

USER GUIDE

Essential Studio for EJ2 React

Version - v25.1.35 | Release Date - March 15, 2024

Calendar	28
Getting started	28
Dependencies.....	28
Installation and configuration.....	28
Adding Syncfusion packages	28
Adding Style sheet to the Application.....	29
Adding Calendar component to the Application	29
Run the application	30
Setting the value, min and max dates.....	31
See Also	32
Date range in React Calendar component.....	32
Globalization in React Calendar component	34
Right-To-Left	551
Customization in React Calendar component	1130
Disable Weekends.....	1131
Day Cell Format.....	1132
Highlight Weekends	1136
See Also	1138
Multi select in React Calendar component.....	1138
Calendar views in React Calendar component	1139
View Restriction	1140
Accessibility in React Calendar component.....	1143
WAI-ARIA attributes.....	1144
Keyboard Interaction	1144
Ensuring accessibility	1147
See also	1147
Islamic calendar in React Calendar component.....	1147
Style appearance in React Calendar component.....	1151
Customizing the background color for the Calendar	1151
Customizing the Calendar date elements on hovering.....	1152
Customizing the border of date cell grid	1152
Customizing the Calendar title.....	1152
Customizing the previous and next icon.....	1152
Customizing the footer button	1153
Customizing the selected date cell grid	1153

Customizing the content header in Calendar	1153
How To	1153
Set clear button in calendar in React Calendar component	1153
Show dates of other months in React Calendar component.....	1155
Select a sequence of dates in calendar in React Calendar component.....	1156
Skip a month in calendar in React Calendar component.....	1158
Render the calendar with week numbers in React Calendar component.....	1160
Change the first day of week in React Calendar component.....	1160
Customize the calendar day header in React Calendar component.....	1161
Card.....	1163
Getting Started.....	1163
Dependencies.....	1163
Setup for Local Development.....	1163
Adding Syncfusion packages	1164
Adding a simple Card	1164
Adding a header to the card	1164
See Also	1168
Header content in React Card component	1168
Header.....	1168
Content	1172
Card image in React Card component	1176
Images	1176
Divider	1179
See Also	1183
Action buttons in React Card component.....	1183
Vertical	1183
See Also	1188
Horizontal in React Card component.....	1188
Stacked cards	1188
Style in React Card component.....	1192
Customizing the card	1192
Customizing the Header element	1192
Customizing the card content.....	1192
Divider used to separate the elements inside the card.....	1193
Including image within card element	1193

Including a title or caption for the image	1193
To include heading image within the header	1193
Customizing the Header main title	1194
Customizing the Header subtitle.....	1194
Including action buttons or anchor tags	1194
To align card elements horizontally	1194
To align elements vertically within the horizontal layout.....	1195
How To	1195
Customize the card image title position in React Card component	1195
Integrate other component inside the card in React Card component.....	1200
Carousel	1202
Getting Started.....	1202
Dependencies.....	1202
Setup your development environment	1203
Adding Syncfusion packages	1203
Adding Style sheet to the Application.....	1204
Add Carousel to the project	1204
Run the application	1205
Populating items in React Carousel component.....	1205
Populating items using carousel item	1205
Populating Items using data source	1207
Selection.....	1208
Partial visible slides	1212
See Also	1215
Navigators and indicators in React Carousel component.....	1215
Navigators	1216
Indicators	1221
Play button.....	1235
Animations and transitions in React Carousel component	1239
Animations	1239
Intervals between slides	1242
Auto play slides	1244
Pause on hover.....	1245
Looping slides.....	1247
Slide changing events.....	1249

Disable touch swiping	1251
Swipe Modes.....	1252
Accessibility in React Carousel component	1254
ARIA attributes.....	1255
Keyboard interaction	1256
Ensuring accessibility	1256
See also	1256
Styles and appearance in React Carousel component.....	1256
CSS Structure in React Carousel Control.....	1257
Customizing the indicators	1257
Customizing the navigators.....	1259
Customizing partial slides size	1261
Chart.....	1261
Getting Started.....	1261
Getting Started.....	1261
Creating a Next.js Application Using Syncfusion React Components	1273
Getting Started with the React Chart Component in the Preact Framework.....	1275
Working with data in React Chart component	1279
Local Data.....	1279
Lazy loading.....	1280
Remote Data	1284
Empty points	1286
Chart dimensions in React Chart component	1288
Size for Container.....	1288
Size for Chart.....	1290
Category axis in React Chart component.....	1293
Labels Placement	1294
Range	1295
Indexed category axis.....	1296
Numeric axis in React Chart component	1297
Range	1299
Range Padding.....	1300
Label Format	1306
GroupingSeparator	1308
Custom Label Format.....	1309

Date time axis in React Chart component	1310
DateTime Axis	1310
DateTimeCategory Axis	1312
Label Format	1319
Logarithmic axis in React Chart component	1321
Range	1322
Logarithmic Base	1324
Logarithmic Interval	1325
Axis labels in React Chart component	1326
Smart Axis Labels	1326
Axis Labels Positioning	1330
Multilevel Labels	1331
Sorting	1339
Edge Label Placement	1340
Labels Customization	1341
Customizing Specific Point	1342
Trim using maximum label width	1344
Line break support	1345
Axis customization in React Chart component	1347
Axis Crossing	1347
Title	1348
Title Rotation	1349
Tick Lines Customization	1350
Grid Lines Customization	1352
Multiple Axis	1354
Inversed Axis	1356
Opposed Position	1357
Strip line in React Chart component	1358
Horizontal Strip lines	1358
Vertical Striplines	1360
Customize the strip line	1361
Customize the stripline text	1362
Dash Array	1364
Recurrence Stripline	1365
Size Type	1366

Segment Stripline.....	1368
See Also	1369
Multiple panes in React Chart component	1369
Rows.....	1370
Columns	1374
Chart Types	1378
Line Chart in React Chart component.....	1378
Step line in React Chart component	1382
Stacked Line in React Chart component	1384
100% Stacked Line in React Chart component	1387
Spline in React Chart component	1391
Area series in React Chart component	1393
Range Area in React Chart component.....	1399
Range step area Chart in React Chart component	1401
Spline Range Area in React Chart component	1404
Stacked Area in React Chart component	1408
100% Stacked Area in React Chart component	1412
Stacked step area Chart in React Chart component.....	1415
Step area in React Chart component.....	1418
Step Area in React Chart component.....	1420
Column Chart in React Chart component	1422
Range Column Chart in React Chart component	1433
Stacked Column Chart in React Chart component	1437
100% Stacked Column Chart in React Chart component.....	1442
Bar Charts in React Chart component	1447
Stacked Bar Charts in React Chart component.....	1458
100% Stacked Bar Charts in React Chart component	1464
Bubble in React Chart component.....	1468
Scatter in React Chart component.....	1472
Polar Charts in React Chart component.....	1476
Radar Charts in React Chart component	1487
Hilo Charts in React Chart component.....	1491
High Low Open Close in React Chart component	1494
Candle in React Chart component	1497
Box and Whisker in React Chart component	1501

Waterfall in React Chart component	1505
Histogram in React Chart component	1509
Error Bar in React Chart component.....	1512
Vertical Chart in React Chart component	1521
Pareto in React Chart component	1523
Chart series in React Chart component	1526
Multiple Series	1526
Combination Series	1528
Technical indicators in React Chart component	1530
Accumulation Distribution	1530
Average True Range (ATR)	1533
Bollinger Band.....	1535
Exponential Moving Average (EMA)	1539
Momentum	1541
Moving Average Convergence Divergence (MACD)	1545
Relative Strength Index (RSI).....	1550
Simple Moving Average (SMA)	1552
Stochastic	1554
Triangular Moving Average (TMA).....	1559
Trend lines in React Chart component	1565
Linear.....	1565
Exponential	1568
Logarithmic	1570
Polynomial	1572
Power	1574
Moving Average	1576
Forecasting.....	1581
Show or hide a trendline.....	1585
Data markers in React Chart component	1587
Marker.....	1587
Shape.....	1589
Images.....	1590
Customization	1592
Customizing specific point	1593
Fill marker with series color	1595

See Also	1596
Data labels in React Chart component	1596
Position	1598
Data Label Template	1599
Text Mapping	1601
Format.....	1602
Margin	1603
DataLabel Rotation	1605
Customization	1606
Customizing Specific Point	1608
Show percentage based on each series points.....	1609
See Also	1612
Chart annotations in React Chart component	1612
Region	1613
Co-ordinate Units.....	1615
Legend in React Chart component.....	1617
Position and Alignment.....	1617
Legend Reverse	1620
Customization	1625
Series Selection on Legend	1638
Enable Animation.....	1640
Collapsing Legend Item	1642
Legend Title.....	1643
Arrow Page Navigation	1645
Legend Item Padding	1648
See Also	1650
Tooltip in React Chart component.....	1650
Default tooltip.....	1650
Fixed tooltip	1652
Format the tooltip.....	1653
Individual series format	1654
Tooltip template	1657
Tooltip mapping name.....	1659
Customize the appearance of tooltip	1660
See also	1661

Zooming in React Chart component	1662
Enable zooming.....	1662
Modes	1663
Toolbar	1665
Enable scrollbar.....	1666
Enable pan.....	1668
Auto interval on zooming.....	1670
Data editing in React Chart component.....	1671
Enable Data Editing	1671
Cross hair and track ball in React Chart component.....	1673
Tooltip for axis	1675
Customization	1676
Trackball.....	1678
Synchronized Charts in React Chart component	1680
Tooltip synchronization.....	1680
Crosshair synchronization	1685
Zooming synchronization.....	1690
Selection synchronization	1695
Selection in React Chart component	1701
Point.....	1701
Series.....	1702
Cluster	1704
Rectangular selection.....	1705
Lasso selection	1706
Multi-region selection.....	1708
Selection Type.....	1709
Selection on Load	1710
Selection through on legend.....	1712
Customization for selection	1714
See Also	1715
Chart print in React Chart component.....	1715
Print.....	1715
Export.....	1717
Multiple chart export.....	1728
Exporting chart using base64 string.....	1731

Chart appearance in React Chart component	1734
Custom color palette.....	1734
Data point customization.....	1735
Point level customization.....	1739
Chart area customization.....	1741
Animation.....	1746
Chart title	1750
Chart subTitle	1759
See also	1761
Render methods in React Chart component	1761
SVG.....	1761
Canvas	1762
Accessibility in React Chart component.....	1762
WAI-ARIA attributes.....	1763
Keyboard interaction	1763
Ensuring accessibility	1764
See also	1764
Internationalization in React Chart component	1764
Localization in React Chart component	1766
Ej1 api migration in React Chart component.....	1768
Annotations.....	1768
Columns	1770
CommonSeriesOptions	1770
Crosshair	1771
3D chart.....	1771
Indicators	1771
Legend.....	1774
primaryXAxis	1776
primaryYAxis	1782
Axes.....	1789
Rows.....	1796
Series.....	1796
marker.....	1801
TrendLines.....	1804
StripLines.....	1805

Multilevel Labels	1807
Methods	1808
Events.....	1809
Chart properties.....	1813
How To	1814
Live chart in React Chart component.....	1814
Prevent data label in React Chart component.....	1816
Tool tip format in React Chart component	1818
Add series in React Chart component	1820
Points customization in React Chart component	1822
Stacking total in React Chart component	1824
Selected data grid in React Chart component	1827
Marker customization in React Chart component.....	1831
Legend customization in React Chart component.....	1833
Tool tip table in React Chart component.....	1835
Footer in React Chart component.....	1838
Threshold in React Chart component	1840
Grid data chart in React Chart component.....	1841
Data label template in React Chart component	2318
Check box.....	2320
Getting Started.....	2320
Dependencies.....	2320
Installation and Configuration	2321
Adding Syncfusion packages	2321
Adding CSS Reference	2321
Adding CheckBox component to the Application	2322
Run the application	2322
States in React Check box component.....	2323
Checked and Unchecked	2323
Indeterminate	2323
Label and size in React Check box component	2324
Label	2324
Size	2325
See Also	2326
Style and appearance in React Check box component.....	2326

Accessibility in React CheckBox component.....	2326
WAI-ARIA attributes.....	2327
Keyboard interaction	2327
Ensuring accessibility	2327
See also	2328
How To	2328
Customized checkbox in React Check box component.....	2328
Name and value in form submit in React Check box component.....	2331
Right to left in React Check box component.....	2332
Ej1 api migration in React Check box component	2333
Properties.....	2333
Methods.....	2334
Events.....	2335
Chips.....	2335
Getting Started.....	2335
Dependencies.....	2335
Installation and Configuration	2336
Adding Syncfusion packages	2336
Adding CSS Reference	2336
Adding Chip component to the Application	2336
Running the application	2337
Types in React Chips component	2338
Input Chip.....	2338
Choice Chip	2339
Filter Chip	2340
Action Chip	2341
Customization in React Chips component	2343
Styles	2343
Leading Icon	2344
Avatar.....	2345
Avatar Content.....	2346
Trailing Icon.....	2347
Outline Chip	2348
Style in React Chips component	2349
Customizing the chip text	2349

Customizing the chip icon	2349
Customizing the chip delete button.....	2350
Customizing the chip outline	2350
Customizing the chip on selection	2350
Customizing the chip avatar text	2351
Accessibility in React Chips component.....	2351
WAI-ARIA attributes.....	2352
Keyboard interaction	2352
Ensuring accessibility	2352
See also	2353
3D Circular Chart.....	2353
Getting started	2353
Dependencies.....	2353
Installation and configuration.....	2353
Add 3D Circular Chart to the project	2354
Pie and Donut in React 3D Circular Chart component.....	2356
Pie chart	2356
Radius customization	2358
Various radius pie chart	2359
Donut chart	2361
Text and fill color mapping	2363
Customization	2365
Data Label in React 3D Circular Chart component	2367
Positioning.....	2369
Data label template.....	2371
Connector line.....	2373
Text mapping	2375
Format.....	2377
Customization	2379
Using textRender event	2381
Using template.....	2383
Empty points in React 3D Circular Chart component	2385
Customization	2386
Legend in React 3D Circular Chart component.....	2388
Position and alignment	2390

Legend reverse	2392
Legend shape	2393
Legend size	2395
Legend item size.....	2397
Legend paging	2399
Legend text wrap	2400
Legend title	2402
Arrow page navigation.....	2404
Legend item padding	2406
Tooltip in React 3D Circular Chart component	2408
Header.....	2410
Format.....	2412
Tooltip template	2414
Fixed tooltip	2416
Customization	2418
Customization of individual tooltip.....	2420
Title and subtitle in React 3D Circular Chart component	2422
Title	2422
Title customization.....	2424
Subtitle	2426
Subtitle customization	2428
Print and Export in React 3D Circular Chart component	2430
Print.....	2430
Export.....	2433
Circular Gauge.....	2436
Getting Started.....	2436
Dependencies.....	2436
Installation and configuration.....	2437
Set Pointer Value	2439
Creating a Next.js Application Using Syncfusion React Components	2440
What is Next.js?	2440
Prerequisites	2440
Create a Next.js application	2440
Install Syncfusion React packages.....	2441
Add Syncfusion React component	2441

Run the application	2441
Gauge dimensions in React Circular gauge component	2442
Size for Container	2442
Size for Circular Gauge	2442
Gauge axes in React Circular Gauge component	2444
Axis Customization	2444
Angles and Direction	2445
Axis Radius	2447
Ticks.....	2448
Labels	2451
Minimum and Maximum	2459
Multiple Axes	2459
Gauge ranges in React Circular gauge component	2461
Start and End.....	2461
Customization	2462
Radius.....	2463
Dragging range	2465
Multiple Ranges	2466
Rounded corner radius	2467
Gradient Color.....	2468
See also	2484
Gauge pointers in React Circular gauge component	2484
Needle Pointers.....	2485
RangeBar Pointer	2490
Rounded corner for range bar pointer	2492
Marker Pointer	2493
Dragging pointer	2495
Multiple Pointers	2496
Animation.....	2498
Gradient Color.....	2499
Gauge annotations in React Circular gauge component	2505
Content	2505
Position	2506
Sub Gauge	2507
See also	2512

Animation in React Circular Gauge component	2512
Gauge legend in React Circular gauge component.....	2516
Legend customization	2516
Toggle option in legend	2519
Paging support in legend	2520
Legend text customization.....	2522
Gauge user interaction in React Circular gauge component	2523
Tooltip for pointers	2523
Tooltip for ranges.....	2524
Tooltip for annotation.....	2524
Pointer Drag	2528
Gauge print and export in React Circular gauge component	2529
Print.....	2529
Export.....	2530
Gauge appearance in React Circular gauge component.....	2533
Gauge Title	2533
Gauge Position	2534
Area Customization.....	2536
Radius calculation based on angles	2539
Accessibility in React Circular Gauge component.....	2540
WAI-ARIA attributes.....	2540
Screen reading in Circular Gauge.....	2540
Ensuring accessibility	2541
See also	2541
Internationalization in React Circular Gauge component	2541
Globalization	2541
Right-to-left.....	2542
Ej1 api migration in React Circular gauge component.....	2546
Circular gauge dimensions	2546
Axis Line	2546
Ticks.....	2548
Labels	2550
Ranges.....	2552
Needle Pointer	2554
Marker Pointer	2555

Rangebar Pointer	2556
Annotations.....	2557
Appearance	2558
Events.....	2559
ColorPicker	2561
Getting Started.....	2561
Dependencies.....	2561
Installation and configuration.....	2561
Adding Syncfusion packages	2562
Adding CSS reference.....	2562
Adding ColorPicker to the application	2562
Run the application	2563
See Also	2564
Mode and value in React Color picker component	2564
Inline	2564
Rendering palette at initial load	2565
Color value	2566
See Also	2567
Localization in React Color picker component.....	2567
Localization	2567
Right to Left - RTL.....	2568
See Also	2569
Accessibility in React ColorPicker component.....	2569
WAI-ARIA attributes.....	2570
Keyboard interaction	2571
Ensuring accessibility	2571
See also	2571
Style and appearance in React Color picker component.....	2571
How To	2572
Hide control buttons in React Color picker component	2572
Render palette alone in React Color picker component.....	2572
Colorpicker in dropdownbutton in React Color picker component	2573
Customize colorpicker in React Color picker component.....	2575
Handle no color support in React Color picker component	2585
Disabled in React Color picker component.....	2591

Ej1 api migration in React Color picker component	2592
Properties.....	2592
Methods	2594
Events.....	2596
ComboBox.....	2597
Getting Started.....	2597
Dependencies.....	2597
Installation and configuration.....	2597
Adding syncfusion packages	2598
Adding ComboBox component	2598
Adding CSS reference.....	2599
Binding data source	2599
Run the application	2600
Custom values.....	2601
Configure the popup list	2603
See Also	2605
Data binding in React Combo box component	2605
Binding local data.....	2605
Binding remote data	2611
See Also	2613
Value binding in ComboBox Component.....	2613
Primitive Data Types	2613
Object Data Types	2615
Templates in React Combo box component.....	2616
Item template	2616
Group template.....	2619
Header template	2622
Footer template	2625
No records template	2627
Action failure template	2629
See Also	2632
Virtualization in ComboBox Component	2632
Binding local data.....	2632
Binding remote data	2634
Grouping	2635

Filtering with Virtualization.....	2637
Grouping in React Combo box component.....	2638
Customization	2641
See Also	2641
Filtering in React Combo box component	2641
Limit the minimum filter character.....	2644
Change the filter type	2648
Case sensitive filtering	2652
Diacritics Filtering.....	2655
See Also	2657

Selection.....	2680
Popup.....	2681
Common.....	2681
Context menu	2682
Getting Started.....	2682
Dependencies.....	2682
Setup your development environment	2683
Adding Syncfusion packages	2683
Adding Style sheet to the Application.....	2683
target {	2684
Add ContextMenu to the project.....	2684
Run the application	2686
See Also	2687
Icons and navigation in React Context menu component.....	2687
Icons	2687
Navigation URL.....	2688
See Also	2690
Template in React Context menu component.....	2690
Multilevel nesting	2692
See Also	2693
Accessibility in React ContextMenu component	2693
WAI-ARIA attributes.....	2694
Keyboard interaction	2695
Ensuring accessibility	2695
See also	2695
Style and appearance in React Context menu component	2695

How To	2696
Data binding in React Context menu component.....	2696
Render with separator in React Context menu component.....	2697
Open and close contextmenu in React Context menu component.....	2699
Change menu items dynamically in React Context menu component.....	2700
Scrollable contextmenu in React Context menu component.....	2702
Template in React Context menu component.....	2704
Underline a character in the item text in React Context menu component	2708
Open a dialog on contextmenu item click in React Context menu component	2710
Change animation settings in React Context menu component	2712
Add or remove context menu items in React Context menu component.....	2714
Enable or disable context menu items in React Context menu component	2717
Dashboard Layout	2719
Getting Started.....	2719
Dependencies.....	2719
Installation and configuration.....	2719
Adding Syncfusion packages	2720
Adding CSS Reference	2720
Add Dashboard Layout to the application	2720
Setting the `panels` property using HTML attributes	2720

Calendar

Getting started

This section explains you the steps required to create a simple Calendar and demonstrate the basic usage of the Calendar component.

To get start quickly with React Calendars, you can check on this video:

Dependencies

The below list of dependencies are required to use the `Calendar` component in your application.

```
`javascript
|-- @syncfusion/ej2-react-calendars
|-- @syncfusion/ej2-react-base
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-calendars
|-- @syncfusion/ej2-inputs
|-- @syncfusion/ej2-splitbuttons
|-- @syncfusion/ej2-lists
|-- @syncfusion/ej2-popups
|-- @syncfusion/ej2-buttons
`,`
```

Installation and configuration

You can use [create-react-app](#) to setup the applications. To install `create-react-app` run the following command.

```
`
npm install -g create-react-app
`,`
```

- To setup basic `React` sample use following commands.

```
`
create-react-app quickstart --scripts-version=react-scripts-ts
cd quickstart
`,`
```

Adding Syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](#) public registry. You can choose the component that you want to install. For this application, we are going to use `Calendar` component.

To install Calendar component, use the following command

```
`bash
npm install @syncfusion/ej2-react-calendars --save
`
```

Adding Style sheet to the Application

To render the Calendar component, need to import Calendar and its dependent component's styles as given below in `App.css`.

```
`css
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-react-calendars/styles/material.css";
`
```

Note: If you want to refer the combined component styles, please make use of our [CRG](#) (Custom Resource Generator) in your application.

Adding Calendar component to the Application

- To include the Calendar component in application import the `CalendarComponent` from `ej2-react-calendars` package in `App.tsx`.
- Then add the Calendar component as shown in below code example.

[src/App.tsx]

[Class-component]

```
`ts
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import './App.css';
export default class App extends React.Component<{}, {}> {
  public render() {
    return <CalendarComponent id="calendar" />
  }
};
`
```

[Functional-component]

```
`ts
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
```

```
import * as ReactDOM from 'react-dom';

function App() {
  return <CalendarComponent id="calendar" />;
}

ReactDOM.render(<App />, document.getElementById('element'));
```

Run the application

Now run the `npm start` command in the console, it will run your application and open the browser window.

```
npm start
```

The below examples shows the basic calendar component.

[Class-component]

INDEX.JSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  render() {
    return <CalendarComponent id="calendar"/>;
  }
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
  public render() {
    return <CalendarComponent id="calendar" />
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]

INDEX.JSX

```
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
```

```
import * as ReactDOM from 'react-dom';
function App() {
    return <CalendarComponent id="calendar"/>;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
    return <CalendarComponent id="calendar" />;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

Setting the value, min and max dates

The following example demonstrates how to set the value, min and max dates on initializing the Calendar. Here the Calendar allows to select a date within a range from 9th to 15th in a month of May 2017. To know more about range restriction in Calendar, please refer this [page](#).

[Class-component]**INDEX.JSX**

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
    //initialize the value, min and max
    dateValue = new Date("05/11/2017");
    minDate = new Date("05/09/2017");
    maxDate = new Date("05/15/2017");
    render() {
        return <CalendarComponent id="calendar" value={this.dateValue}
min={this.minDate} max={this.maxDate}/>;
    }
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
    //initialize the value, min and max
    private dateValue: Date = new Date("05/11/2017");
    private minDate: Date = new Date("05/09/2017");
    private maxDate: Date = new Date("05/15/2017");
    public render() {
```

```

        return <CalendarComponent id="calendar" value={this.dateValue}
        min={this.minDate} max={this.maxDate} />
    };
    ReactDOM.render(<App />, document.getElementById('element'));

```

[Functional-component]

INDEX.JSX

```

import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    //initialize the value, min and max
    const dateValue = new Date("05/11/2017");
    const minDate = new Date("05/09/2017");
    const maxDate = new Date("05/15/2017");
    return <CalendarComponent id="calendar" value={dateValue} min={minDate}
    max={maxDate}/>;
}
;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { CalendarComponent} from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    //initialize the value, min and max
    const dateValue: Date = new Date("05/11/2017");
    const minDate: Date = new Date("05/09/2017");
    const maxDate: Date = new Date("05/15/2017");
    return <CalendarComponent id="calendar" value={dateValue} min={minDate}
    max={maxDate} />
};
ReactDOM.render(<App />, document.getElementById('element'));

```

Date range in React Calendar component

Calendar provides an option to select a date value within a specified range by using the [min](#) and [max](#) properties. Always the min date has to be lesser than the max date.

The below example allows to select a date within a range from 7th to 27th dates in a month.

[Class-component]**INDEX.JSX**

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
    // creates a calendar with min and max property
    minDate = new Date(new Date().getFullYear(), new Date().getMonth(), 7);
    maxDate = new Date(new Date().getFullYear(), new Date().getMonth(), 27);
    dateValue = new Date(new Date().setDate(14));
    render() {
        return <CalendarComponent id="calendar" value={this.dateValue}
min={this.minDate} max={this.maxDate}/>;
    }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
    // creates a calendar with min and max property
    private minDate:Date= new Date(new Date().getFullYear(), new
Date().getMonth(), 7);
    private maxDate:Date= new Date(new Date().getFullYear(), new
Date().getMonth(), 27);
    private dateValue:Date= new Date(new Date().setDate(14));
    public render() {
        return <CalendarComponent id="calendar" value={this.dateValue}
min={this.minDate} max={this.maxDate} />
    }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]**INDEX.JSX**

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    // creates a calendar with min and max property
    const minDate = new Date(new Date().getFullYear(), new
Date().getMonth(), 7);
    const maxDate = new Date(new Date().getFullYear(), new
Date().getMonth(), 27);
    const dateValue = new Date(new Date().setDate(14));
```

```

    return <CalendarComponent id="calendar" value={dateValue} min={minDate}
    max={maxDate} />;
  }
;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  // creates a calendar with min and max property
  const minDate:Date= new Date(new Date().getFullYear(), new
Date().getMonth(), 7);
  const maxDate:Date= new Date(new Date().getFullYear(), new
Date().getMonth(), 27);
  const dateValue:Date= new Date(new Date().setDate(14));
  return <CalendarComponent id="calendar" value={dateValue} min={minDate}
max={maxDate} />
};
ReactDOM.render(<App />, document.getElementById('element'));

```

If the value of `min` or `max` properties changed through code behind. Then you have to update the `value` property to set within the range. Or else, if the value is out of specified date range and less than `min` date, value property will be updated with min date or the value is higher than max date, value property will be updated with `max` date.

Globalization in React Calendar component

Globalization is the combination of internalization and localization. You can adapt the component to various languages by parsing and formatting the date or number ([Internationalization](#)), and also add culture specific customization and translation to the text ([localization](#)).

By default, Calendar date format, week and month names are specific to American English culture. It utilizes the [Essential JavaScript 2 Internationalization](#)

package to parse and format the date object based on the culture by using the official [UNICODE CLDR](#) JSON data and also it provides the [loadCldr](#) method to load the culture specific CLDR JSON data.

To go with the different culture other than `English`, follow the below steps.

- Install the `CLDR-Data` package by using the below command (it installs the CLDR JSON data). To know more about CLDR-Data refer the [CLDR-Data](#) link.

,

```
npm install cldr-data --save
```

,

Once the package installed, you can find the culture specific JSON data under the location `\node_modules\cldr-data`.

- Now import the installed CLDR JSON data into the `app.ts` file.
- Now use the [loadCldr](#) method to load the culture specific CLDR JSON data from the installed location to `app.ts` file.
- Calendar displayed `Sunday` as the first day of week based on default culture ("en-US"). If you want to display the Calendar with loaded culture's first day of week, you need to import `weekdata.json` file from the `cldr-data/supplemental` as given in the code example.

```
`ts
//import the loadCldr from ej2-base
import { loadCldr } from '@syncfusion/ej2-base';
import * as gregorian from 'cldr-data/main/de/ca-gregorian.json';
import * as numbers from 'cldr-data/main/de/numbers.json';
import * as timeZoneNames from 'cldr-data/main/de/timeZoneNames.json';
import * as numberingSystems from 'cldr-data/supplemental/numberingSystems.json';
import * as weekData from 'cldr-data/supplemental/weekData.json'; // To load the culture based first
day of week
loadCldr(numberingSystems, gregorian, numbers, timeZoneNames, weekData);
`
```

if you are facing the error `/node_modules/cldr-data/main/de/*.json (1,1): unused expression, expected an assignment or function call` when you are adding the json files to render the culture sample, then add the below configuration in your `tslint.json` file

```
`ts
"linterOptions": {
  "exclude": [
    "*.json",
    "/*.json"
  ]
}
`
```

The `Localization` library allows you to localize default text content of the Calendar. The Calendar component has static text for **today** feature that can be changed to other cultures (Arabic, Deutsch, French, etc.) by defining the

[locale](#) value and translation object.

Locale keywords | Text

today | Name of the button to choose Today date.

- Before changing to a culture other than English, ensure that locale text for the concerned culture is loaded through `load` method of `L10n` class.

```
`ts
//Load the L10n, loadCldr from ej2-base
import { L10n } from "@syncfusion/ej2-base";
//load the locale object to set the localized placeholder value
L10n.load({
  'de': {
    'calendar': { today:'heute' }
  }
});
`
```

- Set the culture by using the [locale](#) property.

The following example demonstrates the Calendar in **German** culture.

[Class-component]

CA-GREGORIAN.JSON

```
{
  "main": {
    "de": {
      "identity": {
        "version": {
          "_number": "$Revision: 12879 $",

    }
}
}
}
}
}
}
}
}
}
}

```

Customization in React Calendar component

Calendar allows you to customize the entire appearance by using the custom CSS and [renderDayCell](#) event to customize the each day cell.

This following section demonstrates how to disable, highlights the specific dates in the Calendar.

Disable Weekends

You can disable the weekends of every month in a Calendar by using the [renderDayCell](#) event. The `isDisabled` argument from this event allows you to define whether the date to be disabled or not.

Set `isDisabled` to true to disable the date value.

The following example demonstrates how to disable weekends of every month.

[Class-component]

INDEX.JSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    // initialize the value
    dateValue = new Date();
    disabledDate(args) {
        if (args.date.getDay() === 0 || args.date.getDay() === 6) {
            // set 'true' to disable the weekends
            args.isDisabled = true;
        }
    }
    render() {
        return <CalendarComponent id="calendar"
renderDayCell={this.disabledDate} value={this.dateValue}/>;
    }
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent, RenderDayCellEventArgs } from '@syncfusion/ej2-
react-calendars';
import * as React from "react";
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    // initialize the value
    private dateValue: Date = new Date();
    public disabledDate(args: RenderDayCellEventArgs): void {
        if ((args.date as Date).getDay() === 0 || (args.date as
Date).getDay() === 6) {
            // set 'true' to disable the weekends
            args.isDisabled = true;
        }
    }
    public render() {
        return <CalendarComponent id="calendar"
renderDayCell={this.disabledDate} value={this.dateValue} />
    }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]**INDEX.JSX**

```
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from 'react-dom';
function App() {
    // initialize the value
    let dateValue = new Date();
    function disabledDate(args) {
        if (args.date.getDay() === 0 || args.date.getDay() === 6) {
            // set 'true' to disable the weekends
            args.isDisabled = true;
        }
    }
    return <CalendarComponent id="calendar" renderDayCell={disabledDate}
value={dateValue}/>;
};
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { CalendarComponent, RenderDayCellEventArgs } from '@syncfusion/ej2-
react-calendars';
import * as React from "react";
import * as ReactDOM from 'react-dom';
function App() {
    // initialize the value
    let dateValue: Date = new Date();
    function disabledDate(args: RenderDayCellEventArgs): void {
        if ((args.date as Date).getDay() === 0 || (args.date as
Date).getDay() === 6) {
            // set 'true' to disable the weekends
            args.isDisabled = true;
        }
    }
    return <CalendarComponent id="calendar" renderDayCell={disabledDate}
value={dateValue} />;
};
ReactDOM.render(<App />, document.getElementById('element'));
```

Day Cell Format

You can highlight the specific dates by adding the custom CSS or element to the day cell by using [renderDayCell](#).

Below is the list of classes that provides the flexible way to customize the Calendar component.

Class Name	Description
---	---
e-calendar	Applied to Calendar.
e-header	Applied to header.

- | e-title | Applied to title. |
- | e-icon-container | Applied to previous and next icon container. |
- | e-prev | Applied to previous icon. |
- | e-next | Applied to next icon. |
- | e-weekend | Applied to weekend dates. |
- | e-other-month | Applied to other month dates. |
- | e-day | Applied to each day cell. |
- | e-selected | Applied to selected dates. |
- | e-disabled | Applied to disabled dates. |

The following example highlights the world health date (7th April every year) and world forest day (21st March every year) in the Calendar by using the custom icon and tooltip.

[Class-component]

INDEX.JSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  // initialize the value
  dateValue = new Date('03/10/2017');
  customDates(args) {
    let span;
    // defines the custom HTML element to be added.
    span = document.createElement('span');
    // Use "e-icons" class name to load Essential JS 2 built-in icons.
    span.setAttribute('class', 'e-icons highlight-day');
    if (args.date.getDate() === 7 && args.date.getMonth() === 3) {
      // append the span element to day cell.
      args.element.appendChild(span);
      // set the custom tooltip to the special dates.
      args.element.setAttribute('title', 'World health day!');
      // Use "special" class name to highlight the special dates,
      // which you can refer in "styles.css".
      args.element.className = 'special';
    }
    if (args.date.getDate() === 21 && args.date.getMonth() === 2) {
      args.element.appendChild(span);
      args.element.className = 'special';
      // set the custom tooltip to the special dates.
      args.element.setAttribute('title', 'World forest day');
    }
  }
  render() {
    return <CalendarComponent id="calendar"
    renderDayCell={this.customDates} value={this.dateValue}/>;
  }
}
```

```
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent, RenderDayCellEventArgs } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}>, {}> {
    // initialize the value
    private dateValue: Date = new Date('03/10/2017');
    public customDates(args: RenderDayCellEventArgs): void {
        let span: HTMLElement;
        // defines the custom HTML element to be added.
        span = document.createElement('span');
        // Use "e-icons" class name to load Essential JS 2 built-in icons.
        span.setAttribute('class', 'e-icons highlight-day');
        if ((args.date as Date).getDate() === 7 && (args.date as
Date).getMonth() === 3) {
            // append the span element to day cell.
            (args.element as HTMLElement).appendChild(span);
            // set the custom tooltip to the special dates.
            (args.element as HTMLElement).setAttribute('title', 'World
health day!');
            // Use "special" class name to highlight the special dates,
which you can refer in "styles.css".
            (args.element as HTMLElement).className = 'special';
        }
        if ((args.date as Date).getDate() === 21 && (args.date as
Date).getMonth() === 2) {
            (args.element as HTMLElement).appendChild(span);
            (args.element as HTMLElement).className = 'special';
            // set the custom tooltip to the special dates.
            (args.element as HTMLElement).setAttribute('title', 'World
forest day!');
        }
    }
    public render() {
        return <CalendarComponent id="calendar"
renderDayCell={this.customDates} value={this.dateValue} />
    }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]

INDEX.JSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from 'react-dom';
function App() {
    // initialize the value
    const dateValue = new Date('03/10/2017');
```

```

function customDates(args) {
    let span;
    // defines the custom HTML element to be added.
    span = document.createElement('span');
    // Use "e-icons" class name to load Essential JS 2 built-in icons.
    span.setAttribute('class', 'e-icons highlight-day');
    if (args.date.getDate() === 7 && args.date.getMonth() === 3) {
        // append the span element to day cell.
        args.element.appendChild(span);
        // set the custom tooltip to the special dates.
        args.element.setAttribute('title', 'World health day!');
        // Use "special" class name to highlight the special dates,
        // which you can refer in "styles.css".
        args.element.className = 'special';
    }
    if (args.date.getDate() === 21 && args.date.getMonth() === 2) {
        args.element.appendChild(span);
        args.element.className = 'special';
        // set the custom tooltip to the special dates.
        args.element.setAttribute('title', 'World forest day');
    }
}

return <CalendarComponent id="calendar" renderDayCell={customDates}
value={dateValue}/>;
}
;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

// import the calendarcomponent
import { CalendarComponent, RenderDayCellEventArgs } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from 'react-dom';
function App() {
    // initialize the value
    const dateValue: Date = new Date('03/10/2017');
    function customDates(args: RenderDayCellEventArgs): void {
        let span: HTMLElement;
        // defines the custom HTML element to be added.
        span = document.createElement('span');
        // Use "e-icons" class name to load Essential JS 2 built-in icons.
        span.setAttribute('class', 'e-icons highlight-day');
        if ((args.date as Date).getDate() === 7 && (args.date as
Date).getMonth() === 3) {
            // append the span element to day cell.
            (args.element as HTMLElement).appendChild(span);
            // set the custom tooltip to the special dates.
            (args.element as HTMLElement).setAttribute('title', 'World
health day!');
            // Use "special" class name to highlight the special dates,
            // which you can refer in "styles.css".
            (args.element as HTMLElement).className = 'special';
        }
    }
}

```

```

        if ((args.date as Date).getDate() === 21 && (args.date as
Date).getMonth() === 2) {
            (args.element as HTMLElement).appendChild(span);
            (args.element as HTMLElement).className = 'special';
            // set the custom tooltip to the special dates.
            (args.element as HTMLElement).setAttribute('title', 'World
forest day');
        }
    }
    return <CalendarComponent id="calendar" renderDayCell={customDates}
value={dateValue} />
};
ReactDOM.render(<App />, document.getElementById('element'));

```

Highlight Weekends

You can highlight the weekends of every month in a Calendar by using the [renderDayCell](#) event. The following example demonstrates how to highlights the weekends of every month.

[Class-component]

INDEX.JSX

```

// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
    // initialize the value
    dateValue = new Date();
    highlightWeekend(args) {
        if (args.date.getDay() === 0 || args.date.getDay() === 6) {
            // To highlight the week end of every month
            args.element.classList.add('e-highlightweekend');
        }
    }
    render() {
        return <CalendarComponent id="calendar"
renderDayCell={this.highlightWeekend} value={this.dateValue}/>;
    }
}
;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

// import the calendarcomponent
import { CalendarComponent, RenderDayCellEventArgs } from '@syncfusion/ej2-
react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
    // initialize the value
    private dateValue: Date = new Date();
    public highlightWeekend(args: RenderDayCellEventArgs): void {
        if ((args.date as Date).getDay() === 0 || (args.date as
Date).getDay() === 6) {

```

```

        // To highlight the week end of every month
        args.element.classList.add('e-highlightweekend');
    }
}
public render() {
    return <CalendarComponent id="calendar"
renderDayCell={this.highlightWeekend} value={this.dateValue} />
}
};
ReactDOM.render(<App />, document.getElementById('element'));

```

[Functional-component]

INDEX.JSX

```

// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    // initialize the value
    const dateValue = new Date();
    function highlightWeekend(args) {
        if (args.date.getDay() === 0 || args.date.getDay() === 6) {
            // To highlight the week end of every month
            args.element.classList.add('e-highlightweekend');
        }
    }
    return <CalendarComponent id="calendar" renderDayCell={highlightWeekend}
value={dateValue}/>;
}
;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

// import the calendarcomponent
import { CalendarComponent, RenderDayCellEventArgs } from '@syncfusion/ej2-
react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    // initialize the value
    const dateValue: Date = new Date();
    function highlightWeekend(args: RenderDayCellEventArgs): void {
        if ((args.date as Date).getDay() === 0 || (args.date as
Date).getDay() === 6) {
            // To highlight the week end of every month
            args.element.classList.add('e-highlightweekend');
        }
    }
    return <CalendarComponent id="calendar" renderDayCell={highlightWeekend}
value={dateValue} />
};
ReactDOM.render(<App />, document.getElementById('element'));

Multi select in React Calendar component

Calendar provides an option to select **single** or **multiple dates** by using `isMultiSelection` and `values` properties. By default, `isMultiSelection` property will be in disabled state.

| API | Type | Description |

|-----|-----|-----|

| `isMultiSelection` | **Boolean** | Enables the multi selection option in the Calendar control |

| `values` | **Date[]** | Gets or sets the date range values in multi selection option |

The following example demonstrates the functionality of `isMultiSelection` property and `values` properties in the Calendar control.

[Class-component]

INDEX.JSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
    //initialize the values
    values = [new Date('1/1/2020'), new Date('1/15/2020'), new
Date('1/3/2020'), new Date('1/25/2020')];
    render() {
        return <CalendarComponent id="calendar" isMultiSelection={true}
values={this.values}/>;
    }
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
    //initialize the values
    private values: Date[] = [new Date('1/1/2020'), new Date('1/15/2020'), new
Date('1/3/2020'), new Date('1/25/2020')];
    public render() {
        return <CalendarComponent id="calendar" isMultiSelection={true}
values={this.values} />
    }
}
```

```

    }
  };
  ReactDOM.render(<App />, document.getElementById('element'));

```

[Functional-component]

INDEX.JSX

```

import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  //initialize the values
  const values = [new Date('1/1/2020'), new Date('1/15/2020'), new
Date('1/3/2020'), new Date('1/25/2020')];
  return <CalendarComponent id="calendar" isMultiSelection={true}
values={values}/>;
}
;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { CalendarComponent} from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  //initialize the values
  const values: Date[] = [new Date('1/1/2020'), new Date('1/15/2020'), new
Date('1/3/2020'), new Date('1/25/2020')];
  return <CalendarComponent id="calendar" isMultiSelection={true}
values={values} />
};
ReactDOM.render(<App />, document.getElementById('element'));

```

Calendar views in React Calendar component

The Calendar has the following predefined views that provides a flexible way to navigate back and forth to select the date. Use the [start](#) property to change the default view of the Calendar.

| View | Description |

| --- | --- |

| month (default) | Displays the days in a month |

| year | Displays the months in a year |

| decade | Displays the years in a decade |

The following example demonstrates how to set the **year** as the start view of the calendar.

[Class-component]

INDEX.JSX

```

// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';

```

```
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  render() {
    //creates a calendar with decade view and navigate up to year view.
    return <CalendarComponent id="calendar" start='Year'/>;
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
  public render() {
    //creates a calendar with decade view and navigate up to year view.
    return <CalendarComponent id="calendar" start='Year' />
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]**INDEX.JSX**

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  //creates a calendar with decade view and navigate up to year view.
  return <CalendarComponent id="calendar" start="Year"/>;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  //creates a calendar with decade view and navigate up to year view.
  return <CalendarComponent id="calendar" start="Year" />;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

View Restriction

Calendar view can be restricted by defining the [start](#) and [depth](#)

By defining the start and depth property with the different view, drill-down and drill-up views navigation can be limited to the user. Calendar views will be drill-down up to the view which is set in **depth** property and drill-up up to the view which is set in **start** property.

Always the depth view has to be smaller than the start view.

[Class-component]

INDEX.JSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  render() {
    // creates a calendar with decade view and navigate up to year view.
    return <CalendarComponent id="calendar" start='Decade'
    depth='Year' />;
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
  public render() {
    // creates a calendar with decade view and navigate up to year view.
    return <CalendarComponent id="calendar" start='Decade' depth='Year'
    />
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]

INDEX.JSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  // creates a calendar with decade view and navigate up to year view.
  return <CalendarComponent id="calendar" start="Decade" depth="Year"/>;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
```

```
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  // creates a calendar with decade view and navigate up to year view.
  return <CalendarComponent id="calendar" start="Decade" depth="Year" />;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

You can restrict the calendar's drill down navigation by defining the [start](#) and [depth](#) property

The following example demonstrates how to select the date in **year** view.

[Class-component]

INDEX.JSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  render() {
    //creates a calendar with decade view and navigate up to year view.
    return <CalendarComponent id="calendar" start='Year' depth='Year'/>;
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
  public render() {
    //creates a calendar with decade view and navigate up to year view.
    return <CalendarComponent id="calendar" start='Year' depth='Year' />;
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]

INDEX.JSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  //creates a calendar with decade view and navigate up to year view.
  return <CalendarComponent id="calendar" start="Year" depth="Year"/>;
}
```

```
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  //creates a calendar with decade view and navigate up to year view.
  return <CalendarComponent id="calendar" start="Year" depth="Year" />;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

Accessibility in React Calendar component

The Calendar component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Calendar component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2 Support](#) | |

| [Section 508 Support](#) | |

| [Screen Reader Support](#) | |

| [Right-To-Left Support](#) | |

| [Color Contrast](#) | |

| [Mobile Device Support](#) | |

| [Keyboard Navigation Support](#) | |

| [Accessibility Checker Validation](#) | |

| [Axe-core Accessibility Validation](#) | |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

```

}
</style>

<div> - All
features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

```

WAI-ARIA attributes

The Web accessibility defines a way to make web content and web applications more accessible to disabled people. It especially helps the dynamic content change and advanced user interface controls developed with Ajax, HTML, JavaScript, and related technologies.

Calendar provides built-in compliance with the [WAI-ARIA](#) specifications. WAI-ARIA supports is achieved through the attributes like `aria-label`, `aria-selected`, `aria-disabled`, `aria-activedescendant` applied for navigation buttons, disable and active day cells.

It helps to provides information about the widget for assistive technology to the disabled person in the screen reader. Calendar component contains grid as role and grid cell for each day cell

- **Aria-label** : attribute provides the text label for an object for the previous and next month element. It helps the screen reader object to read for the assistive purpose.
- **Aria-selected** : attribute indicates the currently selected date of the Calendar component.
- **Aria-disabled** : attribute indicates the disabled state of this Calendar component.
- **Aria-activedescendent** : attribute helps in managing the current active child of the Calendar component.
- **Role** : attributes gives assistive technologies information about how to handle each element in a widget.
- **Grid-cell** : attributes define the individual cell that can be focusable and selectable.

Keyboard Interaction

You can use the following keys to interact with the Calendar. The component implements the keyboard navigation support by following the [WAI-ARIA practices](#)

It supports the below list of shortcut keys.

| **Press** | **To do this** |

| --- | --- |

| **Upper Arrow** | **Focus the previous week date.** |

| **Down Arrow** | **Focus the next week date.** |

| **Left Arrow** | **Focus the previous date.** |

| **Right Arrow** | **Focus the next date.** |

| **Home** | **Focus the first date in the month.** |

| **End** | **Focus the last date in the month.** |

- | Page Up | Focus the same date in the previous month. |
- | Page Down | Focus the same date in the next month. |
- | Enter | Select the currently focused date. |
- | Shift + Page Up | Focus the same date in the previous year. |
- | Shift + Page Down | Focus the same date in the next year. |
- | Control + Upper Arrow | Moves into the inner level of view like month-year, year-decade |
- | Control + Down Arrow | Moves out from the depth level view like decade-year, year-month |
- | Control + Home | Focus the starting date in the current year. |
- | Control + End | Focus the ending date in the current year. |

To focus the Calendar component use the `alt+t` keys.

  );
}
ReactDOM.render(<App />, document.getElementById('element'));
{% endraw %}
```

Ensuring accessibility

The Calendar component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Calendar component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Calendar component with accessibility tools.

Islamic calendar in React Calendar component

In addition to the Gregorian calendar, the Calendar control supports displaying the Islamic calendar (Hijri calendar). **Islamic calendar** or **Hijri calendar** is a **lunar calendar** consisting of 12 months in a year of 354 or 355 days. To know more about Islamic calendar, please refer this [wikipedia](#).

Also, it consists of all Gregorian calendar functionalities as like min and max date, week number, start day of the week, multi selection, enable RTL, start and depth view, localization, highlight and customize the specific dates.

By default, calendar mode is in **Gregorian**. You can enable the Islamic mode by setting the **calendarMode** as **Islamic**. Also, need to import and injecting the **Islamic** module into the Calendar using the **Inject** directive from **ej2-react-calendars** as shown below.

```
import { Islamic } from '@syncfusion/ej2-react-calendars';
```

By default, calendar mode is in **Gregorian**. You can enable the Islamic mode by setting the **calendarMode** as **Islamic** and injecting the **Islamic** module into the Calendar using the **Inject** directive.

The following example demonstrates how to display the Islamic Calendar (Hijri Calendar).

[Class-component]

INDEX.JSX

```

import { addClass } from '@syncfusion/ej2-base';
// import the calendarcomponent
import { CalendarComponent, Inject, Islamic } from '@syncfusion/ej2-react-
calendars';
import * as React from "react";
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    calendarMode = 'Islamic';
    constructor(props) {
        super(props);
        this.disableDate = this.disableDate.bind(this);
    }
    // initialize the calendar mode
    disableDate(args) {
        /*Date need to be disabled*/
        if (args.date.getDate() === 2 || args.date.getDate() === 10 ||
args.date.getDate() === 28) {
            args.isDisabled = true;
        }
        if (args.date.getDate() === 13) {
            let span;
            span = document.createElement('span');
            args.element.children[0].className += 'e-day sf-icon-cup
highlight';
            addClass([args.element], ['special', 'e-day', 'dinner']);
            args.element.setAttribute('data-val', ' Dinner !');
            args.element.appendChild(span);
        }
        if (args.date.getDate() === 23) {
            args.element.children[0].className += 'e-day sf-icon-start
highlight';
            let span;
            span = document.createElement('span');
            span.setAttribute('class', 'sf-icons-star highlight');
            // use the imported method to add the multiple classes to the
given element
            addClass([args.element], ['special', 'e-day', 'holiday']);
            args.element.setAttribute('data-val', ' Holiday !');
            args.element.appendChild(span);
        }
    }

renderDayCell={disableDate} ><Inject services={[Islamic]}
/></CalendarComponent>
};
ReactDOM.render(<App />, document.getElementById('element'));

```

Style appearance in React Calendar component

The following content provides the exact CSS structure that can be used to modify the control's appearance based on the user preference.

Customizing the background color for the Calendar

Use the following CSS to customize the background color and border for the Calendar.

```

`css
/ To specify background color and border /
.e-calendar {
background-color: peachpuff;
border: 3px solid red;
}
`

```

Customizing the Calendar date elements on hovering

Use the following CSS to customize the date elements on hovering in the Calendar.

```
`css
/ To specify background color, color, and border /
.e-calendar .e-content td:hover span.e-day, .e-calendar .e-content td:focus span.e-day, .e-bigger.e-small
.e-calendar .e-content td:hover span.e-day, .e-bigger.e-small .e-calendar .e-content td:focus span.e-day
{
background-color: red;
border: 2px solid;
color: #212529;
}
`
```

Customizing the border of date cell grid

Use the following CSS to add the border to the date cell grid.

```
`css
/ To specify border /
.e-calendar .e-content span.e-day, .e-bigger.e-small .e-calendar .e-content span.e-day {
border: 1px solid;
}
`
```

Customizing the Calendar title

Use the following CSS to customize the Calendar title.

```
`css
/ To specify color and font size /
.e-calendar .e-header .e-title, .e-bigger.e-small .e-calendar .e-header .e-title {
color: black;
font-size: 20px;
}
`
```

Customizing the previous and next icon

Use the following CSS to customize the previous and next icon.

```
`css
/ To specify color and border /
.e-calendar .e-header span, .e-bigger.e-small .e-calendar .e-header span {
border: 1px solid;
}
```

```
color: chocolate;
}
`
```

Customizing the footer button

Use the following CSS to customize the footer button.

```
`css
/ To specify background color, color, and border-color /
.e-calendar .e-btn.e-today.e-flat.e-primary, .e-calendar .e-css.e-btn.e-today.e-flat.e-primary {
background-color: red;
border-color: black;
color: black;
}
`
```

Customizing the selected date cell grid

Use the following CSS to customize the selected date cell grid in Calendar.

```
`css
/ To specify background color and color /
.e-calendar .e-content td.e-focused-date.e-today span.e-day {
background-color: maroon;
color: #fff;
}
`
```

Customizing the content header in Calendar

Use the following CSS to customize the content header in Calendar.

```
`css
/ To specify background /
.e-calendar .e-content thead, .e-bigger.e-small .e-calendar .e-content thead {
background: aquamarine;
}
`
```

How To

Set clear button in calendar in React Calendar component

The following steps illustrate how to configure clear button in Calendar UI.

- On [created](#) event of Calendar add the required elements to have clear button. Here we have used div with Essential JS 2 Button component.
- Use the `e-footer` class to the div tag to act as the footer.
- And use the button to clear the selected date.
- Bind the required event handler to the button tags to update the value.

Below is the code example

INDEX.JSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  onCreate() {
    const proxy = this;
    const clearBtn = document.createElement('button');
    clearBtn.setAttribute('class', 'e-btn e-clear e-flat');
    clearBtn.innerHTML = 'Clear';
    const footerElement = document.querySelector('.e-footer-container');
    footerElement.insertBefore(clearBtn, footerElement.childNodes[0]);
    document.querySelector(".e-clear").addEventListener("click", (e) => {
      proxy.value = null;
    });
  }
  render() {
    return (<CalendarComponent id="calendar"
    created={this.onCreate}/>);
  }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
  public onCreate(): void {
    const proxy: any = this;
    const clearBtn = document.createElement('button');
    clearBtn.setAttribute('class', 'e-btn e-clear e-flat');
    clearBtn.innerHTML = 'Clear';
    const footerElement: HTMLElement = document.querySelector('.e-
    footer-container') as HTMLElement;
    footerElement.insertBefore(clearBtn, footerElement.childNodes[0]);
    (document.querySelector(".e-clear") as
    HTMLElement).addEventListener("click", (e) => {
      proxy.value = null;
    });
  }
  public render() {
```

```

        return (
            <CalendarComponent id="calendar" created={this.onCreated} />
        );
    }
}
ReactDOM.render(<App />, document.getElementById('element'));

```

Show dates of other months in React Calendar component

The following example demonstrates how to show dates in other months.

The below styles show the Calendar's other month dates to visibility from its hidden state.

`css

```

.e-calendar .e-content tr.e-month-hide,
.e-calendar .e-content td.e-other-month>span.e-day {
display: block;
}
.e-calendar .e-content td.e-month-hide,
.e-calendar .e-content td.e-other-month {
pointer-events: auto;
touch-action: auto;
}
`

```

INDEX.JSX

```

// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
    render() {
        return <CalendarComponent id="calendar"/>;
    }
}
;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

// import the calendarcomponent
import { CalendarComponent} from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
    public render() {
        return <CalendarComponent id="calendar" />
    }
};

```

```
ReactDOM.render(<App />, document.getElementById('element'));
```

Select a sequence of dates in calendar in React Calendar component

The following example demonstrates how to select the week dates of chosen date in the Calendar using [values](#) property, when [isMultiSelection](#) property is enabled. Methods of Moment.js is used in this sample for calculating the start and end of week from the selected date.

To parse, format and manipulating the date values, here we used momentum. You can install it by using below command

```
npm i moment
```

INDEX.JSX

```
{% raw %}
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
// import the calendar component
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as moment from "moment";
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  calendarInstance;
  constructor(props) {
    super(props);
    this.onChange = this.onChange.bind(this);
    this.onweekChange = this.onweekChange.bind(this);
    this.onworkweekChange = this.onworkweekChange.bind(this);
  }
  onChange(args) {
    const startOfWeek = moment(args.value).startOf('week');
    const endOfWeek = moment(args.value).endOf('week');
    if (this.calendarInstance.element.classList.contains('workweek')) {
      this.getWeekArray(startOfWeek.day(1), endOfWeek.day(5));
    }
    else if (this.calendarInstance.element.classList.contains("week")) {
      this.getWeekArray(startOfWeek, endOfWeek);
    }
  }
  onworkweekChange() {
    if (this.calendarInstance.element.classList.contains('week')) {

Skip a month in calendar in React Calendar component

The following example demonstrates how to skip a month in a Calendar while clicking the previous and next icon. Here we have used the [navigated](#) event to skip a month using [NavigateTo](#) method.

INDEX.JSX

```

{% raw %}
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    calendarInstance;
    // skips a month while clicking previous and next icon in month view.
    onNavigate(args) {
        let date = 0;
        if (args.event.currentTarget.classList.contains('e-next')) {
            // increment the month while clicking the next icon
            date = args.date.setMonth(args.date.getMonth() + 1);
        }
    }
}

```

```

        if (args.event.currentTarget.classList.contains('e-prev')) {
            // decrement the month while clicking the previous icon
            date = args.date.setMonth(args.date.getMonth() - 1);
        }
        if (args.view === 'month') {
            this.calendarInstance.navigateTo('Month', new Date(date));
        }
    }
    render() {
        return (<CalendarComponent navigated={this.onNavigate =
this.onNavigate.bind(this)} ref={(scope) => { this.calendarInstance = scope;
}}/>);
    }
}
ReactDOM.render(<App />, document.getElementById('element'));
{% endraw %}

```

INDEX.TSX

```

{% raw %}
// import the calendarcomponent
import { Calendar, CalendarComponent, NavigatedEventArgs } from
'@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    public calendarInstance: Calendar;
    // skips a month while clicking previous and next icon in month view.
    public onNavigate(args: NavigatedEventArgs) {
        let date: number = 0;
        if (((args.event as KeyboardEvent | MouseEvent |
Event).currentTarget as HTMLElement).classList.contains('e-next')) {
            // increment the month while clicking the next icon
            date = (args.date as Date).setMonth((args.date as
Date).getMonth() + 1);
        }
        if (((args.event as KeyboardEvent | MouseEvent |
Event).currentTarget as HTMLElement).classList.contains('e-prev')) {
            // decrement the month while clicking the previous icon
            date = (args.date as Date).setMonth((args.date as
Date).getMonth() - 1);
        }
        if (args.view === 'month') {
            this.calendarInstance.navigateTo('Month', new Date(date));
        }
    }
    public render() {
        return (
            <CalendarComponent navigated={this.onNavigate =
this.onNavigate.bind(this)} ref={(scope) => {(this.calendarInstance as
Calendar | null) = scope}} />
        );
    }
}
ReactDOM.render(<App />, document.getElementById('element'));
{% endraw %}

```

Render the calendar with week numbers in React Calendar component

You can enable the `weekNumber` in Calendar by using the [weekNumber](#)

property.

INDEX.JSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  render() {
    return <CalendarComponent id="calendar" weekNumber={true}/>;
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
  public render() {
    return <CalendarComponent id="calendar" weekNumber={true} />
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

Change the first day of week in React Calendar component

The Calendar provides an option to change the first day of the week by using the [firstDayOfWeek](#) property. Day of the week starts from 0(Sunday) to 6(Saturday).

By default, the first day of week is based on culture specific.

The following example demonstrates the Calendar with `Tuesday` as first day of the week.

INDEX.JSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  weekstart = 2;
  render() {
    return <CalendarComponent id="calendar"
firstDayOfWeek={this.weekstart}/>;
  }
};
;
```

```
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}>, {}> {
    private weekstart:number = 2;
    public render() {
        return <CalendarComponent id="calendar"
firstDayOfWeek={this.weekstart} />
    }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

Customize the calendar day header in React Calendar component

You can change the format of the day that to be displayed in header using [dayHeaderFormat](#) property. By default, the format is **Short**.

You can find the possible formats on below.

| Name | Description |
|-------------|--|
| ----- ----- | |
| Short | Sets the short format of day name (like Su) in day header. |
| Narrow | Sets the single character of day name (like S) in day header. |
| Abbreviated | Sets the min format of day name (like Sun) in day header. |
| Wide | Sets the long format of day name (like Sunday) in day header. |

INDEX.JSX

```
{% raw %}
// import the calendarcomponent
import { CalendarComponent } from '@syncfusion/ej2-react-calendars';
import { DropDownListComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
    calendarObj;
    floatLabelObj;
    floatData;
    fields;
    value = 'Short';
    constructor(props) {
        super(props);
        this.floatData = [
            { Id: 'Short', Label: 'Short' },
            { Id: 'Narrow', Label: 'Narrow' },
            { Id: 'Abbreviated', Label: 'Abbreviated' },
            { Id: 'Wide', Label: 'Wide' }
        ];
    }
};
```

```

        this.fields = { text: 'Label', value: 'Id' };
    }
    formatHandler(args) {
        this.calendarObj.dayHeaderFormat = args.value;
    }
    render() {
        return (<div id="container">
            <div id="calendar">
                <CalendarComponent ref={ (calendar) => this.calendarObj =
calendar} dayHeaderFormat="Short"/>
            </div>
            <div id="format">
                <label class="custom-input-label">Header Format
Types</label>
                <DropDownListComponent id="select" value={this.value}
dataSource={this.floatData} ref={ (dropdownlist) => { this.floatLabelObj =
dropdownlist; }} fields={this.fields} change={this.formatHandler.bind(this)}
placeholder="Select float type"/>
            </div>
        </div>);
    }
}

export default class App extends React.Component<{}, {}> {
    public calendarObj: CalendarComponent;
    public floatLabelObj: DropDownListComponent;
    private floatData: { [key: string]: Object }[];
    private fields: object;
    private value: string = 'Short';
    constructor(props: {}) {
        super(props);
        this.floatData = [
            { Id: 'Short', Label: 'Short' },
            { Id: 'Narrow', Label: 'Narrow' },
            { Id: 'Abbreviated', Label: 'Abbreviated' },
            { Id: 'Wide', Label: 'Wide' }
        ];
        this.fields = { text: 'Label', value: 'Id' };
    }

    private formatHandler(args: any): void {
        this.calendarObj.dayHeaderFormat = args.value;
    }

    public render(): JSX.Element {
        return (
            <div id="container">

```

```

        <div id="calendar">
            <CalendarComponent ref={(calendar) => this.calendarObj =
calendar} dayHeaderFormat="Short" />
        </div>
        <div id="format">
            <label class="custom-input-label">Header Format
Types</label>
            <DropDownListComponent id="select" value = {this.value}
dataSource={this.floatData} ref={(dropdownlist) => { this.floatLabelObj =
dropdownlist }} fields={this.fields} change={this.formatHandler.bind(this)}
placeholder="Select float type" />
        </div>
    </div>
    );
}
};
ReactDOM.render(<App />, document.getElementById('element'));
{% endraw %}

```

Card

Getting Started

This section explains how to create a simple **Card** using Styles, and how to configure the structure for the header section, Horizontal, action buttons, content section.

Dependencies

The Card Component is pure CSS component so no specific dependencies to render the card.

Setup for Local Development

You can use [create-react-app](#) to setup the applications. To install `create-react-app` run the following command.

`

```
npm install -g create-react-app
```

`

- To setup basic `React` sample use following commands.

using TSX

`

```
create-react-app quickstart --scripts-version=react-scripts-ts
```

```
cd quickstart
```

`

using JSX

`

```
create-react-app quickstart
```

```
cd quickstart
```

Adding Syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](https://www.npmjs.com) public registry.

Install the below required dependency package in order to use the **Card** component in your application.

```
`bash
```

```
npm install @syncfusion/ej2-layouts --save
```

- The Card CSS files are available in the **ej2-layouts** package folder. This can be referenced in your application using the following code.

```
[src/styles/styles.css]
```

```
`css
```

```
@import '../node_modules/@syncfusion/ej2-layouts/styles/material.css';
```

Adding a simple Card

- Add the HTML **div** element with **e-card** class into your **index.html**.

```
[src/index.html]
```

```
<div className = "e-card">
```

```
Sample Card
```

```
</div>
```

Adding a header to the card

You can create cards with a header in a specific structure. For adding header you need to create **div** element and add **e-card-header** class.

- You can include heading inside the card header by adding an **div** element with **e-card-header-caption** class, and also content will be added by adding element with **e-card-content**. For detailed information, refer to the [Header and Content](#).

```
<div class = "e-card"> --> Root Element
```

```
<div class="e-card-header"> --> Root Header Element
```

```
<div class="e-card-header-caption"> --> Root Heading Element
```

```
<div class="e-card-header-title"></div> --> Heading Title Element
```

```

</div>
<div class="e-card-content"></div>    --> Card content Element
</div>
</div>
`

```

- Now, run the application in the browser using the following command.

```

`
npm start
`

```

Output will be as follows:

[Class-component]

- [How to add a header and content](#)

Header content in React Card component

Header

The Card can be created with header title, sub title and images. For adding header you need to create `div` element with the class `e-card-header` added.

Card provides below elements and corresponding class definitions to include header.

Elements | Description

`e-card-header-caption` | To group the title and subtitle within the header which acts as wrapper.

`e-card-header-title` | Main title text with in the header.

`e-card-sub-title` | A sub-title within the header.

`e-card-header-image` | To include heading image within the header.

`e-card-corner` | To add rounded corner for the image.

Title and Subtitle

For adding header to the Card , you need to create wrapper `div` element with `e-card-header-caption` class.

- Place the `div` element with `e-card-header-title` class inside the header caption for adding main title.
- Place the `div` element with `e-card-sub-title` class inside the header caption element for adding sub-title.

Image

Card header has an option for adding images in the header. It is aligned with either before or after the header based on the HTML element positioned in the header structure.

- The header image can be added by creating a `div` element with `e-card-header-image` class which can be placed before or after the header caption wrapper element.

Content

Content in Card holds texts, images, links and all possible HTML elements. Its adaptable within the Card root element.

- Create a `div` element with the class `e-card-content`.
- Place content `div` element in the Card root element or within any Card inner elements.

[Class-component]

Card image in React Card component

Images

The Card supports to include images within the elements, you can add image as direct element anywhere inside card root by adding the `e-card-image` class to `div` element. Using the class defined, you can write CSS styles to load images to that element.

By default, card images occupies full width of its parent element.

,

```

<div className = "e-card">
  <div className="e-card-image">
  </div>
</div>

```

,

Title

Card image is supported to include a title or caption for the image. By default, Title is placed over the image on left-bottom position with overlay.

,

```

<div className = "e-card">
  <div className="e-card-image">
    <div className="e-card-title"></div>
  </div>
</div>

```

,

Divider

Divider used to separate the elements inside the card. You can add divider inside the card elements to separate it.

- Place the `div` element with `e-card-separator` class inside the card element for adding a divider.

[Class-component]

- [How to customize the card image title position](#)

Action buttons in React Card component

You can include Action buttons within the Card and customize them. Action button is a `div` element with `e-card-actions` class followed by button tag or anchor tag within the card root element.

- For adding action buttons you can create button or anchor tag with `e-card-btn` class within the card action element.

```

,
<div className = "e-card">
<div className="e-card-actions">
<button className="e-card-btn"></button>
<a href="#"></a>
</div>
</div>
,

```

Vertical

By default, action buttons positioned in horizontal alignment , and also it can be aligned to show in vertical alignment by adding `e-card-vertical` class.

```

,
<div className = "e-card">
<div className="e-card-actions e-card-vertical">
<button className="e-card-btn">More</button>

```

```
<a href="#">Share</a>
```

```
</div>
```

```
</div>
```

```
,
```

- [How to integrate other component inside the card](#)

Horizontal in React Card component

By default, all the card elements are aligned vertically one after the other as in the DOM.

You can achieve the element to align horizontally as well by adding the class `e-card-horizontal` in the root card element.

Stacked cards

- An horizontally aligned card can push a specific column to align vertical using `e-card-stacked` class.

This will align the stacked section vertically aligned differentiating from horizontal layout.

Class | Description

`e-card-horizontal` | To align card elements horizontally.

`e-card-stacked` | To align elements vertically within the horizontal layout.

```

<div className="e-card e-card-horizontal">
   --> Aligned in horizontal
  <div className="e-card-stacked"> --> Aligned in horizontal
  // Inside the element all are aligned vertical directions
</div>
</div>

```

```

Style in React Card component

The following content provides the exact CSS structure that can be used to modify the control's appearance based on user preference.

Customizing the card

Use the following CSS to customize the card properties.

```
`css
.e-card {
background-color: aqua;
padding-left: 20px;
margin-bottom: 20px;
}
`
```

Customizing the Header element

Use the following CSS to customize the Header element properties.

```
`css
.e-card .e-card-header {
font-family: cursive;
font-style: italic;
}
`
```

Customizing the card content

Use the following CSS to customize the card content properties.

```
`css
.e-card .e-card-content {
font-size: 20px;
}
```

```
color: gray;
line-height: initial;
font-weight: normal;
}
`
```

Divider used to separate the elements inside the card

Use the following CSS to customize the Divider used to separate the elements inside the card properties.

```
`css
.e-card .e-card-separator {
padding-bottom: 30px;
}
`
```

Including image within card element

Use the following CSS to Include image within card element.

```
`css
.e-card .e-card-image {
background-image: url(images.png);
background-color: yellow;
height: 160px;
}
`
```

Including a title or caption for the image

Use the following CSS to Include a title or caption for the image.

```
`css
.e-card .e-card-image .e-card-title {
font-family: cursive;
font-style: italic;
}
`
```

To include heading image within the header

Use the following CSS to Include heading image within the header.

```
`css
.e-card .e-card-header .e-card-header-image {
height: 48px;
```

```
width: 48px;  
}
```

```
,
```

Customizing the Header main title

Use the following CSS to Customize the Header main title.

```
`css  
  
.e-card .e-card-header .e-card-header-caption .e-card-header-title {  
font-size: large;  
color: aquamarine;  
}  
,
```

Customizing the Header subtitle

Use the following CSS to Customize the Header subtitle.

```
`css  
  
.e-card .e-card-header .e-card-header-caption .e-card-sub-title {  
font-size: 20px;  
font-variant: all-petite-caps;  
}  
,
```

Including action buttons or anchor tags

Use the following CSS to Include action buttons or anchor tags.

```
`css  
  
.e-card .e-card-actions .e-card-btn {  
padding-left: 20px;  
background-color: wheat;  
}  
,
```

To align card elements horizontally

Use the following CSS to align card elements horizontally.

```
`css  
  
.e-card .e-card-horizontal {  
margin: auto;  
width: inherit;  
}
```

To align elements vertically within the horizontal layout

Use the following CSS to align elements vertically within the horizontal layout.

```
`css
.e-card .e-card-horizontal .e-card-stacked {
justify-content: flex-start;
margin: initial;
}
```

How To

Customize the card image title position in React Card component

Card Image titles are placed as always Bottom-Left Corner only, we can manually customize to placing titles anywhere over the image by adding styles.

[Class-component]

INDEX.JSX

```
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
import { DropDownListComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class ReactApp extends React.Component {
  fields = { text: 'pos', value: 'id' };
  position = [
    { id: 'bottom-left', pos: 'BottomLeft' },
    { id: 'bottom-right', pos: 'BottomRight' },
    { id: 'top-left', pos: 'TopLeft' },
    { id: 'top-right', pos: 'TopRight' }
  ];
  constructor(props) {
    super(props);
    this.state = {
      isHorizontal: false,
      positionClass: 'e-card-bottom-left'
    };
  }
  onPositionChange(e) {
    this.setState({
      positionClass: 'e-card-' + e.value
    });
  }
  onDirectionChange(e) {
    const value = (e.checked) ? true : false;
    this.setState({ isHorizontal: value });
  }
  render() {
    return (
      <div>
        <br />
        <div className="row">
```

```

                        <div className={'e-card-title ' +
`${status.positionClass}`}>Node.Js </div>
                    </div>
                    <div className="e-card-content">
                        Node.js is a wildly popular platform for writing web
                        applications that has revolutionized web development in many ways, enjoying
                        support across the open source community as well as industry.
                    </div>
                </div>
            </div>
        </div>
    );
}

```

```
}ReactDOM.render(<ReactApp />, document.getElementById("element"));
```

Integrate other component inside the card in React Card component

You can integrate any component inside the card element. Here ListView component is placed inside the card for showcasing the To-Do list.

[Class-component]

APP.JSX

APP.TSX

INDEX.JSX

```
import { ListViewComponent } from '@syncfusion/ej2-react-lists';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class ReactApp extends React.Component {
  fields = { text: 'todoList' };
  // define the array of JSON
  todoList = [
    { todoList: 'Pay Bills' },
    { todoList: 'Call Chris' },
    { todoList: 'Meet Andrew' },
    { todoList: 'Visit Manager' },
    { todoList: 'Customer Meeting' },
  ];
  render() {
    return (
      <div>
        <div className="e-card" id="basic">
          <div className="e-card-title">To-Do List</div>
          <div className="e-card-separator"/>
          <div className="e-card-content">
            <ListViewComponent dataSource={this.todoList}
              fields={this.fields} showCheckBox={true}/>
          </div>
        </div>
      </div>
    );
  }
}
ReactDOM.render(<ReactApp />, document.getElementById("element"));
```

INDEX.TSX

```
import { ListViewComponent } from '@syncfusion/ej2-react-lists';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class ReactApp extends React.Component<{}, {}> {
  public fields = { text: 'todoList' };
}
```

```
// define the array of JSON
public todoList: any = [
  { todoList: 'Pay Bills' },
  { todoList: 'Call Chris' },
  { todoList: 'Meet Andrew' },
  { todoList: 'Visit Manager' },
  { todoList: 'Customer Meeting' },
];
public render() {
  return (
    <div>
      <div className="e-card" id="basic">
        <div className="e-card-title">To-Do List</div>
        <div className="e-card-separator" />
        <div className="e-card-content">
          <ListViewComponent dataSource={this.todoList}
fields={this.fields} showCheckBox={true} />
        </div>
      </div>
    </div>
  );
}
}
ReactDOM.render(<ReactApp />, document.getElementById("element"));
```

[Functional-component]

APP.JSX

APP.TSX

INDEX.JSX

                    <ListViewComponent dataSource={todoList} fields={fields}
showCheckBox={true} />
                </div>
            </div>
        </div>
    );
}
ReactDOM.render(<ReactApp />, document.getElementById("element"));

```

Carousel

Getting Started

This section explains how to create a simple [React CarouselLink to the Video](#), and configure its available functionalities in React.

To get started quickly with React Carousel component, you can check out this video:

Dependencies

The following list of dependencies are required to use the Carousel component in your application.

```
`javascript
```

```
|-- @syncfusion/ej2-react-navigations
```

```
|-- @syncfusion/ej2-react-base
```

```
|-- @syncfusion/ej2-navigations
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-buttons
`
```

Setup your development environment

To set-up a React application, choose any of the following ways. The best and easiest way is to use the [create-react-app](#). It sets up your development environment in JavaScript and improvise your application for production. Refer to the [installation instructions](#) of `create-react-app`.

```
`bash
npx create-react-app my-app
cd my-app
npm start
`
```

or

```
`bash
yarn create react-app my-app
cd my-app
yarn start
`
```

To set-up a React application in `TypeScript` environment, run the following command.

```
`bash
npx create-react-app my-app --template typescript
cd my-app
npm start
`
```

Besides using the [npm](#) package runner tool, also create an application from the `npm init`. To begin with the `npm init`, upgrade the `npm` version to `npm 6+`.

```
`bash
npm init react-app my-app
cd my-app
npm start
`
```

Adding Syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](#) public registry.

To install `Carousel` component, use the following command

```
`bash
npm install @syncfusion/ej2-react-navigations --save
`
```

The above command installs [Carousel dependencies](#)

which are required to render the component in the `React` environment.

Adding Style sheet to the Application

Add `Carousel` component's styles as given below in `App.css`.

```
`css
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
`
```

Add Carousel to the project

Now, you can create `Carousel` component in the application. Add `Carousel` component in `src/App.ts` file using the following code snippet.

```
`ts
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective } from "@syncfusion/ej2-react-navigations";
import * as React from "react";
const App = () => {
  return (<div className='control-container'>
    <CarouselComponent>
      <CarouselItemsDirective>
        <CarouselItemDirective template='<figure class="img-container"><figcaption class="img-caption">Cardinal</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-container"><figcaption class="img-caption">Kingfisher</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-container"><figcaption class="img-caption">Keel-billed-
toucan</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-container"><img
src="https://ej2.syncfusion.com/products/images/carousel/kaohsiung.png" alt="yellow-warbler"
`
```

```

style="height:100%;width:100%;" /><figcaption class="img-caption">Yellow-
warbler</figcaption></figure>' />
<CarouselItemDirective template='<figure class="img-container"><figcaption class="img-caption">Bee-eater</figcaption></figure>' />
</CarouselItemsDirective>
</CarouselComponent>
</div>);
}
export default App;
`

```

Run the application

Run the application in the browser using the following command:

```
npm start
```

Note: You can also explore our [React Carousel example](#) that shows you how to configure the Carousel in React.

Populating items in React Carousel component

In the Carousel, slides can be rendered in two ways as follows,

- Populating items using carousel item
- Populating Items using data source

Populating items using carousel item

When rendering the Carousel component using items binding, you can assign templates for each item separately or assign a common template to each item. You can also customize the slide transition interval for each item separately. The following example code depicts the functionality as item property binding.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (<div className='control-container'>
    <CarouselComponent>
      <CarouselItemsDirective>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
  </CarouselItemsDirective>
</CarouselComponent>
</div>;
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />

```

```

        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
</CarouselComponent>
</div>
);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Populating Items using data source

When rendering the Carousel component using data binding, you can assign a common template only for all items using the [itemTemplate](#) property. You cannot set the interval for each item. The following example code depicts the functionality as data binding.

INDEX.JSX

```

import { CarouselComponent } from "@syncfusion/ej2-react-navigations";
import { useMemo } from "react";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    const productItems = useMemo(() => [
        { ID: 1, Name: "Cardinal", imageName: 'cardinal' },
        { ID: 2, Name: "Kingfisher", imageName: 'hunei' },
        { ID: 3, Name: "Keel-billed-toucan", imageName: 'costa-rica' },
        { ID: 4, Name: "Yellow-warbler", imageName: 'kaohsiung' },
        { ID: 5, Name: "Bee-eater", imageName: 'bee-eater' }
    ], []);
    const itemTemplate = (props) => {
        return <figure className="img-container"><img
src={"https://ej2.syncfusion.com/products/images/carousel/" +
props.imageName + ".png"} alt={props.Name} style={{ height: "100%", width:
"100%" }} /><figcaption className="img-
caption">{props.Name}</figcaption></figure>;
    }
    return (
        <div className='control-container'>
            <CarouselComponent dataSource={productItems}
            itemTemplate={itemTemplate}></CarouselComponent>
        </div>
    );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```
import { CarouselComponent } from "@syncfusion/ej2-react-navigations";
import { useMemo } from "react";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  const productItems: Record<string, string | number>[] = useMemo(() => [
    { ID: 1, Name: "Cardinal", imageName: 'cardinal' },
    { ID: 2, Name: "Kingfisher", imageName: 'hunei' },
    { ID: 3, Name: "Keel-billed-toucan", imageName: 'costa-rica' },
    { ID: 4, Name: "Yellow-warbler", imageName: 'kaohsiung' },
    { ID: 5, Name: "Bee-eater", imageName: 'bee-eater' }
  ], []);
  const itemTemplate = (props: any): JSX.Element => {
    return <figure className="img-container"><img
      src={"https://ej2.syncfusion.com/products/images/carousel/" +
        props.imageName + ".png"} alt={props.Name} style={{ height: "100%", width:
          "100%" }} /><figcaption className="img-
        caption">{props.Name}</figcaption></figure>;
  }
  return (
    <div className='control-container'>
      <CarouselComponent dataSource={productItems}
        itemTemplate={itemTemplate}></CarouselComponent>
    </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

Selection

The Carousel items will be populated from the first index of the Carousel items and can be customized using the following ways,

- Select an item using the property.
- Select an item using the method.

Select an item using the property

Using the [selectedIndex](#) property of the Carousel component, you can set the slide to be populated at the time of initial rendering else you can switch to the particular slide item.

INDEX.JSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (<div className='control-container'>
    <CarouselComponent selectedIndex={3}>
      <CarouselItemsDirective>
        <CarouselItemDirective template='<figure class="img-
        container"><figcaption class="img-
          caption">Cardinal</figcaption></figure>' />
      </CarouselItemsDirective>
    </CarouselComponent>
  );
}
```

```

        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
</CarouselComponent>
</div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    return (
        <div className='control-container'>
            <CarouselComponent selectedIndex={3}>
                <CarouselItemsDirective>
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
</CarouselComponent>
</div>
);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Select an item using the method

Using the [prev](#) or [next](#) public method of the Carousel component, you can switch the current populating slide to a previous or next slide.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import { ButtonComponent } from "@syncfusion/ej2-react-buttons";
import { useRef } from "react";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    const carouselRef = useRef<CarouselComponent>(null);
    const prevBtnClick = () => {
        carouselRef.current.prev();
    }
    const nextBtnClick = () => {
        carouselRef.current.next();
    }
    return (
        <div>
            <ButtonComponent className="e-btn" cssClass="e-info"
onClick={prevBtnClick}>Previous</ButtonComponent>
            <ButtonComponent className="e-btn" cssClass="e-info"
onClick={nextBtnClick}>Next</ButtonComponent>
            <div className='control-container'>
                <CarouselComponent ref={carouselRef}>
                    <CarouselItemsDirective>
                        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
                        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
                        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
  </CarouselComponent>
</div>
</div>
);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import { ButtonComponent } from "@syncfusion/ej2-react-buttons";
import { useRef } from "react";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  const carouselRef = useRef<CarouselComponent>(null);
  const prevBtnClick = (): void => {
    carouselRef.current.prev();
  }
  const nextBtnClick = (): void => {
    carouselRef.current.next();
  }
  return (
    <div>
      <ButtonComponent className="e-btn" cssClass="e-info"
onClick={prevBtnClick}>Previous</ButtonComponent>
      <ButtonComponent className="e-btn" cssClass="e-info"
onClick={nextBtnClick}>Next</ButtonComponent>
      <div className='control-container'>
        <CarouselComponent ref={carouselRef}>
          <CarouselItemsDirective>
            <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
            <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
  </CarouselComponent>
</div>
</div>
);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Partial visible slides

The Carousel component supports to show one complete slide and a partial view of adjacent (previous and next) slides at the same time. You can enable or disable the partial slides using the [partialVisible](#) property.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (<div className='control-container'>
    <CarouselComponent partialVisible={true}>
      <CarouselItemsDirective>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />

```

```

        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
</CarouselComponent>
</div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    return (
        <div className='control-container'>
            <CarouselComponent partialVisible={true}>
                <CarouselItemsDirective>
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
                </CarouselItemsDirective>
            </CarouselComponent>
        </div>
    );
}

```

```

    );
  }
  const root = ReactDOM.createRoot(document.getElementById('element'));
  root.render(<App />);

```

Slide animation only applicable if the `partialVisible` is enabled.

The last slide will be displayed as a partial slide at the initial rendering when the `loop` and `partialVisible` properties are enabled.

The previous slide is not displayed at the initial rendering when the `loop` is disabled.

The following example code depicts the functionality of `partialVisible` and without `loop` functionalities.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent partialVisible={true} loop={false}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent partialVisible={true} loop={false}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-

Navigators and indicators in React Carousel component

The navigators and indicators are used to transition the slides manually.

To have a glance at how to customize the React Carousel component's navigator buttons, play button, and indicators, watch this video:

Navigators

Show or hide previous and next button

In navigators, the previous and next slide transition buttons are used to perform slide transitions manually. You can show/hide the navigators using the [buttonsVisibility](#) property. The possible property values are as follows:

- **Hidden** – the navigator's buttons are not visible.
- **Visible** – the navigator's buttons are visible.
- **VisibleOnHover** – the navigator's buttons are visible only when hovering over the carousel.

The following example depicts the code to show/hide the navigators in the carousel.

INDEX.JSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  const showButtons = "Visible";
  return (
    <div className='control-container'>
      <CarouselComponent buttonsVisibility={showButtons}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

INDEX.TSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective,
CarouselButtonVisibility } from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  const showButtons: CarouselButtonVisibility = "Visible";
  return (
    <div className='control-container'>
      <CarouselComponent buttonsVisibility={showButtons}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

Show previous and next button on hover

In the carousel, you can show the previous and next buttons only on mouse hover using the [buttonsVisibility](#) property. The following example depicts the code to show the navigators on mouse hover in the carousel.

INDEX.JSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
```

```

import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  const showButtons = "VisibleOnHover";
  return (<div className='control-container'>
    <CarouselComponent buttonsVisibility={showButtons}>
      <CarouselItemsDirective>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
      </CarouselItemsDirective>
    </CarouselComponent>
  </div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective,
CarouselButtonVisibility } from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  const showButtons: CarouselButtonVisibility = "VisibleOnHover";
  return (
    <div className='control-container'>
      <CarouselComponent buttonsVisibility={showButtons}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />

```

```

        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
</CarouselComponent>
</div>
);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Previous and next button template

Template options are provided to customize the previous button using [previousButtonTemplate](#) and the next button using [nextButtonTemplate](#). The following example depicts the code for applying the template to previous and next buttons in the carousel.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import { ButtonComponent } from "@syncfusion/ej2-react-buttons";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    const previousButtonTemplate = (props) => {
        return (<ButtonComponent className="e-btn" cssClass="e-flat e-round"
iconCss="e-icons e-chevron-left-double" />);
    }
    const nextButtonTemplate = (props) => {
        return (<ButtonComponent className="e-btn" cssClass="e-flat e-round"
iconCss="e-icons e-chevron-right-double" />);
    }
    return (<div className='control-container'>
        <CarouselComponent previousButtonTemplate={previousButtonTemplate}
nextButtonTemplate={nextButtonTemplate}>
            <CarouselItemsDirective>

```

Indicators

Show or hide indicators

In indicators, the total slides and current slide state have been depicted. You can show/hide the indicators using the [showIndicators](#) property. The following example depicts the code to show/hide the indicators in the carousel.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    return (<div className='control-container'>
        <CarouselComponent showIndicators={true}>
            <CarouselItemsDirective>
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
            </CarouselItemsDirective>
        </CarouselComponent>
    </div>);
}

```

```

        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
</CarouselComponent>
</div>;
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    return (
        <div className='control-container'>
            <CarouselComponent showIndicators={true}>
                <CarouselItemsDirective>
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
                </CarouselItemsDirective>
            </CarouselComponent>
        </div>
    );
}

```

```
);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

Indicators Template

Template option is provided to customize the indicators by using the [indicatorTemplate](#) property. The following example depicts the code for applying a template to indicators in the carousel.

INDEX.JSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import { useMemo } from "react";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  const indicatorTemplate = useMemo(() => {
    return (props) => <div className="indicator" indicator-
index={props.index}></div>;
  }, []);
  return (
    <div className='control-container'>
      <CarouselComponent indicatorsTemplate={indicatorTemplate}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
```

```
root.render(<App />);
```

INDEX.TSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import { useMemo } from "react";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    const indicatorTemplate = useMemo(() => {
        return (props: any) => <div className="indicator" indicator-
index={props.index}></div>;
    }, []);
    return (
        <div className='control-container'>
            <CarouselComponent indicatorsTemplate={indicatorTemplate}>
                <CarouselItemsDirective>
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
                </CarouselItemsDirective>
            </CarouselComponent>
        </div>
    );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

INDEX.CSS

```
.control-container {
    height: 360px;
    margin: 0 auto;
```

```

width: 600px;
}
.img-container {
  height: 100%;
  margin: 0;
}
.img-caption {
  color: #fff;
  font-size: 1rem;
  position: absolute;
  bottom: 3rem;
  width: 100%;
  text-align: center;
}
.e-carousel .e-carousel-indicators .e-indicator-bars .e-indicator-bar.e-
template .indicator {
  background-color: #ecec;
  border-radius: 0.25rem;
  cursor: pointer;
  height: 0.5rem;
  margin: 0.5rem;
  width: 1.5rem;
}
.e-carousel .e-carousel-indicators .e-indicator-bars .e-indicator-bar.e-
active .indicator {
  background-color: #3c78ef;
}

```

Showing preview of slide in indicator

You can customize the indicators by showing the preview image of each slide using the [indicatorTemplate](#) property. The following example depicts the code for showing the preview image using a template for indicators in the carousel.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import { useState } from "react";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  const [slides] = useState(["Slide 1", "Slide 2", "Slide 3", "Slide 4",
"Slide 5"]);
  const getContent = (index) => {
    return slides[index];
  }
  const indicatorTemplate = (props) => {
    return (
      <div className="indicator" indicator-index={props.index}>
        <div className="preview-content">{getContent(props.index)}</div>
      </div>
    );
  }
  return (
    <div className="control-container">
      <CarouselComponent indicatorsTemplate={indicatorTemplate}>

```

```

        <CarouselItemsDirective>
          <CarouselItemDirective template="<div class='slide-content'>Slide
1</div>" />
          <CarouselItemDirective template="<div class='slide-content'>Slide
2</div>" />
          <CarouselItemDirective template="<div class='slide-content'>Slide
3</div>" />
          <CarouselItemDirective template="<div class='slide-content'>Slide
4</div>" />
          <CarouselItemDirective template="<div class='slide-content'>Slide
5</div>" />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import { useState } from "react";

```

Indicators Types

Choose different types of indicators available using the [indicatorsType](#) property. The indicator types are categorized as follows:

- [Default Indicator](#)
- [Dynamic Indicator](#)
- [Fraction Indicator](#)
- [Progress Indicator](#)

Default Indicator

A default indicator in a carousel is a set of dots that indicate the current position of the slide in the carousel. The Default indicator can be achieved by setting the [indicatorsType](#) to **Default**.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent indicatorsType="Default">
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><img
src="https://ej2.syncfusion.com/products/images/carousel/kaohsiung.png"

```

```

alt="yellow-warbler" style="height:100%;width:100%;" /><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
</CarouselComponent>
</div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    return (
        <div className='control-container'>
            <CarouselComponent indicatorsType="Default">
                <CarouselItemsDirective>
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
                </CarouselItemsDirective>
            </CarouselComponent>
        </div>
    );
}
const root = ReactDOM.createRoot(document.getElementById('element'));

```

```
root.render(<App />);
```

Dynamic Indicator

A dynamic indicator in a carousel provides visual cues or markers that dynamically change or update to indicate the current position. The Dynamic indicator can be achieved by setting the [indicatorsType](#) to **Dynamic**.

INDEX.JSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
  from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (<div className='control-container'>
    <CarouselComponent indicatorsType="Dynamic">
      <CarouselItemsDirective>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>'>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>'>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>'>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>'>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>'>
      </CarouselItemsDirective>
    </CarouselComponent>
  </div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

INDEX.TSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
  from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
```

```

const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent indicatorsType="Dynamic">
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Fraction Indicator

The fraction indicator type displays the current slide index and total slide count as a fraction. The Fraction indicator can be achieved by setting the [indicatorsType](#) to **Fraction**.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (<div className='control-container'>
    <CarouselComponent indicatorsType="Fraction">
      <CarouselItemsDirective>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
  </CarouselItemsDirective>
</CarouselComponent>
</div>;
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent indicatorsType="Fraction">
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />

```

```

        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
</CarouselComponent>
</div>
);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Progress Indicator

The Progress Indicator type displays the current slide as a progress bar. The Progress indicator can be achieved by setting the [indicatorsType](#) to **Progress**.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    return (<div className='control-container'>
        <CarouselComponent indicatorsType="Progress">
            <CarouselItemsDirective>
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
  </CarouselComponent>
</div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

INDEX.TSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent indicatorsType="Progress">
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

Play button

Show or hide the play button

In the carousel, [autoPlay](#) actions have been controlled by using the [showPlayButton](#) property in the user interface. When you enable this property, the slide transitions are controlled using this play and pause button. This property depends on the [buttonsVisibility](#) property. The following example depicts the code to show the play button in the carousel.

INDEX.JSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    return (<div className='control-container'>
        <CarouselComponent showPlayButton={true}>
            <CarouselItemsDirective>
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
            </CarouselItemsDirective>
        </CarouselComponent>
    </div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

INDEX.TSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
```

```

const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent showPlayButton={true}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Play button template

Template option is provided to customize the play button by using the [playButtonTemplate](#) property. The following example depicts the code for applying a template to play Button in the carousel.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import { ButtonComponent } from "@syncfusion/ej2-react-buttons";
import * as React from "react";
import { useState } from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  const [buttonContent, setButtonContent] = useState('Pause');
  const [autoPlay, setAutoPlay] = useState(true);
  const btnClick = () => {
    if (autoPlay) {
      setButtonContent('Play');
    }
  }
}

```

```

        setAutoPlay(false);
    } else {
        setButtonContent('Pause');
        setAutoPlay(true);
    }
}

const playButtonTemplate = (props) => {
    return (
        <ButtonComponent className="e-btn" cssClass="e-info playBtn"
content={buttonContent} onClick={btnClick} />
    );
}
return (
    <div className='control-container'>
        <CarouselComponent showPlayButton={true}
playButtonTemplate={playButtonTemplate} autoPlay={autoPlay}>
            <CarouselItemsDirective>
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
            </CarouselItemsDirective>
        </CarouselComponent>
    </div>
    );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import { ButtonComponent } from "@syncfusion/ej2-react-buttons";

```

```

import * as React from "react";
import { useState } from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  const [buttonContent, setButtonContent] = useState<string>('Pause');
  const [autoPlay, setAutoPlay] = useState<boolean>(true);
  const btnClick = () => {
    if (autoPlay) {
      setButtonContent('Play');
      setAutoPlay(false);
    } else {
      setButtonContent('Pause');
      setAutoPlay(true);
    }
  }

  const playButtonTemplate = (props: any): JSX.Element => {
    return (
      <ButtonComponent className="e-btn" cssClass="e-info playBtn"
content={buttonContent} onClick={btnClick} />
    );
  }

  return (
    <div className='control-container'>
      <CarouselComponent showPlayButton={true}
playButtonTemplate={playButtonTemplate} autoPlay={autoPlay}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>
  );
}

```

```
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

Animations and transitions in React Carousel component

Animations

Fade animation

In Carousel, two built-in animations are provided for slide transitions. You can disable animation using the [animationEffect](#) property. By default, Slide animation is applied for the transition between slides.

The following demo depicts the example for fade animation,

INDEX.JSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    return (<div className='control-container'>
        <CarouselComponent animationEffect="Fade">
            <CarouselItemsDirective>
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
            </CarouselItemsDirective>
        </CarouselComponent>
    </div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

INDEX.TSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent animationEffect="Fade">
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

Custom animation

In Carousel, you can use customized animation effects for slide transitions using the [Custom](#) option of the [animationEffect](#) property and apply custom animation css via [cssClass](#) property.

The following demo depicts the example for **parallax** custom animation,

INDEX.JSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (<div className='control-container'>
```

```

        <CarouselComponent animationEffect="Custom" cssClass="parallax">
          <CarouselItemsDirective>
            <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
            <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
            <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
            <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
            <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
          </CarouselItemsDirective>
        </CarouselComponent>
      </div>;
    }
    const root = ReactDOM.createRoot(document.getElementById('element'));
    root.render(<App />);

```

INDEX.TSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent animationEffect= "Custom" cssClass= "parallax">
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />

```

```

        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
  </CarouselComponent>
</div>
);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Intervals between slides

Using the items property, you can set different intervals for each item to transition between slides. The default interval is 5000 ms (5 seconds). The following example depicts the code for setting the different intervals between each item.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective, }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (<div className='control-container'>
    <CarouselComponent>
      <CarouselItemsDirective>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' interval={3000}/>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' interval={1000}/>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>'
interval={2000}/>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' interval={5000}/>
    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' interval={6000}/>
    </CarouselItemsDirective>
  </CarouselComponent>
</div>;
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```

import {
  CarouselComponent,
  CarouselItemsDirective,
  CarouselItemDirective,
} from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' interval={3000} />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' interval={1000} />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>'
interval={2000} />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' interval={5000} />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' interval={6000} />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>
  );
};

```

```

    </CarouselComponent>
  </div>
);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Note: Interval property can accept value in terms of milliseconds.

Auto play slides

In the carousel, all slides transitions are performed continuously after the specified or default intervals. You can enable or disable the auto slide transition using the [autoPlay](#) property. The following example depicts the code to enable or disable the auto slide transitions.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (<div className='control-container'>
    <CarouselComponent autoPlay={true}>
      <CarouselItemsDirective>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
      </CarouselItemsDirective>
    </CarouselComponent>
  </div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent autoPlay={true}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

Pause on hover

By default, Slide transitions are paused when hovering the mouse pointer over the Carousel element. You can enable or disable this functionality using the [pauseOnHover](#) property.

The following example depicts the code to play the slides when hovering the mouse pointer over the Carousel element.

INDEX.JSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
```

```
import * as ReactDOM from "react-dom";
const App = () => {
  return (<div className='control-container'>
    <CarouselComponent pauseOnHover={false}>
      <CarouselItemsDirective>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
      </CarouselItemsDirective>
    </CarouselComponent>
  </div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

INDEX.TSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent pauseOnHover={false}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
  </CarouselComponent>
</div>
);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Looping slides

In the carousel, slides transitions are repeated continuously when you reach the last slide by default. You can enable or disable the infinite slide transition using the [loop](#) property. The following example depicts the code to enable or disable the infinite slide transitions.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective, }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (<div className='control-container'>
    <CarouselComponent loop={true}>
      <CarouselItemsDirective>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />

```

```

        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
</CarouselComponent>
</div>;
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```

import {
    CarouselComponent,
    CarouselItemsDirective,
    CarouselItemDirective,
} from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    return (
        <div className='control-container'>
            <CarouselComponent loop={true}>
                <CarouselItemsDirective>
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />

container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
                    <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
                </CarouselItemsDirective>
            </CarouselComponent>
        </div>
    );
}

```

```

        </CarouselItemsDirective>
      </CarouselComponent>
    </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Slide changing events

Using the [slideChanging](#) or [slideChanged](#) events of the Carousel component, you can perform sample end customization while the carousel items are switched.

The following demo depicts the example for carousel events,

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective }
from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
const App = () => {
  const onSlideChanging = (args) => {
    console.log(args.currentSlide); // You can customize the slide
    before changing.
  };
  const onSlideChanged = (args) => {
    console.log(args.currentSlide); // You can customize the slide after
    changed.
  };
  return (
    <div className='control-container'>
      <CarouselComponent slideChanging={onSlideChanging}
      slideChanged={onSlideChanged}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
          container"><figcaption class="img-
          caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
          container"><figcaption class="img-
          caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
          container"><figcaption
          class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
          container"><figcaption
          class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
          container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
    </CarouselItemsDirective>
  </CarouselComponent>
</div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

INDEX.TSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective,
SlideChangingEventArgs, SlideChangedEventArgs } from '@syncfusion/ej2-react-
navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
const App = () => {
  const onSlideChanging = (args: SlideChangingEventArgs): void => {
    console.log(args.currentSlide); // You can customize the slide before
    changing.
  }
  const onSlideChanged = (args: SlideChangedEventArgs): void => {
    console.log(args.currentSlide); // You can customize the slide after
    changed.
  }
  return (
    <div className='control-container'>
      <CarouselComponent slideChanging={onSlideChanging}
slideChanged={onSlideChanged}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
        </CarouselItemsDirective>
```

```

    </CarouselComponent>
  </div>
);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Disable touch swiping

In the carousel, you can swipe the carousel slides using touch actions by default. The swipe action can be enabled or disabled using the [enableTouchSwipe](#) property. The following example depicts the code to disable the swipe action for the slide.

INDEX.JSX

```

import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective, }
from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (<div className='control-container'>
    <CarouselComponent enableTouchSwipe={false}>
      <CarouselItemsDirective>
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
        <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
      </CarouselItemsDirective>
    </CarouselComponent>
  </div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

INDEX.TSX

```

import {
  CarouselComponent,
  CarouselItemsDirective,
  CarouselItemDirective,
} from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent enableTouchSwipe={false}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Swipe Modes

In the carousel, the [swipeMode](#) property allows specifying whether the slide transition should occur while performing swiping via touch or mouse. The slide swiping is enabled or disabled using the bitwise operator.

The following are the different swipe modes available in the carousel:

- `CarouselSwipeMode.Touch` - Allows the user to slide the slides using touch actions.
- `CarouselSwipeMode.Mouse` - Allows the user to slide the slides using mouse actions.

- CarouselSwipeMode.Touch & CarouselSwipeMode.Mouse - Allows the user to slide the slides using both touch and mouse actions.
- ~CarouselSwipeMode.Touch & ~CarouselSwipeMode.Mouse - Disables both touch and mouse actions.

INDEX.JSX

```
import { CarouselComponent, CarouselItemsDirective, CarouselItemDirective,
CarouselSwipeMode } from "@syncfusion/ej2-react-navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
const App = () => {
    return (<div className='control-container'>
        <CarouselComponent swipeMode={CarouselSwipeMode.Touch &
CarouselSwipeMode.Mouse}>
            <CarouselItemsDirective>
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
                <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
            </CarouselItemsDirective>
        </CarouselComponent>
    </div>);
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);
```

INDEX.TSX

```
import { CarouselComponent, CarouselItemsDirective,
CarouselItemDirective, CarouselSwipeMode } from "@syncfusion/ej2-react-
navigations";
import * as React from "react";
import * as ReactDOM from "react-dom";
```

```

const App = () => {
  return (
    <div className='control-container'>
      <CarouselComponent swipeMode={CarouselSwipeMode.Touch &
CarouselSwipeMode.Mouse}>
        <CarouselItemsDirective>
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Cardinal</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Kingfisher</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Keel-billed-toucan</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption
class="img-caption">Yellow-warbler</figcaption></figure>' />
          <CarouselItemDirective template='<figure class="img-
container"><figcaption class="img-
caption">Bee-eater</figcaption></figure>' />
        </CarouselItemsDirective>
      </CarouselComponent>
    </div>
  );
}
const root = ReactDOM.createRoot(document.getElementById('element'));
root.render(<App />);

```

Accessibility in React Carousel component

The Carousel component has been designed, keeping in mind the [WAI-ARIA](#) specifications, and applying the WAI-ARIA roles, states and properties along with keyboard support for people who use assistive devices. WAI-ARIA accessibility support is achieved through attributes like `aria-roledescription`, `aria-label`, `aria-current`, `aria-live`, `aria-role` and `aria-hidden`. It provides information about elements in a document for assistive technology. The component implements keyboard navigation support by following the [WAI-ARIA practices](#) and has been tested in major screen readers.

The accessibility compliance for the Carousel component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

| [Section 508](#) Support | |

| Screen Reader Support | |

| Right-To-Left Support | |

| Color Contrast | |

| Mobile Device Support | |

| Keyboard Navigation Support | |

| [Accessibility Checker](#) Validation | |

| [Axe-core](#) Accessibility Validation | |

```
<style>
.post .post-content img {
display: inline-block;
margin: 0.5em 0;
}
</style>

<div> - All
features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>
```

ARIA attributes

The Carousel component is designed by considering [WAI-ARIA](#) standard. Carousel is supported with ARIA Accessibility which is accessible by on-screen readers and other assistive technology devices. The following list of attributes is added to the Carousel.

| Roles and Attributes | Functionalities

Roles and Attributes	Functionalities
aria-roledescription	The role description attribute has been added for the root element (Carousel) and each Carousel slide item (slide).

aria-label	Previous, next and play/pause buttons and all indicator elements.
aria-current	For the active item indicator element, <code>aria-current</code> is set to <code>true</code> .
aria-hidden	For all Carousel elements except the currently visible item, <code>aria-hidden</code> is set to <code>true</code> .
aria-live	For Carousel items element, when <code>autoPlay</code> is <code>true</code> , <code>aria-live</code> is set to <code>off</code> ; when <code>autoPlay</code> is <code>false</code> , <code>aria-live</code> is set to <code>polite</code> .
aria-role	For Carousel slide item, <code>aria-role</code> has been grouped.

Keyboard interaction

By default, keyboard navigation is enabled. This component implements keyboard navigation support by following the WAI-ARIA practices. Once focused on the active Carousel element, you can use the following key combination for interacting with the Carousel.

Key	Description	
-----	-----	
Alt + J	Keys to focus the Carousel component (done at application end).	
Arrows	Keys to navigate between slides.	
Home	To navigate to the first slide.	
End	To navigate to the last slide.	
Space	To play/pause the slide transitions.	
Enter	To perform the respective action on its focus.	
Tab	To Move focus through the interactive elements.	
Shift + Tab	To Move focus through the interactive elements.	

Ensuring accessibility

The Carousel component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Carousel component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Carousel component with accessibility tools.

- [Accessibility in Syncfusion React components](#)

Styles and appearance in React Carousel component

To modify the Carousel appearance, you need to override the default CSS of Carousel component.

Please find the list of CSS classes and its corresponding section in Carousel component. Also, you have an option to create your own custom theme for the controls using our [Theme Studio](#).

CSS Structure in React Carousel Control

The following content provides the exact CSS structure that can be used to modify the control's appearance based on user preference.

CSS Class | Purpose of Class

- |.e-carousel|.e-carousel-item|To customize the carousel item
- |.e-carousel-item.e-active|To customize the active carousel item
- |.e-carousel|.e-carousel-indicators|To customize the indicators
- |.e-carousel|.e-carousel-indicators|.e-indicator-bars|.e-indicator-bar|To customize the indicator bars
- |.e-carousel|.e-carousel-indicators|.e-indicator-bars|.e-indicator-bar|.e-indicator|To customize the individual indicator appearance
- |.e-carousel|.e-carousel-navigators|To customize the navigators
- |.e-carousel|.e-carousel-navigators|.e-previous|To customize the previous button
- |.e-carousel|.e-carousel-navigators|.e-next|To customize the next button
- |.e-carousel|.e-carousel-navigators|.e-play-pause|To customize the play and pause button
- |.e-carousel.e-partial|.e-carousel-slide-container|To customize the partial visible slides

Customizing the indicators

Use the following CSS to customize the space between indicators by overriding the `.e-indicator-bar` CSS class.

```
`css
```

```
.e-carousel .e-carousel-indicators .e-indicator-bars .e-indicator-bar {  
padding: 8px;  
}  
`
```

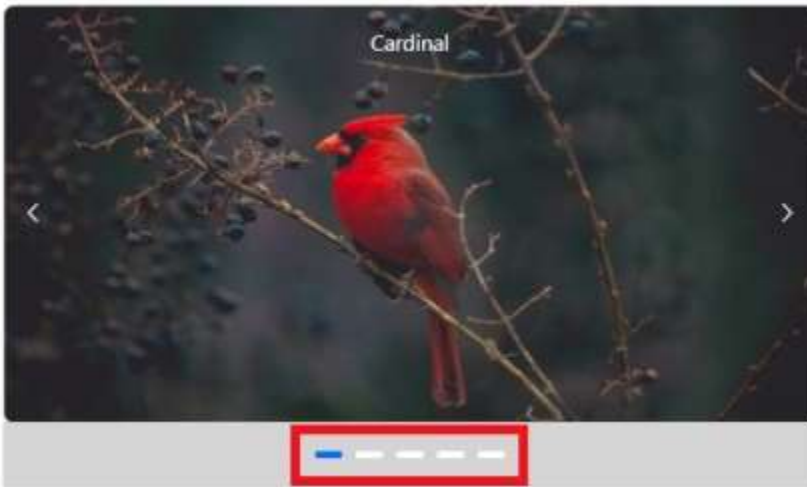

Use the following CSS to customize the indicators appearance by overriding the `.e-indicator` CSS class.

```
`css
.e-carousel .e-carousel-indicators .e-indicator-bars .e-indicator-bar .e-indicator {
width: 20px;
border-radius: 100%;
}
`
```

Use the following CSS to render the indicators outside the carousel items by overriding the `.e-carousel-indicators` CSS class.

```
`css
.e-carousel .e-carousel-indicators {
bottom: auto;
}
`
```

Customizing the navigators

Use the following CSS to customize the previous and next icon size and colors.

```
`css
.e-carousel .e-carousel-navigators .e-next .e-btn:not(:disabled) .e-btn-icon,
.e-carousel .e-carousel-navigators .e-previous .e-btn:not(:disabled) .e-btn-icon
{
  color: greenyellow;
  font-size: 25px;
}
```

Use the following CSS to customize the navigators position to bottom by overriding the `.e-carousel-navigators` CSS class.

```
`css
```

```
.e-carousel .e-carousel-navigators {  
top: 120px;  
}  
、
```

Use the following CSS to render the previous and next icon to outside the carousel items by overriding the `.e-previous` and `.e-next` CSS class.

```
`css  
.e-carousel .e-carousel-navigators .e-previous,  
.e-carousel .e-carousel-navigators .e-next  
{  
margin: -60px;  
background: black;  
}  
、
```

Customizing partial slides size

You can customize the partial slide size by overriding the `.e-carousel-slide-container` CSS class.

```
`css
.e-carousel.e-partial .e-carousel-slide-container{
padding: 0 150px;
}
```

Chart

Getting Started

<!-- markdownlint-disable MD036 -->

Getting Started

This section explains you the steps required to create a simple chart and demonstrate the basic usage of the chart control.

To get start quickly with React Charts, you can check on this video:

[Dependencies](#)

Below is the list of minimum dependencies required to use the chart component.

```
`javascript
|-- @syncfusion/ej2-react-charts
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-charts
|-- @syncfusion/ej2-react-base
|-- @syncfusion/ej2-pdf-export
|-- @syncfusion/ej2-file-utils
|-- @syncfusion/ej2-compression
|-- @syncfusion/ej2-svg-base
`,`
```

[Installation and configuration](#)

You can use [create-react-app](#) to setup the applications.

To install `create-react-app` run the following command.

```
`
npm install -g create-react-app
`,`
```

- To set-up a React application in TypeScript environment, run the following command.

```
`
create-react-app quickstart --template typescript
```

```
cd quickstart
```

```
npm start
`,`
```

- To set-up a React application in JavaScript environment, run the following command.

```
`
create-react-app quickstart
```

```
cd quickstart
```

```
npm start
`,`
```

- Install Syncfusion packages using below command.

```
npm install @syncfusion/ej2-react-charts --save
```

Add Chart to the Project

Now, you can start adding Chart component in the application.

For getting started, add the Chart component in `src/App.tsx` file using following code.

INDEX.JSX

```
import { ChartComponent } from '@syncfusion/ej2-react-charts';
import * as React from 'react';
function App() {
  return (<ChartComponent />);
}
export default App;
```

INDEX.TSX

```
import { ChartComponent } from '@syncfusion/ej2-react-charts';
import * as React from 'react';
function App() {
  return (<ChartComponent />);
}
export default App;
```

Now run the `npm start` command in the console, it will run your application and open the browser window.

```
npm start
```

The below example shows a basic Chart.

INDEX.JSX

```
import { ChartComponent } from '@syncfusion/ej2-react-charts';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  return <ChartComponent id='charts' />;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import { ChartComponent } from '@syncfusion/ej2-react-charts';
```

```
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  return <ChartComponent id='charts' />
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Module Injection

Chart component are segregated into individual feature-wise modules. In order to use a particular feature, you need to inject its feature service in the AppModule. In the current application, we are going to modify the above basic chart to visualize sales data for a particular year. For this application we are going to use line series, tooltip, data label, category axis and legend feature of the chart. Please find the relevant feature service name and description as follows.

- **LineSeries** - Inject this module in to **services** to use line series.
- **Legend** - Inject this module in to **services** to use legend feature.
- **Tooltip** - Inject this module in to **services** to use tooltip feature.
- **DataLabel** - Inject this module in to **services** to use datalabel feature.
- **Category** - Inject this module in to **services** to use category feature.

These modules should be injected to the **services** section as follows,

INDEX.JSX

```
import { Category, ChartComponent, DataLabel, LineSeries, Legend, Tooltip,
Inject } from '@syncfusion/ej2-react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  return <ChartComponent id='charts'>
    <Inject services={[LineSeries, Legend, Tooltip, DataLabel, Category]} />
  </ChartComponent>;
}
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import { Category, ChartComponent, DataLabel, LineSeries, Legend, Tooltip,
Inject } from '@syncfusion/ej2-react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  return <ChartComponent id='charts'>
    <Inject services={[LineSeries, Legend, Tooltip, DataLabel, Category]} />
  </ChartComponent>;
}
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Populate Chart with Data

This section explains how to plot below JSON data to the chart.

INDEX.JSX

```
export let data = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
```

INDEX.TSX

```
export let data: any[] = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
```

Add a series object to the chart by using [series](#) property. Now map the field names `month` and `sales` in the JSON data to the [xName](#) and [yName](#) properties of the series, then set the JSON data to [dataSource](#) property.

Since the JSON contains category data, set the [valueType](#) for horizontal axis to `Category`. By default, the axis `valueType` is `Numeric`.

INDEX.JSX

```
import { Category, ChartComponent, ColumnSeries, Inject, LineSeries,
SeriesCollectionDirective, SeriesDirective, Tooltip } from '@syncfusion/ej2-react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  const data = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
  ];
  const primaryXAxis = { valueType: 'Category' };
  return <ChartComponent id="charts" primaryXAxis={primaryXAxis}>
    <Inject services={[ColumnSeries, Tooltip, LineSeries, Category]}/>
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={data} xName='month' yName='sales'
name='Sales' />
    </SeriesCollectionDirective>
  </ChartComponent>;
```

```

}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import { AxisModel, Category, ChartComponent, ColumnSeries, Inject,
LineSeries, SeriesCollectionDirective, SeriesDirective, Tooltip } from
'@syncfusion/ej2-react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  const data: any[] = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
  ];
  const primaryxAxis: AxisModel = { valueType: 'Category' };
  return <ChartComponent id="charts" primaryXAxis={primaryxAxis}>
    <Inject services={[ColumnSeries, Tooltip, LineSeries, Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={data} xName='month' yName='sales'
name='Sales' />
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

The sales data are in thousands, so format the vertical axis label by adding \$ as a prefix and K as a suffix to each label. This can be achieved by setting the ``${value}K`` to the `labelFormat` property of axis. Here, `{value}` act as a placeholder for each axis label.

INDEX.JSX

```

import { Category, ChartComponent, ColumnSeries, Inject, LineSeries,
SeriesCollectionDirective, SeriesDirective, Tooltip } from '@syncfusion/ej2-
react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  const data = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
  ];
  const primaryxAxis = { valueType: 'Category' };
  const primaryyAxis = { labelFormat: `${value}K` };

```

```

    return <ChartComponent id="charts" primaryXAxis={primaryxAxis}
    primaryYAxis={primaryyAxis}>
      <Inject services={[ColumnSeries, Tooltip, LineSeries, Category]}/>
      <SeriesCollectionDirective>
        <SeriesDirective dataSource={data} xName='month' yName='sales'
        name='Sales' />
      </SeriesCollectionDirective>
    </ChartComponent>;
  }
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import { AxisModel, Category, ChartComponent, ColumnSeries, Inject,
LineSeries, SeriesCollectionDirective, SeriesDirective, Tooltip } from
'@syncfusion/ej2-react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  const data: any[] = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
  ];
  const primaryxAxis: AxisModel = { valueType: 'Category' };
  const primaryyAxis: AxisModel = { labelFormat: '${value}K' };
  return <ChartComponent id="charts" primaryXAxis={primaryxAxis}
    primaryYAxis={primaryyAxis}>
    <Inject services={[ColumnSeries, Tooltip, LineSeries, Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={data} xName='month' yName='sales'
      name='Sales' />
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Add Chart Title

You can add a title using [title](#) property to the chart to provide quick information to the user about the data plotted in the chart.

INDEX.JSX

```

import { Category, ChartComponent, ColumnSeries, Inject, LineSeries,
SeriesCollectionDirective, SeriesDirective, Tooltip } from '@syncfusion/ej2-
react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {

```

```

const data = [
  { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
  { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
  { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
  { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
  { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
  { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
];
const primaryxAxis = { valueType: 'Category' };
return <ChartComponent id="charts" primaryXAxis={primaryxAxis}
title='Sales Analysis'>
  <Inject services={[ColumnSeries, Tooltip, LineSeries, Category]} />
  <SeriesCollectionDirective>
    <SeriesDirective dataSource={data} xName='month' yName='sales'
name='Sales' />
  </SeriesCollectionDirective>
</ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import { AxisModel, Category, ChartComponent, ColumnSeries, Inject,
LineSeries, SeriesCollectionDirective, SeriesDirective, Tooltip } from
'@syncfusion/ej2-react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  const data: any[] = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
  ];
  const primaryxAxis: AxisModel = { valueType: 'Category' };
  return <ChartComponent id="charts" primaryXAxis={primaryxAxis}
    title='Sales Analysis'>
    <Inject services={[ColumnSeries, Tooltip, LineSeries, Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={data} xName='month' yName='sales'
name='Sales' />
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Enable Legend

You can use legend for the chart by setting the `visible` property to true in [legendSettings](#) object and by injecting the `Legend` module into the services.

INDEX.JSX

```
import { Category, ChartComponent, ColumnSeries, Inject, Legend, LineSeries,
SeriesCollectionDirective, SeriesDirective, Tooltip } from '@syncfusion/ej2-
react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    const data = [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
    ];
    const legendSettings = { visible: true };
    const primaryxAxis = { valueType: 'Category' };
    return <ChartComponent id="charts" primaryXAxis={primaryxAxis}
legendSettings={legendSettings}>
        <Inject services={[ColumnSeries, Tooltip, Legend, LineSeries,
Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={data} xName='month' yName='sales'
name='Sales' />
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import { AxisModel, Category, ChartComponent, ColumnSeries, Inject, Legend,
LegendSeriesModel, LineSeries, SeriesCollectionDirective, SeriesDirective,
Tooltip } from '@syncfusion/ej2-react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    const data: any[] = [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
    ];
    const legendSettings: LegendSeriesModel = { visible: true };
    const primaryxAxis: AxisModel = { valueType: 'Category' };
    return <ChartComponent id="charts" primaryXAxis={primaryxAxis}
legendSettings={legendSettings}>
        <Inject services={[ColumnSeries, Tooltip, Legend, LineSeries, Category]}
/>
        <SeriesCollectionDirective>
```

```

        <SeriesDirective dataSource={data} xName='month' yName='sales'
name='Sales' />
    </SeriesCollectionDirective>
</ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Add Data Label

You can add data labels to improve the readability of the chart. This can be achieved by setting the visible property to true in the `dataLabel` object and by injecting `DataLabel` module into the services.

INDEX.JSX

```

import { Category, ChartComponent, ColumnSeries, DataLabel, Inject, Legend,
LineSeries, SeriesCollectionDirective, SeriesDirective, Tooltip } from
'@syncfusion/ej2-react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    const data = [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
    ];
    const primaryyAxis = { labelFormat: '${value}K' };
    const primaryxAxis = { valueType: 'Category' };
    const legendSettings = { visible: true };
    const marker = { dataLabel: { visible: true } };
    return <ChartComponent id="charts" primaryXAxis={primaryxAxis}
legendSettings={legendSettings} primaryYAxis={primaryyAxis}>
        <Inject services={[ColumnSeries, DataLabel, Tooltip, Legend, LineSeries,
Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={data} xName='month' yName='sales'
name='Sales' marker={marker}/>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import {
    AxisModel, Category, ChartComponent, ColumnSeries, DataLabel, Inject,
    Legend,
    LegendSeriesModel, LineSeries, SeriesCollectionDirective,
    SeriesDirective, Tooltip
} from '@syncfusion/ej2-react-charts';
import * as React from "react";

```

```
import * as ReactDOM from "react-dom";
function App() {
  const data: any[] = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
  ];
  const primaryyAxis: AxisModel = { labelFormat: '${value}K' };
  const primaryxAxis: AxisModel = { valueType: 'Category' };
  const legendSettings: LegendSeriesModel = { visible: true };
  const marker = { dataLabel: { visible: true } };
  return <ChartComponent id="charts" primaryXAxis={primaryxAxis}
    legendSettings={legendSettings} primaryYAxis={primaryyAxis}>
    <Inject services={[ColumnSeries, DataLabel, Tooltip, Legend, LineSeries,
    Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={data} xName='month' yName='sales'
name='Sales' marker={marker} />
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Enable Tooltip

The tooltip is useful when you cannot display information by using the data labels due to space constraints. You can enable tooltip by setting the enable property as true in [tooltip](#) object and by injecting [Tooltip](#) module into the [services](#).

INDEX.JSX

```
import { Category, ChartComponent, ColumnSeries, DataLabel, Inject, Legend,
LineSeries, SeriesCollectionDirective, SeriesDirective, Tooltip } from
'@syncfusion/ej2-react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  const data = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
  ];
  const tooltip = { enable: true, shared: false };
  const primaryyAxis = { labelFormat: '${value}K' };
  const primarxyAxis = { valueType: 'Category' };
  const legendSettings = { visible: true };
  const marker = { dataLabel: { visible: true } };
  return <ChartComponent id="charts" primaryXAxis={primarxyAxis}
    legendSettings={legendSettings} primaryYAxis={primaryyAxis}
    tooltip={tooltip}>
```

```

    <Inject services={[ColumnSeries, DataLabel, Tooltip, Legend, LineSeries,
Category]}/>
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={data} xName='month' yName='sales'
name='Sales' marker={marker}/>
    </SeriesCollectionDirective>
  </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import {
  AxisModel, Category, ChartComponent, ColumnSeries, DataLabel, Inject,
  Legend, LegendSeriesModel, LineSeries, SeriesCollectionDirective,
  SeriesDirective, Tooltip, TooltipSettingsModel
} from '@syncfusion/ej2-react-charts';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  const data: any[] = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
  ];
  const tooltip: TooltipSettingsModel = { enable: true, shared: false }
  const primaryyAxis: AxisModel = { labelFormat: '${value}K' }
  const primarxyAxis: AxisModel = { valueType: 'Category' }
  const legendSettings: LegendSeriesModel = { visible: true }
  const marker = { dataLabel: { visible: true } };
  return <ChartComponent id="charts" primaryXAxis={primarxyAxis}
legendSettings={legendSettings}
  primaryYAxis={primaryyAxis} tooltip={tooltip}>
    <Inject services={[ColumnSeries, DataLabel, Tooltip, Legend, LineSeries,
Category]}/>
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={data} xName='month' yName='sales'
name='Sales' marker={marker} />
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

You can refer to our [React Charts](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Charts example](#) that shows various chart types and how to represent time-dependent data, showing trends in data at equal intervals.

Creating a Next.js Application Using Syncfusion React Components

This section provides a step-by-step guide for setting up a Next.js application and integrating the Syncfusion React Chart component.

What is Next.js?

[Next.js](#) is a React framework that makes it easy to build fast, SEO-friendly, and user-friendly web applications. It provides features such as server-side rendering, automatic code splitting, routing, and API routes, making it an excellent choice for building modern web applications.

Prerequisites

Before getting started with the Next.js application, ensure the following prerequisites are met:

- [Node.js 16.8](#) or later.
- The application is compatible with macOS, Windows, and Linux operating systems.

Create a Next.js application

To create a new **Next.js** application, use one of the commands that are specific to either NPM or Yarn.

NPM

```
npx create-next-app@latest
```

YARN

```
yarn create next-app
```

Using one of the above commands will lead you to set up additional configurations for the project as below:

1. Define the project name: Users can specify the name of the project directly. Let's specify the name of the project as **ej2-nextjs-chart**.

CMD

```
√ What is your project named? » ej2-nextjs-chart
```

2. Select the required packages.

CMD

```
√ What is your project named? ... ej2-nextjs-chart
√ Would you like to use TypeScript? ... No / `Yes`
√ Would you like to use ESLint? ... No / `Yes`
√ Would you like to use Tailwind CSS? ... `No` / Yes
√ Would you like to use `src/` directory? ... No / `Yes`
√ Would you like to use App Router? (recommended) ... No / `Yes`
√ Would you like to customize the default import alias? ... `No` / Yes
Creating a new Next.js app in D:\ej2-nextjs-chart.
```

3. Once complete the above mentioned steps to create **ej2-nextjs-chart**, navigate to the directory using the below command:

CMD

```
cd ej2-nextjs-chart
```

The application is ready to run with default settings. Now, let's add Syncfusion components to the project.

Install Syncfusion React packages

Syncfusion React component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion React components in the project, install the corresponding npm package.

Here, the [React Chart component](#) is used in the project. To install the React Chart component, use the following command:

NPM

```
npm install @syncfusion/ej2-react-charts --save
```

YARN

```
yarn add @syncfusion/ej2-react-charts
```

Add Syncfusion React component

Follow the below steps to add the React Chart component to the Next.js project:

1. Before adding the Chart component to your markup, import the Chart component in the **src/app/page.tsx** file.

PAGE.TSX

```
'use client'
import {
  AxisModel, Category, ChartComponent, ColumnSeries, DataLabel, Inject,
  Legend, LegendSeriesModel, LineSeries, SeriesCollectionDirective,
  SeriesDirective, Tooltip, TooltipSettingsModel
} from '@syncfusion/ej2-react-charts';
```

2. Then, define the Chart component in the **src/app/page.tsx** file, as shown below:

PAGE.TSX

```
'use client'
import {
  AxisModel, Category, ChartComponent, ColumnSeries, DataLabel, Inject,
  Legend, LegendSeriesModel, LineSeries, SeriesCollectionDirective,
  SeriesDirective, Tooltip, TooltipSettingsModel
} from '@syncfusion/ej2-react-charts';
export default function Home() {
  const data: any[] = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
  ];
  const tooltip: TooltipSettingsModel = { enable: true, shared: false }
```

```
const primaryyAxis: AxisModel = { labelFormat: '${value}K' }
const primarxyAxis: AxisModel = { valueType: 'Category' }
const legendSettings: LegendSeriesModel = { visible: true }
const marker = { dataLabel: { visible: true } };
return (
  <>
  <h2>Syncfusion React Chart Component</h2>
  <ChartComponent id="charts" primaryXAxis={primarxyAxis}
  legendSettings={legendSettings}
  primaryYAxis={primaryyAxis} tooltip={tooltip}>
  <Inject services={[ColumnSeries, DataLabel, Tooltip, Legend, LineSeries,
  Category]} />
  <SeriesCollectionDirective>
  <SeriesDirective dataSource={data} xName='month' yName='sales' name='Sales'
  marker={marker} />
  </SeriesCollectionDirective>
  </ChartComponent>
  </>
  )
}
```

Run the application

To run the application, use the following command:

NPM

```
npm run dev
```

YARN

```
yarn run dev
```

To learn more about the functionality of the Chart component, refer to the [documentation](#).

[View the NEXT.js Chart sample in the GitHub repository.](#)

Getting Started with the React Chart Component in the Preact Framework

This article provides a step-by-step guide for setting up a [Preact](#) project and integrating the Syncfusion React Chart component.

Preact is a fast and lightweight JavaScript library for building user interfaces. It's often used as an alternative to larger frameworks like React. The key difference is that Preact is designed to be smaller in size and faster in performance, making it a good choice for projects where file size and load times are critical factors.

Prerequisites

[System requirements for Syncfusion React UI components](#)

Set up the Preact project

To create a new **Preact** project, use one of the commands that are specific to either NPM or Yarn.

```
`bash
```

```
npm init preact
```

```
`
```

```
or
```

```
`bash
```

```
yarn init preact
```

```
`
```

Using one of the above commands will lead you to set up additional configurations for the project, as below:

1\ Define the project name: We can specify the name of the project directly. Let's specify the name of the project as `my-project` for this article.

```
`bash
```

```
T Preact - Fast 3kB alternative to React with the same modern API
```

```
|
```

- Project directory:

```
| my-project
```

```
—
```

```
`
```

2\ Choose `JavaScript` as the framework variant to build this Preact project using JavaScript and React.

```
`bash
```

```
T Preact - Fast 3kB alternative to React with the same modern API
```

```
|
```

- Project language:

```
| > JavaScript
```

```
| TypeScript
```

```
—
```

```
`
```

3\ Then configure the project as below for this article.

```
`bash
```

```
T Preact - Fast 3kB alternative to React with the same modern API
```

```
|
```

- Use router?

```
| Yes / > No
```

—
|

- Prerender app (SSG)?

| Yes / > No

—
|

- Use ESLint?

| Yes / > No

—
,

5\ Upon completing the aforementioned steps to create `my-project`, run the following command to jump into the project directory:

```
`bash
cd my-project
`
```

Now that `my-project` is ready to run with default settings, let's add Syncfusion components to the project.

Add the Syncfusion React packages

Syncfusion React component packages are available at [npmjs.com](https://www.npmjs.com). To use Syncfusion React components in the project, install the corresponding npm package.

This article uses the [React Chart component](#) as an example. To use the React Chart component in the project, the `@syncfusion/ej2-react-charts` package needs to be installed using the following command:

```
`bash
npm install @syncfusion/ej2-react-charts --save
`
```

or

```
`bash
yarn add @syncfusion/ej2-react-charts
`
```

Add the Syncfusion React component

Follow the below steps to add the React Chart component to the Vite project:

1\ Before adding the Chart component to your markup, import the Chart component in the **src/index.jsx** file.

~/SRC/INDEX.JSX

```
import { Category, ChartComponent, ColumnSeries, Inject, LineSeries,
SeriesCollectionDirective, SeriesDirective, Tooltip } from '@syncfusion/ej2-
react-charts';
```

2\ Then, define the Chart component in the **src/index.jsx** file, as shown below:

~/SRC/INDEX.JSX

```
import { render } from 'preact';
import { Category, ChartComponent, ColumnSeries, Inject, LineSeries,
SeriesCollectionDirective, SeriesDirective, Tooltip } from '@syncfusion/ej2-
react-charts';
export function App() {
  const data = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
  ];
  const primaryxAxis = { valueType: 'Category' };
  return (
    <ChartComponent id="charts" primaryXAxis={primaryxAxis}>
    <Inject services={[ColumnSeries, Tooltip, LineSeries, Category]}/>
    <SeriesCollectionDirective>
    <SeriesDirective dataSource={data} xName='month' yName='sales'
    name='Sales' />
    </SeriesCollectionDirective>
    </ChartComponent>
  );
}
render(<App />, document.getElementById('app'));
```

Run the project

To run the project, use the following command:

```
`bash
```

```
npm run dev
```

```
,
```

or

```
`bash
```

```
yarn run dev
```

```
,
```

The output will appear as follows:

<!-- markdownlint-disable MD036 -->

Working with data in React Chart component

Chart can visualise data bound from local or remote data.

Local Data

You can bind a simple JSON data to the chart using [dataSource](#) property in series. Now map the fields in JSON to [xName](#) and [yName](#) properties.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { Category, ChartComponent, ColumnSeries, Inject, Legend, LineSeries,
SeriesCollectionDirective, SeriesDirective } from '@syncfusion/ej2-react-charts';
function App() {
    const data = [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
    ];
    const primaryXAxis = { valueType: 'Category' };
    return <ChartComponent id='charts' primaryXAxis={primaryXAxis}>
        <Inject services={[ColumnSeries, Legend, LineSeries, Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={data} xName='month' type='Column'
yName='sales' name='Sales' />
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
```

```
import * as ReactDOM from "react-dom";
import { AxisModel, Category, ChartComponent, ColumnSeries, Inject, Legend,
LineSeries,
SeriesCollectionDirective, SeriesDirective } from '@syncfusion/ej2-react-
charts';
function App() {
  const data: any[] = [
    { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
    { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
    { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
    { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
    { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
    { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
  ];
  const primaryXAxis: AxisModel = { valueType: 'Category' };
  return <ChartComponent id='charts' primaryXAxis={primaryXAxis}>
    <Inject services={[ColumnSeries, Legend, LineSeries, Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={data} xName='month' type='Column'
yName='sales' name='Sales' />
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Lazy loading

Lazy loading allows you to load data for chart on demand. Chart will fire the scrollEnd event, in that we can get the minimum and maximum range of the axis, based on this, we can upload the data to chart.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ScrollBar, Zoom, LineSeries, Tooltip, DateTime, Crosshair } from
"@syncfusion/ej2-react-charts";

Common DataSource

You can also bind a JSON data common to all series using [dataSource](#) property in chart.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { Category, ChartComponent, ColumnSeries, Inject, Legend, LineSeries,
SeriesCollectionDirective, SeriesDirective } from '@syncfusion/ej2-react-
charts';
function App() {
  const chartData = [
    { month: 'Jan', sales: 35, sales1: 28 }, { month: 'Feb', sales: 28,
sales1: 35 },
    { month: 'Mar', sales: 34, sales1: 32 }, { month: 'Apr', sales: 32,
sales1: 34 },
    { month: 'May', sales: 40, sales1: 32 }, { month: 'Jun', sales: 32,
sales1: 40 },
    { month: 'Jul', sales: 35, sales1: 55 }, { month: 'Aug', sales: 55,
sales1: 35 },
    { month: 'Sep', sales: 38, sales1: 30 }, { month: 'Oct', sales: 30,
sales1: 38 },
    { month: 'Nov', sales: 25, sales1: 32 }, { month: 'Dec', sales: 32,
sales1: 25 }
  ];
}

```

```

const primaryxAxis = { valueType: 'Category' };
return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
dataSource={chartData}>
  <Inject services={[ColumnSeries, Legend, LineSeries, Category]} />
  <SeriesCollectionDirective>
    <SeriesDirective xName='month' type='Column' yName='sales' />
    <SeriesDirective xName='month' type='Column' yName='sales1' />
  </SeriesCollectionDirective>
</ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, Category, ChartComponent, ColumnSeries, Inject, Legend,
LineSeries,
SeriesCollectionDirective, SeriesDirective } from '@syncfusion/ej2-react-
charts';
function App() {
  const chartData: any[] = [
    { month: 'Jan', sales: 35, sales1: 28 }, { month: 'Feb', sales: 28,
sales1: 35 },
    { month: 'Mar', sales: 34, sales1: 32 }, { month: 'Apr', sales: 32,
sales1: 34 },
    { month: 'May', sales: 40, sales1: 32 }, { month: 'Jun', sales: 32,

sales1: 25 }
  ];
  const primaryxAxis: AxisModel = { valueType: 'Category' };
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
dataSource={chartData}>
    <Inject services={[ColumnSeries, Legend, LineSeries, Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective xName='month' type='Column' yName='sales' />
      <SeriesDirective xName='month' type='Column' yName='sales1' />
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Remote Data

You can also bind remote data to the chart using **DataManager**. The DataManager requires minimal information like webservice URL, adaptor and crossDomain to interact with service endpoint properly.

Assign the instance of DataManager to the [dataSource](#) property in series and map the fields of data to [xName](#) and [yName](#) properties. You can also use the [query](#) property of the series to filter the data.

INDEX.JSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { DataManager, Query } from '@syncfusion/ej2-data';
import { Category, ChartComponent, ColumnSeries, Inject, Legend, LineSeries,
SeriesCollectionDirective, SeriesDirective } from '@syncfusion/ej2-react-
charts';
function App() {
  const dataManager = new DataManager({
    url: 'https://services.syncfusion.com/js/production/api/orders'
  });
  const query = new Query().take(5).where('Estimate', 'lessThan', 3, false);
  const primaryxAxis = { valueType: 'Category' };
  const primaryyAxis = { title: 'Freight rate in U.S. dollars' };
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title="Container freight rate">
    <Inject services={[ColumnSeries, Legend, Category, LineSeries]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={dataManager} xName='CustomerID'
type='Column' yName='Freight' query={query} />
    </SeriesCollectionDirective>
  </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
{% endraw %}
```

INDEX.TSX

```
{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { DataManager, Query } from '@syncfusion/ej2-data';
import { AxisModel, Category, ChartComponent, ColumnSeries, Inject, Legend,
LineSeries, SeriesCollectionDirective, SeriesDirective } from
 '@syncfusion/ej2-react-charts';
function App() {
  const dataManager = new DataManager({
    url: 'https://services.syncfusion.com/js/production/api/orders'
  });
  const query = new Query().take(5).where('Estimate', 'lessThan', 3, false);
  const primaryxAxis: AxisModel = { valueType: 'Category' };
  const primaryyAxis: AxisModel = { title: 'Freight rate in U.S. dollars' };
  return <ChartComponent id='charts'
    primaryXAxis={primaryxAxis}
    primaryYAxis={primaryyAxis}
    title="Container freight rate">
    <Inject services={[ColumnSeries, Legend, Category, LineSeries]} />
    <SeriesCollectionDirective>

```

```

        <SeriesDirective dataSource={dataManager} xName='CustomerID'
        type='Column' yName='Freight' query={query} />
      </SeriesCollectionDirective>
    </ChartComponent>
  };
  export default App;
  ReactDOM.render(<App />, document.getElementById("charts"));
  {% enddraw %}

```

Empty points

The Data points that uses the `null` or `undefined` as value are considered as empty points. Empty data points are ignored and not plotted in the Chart. When the data is provided by using the points property, By using `emptyPointSettings` property in series, you can customize the empty point. Default `mode` of the empty point is `Gap`.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { Category, ChartComponent, ColumnSeries, Inject, LineSeries,
SeriesCollectionDirective, SeriesDirective } from '@syncfusion/ej2-react-charts';
function App() {
  const data = [

Chart dimensions in React Chart component

Size for Container

Chart can render to its container size. You can set the size via inline or CSS as demonstrated below.

```
<div id="charts" style="width:650px; height:350px"></div>
```

```
`ts
```

```
import * as React from "react";
```

```
import * as ReactDOM from "react-dom";
```

```

import { ChartComponent, SeriesCollectionDirective, AxesDirective, AxisDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, Zoom, Crosshair, LineSeries, Selection}
from '@syncfusion/ej2-react-charts';
function App() {
return <ChartComponent id='charts'>
</ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
`ts
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent } from '@syncfusion/ej2-react-charts';
function App() {
return <ChartComponent id='charts'>
</ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
`

```

INDEX.JSX

```

import * as React from "react";

```

In Percentage

By setting value in percentage, chart gets its dimension with respect to its container. For example, when the height is '50%', chart renders to half of the container height.

INDEX.JSX

```

```

Note: When you do not specify the size, it takes [Link to the Video](#) as the height and window size as its width.

Category axis in React Chart component

Category axis are used to represent, the string values instead of numbers.

To get start quickly with React Category Axis, you can check out this video:

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category } from '@syncfusion/ej2-react-charts';
import { chartData } from 'datasource.ts';
function App() {
  const primaryxAxis = { valueType: 'Category', title: 'Countries' };
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
title='Olympic Medals'>
    <Inject services={[ColumnSeries, Legend, Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={chartData} xName='country' yName='gold'
type='Column'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective, AxesDirective,
AxisDirective, SeriesDirective, Inject, ColumnSeries, Legend, Category }
from '@syncfusion/ej2-react-charts';
function App() {
  const primaryxAxis: AxisModel = { valueType: 'Category', title:
'Countries' };
  const chartData: Object[] = [
    { country: "USA", gold: 50 },

```

```

    { country: "China", gold: 40 },
    { country: "Japan", gold: 70 },
    { country: "Australia", gold: 60 },
    { country: "France", gold: 50 },
    { country: "Germany", gold: 40 },
    { country: "Italy", gold: 40 },
    { country: "Sweden", gold: 30 }
  ];
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
    title='Olympic Medals'>
    <Inject services={[ColumnSeries, Legend, Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={chartData} xName='country' yName='gold'
type='Column'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>
  };
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Note: To use category axis, we need to inject **Category** module into the **services** and set the [valueType](#) of axis to Category.

Labels Placement

By default, category labels are placed between the ticks in an axis, this can also be placed on ticks using [labelPlacement](#) property.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category } from '@syncfusion/ej2-react-charts';
import { chartData } from 'datasource.ts';
function App() {
  const primaryxAxis = { valueType: 'Category', title: 'Countries',
labelPlacement: 'OnTicks' };
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
title='Olympic Medals'>
    <Inject services={[ColumnSeries, Legend, Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={chartData} xName='country' yName='gold'
type='Column'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";

```

```
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective, AxesDirective,
AxisDirective, SeriesDirective, Inject, ColumnSeries, Legend, Category }
from '@syncfusion/ej2-react-charts';
function App() {
  const primaryXAxis: AxisModel = { valueType: 'Category', title:
'Countries', labelPlacement: 'OnTicks' };
  const chartData: any[] = [
    { country: "USA", gold: 50 },
    { country: "China", gold: 40 },
    { country: "Japan", gold: 70 },
    { country: "Australia", gold: 60 },
    { country: "France", gold: 50 },
    { country: "Germany", gold: 40 },
    { country: "Italy", gold: 40 },
    { country: "Sweden", gold: 30 }
  ];
  return <ChartComponent id='charts' primaryXAxis={primaryXAxis}
    title='Olympic Medals' >
    <Inject services={[ColumnSeries, Legend, Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={chartData} xName='country' yName='gold'
type='Column'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>
  };
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Range

Range of the category axis can be customized using [minimum](#), [maximum](#) and [interval](#) property of the axis.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category } from '@syncfusion/ej2-react-charts';
import { chartData } from 'datasource.ts';
function App() {
  const primaryXAxis = { valueType: 'Category', title: 'Countries',
interval: 2, minimum: 1, maximum: 5 };
  return <ChartComponent id='charts' primaryXAxis={primaryXAxis}
title='Olympic Medals'>
    <Inject services={[ColumnSeries, Legend, Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={chartData} xName='country' yName='gold'
type='Column'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>;
  }
;
export default App;
```

```
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, AxesDirective,
AxisDirective, SeriesDirective, Inject, ColumnSeries, Legend, Category }
from '@syncfusion/ej2-react-charts';
function App() {
    const primaryXAxis: AxisModel = { valueType: 'Category', title:
'Countries', interval: 2, minimum: 1, maximum: 5 };
    const chartData: any[] = [
        { country: "USA", gold: 50 },
        { country: "China", gold: 40 },
        { country: "Japan", gold: 70 },
        { country: "Australia", gold: 60 },
        { country: "France", gold: 50 },
        { country: "Germany", gold: 40 },
        { country: "Italy", gold: 40 },
        { country: "Sweden", gold: 30 }
    ];

    return <ChartComponent id='charts' primaryXAxis={primaryXAxis}
        title='Olympic Medals' >
        <Inject services={[ColumnSeries, Legend, Category]} />
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={chartData} xName='country' yName='gold'
type='Column'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Indexed category axis

Category axis also can be rendered based on the index values of data source. This can be achieved by defining the `isIndexed` property to `true` in the axis.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { Category, ChartComponent, ColumnSeries, Inject, Legend,
SeriesCollectionDirective, SeriesDirective } from '@syncfusion/ej2-react-
charts';
function App() {
    const data1 = [{ x: 'Myanmar', y: 7.3 }, { x: 'India', y: 7.9 },
        { x: 'Bangladesh', y: 6.8 }, { x: 'Cambodia', y: 7.0 }, { x:
'China', y: 6.9 }];
    const data2 = [{ x: 'Poland', y: 2.7 }, { x: 'Australia', y: 2.5 },
        { x: 'Singapore', y: 2.0 }, { x: 'Canada', y: 1.4 }, { x: 'Germany',
y: 1.8 }];
    const primaryXAxis = { valueType: 'Category', isIndexed: true };
}
```

```

    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}>
        <Inject services={[ColumnSeries, Legend,
Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={data1} xName='x'
yName='y' type='Column' />
            <SeriesDirective dataSource={data1} xName='x'
yName='y' type='Column' />
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, Category, ChartComponent, ColumnSeries, Inject, Legend,
SeriesCollectionDirective, SeriesDirective } from '@syncfusion/ej2-react-
charts';
function App() {
    const data1: any[] = [{ x: 'Myanmar', y: 7.3 }, { x: 'India', y: 7.9 },
{ x: 'Bangladesh', y: 6.8 }, { x: 'Cambodia', y:
7.0 }, { x: 'China', y: 6.9 }];
    const data2: any[] = [{ x: 'Poland', y: 2.7 }, { x: 'Australia', y: 2.5
},
{ x: 'Singapore', y: 2.0 }, { x: 'Canada', y: 1.4
}, { x: 'Germany', y: 1.8 }];
    const primaryxAxis: AxisModel= { valueType: 'Category', isIndexed:
true };
    return <ChartComponent id='charts'
primaryXAxis={ primaryxAxis }>
        <Inject services={[ColumnSeries, Legend,
Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource ={data1} xName='x'
yName='y' type='Column' />
            <SeriesDirective dataSource ={data1} xName='x'
yName='y' type='Column' />
        </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

<!-- markdownlint-disable MD036 -->

Numeric axis in React Chart component

You can use numeric axis to represent numeric values of data in chart. By default, the `valueType` of an axis is `Double`.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, AreaSeries } from
'@syncfusion/ej2-react-charts';
import { numericData } from 'datasource.ts';
function App() {
    const primaryxAxis = { valueType: 'Double', title: 'Overs' };
    const primaryyAxis = { title: 'Runs' };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='England - Run Rate'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={numericData} xName='x' yName='y'
name='England' type='Area'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, Zoom, Crosshair,
AreaSeries, Selection}
from '@syncfusion/ej2-react-charts';
function App() {
    const primaryxAxis: AxisModel = { valueType: 'Double', title: 'Overs' };
    const primaryyAxis: AxisModel = { title: 'Runs' };
    const numericData: any[] = [
        { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 },
        { x: 4, y: 14 }, { x: 5, y: 1 }, { x: 6, y: 10 },
        { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 },
        { x: 10, y: 10 }, { x: 11, y: 16 }, { x: 12, y: 6 },
        { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 },
        { x: 16, y: 2 }, { x: 17, y: 14 }, { x: 18, y: 7 },
        { x: 19, y: 7 }, { x: 20, y: 10 }
    ];
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis}
title='England - Run Rate'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={numericData} xName='x' yName='y'
name='England' type='Area'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>

```

```
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Range

Range for an axis, will be calculated automatically based on the provided data, you can also customize the range of the axis using [minimum](#), [maximum](#) and [interval](#) property of the axis.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, AreaSeries } from

import { numericData } from 'datasource.ts';
function App() {
    const primaryxAxis = { valueType: 'Double', title: 'Overs', minimum: 1,
maximum: 20, interval: 5 };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
title='England - Run Rate'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]} />
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={numericData} xName='x' yName='y'
name='England' type='Area'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, Zoom, Crosshair,
AreaSeries, Selection }
from '@syncfusion/ej2-react-charts';
function App() {
    const primaryxAxis: AxisModel = { valueType: 'Double', title: 'Overs',
minimum: 1, maximum: 20, interval: 5 };
    const numericData: any[] = [
        { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 },
        { x: 4, y: 14 }, { x: 5, y: 1 }, { x: 6, y: 10 },
        { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 },
        { x: 10, y: 10 }, { x: 11, y: 16 }, { x: 12, y: 6 },
        { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 },
        { x: 16, y: 2 }, { x: 17, y: 14 }, { x: 18, y: 7 },
        { x: 19, y: 7 }, { x: 20, y: 10 }
    ];
};
```

```

return <ChartComponent id='charts'
  primaryXAxis={primaryxAxis}
  title='England - Run Rate'>
  <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]} />
  <SeriesCollectionDirective>
    <SeriesDirective dataSource={numericData} xName='x' yName='y'
name='England' type='Area'>
    </SeriesDirective>
  </SeriesCollectionDirective>
</ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Range Padding

Padding can be applied to the minimum and maximum extremes of the axis range by using the [rangePadding](#) property. Numeric axis supports following types of padding.

- None
- Round
- Additional
- Normal
- Auto

Numeric - None

When the [rangePadding](#) is set to **None**, minimum and maximum of an axis is based on the data.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";

            <SeriesDirective dataSource={numericData} xName='x' yName='y'
name='England' type='Area'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Numeric - Round

When the [rangePadding](#) is set to **Round**, minimum and maximum will be rounded to the nearest possible value divisible by interval. For example, when the minimum is 3.5 and the interval is 1, then the minimum will be rounded to 3.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, AreaSeries } from
 '@syncfusion/ej2-react-charts';
import { numericData } from 'datasource.ts';
function App() {
```

```

    const primaryxAxis = { valueType: 'Double', title: 'Overs',
rangePadding: 'Round' };
    const primaryyAxis = { title: 'Runs' };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='England - Run Rate'>
      <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]}>
        <SeriesCollectionDirective>
          <SeriesDirective dataSource={numericData} xName='x' yName='y'
name='England' type='Area'>
            </SeriesDirective>
          </SeriesCollectionDirective>
        </ChartComponent>;
  }
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, Zoom, Crosshair,
AreaSeries, Selection}
from '@syncfusion/ej2-react-charts';
function App() {
  const primaryxAxis: AxisModel = { valueType: 'Double', title: 'Overs',
rangePadding: 'Round' };
  const primaryyAxis: AxisModel = { title: 'Runs' };
  const numericData: any[] = [
    { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 },
    { x: 4, y: 14 }, { x: 5, y: 1 }, { x: 6, y: 10 },
    { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 },
    { x: 10, y: 10 }, { x: 11, y: 16 }, { x: 12, y: 6 },
    { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 },
    { x: 16, y: 2 }, { x: 17, y: 14 }, { x: 18, y: 7 },
    { x: 19, y: 7 }, { x: 20, y: 10 }
  ];

rangePadding: 'Additional' };
    const primaryyAxis = { title: 'Runs' };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='England - Run Rate'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={numericData} xName='x' yName='y'
name='England' type='Area'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, Zoom, Crosshair,
AreaSeries, Selection}
from '@syncfusion/ej2-react-charts';
function App() {
    const primaryxAxis: AxisModel = { valueType: 'Double', title: 'Overs',
rangePadding: 'Additional' };
    const primaryyAxis: AxisModel = { title: 'Runs' };
    const numericData: any[] = [
        { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 },
        { x: 4, y: 14 }, { x: 5, y: 1 }, { x: 6, y: 10 },
        { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 },
        { x: 10, y: 10 }, { x: 11, y: 16 }, { x: 12, y: 6 },
        { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 },
        { x: 16, y: 2 }, { x: 17, y: 14 }, { x: 18, y: 7 },
        { x: 19, y: 7 }, { x: 20, y: 10 }
    ];
    return <ChartComponent id='charts'
        primaryXAxis={primaryxAxis}
        primaryYAxis={primaryyAxis}
```

```

        title='England - Run Rate'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]} />
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={numericData} xName='x' yName='y'
name='England' type='Area'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Numeric - Normal

When the [rangePadding](#) is set to **Normal**, padding is applied to the axis based on default range calculation.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, AreaSeries } from
'@syncfusion/ej2-react-charts';
import { numericData } from 'datasource.ts';
function App() {
    const primaryxAxis = { valueType: 'Double', title: 'Overs',
rangePadding: 'Normal' };
    const primaryyAxis = { title: 'Runs' };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='England - Run Rate'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]} />
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={numericData} xName='x' yName='y'
name='England' type='Area'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, Zoom, Crosshair,
AreaSeries, Selection}
from '@syncfusion/ej2-react-charts';
function App() {

```

```

const primaryxAxis: AxisModel = { valueType: 'Double', title: 'Overs',
rangePadding: 'Normal' };
const primaryyAxis: AxisModel = { title: 'Runs' };
const numericData: any[] = [
  { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 },
  { x: 4, y: 14 }, { x: 5, y: 1 }, { x: 6, y: 10 },
  { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 },
  { x: 10, y: 10 }, { x: 11, y: 16 }, { x: 12, y: 6 },
  { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 },
  { x: 16, y: 2 }, { x: 17, y: 14 }, { x: 18, y: 7 },
  { x: 19, y: 7 }, { x: 20, y: 10 }
];
return <ChartComponent id='charts'
  primaryXAxis={primaryxAxis}
  primaryYAxis={primaryyAxis}
  title='England - Run Rate'>
  <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]} />
  <SeriesCollectionDirective>

AxesDirective, AxisDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, Zoom, Crosshair,
AreaSeries, Selection }
from '@syncfusion/ej2-react-charts';
function App() {
    const primaryxAxis: AxisModel = { valueType: 'Double', title: 'Overs',
rangePadding: 'Auto' };
    const primaryyAxis: AxisModel = { title: 'Runs' };
    const numericData: any[] = [
        { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 },
        { x: 4, y: 14 }, { x: 5, y: 1 }, { x: 6, y: 10 },
        { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 },
        { x: 10, y: 10 }, { x: 11, y: 16 }, { x: 12, y: 6 },
        { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 },
        { x: 16, y: 2 }, { x: 17, y: 14 }, { x: 18, y: 7 },
        { x: 19, y: 7 }, { x: 20, y: 10 }
    ];
    return <ChartComponent id='charts'
        primaryXAxis={primaryxAxis}
        primaryYAxis={primaryyAxis}
        title='England - Run Rate'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]} />
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={numericData} xName='x' yName='y'
name='England' type='Area'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Label Format

Numeric Label Format

Numeric labels can be formatted by using the [labelFormat](#) property. Numeric labels supports all globalize format.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, AreaSeries } from
'@syncfusion/ej2-react-charts';
import { numericData } from 'datasource.ts';
```

```
function App() {
  const primaryxAxis = { title: 'Runs', labelFormat: 'c' };
  return <ChartComponent id='charts' primaryYAxis={primaryxAxis}
title='England - Run Rate'>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]}/>
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={numericData} xName='x' yName='y'
name='England' type='Area'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, Zoom, Crosshair,
AreaSeries, Selection}
from '@syncfusion/ej2-react-charts';
function App() {
  const primaryxAxis: AxisModel = { title: 'Runs', labelFormat: 'c' };
  const numericData: any[] = [
    { x: 1, y: 7 }, { x: 2, y: 1 }, { x: 3, y: 1 },
    { x: 4, y: 14 }, { x: 5, y: 1 }, { x: 6, y: 10 },
    { x: 7, y: 8 }, { x: 8, y: 6 }, { x: 9, y: 10 },
    { x: 10, y: 10 }, { x: 11, y: 16 }, { x: 12, y: 6 },
    { x: 13, y: 14 }, { x: 14, y: 7 }, { x: 15, y: 5 },
    { x: 16, y: 2 }, { x: 17, y: 14 }, { x: 18, y: 7 },
    { x: 19, y: 7 }, { x: 20, y: 10 }
  ];
  return <ChartComponent id='charts'
    primaryYAxis={primaryxAxis}
    title='England - Run Rate'>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]}/>
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={numericData} xName='x' yName='y'
name='England' type='Area'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>
  };
  export default App;
  ReactDOM.render(<App />, document.getElementById("charts"));
```

The following table describes the result of applying some commonly used label formats on numeric values.

<!-- markdownlint-disable MD033 -->

Label Value	Label Format property value	Result	Description
1000	n1	1000.0	The Number is rounded to 1 decimal place
1000	n2	1000.00	The Number is rounded to 2 decimal place
1000	n3	1000.000	The Number is rounded to 3 decimal place
0.01	p1	1.0%	The Number is converted to percentage with 1 decimal place
0.01	p2	1.00%	The Number is converted to percentage with 2 decimal place
0.01	p3	1.000%	The Number is converted to percentage with 3 decimal place
1000	c1	\$1000.0	The Currency symbol is appended to number and number is rounded to 1 decimal place
1000	c2	\$1000.00	The Currency symbol is appended to number and number is rounded to 2 decimal place

GroupingSeparator

To separate groups of thousands, use [useGroupingSeparator](#) property in chart.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, AreaSeries } from
'@syncfusion/ej2-react-charts';
import { groupingData } from 'datasource.ts';
function App() {
    const primaryyAxis = { title: 'Runs' };
    return <ChartComponent id='charts' primaryYAxis={primaryyAxis}
title='England - Sales Rate' useGroupingSeparator={true}>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]} />
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={groupingData} xName='x' yName='y'
name='England' type='Column'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, AxesDirective,
AxisDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, Zoom, Crosshair,
AreaSeries, Selection}
from '@syncfusion/ej2-react-charts';
function App() {
    const primaryyAxis: AxisModel = { title: 'Runs' };
    const groupingData: any[] = [
        { x: 10, y: 7000 }, { x: 20, y: 1000 }, { x: 30, y: 12000 }, { x: 40, y:
14000 }, { x: 50, y: 11000 }, { x: 60, y: 5000 },
        { x: 70, y: 7300 }, { x: 80, y: 9000 }, { x: 90, y: 12000 }, { x: 100,
y: 14000 }, { x: 110, y: 11000 }, { x: 120, y: 5000 },
    ];
    return <ChartComponent id='charts'
        primaryYAxis={primaryyAxis}
        title='England - Sales Rate' useGroupingSeparator={true}>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
AreaSeries, Category]} />
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={groupingData} xName='x' yName='y'
name='England' type='Column'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>
    };
    export default App;
    ReactDOM.render(<App />, document.getElementById("charts"));
```

Custom Label Format

Axis also supports custom label format using placeholder like {value}°C, in which the value represent the axis label e.g 20°C.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, AreaSeries } from

      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

<!-- markdownlint-disable MD036 -->

Date time axis in React Chart component

DateTime Axis

Date time axis uses date time scale and displays the date time values as axis labels in the specified format.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, DateTime, Tooltip, DataLabel, LineSeries } from
 '@syncfusion/ej2-react-charts';
import { dateTimeData } from 'datasource.ts';
function App() {
```

```

    const primaryxAxis = { valueType: 'DateTime', title: 'Sales Across
Years', labelFormat: 'yMMM' };
    const primaryyAxis = { title: 'Sales Amount in millions(USD)' };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='Average Sales Comparison'>
      <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
LineSeries, DateTime]}>
        <SeriesCollectionDirective>
          <SeriesDirective dataSource={dateTimeData} xName='x' yName='y'
name='Sales' type='Line'>
            </SeriesDirective>
          </SeriesCollectionDirective>
        </ChartComponent>;
  }
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject,
ColumnSeries, Legend, DateTime, Tooltip, DataLabel, Zoom, Crosshair,
LineSeries, Selection}
from '@syncfusion/ej2-react-charts';
function App() {
  const primaryxAxis: AxisModel = { valueType: 'DateTime', title: 'Sales
Across Years', labelFormat: 'yMMM' };
  const primaryyAxis: AxisModel = { title: 'Sales Amount in millions(USD)'
};
  const dateTimeData: any[] = [
    { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
    { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
    { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
  ];
  return <ChartComponent id='charts'
    primaryXAxis={primaryxAxis}
    primaryYAxis={primaryyAxis}
    title='Average Sales Comparison'>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
LineSeries, DateTime]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={dateTimeData} xName='x' yName='y'
name='Sales' type='Line'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>
  };
  export default App;
  ReactDOM.render(<App />, document.getElementById("charts"));
}

```

Note: To use datetime axis, we need to inject **DateTime** module into the **services** and

set the [valueType](#) of axis to DateTime.

DateTimeCategory Axis

Date-time category axis is used to display the date-time values with non-linear intervals. For example, the business days alone have been depicted in a week here.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";

    return <ChartComponent id='charts'>
```

```

    primaryXAxis={primaryxAxis}
    primaryYAxis={primaryyAxis}
    title='Average Sales Comparison'>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
LineSeries, DateTimeCategory]} />
    <SeriesCollectionDirective>
        <SeriesDirective dataSource={dateTimeCategoryData} xName='x'
yName='y' name='Sales' type='Line'>
        </SeriesDirective>
    </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Note: To use `dateTimeCategory` axis, we need to inject `DateTimeCategory` module into the `services` method and

set the [valueType](#) of axis to `DateTimeCategory`.

Range

Range for an axis, will be calculated automatically based on the provided data, you can also customize the range of the axis using [minimum](#), [maximum](#) and [interval](#) property of the axis.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, DateTime, Tooltip, DataLabel, LineSeries } from
'@syncfusion/ej2-react-charts';

name='Sales' type='Line'>
    </SeriesDirective>
  </SeriesCollectionDirective>
</ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Interval Customization

Date time intervals can be customized by using the [interval](#) and [intervalType](#) properties of the axis. For example, when you set interval as 2 and intervalType as years, it considers 2 years as interval.

DateTime axis supports following interval types,

- Auto
- Years
- Months
- Days
- Hours
- Minutes
- Seconds

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";

```

```
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, DateTime, Tooltip, DataLabel, LineSeries } from
'@syncfusion/ej2-react-charts';
import { dateTimeData } from 'datasource.ts';

    const primaryxAxis = { valueType: 'DateTime', title: 'Sales Across
Years', intervalType: 'Years' };
    const primaryyAxis = { title: 'Sales Amount in millions(USD)' };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='Average Sales Comparison'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
LineSeries, DateTime]}>
            <SeriesCollectionDirective>
                <SeriesDirective dataSource={dateTimeData} xName='x' yName='y'
name='Sales' type='Line'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject,
ColumnSeries, Legend, DateTime, Tooltip, DataLabel, Zoom, Crosshair,
LineSeries, Selection}
from '@syncfusion/ej2-react-charts';
function App() {
    const primaryxAxis: AxisModel = { valueType: 'DateTime', title: 'Sales
Across Years', intervalType: 'Years' };
    const primaryyAxis: AxisModel = { title: 'Sales Amount in millions(USD)'
};
    const dateTimeData: any[] = [
        { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
        { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
        { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
    ];
    return <ChartComponent id='charts'
        primaryXAxis={primaryxAxis}
        primaryYAxis={primaryyAxis}
        title='Average Sales Comparison'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
LineSeries, DateTime]} />
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={dateTimeData} xName='x' yName='y'
name='Sales' type='Line'>
        </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
```

```
ReactDOM.render(<App />, document.getElementById("charts"));
```

Applying Padding to the Range

Padding can be applied to the minimum and maximum extremes of the range by using the [rangePadding](#) property. Date time axis supports the following types of padding,

- None
- Round
- Additional

DateTime - None

When the [rangePadding](#) is set to **None**, minimum and maximum of the axis is based on the data.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, DateTime, Tooltip, DataLabel, LineSeries } from
'@syncfusion/ej2-react-charts';
import { dateTimeData } from 'datasource.ts';
function App() {
    const primaryxAxis = { valueType: 'DateTime', rangePadding: 'None' };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
title='Average Sales Comparison'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
LineSeries, DateTime]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={dateTimeData} xName='x' yName='y'
name='Sales' type='Line'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject,
ColumnSeries, Legend, DateTime, Tooltip, DataLabel, Zoom, Crosshair,
LineSeries, Selection }
from '@syncfusion/ej2-react-charts';
function App() {
    const primaryxAxis: AxisModel = { valueType: 'DateTime', rangePadding:
'None' };
    const dateTimeData: any[] = [
        { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
        { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
```

```

    { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
  ];
  return <ChartComponent id='charts'
    primaryXAxis={primaryXAxis}
    title='Average Sales Comparison'>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
    LineSeries, DateTime]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={dateTimeData} xName='x' yName='y'
name='Sales' type='Line'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>
  </>
  export default App;
  ReactDOM.render(<App />, document.getElementById("charts"));

```

DateTime - Round

When the [rangePadding](#) is set to **Round**, minimum and maximum will be rounded to the nearest possible value divisible by interval.

For example, when the minimum is 15th Jan, interval is 1 and the interval type is 'month', then the axis minimum will be Jan 1st.

INDEX.JSX

```

import * as React from "react";

        </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Label Format

You can format and parse the date to all globalize format using [Link to the Video](#) property in an axis.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, DateTime, Tooltip, DataLabel, LineSeries } from
'@syncfusion/ej2-react-charts';
import { DateTimeData } from 'datasource.ts';
function App() {
    const primaryxAxis = { valueType: 'DateTime', labelFormat: 'yMd' };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
title='Average Sales Comparison'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
LineSeries, DateTime]} />
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={dateTimeData} xName='x' yName='y'
name='Sales' type='Line'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

```

        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>;
  }
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
  AxesDirective, AxisDirective, SeriesDirective, Inject,
  ColumnSeries, Legend, DateTime, Tooltip, DataLabel, Zoom, Crosshair,
  LineSeries, Selection }
from '@syncfusion/ej2-react-charts';
function App() {
  const primaryxAxis: AxisModel = { valueType: 'DateTime', labelFormat:
    'yMd' };
  const dateTimeData: any[] = [
    { x: new Date(2000, 6, 11), y: 10 }, { x: new Date(2002, 3, 7), y: 30 },
    { x: new Date(2004, 3, 6), y: 15 }, { x: new Date(2006, 3, 30), y: 65 },
    { x: new Date(2008, 3, 8), y: 90 }, { x: new Date(2010, 3, 8), y: 85 }
  ];
  return <ChartComponent id='charts'
    primaryXAxis={primaryxAxis}
    title='Average Sales Comparison'>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
    LineSeries, DateTime]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={dateTimeData} xName='x' yName='y'
name='Sales' type='Line'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>
  };
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

The following table describes the result of applying some common date time formats to the labelFormat property

<!-- markdownlint-disable MD033 -->

Label Value	Label Format Property Value	Result	Description
new Date(2000, 03, 10)	EEEE	Monday	The Date is displayed in day format
new Date(2000, 03, 10)	yMd	04/10/2000	The Date is displayed in month/date/year format

new Date(2000, 03, 10)	MMM	Apr	The Shorthand month for the date is displayed
new Date(2000, 03, 10)	hm	12:00 AM	Time of the date value is displayed as label
new Date(2000, 03, 10)	hms	12:00:00 AM	The Label is displayed in hours:minutes:seconds format

Logarithmic axis in React Chart component

<!-- markdownlint-disable MD033 -->

Logarithmic axis uses logarithmic scale and it is very useful in visualizing data, when it has numeric values in both lower order of magnitude (eg: 10^{-6}) and higher order of magnitude (eg: 10^6).

To get start quickly with React Logarithmic Axis, you can check out this video:

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject, ColumnSeries, Legend, DateTime, Logarithmic, Tooltip, DataLabel, LineSeries } from '@syncfusion/ej2-react-charts';
import { logData } from 'datasource.ts';
function App() {
    const primaryxAxis = { valueType: 'DateTime', title: 'Years', labelFormat: 'y' };
    const primaryyAxis = { valueType: 'Logarithmic', title: 'Profit' };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis} primaryYAxis={primaryyAxis} title='Product X Growth [1995-2005]'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel, Logarithmic, LineSeries, DateTime]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={logData} xName='x' yName='y' name='Product X' type='Line'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective, AxesDirective, AxisDirective, SeriesDirective, Inject, ColumnSeries, Legend, DateTime, Logarithmic, Tooltip, DataLabel, Zoom, Crosshair, LineSeries, Selection } from '@syncfusion/ej2-react-charts';
```

```
function App() {
  const primaryxAxis: AxisModel = { valueType: 'DateTime', title: 'Years',
labelFormat: 'y' };
  const primaryyAxis: AxisModel = { valueType: 'Logarithmic', title:
'Profit' };
  const logData: any[] = [
    { x: new Date(1995, 0, 1), y: 80 }, { x: new Date(1996, 0, 1), y: 200 },
    { x: new Date(1997, 0, 1), y: 400 }, { x: new Date(1998, 0, 1), y: 600
  },
    { x: new Date(1999, 0, 1), y: 700 }, { x: new Date(2000, 0, 1), y: 1400
  },
    { x: new Date(2001, 0, 1), y: 2000 }, { x: new Date(2002, 0, 1), y: 4000
  },
    { x: new Date(2003, 0, 1), y: 6000 }, { x: new Date(2004, 0, 1), y: 8000
  },
    { x: new Date(2005, 0, 1), y: 11000 }
  ];
  return <ChartComponent id='charts'
    primaryXAxis={primaryxAxis}
    primaryYAxis={primaryyAxis}
    title='Product X Growth [1995-2005]'>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Logarithmic, LineSeries, DateTime]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={logData} xName='x' yName='y'
name='Product X' type='Line'>
      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Note: To use log axis, we need to inject **Logarithmic** module into the **services** and set the **valueType** of axis to **Logarithmic**.

Range

Range of an axis, will be calculated automatically based on the provided data, you can also customize the range of the axis using **minimum**, **maximum** and **interval** property of the axis.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";

    </ChartComponent>
  };
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Logarithmic Base

Logarithmic base can be customized by using the [logBase](#) property of the axis. For example when the logBase is 5, the axis values follows 5^{-2} , 5^{-1} , 5^0 , 5^1 , 5^2 etc.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";

name='Product X' type='Line'>
      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Logarithmic Interval

Logarithmic axis interval can be customized by using the [Link to the Video](#) property of the axis. When the logarithmic base is 10 and logarithmic interval is 2, then the axis labels are placed at an interval of 10^2 . The default value of the interval is 1.

INDEX.JSX

```

Axis labels in React Chart component

To get start quickly with Axis Labels in React Charts, you can check on this video:

Smart Axis Labels

When the axis labels overlap with each other, you can use [labelIntersectAction](#) property in the axis, to place them smartly.

When setting `labelIntersectAction` as `Hide`

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel } from '@syncfusion/ej2-
react-charts';

```

```
import { smartAxisData } from 'datasource.ts';
function App() {
  const primaryxAxis = { title: 'Countries', labelIntersectAction: 'Hide',
    valueType: 'Category' };
  const primaryyAxis = { title: 'People(in millions)', minimum: 0,
    maximum: 80, interval: 10 };
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
    primaryYAxis={primaryyAxis} title='Internet Users'>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
    Category]}/>
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={smartAxisData} xName='x' yName='y'
        name='Internet' type='Column'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
  AxesDirective, AxisDirective, SeriesDirective, Inject, ColumnSeries, Legend,
  Category, Tooltip, DataLabel, Zoom, Crosshair, LineSeries, Selection } from
  '@syncfusion/ej2-react-charts';
function App() {
  const primaryxAxis: AxisModel = { title: 'Countries',
    labelIntersectAction: 'Hide', valueType: 'Category' };
  const primaryyAxis: AxisModel = { title: 'People(in millions)', minimum:
    0, maximum: 80, interval: 10 };
  const smartAxisData: any[] = [
    { x: "South Korea", y: 39.4 }, { x: "India", y: 61.3 }, { x: "Pakistan",
    y: 20.4 },
    { x: "Germany", y: 65.1 }, { x: "Australia", y: 15.8 }, { x: "Italy", y:
    29.2 },
    { x: "France", y: 44.6 }, { x: "Saudi Arabia", y: 9.7 }, { x: "Russia",
    y: 40.8 },
    { x: "Mexico", y: 31 }, { x: "Brazil", y: 75.9 }, { x: "China", y: 51.4
    }

    </SeriesDirective>
  </SeriesCollectionDirective>
</ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Axis Labels Positioning

By default, the axis labels can be placed at **outside** the axis line and this also can be placed at **inside** the axis line using the **labelPosition** property.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel } from '@syncfusion/ej2-
react-charts';
import { categoryData } from 'datasource.ts';
function App() {
  const primaryxAxis = { valueType: 'Category', labelPosition: 'Inside' };
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={categoryData} xName='country'
yName='gold' type='Column'>
      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>;
}
;
export default App;

```

```
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject, ColumnSeries, Legend,
Category, Tooltip, DataLabel, Zoom, Crosshair, LineSeries,
Selection} from '@syncfusion/ej2-react-charts';
function App() {
  const primaryXAxis: AxisModel = { valueType: 'Category', labelPosition:
'Inside' };
  const categoryData: Object[] = [
    { country: "Russia", gold: 50, silver: 70, bronze: 45 },
    { country: "China", gold: 40, silver: 60, bronze: 55 },
    { country: "Japan", gold: 70, silver: 60, bronze: 50 },
    { country: "Australia", gold: 60, silver: 56, bronze: 40 },
    { country: "France", gold: 50, silver: 45, bronze: 35 },
    { country: "Germany", gold: 40, silver: 30, bronze: 22 },
    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "United States", gold: 30, silver: 25, bronze: 27 }
  ];
  return <ChartComponent id='charts'
    primaryXAxis={primaryXAxis}>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={categoryData} xName='country'
yName='gold' type='Column'>
      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Multilevel Labels

Any number of levels of labels can be added to an axis using the `multiLevelLabels` property.

This property can be configured using the following properties:

- Categories
- Overflow
- Alignment
- Text style
- Border

Note: To use multilevel label feature, we need to inject `MultiLevelLabel` module into the `services`.

Categories

Using the categories property, you can configure the `start`, `end`, `text`, and `maximumTextWidth` of multilevel labels.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel, MultiLevelLabel } from
"@syncfusion/ej2-react-charts";
import { categoryData } from "datasource.ts";
function App() {
    const primaryxAxis = {
        valueType: 'Category',
        multiLevelLabels: [{
            categories: [
                {
                    start: -0.5,
                    end: 3.5,
                    //Multi-level label's text.
                    text: 'Half Yearly 1'
                },
                { start: 3.5, end: 7.5, text: 'Half Yearly 2' },
            ]
        }]

      </SeriesCollectionDirective>
    </ChartComponent>
  };
  export default App;
  ReactDOM.render(<App />, document.getElementById("charts"));

```

Sorting

The chart's data source can be sorted using the `sort` method of chart. The arguments that are required to pass to sort method are data of chart. The fields depend on which sorting is performed either `x` or `y`, and the `isDescending` with which data source values are sorted in either `ascending` or `descending`.

INDEX.JSX

    { country: "Australia", gold: 60, silver: 56, bronze: 40 },
    { country: "France", gold: 50, silver: 45, bronze: 35 },
    { country: "Germany", gold: 40, silver: 30, bronze: 22 },
    { country: "Italy", gold: 40, silver: 35, bronze: 37 },
    { country: "United States", gold: 30, silver: 25, bronze: 27 }
  ];
  return <ChartComponent id='charts'
    primaryXAxis={primaryxAxis}>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={categoryData} xName='country'
yName='gold' type='Column'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>
  </>;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Customizing Specific Point

You can customize the specific text in the axis labels using `axisLabelRender` event.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel } from '@syncfusion/ej2-
react-charts';
import { categoryData } from 'datasource.ts';
function App() {
  const axisLabelRender = (args) => {
    if (args.text === 'France') {
      args.labelStyle.color = 'Red';
    }
  };
  const primaryxAxis = { valueType: 'Category', border: { width: 1, type:
'Rectangle', color: 'red' } };
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
axisLabelRender={axisLabelRender}>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]}/>

```

```

        <SeriesCollectionDirective>
            <SeriesDirective dataSource={categoryData} xName='country'
yName='gold' type='Column'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";

        { country: "France", gold: 50, silver: 45, bronze: 35 },
        { country: "Germany", gold: 40, silver: 30, bronze: 22 },
        { country: "Italy", gold: 40, silver: 35, bronze: 37 },
        { country: "United States", gold: 30, silver: 25, bronze: 27 }
    ];
    return <ChartComponent id='charts'
        primaryXAxis={primaryXAxis}
        axisLabelRender={axisLabelRender}>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]} />
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={categoryData} xName='country'
yName='gold' type='Column'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Trim using maximum label width

You can trim the label using [enableTrim](#) property and width of the labels can also be customized using [maximumLabelWidth](#) property in the axis, the value maximum label width is **34** by default.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel } from '@syncfusion/ej2-
react-charts';
import { smartAxisData } from 'datasource.ts';
function App() {
    const primaryxAxis = { valueType: 'Category',
        //label is trimmed
        enableTrim: true,
        //maximum width of label is provided
        maximumLabelWidth: '34',
    };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={smartAxisData} xName='x' yName='y'
type='Column'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject,
IAxisLabelRenderEventArgs, ColumnSeries, Legend, Category, Tooltip,
DataLabel, Zoom, Crosshair, LineSeries, Selection } from '@syncfusion/ej2-
react-charts';
function App() {
    const primaryxAxis: AxisModel = { valueType: 'Category',
        //label is trimmed
        enableTrim: true,
        //maximum width of label is provided
        maximumLabelWidth: '34',
    };
    const smartAxisData: any[] = [
        { x: "South Korea", y: 39.4 }, { x: "India", y: 61.3 }, { x: "Pakistan",
y: 20.4 },
        { x: "Germany", y: 65.1 }, { x: "Australia", y: 15.8 }, { x: "Italy", y:
29.2 },
        { x: "France", y: 44.6 }, { x: "Saudi Arabia", y: 9.7 }, { x: "Russia",
y: 40.8 },
    ];
```

```

    { x: "Mexico", y: 31 }, { x: "Brazil", y: 75.9 }, { x: "China", y: 51.4
  }
];
return <ChartComponent id='charts'
  primaryXAxis={primaryxAxis}>
  <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]} />

    <SeriesDirective dataSource={smartAxisData} xName='x' yName='y'
type='Column'>
      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>
</>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Line break support

Line break feature used to customize the long axis label text into multiple lines by using tag. Refer the below example in that dataSource x value contains long text, it breaks into two lines by using `
` tag.

INDEX.JSX

Axis customization in React Chart component

Axis Crossing

An axis can be positioned in the chart area using [crossesAt](#) and [crossesInAxis](#) properties. The [crossesAt](#) property specifies the values (datetime, numeric, or logarithmic) at which the axis line has to be intersected with the vertical axis or vice-versa, and the [crossesInAxis](#) property specifies the axis name with which the axis line has to be crossed.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
ColumnSeries, Legend, Category, Tooltip, DataLabel } from '@syncfusion/ej2-
react-charts';
import { stripData } from 'datasource.ts';
function App() {
    const primaryxAxis = { crossesAt: 15 };
    const primaryyAxis = { crossesAt: 5 };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis}>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={stripData} xName='x' yName='y'
type='Column'>
                </SeriesDirective>
            </SeriesCollectionDirective>
        </ChartComponent>;
    }
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject, ColumnSeries, Legend,
Category, Tooltip, DataLabel, Zoom, Crosshair, LineSeries, Selection } from
'@syncfusion/ej2-react-charts';
function App() {
    const primaryxAxis: AxisModel = { crossesAt: 15 };
    const primaryyAxis: AxisModel = { crossesAt: 5 };
    const stripData: any[] = [
        {x: 1, y: 20},
        {x: 2, y: 22},

<!-- markdownlint-disable MD036 -->

Strip line in React Chart component

<!-- markdownlint-disable MD036 -->

EJ2 chart supports horizontal and vertical strip lines and customization of stripline in both orientation.

To use strip line feature, you need to inject **StripLine** into the **services**.

Horizontal Strip lines

You can create Horizontal stripline by adding the **stripline** in the vertical axis and set **visible** option to true. Striplines are rendered in the specified start to end range and you can add more than one stripline for an axis.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
StripLine, ColumnSeries, Legend, Category, Tooltip, DataLabel } from
'@syncfusion/ej2-react-charts';
import { stripData } from 'datasource.ts';
function App() {
    const primaryxAxis = { title: 'Overs' };
    const primaryyAxis = {
        title: 'Runs',
        stripLines: [{ start: 15, end: 22, text: 'Good', color: '#ff512f',
visible: true },
            { start: 8, end: 15, text: 'Medium', color: 'pink', opacity:
0.5, visible: true },
            { start: 0, end: 8, text: 'Not enough', color: 'skyblue',
opacity: 0.5, visible: true } ]
    };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='India Vs Australia 1st match'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel, Category,
StripLine]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={stripData} xName='x' yName='y'
type='Column'>
                </SeriesDirective>
            </SeriesCollectionDirective>
        </ChartComponent>;
    }
    ;
    export default App;
    ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject, StripLine,
ColumnSeries, Legend, Category, Tooltip, DataLabel, Zoom, Crosshair,
LineSeries, Selection, StripLinesDirective, StripLineDirective }
from '@syncfusion/ej2-react-charts';
function App() {
    const primaryxAxis: AxisModel = { title: 'Overs' };
    const primaryyAxis: AxisModel = {
        title: 'Runs',
        stripLines: [{ start: 15, end: 22, text: 'Good', color: '#ff512f',
visible: true },
            { start: 8, end: 15, text: 'Medium', color: 'pink', opacity: 0.5,
visible: true },
            { start: 0, end: 8, text: 'Not enough', color: 'skyblue', opacity: 0.5,
visible: true } ]
    };
    const stripData: any[] = [
        {x: 1, y: 20}, {x: 2, y: 22}, {x: 3, y: 0}, {x: 4, y: 12}, {x: 5, y: 5},
```

```

    {x: 6, y: 15}, {x: 7, y: 6}, {x: 8, y: 12}, {x: 9, y: 34}, {x: 10, y: 7}
  ];

type='Column'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>
  </>
  export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

Vertical Striplines

You can create vertical stripline by adding the `stripline` in the horizontal axis and set `visible` option to `true`. Striplines are rendered in the specified start to end range and you can add more than one stripline for an axis.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
StripLine, ColumnSeries, Legend, Category, Tooltip, DataLabel } from
'@syncfusion/ej2-react-charts';
import { stripData } from 'datasource.ts';
function App() {
  const primaryxAxis = {
    title: 'Overs', stripLines: [{ start: 0, end: 5, text: 'powerplay
1', color: 'red', visible: true, opacity: 0.5 },
    { start: 5, end: 10, text: 'powerplay 2', color: 'blue',
visible: true, opacity: 0.5 }]
  };
  const primaryyAxis = { title: 'Runs' };
  return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='India Vs Australia 1st match'>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel, Category,
StripLine]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={stripData} xName='x' yName='y'
type='Column'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject, StripLine,
ColumnSeries, Legend, Category, Tooltip, DataLabel, Zoom, Crosshair,
LineSeries, Selection, StripLinesDirective, StripLineDirective }
from '@syncfusion/ej2-react-charts';
function App() {
  const primaryxAxis: AxisModel = {
    title: 'Overs', stripLines: [{ start: 0, end: 5, text: 'powerplay 1',
color: 'red', visible: true, opacity: 0.5 },
{ start: 5, end: 10, text: 'powerplay 2', color: 'blue', visible: true,
opacity: 0.5 } ]
  };
  const primaryyAxis: AxisModel = { title: 'Runs' };
  const stripData: any[] = [
    {x: 1, y: 20}, {x: 2, y: 22}, {x: 3, y: 0}, {x: 4, y: 12}, {x: 5, y: 5},
    {x: 6, y: 15}, {x: 7, y: 6}, {x: 8, y: 12}, {x: 9, y: 34}, {x: 10, y: 7}
  ];
  return <ChartComponent id='charts'
    primaryXAxis={primaryxAxis}
    primaryYAxis={primaryyAxis}
    title='India Vs Australia 1st match'>
    <Inject services=[ColumnSeries, Legend, Tooltip, DataLabel, Category,
StripLine] />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={stripData} xName='x' yName='y'
type='Column'>
        </SeriesDirective>
      </SeriesCollectionDirective>
    </ChartComponent>
  </>
  export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Customize the strip line

Starting value in specific strip line can be customized by **start** property in strip line. Similarly, ending value is customized by **end**. It can be also set for starting from the corresponding origin of the axis by **startFromOrigin**. Size of the strip line is customized by **size**. Border for the stripline is customized by **border**. Order of the strip line such that whether it should be rendered in behind or over the series elements is customized by **zIndex**.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
StripLine, ColumnSeries, Legend, Category, Tooltip, DataLabel } from
"@syncfusion/ej2-react-charts";
import { stripData } from "datasource.ts";
function App() {
  const primaryxAxis = { title: 'Overs', stripLines: [{ startFromOrigin:
true, size: 4, zIndex: 'Behind', opacity: 0.5 } ] };
  const primaryyAxis = { title: 'Runs' };
```

```

    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='India Vs Australia 1st match'>
    <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel, Category,
StripLine]}/>
    <SeriesCollectionDirective>
    <SeriesDirective dataSource={stripData} xName='x' yName='y'
type='Column'>
    </SeriesDirective>
    </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));

```

INDEX.TSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
AxesDirective, AxisDirective, SeriesDirective, Inject, StripLine,
ColumnSeries, Legend, Category, Tooltip, DataLabel, Zoom, Crosshair,
LineSeries, Selection, StripLinesDirective, StripLineDirective}
from '@syncfusion/ej2-react-charts';
function App() {
    const primaryxAxis: AxisModel = { title: 'Overs', stripLines: [{
startFromOrigin: true, size: 4, zIndex: 'Behind', opacity: 0.5 }] };
    const primaryyAxis: AxisModel = { title: 'Runs' };
    const stripData: any[] = [
        {x: 1, y: 20},{x: 2, y: 22},{x: 3, y: 0},{x: 4, y: 12},{x: 5, y: 5},
        {x: 6, y: 15},{x: 7, y: 6},{x: 8, y: 12},{x: 9, y: 34},{x: 10, y: 7}
    ];
    return <ChartComponent id='charts'
        primaryXAxis={primaryxAxis}
        primaryYAxis={primaryyAxis}
        title='India Vs Australia 1st match'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel, Category,
StripLine]}/>
        <SeriesCollectionDirective>
        <SeriesDirective dataSource={stripData} xName='x' yName='y'
type='Column'>
        </SeriesDirective>
        </SeriesCollectionDirective>
        </ChartComponent>
    };
    export default App;
    ReactDOM.render(<App />, document.getElementById("charts"));
}

```

Customize the stripline text

You can customize the text rendered in stripline by `textStyle` property. Rotation of the strip line text can be changed by `rotation` property. Horizontal and Vertical alignment of stripline text can be changed by `horizontalAlignment` and `verticalAlignment` property.

INDEX.JSX

```

import * as React from "react";

```

Recurrence Stripline

The strip lines to be drawn repeatedly at the regular intervals – this will be useful when you want to mark an event that occurs recursively along the timeline of the chart. Following properties are used to configure this feature.

- **isRepeat** - It is used for enable / disable the recurrence strip line.
- **repeatEvery** - It is used for mention the stripline interval.
- **repeatUntil** - It specifies the end value at which point strip line has to stop repeating.

Segment Stripline

You can create stripline in a particular region with respect to segment. You can enable the segment stripline using `isSegmented` property. The start and end value of this type of stripline can be defined using `segmentStart` and `segmentEnd` properties.

- `isSegmented` - It is used for enable the segment stripline.
- `segmentStart` - Used to change the segment start value. Value correspond to associated axis.
- `segmentEnd` - Used to change the segment end value. Value correspond to associated axis.
- `segmentAxisName` - Used to specify the name of the associated axis.

- [Mark the threshold in chart](#)

Multiple panes in React Chart component

Chart area can be divided into multiple panes using [rows](#) and [columns](#).

Rows

To split the chart area vertically into number of rows, use [rows](#) property of the chart.

*1. You can allocate space for each row by using the [height](#) property.

The value can be either in percentage or in pixel.*

2. To associate a vertical axis to a particular row, specify its index to [rowIndex](#) property of the axis.

3. To customize each row's bottom line, use [border](#) property.

Chart Types

Line Chart in React Chart component

<!-- markdownlint-disable MD036 -->

Line

To render a line series, use series [type](#) as `Line` and inject `LineSeries` module into the `services`.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, LineSeries } from '@syncfusion/ej2-
react-charts';
import { data } from 'datasource.ts';
function App() {
    return <ChartComponent id='charts'>
        <Inject services={[LineSeries, Legend, Tooltip, DataLabel,
Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={data} xName='x' yName='y' width={2}
name='India' type='Line'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, Zoom, Crosshair, LineSeries,
Selection}
from '@syncfusion/ej2-react-charts';
import { data } from 'datasource.ts';
function App() {
    return <ChartComponent id='charts'>
        <Inject services={[LineSeries, Legend, Tooltip, DataLabel, Category]}
/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={data} xName='x' yName='y' width={2}
name='India' type='Line'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Multicolored Line

To render a multicolored line series, use series [type](#) as `Line` and inject `LineSeries` module into the services.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
```

```
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, MultiColoredLineSeries, LineSeries }
from '@syncfusion/ej2-react-charts';

'darkorange' }];
    return <ChartComponent id='charts'>
        <Inject services={[LineSeries, Legend, Tooltip, DataLabel, Category,
MultiColoredLineSeries]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={data} xName='x' yName='y' width={2}
name='India' type='MultiColoredLine' pointColorMapping='color'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, Zoom, MultiColoredLineSeries,
LineSeries, Selection}
from '@syncfusion/ej2-react-charts';
function App() {
    const data: any[] = [{ x: 2005, y: 28, color: 'red' }, { x: 2006, y: 25,
color: 'green' },
        { x: 2007, y: 26, color: '#ff0097' }, { x: 2008, y:
27, color: 'crimson' },
        { x: 2009, y: 32, color: 'blue' }, { x: 2010, y: 35,
color: 'darkorange' }];
    return <ChartComponent id='charts'>
        <Inject services={[LineSeries, Legend, Tooltip, DataLabel, Category,
MultiColoredLineSeries]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={data} xName='x' yName='y' width={2}
name='India' type='MultiColoredLine'
            pointColorMapping='color'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Series customization

The following properties can be used to customize the **line** series.

- [fill](#) – Specifies the color of the series.
- [opacity](#) – Specifies the opacity of [fill](#).
- [dashArray](#) – Specifies the dashes for series.
- [width](#) – Specifies the width for series.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, LineSeries } from '@syncfusion/ej2-
react-charts';

Step Area in React Chart component

Spline Area

To render a spline series, use series [type](#) as **Spline** and inject **SplineAreaSeries** module into the services.

INDEX.JSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
SplineAreaSeries, Legend, Category, Tooltip, DataLabel } from
'@syncfusion/ej2-react-charts';
import { splineData } from 'datasource.ts';
function App() {
  const primaryXAxis = { title: 'Month', valueType: 'Category' };
  return <ChartComponent id='charts' primaryXAxis={primaryXAxis}>
    <Inject services={[SplineAreaSeries, Legend, Tooltip, DataLabel,
Category]}/>
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={splineData} xName='x' yName='y'
width={2} name='London' type='SplineArea' marker={{ visible: true, width:
10, height: 10 }}>
      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
{% endraw %}

```

INDEX.TSX

```

{% raw %}
import * as React from "react";
import * as ReactDOM from "react-dom";

```

```
import { AxisModel, ChartComponent, SeriesCollectionDirective,
SeriesDirective, Inject, SplineAreaSeries,
      Legend, Category, Tooltip, DataLabel, Zoom, Crosshair,
SplineSeries, Selection}
from '@syncfusion/ej2-react-charts';
import { splineData } from 'datasource.ts';
function App() {
  const primaryxAxis: AxisModel = { title: 'Month', valueType: 'Category' };
  return <ChartComponent id='charts'
    primaryXAxis={primaryxAxis}>
    <Inject services={[SplineAreaSeries, Legend, Tooltip, DataLabel,
Category]} />
    <SeriesCollectionDirective>
      <SeriesDirective dataSource={splineData} xName='x' yName='y'
width={2} name='London' type='SplineArea'
        marker={{ visible: true, width: 10, height: 10 }}>
      </SeriesDirective>
    </SeriesCollectionDirective>
  </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
{% endraw %}
```

Series customization

The following properties can be used to customize the **spline area** series.

- [fill](#) – Specifies the color of the area series.
- [opacity](#) – Specifies the opacity of [fill](#).
- [dashArray](#) – Specifies the dashes of series.
- [border](#) – Specifies the [color](#) and [width](#) of series border.

Column Chart in React Chart component

Column

To render a column series, use series [type](#) as `Column` and inject `ColumnSeries` module into the services.

INDEX.JSX

```

import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, ColumnSeries } from '@syncfusion/ej2-
react-charts';
import { columnData } from 'datasource.ts';

```

```
function App() {
    const primaryxAxis = { valueType: 'Category', title: 'Countries' };
    const primaryyAxis = { minimum: 0, maximum: 80, interval: 20, title:
'Medals' };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='Olympic Medals'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={columnData} xName='country'
yName='gold' name='Gold' type='Column'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>;
}
;
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

INDEX.TSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { AxisModel, ChartComponent, SeriesCollectionDirective,
SeriesDirective, Inject,
    Legend, Category, Tooltip, DataLabel, Zoom, Crosshair,
ColumnSeries, Selection}
from '@syncfusion/ej2-react-charts';
import { columnData } from 'datasource.ts';
function App() {
    const primaryxAxis: AxisModel = { valueType: 'Category', title:
'Countries' };
    const primaryyAxis: AxisModel = { minimum: 0, maximum: 80, interval: 20,
title: 'Medals' };
    return <ChartComponent id='charts'
        primaryXAxis={primaryxAxis}
        primaryYAxis={primaryyAxis}
        title='Olympic Medals'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={columnData} xName='country'
yName='gold' name='Gold' type='Column'>
            </SeriesDirective>
        </SeriesCollectionDirective>
    </ChartComponent>
};
export default App;
ReactDOM.render(<App />, document.getElementById("charts"));
```

Column space and width

The [columnSpacing](#) and [columnWidth](#) properties are used to customize the space between columns.

INDEX.JSX

```
import * as React from "react";
```

```
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
Legend, Category, Tooltip, DataLabel, ColumnSeries } from '@syncfusion/ej2-
react-charts';
import { columnData } from 'datasource.ts';
function App() {
    const primaryxAxis = { valueType: 'Category', title: 'Countries' };
    const primaryyAxis = { minimum: 0, maximum: 80, interval: 20, title:
'Medals' };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='Olympic Medals'>
        <Inject services={[ColumnSeries, Legend, Tooltip, DataLabel,
Category]}/>

Polar Charts in React Chart component

Polar Chart

To render a polar series, use series [type](#) as **Polar** and inject [Link to the Video](#) module into services

To get start quickly with React Polar and Radar Charts, you can check on this video:

Draw Types

Polar drawType property is used to change the series plotting type to line, column, area, range column,spline, scatter, stacking area and stacking column. The default value of drawType is **Line**.

Line

To render a line draw type, use series [drawType](#) as **Line** and inject **LineSeries** into services.

[isClosed](#) property specifies whether to join start and end point of a line series used in polar chart to form a closed path. Default value of isClosed is true.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ChartComponent, SeriesCollectionDirective, SeriesDirective, Inject,
PolarSeries, LineSeries } from '@syncfusion/ej2-react-charts';
import { data } from 'datasource.ts';
function App() {
    const primaryxAxis = { title: 'Month' };
    const primaryyAxis = { minimum: 20, maximum: 40, interval: 5, title:
'Efficiency', labelFormat: '{value}%' };
    return <ChartComponent id='charts' primaryXAxis={primaryxAxis}
primaryYAxis={primaryyAxis} title='Efficiency of oil-fired power
production'>
        <Inject services={[PolarSeries, LineSeries]}/>
        <SeriesCollectionDirective>
            <SeriesDirective dataSource={data} xName='x' yName='y' type='Polar'
name='Department' drawType='Line'>
            </SeriesDirective>
        </SeriesCollectionDirective>

Radar Charts in React Chart component

Radar

To render a Radar series, use series [type](#) as **Radar** and inject **RadarSeries** module into services

Draw Type

Similar to Polar drawType, Radar draw type property is used to change the series plotting type to line, column, area, range column, spline, scatter, stacking area and stacking column. The default value of drawType is **Line**.
