonComponent>
        <ButtonComponent onClick={copyHeader}>CopyHeader</ButtonComponent>
        <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' ref={g => treegrid = g} allowPaging={true}
selectionSettings={settings}>
            <ColumnsDirective>
                <ColumnDirective field='taskID' headerText='Task ID'
width='90' textAlign='Right' isPrimaryKey={true}/>
                <ColumnDirective field='taskName' headerText='Task Name'
width='180'/>
                <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date'/>
                <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right'/>
            </ColumnsDirective>
            <Inject services={[Page]}/>
        </TreeGridComponent>
    </div>);
}
;
export default App;

```

APP.TSX

```

import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { ColumnDirective, ColumnsDirective, TreeGrid, Inject, Page,
TreeGridComponent, SelectionSettingsModel } from '@syncfusion/ej2-react-
treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    let treegrid: TreeGridComponent | null;
    const settings: SelectionSettingsModel = { type: 'Multiple', mode: 'Row'
};
    const copy = () =>{
        if (treegrid) {

```

```

        treegrid.copy();
    }
}

const copyHeader = () => {
    if (treegrid) {
        treegrid.copy(true);
    }
}

return (<div>
    <ButtonComponent onClick= { copy }>Copy</ButtonComponent>
    <ButtonComponent onClick= { copyHeader
}>CopyHeader</ButtonComponent>
    <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks'
    ref={g => treegrid = g} allowPaging={true}
selectionSettings={settings}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID'
width='90' textAlign='Right' isPrimaryKey={true}/>
            <ColumnDirective field='taskName' headerText='Task Name'
width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
        </ColumnsDirective>
        <Inject services={[Page]} />
    </TreeGridComponent>
</div>)
};
export default App;

```

Copy Hierarchy Modes

Tree Grid provides support for a set of copy modes with [copyHierarchyMode](#) property.

The below are the type of copy modes available in TreeGrid.

- **Parent** : This is the default copy hierarchy mode in Tree Grid. Clipboard value have the selected records with its parent records, if the selected records not have any parent record then the selected record will be in clipboard.
- **Child** : Clipboard value will have the selected records with its child record. If the selected records do not have any child record, then the selected records will be in clipboard.
- **Both** : Clipboard value will have the selected records with its both parent and child record. If the selected records do not have any parent and child record then the selected records alone in clipboard.
- **None** : Only the Selected records will be in clipboard.

APP.JSX

```

import { DropDownListComponent } from "@syncfusion/ej2-react-dropdowns";
import { ColumnDirective, ColumnsDirective } from '@syncfusion/ej2-react-
treegrid';

```

```

import { TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    let treegrid;
    const data = ['Parent', 'Child', 'Both', 'None'];
    const settings = { type: 'Multiple', mode: 'Row' };
    const onChange = (sel) => {
        const mode = sel.value.toString();
        if (treegrid) {
            treegrid.copyHierarchyMode = mode;
        }
    };
    return (
        <DropDownListComponent popupHeight="250px" dataSource={data}
        value="Parent" change={onChange} width="150px"/>
        <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
        childMapping='subtasks' height='225' allowFiltering={true}
        selectionSettings={settings} ref={g => treegrid = g}>
            <ColumnsDirective>
                <ColumnDirective field='taskID' headerText='Task ID' width='75'
                textAlign='Right'/>
                <ColumnDirective field='taskName' headerText='Task Name'
                width='180'/>
                <ColumnDirective field='startDate' headerText='Start Date'
                width='90' format='yMd' textAlign='Right' type='date'/>
                <ColumnDirective field='duration' headerText='Duration'
                width='80' textAlign='Right'/>
            </ColumnsDirective>
        </TreeGridComponent>
    </div>);
}
;
export default App;

```

APP.TSX

```

import { ChangeEventArgs, DropDownListComponent } from "@syncfusion/ej2-react-dropdowns";
import { ColumnDirective, ColumnsDirective } from '@syncfusion/ej2-react-treegrid';
import { Inject, TreeGrid, TreeGridComponent, SelectionSettingsModel } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    let treegrid: TreeGridComponent | null;
    const data: string[] = ['Parent', 'Child', 'Both', 'None'];
    const settings: SelectionSettingsModel = { type: 'Multiple', mode: 'Row' };
};
const onChange = (sel: ChangeEventArgs): void => {
    const mode: any = sel.value.toString();
    if (treegrid) {
        treegrid.copyHierarchyMode = mode;
    }
}

```

```

    return (
      <div>
        <DropDownListComponent popupHeight="250px" dataSource={data}
        value="Parent" change={onChange} width="150px" />
        <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
        childMapping='subtasks' height='225' allowFiltering={true}
        selectionSettings={settings}
        ref={g => treegrid = g}>
          <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='75'
            textAlign='Right' />
            <ColumnDirective field='taskName' headerText='Task Name'
            width='180' />
            <ColumnDirective field='startDate' headerText='Start Date'
            width='90' format='yMd' textAlign='Right' type='date' />
            <ColumnDirective field='duration' headerText='Duration'
            width='80' textAlign='Right' />
          </ColumnsDirective>
        </TreeGridComponent>
      </div>
    );
  };
  export default App;

```

AutoFill

AutoFill Feature allows you to copy the data of selected cells and paste it to another cells by just dragging the autofill icon of the selected cells up to required cells. This feature is enabled by defining `enableAutoFill` property as true.

APP.JSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent, Edit,
Toolbar } from '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const editOptions = { allowEditing: true, allowAdding: true,
allowDeleting: true, mode: 'Batch' };
  const settings = { cellSelectionMode: 'Box', type: 'Multiple', mode:
'Cell' };
  const toolbarOptions = ['Add', 'Update', 'Cancel'];
  const pageSettings = { pageSize: 10 };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} enableAutoFill={true}
pageSettings={pageSettings} selectionSettings={settings}
editSettings={editOptions} toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
      textAlign='Right' isPrimaryKey={true} />
      <ColumnDirective field='taskName' headerText='Task Name'
      width='180' />
      <ColumnDirective field='startDate' headerText='Start Date'
      width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
      width='80' textAlign='Right' />
    </ColumnsDirective>

```

```

    <Inject services={[Page, Edit, Toolbar]}/>
  </TreeGridComponent>;
}
;
export default App;

```

APP.TSX

```

import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent, Edit,
Toolbar } from '@syncfusion/ej2-react-treegrid';
import { Page, SelectionSettingsModel, PageSettingsModel, EditSettingsModel,
ToolbarItems } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
  const editOptions: EditSettingsModel = { allowEditing: true,
allowAdding: true, allowDeleting: true, mode: 'Batch' };
  const settings: SelectionSettingsModel = { cellSelectionMode: 'Box',
type: 'Multiple', mode: 'Cell' };
  const toolbarOptions: ToolbarItems[] = ['Add', 'Update', 'Cancel'];
  const pageSettings: PageSettingsModel = { pageSize: 10 };
  return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} enableAutoFill={true}
pageSettings={pageSettings} selectionSettings={settings} editSettings =
{editOptions} toolbar={toolbarOptions}>
    <ColumnsDirective>
      <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true}/>
      <ColumnDirective field='taskName' headerText='Task Name'
width='180'/>
      <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date' />
      <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right' />
    </ColumnsDirective>
    <Inject services={[Page, Edit, Toolbar]}/>
  </TreeGridComponent>
};
export default App;

```

* If `enableAutoFill` is set to true, then the autofill icon will be displayed on cell selection to copy cells.

* It requires the selection mode to be `Cell`, `cellSelectionMode` to be `Box` and also Batch Editing should be enabled.

Limitations of AutoFill

- Since the string values are not parsed to number and date type, so when the selected string type cells are dragged to number type cells then it will display as **NaN**. For date type cells, when the selected string type cells are dragged to date type cells then it will display as an **empty cell**.
- Linear series and the sequential data generations are not supported in this autofill feature.

Paste

You can able to copy the content of a cell or a group of cells by selecting the cells and pressing Ctrl + C shortcut key and paste it to another set of cells by selecting the cells and pressing Ctrl + V shortcut key.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent, Edit,
Toolbar } from '@syncfusion/ej2-react-treegrid';
import { Page } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions = { allowEditing: true, allowAdding: true,
allowDeleting: true, mode: 'Batch' };
    const settings = { cellSelectionMode: 'Box', type: 'Multiple', mode:
'Cell' };
    const toolbarOptions = ['Add', 'Update', 'Cancel'];
    const pageSettings = { pageSize: 10 };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
selectionSettings={settings} editSettings={editOptions}
toolbar={toolbarOptions}>
        <ColumnsDirective>
            <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true}/>
            <ColumnDirective field='taskName' headerText='Task Name'
width='180'/>
            <ColumnDirective field='startDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' type='date'/>
            <ColumnDirective field='duration' headerText='Duration'
width='80' textAlign='Right'/>
        </ColumnsDirective>
        <Inject services={[Page, Edit, Toolbar]}/>
    </TreeGridComponent>;
}
;
export default App;
```

APP.TSX

```
import { ColumnDirective, ColumnsDirective, Inject, TreeGridComponent, Edit,
Toolbar } from '@syncfusion/ej2-react-treegrid';
import { Page, SelectionSettingsModel, PageSettingsModel, EditSettingsModel,
ToolbarItems } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    const editOptions: EditSettingsModel = { allowEditing: true,
allowAdding: true, allowDeleting: true, mode: 'Batch' };
    const settings: SelectionSettingsModel = { cellSelectionMode: 'Box',
type: 'Multiple', mode: 'Cell' };
    const toolbarOptions: ToolbarItems[] = ['Add', 'Update', 'Cancel'];
    const pageSettings: PageSettingsModel = { pageSize: 10 };
    return <TreeGridComponent dataSource={sampleData} treeColumnIndex={1}
childMapping='subtasks' allowPaging={true} pageSettings={pageSettings}
```

```

selectionSettings={settings} editSettings = {editOptions}
toolbar={toolbarOptions}>
  <ColumnsDirective>
    <ColumnDirective field='taskID' headerText='Task ID' width='90'
textAlign='Right' isPrimaryKey={true}/>
    <ColumnDirective field='taskName' headerText='Task Name '
width='180' />
    <ColumnDirective field='startDate' headerText='Start Date '
width='90' format='yMd' textAlign='Right' type='date' />
    <ColumnDirective field='duration' headerText='Duration '
width='80' textAlign='Right' />
  </ColumnsDirective>
  <Inject services={[Page, Edit, Toolbar]}/>
</TreeGridComponent>
};
export default App;

```

To perform paste functionality, it requires the selection **mode** to be **Cell**, **cellSelectionMode** to be **Box** and also Batch Editing should be enabled.

Limitations of Paste Functionality

- Since the string values are not parsed to number and date type, so when the copied string type cells are pasted to number type cells then it will display as **NaN**. For date type cells, when the copied string format cells are pasted to date type cells then it will display as an **empty cell**.

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Context menu in React Treegrid component

The TreeGrid has options to show the context menu when right clicked on it. To enable this feature, you need to define either default or custom item in the [contextMenuItems](#).

To use the context menu, inject the **ContextMenu** module in the treegrid.

The default items are in the following table.

Items | Description

AutoFit | Auto fit the current column.

AutoFitAll | Auto fit all columns.

Edit | Edit the current record.

Delete | Delete the current record.

Save | Save the edited record.

Cancel | Cancel the edited state.

PdfExport | Export the treegrid data as Pdf document.

ExcelExport | Export the treegrid data as Excel document.

CsvExport | Export the treegrid data as CSV document.

SortAscending | Sort the current column in ascending order.

SortDescending | Sort the current column in descending order.

FirstPage | Go to the first page.

PrevPage | Go to the previous page.

LastPage | Go to the last page.

NextPage | Go to the next page.

AddRow | Add new row to the treegrid.

Indent | Indents the record to one level of hierarchy.

Outdent | Outdents the record to one level of hierarchy.

APP.JSX

```
import { ColumnDirective, ColumnsDirective, Page, Resize, TreeGridComponent
} from '@syncfusion/ej2-react-treegrid';

Custom context menu items

The custom context menu items can be added by defining the [contextMenuItems](#) as a collection of [contextMenuItemModel](#). Actions for this customized items can be defined in the [contextMenuClick](#) event.

In the below sample, we have shown context menu item for parent rows to expand or collapse child rows.

APP.JSX

```

import { getValue, isNullOrUndefined } from '@syncfusion/ej2-base';
import { ColumnDirective, ColumnsDirective, Page, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { ContextMenu, Inject } from '@syncfusion/ej2-react-treegrid';
import * as React from 'react';
import { sampleData } from './datasource';
function App() {
    let treegrid;
    const pageSettings = { pageSize: 7 };
    const contextMenuItems = [
        { text: 'Collapse the Row', target: '.e-content', id: 'collapserow'
    },
        { text: 'Expand the Row', target: '.e-content', id: 'expandrow' }
    ];
    const contextMenuClick = (args) => {
        if (treegrid) {
            treegrid.getColumnByField('taskID');
            if (args.item.id === 'collapserow') {

```

You can hide or show an item in context menu for specific area inside of treegrid by defining the [target](#) property.

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Treegrid styling in React Treegrid component

To modify the TreeGrid appearance, you need to override the default CSS of treegrid. Please find the list of CSS classes and its corresponding section in treegrid. Also, you have an option to create your own custom theme for all the React controls using our [Theme Studio](#).

Section | CSS class | Purpose of CSS class

Root | e-treegrid | This class is added in this root element (div) of the treegrid control.

Header | e-gridheader | This class is added in the root element of header element. In this class, You can override thin line between header and content of the treegrid.

| e-table | This class is added at 'table' of the treegrid header. This CSS class makes table width as 100 %.

| e-columnheader | This class is added at 'tr' of the treegrid header.

| e-headercell | This class is added in 'th' element of treegrid header. You can override background color of header and border color.

| e-headercelldiv | This class is added in div which present 'th' element in the header. we recommend you to use the e-headercelldiv to override skeleton of header.

Body | e-gridcontent | This class is added at root of body content. This is to override background color of the body.

| e-table | This class is added to table of content. This CSS class makes table width as 100 %.

| e-altrow | This class is added to alternate rows of treegrid. This is to override alternate row color of the treegrid.

| e-rowcell | This class is added to all cells in the treegrid. This is to override cells appearance and styling.

| e-groupcaption | This class is added to the 'td' of group caption which is to change the background color of caption cell.

| e-selectionbackground | This class is added to rowcell's of the treegrid. This is to override selection.

| e-hover | This class is added to row of treegrid, while hovering the treegrid rows.

Pager | e-pager | This class is added to root element of the pager. This is to change appearance of the background color and color of font.

| e-pagercontainer | This class is added to numeric items of the pager.

| e-parentmsgbar | This class is added to pager info of the pager.

Summary | e-gridfooter | This class is added to root of the summary div.

| |e-summaryrow| This class is added to rows of treegrid summary.

| |e-summarycell| This class is added to cells of summary row. This to override background color of summary.

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

How To

Refresh the data source in React Treegrid component

You can add/delete the datasource records through an external button. To reflect the datasource changes in treegrid, you need to assign the modified data to dataSource property.

Please follow the below steps to refresh the treegrid after datasource change.

Step 1:

Add/delete the datasource record by using the following code.

```
`ts
const dataSource: object = extendArray(treegridObj.dataSource as object[]);
// Added New Record.
(dataSource as object[]).unshift({ TaskID: 99, TaskName: "New Data", StartDate: new
Date('02/03/2017'), Duration: 10 });
// Delete record.
(dataSource as object[]).splice(selectedRow, 1);
`
```

Step 2:

Refresh the treegrid after the datasource change by assign the modified data to dataSource property.

```
`ts
treegridObj.dataSource = dataSource; // Refresh the TreeGrid.
`
```

APP.JSX

```
import * as React from 'react';
import { projectData } from './datasource';
import { ColumnsDirective, ColumnDirective, TreeGridComponent, extendArray }
from '@syncfusion/ej2-react-treegrid';
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
/* tslint:disable */
function App() {
  let treegridObj;
  const treegridData = projectData;
  const add = () => {
    const dataSource = extendArray(treegridObj.dataSource);
    dataSource.unshift({ TaskID: 99, TaskName: "New Data", StartDate:
new Date('02/03/2017'), Duration: 10 });
    treegridObj.dataSource = dataSource;
  };
}
```

```

const deleteAction = () => {
    const selectedRow = treegridObj.getSelectedRowIndex() [0];
    const dataSource = extendArray(treegridObj.dataSource);
    if (treegridObj.getSelectedRecords().length > 0) {
        dataSource.splice(selectedRow, 1); // Delete record.
    }
    else {
        alert("No records selected for delete operation");
    }
    treegridObj.dataSource = dataSource; // Refresh the TreeGrid.
};
return (<div>
    <ButtonComponent cssClass='e-flat' isToggle
onClick={add}>Add</ButtonComponent>
    <ButtonComponent cssClass='e-flat' isToggle onClick={deleteAction}
