You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Enable/disable treegrid and its actions in React Treegrid component

You can enable/disable the TreeGrid and its actions by applying/removing corresponding CSS styles.

To enable/disable the treegrid and its actions, follow the given steps:

Step 1:

Create CSS class with custom style to override the default style of TreeGrid.

```
`css
.disabletreegrid {
  pointer-events: none;
  opacity: 0.4;
}
.wrapper {
  cursor: not-allowed;
}
`
```

Step 2:

Add/Remove the CSS class to the TreeGrid in the click event handler of Button.

```
`ts
const btnClick = (): void => {
  if (treegrid && treegrid.element.classList.contains('disabletreegrid')) {
    treegrid.element.classList.remove('disabletreegrid');
    (document.getElementById("TreeGridParent") as HTMLElement).classList.remove('wrapper');
  }
  else if (treegrid) {
    treegrid.element.classList.add('disabletreegrid');
    (document.getElementById("TreeGridParent") as HTMLElement).classList.add('wrapper');
  }
}
`
```

In the below demo, the button click will enable/disable the TreeGrid and its actions.

APP.JSX

```
import * as React from 'react';
import { projectData } from './datasource';
import { ColumnsDirective, ColumnDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { Inject, Page, Edit, Toolbar } from '@syncfusion/ej2-react-
 treegrid';
```

```

import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
/* tslint:disable */
function App() {
    const editOptions = { allowAdding: true, allowEditing: true,
allowDeleting: true };
    const toolbarOptions = ['Add', 'Delete', 'Update', 'Cancel'];
    let treegrid;
    const btnClick = () => {
        if (treegrid &&
treegrid.element.classList.contains('disabletreegrid')) {
            treegrid.element.classList.remove('disabletreegrid');

document.getElementById("TreeGridParent").classList.remove('wrapper');
        }
        else if (treegrid) {
            treegrid.element.classList.add('disabletreegrid');
            document.getElementById("TreeGridParent").classList.add('wrapper');
        }
    };
    return (<div>
        <ButtonComponent cssClass='e-flat e-primary' iconCss='e-icons e-play-

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Change header text dynamically in React Treegrid component

You can change the column [headerText](#) dynamically through an external button.

Follow the given steps to change the header text dynamically:

Step 1:

Get the column object corresponding to the field name by using the [getColumnByField](#) method.

Then change the header Text value.

```
`ts
/ get the JSON object of the column corresponding to the field name */
const column = treegrid.getColumnByField("Duration");
/ assign a new header text to the column */
column.headerText = "Changed Text";
`
```

Step 2:

To reflect the changes in the grid header, invoke the [refreshColumns](#) method.

```
`ts
treegrid.refreshColumns();
`
```

APP.JSX

```
import * as React from 'react';

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations.

You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Customize column styles in React Treegrid component

You can customise the appearance of header and content of the particular column using the [customAttributes](#) property.

To customize the treegrid column, follow the given steps:

Step 1:

Create a css class with custom style to override the default style for rowcell and headercell.

```
`css
.e-treegrid .e-rowcell.customcss{
background-color: #ecedee;
font-family: 'Bell MT';
color: 'red';
font-size: '20px';
}
.e-treegrid .e-headercell.customcss{
background-color: #2382c3;
color: white;
font-family: 'Bell MT';
font-size: '20px';
}
`
```

Step 2:

Add the custom css class to particular column by using [customAttributes](#) property.

```
`ts
<ColumnDirective field='TaskName' headerText='Task Name' width='100'
customAttributes={customAttributes}></ColumnDirective>
`
```

APP.JSX

```
import * as React from 'react';
import { projectData } from './datasource';
import { ColumnsDirective, ColumnDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
/* tslint:disable */
function App() {
    const customAttributes = { class: 'customcss' };
    return (<TreeGridComponent dataSource={projectData} treeColumnIndex={1}
idMapping='TaskID' parentIdMapping='parentID' height={320}>
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Task ID' width='70'
textAlign='Right'></ColumnDirective>
            <ColumnDirective field='TaskName' headerText='Task Name'
width='100' customAttributes={customAttributes}></ColumnDirective>
            <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right'>
            <ColumnDirective field='Duration' headerText='Duration' width='90'
textAlign='Right'>
        </ColumnsDirective>
    </TreeGridComponent>);
}
```

```

    </TreeGridComponent>);
}
;
export default App;

```

APP.TSX

```

import * as React from 'react';
import { projectData } from './datasource';
import { ColumnsDirective, ColumnDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
/* tslint:disable */
function App() {
    const customAttributes: any = {class: 'customcss'};
    return (
        <TreeGridComponent dataSource={projectData} treeColumnIndex={1}
idMapping= 'TaskID' parentIdMapping='parentID' height={320}>
            <ColumnsDirective>
                <ColumnDirective field='TaskID' headerText='Task ID' width='70'
textAlign='Right'></ColumnDirective>
                <ColumnDirective field='TaskName' headerText='Task Name'
width='100' customAttributes={customAttributes}></ColumnDirective>
                <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' />
                <ColumnDirective field='Duration' headerText='Duration' width='90'
textAlign='Right' />
            </ColumnsDirective>
        </TreeGridComponent>
    );
};
export default App;

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Custom tool tip for columns in React Treegrid component

You can achieve the custom tooltip([EJ2 Tooltip](#)) for TreeGrid by using the [queryCellInfo](#) event.

Render the Tooltip component for the treegrid cells by using the following code in the [queryCellInfo](#) event.

```
`ts
const tooltip = (args: QueryCellInfoEventArgs) => {
const tooltip: Tooltip = new Tooltip({
content: getValue((args.column as Column).field, args.data as object).toString()
});
tooltip.appendTo(args.cell as HTMLElement);
}
`
```

APP.JSX

```
import * as React from 'react';
import { projectData } from './datasource';
import { getValue } from '@syncfusion/ej2-base';
import { Tooltip } from '@syncfusion/ej2-popups';
import { ColumnsDirective, ColumnDirective, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
/* tslint:disable */
function App() {
    const tooltip = (args) => {
        const tooltip = new Tooltip({
            content: getValue(args.column.field, args.data).toString()
        });
        tooltip.appendTo(args.cell);
    };
    return (
        <TreeGridComponent dataSource={projectData} treeColumnIndex={1}
        idMapping='TaskID' parentIdMapping='parentID' queryCellInfo={tooltip}
        height={320}>
            <ColumnsDirective>
                <ColumnDirective field='TaskID' headerText='Task ID' width='70'
                textAlign='Right'></ColumnDirective>
                <ColumnDirective field='TaskName' headerText='Task Name'
                width='100'></ColumnDirective>
                <ColumnDirective field='StartDate' headerText='Start Date'
                width='90' format='yMd' textAlign='Right'>
                <ColumnDirective field='Duration' headerText='Duration' width='90'
                textAlign='Right'>
            </ColumnsDirective>
        </TreeGridComponent>);
}
;
export default App;
```

APP.TSX

```
import * as React from 'react';
import { projectData } from './datasource';
import { getValue } from '@syncfusion/ej2-base';
import { Tooltip } from '@syncfusion/ej2-popups';
```

```

import { ColumnsDirective, ColumnDirective, TreeGridComponent } from
 '@syncfusion/ej2-react-treegrid';
import { QueryCellInfoEventArgs, Column } from '@syncfusion/ej2-react-
 grids';
/* tslint:disable */
function App() {
  const tooltip = (args: QueryCellInfoEventArgs) => {
    const tooltip: Tooltip = new Tooltip({
      content: getValue((args.column as Column).field, args.data as
 object).toString()
    });
    tooltip.appendTo(args.cell as HTMLElement);
  }
  return (
    <TreeGridComponent dataSource={projectData} treeColumnIndex={1}
 idMapping= 'TaskID' parentIdMapping='parentID' queryCellInfo={tooltip}
 height={320}>
      <ColumnsDirective>
        <ColumnDirective field='TaskID' headerText='Task ID' width='70'
 textAlign='Right'></ColumnDirective>
        <ColumnDirective field='TaskName' headerText='Task Name'

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations.

You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Change orientation of header text in React Treegrid component

You can change the orientation of the header text by using the [customAttributes](#) property.

Ensure the following steps:

Step 1:

Create a css class with orientation style for treegrid header cell.

```
`css
.orientationcss .e-headercelldiv {
transform: rotate(90deg);
}
`
```

Step 2:

Add the custom css class to particular column by using [customAttributes](#) property.

```
`ts
<ColumnDirective field='EndDate' headerText='End Date' width='90' format='yMd'
customAttributes={this.customAttributes} textAlign='Center' />
`
```

Step 3:

Resize the header cell height in [create](#) event by using the following code.

```
`ts
const setHeaderHeight = () => {
/ Obtain the width of the headerText content */
const textWidth: number = (document.querySelector(".orientationcss > div") as
HTMLElement).scrollWidth;
const headerCell: NodeList = document.querySelectorAll(".e-headercell");
for(let i: number = 0; i < headerCell.length; i++) {
/ Assign the obtained textWidth as the height of the headerCell */
((headerCell as any).item(i)).style.height = textWidth + 'px';
}
}
`
```

APP.JSX

```
import * as React from 'react';
import { projectData } from '../datasource';
import { ColumnsDirective, ColumnDirective, TreeGridComponent } from
'@syncfusion/ej2-react-treegrid';
/* tslint:disable */
function App() {
  const customAttributes = { class: 'orientationcss' };
  const setHeaderHeight = () => {
```

```

    /** Obtain the width of the headerText content */
    const textWidth = document.querySelector(".orientationcss >
div").scrollWidth;
    const headerCell = document.querySelectorAll(".e-headercell");
    for (let i = 0; i < headerCell.length; i++) {
        /** Assign the obtained textWidth as the height of the
headerCell */
        (headerCell.item(i)).style.height = textWidth + 'px';
    }
};
return (<div>
    <TreeGridComponent dataSource={projectData} treeColumnIndex={1}
idMapping='TaskID' parentIdMapping='parentID' created={setHeaderHeight}
height={230}>
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Task ID' width='70'
textAlign='Right'></ColumnDirective>
            <ColumnDirective field='TaskName' headerText='Task Name'
width='100'></ColumnDirective>
            <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right'>
            <ColumnDirective field='EndDate' headerText='End Date'
width='90' format='yMd' customAttributes={customAttributes}
textAlign='Center'>
            <ColumnDirective field='Duration' headerText='Duration'
width='90' textAlign='Right'>
            <ColumnDirective field='Progress' headerText='Progress'
width='90' textAlign='Right'>
        </ColumnsDirective>
    </TreeGridComponent>
</div>);
}
;
export default App;

```

APP.TSX

```

import * as React from 'react';

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Render react component in column in React Treegrid component

You can use [queryCellInfo](#) event to render the React component inside TreeGrid cells.

In the following sample, the DropDownList is rendered in the **Priority** column.

APP.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { projectData } from './datasource';
import { getValue } from '@syncfusion/ej2-base';
import { DataUtil } from '@syncfusion/ej2-data';
import { DropDownListComponent } from '@syncfusion/ej2-react-dropdowns';
import { ColumnsDirective, ColumnDirective, TreeGridComponent } from '@syncfusion/ej2-react-treegrid';
/* tslint:disable */
function App() {
    let drop;
    const dropdown = (args) => {
        drop = DataUtil.distinct(projectData, 'Priority');
        if (args.column.field === "Priority") {
            const val = getValue(args.column.field, args.data);
            ReactDOM.render(<DropDownListComponent id="dropdown" value={val}
dataSource={drop} change={onChange}/>, args.cell);
        }
    };
    const onChange = (args) => {
        /** Event will trigger when you have change the value in dropdown
column */
        alert(args.value);
    };
    return (<div>
        <TreeGridComponent dataSource={projectData} treeColumnIndex={1}
idMapping='TaskID' parentIdMapping='parentID' queryCellInfo={dropdown}
height={315}>
            <ColumnsDirective>
                <ColumnDirective field='TaskID' headerText='Task ID' width='70'
textAlign='Right'></ColumnDirective>
                <ColumnDirective field='TaskName' headerText='Task Name '
width='100'></ColumnDirective>
                <ColumnDirective field='StartDate' headerText='Start Date '
width='90' format='yMd' textAlign='Right'></ColumnDirective>
                <ColumnDirective field='EndDate' headerText='End Date' width='90'
format='yMd' textAlign='Right'></ColumnDirective>
                <ColumnDirective field='Duration' headerText='Duration' width='90'
textAlign='Right'></ColumnDirective>
                <ColumnDirective field='Priority' headerText='Priority' width='90'
textAlign='Right'></ColumnDirective>
            </ColumnsDirective>
        </TreeGridComponent>
    </div>);
}
;
export default App;
```

APP.TSX

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Customize the icon for column menu in React Treegrid component

You can customize the column menu icon by overriding the default treegrid class **.e-icons.e-columnmenu** with a custom property **content** as mentioned below,

```
`css
.e-treegrid .e-columnheader .e-icons.e-columnmenu::before {
content: "\e903";
}
`
```

In the below sample, treegrid is rendered with a customized column menu icon.

APP.JSX

```
import * as React from 'react';
import { projectData } from './datasource';
import { ColumnsDirective, ColumnDirective, TreeGridComponent, ColumnMenu, Inject } from '@syncfusion/ej2-react-treegrid';
/* tslint:disable */
function App() {
    return (<div>
        <TreeGridComponent dataSource={projectData} treeColumnIndex={1}
idMapping='TaskID' parentIdMapping='parentID' showColumnMenu={true}
height={315}>
            <ColumnsDirective>
                <ColumnDirective field='TaskID' headerText='Task ID' width='70'
textAlign='Right'></ColumnDirective>
                <ColumnDirective field='TaskName' headerText='Task Name'
width='100'></ColumnDirective>
                <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right'>
                <ColumnDirective field='EndDate' headerText='End Date' width='90'
format='yMd' textAlign='Right'>
                <ColumnDirective field='Duration' headerText='Duration' width='90'
textAlign='Right'>
                <ColumnDirective field='Priority' headerText='Priority' width='90'
textAlign='Right'>
            </ColumnsDirective>
        </TreeGridComponent>
    </div>);
}
```

```

        </ColumnsDirective>
        <Inject services={[ColumnMenu]}/>
    </TreeGridComponent>
</div>);
}
;
export default App;

```

APP.TSX

```

import * as React from 'react';
import { projectData } from './datasource';
import { ColumnsDirective, ColumnDirective, TreeGridComponent, ColumnMenu,
Inject } from '@syncfusion/ej2-react-treegrid';
/* tslint:disable */
function App() {
    return <div>
        <TreeGridComponent dataSource={projectData} treeColumnIndex={1}
idMapping= 'TaskID' parentIdMapping='parentID' showColumnMenu={true}
height={315}>
            <ColumnsDirective>
                <ColumnDirective field='TaskID' headerText='Task ID' width='70'
textAlign='Right'></ColumnDirective>
                <ColumnDirective field='TaskName' headerText='Task Name'
width='100'></ColumnDirective>
                <ColumnDirective field='StartDate' headerText='Start Date'
width='90' format='yMd' textAlign='Right' />
                <ColumnDirective field='EndDate' headerText='End Date' width='90'
format='yMd' textAlign='Right' />
                <ColumnDirective field='Duration' headerText='Duration' width='90'

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Customize the edit dialog in React Treegrid component

You can customize the appearance of the edit dialog in the [actionComplete](#) event based on **requestType** as **beginEdit** or **add**.

In the below example, we have changed the dialog's header text for editing and adding records.

APP.JSX

```
import * as React from 'react';
import { projectData } from './datasource';
import { getValue } from '@syncfusion/ej2-base';
import { ColumnsDirective, ColumnDirective, TreeGridComponent, Inject } from '@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
/* tslint:disable */
function App() {
    const editOptions = { allowEditing: true, allowAdding: true,
allowDeleting: true, mode: 'Dialog' };
    const toolbarOptions = ['Add', 'Edit', 'Delete'];
    const actionComplete = (args) => {
        if ((args.requestType === 'beginEdit' || args.requestType ===
'add')) {
            const dialog = args.dialog;
            dialog.height = 400;
            // change the header of the dialog
            dialog.header = args.requestType === 'beginEdit' ?
'Record of ' + getValue('TaskName', args.rowData) : 'New
Customer';
        }
    };
    return (<TreeGridComponent dataSource={projectData} treeColumnIndex={1}
idMapping='TaskID' parentIdMapping='parentID'
actionComplete={actionComplete} editSettings={editOptions}
toolbar={toolbarOptions} height={265}>
        <ColumnsDirective>
            <ColumnDirective field='TaskID' headerText='Task ID' width='70'
textAlign='Right' isPrimaryKey={true}></ColumnDirective>
            <ColumnDirective field='TaskName' headerText='Task Name'
width='100'></ColumnDirective>
            <ColumnDirective field='Duration' headerText='Duration' width='90'
textAlign='Right'></ColumnDirective>
            <ColumnDirective field='Priority' headerText='Priority' width='90'
textAlign='Right'></ColumnDirective>
        </ColumnsDirective>
        <Inject services={[Edit, Toolbar]}></Inject>
    </TreeGridComponent>);
}
;
export default App;
```

APP.TSX

```
import * as React from 'react';
```

```

import { projectData } from './datasource';
import { getValue } from '@syncfusion/ej2-base';
import { Dialog } from '@syncfusion/ej2-popups';

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Cascading drop down list with treegrid editing in React Treegrid component

You can achieve the Cascading DropDownList with treegrid Editing by using the Cell Edit Template feature.

In the below demo, Cascading DropDownList rendered for **Priority** and **Duration** column.

APP.JSX

```
import * as React from 'react';
import { projectData } from './datasource';
import { DataManager, Query } from '@syncfusion/ej2-data';
import { DropDownList } from '@syncfusion/ej2-dropdowns';
import { ColumnsDirective, ColumnDirective, TreeGridComponent, Inject } from '@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar } from '@syncfusion/ej2-react-treegrid';
/* tslint:disable */
function App() {
    const editOptions = { allowEditing: true, allowAdding: true,
allowDeleting: true, mode: 'Row' };
    const toolbarOptions = ['Add', 'Edit', 'Delete'];
    let treegridObj;
    let priorityElem;
    let priorityObj;
    let durationElem;
    let durationObj;
    const priority = {
        create: () => {
            priorityElem = document.createElement('input');
            return priorityElem;
        },
        destroy: () => {
            priorityObj.destroy();
        },
        read: () => {
            return priorityObj.text;
        },
        write: () => {
            priorityObj = new DropDownList({
```

```

        change: () => {
            durationObj.enabled = true;
            const tempQuery = new Query().where('priorityId',
'equal', priorityObj.value);
            durationObj.query = tempQuery;
            durationObj.text = '';

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations.

You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Provide custom data source and enabling filtering to drop down list in React Treegrid component

You can provide data source to the DropDownList by using the **params** of [columns.edit](#) property.

While setting new data source using edit params, you must specify a new **query** property for the DropDownList as follows,

```
`ts
```

```
const priority : IEditCell = {
```

```
  params: {
```

```
    actionComplete: () => false,
```

```

allowFiltering: true,
dataSource: new DataManager(this.priorityData),
fields: { text: "countryName", value: "countryName"},
query: new Query()
}
};
`

```

You can also enable filtering for the DropDownList by passing the [allowFiltering](#) as **true** to the edit params.

In the below demo, DropDownList is rendered with custom [dataSource](#) for the *Priority* column and enabled filtering to search DropDownList items.

APP.JSX

```

import * as React from 'react';
import { projectData } from './datasource';
import { DataManager, Query } from '@syncfusion/ej2-data';
import { ColumnsDirective, ColumnDirective, TreeGridComponent, Inject } from '@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar, Page } from '@syncfusion/ej2-react-treegrid';
/* tslint:disable */
function App() {
    const editOptions = { allowEditing: true, allowAdding: true,
allowDeleting: true, mode: 'Row' };
    const toolbarOptions = ['Add', 'Edit', 'Delete'];
    const priorityData = [
        { priorityName: 'Normal', priorityId: '1' },
        { priorityName: 'High', priorityId: '2' },
        { priorityName: 'Low', priorityId: '3' },
        { priorityName: 'Critical', priorityId: '4' },
        { priorityName: 'Breaker', priorityId: '5' }
    ];
    const priority = {
        params: {
            actionComplete: () => false,
            allowFiltering: true,
            dataSource: new DataManager(priorityData),
            fields: { text: "priorityName", value: "priorityName" },
            query: new Query()
        }
    };
    return (<TreeGridComponent dataSource={projectData} treeColumnIndex={1}
idMapping='TaskID' parentIdMapping='parentID' editSettings={editOptions}

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Use wizard like dialog editing in React Treegrid component

Wizard helps you create intuitive step-by-step forms to fill. You can achieve the wizard like editing by using the dialog template feature. It supports your own editing template by defining [editSettings.mode](#) as **Dialog** and [editSetting.template](#) as a REACT Component.

The following example demonstrates the wizard like editing in the treegrid with the obtrusive Validation.

APP.JSX

```

{% raw %}

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Using tab inside the dialog editing in React Treegrid component

You can use [tab](#) component inside dialog edit UI using dialog template feature. The dialog template feature can be enabled by defining [editSettings.mode](#) as `Dialog` and [editSetting.template](#) as a REACT Component.

The following example demonstrate the usage of tab control inside the dialog template.

APP.JSX

```
{% raw %}
import * as React from 'react';
import { DataUtil } from '@syncfusion/ej2-data';
import { projectData } from './datasource';
import { projectData as orderData } from './datasource';

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Disable editing for particular row cell in React Treegrid component

You can disable the editing for a particular row by using the [actionBegin](#) event of Grid based on **requestType** as **beginEdit**.

In the below demo, the rows which are having the value for *Priority* column as *Breaker* is prevented from editing.

APP.JSX

```

import * as React from 'react';
import { projectData } from './datasource';
import { getValue } from '@syncfusion/ej2-base';
import { ColumnsDirective, ColumnDirective, TreeGridComponent, Inject } from '@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar, Page } from '@syncfusion/ej2-react-treegrid';
/* tslint:disable */
function App() {
    const editOptions = { allowEditing: true, allowAdding: true,
allowDeleting: true, mode: 'Row' };
    const toolbarOptions = ['Add', 'Edit', 'Delete'];

```

```

    const actionBegin = (args) => {
      if (args.requestType === 'beginEdit') {
        if (getValue('Priority', args.rowData) === "Breaker") {
          args.cancel = true;
        }
      }
    };
    return (<TreeGridComponent dataSource={projectData} treeColumnIndex={1}
    idMapping='TaskID' parentIdMapping='parentID' height={265}
    editSettings={editOptions} actionBegin={actionBegin}
    toolbar={toolbarOptions}>
      <ColumnsDirective>
        <ColumnDirective field='TaskID' headerText='Task ID' width='70'
        textAlign='Right' isPrimaryKey={true}></ColumnDirective>
        <ColumnDirective field='TaskName' headerText='Task Name'
        width='100'></ColumnDirective>
        <ColumnDirective field='StartDate' headerText='Start Date'
        width='100' format='yMd' textAlign='Right'
        editType='datepickeredit'></ColumnDirective>
        <ColumnDirective field='EndDate' headerText='End Date' width='100'
        format='yMd' textAlign='Right' editType='datepickeredit'></ColumnDirective>
        <ColumnDirective field='Priority' headerText='Priority' width='90'
        textAlign='Right'></ColumnDirective>
      </ColumnsDirective>
      <Inject services={[Edit, Toolbar, Page]}></Inject>
    </TreeGridComponent>);
  }
;
export default App;

```

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Display null values at bottom in React Treegrid component

By default the null values are displayed at bottom of the TreeGrid row while perform sorting in ascending order. As well as this values are displayed at top of the TreeGrid row while perform sorting with descending order. But you can customize this default order to display the null values at always bottom row of the TreeGrid by using [column.sortComparer](#) method.

In the below demo we have displayed the null date values at bottom of the Grid row while sorting the **StartDate** column in both ways.

APP.JSX

```
import * as React from 'react';
import { projectData } from './datasource';
import { ColumnsDirective, ColumnDirective, TreeGridComponent, Inject, Sort }
  from '@syncfusion/ej2-react-treegrid';
/* tslint:disable */
function App() {
  const [action, setAction] = React.useState('');
  const sortComparer = (reference, comparer) => {
    const sortAsc = action === "Ascending" ? true : false;
    if (sortAsc && reference === null) {
      return -1;
    }
    else if (sortAsc && comparer === null) {
      return 1;
    }
    else if (!sortAsc && reference === null) {
      return -1;
    }
    else if (!sortAsc && comparer === null) {
      return 1;
    }
    else {
      return reference - comparer;
    }
  };
  const actionBegin = (args) => {
    if (args.requestType === "sorting") {
      setAction(args.direction);
    }
  };
  return (

```

You can refer to our [React Tree Grid](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Tree Grid example](#) to know how to present and manipulate data.

Restrict decimal points while treegrid editing in React Treegrid component

By default, the number of decimal places will be restricted to two in the NumericTextBox while editing the numeric column. We can restrict to type the decimal points in a NumericTextBox by using the **validateDecimalOnType** and **decimals** properties of NumericTextBox.

In the below demo, while editing the row we have restricted to type the decimal point value in the NumericTextBox of **Progress** column.

APP.JSX

```
import * as React from 'react';
import { stackedData } from './datasource';
import { ColumnsDirective, ColumnDirective, TreeGridComponent, Inject } from
 '@syncfusion/ej2-react-treegrid';
import { Edit, Toolbar, Page } from '@syncfusion/ej2-react-treegrid';
/* tslint:disable */
function App() {
    const editOptions = { allowEditing: true, allowAdding: true,
allowDeleting: true, mode: 'Row' };
    const toolbarOptions = ['Add', 'Edit', 'Delete'];
    let treegrid;
    const numericParams = {
        params: {
            decimals: 0,
            format: "N",
            validateDecimalOnType: true
        }
    };
};
```

```

    return (<TreeGridComponent dataSource={stackedData} treeColumnIndex={1}
childMapping='subtasks' editSettings={editOptions} toolbar={toolbarOptions}
height={265} ref={g => treegrid = g}>
    <ColumnsDirective>
        <ColumnDirective field='orderID' headerText='Order ID' width='70'
textAlign='Right' isPrimaryKey={true}></ColumnDirective>
        <ColumnDirective field='orderName' headerText='Order Name'
width='100'></ColumnDirective>
        <ColumnDirective field='orderDate' headerText='Order Date'
width='100' format='yMd' textAlign='Right'
editType='datepickeredit'></ColumnDirective>
        <ColumnDirective field='price' headerText='price'
edit={numericParams} editType='numericedit' width='90' format='c2'
textAlign='Right'></ColumnDirective>
    </ColumnsDirective>
    <Inject services={[Edit, Toolbar, Page]}></Inject>
</TreeGridComponent>);
}
;
export default App;

```

APP.TSX
