Handle no color support in React Color picker component

The ColorPicker component supports no color functionality. By clicking the no color tile from palette, the selected color becomes **empty** and considered as no color has been selected from color picker.

Default no color

To achieve this, set **noColor** property as **true**.

In the following sample, the first tile of the color palette represents the no color tile. By clicking the no color tile you can achieve the above functionalities.

INDEX.JSX

```

import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
import { useEffect } from "react";
function App() {

```

```

let preview;
function onChange(args) {
    preview.style.backgroundColor = args.currentValue.hex;
    preview.textContent = args.currentValue.hex ? args.currentValue.hex :
    'No color';
}
useEffect(() => {
    preview = document.getElementById('preview');
    preview.style.backgroundColor = '#ba68c8';
    preview.textContent = '#ba68c8';
}, []);
return (<div id='container'>
    <div className='wrap'>
        <div id='preview' />
        <h4>Select Color</h4>
        <ColorPickerComponent id='colorpicker' value='#ba68c8'
mode='Palette' noColor={true} showButtons={false} modeSwitcher={false}
change={onChange} />
    </div>
    </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { ColorPickerComponent, ColorPickerEventArgs } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
import { useEffect } from "react";
function App() {
    let preview: HTMLElement;
    function onChange (args: ColorPickerEventArgs): void {
        preview.style.backgroundColor = args.currentValue.hex;
        preview.textContent = args.currentValue.hex ? args.currentValue.hex :
    'No color';
    }
    useEffect(() => {
        preview = document.getElementById('preview') as HTMLElement;
        preview.style.backgroundColor = '#ba68c8';
        preview.textContent = '#ba68c8';
    }, []);
    return (
        <div id='container'>
            <div className='wrap'>
                <div id='preview' />
                <h4>Select Color</h4>
                <ColorPickerComponent id='colorpicker' value='#ba68c8'
mode='Palette' noColor={true} showButtons={false} modeSwitcher={false}
change={onChange} />
            </div>
            </div>
        );
    }
export default App;

```

```
ReactDOM.render(<App />, document.getElementById('element'));
```

If the [noColor](#) property is enabled, make sure to disable the [modeswitcher](#) property.

Custom no color

The following sample show the color palette with custom no color option.

INDEX.JSX

```
import * as React from "react";
import * as ReactDOM from "react-dom";
import { ColorPickerComponent, PaletteTileEventArgs, ColorPickerEventArgs }
from '@syncfusion/ej2-react-inputs';
import { SplitButtonComponent } from '@syncfusion/ej2-react-splitbuttons';

Disabled in React Color picker component

To achieve disabled state in ColorPicker, set the `disabled` property to `true`. The ColorPicker pop-up cannot be accessed in disabled state.

The following example shows the disabled state of ColorPicker component.

INDEX.JSX

```
import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  return (<div id='container'>
    <div className='wrap'>
```

```

        <h4>Choose Color</h4>
        <ColorPickerComponent disabled={true}/>
      </div>
    </div>);
  }
;
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { ColorPickerComponent } from '@syncfusion/ej2-react-inputs';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  return (
    <div id='container'>
      <div className='wrap'>
        <h4>Choose Color</h4>
        <ColorPickerComponent disabled={true}/>
      </div>
    </div>
  );
};
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

Ej1 api migration in React Color picker component

This article describes the API migration process of ColorPicker component from Essential JS 1 to Essential JS 2.

Properties

{% raw %}

| Behavior | API in Essential JS 1 | API in Essential JS 2 |

| --- | --- | --- |

| Default | **property:** *value*

 <EJ.ColorPicker id="colorpicker" value="#278787"></EJ.ColorPicker> | **property:** *value*

 <ColorPickerComponent id="colorpicker" value="#278787"></ColorPickerComponent> |

| Inline mode color picker | **property:** *displayInline*

 <EJ.ColorPicker id="colorpicker" displayInline={true}></EJ.ColorPicker> | **property:** *inline*

 <ColorPickerComponent id="colorpicker" inline={true}></ColorPickerComponent> |

| Adding custom class | **property:** *cssClass*

 <EJ.ColorPicker id="colorpicker" cssClass="custom-class"></EJ.ColorPicker> | **property:** *cssClass*

 <ColorPickerComponent id="colorpicker" cssClass="custom-class"></ColorPickerComponent> |

| Disable the ColorPicker component | **property:** *enabled*

 <EJ.ColorPicker id="colorpicker" enabled={false}></EJ.ColorPicker> | **property:** *disabled*

 <ColorPickerComponent id="colorpicker" disabled={true}></ColorPickerComponent> |

| To display custom text in button elements | **property:** *buttonText*

 var buttonText = { apply: "Apply", cancel: "Cancel", swatches: "Swatches" };
 <EJ.ColorPicker id="colorpicker" buttonText={buttonText}></EJ.ColorPicker> | Not Applicable |

| To display customized text or content when mouse over the color picker elements | **property:** *tooltipText*

 var tooltipText = { switcher: "Switch", currentColor: "New Color", selectedColor: "Old Color" };
 <EJ.ColorPicker id="colorpicker" tooltipText={tooltipText}></EJ.ColorPicker> | Not Applicable |

| Disable / hide opacity | **property:** *enableOpacity*

 <EJ.ColorPicker id="colorpicker" enableOpacity={false}></EJ.ColorPicker> | **property:** *enableOpacity*

 <ColorPickerComponent id="colorpicker" enableOpacity={false}></ColorPickerComponent> |

| ColorPicker Button mode | **property:** *buttonMode*

 <EJ.ColorPicker id="colorpicker" buttonMode="Dropdown"></EJ.ColorPicker> | Not Applicable |

| To show / hide the control (apply / cancel) buttons | **property:** *showApplyCancel*

 <EJ.ColorPicker id="colorpicker" showApplyCancel={false}></EJ.ColorPicker> | **property:** *showButtons*

 <ColorPickerComponent id="colorpicker" showButtons={false}></ColorPickerComponent> |

| To show / hide the clear button | **property:** *showClearButton*

 <EJ.ColorPicker id="colorpicker" showClearButton={false}></EJ.ColorPicker> | Not Applicable |

| Show / hide the mode (picker / palette) switcher | **property:** *showSwitcher*

 <EJ.ColorPicker id="colorpicker" showSwitcher={false}></EJ.ColorPicker> | **property:** *modeSwitcher*

 <ColorPickerComponent id="colorpicker" modeSwitcher={false}></ColorPickerComponent> |

| To show / hide the preview area | **property:** *showPreview*

 <EJ.ColorPicker id="colorpicker" showPreview={false}></EJ.ColorPicker> | Not Applicable |

| To show / hide the recent selected color list | **property:** *showRecentColors*

 <EJ.ColorPicker id="colorpicker" showRecentColors={true}></EJ.ColorPicker> | Not Applicable |

| To show / hide the color picker slider tooltip | **property:** *showTooltip*

 <EJ.ColorPicker id="colorpicker" showTooltip={false}></EJ.ColorPicker> | Not Applicable |

| Custom icon in dropdown control color area | **property:** *toolIcon*

 <EJ.ColorPicker id="colorpicker" toolIcon="e-font-icon"></EJ.ColorPicker> | Not Applicable |

| ColorPicker mode | **property:** *modelType*

 <EJ.ColorPicker id="colorpicker" modelType="Picker"></EJ.ColorPicker> | **property:** *mode*

 <ColorPickerComponent id="colorpicker" mode="Palette"></ColorPickerComponent> |

| Opacity value | **property:** *opacityValue*

 <EJ.ColorPicker id="colorpicker" opacityValue={80}></EJ.ColorPicker> | Not Applicable |

| Number of columns in color palette | **property:** *columns*

 <EJ.ColorPicker id="colorpicker" columns={10}></EJ.ColorPicker> | **property:** *columns*

 <ColorPickerComponent id="colorpicker" columns={15}></ColorPickerComponent> |

Custom colors | **property:** *palette*

 var colors = { "ffffff", "ffccff", "ff99ff", "ff66ff", "ff33ff", "ff00ff", "ccffff", "ccccff", "cc99ff", "cc66ff", "cc33ff", "cc00ff", "99ffff", "99ccff", "9999ff", "9966ff", "9933ff", "9900ff", "ffffcc", "ffcccc" };
 <EJ.ColorPicker id="colorpicker" palette="CustomPalette" modelType="Palette" custom={colors}></EJ.ColorPicker> | **property:** *presetColors*

 constructor(props: {}) {
 this.colors = {
 'custom': ["ffffff", "ffccff", "ff99ff", "ff66ff", "ff33ff", "ff00ff", "ccffff", "ccccff", "cc99ff", "cc66ff", "cc33ff", "cc00ff", "99ffff", "99ccff", "9999ff", "9966ff", "9933ff", "9900ff", "ffffcc", "ffcccc"];
 }
 <ColorPickerComponent id="colorpicker" presetColors={this.colors}></ColorPickerComponent> |

| Rendering palette from the predefined set of palettes | **property:** *presetType*

 <EJ.ColorPicker id="colorpicker" modelType="Palette" presetType="FlatColors"></EJ.ColorPicker> | Not Applicable |

| No color option in color palette | Not Applicable | **property:** *noColor*

 <ColorPickerComponent id="colorpicker" noColor={true} modeSwitcher={false} mode="Palette"></ColorPickerComponent> |

| Localization | **property:** *locale*

 ej.ColorPicker.Locale["zh-CN"] = {
 buttonText: {
 apply: "应用",
 cancel: "取消",
 swatches: "色板"
 },
 tooltipText: {
 switcher: "切换器",
 addButton: "添加颜色",
 basic: "基本"
 }
 }
 <EJ.ColorPicker id="colorpicker" locale="zh-CN"></EJ.ColorPicker> | **property:** *locale*

 L10n.load({
 'ar': {
 "colorpicker": {
 "Apply": "تطبيق",
 "Cancel": "إلغاء",
 "ModeSwitcher": "مفتاح كهربائي الوضع"
 }
 }
 });
 <ColorPickerComponent id="colorpicker" locale="ar"></ColorPickerComponent> |

| Right to left | **property:** *enableRTL*

 <EJ.ColorPicker id="colorpicker" enableRTL={true}></EJ.ColorPicker> | **property:** *enableRtl*

 <ColorPickerComponent id="colorpicker" enableRtl={true}></ColorPickerComponent> |

Methods

| Behavior | API in Essential JS 1 | API in Essential JS 2 |

— — — — —

```
| Method to open color picker popup | Method: show <br/><br/> <EJ.ColorPicker
id="colorpicker"></EJ.ColorPicker> <br/> var colorPickerObj =
$('#colorpicker').ejColorPicker('instance'); <br/> colorPickerObj.show(); | Method: toggle <br/><br/>
<ColorPickerComponent id="colorpicker" ref = {(scope) => {this.colorPickerObj =
scope}}></ColorPickerComponent> <br/> constructor(props: {}) { <br/> &#160;
this.colorPickerObj.toggle(); <br/> } |
```

```
| Method to close color picker popup | Method: hide <br/><br/> <EJ.ColorPicker  
id="colorpicker"></EJ.ColorPicker> <br/> var colorPickerObj =  
$('#colorpicker').ejColorPicker('instance'); <br/> colorPickerObj.hide(); | Method: toggle <br/><br/>  
<ColorPickerComponent id="colorpicker" ref = {(scope) => {this.colorPickerObj =
```

```
scope}}></ColorPickerComponent> <br/> constructor(props: {}) { <br/> &#160;
this.colorPickerObj.toggle(); <br/> } |
```

| Enable the color picker control | **Method:** *enable*

 <EJ.ColorPicker
id="colorpicker"></EJ.ColorPicker>
 var colorPickerObj =
\$('#colorpicker').ejColorPicker('instance');
 colorPickerObj.enable(); | Not Applicable |

| Disables the color picker control | **Method:** *disable*

 <EJ.ColorPicker
id="colorpicker"></EJ.ColorPicker>
 var colorPickerObj =
\$('#colorpicker').ejColorPicker('instance');
 colorPickerObj.disable(); | Not Applicable |

| Method returns the selected color value as hex code | **Method:** *getValue*

 <EJ.ColorPicker
id="colorpicker"></EJ.ColorPicker>
 var colorPickerObj =
\$('#colorpicker').ejColorPicker('instance');
 colorPickerObj.getValue(); | **Method:** *getValue*

 <ColorPickerComponent id="colorpicker" ref = {(scope) => {this.colorPickerObj =
scope}}></ColorPickerComponent>
 constructor(props: {}) {

this.colorPickerObj.getValue();
 } |

| Method returns the selected color value in RGB format | **Method:** *getColor*

<EJ.ColorPicker id="colorpicker"></EJ.ColorPicker>
 var colorPickerObj =
\$('#colorpicker').ejColorPicker('instance');
 colorPickerObj.getColor(); | **Method:** *getValue*

 <ColorPickerComponent id="colorpicker" ref = {(scope) => {this.colorPickerObj =
scope}}></ColorPickerComponent>
 constructor(props: {}) {

this.colorPickerObj.getValue(null, 'RGB');
 } |

| Method convert the color value from hexCode to RGB | **Method:** *hexCodeToRGB*

<EJ.ColorPicker id="colorpicker"></EJ.ColorPicker>
 var colorPickerObj =
\$('#colorpicker').ejColorPicker('instance');
 colorPickerObj.hexCodeToRGB("#278787"); | **Method:**
getValue

 <ColorPickerComponent id="colorpicker" ref = {(scope) =>
{this.colorPickerObj = scope}}></ColorPickerComponent>
 constructor(props: {}) {

 this.colorPickerObj.getValue("#278787", 'RGB');
 } |

| Method convert the color value from RGB to Hex code | **Method:** *RGBToHEX*

<EJ.ColorPicker id="colorpicker"></EJ.ColorPicker>
 var colorPickerObj =
\$('#colorpicker').ejColorPicker('instance');
 colorPickerObj.RGBToHEX({r:38,g:133,b:133}); | **Method:**
getValue

 <ColorPickerComponent id="colorpicker" ref = {(scope) =>
{this.colorPickerObj = scope}}></ColorPickerComponent>
 constructor(props: {}) {

 this.colorPickerObj.getValue("rgb(38,133,133)", 'Hex');
 } |

| Method convert the color value from RGB to HSV | **Method:** *RGBToHSV*

 <EJ.ColorPicker
id="colorpicker"></EJ.ColorPicker>
 var colorPickerObj =
\$('#colorpicker').ejColorPicker('instance');
 colorPickerObj.RGBToHSV({h:230,s:98,v:98}); | **Method:**
getValue

 <ColorPickerComponent id="colorpicker" ref = {(scope) =>
{this.colorPickerObj = scope}}></ColorPickerComponent>
 constructor(props: {}) {

 this.colorPickerObj.getValue("rgb(180,71.1,52.9)", 'HSV');
 } |

| Method convert the color value from HSV to RGB | **Method:** *HSVToRGB*

 <EJ.ColorPicker
id="colorpicker"></EJ.ColorPicker>
 var colorPickerObj =
\$('#colorpicker').ejColorPicker('instance');
 colorPickerObj.HSVToRGB({h:230,s:98,v:98}); | **Method:**
getValue

 <ColorPickerComponent id="colorpicker" ref = {(scope) =>

```
{this.colorPickerObj = scope}}></ColorPickerComponent> <br/> constructor(props: {}) { <br/>
&#160; this.colorPickerObj.getValue("hsv(180,71.1,52.9)", 'RGB'); <br/> } |
```

Events

| Behavior | API in Essential JS 1 | API in Essential JS 2 |

| --- | --- | --- |

| Event triggers before opening the ColorPicker popup | Not Applicable | **Event:** *beforeOpen*

<ColorPickerComponent id="colorpicker"

```
beforeOpen={this.beforeOpen.bind(this)}></ColorPickerComponent> <br/> beforeOpen(args) {
<br/> &#160; &#160; / code block */ <br/> } |
```

| Event triggers before closing the ColorPicker popup | Not Applicable | **Event:** *beforeClose*

<ColorPickerComponent id="colorpicker"

```
beforeClose={this.beforeClose.bind(this)}></ColorPickerComponent> <br/> beforeClose(args) {
<br/> &#160; &#160; / code block */ <br/> } |
```

| Event triggers after opening the ColorPicker popup | **Event:** *open*

 <EJ.ColorPicker
id="colorpicker" open={open}></EJ.ColorPicker>
 function open(args) {
 /
code block /
 } | **Event:** *open*

 <ColorPickerComponent id="colorpicker"
open={this.open.bind(this)}></ColorPickerComponent>
 open(args) {
 / code
block /
 } |

| Event triggers after closing the ColorPicker popup | **Event:** *close*

 <EJ.ColorPicker
id="colorpicker" close={close}></EJ.ColorPicker>
 function close(args) {
 /
code block */
 } | Not Applicable |

| Event triggers once the component rendering is completed | **Event:** *create*

<EJ.ColorPicker id="colorpicker" create={create}></EJ.ColorPicker>
 function create(args) {

 / code block /
 } | **Event:** *created*

 <ColorPickerComponent
id="colorpicker" created={this.created.bind(this)}></ColorPickerComponent>
 created() {

 / code block /
 } |

| Event triggers once the color picker control is destroyed | **Event:** *destroy*

 <EJ.ColorPicker
id="colorpicker" destroy={destroy}></EJ.ColorPicker>
 function destroy(args) {

 / code block */
 } | Not Applicable |

| Event triggers before Switching between Picker / Palette mode | Not Applicable | **Event:**
beforeModeSwitch

 <ColorPickerComponent id="colorpicker"
beforeModeSwitch={this.beforeModeSwitch.bind(this)}></ColorPickerComponent>

beforeModeSwitch(args) {
 / code block */
 } |

| Event triggers after color value has been selected | **Event:** *select*

 <EJ.ColorPicker
id="colorpicker" select={select}></EJ.ColorPicker>
 function select(args) {

 / code block /
 } | **Event:** *select*

 <ColorPickerComponent id="colorpicker"
select={this.select.bind(this)}></ColorPickerComponent>
 select(args) {
 /
code block /
 } |

| Event triggers after color value has been changed | **Event:** *change*

 <EJ.ColorPicker
id="colorpicker" change={change}></EJ.ColorPicker>
 function change(args) {

 / code block /
 } | **Event:** *change*

 <ColorPickerComponent id="colorpicker"

```
change={this.change.bind(this)}></ColorPickerComponent> <br/> change(args) { <br/> &#160; &#160;  
/ code block / <br/> } |
```

```
{% endraw %}
```

ComboBox

Getting Started

This section explains how to create a simple [Link to the Video](#) component and configure its available functionalities in React.

To get start quickly with React ComboBox, you can check on this video:

Dependencies

The following list of dependencies are required to use the **ComboBox** component in your application.

```
`javascript  
|-- @syncfusion/ej2-react-dropdowns  
|-- @syncfusion/ej2-base  
|-- @syncfusion/ej2-data  
|-- @syncfusion/ej2-react-base  
|-- @syncfusion/ej2-dropdowns  
|-- @syncfusion/ej2-lists  
|-- @syncfusion/ej2-inputs  
|-- @syncfusion/ej2-navigations  
|-- @syncfusion/ej2-popups  
|-- @syncfusion/ej2-buttons  
`,`
```

Installation and configuration

You can use [Create-react-app](#) to setup the applications. To install **create-react-app** run the following command.

```
`bash  
npm install -g create-react-app  
`,`
```

Start a new project using create-react-app command as follows

```
`bash  
create-react-app quickstart --scripts-version=react-scripts-ts  
cd quickstart  
`,`
```

Adding syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](https://www.npmjs.com) public registry. You can choose the component that you want to install.

To install ComboBox component, use the following command

```
`bash
npm install @syncfusion/ej2-react-dropdowns --save
`
```

Adding ComboBox component

Now, you can start adding ComboBox component in the application. For getting started, add the ComboBox component in `src/App.tsx` file using following code. Now place the below ComboBox code in the `src/App.tsx`.

[Class-component]

```
`ts
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
  public render() {
    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id='comboelement'/>
    );
  }
}
ReactDOM.render(<App />, document.getElementById('sample'));
`
```

[Functional-component]

```
`ts
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  return (
    // specifies the tag for render the ComboBox component

```

```
<ComboBoxComponent id='comboelement'/>
);
}
ReactDOM.render(<App />, document.getElementById('sample'));
`
```

Adding CSS reference

Import the ComboBox component required CSS references as follows in `src/App.css`.

```
`css
/ import the ComboBox dependency styles /
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-react-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-react-dropdowns/styles/material.css";
`
```

Binding data source

After initialization, populate the ComboBox with data using the `dataSource` property. Here, an array of string values is passed to the ComboBox component.

[Class-component]

```
`ts
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
// define the array of data
private sportsData: string[] = ['Badminton', 'Cricket', 'Football', 'Golf', 'Tennis'];
public render() {
return (
// specifies the tag for render the ComboBox component
<ComboBoxComponent id="comboelement" dataSource={this.sportsData} />
);
}
}
ReactDOM.render(<App />, document.getElementById('sample'));
`
```

[Functional-component]

```
`ts
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
// define the array of data
const sportsData: string[] = ['Badminton', 'Cricket', 'Football', 'Golf', 'Tennis'];
return (
// specifies the tag for render the ComboBox component
<ComboBoxComponent id="comboelement" dataSource={sportsData} />
);
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

Run the application

After completing the configuration required to render a basic ComboBox, run the following command to display the output in your default browser.

```
npm start
```

[Class-componnet]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
// define the array of data
sportsData = ['Badminton', 'Cricket', 'Football', 'Golf', 'Tennis'];
render() {
return (
// specifies the tag for render the ComboBox component
<ComboBoxComponent id="comboelement" dataSource={this.sportsData}
placeholder="Select a game"/>);
}
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
```

```
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}>, {}> {
  // define the array of data
  private sportsData: string[] = ['Badminton', 'Cricket', 'Football', 'Golf', 'Tennis'];
  public render() {
    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id="comboelement" dataSource={this.sportsData}
placeholder="Select a game" />
    );
  }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

[Functional-componnet]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  // define the array of data
  const sportsData = ['Badminton', 'Cricket', 'Football', 'Golf', 'Tennis'];
  return (
    // specifies the tag for render the ComboBox component
    <ComboBoxComponent id="comboelement" dataSource={sportsData}
placeholder="Select a game"/>
  );
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  // define the array of data
  const sportsData: string[] = ['Badminton', 'Cricket', 'Football', 'Golf', 'Tennis'];
  return (
    // specifies the tag for render the ComboBox component
    <ComboBoxComponent id="comboelement" dataSource={sportsData}
placeholder="Select a game" />
  );
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

Custom values

The ComboBox allows the user to give input as custom value which is not required to present in predefined set of values. By default, this support is enabled by [allowCustom](#) property. In this case, both

text field and value field considered as same. The custom value will be sent to post back handler when a form is about to be submitted.

[Class-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    // defined the array of data
    sportsData = [
        { Id: 'game1', Game: 'Badminton' },
        { Id: 'game2', Game: 'Football' },
        { Id: 'game3', Game: 'Tennis' }
    ];
    // maps the appropriate column to fields property
    fields = { text: 'Game', value: 'Id' };
    render() {
        return (
            // specifies the tag for render the ComboBox component
            <ComboBoxComponent id="comboelement" fields={this.fields}
            dataSource={this.sportsData} allowCustom={true} placeholder="Select a
            game"/>);
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    // defined the array of data
    private sportsData: { [key: string]: Object }[] = [
        { Id: 'game1', Game: 'Badminton' },
        { Id: 'game2', Game: 'Football' },
        { Id: 'game3', Game: 'Tennis' }
    ];
    // maps the appropriate column to fields property
    private fields: object = { text: 'Game', value: 'Id' };
    public render() {
        return (
            // specifies the tag for render the ComboBox component
            <ComboBoxComponent id="comboelement" fields={this.fields}
            dataSource={this.sportsData} allowCustom={true} placeholder="Select a game"
            />
        );
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

[Functional-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
    // defined the array of data
    const sportsData = [
        { Id: 'game1', Game: 'Badminton' },
        { Id: 'game2', Game: 'Football' },
        { Id: 'game3', Game: 'Tennis' }
    ];
    // maps the appropriate column to fields property
    const fields = { text: 'Game', value: 'Id' };
    return (
        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="comboelement" fields={fields}
        dataSource={sportsData} allowCustom={true} placeholder="Select a game"/>
    );
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
    // defined the array of data
    const sportsData: { [key: string]: Object }[] = [
        { Id: 'game1', Game: 'Badminton' },
        { Id: 'game2', Game: 'Football' },
        { Id: 'game3', Game: 'Tennis' }
    ];
    // maps the appropriate column to fields property
    const fields: object = { text: 'Game', value: 'Id' };
    return (
        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="comboelement" fields={fields}
        dataSource={sportsData} allowCustom={true} placeholder="Select a game" />
    );
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

Configure the popup list

By default, the width of the popup list automatically adjusts according to the ComboBox input element's width, and the height of the popup list has '300px'.

The height and width of the popup list can also be customized using the [popupHeight](#) and [popupWidth](#) property respectively.

In the following sample, popup list's width and height have configured.

[Class-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    // define the array of data
    sportsData = ['Badminton', 'Basketball', 'Cricket', 'Football', 'Golf',
    'Hockey', 'Rugby', 'Snooker', 'Tennis'];
    render() {
        return (
            // specifies the tag for render the ComboBox component
            <ComboBoxComponent id="comboelement" dataSource={this.sportsData}
            popupHeight="200px" popupWidth="250px" placeholder="select a game"/>);
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    // define the array of data
    private sportsData: string[] = ['Badminton', 'Basketball', 'Cricket',
    'Football', 'Golf', 'Hockey', 'Rugby', 'Snooker', 'Tennis'];
    public render() {
        return (
            // specifies the tag for render the ComboBox component
            <ComboBoxComponent id="comboelement" dataSource={this.sportsData}
            popupHeight="200px" popupWidth="250px" placeholder="select a game" />
        );
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

[Functional-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';

- [How to bind the data](#)

Data binding in React Combo box component

The ComboBox loads the data either from local data sources or remote data services using the [dataSource](#) property. It supports the data type of `array` or `DataManager`.

The ComboBox also supports different kinds of data services such as OData, OData V4, and Web API, and data formats such as XML, JSON, and JSONP with the help of `DataManager` adaptors.

Fields	Type	Description
text	string	Specifies the display text of each list item.
value	number or string	Specifies the hidden data value which mapped to each list item that should be unique.
groupBy	string	Specifies the category under which the list item needs to be grouped.
iconCss	string	Specifies the icon class of each list item.

When binding complex data to the ComboBox, fields should be mapped correctly. Otherwise, the selected item remains undefined.

Binding local data

Local data can be represented in two ways as described below.

1. Array of simple data

The ComboBox has support to load array of primitive data such as strings and numbers. Here, both value and text field act the same.

[Class-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
```

```
export default class App extends React.Component {
  // define the array of string
  sportsData = ['Badminton', 'Cricket', 'Football', 'Golf', 'Tennis'];
  render() {
    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id="comboelement" dataSource={this.sportsData}
placeholder="Select a game"/>);
    }
  }
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
  // define the array of string
  private sportsData: string[] = ['Badminton', 'Cricket', 'Football',
'Golf', 'Tennis'];
  public render() {
    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id="comboelement" dataSource={this.sportsData}
placeholder="Select a game" />
    );
  }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

[Functional-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  // define the array of string
  const sportsData = ['Badminton', 'Cricket', 'Football', 'Golf',
'Tennis'];
  return (
    // specifies the tag for render the ComboBox component
    <ComboBoxComponent id="comboelement" dataSource={sportsData}
placeholder="Select a game"/>);
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
```

```
// define the array of string
const sportsData: string[] = ['Badminton', 'Cricket', 'Football', 'Golf', 'Tennis'];
return (
  // specifies the tag for render the ComboBox component
  <ComboBoxComponent id="comboelement" dataSource={sportsData}
placeholder="Select a game" />
);
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

2. Array of JSON data

The ComboBox can generate its list items through an array of complex data. For this, the appropriate columns should be mapped to the [fields](#) property.

In the following example, **Id** column and **Game** column from complex data have been mapped to the **value** field and **text** field, respectively.

[Class-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  // define the JSON of data
  sportsData = [
    { Id: 'game1', Game: 'Badminton' },
    { Id: 'game2', Game: 'Football' },
    { Id: 'game3', Game: 'Tennis' }
  ];
  // maps the appropriate column to fields property
  fields = { text: 'Game', value: 'Id' };
  render() {
    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id="comboelement" dataSource={this.sportsData}
fields={this.fields} placeholder="Select a game"/>
    );
  }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
  // define the JSON of data
  private sportsData: { [key: string]: Object }[] = [
    { Id: 'game1', Game: 'Badminton' },
    { Id: 'game2', Game: 'Football' },
    { Id: 'game3', Game: 'Tennis' }
  ];
  // maps the appropriate column to fields property
```

```
private fields: object = { text: 'Game', value: 'Id' };
public render() {
    return (
        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="comboelement" dataSource={this.sportsData}
fields={this.fields} placeholder="Select a game" />
    );
}
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

[Functional-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
    // define the JSON of data
    const sportsData = [
        { Id: 'game1', Game: 'Badminton' },
        { Id: 'game2', Game: 'Football' },
        { Id: 'game3', Game: 'Tennis' }
    ];
    // maps the appropriate column to fields property
    const fields = { text: 'Game', value: 'Id' };
    return (
        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="comboelement" dataSource={sportsData}
fields={fields} placeholder="Select a game"/>
    );
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
    // define the JSON of data
    const sportsData: { [key: string]: Object }[] = [
        { Id: 'game1', Game: 'Badminton' },
        { Id: 'game2', Game: 'Football' },
        { Id: 'game3', Game: 'Tennis' }
    ];
    // maps the appropriate column to fields property
    const fields: object = { text: 'Game', value: 'Id' };
    return (
        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="comboelement" dataSource={sportsData}
fields={fields} placeholder="Select a game" />
    );
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

3. Array of Complex data

The ComboBox can generate its list items through an array of complex data. For this, the appropriate columns should be mapped to the

[fields](#) property.

In the following example, `Code.Id` column and `Country.Name` column from complex data have been mapped to the `value` field and `text` field, respectively.

[Class-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    // define the JSON of data
    countriesData = [
        { Country: { Name: 'Australia' }, Code: { Id: 'AU' } },
        { Country: { Name: 'Bermuda' }, Code: { Id: 'BM' } },
        { Country: { Name: 'Canada' }, Code: { Id: 'CA' } },
        { Country: { Name: 'Cameroon' }, Code: { Id: 'CM' } },
        { Country: { Name: 'Denmark' }, Code: { Id: 'DK' } },
        { Country: { Name: 'France' }, Code: { Id: 'FR' } }
    ];
    // maps the appropriate column to fields property
    fields = { text: 'Country.Name', value: 'Code.Id' };
    render() {
        return (
            // specifies the tag for render the ComboBox component
            <ComboBoxComponent id="comboelement" dataSource={this.countriesData}
            fields={this.fields} placeholder="Select a country"/>);
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
{% raw %}
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';

export default class App extends React.Component<{}, {}> {
    // define the JSON of data
    private countriesData: { [key: string]: Object }[] = [
        { Country: { Name: 'Australia' }, Code: { Id: 'AU' } },
        { Country: { Name: 'Bermuda' }, Code: { Id: 'BM' } },
        { Country: { Name: 'Canada' }, Code: { Id: 'CA' } },
        { Country: { Name: 'Cameroon' }, Code: { Id: 'CM' } },
        { Country: { Name: 'Denmark' }, Code: { Id: 'DK' } },
        { Country: { Name: 'France' }, Code: { Id: 'FR' } }
    ];
    // maps the appropriate column to fields property
    private fields: object = { text: 'Country.Name', value: 'Code.Id' };
    public render() {
        return (
```

```

        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="comboelement"
        dataSource={this.countriesData} fields={this.fields} placeholder="Select a
        country" />
      );
    }
  }
  ReactDOM.render(<App />, document.getElementById('sample'));
  {% endraw %}

```

[Functional-component]

INDEX.JSX

```

import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  // define the JSON of data
  const countriesData = [
    { Country: { Name: 'Australia' }, Code: { Id: 'AU' } },
    { Country: { Name: 'Bermuda' }, Code: { Id: 'BM' } },
    { Country: { Name: 'Canada' }, Code: { Id: 'CA' } },
    { Country: { Name: 'Cameroon' }, Code: { Id: 'CM' } },
    { Country: { Name: 'Denmark' }, Code: { Id: 'DK' } },
    { Country: { Name: 'France' }, Code: { Id: 'FR' } }
  ];
  // maps the appropriate column to fields property
  const fields = { text: 'Country.Name', value: 'Code.Id' };
  return (
    // specifies the tag for render the ComboBox component
    <ComboBoxComponent id="comboelement" dataSource={countriesData}
    fields={fields} placeholder="Select a country"/>);
}
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

{% raw %}
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  // define the JSON of data
  const countriesData: { [key: string]: Object }[] = [
    { Country: { Name: 'Australia' }, Code: { Id: 'AU' } },
    { Country: { Name: 'Bermuda' }, Code: { Id: 'BM' } },
    { Country: { Name: 'Canada' }, Code: { Id: 'CA' } },
    { Country: { Name: 'Cameroon' }, Code: { Id: 'CM' } },
    { Country: { Name: 'Denmark' }, Code: { Id: 'DK' } },
    { Country: { Name: 'France' }, Code: { Id: 'FR' } }
  ];
  // maps the appropriate column to fields property
  const fields: object = { text: 'Country.Name', value: 'Code.Id' };
  return (
    // specifies the tag for render the ComboBox component

```

```
<ComboBoxComponent id="comboelement" dataSource={countriesData}
fields={fields} placeholder="Select a country" />
);
}
ReactDOM.render(<App />, document.getElementById('sample'));
{% endraw %}
```

Binding remote data

The ComboBox supports retrieval of data from remote data services with the help of **DataManager** component. The [Query](#) property is used to fetch data from the database and bind it to the ComboBox.

The following sample displays the first 6 contacts from “Customers” table of the **Northwind** Data Service.

[Class-component]

INDEX.JSX

```
// import DataManager related classes
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  // bind the DataManager instance to dataSource property
  customerData = new DataManager({
    adaptor: new ODataV4Adaptor,
    crossDomain: true,
    url: 'https://services.odata.org/V4/Northwind/Northwind.svc/'
  });
  // bind the Query instance to query property
  query = new Query().from('Customers').select(['ContactName',
'CustomerID']).take(6);
  // maps the appropriate column to fields property
  fields = { text: 'ContactName', value: 'CustomerID' };
  // sort the resulted items
  sortOrder = 'Ascending';
  render() {
    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id="comboelement" query={this.query}
dataSource={this.customerData} fields={this.fields} placeholder="Select a
customer" sortOrder={this.sortOrder}/>);
    }
  }
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
// import DataManager related classes

Value binding in ComboBox Component

Value binding in the ComboBox control allows you to associate data values with each list item. This facilitates managing and retrieving selected values efficiently. The ComboBox component provides flexibility in binding both primitive data types and complex objects.

Primitive Data Types

The ComboBox control provides flexible binding capabilities for primitive data types like strings and numbers. You can effortlessly bind local primitive data arrays, fetch and bind data from remote sources, and even custom data binding to suit specific requirements. Bind the value of primitive data to the [value](#) property of the ComboBox.

Primitive data types include:

- String
- Number
- Boolean
- Null

The following sample shows the example for preselect values for primitive data type

[Class-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  constructor(props) {
    super(props);
    this.records = ["Item 1", "Item 2", "Item 3", "Item 4", "Item 5", "Item 6", "Item 7", "Item 8", "Item 9", "Item 10"];
  }
  fields = { text: 'text', value: 'id' };
  value = "Item 5";

  render() {
    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id="datas" dataSource={this.records}
      value={this.value} placeholder="e.g. Item 1" allowFiltering={false}
      popupHeight="200px" >
        </ComboBoxComponent>;
    );
  }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
  // maps the appropriate column to fields property
  private fields: object = { text: 'text', value: 'id' };
  // define the array of string
  private records: string[] = [];
  private value : string = "Item 1";
  constructor(props) {
    super(props);
    this.records = ["Item 1", "Item 2", "Item 3", "Item 4", "Item 5", "Item 6", "Item 7", "Item 8", "Item 9", "Item 10"];
  }
  public render() {
    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id="datas" dataSource={this.records}
      value={this.value} placeholder="e.g. Item 1" allowObjectBinding={true}
      allowFiltering={false} popupHeight="200px" >
    );
  }
}
```

```

        </ComboBoxComponent>
    );
}
}
ReactDOM.render(<App />, document.getElementById('sample'));

```

Object Data Types

In the ComboBox control, object binding allows you to bind to a dataset of objects. When [allowObjectBinding](#) is enabled, the value of the control will be an object of the same type as the selected item in the [value](#) property. This feature seamlessly binds arrays of objects, whether sourced locally, retrieved from remote endpoints, or customized to suit specific application needs.

The following sample shows the example for preselect values for object data type

[Link to the Video](#)

INDEX.JSX

```

import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    constructor(props) {
        super(props);
        this.records = Array.from({ length: 150 }, (_, i) => ({
            id: 'id' + (i + 1),
            text: `Item ${i + 1}`,
        }));
    }
    fields = { text: 'text', value: 'id' };
    value = { text: 'Item 5', value: 'id5' };

    render() {
        return (
            // specifies the tag for render the ComboBox component
            <ComboBoxComponent id="datas" dataSource={this.records}
            value={this.value} fields={this.fields} placeholder="e.g. Item 1"
            allowObjectBinding={true} allowFiltering={false} popupHeight="200px" >
                </ComboBoxComponent>);
        )
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    // maps the appropriate column to fields property
    private fields: object = { text: 'text', value: 'id' };
    // define the array of string
    private records: { [key: string]: Object }[] = [];
    private value : { [key: string]: Object } = { id: 'id1', text: 'Item 1'
};

```

```

    constructor(props) {
      super(props);
      this.records = Array.from({ length: 150 }, (_, i) => ({
        id: 'id' + (i + 1),
        text: `Item ${i + 1}`,
      }));
    }
    public render() {
      return (
        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="datas" dataSource={this.records}
        value={this.value} fields={this.fields} placeholder="e.g. Item 1"
        allowObjectBinding={true} allowFiltering={false} popupHeight="200px" >
          </ComboBoxComponent>
        );
      }
    }
  }
ReactDOM.render(<App />, document.getElementById('sample'));

```

Templates in React Combo box component

The ComboBox has been provided with several options to customize each list items, group title, header, and footer elements.

To get started with React ComboBox templates, you can check on this video:

Item template

The content of each list item within the ComboBox can be customized with the help of [itemTemplate](#) property.

In the following sample, each list item is split into two columns to display relevant data's.

[Class-component]

INDEX.JSX

```

// import DataManager related classes
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  // bind the DataManager instance to dataSource property
  employeeData = new DataManager({
    adaptor: new ODataV4Adaptor,
    crossDomain: true,
    url: 'https://services.odata.org/V4/Northwind/Northwind.svc/'
  });
  // bind the Query instance to query property
  query = new Query().from('Employees').select(['FirstName', 'City',
  'EmployeeID']).take(6);
  // maps the appropriate column to fields property
  fields = { text: 'FirstName', value: 'EmployeeID' };
  // sort the resulted items
  sortOrder = 'Ascending';
  // set the value to itemTemplate property
  itemTemplate(data) {

```

```

        return (<span className='item'><span

}
ReactDOM.render(<App />, document.getElementById('sample'));
```

Group template

The group header title under which appropriate sub-items are categorized can also be customize with the help of [groupTemplate](#) property. This template is common for both inline and floating group header template.

In the following sample, employees are grouped according to their city.

```

Header template

The header element is shown statically at the top of the popup list items within the ComboBox, and any custom element can be placed as a header element using the

[headerTemplate](#) property.

In the following sample, the list items and its headers are designed and displayed as two columns similar to multiple columns of the grid.

ReactDOM.render(<App />, document.getElementById('sample'));
```

Footer template

The ComboBox has options to show a footer element at the bottom of the list items in the popup list. Here, you can place any custom element as a footer element using the [footerTemplate](#) property.

In the following sample, footer element displays the total number of list items present in the ComboBox.

[Class-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    // define the array of data
    sportsData = ["BasketBall", "Cricket", "Football", "Golf"];
    // set the value to footer template
    footerTemplate(data) {
        return (<span className='foot' />);
    }
    render() {
        return (
            // specifies the tag for render the ComboBox component
            <ComboBoxComponent id="comboelement"
            footerTemplate={this.footerTemplate} dataSource={this.sportsData}
            placeholder="Select a game" />);
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

ReactDOM.render(<App />, document.getElementById('sample'));
```

No records template

The ComboBox is provided with support to custom design the popup list content when no data is found and no matches found on search with the help of

[noRecordsTemplate](#) property.

In the following sample, popup list content displays the notification of no data available.

[Class-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  // define the array of data
```

```

data = [];
// set the value to noRecords template
noRecordsTemplate(data) {
    return (<span className='norecord'> NO DATA AVAILABLE</span>);
}
render() {
    return (
        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="comboelement"
noRecordsTemplate={this.noRecordsTemplate =
this.noRecordsTemplate.bind(this)} dataSource={this.data} placeholder="Select
an item"/>);
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    // define the array of data
    private data: string[] = [];
    // set the value to noRecords template
    public noRecordsTemplate(data: any): JSX.Element {
        return (
            <span className='norecord'> NO DATA AVAILABLE</span>
        );
    }
    public render() {
        return (
            // specifies the tag for render the ComboBox component
            <ComboBoxComponent id="comboelement"
noRecordsTemplate={this.noRecordsTemplate =
this.noRecordsTemplate.bind(this)} dataSource={this.data} placeholder="Select
an item" />
        );
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));

```

[Functional-component]

INDEX.JSX

```

import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
    // define the array of data
    const data = [];
    // set the value to noRecords template
    function noRecordsTemplate(data) {
        return (<span className='norecord'> NO DATA AVAILABLE</span>);
    }
}

```

```

    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id="comboelement" noRecordsTemplate={noRecordsTemplate}
      = noRecordsTemplate.bind(this) dataSource={data} placeholder="Select an
      item"/>);
    }
    ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  // define the array of data
  const data: string[] = [];
  // set the value to noRecords template
  function noRecordsTemplate(data: any): JSX.Element {
    return (
      <span className='norecord'> NO DATA AVAILABLE</span>
    );
  }
  return (
    // specifies the tag for render the ComboBox component
    <ComboBoxComponent id="comboelement"
    noRecordsTemplate={noRecordsTemplate = noRecordsTemplate.bind(this)}
    dataSource={data} placeholder="Select an item" />
  );
}
ReactDOM.render(<App />, document.getElementById('sample'));

```

Action failure template

There is also an option to custom design the popup list content when the data fetch request fails at the remote server. This can be achieved using the

[actionFailureTemplate](#) property.

In the following sample, when the data fetch request fails, the ComboBox displays the notification.

[Class-component]

INDEX.JSX

```

// import DataManager related classes
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  // bind the DataManager instance to dataSource property
  customerData = new DataManager({
    adaptor: new ODataV4Adaptor,
    crossDomain: true,
    url: 'http://services.odata.org/V4/Northwind/Northwind.svc/'
  });
  // bind the Query instance to query property

```

```

    query = new Query().from('Customers').select(['ContactName',
'CustomerID']).take(6);
    // maps the appropriate column to fields property
    fields = { text: 'ContactName', value: 'CustomerID' };
    // set the value to action failure template
    template(data) {
        return (<span className='action-failure'> Data fetch get
fails</span>);
    }
    render() {
        return (
            // specifies the tag for render the ComboBox component
            <ComboBoxComponent id="comboelement"
actionFailureTemplate={this.template = this.template.bind(this)}
query={this.query} dataSource={this.customerData} fields={this.fields}
placeholder="Select a customer"/>);
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

// import DataManager related classes
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    // bind the DataManager instance to dataSource property
    private customerData: DataManager = new DataManager({
        adaptor: new ODataV4Adaptor,
        crossDomain: true,
        url: 'http://services.odata.org/V4/Northwind/Northwind.svcs/'
    });
    // bind the Query instance to query property
    private query: Query = new
Query().from('Customers').select(['ContactName', 'CustomerID']).take(6);
    // maps the appropriate column to fields property
    private fields: object = { text: 'ContactName', value: 'CustomerID' };
    // set the value to action failure template
    public template(data: any): JSX.Element {
        return (
            <span className='action-failure'> Data fetch get fails</span>
        );
    }
    public render() {
        return (

Virtualization in ComboBox Component

ComboBox virtualization is a technique used to efficiently render extensive lists of items while minimizing the impact on performance. This method is particularly advantageous when dealing with large datasets because it ensures that only a fixed number of DOM (Document Object Model) elements are created. When scrolling through the list, existing DOM elements are reused to display relevant data instead of generating new elements for each item. This recycling process is managed internally.

During virtual scrolling, the data retrieved from the data source depends on the popup height and the calculation of the list item height. Enabling the [enableVirtualization](#) option in a ComboBox activates this virtualization technique.

When fetching data from the data source, the [actionBegin](#) event is triggered before data retrieval begins. Then, the [actionComplete](#) event is triggered once the data is successfully fetched.

Furthermore, Incremental Search is supported with virtualization in the Combobox component. When a key is typed, the focus is moved to the respective element in the open popup state. In the closed popup state, the popup opens, and focus is moved to the respective element in the popup list based on the typed key. The Incremental Search functionality is well-suited for scenarios involving remote data binding.

When the enableVirtualization property is enabled, the `skip` and `take` properties provided by the user within the Query class at the initial state or during the `actionBegin` or `actionComplete` events will not be considered, since it is internally managed and calculated based on certain dimensions with respect to the popup height.

Binding local data

The Combobox can generate its list items through an array of complex data. For this, the appropriate columns should be mapped to the [fields](#) property. When using virtual scrolling, the list updates based on the scroll offset value, triggering a request to fetch more data from the server. As the data is being fetched, the `actionBegin` event occurs before the data retrieval starts. Once the data retrieval is successful, the `actionComplete` event is triggered, indicating that the data fetch process is complete.

In the following example, **id** column and **text** column from complex data have been mapped to the **value** field and **text** field, respectively.

[Class-component]

INDEX.JSX

```
import { ComboBoxComponent, Inject, VirtualScroll } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  constructor(props) {
    super(props);
    this.records = Array.from({ length: 150 }, (_, i) => ({
      id: 'id' + (i + 1),
      text: `Item ${i + 1}`,
    }));
  }
  fields = { text: 'text', value: 'id' };

  render() {
    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id="datas" dataSource={this.records}
fields={this.fields} placeholder="e.g. Item 1" enableVirtualization={true}
allowFiltering={false} popupHeight="200px" >
        <Inject services={[VirtualScroll]}/>
      </ComboBoxComponent>);
  }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent, Inject, VirtualScroll } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
  // maps the appropriate column to fields property
  private fields: object = { text: 'text', value: 'id' };
  // define the array of string
  private records: { [key: string]: Object }[] = [];
  constructor(props) {
    super(props);
    this.records = Array.from({ length: 150 }, (_, i) => ({
      id: 'id' + (i + 1),
      text: `Item ${i + 1}`,
    }));
  }
  public render() {
    return (
      // specifies the tag for render the ComboBox component

```

```

        <ComboBoxComponent id="datas" dataSource={this.records}
        fields={this.fields} placeholder="e.g. Item 1" enableVirtualization={true}
        allowFiltering={false} popupHeight="200px" >
            <Inject services={[VirtualScroll]} />
        </ComboBoxComponent>
    );
}
}
ReactDOM.render(<App />, document.getElementById('sample'));

```

Binding remote data

The Combobox supports retrieval of data from remote data services with the help of **DataManager** component. When using remote data, it initially fetches all the data from the server, triggering the **actionBegin** and **actionComplete** events, and then stores the data locally. During virtual scrolling, additional data is retrieved from the locally stored data, triggering the **actionBegin** and **actionComplete** events at that time as well.

The following sample displays the OrderId from the **Orders** Data Service.

[Class-component]

INDEX.JSX

```

import { ComboBoxComponent, Inject, VirtualScroll } from '@syncfusion/ej2-react-dropdowns';
import { DataManager, WebApiAdaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    customerData = new DataManager({
        url: 'https://services.syncfusion.com/react/production/api/Orders',
        adaptor: new WebApiAdaptor,
        crossDomain: true
    });
    customerField = { text: 'OrderID', value: 'OrderID' };

    render() {
        return (
            // specifies the tag for render the ComboBox component
            <ComboBoxComponent id="datas" dataSource={this.customerData}
            fields={this.customerField} placeholder="OrderID" enableVirtualization={true}
            allowFiltering={true} popupHeight="200px" >
                <Inject services={[VirtualScroll]} />
            </ComboBoxComponent>);
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import { ComboBoxComponent, Inject, VirtualScroll } from '@syncfusion/ej2-react-dropdowns';
import { DataManager, WebApiAdaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import * as ReactDOM from 'react-dom';

```

```
export default class App extends React.Component<{}, {}> {
  // maps the appropriate column to fields property
  private customerField: object = { text: 'OrderID', value: 'OrderID' };

  private customerData: DataManager = new DataManager({
    url: 'https://services.syncfusion.com/react/production/api/Orders',
    adaptor: new WebApiAdaptor,
    crossDomain: true
  });

  public render() {
    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id="datas" dataSource={this.customerData}
fields={this.customerField} placeholder="OrderID" enableVirtualization={true}
allowFiltering={true} popupHeight="200px" >
        <Inject services={[VirtualScroll]} />
      </ComboBoxComponent>
    );
  }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

Grouping

The Combobox component supports grouping with Virtualization. It allows you to organize elements into groups based on different categories. Each item in the list can be classified using the [groupBy](#) field in the data table. After grouping, virtualization works similarly to local data binding, providing a seamless user experience. When the data source is bound to remote data, an initial request is made to retrieve all data for the purpose of grouping. Subsequently, the grouped data works in the same way as local data binding virtualization, enhancing performance and responsiveness.

The following sample shows the example for Grouping with Virtualization.

[Class-component]

INDEX.JSX

```
import { ComboBoxComponent, Inject, VirtualScroll } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  constructor(props) {
    super(props);
    for (let i = 1; i <= 150; i++) {
      let item = {};
      item.id = 'id' + i;
      item.text = `Item ${i}`;
      // Generate a random number between 1 and 4 to determine the
group
      const randomGroup = Math.floor(Math.random() * 4) + 1;
      switch (randomGroup) {
        case 1:
          item.group = 'Group A';
          break;
        case 2:
          item.group = 'Group B';
```

```

                break;
            case 3:
                item.group = 'Group C';
                break;
            case 4:
                item.group = 'Group D';
                break;
            default:
                break;
        }
        this.records.push(item);
    }
}
fields = { groupBy: 'group', text: 'text', value: 'id' };

render() {
    return (
        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="datas" dataSource={this.records}
fields={this.fields} placeholder="e.g. Item 1" enableVirtualization={true}
allowFiltering={true} popupHeight="200px" >
            <Inject services={[VirtualScroll]}/>
        </ComboBoxComponent>);
}
}
ReactDOM.render(<App />, document.getElementById('sample'));

```

INDEX.TSX

```

import { ComboBoxComponent, Inject, VirtualScroll } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    // maps the appropriate column to fields property
    private fields: object = { groupBy: 'group', text: 'text', value: 'id' };
    // define the array of string
    private records: { [key: string]: Object }[] = [];
    constructor(props) {
        super(props);
        for (let i = 1; i <= 150; i++) {
            const item: { id: string, text: string, group: string } = {
                id: 'id' + i,
                text: `Item ${i}`,
                group: ''
            };
            // Generate a random number between 1 and 4 to determine the
group
            const randomGroup = Math.floor(Math.random() * 4) + 1;
            switch (randomGroup) {
                case 1:
                    item.group = 'Group A';
                    break;
                case 2:
                    item.group = 'Group B';

```

```

        break;
      case 3:
        item.group = 'Group C';
        break;
      case 4:
        item.group = 'Group D';
        break;
      default:
        break;
    }
    this.records.push(item);
  }
}

public render() {
  return (
    // specifies the tag for render the ComboBox component
    <ComboBoxComponent id="datas" dataSource={this.records}
    fields={this.fields} placeholder="e.g. Item 1" enableVirtualization={true}
    allowFiltering={true} popupHeight="200px" >
      <Inject services={[VirtualScroll]} />
    </ComboBoxComponent>
  );
}
}

ReactDOM.render(<App />, document.getElementById('sample'));

```

Filtering with Virtualization

The ComboBox component supports Filtering with Virtualization. The ComboBox includes a built-in feature that enables data filtering when the [allowFiltering](#) option is enabled. In the context of Virtual Scrolling, the filtering process operates in response to the typed characters. Specifically, the DropDownList sends a request to the server, utilizing the full data source, to achieve filtering. Before initiating the request, an action event is triggered. Upon successful retrieval of data from the server, an action complete event is triggered. The initial data is loaded when the popup is opened. Whether the filter list has a selection or not, the popup closes.

The following sample shows the example for Filtering with Virtualization.

[Class-component]

INDEX.JSX

```

import { ComboBoxComponent, Inject, VirtualScroll } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  constructor(props) {
    super(props);
    this.records = Array.from({ length: 150 }, (_, i) => ({
      id: 'id' + (i + 1),
      text: `Item ${i + 1}`,
    }));
  }
  fields = { text: 'text', value: 'id' };
}

```

```
render() {
    return (
        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="datas" dataSource={this.records}
        fields={this.fields} placeholder="e.g. Item 1" enableVirtualization={true}
        allowFiltering={true} popupHeight="200px" >
            <Inject services={[VirtualScroll]}/>
        </ComboBoxComponent>;
    )
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent, Inject, VirtualScroll } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    // maps the appropriate column to fields property
    private fields: object = { text: 'text', value: 'id' };
    // define the array of string
    private records: { [key: string]: Object }[] = [];
    constructor(props) {
        super(props);
        this.records = Array.from({ length: 150 }, (_, i) => ({
            id: 'id' + (i + 1),
            text: `Item ${i + 1}`,
        }));
    }
    public render() {
        return (
            // specifies the tag for render the ComboBox component
            <ComboBoxComponent id="datas" dataSource={this.records}
            fields={this.fields} placeholder="e.g. Item 1" enableVirtualization={true}
            allowFiltering={true} popupHeight="200px" >
                <Inject services={[VirtualScroll]} />
            </ComboBoxComponent>
        );
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

Grouping in React Combo box component

The ComboBox supports wrapping nested elements into a group based on different categories. The category of each list item can be mapped through the `groupBy` field in the data table. The group header is displayed both as inline and fixed headers. The fixed group header content

is updated dynamically on scrolling the popup list with its category value.

In the following sample, the vegetables are grouped according to its category using `groupBy` field.

[Class-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    // define the data with category
    vegetableData = [
        { Vegetable: 'Cabbage', Category: 'Leafy and Salad', Id: 'item1' },
        { Vegetable: 'Spinach', Category: 'Leafy and Salad', Id: 'item2' },
        { Vegetable: 'Wheat grass', Category: 'Leafy and Salad', Id: 'item3' },
    ],
    { Vegetable: 'Yarrow', Category: 'Leafy and Salad', Id: 'item4' },
    { Vegetable: 'Pumpkins', Category: 'Leafy and Salad', Id: 'item5' },
    { Vegetable: 'Chickpea', Category: 'Beans', Id: 'item6' },
    { Vegetable: 'Green bean', Category: 'Beans', Id: 'item7' },
    { Vegetable: 'Horse gram', Category: 'Beans', Id: 'item8' },
    { Vegetable: 'Garlic', Category: 'Bulb and Stem', Id: 'item9' },
    { Vegetable: 'Nopal', Category: 'Bulb and Stem', Id: 'item10' },
    { Vegetable: 'Onion', Category: 'Bulb and Stem', Id: 'item11' }
    ];
    // map the groupBy field with Category column
    fields = { groupBy: 'Category', text: 'Vegetable', value: 'Id' };
    render() {
        return (
            // specifies the tag for render the ComboBox component
            <ComboBoxComponent id="comboelement" popupHeight='200px'
fields={this.fields} dataSource={this.vegetableData} placeholder="Select a
vegetable"/>);
        }
    }
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    // define the data with category
    private vegetableData: { [key: string]: Object }[] = [
        { Vegetable: 'Cabbage', Category: 'Leafy and Salad', Id: 'item1' },
        { Vegetable: 'Spinach', Category: 'Leafy and Salad', Id: 'item2' },

```

Customization

The grouping header is also provided with customization option. This allows custom designing using the `groupTemplate` property for both inline and fixed headers as referred here: [Group Template support to ComboBox](#).

- [Group Template support to ComboBox](#).

Filtering in React Combo box component

The ComboBox has built-in support to filter data items when `allowFiltering` is enabled. The filter operation starts as soon as you start typing characters in the component.

To display filtered items in the popup, filter the required data and return it to the ComboBox via `updateData` method by using the `filtering` event.

The following sample illustrates how to query the data source and pass the data to the ComboBox through the `updateData` method in `filtering` event.

[Class-component]

INDEX.JSX

```

// import DataManager related classes
import { Query } from '@syncfusion/ej2-data';
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  // define the filtering data
  searchData = [
    { Index: "s1", Country: "California" }, { Index: "s2", Country:
    "Florida" },
    { Index: "s3", Country: "Alaska" }, { Index: "s4", Country: "Georgia"
  }
  ];
}

```

```
// maps the appropriate column to fields property
fields = { text: "Country", value: "Index" };
// sort the resulted items
sortOrder = 'Ascending';
constructor(props) {
    super(props);
    this.onFiltering = this.onFiltering.bind(this);
}
// filtering event handler to filter a Country
onFiltering(args) {
    let query = new Query();
    // frame the query based on search string with filter type.
    query = (args.text !== "") ? query.where("Country", "startswith",
args.text, true) : query;
    // pass the filter data source, filter query to updateData method.
    args.updateData(this.searchData, query);
}
render() {
    return (
        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="comboelement" popupHeight="250px"
fields={this.fields} filtering={this.onFiltering} allowFiltering={true}
sortOrder={this.sortOrder} dataSource={this.searchData} placeholder="Select a
country"/>);
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

        { Index: "s3", Country: "Alaska" }, { Index: "s4", Country: "Georgia" }
    ];
    // maps the appropriate column to fields property
    const fields: object = { text: "Country", value: "Index" };
    // sort the resulted items
    const sortOrder: SortOrder = 'Ascending';
    // filtering event handler to filter a Country
    function onFiltering(args: FilteringEventArgs) {
        let query = new Query();
        // frame the query based on search string with filter type.
        query = (args.text !== "") ? query.where("Country", "startswith",
args.text, true) : query;
        // pass the filter data source, filter query to updateData method.
        args.updateData(this.searchData, query);
    }
    return (
        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="comboelement" popupHeight="250px"
fields={fields} filtering={onFiltering} allowFiltering={true}
sortOrder={sortOrder} dataSource={searchData} placeholder="Select a country"
/>
    );
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

Limit the minimum filter character

When filtering the list items, you can set the limit for character count to raise remote request and fetch filtered data on the ComboBox. This can be done by manual validation within the filter event handler.

In the following example, the remote request does not fetch the search data until the search key contains three characters.

[Class-component]

INDEX.JSX

```
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
```

```
// bind the DataManager instance to dataSource property
searchData = new DataManager({
  adaptor: new ODataV4Adaptor,
  crossDomain: true,
  url:
'https://services.odata.org/V4/Northwind/Northwind.svc/Customers'
});
// maps the appropriate column to fields property
fields = { text: 'ContactName', value: 'CustomerID' };
// bind the Query instance to query property
query = new Query().select(['ContactName', 'CustomerID']).take(6);
// sort the resulted items
sortOrder = 'Ascending';
constructor(props) {
  super(props);
  this.onFiltering = this.onFiltering.bind(this);
}
// filtering event handler to filter a customer
onFiltering(e) {
  // load overall data when search key empty.
  if (e.text === '') {
    e.updateData(this.searchData);
  }
  else {
    // restrict the remote request until search key contains 3
characters.
    if (e.text.length < 3) {
      return;
    }
    let query = new Query().select(['ContactName', 'CustomerID']);
    query = (e.text !== '') ? query.where('ContactName',
'startswith', e.text, true) : query;
    e.updateData(this.searchData, query);
  }
}
render() {
  return (
    // specifies the tag for render the ComboBox component
    <ComboBoxComponent id="comboelement" allowFiltering={true}
popupHeight="250px" filtering={this.onFiltering} query={this.query}
dataSource={this.searchData} fields={this.fields} placeholder="Select a
customer" sortOrder={this.sortOrder}/>);
}
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

dataSource={searchData} fields={fields} placeholder="Select a customer"
sortOrder={sortOrder} />
);
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

Change the filter type

While filtering, you can change the filter type to `contains`, `startsWith`, or `endsWith` for string type within the filter event handler.

In the following examples, data filtering is done with `endsWith` type.

[Class-component]

INDEX.JSX

```
// import DataManager related classes
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    // bind the DataManager instance to dataSource property
    searchData = new DataManager({
        adaptor: new ODataV4Adaptor,
        crossDomain: true,
        url:
'https://services.odata.org/V4/Northwind/Northwind.svc/Customers'
    });
    // maps the appropriate column to fields property
    fields = { text: 'ContactName', value: 'CustomerID' };
}
```

```
// bind the Query instance to query property
query = new Query().select(['ContactName', 'CustomerID']).take(6);
// sort the resulted items
sortOrder = 'Ascending';
constructor(props) {
    super(props);
    this.onFiltering = this.onFiltering.bind(this);
}
// filtering event handler to filter a customer
onFiltering(e) {
    // load overall data when search key empty.
    if (e.text === '') {
        e.updateData(this.searchData);
    }
    else {
        let query = new Query().select(["ContactName", "CustomerID"]);
        query = (e.text !== '') ? query.where('ContactName', 'endswith',
e.text, true) : query;
        e.updateData(this.searchData, query);
    }
}
render() {
    return (
        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="comboelement" allowFiltering={true}
popupHeight="250px" filtering={this.onFiltering} query={this.query}
dataSource={this.searchData} fields={this.fields} placeholder="Select a
customer" sortOrder={this.sortOrder}/>);
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
// import DataManager related classes

);
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

Case sensitive filtering

Data items can be filtered either with or without case sensitivity using the DataManager. This can be done by passing the fourth optional parameter of the **where** clause.

The following example shows how to perform case-sensitive filter.

[Class-component]

INDEX.JSX

```
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    // bind the DataManager instance to dataSource property
    searchData = new DataManager({
        adaptor: new ODataV4Adaptor,
        crossDomain: true,
        url:
'https://services.odata.org/V4/Northwind/Northwind.svc/Customers'
    });
    // maps the appropriate column to fields property
    fields = { text: 'ContactName', value: 'CustomerID' };
    // bind the Query instance to query property
    query = new Query().select(['ContactName', 'CustomerID']).take(6);
    // sort the resulted items
    sortOrder = 'Ascending';
    constructor(props) {
        super(props);
        this.onFiltering = this.onFiltering.bind(this);
    }
    // filtering event handler to filter a customer
    onFiltering(e) {
        // load overall data when search key empty.
        if (e.text === '') {
            e.updateData(this.searchData);
        }
        else {
            let query = new Query().select(["ContactName", "CustomerID"]);
            // enable the case sensitive filtering by passing false to 4th
parameter.
            query = (e.text !== '') ? query.where('ContactName', 'contains',
e.text, false) : query;
            e.updateData(this.searchData, query);
        }
    }
}
```

```
render() {
    return (
        // specifies the tag for render the ComboBox component
        <ComboBoxComponent id="comboelement" popupHeight="250px"
allowFiltering={true} filtering={this.onFiltering} query={this.query}
dataSource={this.searchData} fields={this.fields} placeholder="Select a
customer" sortOrder={this.sortOrder}/>);
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

dataSource={searchData} fields={fields} placeholder="Select a customer"
sortOrder={sortOrder} />
    );
}

ReactDOM.render(<App />, document.getElementById('sample'));
```

Diacritics Filtering

ComboBox supports diacritics filtering which will ignore the [diacritics](#) and makes it easier to filter the results in international characters lists when the [ignoreAccent](#) is enabled.

In the following sample,data with diacritics are bound as dataSource for ComboBox.

[Class-component]

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    diacriticsData = [
        'Aeróbics',
        'Aeróbics en Agua',
        'Aerografía',
        'Aeromodelaje',
        'Águilas',
        'Ajedrez',
        'Ala Delta',
        'Álbumes de Música',
        'Alusivos',
        'Análisis de Escritura a Mano'
    ];
    render() {
        return (
            <ComboBoxComponent id="diacritics" ignoreAccent={true}
allowFiltering={true} dataSource={this.diacriticsData} placeholder="e.g:
aero"/>
        );
    }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    private diacriticsData: string[] = [
        'Aeróbics',
        'Aeróbics en Agua',
        'Aerografía',
        'Aeromodelaje',
        'Águilas',
        'Ajedrez',
        'Ala Delta',
        'Álbumes de Música',

Localization in React Combo box component

The Localization library allows you to localize static text content of the [noRecordsTemplate](#) and [actionFailureTemplate](#) property according to the culture currently assigned to the ComboBox.

| Locale key | en-US (default) |

|-----|-----|

| noRecordsTemplate | No records found |

| actionFailureTemplate | The request failed |

Loading translations

To load translation object to your application, use load function of the **L10n** class.

In the following sample, French culture is set to the ComboBox and no data is loaded. Hence, the **noRecordsTemplate** property displays its text in French culture initially, and if the sample is run offline, the **actionFailureTemplate** property displays its text appropriately.

[Class-component]

INDEX.JSX

```
// import L10n class for load function
import { L10n } from '@syncfusion/ej2-base';
// import DataManager related classes
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    // bind remotedata to showcase actionFailureTemplate in offline.
    customerData = new DataManager({

Style in React Combo box component

The following content provides the exact CSS structure that can be used to modify the control's appearance based on the user preference.

Customizing the appearance of wrapper element

Use the following CSS to customize the appearance of wrapper element.

```

`css
.e-ddl.e-input-group.e-control-wrapper .e-input {
font-size: 20px;
font-family: emoji;
color: #ab3243;
background: #32a5ab;
}
`

```

Customizing the dropdown icon's color

Use the following CSS to customize the dropdown icon's color.

```

`css
.e-ddl.e-input-group .e-input-group-icon,.e-ddl.e-input-group.e-control-wrapper .e-input-group-
icon:hover {

```

```
color: #bb233d;
font-size: 13px;
}
`
```

Customizing the focus color

Use the following CSS to customize the focusing color of input element.

```
`css
.e-ddl.e-input-group.e-control-wrapper.e-input-focus::before, .e-ddl.e-input-group.e-control-wrapper.e-
input-focus::after {
background: #c000ff;
}
`
```

Customizing the outline theme's focus color

Use the following CSS to customize the focusing color of outline theme.

```
`css
.e-outline.e-input-group.e-input-focus:hover:not(.e-success):not(.e-warning):not(.e-error):not(.e-
disabled):not(.e-float-icon-left),.e-outline.e-input-group.e-input-focus.e-control-wrapper:hover:not(.e-
success):not(.e-warning):not(.e-error):not(.e-disabled):not(.e-float-icon-left),.e-outline.e-input-group.e-
input-focus:not(.e-success):not(.e-warning):not(.e-error):not(.e-disabled),.e-outline.e-input-group.e-
control-wrapper.e-input-focus:not(.e-success):not(.e-warning):not(.e-error):not(.e-disabled) {
border-color: #b1bd15;
box-shadow: inset 1px 1px #b1bd15, inset -1px 0 #b1bd15, inset 0 -1px #b1bd15;
}
`
```

Customizing the disabled component's text color

Use the following CSS to customize the text color when the component is disabled.

```
`css
.e-input-group.e-control-wrapper .e-input[disabled] {
-webkit-text-fill-color: #0d9133;
}
`
```

Customizing the float label element's focusing color

Use the following CSS to customize the focusing color of float label element.

```
`css
.e-float-input.e-input-group:not(.e-float-icon-left) .e-float-line::before,.e-float-input.e-control-
wrapper.e-input-group:not(.e-float-icon-left) .e-float-line::before,.e-float-input.e-input-group:not(.e-
```

```
float-icon-left) .e-float-line::after,.e-float-input.e-control-wrapper.e-input-group:not(.e-float-icon-left)
.e-float-line::after {
background-color: #2319b8;
}

.e-ddl.e-input-group.e-control-wrapper.e-float-input.e-input-focus .e-float-text.e-label-top, .e-float-
input.e-control-wrapper:not(.e-error).e-input-focus input ~ label.e-float-text {
color: #2319b8;
}
、
```

Customizing the color of the placeholder text

Use the following CSS to customize the text color of placeholder.

```
`css
.e-ddl.e-input-group input.e-input::placeholder {
color: red;
}
、
```

Customizing the text selection color

Use the following CSS to customize the selection color of text and background.

```
`css
.e-ddl.e-input-group input.e-input::selection {
color: red;
background: yellow;
}
、
```

Customizing the background color of focus, hover, and active item's

Use the following CSS to customize the background color of focus, hover and active item's.

```
`css
.e-dropdownbase .e-list-item.e-item-focus, .e-dropdownbase .e-list-item.e-active, .e-dropdownbase .e-
list-item.e-active.e-hover, .e-dropdownbase .e-list-item.e-hover {
background-color: #1f9c99;
color: #2319b8;
}
、
```

Customizing the appearance of pop-up element

Use the following CSS to customize the appearance of popup element.

```
`css
.e-dropdownbase .e-list-item, .e-dropdownbase .e-list-item.e-item-focus {
background-color: #29c2b8;
color: #207cd9;
font-family: emoji;
min-height: 29px;
}
`
```

Adding mandatory asterisk to placeholder and float label

You can add a mandatory asterisk(*) to placeholder and float label using `.e-input-group.e-control-wrapper.e-float-input .e-float-text::after` class.

ReactDOM.render(<App />, document.getElementById('sample'));
```

Accessibility in React Combo box component

The ComboBox component has been designed, keeping in mind the WAI-ARIA specifications, and applies the WAI-ARIA roles, states, and properties along with keyboard support. This component is characterized by complete keyboard interaction support and ARIA accessibility support that makes it easy for people who use assistive technologies (AT) or those who completely rely on keyboard navigation.

The ComboBox component followed the accessibility guidelines and standards, including [ADA](#), [Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the ComboBox component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2 Support](#) | |

| [Section 508 Support](#) | |

| [Screen Reader Support](#) | |

| [Right-To-Left Support](#) | |

| [Color Contrast](#) | |

| [Mobile Device Support](#) | |

| [Keyboard Navigation Support](#) | |

| [Accessibility Checker Validation](#) | |

| [Axe-core Accessibility Validation](#) | |

```
<style>
.post .post-content img {
display: inline-block;
margin: 0.5em 0;
}
</style>

<div> - All
features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>
```

WAI-ARIA attributes

The ComboBox component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the ComboBox component:

| Properties | Functionalities |

| --- | --- |

| **aria-haspopup** | Indicates whether the ComboBox input element has a popup list or not. |

| **aria-expanded** | Indicates whether the popup list has expanded or not. |

| **aria-selected** | Indicates the selected option. |

| **aria-readonly** | Indicates the readonly state of the ComboBox element. |

- | aria-disabled | Indicates whether the ComboBox component is in a disabled state or not. |
- | aria-activedescendent | This attribute holds the ID of the active list item to focus its descendant child element. |
- | aria-owns | This attribute contains the ID of the popup list to indicate popup as a child element. |
- | aria-autocomplete | This attribute contains the 'both' to a list of options shows and the currently selected suggestion also shows inline. |

Keyboard interaction

You can use the following key shortcuts to access the ComboBox without interruptions.

| Keyboard shortcuts | Actions |

| --- | --- |

| Arrow Down | Selects the first item in the ComboBox when no item selected. Otherwise, selects the item next to the currently selected item. |

| Arrow Up | Selects the item previous to the currently selected one. |

| Page Down | Scrolls down to the next page and selects the first item when popup list opens. |

| Page Up | Scrolls up to the previous page and selects the first item when popup list opens. |

| Enter | Selects the focused item and popup list closes when it is in open state. |

| Tab | Focuses on the next TabIndex element on the page when the popup is closed. Otherwise, closes the popup list and remains the focus of the component. |

| Shift + tab | Focuses on the previous TabIndex element on the page when the popup is closed. Otherwise, closes the popup list and remains the focus of the component. |

| Alt + Down | Open the popup list |

| Alt + Up | Close the popup list |

| Esc(Escape) | Closes the popup list when it is in an open state and the currently selected item remains the same. |

| Home | Cursor moves to before of first character in input |

| End | Cursor moves to next of last character in input |

In the below sample, alt+t keys are used to focus the ComboBox component.

[Class-component]

{% endraw %}
```

Ensuring accessibility

The ComboBox component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the ComboBox component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the ComboBox component with accessibility tools.

How To

Autofill in React Combo box component

The ComboBox supports the **autofill** behaviour with the help of [autofill](#) property. Whenever you change the input value, the ComboBox will autocomplete your data by matching the typed character. Suppose, if no matches found then, ComboBox doesn't suggest any item.

The following examples, showcase that how to work autofill with ComboBox.

INDEX.JSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  // define the array of data
  sportsData = ['Badminton', 'Cricket', 'Football', 'Golf', 'Tennis'];
  render() {
    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id="comboelement" placeholder="Select a game"
      autofill={true} dataSource={this.sportsData}/>);
  }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
  // define the array of data
  private sportsData: string[] = ['Badminton', 'Cricket', 'Football', 'Golf', 'Tennis'];
  public render() {
    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id="comboelement" placeholder="Select a game"
      autofill={true} dataSource={this.sportsData} />
    );
  }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

Cascading in React Combo box component

The cascading ComboBox is a series of ComboBox, where the value of one ComboBox depends upon another's value. This can be configured by using the [change](#) event of the parent ComboBox. Within that change event handler, data has to be loaded to the child ComboBox based on the selected value of the parent ComboBox.

The following example, shows the cascade behavior of country, state, and city ComboBox. Here, the [dataBind](#) method is used to reflect the property changes immediately to the ComboBox.

INDEX.JSX

```
{% raw %}
import { Query } from '@syncfusion/ej2-data';
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  // country ComboBox instance
  countryObj;
  // state ComboBox instance
  stateObj;
  // city ComboBox instance
  cityObj;
  // define the country ComboBox data
  countryData = [
    { CountryName: 'Australia', CountryId: '2' },
    { CountryName: 'United States', CountryId: '1' }
  ];
  // define the state ComboBox data
  stateData = [
    { StateName: 'New York', CountryId: '1', StateId: '101' },
    { StateName: 'Virginia ', CountryId: '1', StateId: '102' },
    { StateName: 'Tasmania ', CountryId: '2', StateId: '105' }
  ];
  // define the city ComboBox data
  cityData = [
    { CityName: 'Albany', StateId: '101', CityId: 201 },
    { CityName: 'Beacon ', StateId: '101', CityId: 202 },

    }
}
ReactDOM.render(<App />, document.getElementById('sample'));
{% endraw %}

```

Icons support in React Combo box component

You can render **icons** to the list items by mapping the the **iconCss** fields. This **iconCss** field create a span in the list item with mapped class name to allow styling as per your need.

In the following sample, icon classes are mapped with **iconCss** field.

INDEX.JSX

```

import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {

```

```
// define the array of data
sortFormatData = [
  { Class: 'asc-sort', Type: 'Sort A to Z', Id: '1' },
  { Class: 'dsc-sort', Type: 'Sort Z to A ', Id: '2' },
  { Class: 'filter', Type: 'Filter', Id: '3' },
  { Class: 'clear', Type: 'Clear', Id: '4' }
];
// map the icon column to iconCSS field.
fields = { text: 'Type', iconCss: 'Class', value: 'Id' };
render() {
  return (
    // specifies the tag for render the ComboBox component
    <ComboBoxComponent id="comboelement" dataSource={this.sortFormatData}
    fields={this.fields} placeholder="Select a format"/>);
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

INDEX.TSX

```
import { ComboBoxComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
  // define the array of data
  private sortFormatData: { [key: string]: Object }[] = [
    { Class: 'asc-sort', Type: 'Sort A to Z', Id: '1' },
    { Class: 'dsc-sort', Type: 'Sort Z to A ', Id: '2' },
    { Class: 'filter', Type: 'Filter', Id: '3' },
    { Class: 'clear', Type: 'Clear', Id: '4' }
  ];
  // map the icon column to iconCSS field.
  private fields: object = { text: 'Type', iconCss: 'Class', value: 'Id' };
  public render() {
    return (
      // specifies the tag for render the ComboBox component
      <ComboBoxComponent id="comboelement"
      dataSource={this.sortFormatData} fields={this.fields} placeholder="Select a
      format" />
    );
  }
}
ReactDOM.render(<App />, document.getElementById('sample'));
```

Ej1 api migration in React Combo box component

This article describes the API migration process of ComboBox component from Essential JS 1 to Essential JS 2.

DataBinding

{% raw %}

<!-- markdownlint-disable MD010 -->

<EJ.ComboBox readOnly={true}></EJ.ComboBox> | **Property:**
readOnly
<ComboBoxComponent id="ddl" ref={(scope) => { this.ddlObj = scope; }}
readOnly={true} /> |

| **Addition of Html attributes** | **Property:** *htmlAttributes*
<EJ.ComboBox
htmlAttributes={htmlAttributes}></EJ.ComboBox> | **Property:**
htmlAttributes
<ComboBoxComponent id="ddl" ref={(scope) => { this.ddlObj = scope; }}
htmlAttributes={this.htmlAttributes} /> |

Sorting

<!-- markdownlint-disable MD010 -->

| Behavior | API in Essential JS 1 | API in Essential JS 2 |

| --- | --- | --- |

| **Order of sorting** | **Property:** *sortOrder*
<EJ.ComboBox
sortOrder={sortOrder}></EJ.ComboBox> | **Property:** *sortOrder*
<ComboBoxComponent
id="ddl" ref={(scope) => { this.ddlObj = scope; }} sortOrder={this.sortOrder} /> |

Selection

<!-- markdownlint-disable MD010 -->

| Behavior | API in Essential JS 1 | API in Essential JS 2 |

| --- | --- | --- |

| **Selecting particular index** | **Property:** *index*
<EJ.ComboBox index="1"></EJ.ComboBox> |
Property: *index*
<ComboBoxComponent id="ddl" ref={(scope) => { this.ddlObj = scope; }}
index={this.index} /> |

| **Selecting particular value** | **Property:** *value*
<EJ.ComboBox value="data"></EJ.ComboBox> |
Property: *value*
<ComboBoxComponent id="ddl" ref={(scope) => { this.ddlObj = scope; }}
value={this.value} /> |

| **Selecting particular text** | **Property:** *text*
<EJ.ComboBox text="data"></EJ.ComboBox> |
Property: *text*
<ComboBoxComponent id="ddl" ref={(scope) => { this.ddlObj = scope; }}
text={this.text} /> |

| **Getting data by using value** | **Method:** *getItemDataByValue*
<EJ.ComboBox
sortOrder={sortOrder}></EJ.ComboBox>

\$('#dropdown').ejComboBox('getItemDataByValue', 'data') | **Method:**
getDataByValue
<ComboBoxComponent id="ddl" ref={(scope) => { this.ddlObj = scope; }}
</>

 this.ddlObj.getDataByValue("data");

| **Select event** | **Event:** `select
<EJ.ComboBox select="select"></EJ.ComboBox>` | **Event:** `select
<ComboBoxComponent id="ddl" ref={{(scope) => { this.ddlObj = scope; }} select={this.select} />` |

Popup

<!-- markdownlint-disable MD010 -->

| Behavior | API in Essential JS 1 | API in Essential JS 2 |

| --- | --- | --- |

| **Popup height** | **Property:** `popupHeight
<EJ.ComboBox popupHeight="300px"></EJ.ComboBox>` | **Property:** `popupHeight
<ComboBoxComponent id="ddl" ref={{(scope) => { this.ddlObj = scope; }} popupHeight={this.popupHeight} />` |

| **Popup width** | **Property:** `popupWidth
<EJ.ComboBox popupWidth="300px"></EJ.ComboBox>` | **Property:** `popupWidth
<ComboBoxComponent id="ddl" ref={{(scope) => { this.ddlObj = scope; }} popupWidth={this.popupWidth} />` |

| **Popup showing manually** | **Method:** `showPopup
<EJ.ComboBox ></EJ.ComboBox>

$('#dropdown').ejComboBox("showPopup");` | **Method:** `showPopup
<ComboBoxComponent id="ddl" ref={{(scope) => { this.ddlObj = scope; }} />

this.ddlObj.showPopup();` |

| **Popup hiding manually** | **Method:** `hidePopup
<EJ.ComboBox ></EJ.ComboBox>

$('#dropdown').ejComboBox("hidePopup");` | **Method:** `hidePopup
<ComboBoxComponent id="ddl" ref={{(scope) => { this.ddlObj = scope; }} />

this.ddlObj.hidePopup();` |

| **Popup hide event** | **Event:** `close
<EJ.ComboBox close="close"></EJ.ComboBox>` | **Event:** `close
<ComboBoxComponent id="ddl" ref={{(scope) => { this.ddlObj = scope; }} close={this.close.bind(this)} />` |

| **Popup shown event** | **Event:** `open
<EJ.ComboBox open="open"></EJ.ComboBox>` | **Event:** `open
<ComboBoxComponent id="ddl" ref={{(scope) => { this.ddlObj = scope; }} open={this.open.bind(this)} />` |

Common

<!-- markdownlint-disable MD010 -->

| Behavior | API in Essential JS 1 | API in Essential JS 2 |

| --- | --- | --- |

| **Adding new item** | **Method :** `addItem
<EJ.ComboBox ></EJ.ComboBox>

$('#dropdown').ejComboBox("addItem", { text : "India"});` | **Method:** `addItem
<ComboBoxComponent id="ddl" ref={{(scope) => { this.ddlObj = scope; }} />

this.ddlObj.addItem({Id: 'id', Game: 'Golf'},2);` |

| **Focus out event** | **Not applicable** | **Event:** `blur
<ComboBoxComponent id="ddl" ref={{(scope) => { this.ddlObj = scope; }} blur={this.blur.bind(this)} />` |

```

| Focus in event | Event: focus<br/><EJ.ComboBox focus="focus"></EJ.ComboBox> | Event:
FocusIn<br/><ComboBoxComponent id="ddl" ref={{(scope) => { this.ddlObj = scope; }}}
focusIn={this.focus.bind(this)} /> |

| Focus out | Method: focusOut<br/><EJ.ComboBox ></EJ.ComboBox> <br/>
<br/>${'#dropdown'}.ejComboBox("focusOut"); | Method: focusOut<br/><ComboBoxComponent
id="ddl" ref={{(scope) => { this.ddlObj = scope; }}} /><br/><br/> this.ddlObj.focusOut(); |

| Focus in | Method: focusIn<br/><EJ.ComboBox ></EJ.ComboBox> <br/>
<br/>${'#dropdown'}.ejComboBox("focusIn"); | Method: focusIn<br/><ComboBoxComponent
id="ddl" ref={{(scope) => { this.ddlObj = scope; }}} /><br/><br/> this.ddlObj.focusIn(); |

| Getting the data | Method : getItems<br/><EJ.ComboBox ></EJ.ComboBox> <br/>
<br/>${'#dropdown'}.ejComboBox("getItems"); | Method: getItems<br/><ComboBoxComponent
id="ddl" ref={{(scope) => { this.ddlObj = scope; }}} /><br/><br/> this.ddlObj.getItems(); |

created<br/><ComboBoxComponent id="ddl" ref={{(scope) => { this.ddlObj = scope; }}}
created={this.create.bind(this)} /> |

| Change event | Event: change<br/><EJ.ComboBox close="close"></EJ.ComboBox> | Event:
change<br/><ComboBoxComponent id="ddl" ref={{(scope) => { this.ddlObj = scope; }}}
change={this.change.bind(this)} /> |

| Custom value event | Event: customValueSpecifier<br/><EJ.ComboBox
customValueSpecifier="customValueSpecifier"></EJ.ComboBox> | Event:
customValueSpecifier<br/><ComboBoxComponent id="ddl" ref={{(scope) => { this.ddlObj = scope;
}}} customValueSpecifier={this.customValueSpecifier.bind(this)} /> |

{% endraw %}

```

Context menu

Getting Started

This section explains how to create a simple ContextMenu, and configure its available functionalities in React

Dependencies

The following list of dependencies are required to use the ContextMenu component in your application.

```

`javascript
|-- @syncfusion/ej2-react-navigations
|-- @syncfusion/ej2-react-base
|-- @syncfusion/ej2-navigations
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-inputs
|-- @syncfusion/ej2-lists

```

```
|-- @syncfusion/ej2-popups
|-- @syncfusion/ej2-buttons
,
```

Setup your development environment

You can use [Create-react-app](#) to setup the applications.

To install `create-react-app` run the following command.

```
`bash
npm install -g create-react-app
,
```

Start a new project using create-react-app command as follows

```
<div class='tsx'>
`bash
create-react-app quickstart --scripts-version=react-scripts-ts
cd quickstart
,
```

```
</div>
<div class='jsx'>
`bash
create-react-app quickstart
cd quickstart
,
```

```
</div>
```

'react-scripts-ts' is used for creating React app with typescript.

Adding Syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](https://www.npmjs.com) public registry.

To install `ContextMenu` component, use the following command

```
`bash
npm install @syncfusion/ej2-react-navigations --save
,
```

The above command installs [ContextMenu dependencies](#) which are required to render the component in the `React` environment.

Adding Style sheet to the Application

Add ContextMenu component's styles as given below in `App.css`.

```
`css
```

```
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-lists/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-navigations/styles/material.css";
/ Context Menu target /
```

```
target {
border: 1px dashed;
height: 150px;
padding: 10px;
position: relative;
text-align: justify;
color: gray;
user-select: none;
}
,
```

Add ContextMenu to the project

Now, you can add `ContextMenu` component in the application. For getting started, add `ContextMenu` component in `src/App.tsx` file and the options contain `menuItems` and `target` in which `ContextMenu` will be opened. Using the following code snippet.

```
`ts
import { ContextMenuComponent, MenuItemModel } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import './App.css';
function App() {
let menuItems: MenuItemModel[] = [
{
text: 'Cut'
},
{
text: 'Copy'
},
{
```

```
text: 'Paste'
});
return (
  // specifies the tag to render the ContextMenu component
  <div>
    <div id="target">Right click / Touch hold to open the ContextMenu</div>
    <ContextMenuComponent target="#target" items={menuItems} />
  </div>
);
}
export default App;
`ts
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import './App.css';
function App() {
  let menuItems = [
    {
      text: 'Cut'
    },
    {
      text: 'Copy'
    },
    {
      text: 'Paste'
    }
  ];
  return (
    // specifies the tag to render the ContextMenu component
    <div>
      <div id="target">Right click / Touch hold to open the ContextMenu</div>
      <ContextMenuComponent target="#target" items={menuItems}/>
    </div>
  );
}
```

```
</div>);
```

```
}
```

```
export default App;
```

```
,
```

[Run the application](#)

Run the application in the browser using the following command:

```
,
```

```
npm start
```

```
,
```

The following example shows a basic ContextMenu component.

INDEX.JSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    let menuItems = [
        {
            text: 'Cut'
        },
        {
            text: 'Copy'
        },
        {
            text: 'Paste'
        }
    ];
    return (
        <div className="container">
            <div id='target'>Right click / Touch hold to open the
            ContextMenu</div>
            <ContextMenuComponent id='contextmenu' target='#target'
            items={menuItems}></div>
        </div>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent, MenuItemModel } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    let menuItems: MenuItemModel[] = [
        {
```

```

        text: 'Cut'
      },
      {
        text: 'Copy'
      },
      {
        text: 'Paste'
      }
    ]];
    return (
      <div className="container">
        <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
        <ContextMenuComponent id='contextmenu' target='#target'
          items={menuItems}/>
      </div>
    );
  }
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

Icons and navigation in React Context menu component

Icons

The ContextMenu item have an icon / image in it to provide visual representation of the action. To place the icon on a menu item, set the [iconCss](#) property to e-icons with the required icon CSS. By default, the icon is positioned to the left side of the menu item. In the following sample, the icons for Cut, Copy and Paste menu items are added using `iconCss` property.

INDEX.JSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
  let menuItems = [
    {
      iconCss: 'e-cm-icons e-cut',
      text: 'Cut'
    },
    {
      iconCss: 'e-icons e-copy',
      text: 'Copy'
    },
    {
      iconCss: 'e-cm-icons e-paste',
      text: 'Paste'
    }
  ];
}

```

```

    return (<div className="container">
      <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
      <ContextMenuComponent id='contextmenu' target='#target'
items={menuItems}/>
    </div>);
  }
  export default App;
  ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent, MenuItemModel } from '@syncfusion/ej2-react-
navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
  let menuItems: MenuItemModel[] = [
    {
      iconCss: 'e-cm-icons e-cut',
      text: 'Cut'
    },
    {
      iconCss: 'e-icons e-copy',
      text: 'Copy'
    },
    {
      iconCss: 'e-cm-icons e-paste',
      text: 'Paste'
    }
  ];
  return (
    <div className="container">
      <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
      <ContextMenuComponent id='contextmenu' target='#target'
items={menuItems}/>
    </div>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

Navigation URL

Navigation URL in ContextMenu is used for navigating to other web page when menu item is clicked. This can be achieved by providing link to the menu item using the [url](#) property. In the following sample, Navigation URL for Flipkart, Amazon, and Snapdeal menu items are added using the [url](#) property.

INDEX.JSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';

```

```

enableRipple(true);
function App() {
  let menuItems = [
    {
      iconCss: 'e-cart-icon e-link',
      text: 'Flipkart',
      url: 'https://www.google.co.in/search?q=flipkart'
    },
    {
      iconCss: 'e-cart-icon e-link',
      text: 'Amazon',
      url: 'https://www.google.co.in/search?q=amazon'
    },
    {
      iconCss: 'e-cart-icon e-link',
      text: 'Snapdeal',
      url: 'https://www.google.co.in/search?q=snapdeal'
    }
  ];
  function itemBeforeEvent(args) {
    args.element.getElementsByTagName('a')[0].setAttribute('target',
    '_blank');
  }
  return (<div className="container">
    <div id="target">Right click / Touch hold to open the
    ContextMenu</div>
    <ContextMenuComponent id="contextmenu" target="#target"
    items={menuItems} beforeItemRender={itemBeforeEvent}/>
    </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent, MenuEventArgs, MenuItemModel } from
 '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
  let menuItems: MenuItemModel[] = [
    {
      iconCss: 'e-cart-icon e-link',
      text: 'Flipkart',
      url: 'https://www.google.co.in/search?q=flipkart'
    },
    {
      iconCss: 'e-cart-icon e-link',
      text: 'Amazon',
      url: 'https://www.google.co.in/search?q=amazon'
    },
    {
      iconCss: 'e-cart-icon e-link',
      text: 'Snapdeal',

```

```

        url: 'https://www.google.co.in/search?q=snapdeal'
    }];
    function itemBeforeEvent(args: MenuEventArgs) {
        args.element.getElementsByTagName('a')[0].setAttribute('target',
        '_blank');
    }
    return (
        <div className="container">
            <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
            <ContextMenuComponent id='contextmenu' target='#target'
items={menuItems}
            beforeItemRender={itemBeforeEvent}/>
        </div>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

To open the links in new tab, set 'target' attribute with the value '_blank' in the [beforeItemRender](#) event.

Template in React Context menu component

The ContextMenu items can be customized using the [beforeItemRender](#) property. The item render event triggers while rendering each menu item. The event argument will be used to identify the menu item and customized it based on the requirement. In the following sample, the menu item is rendered with keycode for specified action in ContextMenu using the template. Here, the keycode is specified for Save as, View page source, and Inspect in the right side corner of the menu items by adding span element in the [beforeItemRender](#) event.

INDEX.JSX

```

import { createElement, enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    let menuItems = [
        {
            text: 'Save as...'
        },
        {
            text: 'View page source'
        },
        {
            text: 'Inspect'
        }
    ];
    function itemBeforeEvent(args) {

```

```

        const shortCutSpan = createElement('span');
        const text = args.item.text;
        const shortCutText = text === 'Save as...' ? 'Ctrl + S' : (text ===
'View page source' ? 'Ctrl + U' : 'Ctrl + Shift + I');
        shortCutSpan.textContent = shortCutText;
        args.element.appendChild(shortCutSpan);
        shortCutSpan.setAttribute('class', 'shortcut');
    }
    return (<div class="container">
        <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
        <ContextMenuComponent id='contextmenu' target='#target'
items={menuItems} beforeItemRender={itemBeforeEvent}/>
    </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { createElement, enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent, MenuEventArgs, MenuItemModel } from
'@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    let menuItems: MenuItemModel[] = [
        {
            text: 'Save as...'
        },
        {
            text: 'View page source'
        },
        {
            text: 'Inspect'
        }
    ];
    function itemBeforeEvent(args: MenuEventArgs) {
        const shortCutSpan = createElement('span');
        const text = args.item.text;
        const shortCutText = text === 'Save as...' ? 'Ctrl + S' : (text ===
'View page source' ? 'Ctrl + U' : 'Ctrl + Shift + I');
        shortCutSpan.textContent = shortCutText;
        args.element.appendChild(shortCutSpan);
        shortCutSpan.setAttribute('class', 'shortcut');
    }
    return (
        <div class="container">
            <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
            <ContextMenuComponent id='contextmenu' target='#target'
items={menuItems} beforeItemRender={itemBeforeEvent}/>
        </div>
    );
}
export default App;

```

```
ReactDOM.render(<App />, document.getElementById('element'));
```

To create span element, `createElement` util function used from `ej2-base`.

Multilevel nesting

Multiple level nesting supports in ContextMenu. It can be achieved by mapping the [items](#) property inside the parent [menuItems](#). In the below sample, three level nesting of ContextMenu is provided.

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
function App() {
    let menuItems = [
        {
            text: 'Show All Bookmarks'
        },
        {
            text: 'Bookmarks Toolbar',
            items: [
                {
                    text: 'Most Visited',
                    items: [
                        {
                            text: 'Google'
                        },
                        {
                            text: 'Gmail'
                        }
                    ]
                },
                {
                    text: 'Recently Added'
                }
            ]
        }
    ];
    return (<div class="container">
        <div id='target'>Right click / Touch hold to open the
        ContextMenu</div>
        <ContextMenuComponent id='contextmenu' target='#target'
        items={menuItems}> </ContextMenuComponent>
        </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
```

```

import { ContextMenuComponent, MenuItemModel } from '@syncfusion/ej2-react-navigations';
import { enableRipple } from '@syncfusion/ej2-base';
enableRipple(true);
function App() {
  let menuItems: MenuItemModel[] = [
    {
      text: 'Show All Bookmarks'
    },
    {
      text: 'Bookmarks Toolbar',
      items: [
        {
          text: 'Most Visited',
          items: [
            {
              text: 'Google'
            },
            {
              text: 'Gmail'
            }
          ]
        },
        {
          text: 'Recently Added'
        }
      ]
    }
  ]];
  return (
    <div class="container">
      <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
      <ContextMenuComponent id='contextmenu' target='#target'
items={menuItems}> </ContextMenuComponent>
    </div>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

To open sub menu items only on click, [showItemOnClick](#) property should be set as **true**.

Accessibility in React ContextMenu component

The ContextMenu component followed the accessibility guidelines and standards, including [ADA](#), [Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the ContextMenu component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

| [Section 508](#) Support | |

| Screen Reader Support | |

| Right-To-Left Support | |

| Color Contrast | |

| Mobile Device Support | |

| Keyboard Navigation Support | |

| [Accessibility Checker](#) Validation | |

| [Axe-core](#) Accessibility Validation | |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

}

</style>

<div> - All features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

WAI-ARIA attributes

The ContextMenu component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the ContextMenu component:

| Attributes | Purpose |

| --- | --- |

| `role` | Indicates ContextMenu component popup as `menu`, and the popup items as `menuitem`. |

| `aria-haspopup` | Indicates the availability and type of interactive popup element. |

| `aria-expanded` | Indicates whether the subtree can be expanded or collapsed, as well as indicates whether its current state is expanded or collapsed. |

| `aria-label` | Indicates the menu item text. |

Keyboard interaction

The ContextMenu component followed the [keyboard interaction](#) guideline, making it easy for people who use assistive technologies (AT) and those who completely rely on keyboard navigation. The following keyboard shortcuts are supported by the ContextMenu component.

| **Press** | **To do this** |

| --- | --- |

| **Esc** | Closes the opened sub menu. |

| **Enter** | Selects the focused item. |

| **Up** | Navigates up or to the previous menu item. |

| **Down** | Navigates down or to the next menu item. |

| **Left** | Close the current sub menu and navigates to the parent menu. |

| **Right** | Navigates and open the next sub menu. |

Ensuring accessibility

The ContextMenu component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the ContextMenu component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the ContextMenu component with accessibility tools.

- [Accessibility in Syncfusion React components](#)

Style and appearance in React Context menu component

To modify the ContextMenu appearance, you need to override the default CSS of ContextMenu component. Please find the list of CSS classes and its corresponding section in ContextMenu component. Also, you have an option to create your own custom theme for the controls using our [Theme Studio](#).

CSS Class | Purpose of Class

| `.e-contextmenu-wrapper` | To customize the context menu wrapper

| `.e-contextmenu-wrapper .e-menu-parent` | To customize the context menu items

| `.e-contextmenu-wrapper ul .e-menu-item.e-selected .e-caret::before` | To customize the context menu caret icon

| `.e-contextmenu-wrapper ul .e-menu-item .e-menu-icon::before` | To customize the icons of the context menu

How To

Data binding in React Context menu component

In the following example, menu items are populated from data source and mapped to [items](#) property.

INDEX.JSX

```
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// @ts-ignore
import { data } from '../datasource.tsx';
function App() {
    function getMenuItems() {
        let record;
        const menuItems = [];
        for (const d of data) {
            record = d;
            if (record.parentId) {
                if (!menuItems[record.parentId - 1].items) {
                    menuItems[record.parentId - 1].items = [];
                }
                menuItems[record.parentId - 1].items.push({ text: record.text
});
            }
            else {
                menuItems.push({ text: record.text });
            }
        }
        return menuItems;
    }
    function itemBeforeEvent(args) {
        if (!args.item.text) {
            args.element.classList.add('e-separator');
        }
    }
    return (
        <div className="container">
            <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
            <ContextMenuComponent id='contextmenu' target='#target'
items={getMenuItems()} beforeItemRender={itemBeforeEvent}/>
        </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { ContextMenuComponent, MenuEventArgs, MenuItemModel } from
 '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// @ts-ignore
import { data, IRecord } from '../datasource.tsx';
function App() {
```

```

function getMenuItems() {
    let record: IRecord;
    const menuItems: MenuItemModel[] = [];
    for (const d of data) {
        record = d as IRecord;
        if (record.parentId) {
            if (!menuItems[record.parentId - 1].items) {
                menuItems[record.parentId - 1].items = [];
            }
            menuItems[record.parentId - 1].items.push({ text: record.text
});
        } else {
            menuItems.push({ text: record.text });
        }
    }
    return menuItems;
}
function itemBeforeEvent(args: MenuEventArgs) {
    if (!args.item.text) {
        args.element.classList.add('e-separator');
    }
}
return (
    <div className="container">
        <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
        <ContextMenuComponent id='contextmenu' target='#target'
            items={getMenuItems()} beforeItemRender = {itemBeforeEvent}
        />
    </div>
);
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

While accessing Array we got the exception 'object is possibly undefined' due to 'strictNullChecks' option. So you can disable it in 'tsconfig.json' file.

Render with separator in React Context menu component

The Separators are horizontal lines that are used to separate the menu items. You cannot select the separators. You can enable separators to group the menu items using the [separator](#) property. Cut, Copy, and Paste menu items are grouped using `separator` property in the following sample.

INDEX.JSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    let menuItems = [
        {
            text: 'Cut'
        },
    ],
    {

```

```

        text: 'Copy'
      },
      {
        text: 'Paste'
      },
      {
        separator: true
      },
      {
        text: 'Font'
      },
      {
        text: 'Paragraph'
      }
    ];
    return (<div className="container">
      <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
      <ContextMenuComponent id='contextmenu' target='#target'
items={menuItems}/>
    </div>);
  }
  export default App;
  ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent, MenuItemModel } from '@syncfusion/ej2-react-
navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
  let menuItems: MenuItemModel[] = [
    {
      text: 'Cut'
    },
    {
      text: 'Copy'
    },
    {
      text: 'Paste'
    },
    {
      separator: true
    },
    {
      text: 'Font'
    },
    {
      text: 'Paragraph'
    }
  ];
  return (
    <div className="container">

```

```

        <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
        <ContextMenuComponent id='contextmenu' target='#target'
items={menuItems}/>
    </div>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

The [separator](#) property should not be given along with

the other fields in the [MenuItem](#).

Open and close contextmenu in React Context menu component

ContextMenu can be opened and closed programmatically whenever required by using [open](#) and [close](#) methods.

In the following example, the ContextMenu is opened using the [open](#) method at the specified position using [top](#) and [left](#). Also, ContextMenu is closed using [close](#) method on ContextMenu item click or document click.

INDEX.JSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    let cMenu;
    let menuItems = [
        {
            text: 'Cut'
        },
        {
            text: 'Copy'
        },
        {
            text: 'Paste'
        }
    ];
    function btnClick() {
        cMenu.open(40, 20);
    }
    return (<div className="container">
        <ContextMenuComponent id='contextmenu' ref={(scope) => cMenu =
scope} items={menuItems}/>
        <ButtonComponent onClick={btnClick}>Open
ContextMenu</ButtonComponent>
    </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
import { ContextMenuComponent, MenuItemModel } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    let cMenu: ContextMenuComponent;
    let menuItems: MenuItemModel[] = [
        {
            text: 'Cut'
        },
        {
            text: 'Copy'
        },
        {
            text: 'Paste'
        }
    ];
    function btnClick(): void {
        cMenu.open(40, 20);
    }
    return (
        <div className="container">
            <ContextMenuComponent id='contextmenu' ref={(scope) => cMenu =
scope as ContextMenuComponent} items={menuItems} />
            <ButtonComponent onClick={btnClick}>Open
ContextMenu</ButtonComponent>
        </div>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));
```

Change menu items dynamically in React Context menu component

The items visible in the ContextMenu can be changed dynamically based on the context you open. To achieve this behavior, initialize ContextMenu with all items using [items](#) property and then based on the context you open hide/show required items using [hideItems](#)/[showItems](#) method in [beforeOpen](#) event.

In the following example, the datasource for Clipboard div is **Cut**, **Copy**, **Paste** and for the Editor div is **Add**, **Edit**, **Delete** is changed on [beforeOpen](#) event using [hideItems](#) and [showItems](#) method.

INDEX.JSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    let cmenuInstance;
    let menuItems = [
        {
```

```

        text: 'Cut'
    },
    {
        text: 'Copy'
    },
    {
        text: 'Paste'
    },
    {
        text: 'Add'
    },
    {
        text: 'Edit'
    },
    {
        text: 'Delete'
    }
];
function beforeOpen(args) {
    if (args.event.target.id === 'right') {
        cmenuInstance.hideItems(['Cut', 'Copy', 'Paste']);
        cmenuInstance.showItems(['Add', 'Edit', 'Delete']);
    }
    else if (args.event.target.id === 'left') {
        cmenuInstance.showItems(['Cut', 'Copy', 'Paste']);
        cmenuInstance.hideItems(['Add', 'Edit', 'Delete']);
    }
}

        );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

Template in React Context menu component

Table in Sub ContextMenu

Menu items of the ContextMenu can be customized according to the requirement. The section explains about how to customize table template in sub menu item.

This can be achieved by appending table layout while `li` rendering by using `beforeItemRender` event.

INDEX.JSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    let menuItems = [
        {
            iconCss: 'e-cm-icons e-cut',
            text: 'Cut',
        },
        {
            iconCss: 'e-icons e-copy',
            text: 'Copy'
        },
        {
            iconCss: 'e-cm-icons e-paste',
            text: 'Paste'
        },
        {
            separator: true
        },
        {
            iconCss: 'e-icons e-link',
            text: 'Link'
        },
        {

```

UI Components in ContextMenu

UI components can also be placed inside the each `li` element of ContextMenu.

In the following example, CheckBox component is placed inside each `li` element and this can be achieved by creating CheckBox component in `beforeItemRender` event and appending it into the `li` element.

INDEX.JSX

```

import { closest, createElement, enableRipple } from '@syncfusion/ej2-base';
import { createCheckBox } from '@syncfusion/ej2-buttons';
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';

```

```

enableRipple(true);
function App() {
  let menuItems = [
    { text: 'Option 1' },
    { text: 'Option 2' },
    { text: 'Option 3' }
  ];
  function itemBeforeEvent(args) {
    const check = createCheckBox(createElement, false, {
      checked: (args.item.text === 'Option 1' || args.item.text ===
'Option 2') ? true : false,
      label: args.item.text
    });
    args.element.innerHTML = '';
    args.element.appendChild(check);
  }
  function beforeClose(args) {
    if (closest(args.event.target, '.e-menu-item')) {
      args.cancel = true;
      const selectedElem = args.element.querySelectorAll('.e-
selected');
      for (const elem of selectedElem) {
        const ele = elem;
        ele.classList.remove('e-selected');
      }
      const checkbox = closest(args.event.target, '.e-checkbox-
wrapper');
      if (checkbox) {
        const frame = checkbox.querySelector('.e-frame');
        if (checkbox && frame.classList.contains('e-check')) {
          frame.classList.remove('e-check');
        }
        else if (checkbox) {
          frame.classList.add('e-check');
        }
      }
    }
  }
  return (<div className="container">
    <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
    <ContextMenuComponent id='contextmenu' target='#target'
items={menuItems} beforeItemRender={itemBeforeEvent}
beforeClose={beforeClose}/>
    </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

Open a dialog on contextmenu item click in React Context menu component

This section explains about how to open a dialog on ContextMenu item click. This can be achieved by handling dialog open in `select` event of the ContextMenu.

In the following sample, Dialog will open while clicking `Save As...` item:

INDEX.JSX

```

import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import { DialogComponent } from '@syncfusion/ej2-react-popups';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  let dialogInstance;
  let position = { X: 100, Y: 100 };
  let visible = false;
  let buttons = [{
    buttonModel: {
      content: 'Submit',
      cssClass: 'e-flat',
      isPrimary: true
    },
    'click': () => {
      hide();
    }
  }];
  let menuItems = [
    {
      text: 'Back'
    },
    {
      text: 'Forward'
    },
    {
      text: 'Reload'
    },
    {
      separator: true
    },
    {
      text: 'Save As...'
    },
  ],

```

```

        {
            text: 'Print'
        },
        {
            text: 'Cast'
        }
    ];
    function hide() {
        dialogInstance.hide();
    }
    function select(args) {
        if (args.item.text === 'Save As...') {
            dialogInstance.show();
        }
    }
    return (<div className="container">
        <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
        <DialogComponent width='200px' height='110px' content='This file
can be saved as PDF' buttons={buttons} visible={visible} position={position}
ref={dialog => dialogInstance = dialog}/>
        <ContextMenuComponent id='contextmenu' target='#target'
items={menuItems} select={select}/>
    </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

    function select(args: MenuEventArgs) {
        if (args.item.text === 'Save As...') {
            dialogInstance.show();
        }
    }
    return (
        <div className="container">
            <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
            <DialogComponent width='200px' height='110px' content='This file
can be saved as PDF' buttons={buttons} visible={visible} position={position}
ref={dialog => dialogInstance = dialog as DialogComponent} />
            <ContextMenuComponent id='contextmenu' target='#target'
items={menuItems} select={select}/>
        </div>
    );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

Change animation settings in React Context menu component

To change the animation of the ContextMenu, [animationSettings](#) property is used.

The supported effects for ContextMenu are,

Effect	Functionality
-----	-----
None	Specifies the sub menu transform with no animation effect.
SlideDown	Specifies the sub menu transform with slide down effect.
ZoomIn	Specifies the sub menu transform with zoom in effect.
FadeIn	Specifies the sub menu transform with fade in effect.

The following sample illustrates how to open ContextMenu with **FadeIn** effect with the **duration** of **800ms**.

INDEX.JSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    let animation = {
        duration: 800,
        effect: 'FadeIn'
    };
    let menuItems = [
        {
            text: 'Show All Bookmarks'
        },
        {
            items: [
                {
                    items: [
                        {
                            text: 'Google'
                        },
                        {
                            text: 'Gmail'
                        }
                    ],
                    text: 'Most Visited'
                },
                {
                    text: 'Recently Added'
                }
            ],
            text: 'Bookmarks Toolbar'
        }
    ];
    return (
        <div className="container">
            <div id='target'>Right click / Touch hold to open the
            ContextMenu</div>
            <ContextMenuComponent id='contextmenu' target='#target'
            items={menuItems} animationSettings={animation}/>
            </div>);
    }
    export default App;
    ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent, MenuItemModel } from '@syncfusion/ej2-react-
navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    let animation: any = {

```

```

    duration: 800,
    effect: 'FadeIn'
  };
  let menuItems: MenuItemModel[] = [
    {
      text: 'Show All Bookmarks'
    },
    {
      items: [
        {
          items: [
            {
              text: 'Google'
            },
            {
              text: 'Gmail'
            }
          ],
          text: 'Most Visited'
        },
        {
          text: 'Recently Added'
        }
      ],
      text: 'Bookmarks Toolbar'
    }
  ];
  return (
    <div className="container">
      <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
      <ContextMenuComponent id='contextmenu' target='#target'
        items={menuItems} animationSettings={animation}/>
    </div>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

Add or remove context menu items in React Context menu component

ContextMenu items can be added or removed using the [insertAfter](#), [insertBefore](#) and [removeItems](#) methods.

In the following example, the **Display Settings** menu items are added before the **Personalize** item, the **Sort By** menu items are added after the **Refresh**, and the **Paste** item is removed from context menu.

INDEX.JSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
  let cMenu;
  let menuItems = [
    {

```

```

        items: [
            {
                text: 'Large icons'
            },
            {
                text: 'Medium icons'
            },
            {
                text: 'Small icons'
            }
        ],
        text: 'View'
    },
    {
        text: 'Refresh'
    },
    {
        text: 'Paste'
    },
    {
        separator: true
    },
    {
        text: 'New'
    },
    {
        separator: true
    },
    {
        text: 'Personalize'
    }
];
function created() {
    cMenu.insertAfter([ { text: 'Sort By' } ], 'Refresh');
    cMenu.insertBefore([ { text: 'Display Settings' } ], 'Personalize');
    cMenu.removeItem(['Paste']);
}
;
return (<div className="container">
    <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
    <ContextMenuComponent id="cmenu" ref={ (scope) => cMenu = scope}
target='#target' items={menuItems} created={created}/>
    </div>);
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent, MenuItemModel } from '@syncfusion/ej2-react-
navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);

```

```

function App() {
  let cMenu: ContextMenuComponent;
  let menuItems: MenuItemModel[] = [
    {
      items: [
        {
          text: 'Large icons'
        },
        {
          text: 'Medium icons'
        },
        {
          text: 'Small icons'
        }
      ],
      text: 'View'
    },
    {
      text: 'Refresh'
    },
    {
      text: 'Paste'
    },
    {
      separator: true
    },
    {
      text: 'New'
    },
    {
      separator: true
    },
    {
      text: 'Personalize'
    }
  ]];
  function created(): void {
    cMenu.insertAfter([ {text: 'Sort By'} ], 'Refresh');
    cMenu.insertBefore([ {text: 'Display Settings'} ], 'Personalize');
    cMenu.removeItem(['Paste']);
  };
  return (
    <div className="container">
      <div id='target'>Right click / Touch hold to open the
ContextMenu</div>
      <ContextMenuComponent id="cmenu" ref={ (scope) => cMenu = scope
as ContextMenuComponent} target="#target" items={menuItems}
created={created}/>
    </div>
  );
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

Enable or disable context menu items in React Context menu component

You can enable and disable the menu items using the [enableItems](#) method in ContextMenu. To enable menuItems, set the `enable` property in argument to `true` and vice-versa.

In the following example, the **Display Settings** in parent items and **Medium icons** in sub menu items are disabled.

INDEX.JSX

```
import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    let cMenu;
    let menuItems = [
        {
            items: [
                { text: 'Large icons' },
                { text: 'Medium icons' },
                { text: 'Small icons' }
            ],
            text: 'View'
        },
        {
            text: 'Sort By'
        },
        {
            text: 'Refresh'
        },
        {
            separator: true
        },
        {
            text: 'New'
        },
        {
            separator: true
        },
        {
            text: 'Display Settings'
        },
        {
            text: 'Personalize'
        }
    ];
    return (
        <div className="container">
            <div id="target">Right click / Touch hold to open the
            ContextMenu</div>
            <ContextMenuComponent id="cmenu" ref={(scope) => cMenu = scope}
            target="#target" items={menuItems} created={created}
            beforeOpen={beforeOpen}/>
        </div>
    );
    function created() {
        cMenu.enableItems(['Display Settings'], false);
    }
}
```

```

;
function beforeOpen() {
    cMenu.enableItems(['Medium icons'], false);
}
;
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { enableRipple } from '@syncfusion/ej2-base';
import { ContextMenuComponent, MenuItemModel } from '@syncfusion/ej2-react-navigations';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
enableRipple(true);
function App() {
    let cMenu: ContextMenuComponent;
    let menuItemModel: MenuItemModel[] = [
        {
            items: [
                { text: 'Large icons' },
                { text: 'Medium icons' },
                { text: 'Small icons' }
            ],
            text: 'View'
        },
        {
            text: 'Sort By'
        },
        {
            text: 'Refresh'
        },
        {
            separator: true
        },
        {
            text: 'New'
        },
        {
            separator: true
        },
        {
            text: 'Display Settings'
        },
        {
            text: 'Personalize'
        }
    ];
    return (
        <div className="container">
            <div id="target">Right click / Touch hold to open the
ContextMenu</div>

```

```

        <ContextMenuComponent id="cmenu" ref={(scope) => cMenu = scope as
ContextMenuComponent} target='#target' items={menuItems} created={created}
beforeOpen={beforeOpen} />
    </div>
    );
    function created() {
        cMenu.enableItems(['Display Settings'], false);
    };
    function beforeOpen() {
        cMenu.enableItems(['Medium icons'], false);
    };
}
export default App;
ReactDOM.render(<App />, document.getElementById('element'));

```

To disable sub menu items, use the [beforeOpen](#) event.

Dashboard Layout

Getting Started

This section explains how to create a simple **Dashboard Layout** component and its basic usage.

Dependencies

The following list of dependencies is required to use the Dashboard Layout component in your application.

```

`js
|-- @syncfusion/ej2-react-layouts
|-- @syncfusion/ej2-react-base
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-layouts
,

```

Installation and configuration

You can use [create-react-app](#) to setup the applications.

To install `create-react-app` run the following command.

```

npm install -g create-react-app
,

```

To set-up a React application in TypeScript environment, run the following command.

```

`bash
npx create-react-app my-app --template typescript
cd my-app
npm start

```

`

To set-up a React application in JavaScript environment, run the following command.

```
`bash
npx create-react-app my-app
cd my-app
npm start
`
```

Adding Syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](https://www.npmjs.com) public registry.

To install **Dashboard Layout** component, use the following command

```
`bash
npm install @syncfusion/ej2-react-layouts --save
`
```

Adding CSS Reference

To render the Dashboard Layout component, need to import Dashboard Layout and its dependent component's styles as given below in **src/App.css**.

```
`css
@import '../node_modules/@syncfusion/ej2-base/styles/material.css';
@import "../node_modules/@syncfusion/ej2-react-layouts/styles/material.css";
`
```

Note: If you want to refer the combined component styles, please make use of our [CRG](#) (Custom Resource Generator) in your application.

Add Dashboard Layout to the application

You can render the Dashboard Layout component in the following two ways.

- Defined the **panels** property as the attribute in the HTML element directly.
- Using the **panels** property directly.

Setting the `panels` property using HTML attributes

You can render the Dashboard Layout component by adding the panels property as the attribute to the HTML element. Add the HTML div element with panel definition for Dashboard Layout into your **App.tsx** file.

[src/App.tsx]

```
`ts
// import the DashboardLayout component
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
```

```
function App() {
let cellSpacing: number[] = [5, 5];
return (
<div>
<div className="control-section">
<DashboardLayoutComponent id='defaultLayout' cellSpacing={cellSpacing} allowResizing={true}
columns={5}>
<div id="one" className="e-panel" data-row="0" data-col="0" data-sizex="1" data-size="1">
<span id="close" className="e-template-icon e-clear-icon" />
<div className="e-panel-container">
<div className="text-align">0</div>
</div>
</div>
<div id="two" className="e-panel" data-row="1" data-col="0" data-sizex="1" data-size="2">
<span id="close" className="e-template-icon e-clear-icon" />
<div className="e-panel-container">
<div className="text-align">1</div>
</div>
</div>
<div id="three" className="e-panel" data-row="0" data-col="1" data-sizex="2" data-size="2">
<span id="close" className="e-template-icon e-clear-icon" />
<div className="e-panel-container">
<div className="text-align">2</div>
</div>
</div>
<div id="four" className="e-panel" data-row="2" data-col="1" data-sizex="1" data-size="1">
<span id="close" className="e-template-icon e-clear-icon" />
<div className="e-panel-container">
<div className="text-align">3</div>
</div>
</div>
<div id="five" className="e-panel" data-row="2" data-col="2" data-sizex="2" data-size="1">
<span id="close" className="e-template-icon e-clear-icon" />
```

```

<div className="e-panel-container">
  <div className="text-align">4</div>
</div>
</div>
<div id="six" className="e-panel" data-row="0" data-col="3" data-size="1" data-size="1">
  <span id="close" className="e-template-icon e-clear-icon" />
  <div className="e-panel-container">
    <div className="text-align">5</div>
  </div>
</div>
<div id="seven" className="e-panel" data-row="1" data-col="3" data-size="1" data-size="1">
  <span id="close" className="e-template-icon e-clear-icon" />
  <div className="e-panel-container">
    <div className="text-align">6</div>
  </div>
</div>
<div id="eight" className="e-panel" data-row="0" data-col="4" data-size="1" data-size="3">
  <span id="close" className="e-template-icon e-clear-icon" />
  <div className="e-panel-container">
    <div className="text-align">7</div>
  </div>
</div>
</DashboardLayoutComponent>
</div>
</div>
);
}
export default App;
`ts
// import the DashboardLayout component
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';

```

```
function App() {
  let cellSpacing = [5, 5];
  return (<div>
    <div className="control-section">
      <DashboardLayoutComponent id='defaultLayout' cellSpacing={cellSpacing} allowResizing={true}
        columns={5}>
        <div id="one" className="e-panel" data-row="0" data-col="0" data-size="1" data-size="1">
          <span id="close" className="e-template-icon e-clear-icon"/>
          <div className="e-panel-container">
            <div className="text-align">0</div>
          </div>
        </div>
        <div id="two" className="e-panel" data-row="1" data-col="0" data-size="1" data-size="2">
          <span id="close" className="e-template-icon e-clear-icon"/>
          <div className="e-panel-container">
            <div className="text-align">1</div>
          </div>
        </div>
        <div id="three" className="e-panel" data-row="0" data-col="1" data-size="2" data-size="2">
          <span id="close" className="e-template-icon e-clear-icon"/>
          <div className="e-panel-container">
            <div className="text-align">2</div>
          </div>
        </div>
        <div id="four" className="e-panel" data-row="2" data-col="1" data-size="1" data-size="1">
          <span id="close" className="e-template-icon e-clear-icon"/>
          <div className="e-panel-container">
            <div className="text-align">3</div>
          </div>
        </div>
        <div id="five" className="e-panel" data-row="2" data-col="2" data-size="2" data-size="1">
          <span id="close" className="e-template-icon e-clear-icon"/>
          <div className="e-panel-container">
```

```

<div className="text-align">4</div>
</div>
</div>
<div id="six" className="e-panel" data-row="0" data-col="3" data-size="1" data-size="1">
  <span id="close" className="e-template-icon e-clear-icon"/>
  <div className="e-panel-container">
    <div className="text-align">5</div>
  </div>
</div>
<div id="seven" className="e-panel" data-row="1" data-col="3" data-size="1" data-size="1">
  <span id="close" className="e-template-icon e-clear-icon"/>
  <div className="e-panel-container">
    <div className="text-align">6</div>
  </div>
</div>
<div id="eight" className="e-panel" data-row="0" data-col="4" data-size="1" data-size="3">
  <span id="close" className="e-template-icon e-clear-icon"/>
  <div className="e-panel-container">
    <div className="text-align">7</div>
  </div>
</div>
</DashboardLayoutComponent>
</div>
</div>);
}
export default App;
`

```

Run the application

Now, use the `npm start` command to run the application in the browser.

```

`bash
npm start
`

```

The following example shows a basic Dashboard Layout by adding the panels property directly into the HTML element.

APP.JSX

```

import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
    const cellSpacing = [5, 5];
    return (<div>
        <div className="control-section">
            <DashboardLayoutComponent id='defaultLayout' cellSpacing={cellSpacing}
allowResizing={true} columns={5}>
                <div id="one" className="e-panel" data-row="0" data-col="0" data-
size="1" data-size="1">
                    <span id="close" className="e-template-icon e-clear-icon"/>
                    <div className="e-panel-container">
                        <div className="text-align">0</div>
                    </div>
                </div>
                <div id="two" className="e-panel" data-row="1" data-col="0" data-
size="1" data-size="2">
                    <span id="close" className="e-template-icon e-clear-icon"/>
                    <div className="e-panel-container">
                        <div className="text-align">1</div>
                    </div>
                </div>
                <div id="three" className="e-panel" data-row="0" data-col="1" data-
size="2" data-size="2">
                    <span id="close" className="e-template-icon e-clear-icon"/>
                    <div className="e-panel-container">
                        <div className="text-align">2</div>

Setting the `panels` property directly

You can render the Dashboard Layout component by using the **panels** property directly.

[src/App.tsx]

```
`ts
```

```
// import the DashboardLayout component
```

```

import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
let cellSpacing: number[] = [5, 5];
let panels: object[] = [
{ "sizeX": 1, "sizeY": 1, "row": 0, "col": 0, content: '<div class="content">0</div>' },
{ "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div class="content">1</div>' },
{ "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div class="content">2</div>' },
{ "sizeX": 1, "sizeY": 1, "row": 1, "col": 0, content: '<div class="content">3</div>' },
{ "sizeX": 2, "sizeY": 1, "row": 2, "col": 0, content: '<div class="content">4</div>' },
{ "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div class="content">5</div>' },
{ "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div class="content">6</div>' }
];
return (
<div>
<div className="control-section">
<DashboardLayoutComponent id='defaultLayout' cellSpacing={cellSpacing} allowResizing={true}
panels={panels} columns={5} />
</div>
</div>
);
}
export default App;
`ts
// import the DashboardLayout component
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
let cellSpacing = [5, 5];
let panels = [
{ "sizeX": 1, "sizeY": 1, "row": 0, "col": 0, content: '<div class="content">0</div>' },
{ "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div class="content">1</div>' },

```

```

{ "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div class="content">2</div>' },
{ "sizeX": 1, "sizeY": 1, "row": 1, "col": 0, content: '<div class="content">3</div>' },
{ "sizeX": 2, "sizeY": 1, "row": 2, "col": 0, content: '<div class="content">4</div>' },
{ "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div class="content">5</div>' },
{ "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div class="content">6</div>' }
];

return (<div>
  <div className="control-section">
    <DashboardLayoutComponent id='defaultLayout' cellSpacing={cellSpacing} allowResizing={true}
    panels={panels} columns={5}/>
  </div>
</div>);
}

export default App;

```

The following example shows a basic Dashboard Layout by using the `panels` property.

APP.JSX

```

import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
  const cellSpacing = [5, 5];
  let panels = [
    { "sizeX": 1, "sizeY": 1, "row": 0, "col": 0, content: '<div class="content">0</div>' },
    { "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div class="content">1</div>' },
    { "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div class="content">2</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 1, "col": 0, content: '<div class="content">3</div>' },
    { "sizeX": 2, "sizeY": 1, "row": 2, "col": 0, content: '<div class="content">4</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div class="content">5</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div class="content">6</div>' }
  ];
  return (<div>
    <div className="control-section">
      <DashboardLayoutComponent id='defaultLayout'
      cellSpacing={cellSpacing} allowResizing={true} panels={panels} columns={5}/>
    </div>
  </div>);
}
export default App;

```

APP.TSX

```
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
  const cellSpacing: number[] = [5, 5];
  let panels: object[] = [
    { "sizeX": 1, "sizeY": 1, "row": 0, "col": 0, content: '<div class="content">0</div>' },
    { "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div class="content">1</div>' },
    { "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div class="content">2</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 1, "col": 0, content: '<div class="content">3</div>' },
    { "sizeX": 2, "sizeY": 1, "row": 2, "col": 0, content: '<div class="content">4</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div class="content">5</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div class="content">6</div>' }
  ];
  return (
    <div>
      <div className="control-section">
        <DashboardLayoutComponent id='defaultLayout'
          cellSpacing={cellSpacing} allowResizing={true} panels={panels} columns={5} />
      </div>
    </div>
  );
}
export default App;
```

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import App from './App';
ReactDOM.render(<App />, document.getElementById('root'));
```

INDEX.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import App from './App';
ReactDOM.render(<App />, document.getElementById('root'));
```

You can refer to our [React Dashboard Layout](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Dashboard Layout example](#) to know how to present and manipulate data.

Setting size of cells in React Dashboard layout component

The entire layout dimensions are assigned based on the height and width of the parent element. Hence, a responsive or static layout can be created by assigning a percentage or static dimension values to the parent element. The layout adapts to mobile resolutions by transforming the entire layout into a stacked orientation, so that, the panels will be displayed in a vertical column.

The **Dashboard Layout** is a grid structured component which can be split into subsections of equal size known as cells. The total number of cells in each row is defined by using the `columns` property of the component. The width of each cell will be auto calculated based on the total number of cells placed in a row and the height of a cell will be same as that of its width. However, the height of these cells can also be configured to any desired size using the `cellAspectRatio` property (cellwidth/cellheight ratio) which defines the cell width to height ratio.

The number of rows within the layout has no limits and can have any number of rows based on the panels count and position. Panels which acts as data containers will be placed or positioned over these cells.

Modifying cell size

In a dashboard, the data to be held by the panel in a cell may be of different size, hence different cell dimensions may be required in different scenarios. In this case, the size of these grid cells can be modified to the required size using the `columns` and `cellAspectRatio` properties.

The following sample demonstrates how to modify a cell size using the `columns` and `cellAspectRatio` properties. In the following sample, the width of the parent element is divided into 5 equal cells based on the `columns` property value resulting the width of each cell as 100 px. The height of these cells will be 50 px based on the `cellAspectRatio` value 100/50 (i.e., for every 100 px of width, 50 px will be the height of the cell).

APP.JSX

```
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
  const cellSpacing = [10, 10];
  let panels = [
    { "sizeX": 1, "sizeY": 1, "row": 0, "col": 0, content: '<div class="content">0</div>' },
    { "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div class="content">1</div>' },
    { "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div class="content">2</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 1, "col": 0, content: '<div class="content">3</div>' },
    { "sizeX": 2, "sizeY": 1, "row": 2, "col": 0, content: '<div class="content">4</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div class="content">5</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div class="content">6</div>' }
  ];
  return (
    <div>
      <div className="control-section">
```

```

        <DashboardLayoutComponent id='defaultLayout'
        cellSpacing={cellSpacing} cellAspectRatio={100 / 50} panels={panels}
        columns={5}/>
      </div>
    </div>);
  }
  export default App;

```

APP.TSX

```

import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
  const cellSpacing: number[] = [10, 10];
  let panels: object[] = [
    { "sizeX": 1, "sizeY": 1, "row": 0, "col": 0, content: '<div
class="content">0</div>' },
    { "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div
class="content">1</div>' },
    { "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div
class="content">2</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 1, "col": 0, content: '<div
class="content">3</div>' },
    { "sizeX": 2, "sizeY": 1, "row": 2, "col": 0, content: '<div
class="content">4</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div
class="content">5</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div
class="content">6</div>' }
  ];
  return (
    <div>
      <div className="control-section">
        <DashboardLayoutComponent id='defaultLayout'
        cellSpacing={cellSpacing} cellAspectRatio={100/50} panels={panels}
        columns={5} />
      </div>
    </div>
  );
}
export default App;

```

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import App from './App';
ReactDOM.render(<App />, document.getElementById('root'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import App from './App';
ReactDOM.render(<App />, document.getElementById('root'));

```

Setting cell spacing

The spacing between each panel in a row and column can be defined using the `cellSpacing` property. Adding spacing between the panels will make the layout effective and provides a clear data representation.

The following sample demonstrates the usage of the `cellSpacing` property, which helps in a neat and clear representation of a data.

APP.JSX

```
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
    const cellSpacing = [20, 20];
    let panels = [
        { "sizeX": 1, "sizeY": 1, "row": 0, "col": 0, content: '<div class="content">0</div>' },
        { "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div class="content">1</div>' },
        { "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div class="content">2</div>' },
        { "sizeX": 1, "sizeY": 1, "row": 1, "col": 0, content: '<div class="content">3</div>' },
        { "sizeX": 2, "sizeY": 1, "row": 2, "col": 0, content: '<div class="content">4</div>' },
        { "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div class="content">5</div>' },
        { "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div class="content">6</div>' }
    ];
    return (
        <div>
            <div className="control-section">
                <DashboardLayoutComponent id='defaultLayout'
                    cellSpacing={cellSpacing} panels={panels} columns={5}/>
            </div>
        </div>);
}
export default App;
```

APP.TSX

```
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
    const cellSpacing: number[] = [20, 20];
    let panels: object[] = [
        { "sizeX": 1, "sizeY": 1, "row": 0, "col": 0, content: '<div class="content">0</div>' },
        { "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div class="content">1</div>' },
        { "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div class="content">2</div>' },
        { "sizeX": 1, "sizeY": 1, "row": 1, "col": 0, content: '<div class="content">3</div>' },
    ];
}
```

```

    { "sizeX": 2, "sizeY": 1, "row": 2, "col": 0, content: '<div
class="content">4</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div
class="content">5</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div
class="content">6</div>' }
  ];
  return (
    <div>
      <div className="control-section">
        <DashboardLayoutComponent id='defaultLayout'
cellSpacing={cellSpacing} panels={panels} columns={5} />
      </div>
    </div>
  );
}
export default App;

```

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import App from './App';
ReactDOM.render(<App />, document.getElementById('root'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import App from './App';
ReactDOM.render(<App />, document.getElementById('root'));

```

Graphical representation of layout

These cells combinedly forms a grid-structured layout which will be hidden initially. This grid structured layout can be made visible by enabling the `showGridLines` property, which clearly pictures the cells split-up within the layout. These gridlines will be helpful in panels sizing and placement within the layout during initial designing of a dashboard.

In the following sample, the gridlines indicate the cells split-up of the layout and the data containers placed over these cells are known as panels.

APP.JSX

```

import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
  const cellSpacing = [10, 10];
  let panels = [
    { "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div
class="content">1</div>' },
    { "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div
class="content">2</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div
class="content">3</div>' },

```

```

    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div
class="content">4</div>' }
  ];
  return (<div>
    <div className="control-section">
      <DashboardLayoutComponent id='defaultLayout'
cellSpacing={cellSpacing} showGridLines={true} panels={panels} columns={5}/>
    </div>
    </div>);
}
export default App;

```

APP.TSX

```

import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
  const cellSpacing: number[] = [10, 10];
  let panels: object[] = [
    { "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div
class="content">1</div>' },
    { "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div
class="content">2</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div
class="content">3</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div
class="content">4</div>' }
  ];
  return (
    <div>
      <div className="control-section">
        <DashboardLayoutComponent id='defaultLayout'
cellSpacing={cellSpacing} showGridLines={true} panels={panels} columns={5} />
      </div>
    </div>
  );
}
export default App;

import * as ReactDOM from 'react-dom';
import App from './App';
ReactDOM.render(<App />, document.getElementById('root'));

```

Rendering component in right-to-left direction

It is possible to render the Dashboard Layout in right-to-left direction by setting the [enableRtl](#) API to true.

The following sample demonstrates Dashboard Layout in right-to-left direction.

APP.JSX

```
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
    const cellSpacing = [10, 10];
    let enableRTL = true;
    let panels = [
        { 'id': 'Panel0', 'sizeX': 1, 'sizeY': 1, 'row': 0, 'col': 0, header:
        '<div>Panel 0</div>', content: '<div class="content">Content<div>' },
        { 'id': 'Panel1', 'sizeX': 3, 'sizeY': 2, 'row': 0, 'col': 1, header:
        '<div>Panel 1</div>', content: '<div class="content">Content<div>' },
        { 'id': 'Panel2', 'sizeX': 1, 'sizeY': 3, 'row': 0, 'col': 4, header:
        '<div>Panel 2</div>', content: '<div class="content">Content<div>' },
        { 'id': 'Panel3', 'sizeX': 1, 'sizeY': 1, 'row': 1, 'col': 0, header:
        '<div>Panel 3</div>', content: '<div class="content">Content<div>' },
        { 'id': 'Panel4', 'sizeX': 2, 'sizeY': 1, 'row': 2, 'col': 0, header:
        '<div>Panel 4</div>', content: '<div class="content">Content<div>' },
        { 'id': 'Panel5', 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 2, header:
        '<div>Panel 5</div>', content: '<div class="content">Content<div>' },
        { 'id': 'Panel6', 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 3, header:
        '<div>Panel 6</div>', content: '<div class="content">Content<div>' }
    ];
    return (<div>
        <div className="control-section">
            <DashboardLayoutComponent id='defaultLayout'
            cellSpacing={cellSpacing} enableRtl={enableRTL} panels={panels} columns={5}/>
        </div>
    </div>);
}
export default App;
```

APP.TSX

```
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App(){
    const cellSpacing: number[] = [10, 10];
    let enableRTL: boolean = true;
    let panels: object[] = [
        { 'id': 'Panel0', 'sizeX': 1, 'sizeY': 1, 'row': 0, 'col': 0,
        header: '<div>Panel 0</div>', content: '<div class="content">Content<div>' },
        { 'id': 'Panel1', 'sizeX': 3, 'sizeY': 2, 'row': 0, 'col': 1,
        header: '<div>Panel 1</div>', content: '<div class="content">Content<div>' },
        { 'id': 'Panel2', 'sizeX': 1, 'sizeY': 3, 'row': 0, 'col': 4,
        header: '<div>Panel 2</div>', content: '<div class="content">Content<div>' },
        { 'id': 'Panel3', 'sizeX': 1, 'sizeY': 1, 'row': 1, 'col': 0,
        header: '<div>Panel 3</div>', content: '<div class="content">Content<div>' },
        { 'id': 'Panel4', 'sizeX': 2, 'sizeY': 1, 'row': 2, 'col': 0,
        header: '<div>Panel 4</div>', content: '<div class="content">Content<div>' },
    ],
```

```

    {'id': 'Panel5', 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 2,
    header: '<div>Panel 5</div>', content: '<div class="content">Content</div>'},
    {'id': 'Panel6', 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 3,
    header: '<div>Panel 6</div>', content: '<div class="content">Content</div>'}
  ];
  return (
    <div>
      <div className="control-section">
        <DashboardLayoutComponent id='defaultLayout'
        cellSpacing={cellSpacing} enableRtl={enableRTL} panels={panels} columns={5}
        />
      </div>
    </div>
  );
}
export default App;

```

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';

Panels**Position sizing of panels in React Dashboard layout component**

Panels are the basic building blocks of the dashboard layout component. They act as a container for the data to be visualized or presented. These panels can be positioned or resized for effective presentation of the data.

The following table represents all the available panel properties and the corresponding functionalities.

PanelObject	Description
---	---
id	Specifies the ID value of the panel.
row	Specifies the row value in which the panel to be placed.
col	Specifies the column value in which the panel to be placed.
sizeX	Specifies the width of the panel in cells count.

- | sizeY | Specifies the height of the panel in cells count. |
- | minSizeX | Specifies the minimum width of the panel in cells count. |
- | minSizeY | Specifies the minimum height of the panel in cells count. |
- | maxSizeX | Specifies the maximum width of the panel in cells count. |
- | maxSizeY | Specifies the maximum height of the panel in cells count. |
- | header | Specifies the header template of the panel. |
- | content | Specifies the content template of the panel. |
- | cssClass | Specifies the CSS class name that can be appended with each panel element. |

Positioning of panels

The panels within the layout can be easily positioned or ordered using the `row` and `col` properties of the panels. Positioning of panels will be beneficial to represent the data in any desired order.

The following sample demonstrates the positioning of panels within the dashboard layout using the row and column properties of the panels.

APP.JSX

```
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
    const cellSpacing = [20, 20];
    let panels = [
        { "row": 0, "col": 0, content: '<div class="content">1</div>' },
        { "row": 0, "col": 1, content: '<div class="content">2</div>' },
        { "row": 0, "col": 2, content: '<div class="content">3</div>' },
        { "row": 1, "col": 0, content: '<div class="content">4</div>' },
        { "row": 1, "col": 1, content: '<div class="content">5</div>' },
        { "row": 1, "col": 2, content: '<div class="content">6</div>' }
    ];
    return (
        <div>
            <div className="container">
                <DashboardLayoutComponent id='defaultLayout'
                    cellSpacing={cellSpacing} panels={panels} columns={3}/>
            </div>
        </div>);
}
export default App;
```

APP.TSX

```
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App(){
    const cellSpacing: number[] = [20, 20];
    let panels: object[] = [
        { "row": 0, "col": 0, content: '<div class="content">1</div>' },
        { "row": 0, "col": 1, content: '<div class="content">2</div>' },
        { "row": 0, "col": 2, content: '<div class="content">3</div>' },
        { "row": 1, "col": 0, content: '<div class="content">4</div>' },
        { "row": 1, "col": 1, content: '<div class="content">5</div>' },
    ];
}
```

```

    { "row": 1, "col": 2, content: '<div class="content">6</div>' }
  ];
  return (
    <div>
      <div className="container">
        <DashboardLayoutComponent id='defaultLayout'
cellSpacing={cellSpacing} panels={panels} columns={3} />
      </div>
    </div>
  );
}
export default App;

```

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import App from './App';
ReactDOM.render(<App />, document.getElementById('root'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import App from './App';
ReactDOM.render(<App />, document.getElementById('root'));

```

Sizing of panels

A panel's size can be varied easily by defining the `sizeX` and `sizeY` properties. The `sizeX` property defines the width and the `sizeY` property defines height of a panel in cells count. These properties are helpful in designing a dashboard, where the content of each panel may vary in size.

The following sample demonstrates the sizing of panels within the dashboard layout using the `sizeX` and `sizeY` properties of the panels.

APP.JSX

```

import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
  const cellSpacing = [20, 20];
  let panels = [
    { "sizeX": 1, "sizeY": 1, "row": 0, "col": 0, content: '<div
class="content">0</div>' },
    { "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div
class="content">1</div>' },
    { "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div
class="content">2</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 1, "col": 0, content: '<div
class="content">3</div>' },
    { "sizeX": 2, "sizeY": 1, "row": 2, "col": 0, content: '<div
class="content">4</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div
class="content">5</div>' },

```

```

        { "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div
class="content">6</div>' }
    ];
    return (<div>
        <div className="control-section">
            <DashboardLayoutComponent id='defaultLayout'
cellSpacing={cellSpacing} panels={panels} columns={5}/>
        </div>
    </div>);
}
export default App;

```

APP.TSX

```

import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
    const cellSpacing: number[] = [20, 20];
    let panels: object[] = [
        { "sizeX": 1, "sizeY": 1, "row": 0, "col": 0, content: '<div
class="content">0</div>' },
        { "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div
class="content">1</div>' },
        { "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div
class="content">2</div>' },
        { "sizeX": 1, "sizeY": 1, "row": 1, "col": 0, content: '<div
class="content">3</div>' },
        { "sizeX": 2, "sizeY": 1, "row": 2, "col": 0, content: '<div
class="content">4</div>' },
        { "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div
class="content">5</div>' },
        { "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div
class="content">6</div>' }
    ];
    return (
        <div>
            <div className="control-section">
                <DashboardLayoutComponent id='defaultLayout'

```

You can refer to our [React Dashboard Layout](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Dashboard Layout example](#) to know how to present and manipulate data.

Setting header of panels in React Dashboard layout component

The dashboard layout component is mostly used to represent the data used for monitoring or managing a process. These data or any HTML template can be placed as the content of a panel using the `content` property. Also, word or phrase that summarizes the panel's content can be added as the header on the top of each panel using the `header` property of the panel.

The following sample demonstrates how to add content for each panel using the header and content properties of the panels.

APP.JSX

```
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
    const cellSpacing = [10, 10];
    let panels = [
        { 'id': 'Panel0', 'sizeX': 1, 'sizeY': 1, 'row': 0, 'col': 0, header:
        '<div>Panel 0</div>', content: '<div class="content">Panel Content</div>' },
        { 'id': 'Panel1', 'sizeX': 3, 'sizeY': 2, 'row': 0, 'col': 1, header:
        '<div>Panel 1</div>', content: '<div class="content">Panel Content</div>' },
        { 'id': 'Panel2', 'sizeX': 1, 'sizeY': 3, 'row': 0, 'col': 4, header:
        '<div>Panel 2</div>', content: '<div class="content">Panel Content</div>' },
        { 'id': 'Panel3', 'sizeX': 1, 'sizeY': 1, 'row': 1, 'col': 0, header:
        '<div>Panel 3</div>', content: '<div class="content">Panel Content</div>' },
        { 'id': 'Panel4', 'sizeX': 2, 'sizeY': 1, 'row': 2, 'col': 0, header:
        '<div>Panel 4</div>', content: '<div class="content">Panel Content</div>' },
        { 'id': 'Panel5', 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 2, header:
        '<div>Panel 5</div>', content: '<div class="content">Panel Content</div>' },
        { 'id': 'Panel6', 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 3, header:
        '<div>Panel 6</div>', content: '<div class="content">Panel Content</div>' }
    ];
    return (
        <div>
            <div className="control-section">
                <DashboardLayoutComponent id='defaultLayout'
                cellSpacing={cellSpacing} panels={panels} columns={5}/>
            </div>
        </div>);
}
export default App;
```

APP.TSX

```
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
    const cellSpacing: number[] = [10, 10];
    let panels: object[] = [
```

```

    {'id': 'Panel0', 'sizeX': 1, 'sizeY': 1, 'row': 0, 'col': 0,
    header: '<div>Panel 0</div>', content: '<div class="content">Panel
    Content<div>'},
    {'id': 'Panel1', 'sizeX': 3, 'sizeY': 2, 'row': 0, 'col': 1,
    header: '<div>Panel 1</div>', content: '<div class="content">Panel
    Content<div>'},
    {'id': 'Panel2', 'sizeX': 1, 'sizeY': 3, 'row': 0, 'col': 4,
    header: '<div>Panel 2</div>', content: '<div class="content">Panel
    Content<div>'},
    {'id': 'Panel3', 'sizeX': 1, 'sizeY': 1, 'row': 1, 'col': 0,
    header: '<div>Panel 3</div>', content: '<div class="content">Panel
    Content<div>'},
    {'id': 'Panel4', 'sizeX': 2, 'sizeY': 1, 'row': 2, 'col': 0,
    header: '<div>Panel 4</div>', content: '<div class="content">Panel
    Content<div>'},
    {'id': 'Panel5', 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 2,
    header: '<div>Panel 5</div>', content: '<div class="content">Panel
    Content<div>'},
    {'id': 'Panel6', 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 3,
    header: '<div>Panel 6</div>', content: '<div class="content">Panel
    Content<div>'}
  ];
  return (
    <div>
      <div className="control-section">
        <DashboardLayoutComponent id='defaultLayout'
        cellSpacing={cellSpacing} panels={panels} columns={5} />
      </div>
    </div>
  );
}
export default App;

```

INDEX.JSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import App from './App';
ReactDOM.render(<App />, document.getElementById('root'));

```

INDEX.TSX

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
import App from './App';

```

Placing components as content of panels

In a dashboard, components like the chart, grids, maps, gauge, and more can be used to present a complex data. Such components can be placed as the panel content by assigning the corresponding component element as the **content** of the panel.

The following sample demonstrates how to add EJ2 Chart components as the **content** for each panel in the dashboard layout component.

APP.JSX

```
{% raw %}
import { AccumulationChartComponent, AccumulationSeriesCollectionDirective,
AccumulationSeriesDirective, AccumulationTooltip, Category, ChartComponent,
ColumnSeries, DataLabel, Inject, Legend, LineSeries,
SeriesCollectionDirective, SeriesDirective, Tooltip } from "@syncfusion/ej2-
react-charts";
import { DashboardLayoutComponent, PanelDirective, PanelsDirective } from
'@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
    const cellSpacing = [10, 10];
    // Template for line Chart
    function lineTemplate() {
        const lineData = [
            { x: 2013, y: 28 }, { x: 2014, y: 25 }, { x: 2015, y: 26 }, { x:
2016, y: 27 },
            { x: 2017, y: 32 }, { x: 2018, y: 35 },
        ];
        return (<div className="template">
            <ChartComponent style={{ "height": "162px" }}><Inject
services={[[LineSeries]]}/>
                <SeriesCollectionDirective>
                    <SeriesDirective dataSource={lineData} xName='x'
yName='y' type='Line' />
                </SeriesCollectionDirective>
            </ChartComponent>
        </div>);
    }
    // Template for Pie Chart
    function pieTemplate() {
        const pieData = [
            { x: 'TypeScript', y: 13, text: 'TS 13%' },
            { x: 'React', y: 12.5, text: 'React 12.5%' },
            { x: 'MVC', y: 12, text: 'MVC 12%' },
            { x: 'Core', y: 12.5, text: 'Core 12.5%' },
            { x: 'Vue', y: 10, text: 'Vue 10%' },
            { x: 'Angular', y: 40, text: 'Angular 40%' }
        ];
        return (<div className="template">
            <AccumulationChartComponent style={{ "height": "162px" }}
tooltip={{ enable: true }}><Inject services={[[AccumulationTooltip]]}/>
                <AccumulationSeriesCollectionDirective>
                    <AccumulationSeriesDirective dataSource={pieData}
xName='x' yName='y' innerRadius="40%" />
                </AccumulationSeriesCollectionDirective>
            </AccumulationChartComponent>
        </div>);
    }
    // Template for Pie Chart 1
    function pieTemplate1() {
        const pieData = [
            { 'x': 'Chrome', y: 37, text: '37%' }, { 'x': 'UC Browser', y:
17, text: '17%' },
            { 'x': 'iPhone', y: 19, text: '19%' },

```

```

        { 'x': 'Others', y: 4, text: '4%' }, { 'x': 'Opera', y: 11, text:
'11%' },
        { 'x': 'Android', y: 12, text: '12%' }
    ];
    const dataLabel = { visible: true, position: 'Inside', name: 'text',
font: { fontWeight: '600' } };
    return (<div className="template">
        <AccumulationChartComponent style={{ "height": "162px" }}
tooltip={{ enable: true }}>
            <Inject services={[AccumulationTooltip]}/>
            <AccumulationSeriesCollectionDirective>
                <AccumulationSeriesDirective dataSource={pieData}
dataLabel={dataLabel} xName='x' yName='y' radius="70%" name='Browser' />
            </AccumulationSeriesCollectionDirective>
        </AccumulationChartComponent>
    </div>);
}
function columnTemplate() {
    const chartData = [
        { month: 'Jan', sales: 35 }, { month: 'Feb', sales: 28 },
        { month: 'Mar', sales: 34 }, { month: 'Apr', sales: 32 },
        { month: 'May', sales: 40 }, { month: 'Jun', sales: 32 },
        { month: 'Jul', sales: 35 }, { month: 'Aug', sales: 55 },
        { month: 'Sep', sales: 38 }, { month: 'Oct', sales: 30 },
        { month: 'Nov', sales: 25 }, { month: 'Dec', sales: 32 }
    ];
    return (<div className="template">
        <ChartComponent style={{ "height": "162px" }} primaryXAxis={{
valueType: 'Category' }}>

You can refer to our [React Dashboard Layout](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Dashboard Layout example](#) to know how to present and manipulate data.

Add remove panels in React Dashboard layout component

In real-time cases, the data being presented within the dashboard should be updated frequently which includes adding or removing the data dynamically within the dashboard. This can be easily achieved by using the `addPanel` and `removePanel` public methods of the component.

Add or remove panels dynamically

Panels can be added dynamically by using the `addPanel` public method by passing the `panel` property as parameter. Also, they can be removed dynamically by using the `removePanel` public method by passing the `panel id` value as a parameter.

It is also possible to remove all the panels in a Dashboard Layout by calling [removeAll](#) method.

```
`js
```

```
dashboard.removeAll();
```

The following sample demonstrates how to add and remove the panels dynamically in the dashboard layout component. Here, panels can be added in any desired position of required size by selecting them in the numeric boxes and clicking add button and remove them by selecting the ID of the panel.

APP.JSX

```
import { DropDownListComponent } from '@syncfusion/ej2-react-dropdowns';
import { NumericTextBoxComponent } from '@syncfusion/ej2-react-inputs';
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
    let count = 7;
    let cellSpacing = [10, 10];
    let resize = ['e-south-east', 'e-east', 'e-west', 'e-north', 'e-south'];
    let panels = [
        { 'id': 'Panel0', 'sizeX': 1, 'sizeY': 1, 'row': 0, 'col': 0,
content: '<div class="content">0</div>' },
        { 'id': 'Panel1', 'sizeX': 3, 'sizeY': 2, 'row': 0, 'col': 1,
content: '<div class="content">1</div>' },
        { 'id': 'Panel2', 'sizeX': 1, 'sizeY': 3, 'row': 0, 'col': 4,
content: '<div class="content">2</div>' },

Interaction With Panels

Dragging moving of panels in React Dashboard layout component

The Dashboard Layout component is provided with dragging functionality to drag and reorder the panels within the layout. While dragging a panel, a holder will be highlighted below the panel indicating the panel placement on panel drop. This helps the user to decide whether to place the panel in the current position or revert to previous position without disturbing the layout.

If one or more panels collide while dragging, then the colliding panels will be pushed towards the left or right or top or bottom direction where an adaptive space for the collided panel is available. The position changes of these collided panels will be updated dynamically during dragging of a panel, so the user can conclude whether to place the panel in the current position or not.

While dragging a panel in Dashboard layout the following dragging events will be triggered,

- [dragStart](#) - Triggers when panel drag starts
- [drag](#) - Triggers when panel is being dragged
- [dragStop](#) - Triggers when panel drag stops

The following sample demonstrates dragging and pushing of panels. For example, while dragging the panel 0 over panel 1, these panels get collided and push the panel 1 towards the feasible direction, so that, the panel 0 gets placed in the panel 1 position.

APP.JSX

```
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';  
import * as React from 'react';  
function App() {  
  const cellSpacing = [10, 10];  
  let panels = [  
    { 'sizeX': 1, 'sizeY': 1, 'row': 0, 'col': 0, content: '<div  
class="content">0</div>' },
```

```

    { 'sizeX': 3, 'sizeY': 2, 'row': 0, 'col': 1, content: '<div
class="content">1</div>' },
    { 'sizeX': 1, 'sizeY': 3, 'row': 0, 'col': 4, content: '<div
class="content">2</div>' },
    { 'sizeX': 1, 'sizeY': 1, 'row': 1, 'col': 0, content: '<div
class="content">3</div>' },
    { 'sizeX': 2, 'sizeY': 1, 'row': 2, 'col': 0, content: '<div
class="content">4</div>' },
    { 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 2, content: '<div
class="content">5</div>' },
    { 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 3, content: '<div
class="content">6</div>' }
  ];
  function onDragStart() {
    console.log("Drag start");
  }
  //Dashboard Layout's drag event function
  function onDrag(args) {
    console.log("Dragging");
  }
  //Dashboard Layout's dragstop event function
  function onDragStop(args) {
    console.log("Drag stop");
  }

    <div className="container">
      <DashboardLayoutComponent id='defaultLayout' cellSpacing={cellSpacing}
panels={panels} columns={5}
      dragStart={onDragStart.bind(this)} drag={onDrag.bind(this)}
      dragStop={onDragStop.bind(this)} />
    </div>
  </div>
);
}
export default App;
```

INDEX.JSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import App from './App';
ReactDOM.render(<App />, document.getElementById('root'));
```

INDEX.TSX

```
import * as React from 'react';
import * as ReactDOM from 'react-dom';
import App from './App';
ReactDOM.render(<App />, document.getElementById('root'));
```

Customizing the dragging handler

Initially, the complete panel will act as the handler for dragging the panel such that the dragging action occurs on clicking anywhere over a panel. However, this dragging handler for the panels can be customized using the `draggableHandle` property to restrict the dragging action within a particular element in the panel.

The following sample demonstrates customizing the dragging handler of the panels where the dragging action of panel occurs only with the header of the panel.

APP.JSX

```

Disable dragging of panels

By default, the dragging of panels is enabled in Dashboard Layout. It can also be disabled with the help of [allowDragging](#) API. Setting [allowDragging](#) to false disables the dragging functionality in Dashboard Layout.

The following sample demonstrates Dashboard Layout with dragging support disabled.

APP.JSX

```

import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
    const cellSpacing = [10, 10];
    let allowDragging = false;
    let panels = [
        { 'sizeX': 1, 'sizeY': 1, 'row': 0, 'col': 0, content: '<div
class="content">0</div>' },
        { 'sizeX': 3, 'sizeY': 2, 'row': 0, 'col': 1, content: '<div
class="content">1</div>' },
        { 'sizeX': 1, 'sizeY': 3, 'row': 0, 'col': 4, content: '<div
class="content">2</div>' },

```

```

        { 'sizeX': 1, 'sizeY': 1, 'row': 1, 'col': 0, content: '<div
class="content">3</div>' },
        { 'sizeX': 2, 'sizeY': 1, 'row': 2, 'col': 0, content: '<div
class="content">4</div>' },
        { 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 2, content: '<div
class="content">5</div>' },
        { 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 3, content: '<div
class="content">6</div>' }
    ];
    return (<div>
        <div className="container">
            <DashboardLayoutComponent id='defaultLayout'
cellSpacing={cellSpacing} panels={panels} columns={5}
allowDragging={allowDragging}/>
        </div>
    </div>);
}
export default App;

```

APP.TSX

```

import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';

```

You can refer to our [React Dashboard Layout](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Dashboard Layout example](#) to know how to present and manipulate data.

Moving panels in React Dashboard layout component

Other than drag and drop, it is possible to move the panels in Dashboard Layout programmatically. This can be achieved using [movePanel](#) method. The method is invoked as follows,

```
`js
```

```
movePanel(id, row, col)
```

```
,
```

Where,

- id - ID of the panel which needs to be moved.
- row - New row position for moving the panel.
- col - New column position for moving the panel.

Each time a panel's position is changed (Programmatically or through UI interaction), the Dashboard Layout's [change](#) event will be triggered.

The following sample demonstrates moving a panel programmatically to a new position in the Dashboard Layout's [created](#) event.

APP.JSX

```
{% raw %}
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
  const cellSpacing = [10, 10];
  let panels = [
    { 'sizeX': 1, 'sizeY': 1, 'row': 0, 'col': 0, content: '<div class="content">0</div>' },
    { 'sizeX': 3, 'sizeY': 2, 'row': 0, 'col': 1, content: '<div class="content">1</div>' },
    { 'sizeX': 1, 'sizeY': 3, 'row': 0, 'col': 4, content: '<div class="content">2</div>' },
    { 'sizeX': 1, 'sizeY': 1, 'row': 1, 'col': 0, content: '<div class="content">3</div>' },
  ],
```

```

    { 'sizeX': 2, 'sizeY': 1, 'row': 2, 'col': 0, content: '<div
class="content">4</div>' },
    { 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 2, content: '<div
class="content">5</div>' },
    { 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 3, content: '<div
class="content">6</div>' }
  ];
  //Dashboard Layout's created event function
  function onCreate(args) {
    // movePanel("id", row, col)
    dashboardObj.movePanel("layout_0", 1, 0);
  }
  //Dashboard Layout's change event function
  function onChange(args) {
    console.log("Change event triggered");
  }
  let dashboardObj;
  return (<div>
    <div className="container">
      <DashboardLayoutComponent id='defaultLayout' ref={(scope) => {
dashboardObj = scope; }} cellSpacing={cellSpacing} panels={panels}
columns={5} created={onCreate.bind(this)} change={onChange.bind(this)} />
    </div>
  </div>);
}
export default App;
{% endraw %}

```

APP.TSX

```

{% raw %}
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
  const cellSpacing: number[] = [10, 10];
  let panels: any = [
    { 'sizeX': 1, 'sizeY': 1, 'row': 0, 'col': 0, content: '<div
class="content">0</div>' },
    { 'sizeX': 3, 'sizeY': 2, 'row': 0, 'col': 1, content: '<div

Resizing of panels in React Dashboard layout component

The Dashboard Layout component is also provided with the panel resizing functionality which can be enabled or disabled using the `allowResizing` property. This functionality allows you to resize the panels dynamically through UI interactions using the resizing handlers which controls the panel resizing in various directions.

Initially, the panels can be resized only in south-east direction. However, panels can also be resized in east, west, north, south and south-west directions by defining the required directions with the `resizableHandles` property.

On resizing a panel in Dashboard layout the following events will be triggered,

- [resizeStart](#) - Triggers when panel resize starts
- [resize](#) - Triggers when panel is being resized
- [resizeStop](#) - Triggers when panel resize stops

The following sample demonstrates how to enable and disable the resizing of panels in the Dashboard Layout component in different directions.

APP.JSX

```
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
    const cellSpacing = [10, 10];
    let resize = ['e-south-east', 'e-east', 'e-west', 'e-north', 'e-south'];
    let panels = [
        { 'sizeX': 1, 'sizeY': 1, 'row': 0, 'col': 0, content: '<div class="content">0</div>' },
        { 'sizeX': 3, 'sizeY': 2, 'row': 0, 'col': 1, content: '<div class="content">1</div>' },
        { 'sizeX': 1, 'sizeY': 3, 'row': 0, 'col': 4, content: '<div class="content">2</div>' },
        { 'sizeX': 1, 'sizeY': 1, 'row': 1, 'col': 0, content: '<div class="content">3</div>' },
        { 'sizeX': 2, 'sizeY': 1, 'row': 2, 'col': 0, content: '<div class="content">4</div>' },
        { 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 2, content: '<div class="content">5</div>' },
        { 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 3, content: '<div class="content">6</div>' }
    ];
    function onResizeStart() {
        console.log("Resize start");
    }
    //Dashboard Layout's drag event function
    function onResize(args) {
        console.log("Resizing");
    }
    //Dashboard Layout's dragstop event function
    function onResizeStop(args) {
        console.log("Resize stop");
    }
    return (
        <div>
            <div id="container">
                <DashboardLayoutComponent id='defaultLayout'
                    cellSpacing={cellSpacing} panels={panels} allowResizing={true} columns={5}
                    resizableHandles={resize} resizeStart={onResizeStart.bind(this)}
                    resize={onResize.bind(this)} resizeStop={onResizeStop.bind(this)} />
            </div>
        </div>);
}
export default App;
```

APP.TSX

```

Resizing panels programmatically

The Dashboard Layout panels can also be resized programmatically by using [resizePanel](#) method. The method is invoked as follows,

```
`js
```

```
resizePanel(id, sizeX, sizeY)
```

Where,

- id - ID of the panel which needs to be resized.
- sizeX - New panel width in cells count for resizing the panel.
- sizeY - New panel height in cells count for resizing the panel.

The following sample demonstrates resizing panels programmatically in the Dashboard Layout's [created](#) event.

APP.JSX

```
{% raw %}
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
  const cellSpacing = [10, 10];
  let panels = [
    { 'sizeX': 1, 'sizeY': 1, 'row': 0, 'col': 0, content: '<div
class="content">0</div>' },
    { 'sizeX': 3, 'sizeY': 2, 'row': 0, 'col': 1, content: '<div
class="content">1</div>' },
    { 'sizeX': 1, 'sizeY': 3, 'row': 0, 'col': 4, content: '<div
class="content">2</div>' },
    { 'sizeX': 1, 'sizeY': 1, 'row': 1, 'col': 0, content: '<div
class="content">3</div>' },
    { 'sizeX': 2, 'sizeY': 1, 'row': 2, 'col': 0, content: '<div
class="content">4</div>' },
    { 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 2, content: '<div
class="content">5</div>' },
    { 'sizeX': 1, 'sizeY': 1, 'row': 2, 'col': 3, content: '<div
class="content">6</div>' }
  ];
  //Dashboard Layout's created event function
  function onCreated(args) {
    // resizePanel("id", sizeX, sizeY)
    dashboardObj.resizePanel("layout_4", 1, 1);
    dashboardObj.resizePanel("layout_5", 2, 1);
  }
  let dashboardObj;
  return (<div>
    <div className="container">
      <DashboardLayoutComponent id='defaultLayout' ref={(scope) => {
dashboardObj = scope; }} cellSpacing={cellSpacing} panels={panels}
columns={5} created={onCreated.bind(this)} />
    </div>
  </div>);
}
```

```

Floating of panels in React Dashboard layout component

The floating functionality of the component allows you to effectively use the entire layout for the panel's placement. If the floating functionality is enabled, the panels within the layout get floated upwards automatically to occupy the empty cells available in previous rows. This functionality can be enabled or disabled using the `allowFloating` property of the component.

The following sample demonstrates how to enable or disable the floating of panels in the Dashboard Layout component.

APP.JSX

```
import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
    let dashboardObj;
    let buttonObj;
    let resetPanels = [];
    const cellSpacing = [10, 10];
    let panels = [
        { 'sizeX': 2, 'sizeY': 2, 'row': 1, 'col': 0, content: '<div class="content">0</div>' },
        { 'sizeX': 2, 'sizeY': 2, 'row': 2, 'col': 2, content: '<div class="content">1</div>' },
        { 'sizeX': 2, 'sizeY': 2, 'row': 3, 'col': 4, content: '<div class="content">2</div>' }
    ];
    // Button click action to change the floating options for DashboardLayout
    function onClick(args) {
        if (buttonObj.value === "Disable Floating and Reset") {
            buttonObj.value = 'Enable Floating';
            dashboardObj.allowFloating = false;
            dashboardObj.panels = resetPanels;
        }
        else {
            buttonObj.value = 'Disable Floating and Reset';
            dashboardObj.allowFloating = true;
        }
    }
    // Using created event to initialize the panels
    function onCreate(args) {
        resetPanels = dashboardObj.serialize();
        resetPanels[0].content = '<div class="content">0</div>';
        resetPanels[1].content = '<div class="content">1</div>';
        resetPanels[2].content = '<div class="content">2</div>';
    }
    return (<div>
```

```

        <div id='container'>
          <div className="inline" id="control">
            <DashboardLayoutComponent id='defaultLayout' ref={s =>
(dashboardObj = s)} cellSpacing={cellSpacing} created={onCreate}
panels={panels} allowFloating={false} cellAspectRatio={100 / 75}
columns={6}/>
          </div>
          <div className="inline" id="properties">
            <input type="button" ref={s => buttonObj = s} className="e-btn

Responsive adaptive in React Dashboard layout component

The control is provided with built-in responsive support, where panels within the layout get adjusted based on their parent element's dimensions to accommodate any resolution which relieves the burden of building responsive dashboards.

The dashboard layout is designed to automatically adapt with lower resolutions by transforming the entire layout into a stacked one, so that, the panels will be displayed in a vertical column. By default, whenever the screen resolution meets 600 px or lower resolutions this layout transformation occurs. This transformation can be modified for any user defined resolution by defining the `mediaQuery` property of the component.

The following sample demonstrates the usage of the `mediaQuery` property to turn out the layout into a stacked one in user defined resolution. Here, whenever, the window size reaches 700 px or lesser, the layout becomes a stacked layout.

APP.JSX

```

import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {

```

```

const cellSpacing = [20, 20];
let mediaQuery = 'max-width: 700px';
let panels = [
  { "sizeX": 1, "sizeY": 1, "row": 0, "col": 0, content: '<div
class="content">0</div>' },
  { "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div
class="content">1</div>' },
  { "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div
class="content">2</div>' },
  { "sizeX": 1, "sizeY": 1, "row": 1, "col": 0, content: '<div
class="content">3</div>' },
  { "sizeX": 2, "sizeY": 1, "row": 2, "col": 0, content: '<div
class="content">4</div>' },
  { "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div
class="content">5</div>' },
  { "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div
class="content">6</div>' }
];
return (<div>
  <div id='container'>
    <DashboardLayoutComponent id='defaultLayout' columns={5}
cellSpacing={cellSpacing} panels={panels} mediaQuery={mediaQuery}/>
  </div>
</div>);
}
export default App;

```

APP.TSX

```

import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
  const cellSpacing: number[] = [20, 20];
  let mediaQuery: string = 'max-width: 700px';
  let panels: any = [
    { "sizeX": 1, "sizeY": 1, "row": 0, "col": 0, content: '<div
class="content">0</div>' },
    { "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div

State maintenance in React Dashboard layout component

The current layout structure of the Dashboard Layout component can be obtained and saved to construct another dashboard with same panel structure using the `serialize` public method of the component. This method returns the component's current panel setting which can be used to construct a dashboard with the same layout settings.

The following sample demonstrates how to save and restore the state of the panels using the `serialize` method. Click Save to store the panel's settings and click Restore to restore the previously saved panel settings.

APP.JSX

```

import { DashboardLayoutComponent } from '@syncfusion/ej2-react-layouts';
import * as React from 'react';
function App() {
  let dashboardObj;
  const cellSpacing = [20, 20];
  let panels = [
    { "sizeX": 1, "sizeY": 1, "row": 0, "col": 0, content: '<div class="content">0</div>' },
    { "sizeX": 3, "sizeY": 2, "row": 0, "col": 1, content: '<div class="content">1</div>' },
    { "sizeX": 1, "sizeY": 3, "row": 0, "col": 4, content: '<div class="content">2</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 1, "col": 0, content: '<div class="content">3</div>' },
    { "sizeX": 2, "sizeY": 1, "row": 2, "col": 0, content: '<div class="content">4</div>' },
    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 2, content: '<div class="content">5</div>' },
  ];

```

```

    { "sizeX": 1, "sizeY": 1, "row": 2, "col": 3, content: '<div
class="content">6</div>' }
];
let restoreModel = [];
function onRestore(args) {
    dashboardObj.panels = restoreModel;
}
function onSave(args) {
    restoreModel = dashboardObj.serialize();
    restoreModel[0].content = '<div class="content">0</div>';
    restoreModel[1].content = '<div class="content">1</div>';
    restoreModel[2].content = '<div class="content">2</div>';
    restoreModel[3].content = '<div class="content">3</div>';
    restoreModel[4].content = '<div class="content">4</div>';
    restoreModel[5].content = '<div class="content">5</div>';
    restoreModel[6].content = '<div class="content">6</div>';
}
return (<div>
    <div id='container'>
        <div className="inline" id="control">
            <DashboardLayoutComponent id='defaultLayout' created={onSave}
ref={s => (dashboardObj = s)} cellSpacing={cellSpacing} panels={panels}
columns={5}/>

Style in React Dashboard layout component

The following content provides the exact CSS structure that can be used to modify the control's appearance based on the user preference.

Customizing the dashboard layout panel header

Use the following CSS to customize the dashboard layout panel header.

```
`css
.e-dashboardlayout.e-control .e-panel .e-panel-container .e-panel-header {
color: #754131;
background-color: #c9e2f7;
text-align: center;
}
`
```

Customizing the dashboard layout panel content

Use the following CSS to customize the dashboard layout panel content.

```
`css
.e-dashboardlayout.e-control .e-panel .e-panel-container .e-panel-content {
background-color: #c9e2f7;
padding: 50px;
}
`
```

Customizing the dashboard layout panel resize icon

Use the following CSS to customize the dashboard layout resize icon.

```
`css
.e-dashboardlayout.e-control .e-panel .e-panel-container .e-resize.e-double{
color: #0378d5;
font-size: 30px;
height: 20px;
width: 20px;
}
`
```

Customizing the dashboard layout panel background

Use the following CSS to customize the dashboard layout panel background.

```
`css
.e-dashboardlayout.e-control.e-responsive {
background: #b3d3ed;
}
```

```
}
,
```

You can refer to our [React Dashboard Layout](#) feature tour page for its groundbreaking feature representations. You can also explore our [React Dashboard Layout example](#) to know how to present and manipulate data.

Accessibility in React Dashboard Layout component

The Dashboard Layout component followed the accessibility guidelines and standards, including [ADA, Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the Dashboard Layout component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2](#) Support | |

| [Section 508](#) Support | |

| Screen Reader Support | |

| Right-To-Left Support | |

| Color Contrast | |

| Mobile Device Support | |

| Keyboard Navigation Support | Not applicable |

| [Accessibility Checker](#) Validation | |

| [Axe-core](#) Accessibility Validation | |

<style>

.post .post-content img {

display: inline-block;

margin: 0.5em 0;

}

</style>

<div> - All features of the component meet the requirement.</div>

```
<div> - Some features of the component do not meet the requirement.</div>
```

```
<div> - The component does not meet the requirement.</div>
```

WAI-ARIA attributes

The Dashboard Layout component followed the [WAI-ARIA](#) patterns to meet the accessibility. The following ARIA attributes are used in the Dashboard Layout component:

| **Attributes** | **Purpose** |

| --- | --- |

| **role=list** | Indicates the role as a list for the Dashboard Layout element. |

| **role=listitem** | Indicates the role as a listitem for the Dashboard panels. |

| **role=presentation** | Indicates the role as a presentation for the table when the **showGridLines** property is enabled. |

| **aria-grabbed** | When the panel is chosen for dragging, the aria-grabbed attribute is set to "true". If it's set to "false", the element can be grabbed for drag-and-drop, but it won't be actively held. |

Keyboard interaction

Keyboard support is not applicable for the Dashboard Layout.

Ensuring accessibility

The Dashboard Layout component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the Dashboard Layout component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the Dashboard Layout component with accessibility tools.

DataManager

Getting started

Dependencies

Below is the list of minimum dependencies required to use the DataManager.

```
`javascript
```

```
|-- @syncfusion/ej2-data
```

```
|-- @syncfusion/ej2-base
```

```
|-- es6-promise (Required when window.Promise is not available)
```

```
`
```

@syncfusion/ej2-data requires the presence of a Promise feature in global environment. In the browser, window.Promise must be available.

Installation and configuration

To set-up a React application, choose any of the following ways. The best and easiest way is to use the [create-react-app](#). It sets up your development environment in JavaScript and improvise your application for production. Refer to the [installation instructions](#) of `create-react-app`.

```
`bash
npx create-react-app my-app
cd my-app
npm start
`
```

or

```
`bash
yarn create react-app my-app
cd my-app
yarn start
`
```

To set-up a React application in `TypeScript` environment, run the following command.

```
`bash
npx create-react-app my-app --template typescript
cd my-app
npm start
`
```

Besides using the [npm](#) package runner tool, also create an application from the `npm init`. To begin with the `npm init`, upgrade the `npm` version to `npm 6+`.

```
`bash
npm init react-app my-app
cd my-app
npm start
`
```

Install Syncfusion packages using below command.

```
`
npm install @syncfusion/ej2-data --save
`
```

Connection to a data source

The DataManager can act as gateway for both local and remote data source which will uses the query to interact with the data source.

Binding to JSON data

[DataManager](#) can be bound to local data source by assigning the array of JavaScript objects to the **json** property or simply passing them to the constructor while instantiating.

Add the CSS below to the **app/app.css** file to style the table, then import it in the **src/app.tsx** or **src/app.jsx** file.

```
`css
```

```
datatable {
```

```
border: solid 1px #e0e0e0;
```

```
border-collapse: collapse;
```

```
font-family: Roboto;
```

```
}
```

```
datatable td,
```

```
datatable th {
```

```
border: solid #e0e0e0;
```

```
border-width: 1px 0 0;
```

```
display: table-cell;
```

```
font-size: 14px;
```

```
line-height: 20px;
```

```
overflow: hidden;
```

```
padding: 8px 21px;
```

```
vertical-align: middle;
```

```
white-space: nowrap;
```

```
width: auto;
```

```
}
```

```
,
```

APP.JSX

```
import { DataManager, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { data } from './datasource';
import { Row } from './rowTemplate';
export default class App extends React.Component {
  result = new DataManager(data).executeLocal(new Query().take(8));
  items = this.result.map((row, index) => (
    <Row key={index} {...row} />
  ));
  render() {
    return (
      <table id='datatable' className='e-table'>
        <thead>
          <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
```

```

        </thead>
        <tbody>{this.items}</tbody>
    </table>;
    }
}

```

APP.TSX

```

import { DataManager, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { data } from './datasource';
import { IOrders } from './orders';
import { Row } from './rowTemplate';
export default class App extends React.Component<{}, {}>{
    public result: IOrders[] = new DataManager(data).executeLocal(new
    Query().take(8)) as IOrders[];
    public items: React.ReactNode[] = this.result.map((row: IOrders, index)
=> (
        <Row key={index} {...row} />
    ));
    public render() {
        return <table id='datatable' className='e-table'>
            <thead>
                <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
            </thead>
            <tbody>{this.items}</tbody>
        </table>;
    }
}

```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```

export interface IOrders {
    OrderID: number;
    EmployeeID: number;
    CustomerID: string;
    Order_Details: object[];
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
export class Row extends React.Component {
    render() {

Binding to ODataV4

[DataManager](#) can be bound to remote data source by assigning service end point URL to the `url` property. Now all `DataManager` operations will address the provided service end point.

APP.JSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, Query, ODataV4Adaptor } from '@syncfusion/ej2-data';
import * as React from 'react';
import { Row } from './rowTemplate';
const SERVICE_URI =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component {
  constructor(props) {
    super(props);
    this.state = { items: [] };
  }
  componentDidMount() {
    new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor()
  }).executeQuery(new Query().take(8))
    .then((e) => {
      const res = e.result.map((row) => <Row key={row.OrderID} {...row}
/>);
      this.setState({
        items: res,
      });
    });
  }
  render() {
    return (
      <table id='datatable' className='e-table'>
        <thead>
          <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
        </thead>
        <tbody>{getValue('items', this.state)}</tbody>
      </table>);
  }
}
```

APP.TSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, Query, ReturnOption, ODataV4Adaptor } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { IOOrders } from './orders';
import { Row } from './rowTemplate';

Filter

The data filtering is a trivial operation which will let us to get reduced view of data based on filter criteria. The filter expression can be built easily using [where](#) method of [Query](#) class.

APP.JSX

```

import { DataManager, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { data } from './datasource';
import { Row } from './rowTemplate';
export default class App extends React.Component {
  result = new DataManager(data).executeLocal(new Query()
    .where('EmployeeID', 'equal', 3));
  items = this.result.map((row, index) => (
    <Row key={index} {...row} />
  ));
  render() {
    return (
      <table id='datatable' className='e-table'>
        <thead>
          <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
        </thead>
        <tbody>{this.items}</tbody>
      </table>);
  }
}

```

APP.TSX

```

import { DataManager, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { data } from './datasource';
import { IOrders } from './orders';
import { Row } from './rowTemplate';
export default class App extends React.Component<{}, {}>{
  public result: IOrders[] = new DataManager(data).executeLocal(new Query()
    .where('EmployeeID', 'equal', 3)) as IOrders[];
  public items: React.ReactNode[] = this.result.map((row: IOrders, index)
=> (
    <Row key={index} {...row} />
  ));
  public render() {
    return (
      <table id='datatable' className='e-table'>
        <thead>
          <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
        </thead>
        <tbody>{this.items}</tbody>
      </table>);
  }
}

```

```
}

```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```
export interface IOrders {
  OrderID: number;
  EmployeeID: number;
  CustomerID: string;
  Order_Details: object[];
}
```

ROWTEMPLATE.JSX

```
import * as React from 'react';
export class Row extends React.Component {
  render() {
    const item = this.props;
    return <tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>

    ]];

```

Component binding

DataManager component can be used with Syncfusion components which supports data binding.

In the following samples, the grid component is bound. To render the grid with the necessary configurations, please refer to the [React Grid getting started](#) documentation.

Local data binding

A data source can be created in-line with other Syncfusion component configuration settings.

APP.JSX

```

import { DataManager } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, GridComponent } from
 '@syncfusion/ej2-react-grids';
import * as React from "react";
import { data } from './datasource';
export default class App extends React.Component {
    data = new DataManager(data);

```

```

render() {
    return <GridComponent dataSource={this.data}>
        <ColumnsDirective>
            <ColumnDirective field='OrderID' width='100'
textAlign="Right"/>
            <ColumnDirective field='CustomerID' width='100' />
            <ColumnDirective field='EmployeeID' width='100'
textAlign="Right"/>
            <ColumnDirective field='Freight' width='100' format="C2"
textAlign="Right"/>
            <ColumnDirective field='ShipCountry' width='100' />
        </ColumnsDirective>
    </GridComponent>;
}
}
;

```

APP.TSX

```

import { DataManager } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, GridComponent } from
'@syncfusion/ej2-react-grids';
import * as React from "react";
import { data } from './datasource';
export default class App extends React.Component<{}, {}>{
    public data: DataManager = new DataManager(data);
    public render() {
        return <GridComponent dataSource={this.data}>
            <ColumnsDirective>
                <ColumnDirective field='OrderID' width='100'
textAlign="Right"/>
                <ColumnDirective field='CustomerID' width='100' />
                <ColumnDirective field='EmployeeID' width='100'
textAlign="Right"/>
                <ColumnDirective field='Freight' width='100' format="C2"
textAlign="Right"/>
                <ColumnDirective field='ShipCountry' width='100' />
            </ColumnsDirective>
        </GridComponent>
    }
};

```

DATASOURCE.JSX

```

```

Remote data binding

To bind remote data to Syncfusion component, you can assign a service data as an instance of [DataManager](#) to the **dataSource** property.

APP.JSX

```

import { DataManager, ODataV4Adaptor } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, GridComponent } from
 '@syncfusion/ej2-react-grids';
import * as React from "react";
const SERVICE_URI =
 'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component {
    data = new DataManager({ url: SERVICE_URI , adaptor: new ODataV4Adaptor()
});
    render() {
        return <GridComponent dataSource={this.data}>
            <ColumnsDirective>
                <ColumnDirective field='OrderID' width='100'
textAlign="Right"/>
                <ColumnDirective field='CustomerID' width='100' />
                <ColumnDirective field='EmployeeID' width='100'
textAlign="Right"/>
                <ColumnDirective field='Freight' width='100' format="C2"
textAlign="Right"/>
                <ColumnDirective field='ShipCountry' width='100' />
            </ColumnsDirective>
        </GridComponent>;
    }
}
;

```

APP.TSX

```

import { DataManager, ODataV4Adaptor } from '@syncfusion/ej2-data';
import { ColumnDirective, ColumnsDirective, GridComponent, } from
 '@syncfusion/ej2-react-grids';
import * as React from "react";
const SERVICE_URI:string =
 'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component<{}, {}>{
    public data: DataManager = new DataManager({ url: SERVICE_URI , adaptor:
new ODataV4Adaptor() });
    public render() {
        return <GridComponent dataSource={this.data}>
            <ColumnsDirective>

```

```

        <ColumnDirective field='OrderID' width='100'
textAlign="Right"/>
        <ColumnDirective field='CustomerID' width='100' />
        <ColumnDirective field='EmployeeID' width='100'
textAlign="Right"/>
        <ColumnDirective field='Freight' width='100' format="C2"
textAlign="Right"/>
        <ColumnDirective field='ShipCountry' width='100' />
    </ColumnsDirective>
</GridComponent>
    }
};

```

Data binding in React Data component

[DataManager](#) supports both RESTful JSON data services binding and local JavaScript object array binding.

Local data binding

[DataManager](#) can be bound to local data source by assigning the array of JavaScript objects to the `json` property or simply passing them to the constructor while instantiating. Now the JavaScript object array can be queried and manipulated.

APP.JSX

```

import { DataManager, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { data } from './datasource';
import { Row } from './rowTemplate';
export default class App extends React.Component {
    result = new DataManager(data).executeLocal(new Query().take(8));
    items = this.result.map((row, index) => (
        <Row key={index} {...row} />
    ));
    render() {
        return (
            <table id='datatable' className='e-table'>
                <thead>
                    <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
                </thead>
                <tbody>{this.items}</tbody>
            </table>);
    }
}

```

APP.TSX

```

import { DataManager, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { data } from './datasource';
import { Row } from './rowTemplate';
export default class App extends React.Component<{}, {}> {

    public result: Object[] = new DataManager(data).executeLocal(new
Query().take(8));
}

```

```

    public items: React.ReactNode[] = this.result.map((row: object, index:
number) => (
        <Row key={index} {...row} />
    ));
    public render() {
        return (
            <table id='datatable' className='e-table'>
                <thead>
                    <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
                </thead>
                <tbody>{this.items}</tbody>
            </table>
        );
    }
}

```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```

export interface IOrders {
    OrderID: number;
    EmployeeID: number;
    CustomerID: string;
    Order_Details: object[];
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
export class Row extends React.Component {
    render() {
        const item = this.props;
        return <tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.EmployeeID}</td>
        </tr>;
    }
}

```

ROWTEMPLATE.TSX

```

import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
    public render() {
        const item: IOrders = this.props as IOrders;
        return <tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.EmployeeID}</td>

```

```

        </tr>
    }
}

```

Remote data binding

[DataManager](#) can be bound to remote data source by assigning service end point URL to the `url` property. With the provided `url`, the [DataManager](#) handles all communication with the data server with help of queries.

When querying data, the [DataManager](#) will convert the query object, [Query](#) into server request after calling `executeQuery` and waits for the server response(JSON format).

APP.JSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, Query, ODataV4Adaptor } from '@syncfusion/ej2-data';
import * as React from 'react';
import { Row } from './rowTemplate';
const SERVICE_URI =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component {
    constructor(props) {
        super(props);
        this.state = { items: [] };
    }
    componentDidMount() {
        new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor()
    }).executeQuery(new Query().take(8))
        .then((e) => {
            const res = e.result.map((row) => <Row key={row.OrderID}
{...row} />);
            this.setState({
                items: res,
            });
        });
    }
    render() {
        return (
            <table id='datatable' className='e-table'>
                <thead>
                    <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
                </thead>
                <tbody>{getValue('items', this.state)}</tbody>
            </table>);
    }
}

```

APP.TSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, Query, ReturnOption, ODataV4Adaptor } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { IOOrders } from './orders';
import { Row } from './rowTemplate';

```

```

const SERVICE_URI: string =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component<{}, {}>{
  constructor(props: object) {
    super(props);
    this.state = { items: [] };
  }
  componentDidMount() {
    new DataManager({ url: SERVICE_URI ,adaptor: new ODataV4Adaptor()
  }).executeQuery(new Query().take(8))
    .then((e: ReturnOption) => {
      const res = (e.result as IOrders[]).map((row: IOrders, index:
number) => (
        <Row key={row.OrderID} {...row} />
      ));
      this.setState({
        items: res
      });
    });
  }
  public render() {
    return <table id='datatable' className='e-table'>
      <thead>
        <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
      </thead>
      <tbody>{ getValue('items', this.state) }</tbody>
    </table>
  }
}

```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```

export interface IOrders {
  OrderID: number;
  EmployeeID: number;
  CustomerID: string;
  Order_Details: object[];
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
export class Row extends React.Component {
  render() {
    const item = this.props;
    return <tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>;
  }
}

```

```
}
}
```

ROWTEMPLATE.TSX

```
import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
  public render() {
    const item: IOrders = this.props as IOrders;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>)
  }
}
```

The queried data will not be cached locally unless offline mode is enabled.

Adaptors in React Data component

Each data source or remote service uses different way in accepting request and sending back the response. **DataManager** cannot anticipate every way a data source

works. To tackle this problem the **DataManager** uses the adaptor concept to communicate with particular data source.

For local data sources, the role of the data adaptor is to query the JavaScript object array based on the **Query** object and manipulate them.

When comes with remote datasource, the data adaptor is used to send the request that the server can understand and process the server response.

The adaptor can be assigned using the **adaptor** property of the **DataManager**.

Json adaptor

JsonAdaptor is used to query and manipulate JavaScript object array.

APP.JSX

```
import { DataManager, JsonAdaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
```

```
import { data } from './datasource';
import { Row } from './rowTemplate';
export default class App extends React.Component {
  result = new DataManager({ json: data, adaptor: new JsonAdaptor })
    .executeLocal(new Query().take(8));
  items = this.result.map((row, index) => (
    <Row key={index} {...row} />
  ));
  render() {
    return (
      <table id='datatable' className='e-table'>
        <thead>
          <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
        </thead>
        <tbody>{this.items}</tbody>
      </table>);
  }
}
```

APP.TSX

```
import { DataManager, JsonAdaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { data } from './datasource';
import { Row } from './rowTemplate';
export default class App extends React.Component<{}, {}> {
  public result: Object[] = new DataManager({ json: data, adaptor: new
JsonAdaptor() })
    .executeLocal(new Query().take(8));

  public items: React.ReactElement[] = this.result.map((row: object, index)
=> (
    <Row key={index} {...row} />
  ));
  public render() {
    return (
      <table id='datatable' className='e-table'>
        <thead>
          <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
        </thead>
        <tbody>{this.items}</tbody>
      </table>
    );
  }
}
```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```
export interface IOrders {
  OrderID: number;
```

```

EmployeeID: number;
CustomerID: string;
Order_Details: object[];
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
export class Row extends React.Component {
  render() {
    const item = this.props;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>);
  }
}

```

ROWTEMPLATE.TSX

```

import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
  public render() {
    const item: IOrders = this.props as IOrders;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>);
  }
}

```

[Url adaptor](#)

UrlAdaptor act as the base adaptor for interacting with remote data services. Most of the built-in adaptors are derived from the **UrlAdaptor**.

`ts

```

import { DataManager, Query, ReturnOption, UrlAdaptor } from '@syncfusion/ej2-data';
const SERVICE_URI: string = 'https://ej2services.syncfusion.com/react/development/api/UrlDataSource';
new DataManager({
  adaptor: new UrlAdaptor,
  url: SERVICE_URI
}).executeQuery(new Query().take(8)).then((e: ReturnOption) => {
  // e.result will contain the records
});
`

```

UrlAdaptor expects response as a JSON object with properties **result** and **count** which contains the collection of entities and the total number of records respectively.

The sample response object should be as follows,

```
,
{
  "result": [{..}, {..}, {..}, ...],
  "count": 67
},
```

OData adaptor

OData is standardized protocol for creating and consuming data. You can retrieve data from OData service using **DataManager**. The **ODataAdaptor** helps you to interact with OData service. You can refer to the following code example of remote Data binding using OData service.

```
`ts
import { DataManager, Query, ReturnOption, ODataAdaptor } from '@syncfusion/ej2-data';
const SERVICE_URI: string = 'https://services.odata.org/V3/Northwind/Northwind.svc/Orders/';
new DataManager({
  adaptor: new ODataAdaptor,
  url: SERVICE_URI
}).executeQuery(new Query().take(8)).then((e: ReturnOption) => {
  // e.result will contain the records
});
,
```

ODataAdaptor expects JSON response from the server and the response object should contain properties **Items**, **Result** and **Count** whose values are collection of entities and total count of the entities respectively.

The sample response object should look like below.

```
,
{
  Result: [{..}, {..}, {..}, ...],
  Items: [{..}, {..}, {..}, ...],
  Count: 830
},
```

By default, **ODataAdaptor** is used by **DataManager**.

ODataV4 adaptor

The ODataV4 is an improved version of OData protocols and the **DataManager** can also retrieve and consume OData v4 services. For more details on OData v4 Services, refer the [odata documentation](#). You can use the **ODataV4Adaptor** to interact with ODataV4 service.

APP.JSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { Row } from './rowTemplate';
const SERVICE_URI =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component {
  constructor(props) {
    super(props);
    this.state = { items: [] };
  }
  componentDidMount() {
    new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor })
      .executeQuery(new Query().take(8))
      .then((e) => {
        const res = e.result.map((row, index) => (
          <Row key={row.OrderID} {...row} />
        ));
        this.setState({
          items: res
        });
      });
  }
  render() {
    return (
      <table id='datatable' className='e-table'>
        <thead>
          <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
        </thead>
        <tbody>{getValue('items', this.state)}</tbody>
      </table>);
  }
}
```

APP.TSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query, ReturnOption } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { IOrders } from './orders';
import { Row } from './rowTemplate';
const SERVICE_URI: string =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component<{}, {}>{
  constructor(props: object) {
    super(props);
    this.state = { items: [] };
  }
}
```

```

componentDidMount() {
    new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor })
        .executeQuery(new Query().take(8))
        .then((e: ReturnOption) => {
            const res = (e.result as IOOrders[]).map((row: IOOrders) => (
                <Row key={row.OrderID} {...row} />
            ));
            this.setState({
                items: res
            });
        });
}

public render() {
    return (<table id='datatable' className='e-table'>
        <thead>
            <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
        </thead>
        <tbody>{ getValue('items', this.state) }</tbody>
    </table>)
}
}

```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```

export interface IOOrders {
    OrderID: number;
    EmployeeID: number;
    CustomerID: string;
    Order_Details: object[];
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
export class Row extends React.Component {
    render() {
        const item = this.props;
        return (<tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.EmployeeID}</td>
        </tr>);
    }
}

```

ROWTEMPLATE.TSX

```

import * as React from 'react';
import { IOOrders } from './orders';
export class Row extends React.Component<{}, {}>{

```

```

public render() {
    const item: IOrders = this.props as IOrders;
    return (<tr>
        <td>{item.OrderID}</td>
        <td>{item.CustomerID}</td>
        <td>{item.EmployeeID}</td>
    </tr>)
}
}

```

Web API adaptor

You can use the **WebApiAdaptor** to interact with Web API created with OData endpoint. The **WebApiAdaptor** is extended from the **ODataAdaptor**. Hence to use **WebApiAdaptor**, the endpoint should understand the OData formatted queries send along with request.

To enable OData query option for Web API, please refer to the [documentation](#)

`ts

```

import { DataManager, Query, ReturnOption, WebApiAdaptor } from '@syncfusion/ej2-data';
const SERVICE_URI: string = 'https://ej2services.syncfusion.com/react/development/api/Orders';
new DataManager({
    adaptor: new WebApiAdaptor,
    url: SERVICE_URI
}).executeQuery(new Query().take(8)).then((e: ReturnOption) => {
    // e.result will contain the records
});

```

WebApiAdaptor expects JSON response from the server and the response object should contain properties **Items** and **Count** whose values are collection of entities and total count of the entities respectively.

The sample response object should look like below.

```

{
    Items: [{..}, {..}, {..}, ...],
    Count: 830
}

```

WebMethod Adaptor

The **WebMethodAdaptor** is used to bind data source from remote services and code behind methods. It can be enabled in Grid using Adaptor property of DataManager as **WebMethodAdaptor**.

For every operations, an Fetch post will be send to the specified data service.

```
`ts
import { DataManager, Query, ReturnOption, WebMethodAdaptor } from '@syncfusion/ej2-data';
const SERVICE_URI: string = 'http://controller.com/api';
new DataManager({
  adaptor: new WebMethodAdaptor,
  url: SERVICE_URI
}).executeQuery(new Query().take(8)).then((e: ReturnOption) => {
  // e.result will contain the records
});
`
```

WebMethodAdaptor expects JSON response from the server and the response object should contain properties **result** and **count** whose values are collection of entities and total count of the entities respectively.

The sample response object should look like below.

```
`
{
  result: [{..}, {..}, {..}, ...],
  count: 830
}
`
```

The controller method's data parameter name must be **value**.

GraphQL Adaptor

The **GraphQLAdaptor** provides an option to retrieve data from the GraphQL server. It performs CRUD and data operations such as paging, sorting, filtering etc by sending the required arguments to the server.

You can provide the GraphQL query string by using the **query** property of the **GraphQLAdaptor**. Since, the **GraphQLAdaptor** is extended from the **UrlAdaptor**, it expects response as a JSON object with properties **result** and **count** which contains the collection of entities and the total number of records respectively. The GraphQL response should be returned in JSON format like { "data": { ... } } with query name as field, you need to set the **result** and **count** properties to map the response.

```
`ts
import { DataManager, Query, GraphQLAdaptor } from '@syncfusion/ej2-data';
const SERVICE_URI: string = 'http://controller.com/actions';
new DataManager({
  url: SERVICE_URI, adaptor: new GraphQLAdaptor({
```

```
response: {  
  result: 'getOrders.OrderData',  
  count: 'getOrders.OrderCount'  
},  
query: `query getOrders($datamanager: String) {  
  getOrders(datamanager: $datamanager) {  
    OrderCount,  
    OrderData{OrderID, CustomerID, EmployeeID, ShipCity, ShipCountry}  
  }  
}`  
})  
}).executeQuery(new Query().take(8)).then((e) => {  
  //e.result will contain the records  
});  
`
```

The Schema for the GraphQL server is

```
`ts  
input OrderInput {  
  OrderID: Int!  
  CustomerID: String!  
  EmployeeID: Int!  
  ShipCity: String!  
  ShipCountry: String!  
}  
type Order {  
  OrderID: Int!  
  CustomerID: String!  
  EmployeeID: Int!  
  ShipCity: String!  
  ShipCountry: String!  
}  
type Returntype {  
  getOrders: [Order]
```

```

count: Int
}
type Query {
  getOrders(datamanager: String): ReturnType
}
type Mutation {
  createOrder(value: OrderInput): Order!
  updateOrder(key: Int!, keyColumn: String, value: OrderInput): Order!
  deleteOrder(key: Int!, keyColumn: String, value: OrderInput): Order!
}
`

```

The resolver for the corresponding action is

```

`ts
import { data } from "./db";
const resolvers = {
  Query: {
    getOrders: (parent, { datamanager }, context, info) => {
      if (datamanager.search) {
        // Perform searching
      }
      if (datamanager.sorted) {
        // Perform sorting
      }
      if (datamanager.where) {
        // Perform filtering
      }
      if (datamanager.search) {
        // Perform search
      }
      if (datamanager.skip && datamanager.take) {
        // Perform Paging
      }
      return { OrderData: data, OrderCount: data.length };
    }
  }
}

```

```

}
},
Mutation: {
  createOrder: (parent, { value }, context, info) => {
    // Perform Insert
    return value;
  },
  updateOrder: (parent, { key, keyColumn, value }, context, info) => {
    // Perform Update
    return value;
  },
  deleteOrder: (parent, { key, keyColumn, value }, context, info) => {
    // Perform Delete
    return value;
  },
};
export default resolvers;
`

```

The query parameters will be send in a string format which contains the below details.

Parameters	Description
RequiresCounts	If it is true then the total count of records will be included in response.
Skip	Holds the number of records to skip.
Take	Holds the number of records to take.
Sorted	Contains details about current sorted column and its direction.
Where	Contains details about current filter column name and its constraints.
Group	Contains details about current Grouped column names.

Performing CRUD action with GraphQLAdaptor

You can perform the CRUD actions by returning the mutation queries inside the **getMutation** method based on the action.

```

`ts
import { DataManager, Query, GraphQLAdaptor } from '@syncfusion/ej2-data';

```

```
const SERVICE_URI: string = 'http://controller.com/actions';
new DataManager({
  url: SERVICE_URI, adaptor: new GraphQLAdaptor({
    response: {
      result: 'getOrders.getOrders',
      count: 'getOrders.count'
    },
    query: `query getOrders($datamanager: String) {
      getOrders(datamanager: $datamanager) {
        count,
        getOrders{OrderID, CustomerID, EmployeeID, ShipCity, ShipCountry}
      }
    }`,
    getMutation: function (action): string {
      if (action === 'insert') {
        return `mutation CreateOrderMutation($value: OrderInput!){
          createOrder(value: $value){
            OrderID, CustomerID, EmployeeID, ShipCity, ShipCountry
          }
        }`;
      }
      if (action === 'update') {
        return `mutation Update($key: ID!, $keyColumn: String,$value: OrderInput){
          updateOrder(key: $key, keyColumn: $keyColumn, value: $value) {
            OrderID, CustomerID, EmployeeID, ShipCity, ShipCountry
          }
        }`;
      }
      if (action === 'delete') {
        return `mutation Remove($key: ID!, $keyColumn: String, $value: OrderInput){
          deleteOrder(key: $key, keyColumn: $keyColumn, value: $value) {
            OrderID, CustomerID, EmployeeID, ShipCity, ShipCountry
          }
        }`;
      }
    }
  })
}
```

```

}
})
}).executeQuery(new Query().take(8)).then((e) => {
//e.result will contain the records
});
`

```

Writing custom adaptor

Sometimes the built-in adaptors does not meet your requirement. In such cases you can create your own adaptor.

To create and use custom adaptor, please refer to the below steps.

- Select an built-in adaptor which will act as base class for your custom adaptor.
- Override the desired method to achieve your requirement.
- Assign the custom adaptor to the `adaptor` property of `DataManager`.

For the sake of demonstrating custom adaptor approach, we are going to see how to add serial number for the records by overriding the built-in response processing using `processResponse` method of the `ODataV4Adaptor`.

APP.JSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { Row } from './rowTemplate';
import { SerialNoAdaptor } from './serialNoAdaptor';
const SERVICE_URI =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component {
  constructor(props) {
    super(props);
    this.state = { items: [] };
  }
  componentDidMount() {
    new DataManager({ url: SERVICE_URI, adaptor: new SerialNoAdaptor })
      .executeQuery(new Query().take(8))
      .then((e) => {
        const res = e.result.map((row) => (
          <Row key={row.OrderID} {...row} />
        ));
        this.setState({
          items: res,
        });
      });
  }
  render() {
    return (
      <table id='datatable' className='e-table'>
        <thead>
          <tr><th>SNO</th><th>Customer ID</th><th>Employee
ID</th></tr>

```

```

        </thead>
        <tbody>{getValue('items', this.state)}</tbody>
    </table>);
    }
}

```

APP.TSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, Query, ReturnOption } from '@syncfusion/ej2-data';
import * as React from 'react';
import { IOrders } from './orders';
import { Row } from './rowTemplate';
import { SerialNoAdaptor } from './serialNoAdaptor';
const SERVICE_URI: string =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component<{}, {}>{
    constructor(props: object) {
        super(props);
        this.state = { items: [] };
    }
    componentDidMount() {
        new DataManager({ url: SERVICE_URI, adaptor: new SerialNoAdaptor })
            .executeQuery(new Query().take(8))
            .then((e: ReturnOption) => {
                const res = (e.result as IOrders[]).map((row: IOrders) => (

        let i: number = 0;

```

```

        // calling base class processResponse function
        const original: any = super.processResponse.apply(this, arguments as
any);

        // adding serial number
        original.forEach((item: object) => setValue('SNO', ++i, item));
        return original;
    }
}

```

Querying in React Data component

In this section, you will see in detail about how to build query using [Query](#) class and consume the data source.

Specifying resource name using `from`

The `from` method is used to specify the resource name or table name from where the data should be retrieved.

APP.JSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { Row } from './rowTemplate';
const SERVICE_URI = 'https://services.odata.org/V4/Northwind/Northwind.svc/';
export default class App extends React.Component {
    constructor(props) {
        super(props);
        this.state = { items: [] };
    }
    componentDidMount() {
        new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
            .executeQuery(new Query().from('Orders').take(8))
            .then((e) => {
                const res = e.result.map((row) => (
                    <Row key={row.OrderID} {...row} />
                ));
                this.setState({
                    items: res
                });
            });
    }
    render() {
        return (
            <table id='datatable' className='e-table'>
                <thead>
                    <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
                </thead>
                <tbody>{getValue('items', this.state)}</tbody>
            </table>);
    }
}

```

APP.TSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query, ReturnOption } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { IOrders } from './orders';
import { Row } from './rowTemplate';
const SERVICE_URI:string=
 'https://services.odata.org/V4/Northwind/Northwind.svc/';
export default class App extends React.Component<{}, {}>{
  constructor(props: object) {
    super(props);
    this.state = { items: [] };
  }
  componentDidMount() {
    new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
    .executeQuery(new Query().from('Orders').take(8))
    .then((e: ReturnOption) => {
      const res = (e.result as IOrders[]).map((row: IOrders, index:
number) => (
        <Row key={row.OrderID} {...row} />
      ));
      this.setState({
        items: res
      });
    });
  }
  public render() {
    return <table id='datatable' className='e-table'>
      <thead>
        <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
      </thead>
      <tbody>{ getValue('items', this.state) }</tbody>
    </table>
  }
}

```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```

export interface IOrders {
  OrderID: number;
  EmployeeID: number;
  CustomerID: string;
  Order_Details: object[];
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
export class Row extends React.Component {
  render() {

```

```

    const item = this.props;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>);
  }
}

```

ROWTEMPLATE.TSX

```

import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
  public render() {
    const item: IOrders = this.props as IOrders;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>);
  }
}

```

Projection using select

The [select](#) method is used to select particular fields or columns from the data source.

APP.JSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { Row } from './rowTemplate';
const SERVICE_URI =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders';
export default class App extends React.Component {
  constructor(props) {
    super(props);
    this.state = { items: [] };
  }
  componentDidMount() {
    new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
      .executeQuery(new Query().select(['OrderID',
'CustomerID', 'EmployeeID']).take(8))
      .then((e) => {
        const res = e.result.map((row) => (
          <Row key={row.OrderID} {...row} />
        ));
        this.setState({
          items: res
        });
      });
  }
  render() {
    return (<table id='datatable' className='e-table'>
      <thead>

```

```

        <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
        </thead>
        <tbody>{getValue('items', this.state)}</tbody>
    </table>);
    }
}

```

APP.TSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query, ReturnOption } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { IOrders } from './orders';
import { Row } from './rowTemplate';
const SERVICE_URI:string =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders';
export default class App extends React.Component<{}, {}>{
    constructor(props: object) {
        super(props);
        this.state = { items: [] };
    }
    componentDidMount() {
        new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
        .executeQuery(new Query().select(['OrderID',
'CustomerID', 'EmployeeID']).take(8))
        .then((e: ReturnOption) => {
            const res = (e.result as IOrders[]).map((row: IOrders, index:
number) => (
                <Row key={row.OrderID} {...row} />
            ));
            this.setState({
                items: res
            });
        });
    }
    public render() {
        return (<table id='datatable' className='e-table'>
            <thead>
                <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
            </thead>
            <tbody>{ getValue('items', this.state) }</tbody>
        </table>)
    }
}

```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```
export interface IOrders {
```

```

    OrderID: number;
    EmployeeID: number;
    CustomerID: string;
    Order_Details: object[];
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
export class Row extends React.Component {
    render() {
        const item = this.props;
        return (
            <tr>
                <td>{item.OrderID}</td>
                <td>{item.CustomerID}</td>
                <td>{item.EmployeeID}</td>
            </tr>
        );
    }
}

```

ROWTEMPLATE.TSX

```

import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
    public render() {
        const item: IOrders = this.props as IOrders;
        return (
            <tr>
                <td>{item.OrderID}</td>
                <td>{item.CustomerID}</td>
                <td>{item.EmployeeID}</td>
            </tr>
        );
    }
}

```

Eager loading navigation properties

You can use the [expand](#) method to eagerly load navigation properties. The navigation properties values are accessed using appropriate field names separated by dot(.) sign.

APP.JSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { Row } from './rowTemplate';
const SERVICE_URI =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component {
    constructor(props) {
        super(props);
        this.state = { items: [] };
    }
    componentDidMount() {
        new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })

```

```

        .executeQuery(new Query()
            .expand('Employee')
            .select(['OrderID', 'CustomerID', 'Employee.FirstName'])
            .take(8))
        .then((e) => {
            const res = e.result.map((row) => <Row key={row.OrderID}
{...row} />);
            this.setState({
                items: res,
            });
        });
    }
    render() {
        return (<table id='datatable' className='e-table'>
            <thead>
                <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
            </thead>
            <tbody>{getValue('items', this.state)}</tbody>
        </table>);
    }
}

```

APP.TSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query, ReturnOption } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { IOOrders } from './orders';
import { Row } from './rowTemplate';
const SERVICE_URI: string =
 'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component<{}, {}>{
    constructor(props: object) {
        super(props);
        this.state = { items: [] };
    }
    componentDidMount() {
        new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
            .executeQuery(
                new Query()
                    .expand('Employee')
                    .select(['OrderID', 'CustomerID', 'Employee.FirstName'])
                    .take(8)
            )
            .then((e: ReturnOption) => {
                const res = (e.result as IOOrders[]).map((row: IOOrders) => (
                    <Row key={row.OrderID} {...row} />
                ));
                this.setState({
                    items: res
                });
            });
    }
    public render() {

```

```

        return (<table id='datatable' className='e-table'>
            <thead>
                <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
            </thead>
            <tbody>{ getValue('items', this.state) }</tbody>
        </table>)
    }
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
;
export class Row extends React.Component {
    render() {
        const item = this.props;
        return (<tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.Employee.FirstName}</td>
        </tr>);
    }
}

```

ROWTEMPLATE.TSX

```

import * as React from 'react';
interface IOrders {OrderID: number, CustomerID: string, Employee: {FirstName:
string} };
export class Row extends React.Component<{}, {}>{
    public render() {
        const item: IOrders = this.props as IOrders;
        return (<tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.Employee.FirstName}</td>
        </tr>)
    }
}

```

Sorting

You can use the [sortBy](#) method to perform sort operation in the data source. Default sorting order is **ascending**. To change the sort order, either you can specify the second argument of [sortBy](#) as **descending** or use the [sortByDesc](#) method.

APP.JSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { Row } from './rowTemplate';
const SERVICE_URI =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders';
export default class App extends React.Component {

```

```

    constructor(props) {
        super(props);
        this.state = { items: [] };
    }
    componentDidMount() {
        new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
            .executeQuery(new Query().sortBy('CustomerID',
'descending').take(8))
            .then((e) => {
                const res = e.result.map((row) => (
                    <Row key={row.OrderID} {...row} />
                ));
                this.setState({
                    items: res
                });
            });
    }
    render() {
        return <table id='datatable' className='e-table'>
            <thead>
                <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
            </thead>
            <tbody>{getValue('items', this.state)}</tbody>
        </table>;
    }
}

```

APP.TSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query, ReturnOption } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { IOOrders } from './orders';
import { Row } from './rowTemplate';
const SERVICE_URI:string=
 'https://services.odata.org/V4/Northwind/Northwind.svc/Orders';
export default class App extends React.Component<{}, {}>{
    constructor(props: object) {
        super(props);
        this.state = { items: [] };
    }
    componentDidMount() {
        new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
            .executeQuery(new Query().sortBy('CustomerID',
'descending').take(8))
            .then((e: ReturnOption) => {
                const res = (e.result as IOOrders[]).map((row: IOOrders,index:
number) => (
                    <Row key={row.OrderID} {...row} />
                ));
                this.setState({
                    items: res
                });
            });
    }
}

```

```

    }
    public render() {
        return (<table id='datatable' className='e-table'>
            <thead>
                <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
            </thead>
            <tbody>{ getValue('items', this.state) }</tbody>
        </table>)
    }
}

```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```

export interface IOrders {
    OrderID: number;
    EmployeeID: number;
    CustomerID: string;
    Order_Details: object[];
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
export class Row extends React.Component {
    render() {
        const item = this.props;
        return (<tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.EmployeeID}</td>
        </tr>);
    }
}

```

ROWTEMPLATE.TSX

```

import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
    public render() {
        const item: IOrders = this.props as IOrders;
        return (<tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.EmployeeID}</td>
        </tr>)
    }
}

```

Multi sorting can be performed by simply chaining the multiple `sortBy` methods.

Filtering

You can use the [where](#) method to build filter criteria which allows you to get reduced view of records. The [where](#) method can also be chained to form multiple filter criteria.

APP.JSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { Row } from './rowTemplate';
const SERVICE_URI =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders';
export default class App extends React.Component {
  constructor(props) {
    super(props);
    this.state = { items: [] };
  }
  componentDidMount() {
    new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
      .executeQuery(new Query().where('EmployeeID', 'equal',
3).take(8))
      .then((e) => {
        const res = e.result.map((row) => (
          <Row key={row.OrderID} {...row} />
        ));
        this.setState({
          items: res
        });
      });
  }
  render() {
    return (
      <table id='datatable' className='e-table'>
        <thead>
          <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
        </thead>
        <tbody>{getValue('items', this.state)}</tbody>
      </table>);
  }
}
```

APP.TSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query, ReturnOption } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { IOrders } from './orders';
import { Row } from './rowTemplate';
const SERVICE_URI:string=
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders';
export default class App extends React.Component<{}, {}>{
  constructor(props: object) {
    super(props);
  }
```

```

        this.state = { items: [] };
    }
    componentDidMount() {
        new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
            .executeQuery(new Query().where('EmployeeID', 'equal',
3).take(8))
            .then((e: ReturnOption) => {
                const res = (e.result as IOOrders[]).map((row: IOOrders, index:
number) => (
                    <Row key={row.OrderID} {...row} />
                ));
                this.setState({
                    items: res
                });
            });
    }
    public render() {
        return <table id='datatable' className='e-table'>
            <thead>
                <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
            </thead>
            <tbody>{ getValue('items', this.state) }</tbody>
        </table>
    }
}

```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```

export interface IOOrders {
    OrderID: number;
    EmployeeID: number;
    CustomerID: string;
    Order_Details: object[];
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
export class Row extends React.Component {
    render() {
        const item = this.props;
        return <tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.EmployeeID}</td>
        </tr>;
    }
}

```

ROWTEMPLATE.TSX

```
import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
  public render() {
    const item: IOrders = this.props as IOrders;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>)
  }
}
```

Filter Operators

Filter operators are generally used to specify the filter type. The various filter operators supported by [DataManager](#) is listed below.

- greaterthan
- greaterthanorequal
- lessthan
- lessthanorequal
- equal
- notequal
- startswith
- endswith
- contains

These filter operators are used for creating filter query using [where](#) method and [Predicate](#) class.

Build complex filter criteria using `Predicate`

Sometimes chaining `where` method is not sufficient to create very complex filter criteria, in such cases we can use [Predicate](#) class to create composite filter criteria.

APP.JSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Predicate, Query } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { Row } from './rowTemplate';
const SERVICE_URI =
 'https://services.odata.org/V4/Northwind/Northwind.svc/Orders';
export default class App extends React.Component {
  constructor(props) {
    super(props);
    this.state = { items: [] };
  }
  componentDidMount() {
    let predicate = new Predicate('EmployeeID', 'equal', 3);
    predicate = predicate.or('EmployeeID', 'equal', 2);

    new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
```

```

        .executeQuery(new Query().where(predicate).take(8))
        .then((e) => {
            const res = e.result.map((row) => (
                <Row key={row.OrderID} {...row} />
            ));
            this.setState({
                items: res
            });
        });
    }
    render() {
        return (<table id='datatable' className='e-table'>
            <thead>
                <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
            </thead>
            <tbody>{getValue('items', this.state)}</tbody>
        </table>);
    }
}

```

APP.TSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Predicate, Query, ReturnOption } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { IOOrders } from './orders';
import { Row } from './rowTemplate';
const SERVICE_URI:string =
 'https://services.odata.org/V4/Northwind/Northwind.svc/Orders';
export default class App extends React.Component<{}, {}>{
    constructor(props: object) {
        super(props);
        this.state = { items: [] };
    }
    componentDidMount() {
        let predicate: Predicate = new Predicate('EmployeeID', 'equal', 3);
        predicate = predicate.or('EmployeeID', 'equal', 2);
        new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
            .executeQuery(new Query().where(predicate).take(8))
            .then((e: ReturnOption) => {
                const res = (e.result as IOOrders[]).map((row: IOOrders, index:
number) => (
                    <Row key={row.OrderID} {...row} />
                ));
                this.setState({
                    items: res
                });
            });
    }
    public render() {
        return (<table id='datatable' className='e-table'>
            <thead>
                <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>

```

```

        </thead>
        <tbody>{ getValue('items', this.state) }</tbody>
    </table>)
    }
}

```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```

export interface IOrders {
    OrderID: number;
    EmployeeID: number;
    CustomerID: string;
    Order_Details: object[];
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
export class Row extends React.Component {
    render() {
        const item = this.props;
        return <tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.EmployeeID}</td>
        </tr>;
    }
}

```

ROWTEMPLATE.TSX

```

import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
    public render() {
        const item: IOrders = this.props as IOrders;
        return <tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.EmployeeID}</td>
        </tr>
    }
}

```

Searching

You can use the [search](#) method to create search criteria, it differs from the filter in the way that search criteria will be applied to all fields in the datasource whereas filter criteria will be applied to a particular field.

APP.JSX

```
import { DataManager , Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { data } from './datasource';
import { Row } from './rowTemplate';
export default class App extends React.Component {
    result = new DataManager({ json: data })
        .executeLocal(new Query().search('VI', ['CustomerID']));
    items = this.result.map((row, index) => (
        <Row key={index} {...row} />
    ));
    render() {
        return (<table id='datatable' className='e-table'>
            <thead>
                <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
            </thead>
            <tbody>{this.items}</tbody>
        </table>);
    }
}
```

APP.TSX

```
import { DataManager, Query } from '@syncfusion/ej2-data';
import { data } from './datasource';
import { Row } from './rowTemplate';
import * as React from 'react';
export default class App extends React.Component<{}, {}> {
    public result: Object[] = new DataManager({ json: data })
        .executeLocal(new Query().search('VI', ['CustomerID']));

    public items: React.ReactElement[] = this.result.map((row: object, index)
=> (
        <Row key={index} {...row} />
    ));
    public render() {
        return (
            <table id='datatable' className='e-table'>
                <thead>
                    <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
                </thead>
                <tbody>{this.items}</tbody>
            </table>
        );
    }
}
```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```
export interface IOrders {
  OrderID: number;
  EmployeeID: number;
  CustomerID: string;
  Order_Details: object[];
}
```

ROWTEMPLATE.JSX

```
import * as React from 'react';
export class Row extends React.Component {
  render() {
    const item = this.props;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>);
  }
}
```

ROWTEMPLATE.TSX

```
import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
  public render() {
    const item: IOrders = this.props as IOrders;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>);
  }
}
```

You can search particular fields by passing the field name collection in the second argument of [search](#) method.

Grouping

[DataManager](#) allow you to group records by category. The [group](#) method is used to add group query.

APP.JSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { GroupRow } from './groupTemplate';
const SERVICE_URI =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component {
  constructor(props) {
    super(props);
    this.state = { items: [] };
  }
}
```

```

componentDidMount() {
    new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
        .executeQuery(new Query().group('CustomerID').take(20))
        .then((e) => {
            const res = e.result.map((row, index) => (
                <GroupRow key={index} {...row} />
            ));
            this.setState({
                items: res
            });
        });
}
render() {
    return (
        <table id='datatable' className='e-table'>
            <thead>
                <tr>
                    <th>Order ID</th>
                    <th>Customer ID</th>
                    <th>Employee ID</th>
                </tr>
            </thead>
            {getValue('items', this.state)}
        </table>
    );
}
}

```

APP.TSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, Group, ODataV4Adaptor, Query, ReturnOption } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { GroupRow } from './groupTemplate';
const SERVICE_URI: string =
 'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component<{}, {}> {
    constructor(props: object) {
        super(props);
        this.state = { items: [] };
    }
    componentDidMount() {
        new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
            .executeQuery(new Query().group('CustomerID').take(20))
            .then((e: ReturnOption) => {
                const res = (e.result as Group[]).map((row: Group,
index:number) => (
                    <GroupRow key={index} {...row} />
                ));
                this.setState({
                    items: res,
                });
            });
    }
    public render() {

```

```

        return (
            <table id='datatable' className='e-table'>
                <thead>
                    <tr>
                        <th>Order ID</th>
                        <th>Customer ID</th>
                        <th>Employee ID</th>
                    </tr>
                </thead>
                {getValue('items', this.state)}
            </table>
        );
    }
}

```

GROUPTEMPLATE.JSX

```

import * as React from 'react';
import { Row } from './rowTemplate';
export class GroupRow extends React.Component {
    getRows(data) {
        return data.map((row, index) => (
            <Row key={index} {...row} />
        ));
    }
    render() {
        const item = this.props;
        const ag = { caption: item.field + ' - ' + (item.items &&
            item.items[0][item.field]) };
        return (
            <tbody>
                <Row key={ag.caption} {...ag} />
                {this.getRows(item.items)}
            </tbody>
        );
    }
}

```

GROUPTEMPLATE.TSX

```

import { Group } from '@syncfusion/ej2-data';
import * as React from 'react';
import { IOOrders } from './orders';
import { Row } from './rowTemplate';
export class GroupRow extends React.Component<{}, {}> {
    public getRows(data: IOOrders[]) {
        return data.map((row: IOOrders, index: number) => (
            <Row key={index} {...row} />
        ));
    }
    public render() {
        const item: Group = this.props as Group;
        const ag: { caption: string } = {
            caption: item.field + ' - ' + (item.items && (item.items[0] as
            Object[][item.field as any])),
        };
    }
}

```

```

        return (
            <tbody>
                <Row key={ag.caption} {...ag} />
                {this.getRows(item.items as IOrders[])}
            </tbody>
        );
    }
}

```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```

export interface IOrders {
    SNO: number,
    OrderID: number;
    EmployeeID: number;
    CustomerID: string;
    // Order_Details: object[];
}

```

ROWTEMPLATE.JSX

```

import { getValue } from '@syncfusion/ej2-base';
import * as React from 'react';
export class Row extends React.Component {
    render() {
        const item = this.props;
        if (getValue('caption', item)) {
            return <tr>
                <td colSpan={3}>{getValue('caption', item)}</td>
            </tr>;
        }
        return <tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.EmployeeID}</td>
        </tr>;
    }
}

```

ROWTEMPLATE.TSX

```

import { getValue } from '@syncfusion/ej2-base';
import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
    public render() {
        const item: IOrders = this.props as IOrders;
        if (getValue('caption', item)) {
            return <tr>
                <td colSpan={3}>{getValue('caption', item)}</td>
            </tr>
        }
    }
}

```

```

    }
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>)
  }
}

```

Multiple grouping can be done by simply chaining the `group` method.

Paging

You can query paged data using `page` method. This allow you to query particular set of records based on the page size and index.

APP.JSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Predicate, Query } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { Row } from './rowTemplate';
const SERVICE_URI =
 'https://services.odata.org/V4/Northwind/Northwind.svc/Orders';
export default class App extends React.Component {
  constructor(props) {
    super(props);
    this.state = { items: [] };
  }
  componentDidMount() {
    new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
      .executeQuery(new Query().page(2, 8))
      .then((e) => {
        const res = e.result.map((row) => (
          <Row key={row.OrderID} {...row} />
        ));
        this.setState({
          items: res
        });
      });
  }
  render() {
    return (<table id='datatable' className='e-table'>
      <thead>
        <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
      </thead>
      <tbody>{getValue('items', this.state)}</tbody>
    </table>);
  }
}

```

APP.TSX

```

import { getValue } from '@syncfusion/ej2-base';

```

```

import { DataManager, ODataV4Adaptor, Query, ReturnOption } from
'@syncfusion/ej2-data';
import * as React from 'react';
import { IOrders } from './orders';
import { Row } from './rowTemplate';
const SERVICE_URI:string =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders';
export default class App extends React.Component<{}, {}>{
  constructor(props: object) {
    super(props);
    this.state = { items: [] };
  }
  componentDidMount() {
    new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
      .executeQuery(new Query().page(2, 8))
      .then((e: ReturnOption) => {
        const res = (e.result as IOrders[]).map((row: IOrders, index:
number) => (
          <Row key={row.OrderID} {...row} />
        ));
        this.setState({
          items: res
        });
      });
  }
  public render() {
    return <table id='datatable' className='e-table'>
      <thead>
        <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
      </thead>
      <tbody>{ getValue('items', this.state) }</tbody>
    </table>
  }
}

```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```

export interface IOrders {
  OrderID: number;
  EmployeeID: number;
  CustomerID: string;
  Order_Details: object[];
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
export class Row extends React.Component {
  render() {
    const item = this.props;
  }
}

```

```

        return (<tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.EmployeeID}</td>
        </tr>);
    }
}

```

ROWTEMPLATE.TSX

```

import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
    public render() {
        const item: IOrders = this.props as IOrders;
        return (<tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.EmployeeID}</td>
        </tr>)
    }
}

```

Aggregation

The [aggregate](#) method allows you to get aggregated value for a field based on the type.

The built-in aggregate types are,

- sum
- average
- min
- max
- count
- truecount
- falsecount

AGGREGATETEMPLATE.JSX

```

import * as React from 'react';
export class AggregateRow extends React.Component {
    render() {
        const item = this.props;
        return (<tr>
            <td />
            <td />
            <td>Min: {item.min}</td>
        </tr>);
    }
}

```

AGGREGATETEMPLATE.TSX

```

import { Aggregates } from '@syncfusion/ej2-data';

```

```
import * as React from 'react';
export class AggregateRow extends React.Component<{ }, {}> {
  public render() {
    const item: Aggregates = this.props as Aggregates;
    return (
      <tr>
        <td/>
        <td/>
        <td>{`Min: ${item.min}`}</td>
      </tr>
    );
  }
}
```

APP.JSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { AggregateRow } from './aggregateTemplate';
import { Row } from './rowTemplate';
const SERVICE_URI =

  render() {
    const item = this.props;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>);
  }
}
```

ROWTEMPLATE.TSX

```
import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
  public render() {
    const item: IOrders = this.props as IOrders;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>);
  }
}
```

Hierarchical query

You can use the [hierarchy](#) method to build nested query. The hierarchical queries are commonly required when you use foreign key binding.

The [foreignKey](#) method is used to specify the key field of the foreign table and the second argument of the [hierarchy](#) method accepts a selector function which selects the records from the foreign table.

APP.JSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';

```

Manipulation in React Data component

In this section, you will see in detail about how to manipulate data using [DataManager](#). The [DataManager](#) can create, update and delete records either in local data source or remote data source.

Each data sources uses different way in handling the CRUD operations and hence [DataManager](#) uses data adaptors to manipulate data that can be understood by a particular data source.

Insert

The [insert](#) method of [DataManager](#) is used to add new record to the data source. For remote data source, the new record will be send along with the request to the server.

APP.JSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { data } from './datasource';
import { Row } from './rowTemplate';
export default class App extends React.Component {
  dm;
  style;
  constructor(props) {
    super(props);
    this.state = { items: [] };
    this.style = { class: 'e-form' };
    this.dm = new DataManager(data.slice(0, 5));
    this.dm.executeQuery(new Query())
      .then((e) => {
        this.setState({
          items: e.result.map((row, index) => (
            <Row key={index} {...row} />
          ))
        });
      });
    this.insertUpdate = this.insertUpdate.bind(this);
  }
}

```

```

insertUpdate() {
    const orderid = document.getElementById('OrderID');
    const cusid = document.getElementById('CustomerID');
    const empid = document.getElementById('EmployeeID');
    const rowdata = {
        CustomerID: cusid.value,
        EmployeeID: +empid.value,
        OrderID: +orderid.value
    };
    if (!rowdata.OrderID) {
        return;
    }
    this.dm.insert(rowdata);
    this.dm.executeQuery(new Query())
        .then((e) => {
            this.setState({
                items: e.result.map((row) => (
                    <Row key={row.OrderID} {...row} />
                ))
            });
        });
}

render() {
    return (<div><div style={this.style}>
        <input type="number" id='OrderID' placeholder="Order ID"/>
        <input type="text" id="CustomerID" placeholder="Customer ID"/>
        <input type="number" id="EmployeeID" placeholder="Employee ID"/>
        <input type="button" value="Insert" id="manipulate"
onClick={this.insertUpdate}/></div>
        <div><table id='datatable' className='e-table'>
            <thead>
                <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
            </thead>
            <tbody>{getValue('items', this.state)}</tbody>
        </table>
        </div></div>);
}
}

```

APP.TSX

```

import { getValue } from '@syncfusion/ej2-base';

import * as React from 'react';
import { data } from './datasource';
import { Row } from './rowTemplate';
export default class App extends React.Component<{}, {}>{
    public dm: DataManager;
    public style: { [x: string]: string };
    constructor(props: object) {
        super(props);
        this.state = { items: [] };
        this.style = { class: 'e-form' };
        this.dm = new DataManager(data.slice(0, 5));
        this.dm.executeQuery(new Query())

```

```

        .then((e: ReturnOption) => {
            this.setState({
                items: (e.result as object[]).map((row: object, index: number) => (
                    <Row key={index} {...row} />
                ))
            });
        });
        this.insertUpdate = this.insertUpdate.bind(this);
    }
    public insertUpdate() {
        const orderid: HTMLInputElement = document.getElementById('OrderID')
as HTMLInputElement;
        const cusid: HTMLInputElement = document.getElementById('CustomerID')
as HTMLInputElement;
        const empid: HTMLInputElement = document.getElementById('EmployeeID')
as HTMLInputElement;
        const rowdata: { OrderID: number, CustomerID: string, EmployeeID:
number } = {
            CustomerID: cusid.value,
            EmployeeID: +empid.value,
            OrderID: +orderid.value
        };
        if (!rowdata.OrderID) { return; }
        this.dm.insert(rowdata);
        this.dm.executeQuery(new Query())
            .then((e: ReturnOption) => {
                this.setState({
                    items: (e.result as object[]).map((row:
object, index: number) => (
                        <Row key={index} {...row} />
                    ))
                });
            });
    }
    public render() {
        return (<div><div style={this.style}>
            <input type="number" id='OrderID' placeholder="Order ID" />
            <input type="text" id="CustomerID" placeholder="Customer ID" />
            <input type="number" id="EmployeeID" placeholder="Employee ID" />
            <input type="button" value="Insert" id="manipulate"
onClick={this.insertUpdate} /></div>
            <div><table id='datatable' className='e-table'>
                <thead>
                    <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
                </thead>
                <tbody>{ getValue('items', this.state) }</tbody>
            </table>
            </div></div>)
    }
}

```

ROWTEMPLATE.JSX

```
import * as React from 'react';
```

```
export class Row extends React.Component {
  render() {
    const item = this.props;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>);
  }
}
```

ROWTEMPLATE.TSX

```
import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
  public render() {
    const item: IOrders = this.props as IOrders;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>);
  }
}
```

In remote data sources, when the primary key field is an identity field, then it is advised to return the created data in the response.

Update

The [update](#) method of [DataManager](#) is used to modify/update a record in the data source. For remote data source, the modified record will be send along with the request to the server.

APP.JSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { data } from './datasource';
import { Row } from './rowTemplate';
export default class App extends React.Component {
  dm;
  style;
  constructor(props) {
    super(props);
    this.state = { items: [] };
    this.style = { class: 'e-form' };
    this.dm = new DataManager(data.slice(0, 5));
    this.dm.executeQuery(new Query())
      .then((e) => {
        this.setState({
          items: e.result.map((row, index) => (
            <Row key={index} {...row} />
          ))
        });
      });
  }
}
```

```

    });
    this.insertUpdate = this.insertUpdate.bind(this);
  }
  insertUpdate() {

            <div><table id='datatable' className='e-table'>
                <thead>
                    <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
                </thead>
                <tbody>{ getValue('items', this.state) }</tbody>
            </table>
            </div></div>
        }
    }
}

```

ROWTEMPLATE.JSX

```
import * as React from 'react';
export class Row extends React.Component {
  render() {
    const item = this.props;
    return (
      <tr>
        <td>{item.OrderID}</td>
        <td>{item.CustomerID}</td>
        <td>{item.EmployeeID}</td>
      </tr>
    );
  }
}
```

ROWTEMPLATE.TSX

```
import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
  public render() {
    const item: IOrders = this.props as IOrders;
    return (
      <tr>
        <td>{item.OrderID}</td>
        <td>{item.CustomerID}</td>
        <td>{item.EmployeeID}</td>
      </tr>
    );
  }
}
```

Primary key name is required by the **update** method to find the record to be updated.

Remove

The **remove** method of **DataManager** is used to remove a record from the data source. For remote data source, the record details such as primary key and data will be send along with the request to the server.

APP.JSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { data } from './datasource';
import { Row } from './rowTemplate';
export default class App extends React.Component {
  dm;
  style;
  constructor(props) {
    super(props);
    this.state = { items: [] };
    this.style = { class: 'e-form' };
    this.dm = new DataManager(data.slice(0, 5));
    this.dm.executeQuery(new Query())
      .then((e) => {
        this.setState({
          items: e.result.map((row, index) => (
            <Row key={index} {...row} />
          ))
        });
      });
  }
}
```

```

    });
    this.insertUpdate = this.insertUpdate.bind(this);
  }
  insertUpdate() {
    const orderid = document.getElementById('OrderID');
    const rowdata = {
      OrderID: +orderid.value,
    };
    if (!rowdata.OrderID) {
      return;
    }
    this.dm.remove('OrderID', rowdata);
    this.dm.executeQuery(new Query())
      .then((e) => {
        this.setState({
          items: e.result.map((row, index) => (
            <Row key={index} {...row} />
          ))
        });
      });
  }
  render() {
    return (<div><div style={this.style}>
      <input type="number" id='OrderID' placeholder="Order ID"/>
      <input type="button" value="Remove" id="manipulate"
onClick={this.insertUpdate}/></div>
      <table id='datatable' className='e-table'>
        <thead>
          <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
        </thead>
        <tbody>{getValue('items', this.state)}</tbody>
      </table>
    </div>);
  }
}

```

APP.TSX

```

import { getValue } from '@syncfusion/ej2-base';
import { DataManager, Query, ReturnOption } from '@syncfusion/ej2-data';
import * as React from 'react';
import { data } from './datasource';
import { Row } from './rowTemplate';
export default class App extends React.Component<{}, {}>{
  public dm: DataManager;
  public style: { [x: string]: string };
  constructor(props: object) {
    super(props);
    this.state = { items: [] };
    this.style = { class: 'e-form' };
    this.dm = new DataManager(data.slice(0, 5));
    this.dm.executeQuery(new Query())
      .then((e: ReturnOption) => {

    <input type="number" id='OrderID' placeholder="Order ID"/>
    <input type="button" value="Remove" id="manipulate"
onClick={this.insertUpdate} /></div>
    <table id='datatable' className='e-table'>
      <thead>
        <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
      </thead>
      <tbody>{ getValue('items', this.state) }</tbody>
    </table>
  </div>)
}
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
export class Row extends React.Component {
  render() {
    const item = this.props;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>);
  }
}

```

ROWTEMPLATE.TSX

```
import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
  public render() {
    const item: IOrders = this.props as IOrders;
    return <tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>
  }
}
```

Primary key name and its value are required to find the record to be removed.

Batch Edit Operation

[DataManager](#) supports batch processing for the CRUD operations. You can use the [saveChanges](#) method to batch the edit operation. For remote data source, requests to add, remove and change are handled altogether at a time rather than passing the request separately for each operation.

APP.JSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { data } from './datasource';
import { Row } from './rowTemplate';
export default class App extends React.Component {
  dm;
  style;
  changes;
  constructor(props) {
    super(props);
    this.state = { items: [] };
    this.style = { class: 'e-form' };
    this.changes = { changedRecords: [], addedRecords: [],
    deletedRecords: [] };
    this.dm = new DataManager(data.slice(0, 5));
    this.dm.executeQuery(new Query())
    .then((e) => {
      this.setState({
        items: e.result.map((row) => (
          <Row key={row.OrderID} {...row} />
        ))
      });
    });
    this.action = this.action.bind(this);
    this.saveChanges = this.saveChanges.bind(this);
  }
  action(event) {
    let action = event.currentTarget.getAttribute('value');
    action = (action === 'Update' ? 'changed' : action === 'Insert' ?
    'added' : 'deleted') + 'Records';
    const orderid = document.getElementById('OrderID');
    const cusid = document.getElementById('CustomerID');
    const empid = document.getElementById('EmployeeID');
```

```

        const rowdata = {
            CustomerID: cusid.value,
            EmployeeID: +empid.value,
            OrderID: +orderid.value
        };
        if (!rowdata.OrderID) {
            return;
        }
        this.changes[action].push(rowdata);
        orderid.value = cusid.value = empid.value = '';
    }
    saveChanges() {
        this.dm.saveChanges(this.changes);
        this.dm.executeQuery(new Query())
            .then((e) => {
                this.setState({

            <td>{item.EmployeeID}</td>
        </tr>);
    }
}

```

```
}
}
```

How to in React Data component

Work in offline mode

On remote data binding, every time invoking **executeQuery** will send request to the server and the query will be processed on server-side. To avoid post back to server on calling **executeQuery** to load all the data on initialization time and make the query processing in client-side. To enable this behavior, you can use **offline** property of [DataManager](#).

APP.JSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { Row } from './rowTemplate';
const SERVICE_URI =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component {
  constructor(props) {
    super(props);
    this.state = { items: [] };
  }
  componentDidMount() {
    const dm = new DataManager({ url: SERVICE_URI, adaptor: new
ODataV4Adaptor(), offline: true }, new Query().take(8));
    dm.ready.then((e) => {
      const res = e.result.map((row) => <Row key={row.OrderID} {...row}
/>);
      this.setState({
        items: res,
      });
    });
  }
  render() {
    return (<table id='datatable' className='e-table'>
      <thead>
        <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
      </thead>
      <tbody>{getValue('items', this.state)}</tbody>
    </table>);
  }
}
```

APP.TSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query, ReturnOption } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { IOrders } from './orders';
import { Row } from './rowTemplate';
```

```

const SERVICE_URI: string =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component<{}, {}>{
  constructor(props: object) {
    super(props);
    this.state = { items: [] };
  }
  componentDidMount() {
    const dm: DataManager = new DataManager({ url: SERVICE_URI, adaptor:
new ODataV4Adaptor(), offline: true }, new Query().take(8));
    dm.ready.then((e: ReturnOption) => {
      const res = (e.result as IOOrders[]).map((row: IOOrders, index:
number) => (
        <Row key={row.OrderID} {...row} />
      ));
      this.setState({
        items: res
      });
    });
  }
  public render() {
    return <table id='datatable' className='e-table'>
      <thead>
        <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
      </thead>
      <tbody>{ getValue('items', this.state) }</tbody>
    </table>
  }
}

```

ORDERS.JSX

```
export {};
```

ORDERS.TSX

```

export interface IOOrders {
  OrderID: number;
  EmployeeID: number;
  CustomerID: string;
  Order_Details: object[];
}

```

ROWTEMPLATE.JSX

```

import * as React from 'react';
export class Row extends React.Component {
  render() {
    const item = this.props;
    return <tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>;
  }
}

```

```
}
}
```

ROWTEMPLATE.TSX

```
import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
    public render() {
        const item: IOrders = this.props as IOrders;
        return (<tr>
            <td>{item.OrderID}</td>
            <td>{item.CustomerID}</td>
            <td>{item.EmployeeID}</td>
        </tr>)
    }
}
```

The loaded data will be cached in the **json** property of [DataManager](#).

Sending additional parameters to server

You can use the [addParams](#) method of [Query](#) class, to add custom parameter to the data request.

APP.JSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query } from '@syncfusion/ej2-data';
import * as React from 'react';
import { Row } from './rowTemplate';
const SERVICE_URI =
'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component {
    constructor(props) {
        super(props);
        this.state = { items: [] };
    }
    componentDidMount() {
        new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
            .executeQuery(new Query().addParams('$top', '8'))
            .then((e) => {
                const res = e.result.map((row) => <Row key={row.OrderID} {...row}
/>);
                this.setState({
                    items: res,
                });
            });
    }
    render() {
        return (<table id='datatable' className='e-table'>
            <thead>
                <tr><th>Order ID</th><th>Customer ID</th><th>Employee
ID</th></tr>
            </thead>
            <tbody>{getValue('items', this.state)}</tbody>
        </table>);
    }
}
```

```
}

```

APP.TSX

```
import { getValue } from '@syncfusion/ej2-base';
import { DataManager, ODataV4Adaptor, Query, ReturnOption } from
 '@syncfusion/ej2-data';
import * as React from 'react';
import { IOrders } from './orders';
import { Row } from './rowTemplate';
const SERVICE_URI: string =
 'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
export default class App extends React.Component<{}, {}>{
  constructor(props: object) {
    super(props);
    this.state = { items: [] };
  }
  componentDidMount() {
    new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor() })
      .executeQuery(new Query().addParams('$top', '8'))
      .then((e: ReturnOption) => {
        const res = (e.result as IOrders[]).map((row: IOrders, index:
number) => (
          <Row key={row.OrderID} {...row} />
        ));
        this.setState({
          items: res
        });
      });
  }
  public render() {

```

ROWTEMPLATE.TSX

```
import * as React from 'react';
import { IOrders } from './orders';
export class Row extends React.Component<{}, {}>{
  public render() {
    const item: IOrders = this.props as IOrders;
    return (<tr>
      <td>{item.OrderID}</td>
      <td>{item.CustomerID}</td>
      <td>{item.EmployeeID}</td>
    </tr>)
  }
}
```

Adding custom headers

You can add custom headers to the request made by [DataManager](#) using the **headers** property.

```
`ts
```

```
import { DataManager, ODataV4Adaptor, Query, ReturnOption } from '@syncfusion/ej2-data';
const SERVICE_URI: string = 'https://services.odata.org/V4/Northwind/Northwind.svc/Orders/';
new DataManager({ url: SERVICE_URI, adaptor: new ODataV4Adaptor, headers:[{ 'syncfusion': 'true' } ] })
.executeQuery(new Query())
.then((e: ReturnOption) => {
// get result from e.result
});
`
```

Adding custom headers while making cross domain request will initiate preflight request.

DatePicker

Getting started

This section explains you the steps required to create a simple [React DatePickerLink to the Video](#) and demonstrate the basic usage of the DatePicker component.

To get start quickly with React Date Picker, you can check on this video:

Dependencies

The below list of dependencies are required to use the `DatePicker` component in your application.

```
`javascript
|-- @syncfusion/ej2-react-calendars
|-- @syncfusion/ej2-react-base
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-calendars
|-- @syncfusion/ej2-inputs
|-- @syncfusion/ej2-splitbuttons
|-- @syncfusion/ej2-lists
|-- @syncfusion/ej2-popups
|-- @syncfusion/ej2-buttons
`,`
```

Installation and configuration

You can use [create-react-app](#) to setup the applications.

To install `create-react-app` run the following command.

```
`
npm install -g create-react-app
`,`
```

- To setup basic `React` sample use following commands.

```
`
create-react-app quickstart --scripts-version=react-scripts-ts
cd quickstart
`,`
```

Adding Syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](#) public registry.

You can choose the component that you want to install. For this application, we are going to use `DatePicker` component.

To install `DatePicker` component, use the following command

```
`bash
npm install @syncfusion/ej2-react-calendars --save
```

,

Adding Style sheet to the Application

To render the DatePicker component, need to import DatePicker and its dependent component's styles as given below in `App.css`.

```
`css
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-react-calendars/styles/material.css";
,
```

Note: If you want to refer the combined component styles, please make use of our [CRG](#) (Custom Resource Generator) in your application.

Adding DatePicker component to the Application

- To include the DatePicker component in application import the `DatePickerComponent` from `ej2-react-calendars` package in `App.tsx`.
- Then add the DatePicker component as shown in below code example.

[src/App.tsx]

[Class-component]

```
`ts
// import the datePickerComponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import './App.css';
export default class App extends React.Component<{}, {}> {
  public render() {
    return <DatePickerComponent id="datepicker" />;
  }
}
```

,

[Functional-component]

```
`ts
// import the datePickerComponent
```

```
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  return <DatePickerComponent id="datepicker" />;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

Run the application

Now run the `npm start` command in the console, it will run your application and open the browser window.

```
npm start
```

The below examples shows the basic DatePicker component.

[Class-component]

INDEX.JSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  render() {
    return <DatePickerComponent id="datepicker" placeholder="Enter
date"/>;
  }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
  public render() {
    return <DatePickerComponent id="datepicker" placeholder="Enter
date"/>;
  }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]

INDEX.JSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
    return <DatePickerComponent id="datepicker" placeholder="Enter date"/>;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App(){
    return <DatePickerComponent id="datepicker" placeholder="Enter date"/>;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

Setting the value, min and max dates

The following example demonstrates how to set the value, min and max dates on initializing the DatePicker.

Here the DatePicker allows to select a date within a range from 9th to 15th in a month of May 2017. To know more about range restriction in DatePicker, please refer this [page](#).

[Class-component]**INDEX.JSX**

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    // initialize the value, min and max
    dateValue = new Date('05/11/2017');
    minDate = new Date('05/09/2017');
    maxDate = new Date('05/15/2017');
    render() {
        return <DatePickerComponent id="datepicker" value={this.dateValue}
min={this.minDate} max={this.maxDate}/>;
    }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
```

```
export default class App extends React.Component<{}, {}> {
  // initialize the value, min and max
  private dateValue: Date = new Date('05/11/2017');
  private minDate: Date = new Date('05/09/2017');
  private maxDate: Date = new Date('05/15/2017');
  public render() {
    return <DatePickerComponent id="datepicker" value={this.dateValue}
    min={this.minDate} max={this.maxDate} />;
  }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]

INDEX.JSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  // initialize the value, min and max
  const dateValue = new Date('05/11/2017');
  const minDate = new Date('05/09/2017');
  const maxDate = new Date('05/15/2017');
  return <DatePickerComponent id="datepicker" value={dateValue}
  min={minDate} max={maxDate}/>;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
  // initialize the value, min and max
  const dateValue: Date = new Date('05/11/2017');
  const minDate: Date = new Date('05/09/2017');
  const maxDate: Date = new Date('05/15/2017');
  return <DatePickerComponent id="datepicker" value={dateValue}
  min={minDate} max={maxDate} />;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

Note: You can also explore our [React DatePicker example](#) that shows you how to render the DatePicker in React.

Date range in React DatePicker component

DatePicker provides an option to select a date value within a specified range by using the [min](#) and [max](#) properties. Always the min value has to be lesser than the max value.

When the min and max properties are configured and the selected date value is out-of-range or invalid, then the model value will be set to **out of range** date value or **null** respectively with highlighted **error** class to indicates the date is out of range or invalid.

The value property depends on the min/max with respect to [strictMode](#) property. The below example allows to select a date within a range from 7th to 27th days in a month.

[Class-component]

INDEX.JSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    // creates a datepicker with min and max property
    minDate = new Date(new Date().getFullYear(), new Date().getMonth(), 7);
    maxDate = new Date(new Date().getFullYear(), new Date().getMonth(), 27);
    dateValue = new Date(new Date().setDate(14));
    render() {
        return <DatePickerComponent id="datepicker" value={this.dateValue}
min={this.minDate} max={this.maxDate}/>;
    }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    // creates a datepicker with min and max property
    private minDate: Date = new Date(new Date().getFullYear(), new
Date().getMonth(), 7);
    private maxDate: Date = new Date(new Date().getFullYear(), new
Date().getMonth(), 27);
    private dateValue: Date = new Date(new Date().setDate(14));
    public render() {
        return <DatePickerComponent id="datepicker" value={this.dateValue}
min={this.minDate} max={this.maxDate} />;
    }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]

INDEX.JSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
    // creates a datepicker with min and max property
    const minDate = new Date(new Date().getFullYear(), new Date().getMonth(),
7);
    const maxDate = new Date(new Date().getFullYear(), new Date().getMonth(),
27);
    const dateValue = new Date(new Date().setDate(14));
    return <DatePickerComponent id="datepicker" value={dateValue}
min={minDate} max={maxDate}/>;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
    // creates a datepicker with min and max property
    const minDate: Date = new Date(new Date().getFullYear(), new
Date().getMonth(), 7);
    const maxDate: Date = new Date(new Date().getFullYear(), new
Date().getMonth(), 27);
    const dateValue: Date = new Date(new Date().setDate(14));
    return <DatePickerComponent id="datepicker" value={dateValue}
min={minDate} max={maxDate} />;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

If the value of `min` or `max` properties changed through code behind. Then you have to update the `value` property to set within the range.

Date format in React DatePicker component

Date format is a way of representing the date value in different string format in the textbox.

By default, the DatePicker's format is based on the culture. You can also set the own custom format by using the

[format](#) property.

Once the date format property has been defined it will be common to all the cultures.

To know more about the date format standards, refer to the [Internationalization Date Format](#) section.

The following example demonstrates the DatePicker with the custom format (yyyy-MM-dd).

[Class-component]

INDEX.JSX

```
// import the datePickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    dateValue = new Date();
    render() {
        return <DatePickerComponent id="datepicker" value={this.dateValue}
format='yyyy-MM-dd' placeholder='Enter date' />;
    }
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datePickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    private dateValue:Date=new Date();
    public render() {
        return <DatePickerComponent id="datepicker" value={this.dateValue}
format='yyyy-MM-dd' placeholder='Enter date' />
    }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]**INDEX.JSX**

```
// import the datePickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
    const dateValue = new Date();
    return <DatePickerComponent id="datepicker" value={dateValue}
format='yyyy-MM-dd' placeholder='Enter date' />;
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datePickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
function App() {
    const dateValue:Date=new Date();
    return <DatePickerComponent id="datepicker" value={dateValue}
format='yyyy-MM-dd' placeholder='Enter date' />
}
```

```
};  
ReactDOM.render(<App />, document.getElementById('element'));
```

Date masking in React Datepicker component

DatePicker has `enableMask` property that provides the option to enable the built-in date masking support. Also, you must inject the MaskedDateTime module to enable the masking support.

[Class-component]

INDEX.JSX

```
import { DatePickerComponent, Inject, MaskedDateTime } from '@syncfusion/ej2-react-calendars';  
import * as ReactDOM from 'react-dom';  
import * as React from 'react';  
export default class App extends React.Component {  
  render() {  
    return <DatePickerComponent enableMask={true}><Inject  
services={[MaskedDateTime]} /></DatePickerComponent>;  
  }  
}  
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { DatePickerComponent, Inject, MaskedDateTime } from '@syncfusion/ej2-react-calendars';  
import * as ReactDOM from 'react-dom';  
import * as React from 'react';  
export default class App extends React.Component<{}, {}> {  
  public render() {  
    return <DatePickerComponent enableMask={true}><Inject  
services={[MaskedDateTime]} /></DatePickerComponent>  
  }  
}  
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]

INDEX.JSX

```
import { DatePickerComponent, Inject, MaskedDateTime } from '@syncfusion/ej2-react-calendars';  
import * as ReactDOM from 'react-dom';  
import * as React from 'react';  
function App() {  
  return <DatePickerComponent enableMask={true}><Inject  
services={[MaskedDateTime]} /></DatePickerComponent>;  
}  
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { DatePickerComponent, Inject, MaskedDateTime } from '@syncfusion/ej2-react-calendars';
import * as ReactDOM from 'react-dom';
import * as React from 'react';
function App() {
    return <DatePickerComponent enableMask={true}><Inject
services={[MaskedDateTime]} /></DatePickerComponent>
}
ReactDOM.render(<App />, document.getElementById('element'));
```

The mask pattern is defined based on the provided date format to the component. If the format is not specified, the mask pattern is formed based on the default format of the current culture.

| **Keys | Actions |**

| --- | --- |

| Up / Down arrows | To increment and decrement the selected portion of the date. |

| Left / Right arrows and Tab | To navigate the selection from one portion to next portion |

The following example demonstrates default and custom format of DatePicker component with mask.

[Class-component]

INDEX.JSX

```
import { DatePickerComponent, Inject, MaskedDateTime } from '@syncfusion/ej2-react-calendars';
import * as ReactDOM from 'react-dom';
import * as React from 'react';
export default class App extends React.Component {
    render() {
        return (<div>
            /* specifies the masked DatePicker component without format */
            <DatePickerComponent enableMask={true}><Inject
services={[MaskedDateTime]} /></DatePickerComponent>
            <br />
            <br />
            /* specifies the masked DatePicker component with format */
            <DatePickerComponent format='dd-MM-yyyy'
enableMask={true}><Inject services={[MaskedDateTime]} /></DatePickerComponent>
            </div>);
    }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { DatePickerComponent, Inject, MaskedDateTime } from '@syncfusion/ej2-react-calendars';
import * as ReactDOM from 'react-dom';
import * as React from 'react';
export default class App extends React.Component<{}, {}> {
    public render() {
```

```

        return (
            <div>
                /* specifies the masked DatePicker component without format */
                <DatePickerComponent enableMask={true}><Inject
services={ [MaskedDateTime] } /></DatePickerComponent>
                <br />
                <br />
                /* specifies the masked DatePicker component with format */
                <DatePickerComponent format='dd-MM-yyyy'
enableMask={true}><Inject services={ [MaskedDateTime] }
/></DatePickerComponent>
            </div>
        );
    }
}
ReactDOM.render(<App />, document.getElementById('element'));

```

[Functional-component]

INDEX.JSX

```

import { DatePickerComponent, Inject, MaskedDateTime } from '@syncfusion/ej2-react-calendars';
import * as ReactDOM from 'react-dom';
import * as React from 'react';
function App() {
    return (<div>
        /* specifies the masked DatePicker component without format */
        <DatePickerComponent enableMask={true}><Inject
services={ [MaskedDateTime] } /></DatePickerComponent>
        <br />
        <br />
        /* specifies the masked DatePicker component with format */
        <DatePickerComponent format='dd-MM-yyyy'
enableMask={true}><Inject services={ [MaskedDateTime] } /></DatePickerComponent>
    </div>);
}
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { DatePickerComponent, Inject, MaskedDateTime } from '@syncfusion/ej2-react-calendars';
import * as ReactDOM from 'react-dom';
import * as React from 'react';
function App() {
    return (
        <div>
            /* specifies the masked DatePicker component without format */
            <DatePickerComponent enableMask={true}><Inject
services={ [MaskedDateTime] } /></DatePickerComponent>

```

```

        <br />
        <br />
        { /* specifies the masked DatePicker component with format
    */}
        <DatePickerComponent format='dd-MM-yyyy'
enableMask={true}><Inject services={ [MaskedDateTime] }
/></DatePickerComponent>
    </div>
    );
}
ReactDOM.render(<App />, document.getElementById('element'));

```

Configure Mask Placeholder

You can change mask placeholder value through property `maskPlaceholder`. By default , it takes the full name of date and time co-ordinates such as `day`, `month`, `year`, `hour` etc.

While changing to a culture other than `English`, ensure that locale text for the concerned culture is loaded through load method of L10n class for mask placeholder values like below.

```

`ts
//Load the L10n from ej2-base
import { L10n } from '@syncfusion/ej2-base';
//load the locale object to set the localized mask placeholder value
L10n.load({
  'de': {
    datepicker: { day: 'Tag', month: 'Monat', year: 'Jahr' }
  }
});
`

```

The following example demonstrates default and customized mask placeholder value.

[Class-component]

INDEX.JSX

```

import { DatePickerComponent, Inject, MaskedDateTime } from '@syncfusion/ej2-react-calendars';
import * as ReactDOM from 'react-dom';
import * as React from 'react';
export default class App extends React.Component {
  maskPlaceholderValue;
  constructor(props) {
    super(props);
    this.maskPlaceholderValue = { day: 'd', month: 'M', year: 'y' };
  }
  render() {
    return (
      <div>
        { /* specifies the masked DatePicker component without mask
placeholder */}

```

```

        <DatePickerComponent enableMask={true}><Inject
services={ [MaskedDateTime] }/></DatePickerComponent>
        <br />
        <br />
        /* specifies the masked DatePicker component with mask
placeholder */
        <DatePickerComponent enableMask={true}
maskPlaceholder={this.maskPlaceholderValue}><Inject
services={ [MaskedDateTime] }/></DatePickerComponent>
        </div>;
    }
}
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { DatePickerComponent, Inject, MaskedDateTime } from '@syncfusion/ej2-
react-calendars';
import * as ReactDOM from 'react-dom';
import * as React from 'react';
export default class App extends React.Component<{}, {}> {
    private maskPlaceholderValue: object;
    constructor(props: {}) {
        super(props);
        this.maskPlaceholderValue = {day: 'd', month: 'M', year: 'y'};
    }
    public render() {
        return (
            <div>
                /* specifies the masked DatePicker component without mask
placeholder */
                <DatePickerComponent enableMask={true}><Inject
services={ [MaskedDateTime] } /></DatePickerComponent>
                <br />
                <br />
                /* specifies the masked DatePicker component with mask
placeholder */
                <DatePickerComponent enableMask={true}
maskPlaceholder={this.maskPlaceholderValue}><Inject
services={ [MaskedDateTime] } /></DatePickerComponent>
                </div>
            );
        );
    }
}
ReactDOM.render(<App />, document.getElementById('element'));

```

[Functional-component]**INDEX.JSX**

```

import { DatePickerComponent, Inject, MaskedDateTime } from '@syncfusion/ej2-
react-calendars';
import * as ReactDOM from 'react-dom';
import * as React from 'react';
function App() {
    let maskPlaceholderValue;

```

```

    maskPlaceholderValue = { day: 'd', month: 'M', year: 'y' };
    return (<div>
        /* specifies the masked DatePicker component without mask
placeholder */
        <DatePickerComponent enableMask={true}><Inject
services={ [MaskedDateTime] }/></DatePickerComponent>
        <br />
        <br />
        /* specifies the masked DatePicker component with mask
placeholder */
        <DatePickerComponent enableMask={true}
maskPlaceholder={maskPlaceholderValue}><Inject
services={ [MaskedDateTime] }/></DatePickerComponent>
        </div>);
}
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

import { DatePickerComponent, Inject, MaskedDateTime } from '@syncfusion/ej2-
react-calendars';
import * as ReactDOM from 'react-dom';
import * as React from 'react';
function App() {
    let maskPlaceholderValue: object;
    maskPlaceholderValue = {day: 'd', month: 'M', year: 'y'};
    return (
        <div>
            /* specifies the masked DatePicker component without mask
placeholder */
            <DatePickerComponent enableMask={true}><Inject
services={ [MaskedDateTime] } /></DatePickerComponent>
            <br />
            <br />
            /* specifies the masked DatePicker component with mask
placeholder */
            <DatePickerComponent enableMask={true}
maskPlaceholder={maskPlaceholderValue}><Inject services={ [MaskedDateTime] }
/></DatePickerComponent>
            </div>
        );
    }
ReactDOM.render(<App />, document.getElementById('element'));

```

Globalization in React DatePicker component

Globalization is the combination of internalization and localization. You can adapt the component to various languages by parsing and formatting the date or number [Internationalization](#) and also add culture specific customization and translation to the text [localization](#).

By default, DatePicker date format, week, and month names are specific to the **American English** culture. It utilizes the [Essential JavaScript 2 Internationalization](#) package to parse and format the date object based on the culture by using the official [UNICODE CLDR](#) JSON data. It provides the `loadCldr` method to load culture specific CLDR JSON data. To use a different culture other than **English**, follow the steps below:

- Install the `CLDR-Data` package by using the following command (installs all the CLDR JSON data). To know more about CLDR-Data refer to the [CLDR-Data](#) link.

`

```
npm install cldr-data --save
```

`

Once the package installed, you can find the culture specific JSON data under the location `\node_modules\cldr-data`.

- Now import the installed CLDR JSON data into the `app.ts` file.
- Now use the [loadCldr](#) method to load the culture specific CLDR JSON data from the installed location to `app.ts` file.
- DatePicker displayed **Sunday** as the first day of week based on default culture ("en-US"). If you want to display the DatePicker with loaded culture's first day of week, you need to import `weekdata.json` file from the `cldr-data/supplemental` as given in the code example.

`ts

```
import { loadCldr } from "@syncfusion/ej2-base";
import * as gregorian from 'cldr-data/main/de/ca-gregorian.json';
import * as numbers from 'cldr-data/main/de/numbers.json';
import * as timeZoneNames from 'cldr-data/main/de/timeZoneNames.json';
import * as numberingSystems from 'cldr-data/supplemental/numberingSystems.json';
import * as weekData from 'cldr-data/supplemental/weekData.json'; // To load the culture based first day of week

loadCldr(numberingSystems, gregorian, numbers, timeZoneNames, weekData);
```

`

if you are facing the error `/node_modules/cldr-data/main/de/*.json (1,1): unused expression, expected an assignment or function call` when you are adding the json files to render the culture sample, then add the below configuration in your `tslint.json` file

`ts

```
"linterOptions": {
  "exclude": [
    "*.json",
    "/*.json"
  ]
}
```

`

The **Localization** library allows you to localize default text content of the DatePicker. The DatePicker component has static text for **today** feature that can be changed to other cultures (Arabic, Deutsch, French, etc.) by defining the [locale](#) value and translation object.

Locale keywords | Text

today | Name of the button to choose Today date.

placeholder | Hint to describe expected value in input element.

- Before changing to a culture other than **English**, ensure that locale text for the concerned culture is loaded through **load** method of **L10n** class.

```
`ts
//Load the L10n from ej2-base
import { L10n } from "@syncfusion/ej2-base";
//load the locale object to set the localized placeholder value
L10n.load({
  de: {
    datepicker: {
      placeholder: "Wählen Sie ein Datum",
      today:"heute"
    }
  }
});
`
```

- Set the culture by using the [locale](#) property. The below code example, initialize the DatePicker component in **German** culture with corresponding localized text.

The following example demonstrates the DatePicker in **German** culture.

[Class-component]

Right-To-Left

The DatePicker supports right-to-left functionality for languages like Arabic, Hebrew to displays the text in the right-to-left direction. Use [enableRtl](#) property to set the RTL direction.

The below code example demonstrates the DatePicker component in Hebrew culture and also explains how to set the localized text to the placeholder using [load](#) method of

L10n class.

[Class-component]

Strict mode in React Datepicker component

The [strictMode](#) is an act, that allows the user to enter only the valid date within the specified min/max range in textbox. If the date is invalid, then the component will stay with the previous value.

Else, if the date is out of range, then the component will set the date to the min/max date.

The following example demonstrates the DatePicker in `strictMode` with min/max range of 5th to 25th in a month of May. Here, it allows to enter only the valid date within the specified range. If you are trying to enter the out-of-range value as like 28th of May, then the value will set to the max date of 25th May. Since the value 28th is greater than to `max` value of 25th. Or else if you are trying to enter the invalid date, then the value will stay with the previous value.

[Class-component]

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';

// creates a datepicker with strictMode property
export default class App extends React.Component {
  // sets the value
  dateValue = new Date('5/28/2017');
  // sets the min
  minDate = new Date('5/5/2017');
  // sets the max
  maxDate = new Date('5/25/2017');
  disable = true;

  render() {
    return <DatePickerComponent id="datepicker" strictMode={this.disable}
    format="dd/MM/yyyy" value={this.dateValue} min={this.minDate}
    max={this.maxDate} placeholder="Enter date"/>;
  }
}

ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datePickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// creates a datePicker with strictMode property
export default class App extends React.Component<{}>, {}> {
    // sets the value
    private dateValue:Date= new Date('5/28/2017');
    // sets the min
    private minDate:Date= new Date('5/5/2017');
    // sets the max
    private maxDate:Date= new Date('5/25/2017');
    private disable: boolean = true;
    public render() {
        return <DatePickerComponent id="datepicker" strictMode={this.disable}
format="dd/MM/yyyy" value={this.dateValue} min={this.minDate}
max={this.maxDate} placeholder="Enter date" />
    }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]**INDEX.JSX**

```
// import the datePickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// creates a datePicker with strictMode property
function App() {
    // sets the value
    const dateValue = new Date('5/28/2017');
    // sets the min
    const minDate = new Date('5/5/2017');
    // sets the max
    const maxDate = new Date('5/25/2017');
    const disable = true;
    return <DatePickerComponent id="datepicker" strictMode={disable}
format="dd/MM/yyyy" value={dateValue} min={minDate} max={maxDate}
placeholder="Enter date"/>;
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datePickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// creates a datePicker with strictMode property
```

```
function App() {
  // sets the value
  const dateValue:Date= new Date('5/28/2017');
  // sets the min
  const minDate:Date= new Date('5/5/2017');
  // sets the max
  const maxDate:Date= new Date('5/25/2017');
  const disable: boolean = true;
  return <DatePickerComponent id="datepicker" strictMode={disable}
format="dd/MM/yyyy" value={dateValue} min={minDate} max={maxDate}
placeholder="Enter date" />
};
ReactDOM.render(<App />, document.getElementById('element'));
```

By default, the DatePicker act in strictMode **false** state, that allows to enter the invalid or out-of-range date in textbox.

If the date is out-of-range or invalid, then the model value will be set to **out of range** date value or **null** respectively with highlighted **error** class to indicates the date is out of range or invalid.

The following example demonstrates the strictMode as **false**. Here, it allows to enter the valid or invalid value in textbox. If you are entering out-of-range or invalid date value, then the model value will be set to **out of range** date value or **null** respectively with highlighted **error** class to indicates the date is out of range or invalid.

    // sets the max
    const maxDate = new Date('5/25/2017');
    const disable = false;
    return <DatePickerComponent id="datepicker" strictMode={disable}
format="dd/MM/yyyy" value={dateValue} min={minDate} max={maxDate}
placeholder="Enter date"/>;
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// creates a datepicker with strictMode property
function App() {
    // sets the value
    const dateValue:Date= new Date('5/28/2017');
    // sets the min
    const minDate:Date= new Date('5/5/2017');
    // sets the max
```

```
const maxDate:Date= new Date('5/25/2017');
const disable: boolean = false;
return <DatePickerComponent id="datepicker" strictMode={disable}
format="dd/MM/yyyy" value={dateValue} min={minDate} max={maxDate}
placeholder="Enter date" />
};
ReactDOM.render(<App />, document.getElementById('element'));
```

If the value of `min` or `max` properties changed through code behind. Then you have to update the `value` property to set within the range.

Customization in React Datepicker component

You can customize the entire appearance of the input element and Calendar by using custom [cssClass](#) property and also you can use the calendar's [renderDayCell](#) event to customize the appearance of the each day cell.

Below list of available classes are used to customize the entire DatePicker component.

Class Name	Description
---	---
e-date-wrapper	Applied to DatePicker wrapper
e-datepicker	Applied to the DatePicker element.
e-float-text	Applied to the floating label.
e-date-icon	Applied to the DatePicker icon.
e-popup-wrapper	Applied to DatePicker popup wrapper.
e-calendar	Applied to Calendar element.
e-header	Applied to Calendar header.
e-title	Applied to Calendar title.
e-icon-container	Applied to Calendar previous and next icon container.
e-prev	Applied to Calendar previous icon.
e-next	Applied to Calendar next icon.
e-weekend	Applied to Calendar weekend dates.
e-other-month	Applied to Calendar other month dates.
e-day	Applied to each day cell of the Calendar.
e-selected	Applied to Calendar selected dates.
e-disabled	Applied to Calendar disabled dates.

The following example highlights the textbox and calendars's weekend days by using custom CSS. Here we have used the `e-custom-style` class to highlight the textbox and disabled date and `renderDayCell` event to disable the weekends of every month.

    );
}
ReactDOM.render(<App />, document.getElementById('element'));
```

Adding mandatory asterisk to placeholder and float label

You can add a mandatory asterisk(*) to placeholder and float label using `.e-input-group.e-control-wrapper.e-float-input .e-float-text::after` class.

[Class-component]

INDEX.JSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
```

```
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  render() {
    return <DatePickerComponent id="datepicker" floatLabelType="Auto"
placeholder="Enter date"/>;
  }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

Date views in React DatePicker component

The DatePicker has the following predefined views that provides a flexible way to navigate back and forth to select the date.

View	Description
--- ---	
month (default)	Displays the days in a month
year	Displays the months in a year
decade	Displays the years in a decade

Start view

You can use the [start](#) property to define the initial rendering view.

The following example demonstrates how to create a DatePicker with [decade](#) as initial rendering view.

[Class-component]

INDEX.JSX

```
// import the datePickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// creates a datePicker with year view.
export default class App extends React.Component {
  render() {
    return <DatePickerComponent id="datepicker" start="Decade"
placeholder="Enter date"/>;
  }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datePickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// creates a datePicker with year view.
export default class App extends React.Component<{}, {}> {
  public render() {
    return <DatePickerComponent id="datepicker" start="Decade"
placeholder="Enter date"/>;
  }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]

INDEX.JSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// creates a datepicker with year view.
function App() {
    return <DatePickerComponent id="datepicker" start="Decade"
placeholder="Enter date"/>;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// creates a datepicker with year view.
function App() {
    return <DatePickerComponent id="datepicker" start="Decade"
placeholder="Enter date"/>;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

Depth view

Define the [depth](#) property to control the view navigation.

Always the depth view has to be smaller than the start view, otherwise the view restriction will be not restricted.

The following example demonstrates how to create a DatePicker that allows users to select a month.

[Class-component]**INDEX.JSX**

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// creates a datepicker with decade view and navigate up to year view.
export default class App extends React.Component {
    render() {
        return <DatePickerComponent id="datepicker" start="Decade"
depth="Year" placeholder="Enter date"/>;
    }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// creates a datepicker with decade view and navigate up to year view.
```

```
export default class App extends React.Component<{}, {}> {
  public render() {
    return <DatePickerComponent id="datepicker" start="Decade"
    depth="Year" placeholder="Enter date"/>;
  }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]

INDEX.JSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// creates a datepicker with decade view and navigate up to year view.
function App() {
  return <DatePickerComponent id="datepicker" start="Decade" depth="Year"
  placeholder="Enter date"/>;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
// creates a datepicker with decade view and navigate up to year view.
function App() {
  return <DatePickerComponent id="datepicker" start="Decade" depth="Year"
  placeholder="Enter date"/>;
}
ReactDOM.render(<App />, document.getElementById('element'));
```

To know more about Calendar views refer the Calendar's [Calendar Views](#) section.

Accessibility in React DatePicker component

The DatePicker component followed the accessibility guidelines and standards, including [ADA](#), [Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the DatePicker component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2 Support](#) | |

| [Section 508 Support](#) | |

| [Screen Reader Support](#) | |

```

| Right-To-Left Support |  |
| Color Contrast |  |
| Mobile Device Support |  |
| Keyboard Navigation Support |  |
| Accessibility Checker Validation |  |
| Axe-core Accessibility Validation |  |

<style>
.post .post-content img {
display: inline-block;
margin: 0.5em 0;
}
</style>

<div> - All
features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>

```

WAI-ARIA attributes

The Web accessibility defines a way to make web content and web applications more accessible to disabled people. It especially helps the dynamic content change and advanced user interface controls developed with Ajax, HTML, JavaScript, and related technologies.

DatePicker provides built-in compliance with the [WAI-ARIA](#) specifications. WAI-ARIA supports is achieved through the attributes like `aria-expanded`, `aria-disabled`, `aria-activedescendant` applied to the input element.

To know about the accessibility of Calendar refer to the Calendar's [Accessibility](#) section.

It helps to provide information about the widget for assistive technology to the disabled person in screen reader.

- **Aria-expanded:** attributes indicates the state of a collapsible element.
- **Aria-disabled:** attribute indicates the disabled state of this DatePicker component.
- **Aria-activedescendant:** attribute helps in managing the current active child of the DatePicker component.

Keyboard Interaction

You can use the following keys to interact with the DatePicker. The component implements the keyboard navigation support by following the [WAI-ARIA practices](#).

It supports the below list of shortcut keys.

Input Navigation

Before opening the popup, use the below list of keys to control the popup element.

| **Press** | **To do this** |

| --- | --- |

| **Alt + Down Arrow** | Opens the popup. |

| **Alt + Up Arrow** | Closes the popup. |

| **Esc** | closes the popup. |

Calendar Navigation

Use the below list of keys to navigate the Calendar after the popup has opened.

| **Press** | **To do this** |

| --- | --- |

| **Upper Arrow** | Focus the previous week date. |

| **Down Arrow** | Focus the next week date. |

| **Left Arrow** | Focus the previous date. |

| **Right Arrow** | Focus the next date. |

| **Home** | Focus the first date in the month. |

| **End** | Focus the last date in the month. |

| **Page Up** | Focus the same date in the previous month. |

| **Page Down** | Focus the same date in the next month. |

| **Enter** | Select the currently focused date. |

| **Shift + Page Up** | Focus the same date in the previous year. |

| **Shift + Page Down** | Focus the same date in the next year. |

| **Control + Upper Arrow** | Moves into the inner level of view like month-year, year-decade |

| **Control + Down Arrow** | Moves out from the depth level view like decade-year, year-month |

| **Control + Home** | Focus the starting date in the current year. |

| **Control + End** | Focus the ending date in the current year. |

To focus the DatePicker component use the **alt+t** keys.

[Class-component]

INDEX.JSX

```
{% raw %}
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  datepickerInstance;
  componentDidMount() {
    const proxy = this;
    this.datepickerInstance.placeholder = 'Enter Date';
    this.datepickerInstance.dataBind();
    document.onkeyup = (e) => {
      if (e.altKey && e.keyCode === 84 /* t */) {
        // press alt+t to focus the control.
        proxy.datepickerInstance.focusIn();
      }
    };
  }
  render() {
    return (
      // specifies the tag for render the DatePicker component
      <DatePickerComponent id="datepicker" ref={(scope) => {

```

    <DatePickerComponent id="datepicker" ref={(scope) => {
    (datepickerInstance as DatePicker | null) = scope; }} />
    );
  };
  ReactDOM.render(<App />, document.getElementById('element'));
  {% endraw %}

```

Ensuring accessibility

The DatePicker component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the DatePicker component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the DatePicker component with accessibility tools.

- [Accessibility in Syncfusion React components](#)

Style appearance in React Datepicker component

The following content provides the exact CSS structure that can be used to modify the control's appearance based on the user preference.

Customizing the appearance of DatePicker wrapper element

Use the following CSS to customize the appearance of wrapper element.

```
`css
```

/ To specify height and font size /

```
.e-input-group input.e-input, .e-input-group.e-control-wrapper input.e-input {
height: 40px;
font-size: 20px;
}
`
```

Customizing the DatePicker icon element

Use the following CSS to customize the DatePicker icon element

```
`css
```

/ To specify background color and font size /

```
.e-input-group .e-input-group-icon:last-child, .e-input-group.e-control-wrapper .e-input-group-icon:last-child {
font-size: 12px;
background-color: darkgray;
}
`
```

Customizing the Calendar popup of the DatePicker

Please check the below section, to customize the style and appearance of the Calendar component.

[Customizing Calendar's style and appearance](#)

Full screen mode support in mobiles and tablets

The DatePicker component's full-screen mode feature enables users to view the component popup element in full-screen mode on mobile devices with improved visibility and a better user experience. It is important to mention that this feature is exclusively available for mobile and tablet devices in both landscape and portrait orientations. To activate the full screen mode within the DatePicker component, simply set the [fullScreenMode](#) API value to `true`. This action will extend the calendar element to occupy the entire screen on mobile devices.

`typescript

```
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
  private mobileMode:boolean = true;
  public render() {
    return <DatePickerComponent id="datepicker" fullScreenMode={this.mobileMode} placeholder='Enter date' />
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

How To

Disabled the datepicker component in React Datepicker component

To disable the DatePicker, use its [enable](#) property.

The following example demonstrates the DatePicker in a disabled state.

INDEX.JSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  enable = false;
  render() {
    return (
      // specifies the tag for render the DatePicker component
      <DatePickerComponent enabled={this.enable} placeholder="Enter
date"/>);
  }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
  private enable:boolean = false;
  public render() {
    return (
      // specifies the tag for render the DatePicker component
      <DatePickerComponent enabled={this.enable} placeholder="Enter
date"/>
    );
  }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

Customize the datepicker day header in React Datepicker component

You can change the format of the day that to be displayed in header using [dayHeaderFormat](#) property.

By default, the format is **Short**.

You can find the possible formats on below.

Name	Description
----- -----	
Short	Sets the short format of day name (like Su) in day header.
Narrow	Sets the single character of day name (like S) in day header.
Abbreviated	Sets the min format of day name (like Sun) in day header.

| **Wide** | Sets the long format of day name (like Sunday) in day header. |

INDEX.JSX

```
{% raw %}
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import { DropDownListComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  datepickerObj;
  floatLabelObj;
  floatData;
  fields;
  value = 'Short';
  constructor(props) {
    super(props);
    this.floatData = [
      { Id: 'Short', Label: 'Short' },
      { Id: 'Narrow', Label: 'Narrow' },
      { Id: 'Abbreviated', Label: 'Abbreviated' },
      { Id: 'Wide', Label: 'Wide' }
    ];
    this.fields = { text: 'Label', value: 'Id' };
  }
  formatHandler(args) {
    this.datepickerObj.dayHeaderFormat = args.value;
  }
  render() {
    return (
      // specifies the tag for render the DatePicker component
      <div id='container'>
        <div id='datepicker'>
          <DatePickerComponent ref={(datepicker) =>
this.datepickerObj = datepicker} dayHeaderFormat="Short"/>
        </div>
        <div id="format">
          <label className="custom-input-label">Header Format
Types</label>
          <DropDownListComponent id="select" value={this.value}
dataSource={this.floatData} ref={(dropdownlist) => { this.floatLabelObj =
dropdownlist; }} fields={this.fields}
change={this.formatHandler.bind(this)} />
        </div>
      </div>);
  }
}
ReactDOM.render(<App />, document.getElementById('element'));
{% endraw %}
```

INDEX.TSX

```
{% raw %}
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import { DropDownListComponent } from '@syncfusion/ej2-react-dropdowns';
```

```

import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    public datePickerObj: DatePickerComponent;
    public floatLabelObj: DropDownListComponent;
    private floatData: { [key: string]: Object }[];
    private fields: object;
    private value: string = 'Short';
    constructor(props: {}) {
        super(props);
        this.floatData = [
            { Id: 'Short', Label: 'Short' },
            { Id: 'Narrow', Label: 'Narrow' },
            { Id: 'Abbreviated', Label: 'Abbreviated' },
            { Id: 'Wide', Label: 'Wide' }
        ];
        this.fields = { text: 'Label', value: 'Id' };
    }
    private formatHandler(args: any): void {
        this.datepickerObj.dayHeaderFormat = args.value;
    }
    public render() {
        return (
            // specifies the tag for render the DatePicker component
            <div id='container'>
                <div id='datepicker'>
                    <DatePickerComponent ref={(datepicker) =>
this.datepickerObj = datepicker} dayHeaderFormat="Short"/>
                </div>
                <div id="format">
                    <label className="custom-input-label">Header Format
Types</label>
                    <DropDownListComponent id="select" value = {this.value}
dataSource={this.floatData} ref={(dropdownlist) => { this.floatLabelObj =
dropdownlist }} fields={this.fields} change={this.formatHandler.bind(this)} />
                </div>
            </div>
        );
    }
}
ReactDOM.render(<App />, document.getElementById('element'));
{% endraw %}

```

Set the placeholder in React Datepicker component

The following example demonstrates how to set `placeholder` in the DatePicker component.

Using `placeholder` you can display a short hint in the input element.

INDEX.JSX

```

// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    render() {

```

```

        return (
            // specifies the tag for render the DatePicker component
            <DatePickerComponent placeholder="Choose a date"/>);
    }
}
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    public render() {
        return (
            // specifies the tag for render the DatePicker component
            <DatePickerComponent placeholder="Choose a date"/>
        );
    }
}
ReactDOM.render(<App />, document.getElementById('element'));

```

Set the readonly in React DatePicker component

The following example demonstrates how to set **readonly** in DatePicker component. You can achieve this by using **readonly** property.

INDEX.JSX

```

// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    readonly = true;
    render() {
        return (
            // specifies the tag for render the DatePicker component
            <DatePickerComponent readonly={this.readonly} placeholder="Enter
date"/>);
    }
}
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    private readonly: boolean = true;
    public render() {
        return (
            // specifies the tag for render the DatePicker component

```

```

        <DatePickerComponent readonly={this.readonly} placeholder="Enter
date"/>
    );
}
}
ReactDOM.render(<App />, document.getElementById('element'));

```

Open datepicker popup on input click in React DatePicker component

You can open the DatePicker popup on input focus by calling the `show` method in the input `focus` event.

The following example demonstrates how to open the DatePicker popup when the input is focused.

INDEX.JSX

```

{% raw %}
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
    onFocus(args) {
        this.dateObj.show();
    }
    render() {
        return (
            // Specifies the tag for render the DatePicker component
            <DatePickerComponent focus={this.onFocus.bind(this)}
placeholder="Choose a date" ref={scope => { this.dateObj = scope; }}/>);
        )
    }
}
ReactDOM.render(<App />, document.getElementById('element'));
{% endraw %}

```

INDEX.TSX

```

{% raw %}
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
    public onFocus(args: FocusEventArgs) {
        this.dateObj.show();
    }
    public render() {
        return (
            // Specifies the tag for render the DatePicker component
            <DatePickerComponent focus={this.onFocus.bind(this)}
placeholder="Choose a date" ref = {scope => {this.dateObj = scope }}/>
        );
    }
}
ReactDOM.render(<App />, document.getElementById('element'));
{% endraw %}

```

Prevent the popup close in React DatePicker component

To prevent the DatePicker popup from closing, use the preventDefault method.

The following example demonstrates how to prevent the popup from closing.

INDEX.JSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component {
  onClose(args) {
    // prevent the popup close
    args.preventDefault();
  }
  render() {
    return (
      // specifies the tag for render the DatePicker component
      <DatePickerComponent close={this.onClose} placeholder="Enter
date"/>);
  }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from 'react';
import * as ReactDOM from 'react-dom';
export default class App extends React.Component<{}, {}> {
  public onClose(args: PreventableEventArgs) {
    // prevent the popup close
    args.preventDefault();
  }
  public render() {
    return (
      // specifies the tag for render the DatePicker component
      <DatePickerComponent close={this.onClose} placeholder="Enter
date"/>
    );
  }
}
ReactDOM.render(<App />, document.getElementById('element'));
```

Dynamic form validation in React DatePicker component

Dynamic form can be very useful and more economical to create the forms based on JSON data and without need for adding/changing any code.

- For the dynamic forms, we can create a new React tsx called `dynamic-form.tsx` which is responsible for rendering a dynamic form based on the Json data.

The following example demonstrates how to create the sign up form dynamically.

DATA.JSX

```
export const data = {
  A_FirstName: {
    floatLabelType: 'Auto',
    key: 'FirstName',
    label: 'First Name',
    placeholder: 'First Name',
    type: 'text',
    validation: {
      required: true
    }
  },
  B_LastName: {
    floatLabelType: 'Auto',
    key: 'LastName',
    label: 'Last Name',
    placeholder: 'Last Name',
    type: 'text',
    validation: {
      required: true
    }
  },
  C_Email_ID: {
    floatLabelType: 'Auto',
    key: 'Email_ID',
    label: 'Mail ID',
    placeholder: 'Email',
    type: 'email',
    validation: {
      required: true
    }
  },
  D_Password: {
    floatLabelType: 'Auto',
    key: 'Password',
    label: 'Password',
    placeholder: 'Password',
    type: 'password',
    validation: {
      required: true
    }
  },
  E_DOB: {
    floatLabelType: 'Auto',
    key: 'DOB',
    label: 'DOB',
    placeholder: 'DOB',
    type: 'date',
    validation: {
      required: true
    },
    width: '250px'
  },
  F_Accept: {
    key: 'Accept',
    label: 'Accept terms and conditions',
  }
}
```

```
        type: 'checkbox',
        validation: {
            required: true
        }
    },
    G_Submit: {
        key: 'Button',
        type: 'submit'
    },
};
```

DATA.TSX

```
export const data = {
    A_FirstName: {
        floatLabelType: 'Auto',
        key: 'FirstName',
        label: 'First Name',
        placeholder: 'First Name',
        type: 'text',
        validation: {
            required: true
        }
    },
    B_LastName: {
        floatLabelType: 'Auto',
        key: 'LastName',
        label: 'Last Name',
        placeholder: 'Last Name',
        type: 'text',
        validation: {
            required: true
        }
    },
    C_Email_ID: {
        floatLabelType: 'Auto',
        key: 'Email_ID',
        label: 'Mail ID',
        placeholder: 'Email',
        type: 'email',
        validation: {
            required: true
        }
    },
    D_Password: {
        floatLabelType: 'Auto',
        key: 'Password',
        label: 'Password',
        placeholder: 'Password',
        type: 'password',
        validation: {
            required: true
        }
    },
    E_DOB: {
        floatLabelType: 'Auto',
```

```

        key: 'DOB',
        label: 'DOB',
        placeholder: 'DOB',
        type: 'date',
        validation: {
            required: true
        },
        width: '250px'
    },
    F_Accept: {
        key: 'Accept',
        label: 'Accept terms and conditions',
        type: 'checkbox',
        validation: {
            required: true
        }
    },
    G_Submit: {
        key: 'Button',
        type: 'submit'
    },
}
}

```

DYNAMICFORM.JSX

```

// import the Button component
import { ButtonComponent } from '@syncfusion/ej2-react-buttons';
// import the CheckBox component
import { CheckBoxComponent } from '@syncfusion/ej2-react-buttons';
// import the DatePicker component
import { DatePickerComponent } from '@syncfusion/ej2-react-calendars';
// import the TextBox component
import { TextBoxComponent } from '@syncfusion/ej2-react-inputs';
import * as React from 'react';
export default class DynamicForm extends React.Component {
    objectProps;
    constructor(props) {
        super(props);
    }
    onSubmit() {
        alert("Form submitted!!!");
    }
    renderStatus(element) {
        switch (element.type) {
            case 'date':
                return <div>
                    <DatePickerComponent type={element.type}

Ej1 api migration in React Datepicker component

This article describes the API migration process of DatePicker component from Essential JS 1 to Essential JS 2.

Date Selection

{% raw %}

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
Setting the value	Property: value	Property: value

Date Format

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
Display the date format	Property: dateFormat	Property: format
Day header format	Property: dayHeaderFormat	Not Applicable

Calendar Views

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
Start view	Property: startLevel	Property: start
Depth view	Property: depthLevel	Property: depth

Date Range

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
Minimum date	Property: minDate	Property: min
Maximum date	Property: maxDate	Property: max

Disabled Dates

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
Block-out dates	Property: blackoutDates var blackoutDates = [new Date(2016, 4, 10), new Date(2016, 4, 15), new Date(2016, 4, 20), new Date(2016, 4, 22), new Date(2016, 5, 12), new Date(2016, 5, 24)]	Can be achieved by disableDate(args) { if (args.date.getDay() === 0 args.date.getDay() === 6) { args.isDisabled = true; } }

Customization

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
CSS Class	Property: cssClass	Property: cssClass
Event callback for each cell creation	Not Applicable	Event: renderDayCellonRenderCell() {/ code block */}
Show/Hide the today button	Property: showFooter	Property: showTodayButton
Show/Hide the other month dates	Property: showOtherMonths	Can be achieved by.e-datepicker .e-calendar .e-content tr.e-month-hide, .e-datepicker .e-calendar .e-content td.e-other-month > .e-day { visibility: none; }.e-datepicker .e-calendar .e-content td.e-month-hide, .e-datepicker .e-calendar .e-content td.e-other-month { pointer-events: none; touch-action: none;}
Show/Hide the disabled date	Property: showDisabledRangevar blackoutDates = [new Date(2016, 4, 10), new Date(2016, 4, 15), new Date(2016, 4, 20), new Date(2016, 4, 22), new Date(2016, 5, 12), new Date(2016, 5, 24)]	Not Applicable
Show/Hide the popup button	Property: showPopupButton	Event: FocusonFocus(args) { this.show();}.e-control-wrapper .e-input-group-icon.e-date-icon { display: none;}
Enable/Disable the rounded corner	Property: showRoundedCorner	Can be achieved by.e-control-wrapper.e-customStyle.e-date-wrapper.e-input-group { border-radius: 4px;}
Skip a month	Property: stepMonths	Can be achieved byonOpen(args){ datepicker.navigateTo('Year', new Date("03/18/2028"));}
Show/Hide the tooltip	Property: showTooltip	Not Applicable
Today button text	Property: buttonText	Can be achieved byL10n.load({ 'de': { 'datepicker': { placeholder: 'Wählen Sie ein Datum aus', today: 'heute' } } });`
Display Inline	Property: displayInline	Not Applicable

Enable/Disable the animation	Property: enableAnimation	Not Applicable
Highlight dates	Property: highlightSection	Can be achieved by <code>highlightDate(args) { if (args.date.getDate() === 10) { args.element.classList.add('e-highlightweekend'); }}.e-highlightweekend { background-color: #cfe9f3;}</code>
Highlight weekend	Property: highlightWeekend	Can be achieved by <code>highlightDate(args) { if (args.date.getDay() === 0 args.date.getDay() === 6) { args.element.classList.add('e-highlightweekend'); }}.e-highlightweekend { background-color: #cfe9f3;}</code>
Tooltip format	Property: tooltipFormat	Not Applicable
Special dates	Property: specialDates var specialdate = [{ date: new Date(), tooltip: "In Australia" }]	Can be achieved by <code>customDates(args) { if (args.date.getDate() === 10) { var span = document.createElement('span'); span.setAttribute('class', 'e-icons highlight'); args.element.firstChild.setAttribute('title', 'Birthday !'); args.element.setAttribute('title', 'Birthday !'); args.element.setAttribute('data-val', 'Birthday !'); args.element.appendChild(span); }}</code>
FocusIn event	Event: focusIn function onFocus() { / code block */ }	Event: focusOnFocus() { / code block */ }
FocusOut event	Event: focusOut function onFocus() { / code block */ }	Event: blurOnBlur() { / code block */ }
FocusIn method	Not Applicable	Method: focusIn() <code>create(args){ this.focusIn();}</code>
FocusOut method	Not Applicable	Method: focusOut() <code>create(args){ this.focusIn(); this.focusOut();}</code>
Prevent popup close	Not Applicable	Event: Close <code>onClose(args) { /Triggers when the popup gets close/ args.cancel = true;}</code>
Prevent popup open	Not Applicable	Event: Open <code>onOpen(args) { /Triggers when the popup gets close/ args.cancel = true;}</code>

DateRangePicker

Getting started

This section explains you the steps required to create a simple DateRangePicker and demonstrate the basic usage of the DateRangePicker component.

To get start quickly with React DateRangePicker, you can check on this video:

Dependencies

The below list of dependencies are required to use the DateRangePicker component in your application.

```
`javascript
```

```
|-- @syncfusion/ej2-react-calendars
|-- @syncfusion/ej2-react-base
|-- @syncfusion/ej2-base
|-- @syncfusion/ej2-data
|-- @syncfusion/ej2-calendars
|-- @syncfusion/ej2-inputs
|-- @syncfusion/ej2-splitbuttons
|-- @syncfusion/ej2-lists
|-- @syncfusion/ej2-popups
|-- @syncfusion/ej2-buttons
,
```

Installation and configuration

You can use [create-react-app](#) to setup the applications.

To install `create-react-app` run the following command.

,

```
npm install -g create-react-app
```

,

- To setup basic `React` sample use following commands.

,

```
create-react-app quickstart --scripts-version=react-scripts-ts
```

```
cd quickstart
```

,

Adding Syncfusion packages

All the available Essential JS 2 packages are published in [npmjs.com](https://www.npmjs.com) public registry. You can choose the component that you want to install. For this application, we are going to use `DateRangePicker` component.

To install `DateRangePicker` component, use the following command

```
`bash
```

```
npm install @syncfusion/ej2-react-calendars --save
```

,

Adding Style sheet to the Application

To render the `DateRangePicker` component, need to import `DateRangePicker` and its dependent component's styles as given below in `App.css`.

```
`css
```

```
@import "../node_modules/@syncfusion/ej2-base/styles/material.css";
@import "../node_modules/@syncfusion/ej2-buttons/styles/material.css";
@import "../node_modules/@syncfusion/ej2-lists/styles/material.css";
@import "../node_modules/@syncfusion/ej2-inputs/styles/material.css";
@import "../node_modules/@syncfusion/ej2-popups/styles/material.css";
@import "../node_modules/@syncfusion/ej2-react-calendars/styles/material.css";
`
```

Note: If you want to refer the combined component styles, please make use of our [CRG](#) (Custom Resource Generator) in your application.

Adding DateRangePicker component to the Application

- To include the DateRangePicker component in application import the `DateRangePickerComponent` from `ej2-react-calendars` package in `App.tsx`.
- Then add the DateRangePicker component as shown in below code example.

[src/App.tsx]

[Class-component]

```
`ts
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import './App.css';
export default class App extends React.Component<{}, {}> {
  public render() {
    return <DateRangePickerComponent id="daterangepicker" />
  }
};
`
```

[Functional-component]

```
`ts
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import './App.css';
function App() {
  return <DateRangePickerComponent id="daterangepicker" />
};
`
```

Run the application

Now run the **npm start** command in the console, it will run your application and open the browser window.

npm start

The below examples shows the basic DateRangePicker component.

[Class-component]

INDEX.JSX

```
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  render() {
    return <DateRangePickerComponent id="daterangepicker"
placeholder='Select a range' />;
  }
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
  public render() {
    return <DateRangePickerComponent id="daterangepicker"
placeholder='Select a range' />
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]

INDEX.JSX

```
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  return <DateRangePickerComponent id="daterangepicker" placeholder='Select
a range' />;
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    return <DateRangePickerComponent id="daterangepicker" placeholder='Select
a range' />
};
ReactDOM.render(<App />, document.getElementById('element'));
```

Setting the start and end date in a range

The start and end date in a range can be defined with help of [startDate](#) and [endDate](#) property.

The following example demonstrates, how to set the start date, end date on initializing the DateRangePicker. To know more about range restriction in DateRangePicker, please refer this [page](#).

[Class-component]**INDEX.JSX**

```
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
    start = new Date("10/7/2017");
    end = new Date("11/15/2017");
    render() {
        return <DateRangePickerComponent id="daterangepicker"
placeholder='Select a range' startDate={this.start} endDate={this.end}/>;
    }
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
    private start:Date= new Date("10/7/2017");
    private end:Date= new Date("11/15/2017");
    public render() {
        return <DateRangePickerComponent id="daterangepicker"
placeholder='Select a range' startDate={this.start} endDate={this.end} />
    }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]**INDEX.JSX**

```
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
```

```
import * as ReactDOM from "react-dom";
function App() {
    const start = new Date("10/7/2017");
    const end = new Date("11/15/2017");
    return <DateRangePickerComponent id="daterangepicker" placeholder='Select
a range' startDate={start} endDate={end}/>;
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    const start:Date= new Date("10/7/2017");
    const end:Date= new Date("11/15/2017");
    return <DateRangePickerComponent id="daterangepicker" placeholder='Select
a range' startDate={start} endDate={end} />
};
ReactDOM.render(<App />, document.getElementById('element'));
```

Range selection in React Daterangepicker component

Range selection in a DateRangePicker can be made-to-order with desire restrictions based on application needs.

Restrict the range within a range

You can restrict the minimum and maximum date that can be allowed as start date, end date in a range selection with help of [min](#), [max](#) properties.

- **min** – sets the minimum date that can be selected as startDate.
- **max** – sets the maximum date that can be selected as endDate

In the following sample, you can select a date range from 15th date of this month to 15th date of next month.

[Class-component]**INDEX.JSX**

```
// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
    // creates a daterangepicker with min and max property
    minDate = new Date(new Date().getFullYear(), new Date().getMonth(), 15);
```

```

    maxDate = new Date(new Date().getFullYear(), new Date().getMonth() + 1,
15);
    render() {
        return <DateRangePickerComponent id="daterangepicker"
placeholder='Select a range' min={this.minDate} max={this.maxDate}/>;
    }
}
;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}>, {}> {
    // creates a daterangepicker with min and max property
    private minDate:Date= new Date(new Date().getFullYear(), new
Date().getMonth(), 15);
    private maxDate:Date= new Date(new Date().getFullYear(), new
Date().getMonth()+1, 15);
    public render() {
        return <DateRangePickerComponent id="daterangepicker"
placeholder='Select a range' min={this.minDate} max={this.maxDate} />
    }
};
ReactDOM.render(<App />, document.getElementById('element'));

```

[Functional-component]**INDEX.JSX**

```

// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    // creates a daterangepicker with min and max property
    const minDate = new Date(new Date().getFullYear(), new Date().getMonth(),
15);
    const maxDate = new Date(new Date().getFullYear(), new Date().getMonth()
+ 1, 15);
    return <DateRangePickerComponent id="daterangepicker" placeholder='Select
a range' min={minDate} max={maxDate}/>;
}
;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";

```

```
function App() {
  // creates a daterangepicker with min and max property
  const minDate:Date= new Date(new Date().getFullYear(), new
Date().getMonth(), 15);
  const maxDate:Date= new Date(new Date().getFullYear(), new
Date().getMonth()+1, 15);
  return <DateRangePickerComponent id="daterangepicker" placeholder='Select
a range' min={minDate} max={maxDate} />
};
ReactDOM.render(<App />, document.getElementById('element'));
```

If the value of `min` or `max` properties changed through code behind, then you have to update the `start date`, `end date` property to set within the range. Or else, if the `start` and `end date` is out of specified date range, a validation error class will be appended to the input element. If `strictMode` is enabled, and both the start, end date is lesser than the min date then start and end date will be updated with `min` date. If both the start and end date is higher than the max date then start and end date will be updated with `max` date. Or else, if `startDate` is less than `min` date, `startDate` will be updated with `min` date or if `endDate` is greater than `max` date, `endDate` will be updated with the `max` date.

Range span

Days span between ranges can be limited in order to avoid excess or less days selection towards the required days in a range. In this, minimum and maximum span that can be allowed within the date range can be customized by `minDays`, `maxDays` properties.

- `minDays`- Sets the minimum number of days between start date and end date.
- `maxDays`- Sets the maximum number of days between start date and end date.

In the following sample, the range selection should be greater than 3 days and less than 8 days else it won't set.

[Class-component]

INDEX.JSX

```
// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  render() {
    return (<DateRangePickerComponent id="daterangepicker"
placeholder='Select a range' minDays={3} maxDays={7}/>);
  }
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
```

```
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}>, {}> {
    public render() {
        return (
            <DateRangePickerComponent id="daterangepicker" placeholder='Select a
range' minDays={3} maxDays={7} />
        )
    }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]

INDEX.JSX

```
// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    return (<DateRangePickerComponent id="daterangepicker"
placeholder='Select a range' minDays={3} maxDays={7}/>);
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    return (
        <DateRangePickerComponent id="daterangepicker" placeholder='Select a
range' minDays={3} maxDays={7} />
    )
};
ReactDOM.render(<App />, document.getElementById('element'));
```

Strict mode

DateRangePicker provides the option to limit the user towards entering the valid date only. With strict mode, you can set only valid selection. Also, If any invalid range is specified then the date range value will reset to previous value.

This restriction can be availed by enabling the strict mode by setting true to [strictMode](#) property.

[Class-component]

INDEX.JSX

```
// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
```

```
export default class App extends React.Component {
  render() {
    return <DateRangePickerComponent id="daterangepicker"
placeholder='Select a range' strictMode={true}/>;
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
  public render() {
    return <DateRangePickerComponent id="daterangepicker"
placeholder='Select a range' strictMode={true} />
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

[Functional-component]**INDEX.JSX**

```
// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  return <DateRangePickerComponent id="daterangepicker" placeholder='Select
a range' strictMode={true}/>;
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  return <DateRangePickerComponent id="daterangepicker" placeholder='Select
a range' strictMode={true} />
};
ReactDOM.render(<App />, document.getElementById('element'));
```

Globalization in React Daterangepicker component

Globalization is the combination of internalization and localization. You can adapt the component to various languages by parsing and formatting the date or number [Internationalization](#) and also add culture specific customization and translation to the text [localization](#).

By default, DateRangePicker date format and meridian names are specific to the American English culture. It utilizes the [Essential JavaScript 2 Internationalization](#) package to parse and format the date object based on the culture by using the official [UNICODE CLDR](#) JSON data. It provides the `loadCldr` method to load the culture specific CLDR JSON data. To go with the different culture other than English, follow the below steps.

- Install the `CLDR-Data` package by using the below command (it installs all the CLDR JSON data). To know about CLDR-Data refer the [CLDR-Data](#) link.

```
npm install cldr-data --save
```

Once the package installed, you can find the culture specific JSON data under the location `\node_modules\cldr-data`.

- Now, import the installed CLDR JSON data into the `app.ts` file. To import JSON data we need to install the JSON plugin loader. Here we have used the systemJS JSON plugin loader.

```
npm install systemjs-plugin-json --save-dev
```

- Once the package installed, you can find the culture specific JSON data under the location `\node_modules\cldr-data`.
- Now import the installed CLDR JSON data into the `app.ts` file.
- Now use the [loadCldr](#)

method to load the culture specific CLDR JSON data from the installed location to `app.ts` file.

- DateRangePicker displayed `Sunday` as the first day of week based on default culture ("en-US"). If you want to display the DateRangePicker with loaded culture's first day of week, you need to import `weekdata.json` file from the `cldr-data/supplemental` as given in the code example.

```
`ts
import { loadCldr } from "@syncfusion/ej2-base";
import * as gregorian from 'cldr-data/main/de/ca-gregorian.json';
import * as numbers from 'cldr-data/main/de/numbers.json';
import * as timeZoneNames from 'cldr-data/main/de/timeZoneNames.json';
import * as numberingSystems from 'cldr-data/supplemental/numberingSystems.json';
import * as weekData from 'cldr-data/supplemental/weekData.json'; // To load the culture based first
day of week
```

```
loadCldr(numberingSystems, gregorian, numbers, timeZoneNames, weekData);
```

```
,
```

if you are facing the error `/node_modules/cldr-data/main/de/*.json (1,1): unused expression, expected an assignment or function call` when you are adding the json files to render the culture sample, then add the below configuration in your `tslint.json` file

```
`ts
```

```
"linterOptions": {
```

```
"exclude": [
```

```
"*.json",
```

```
"/*.*.json"
```

```
]
```

```
}
```

```
,
```

The `Localization` library allows you to localize default text content of the DateRangePicker. The DateRangePicker component has static text for **today** feature that can be changed to other cultures (Arabic, Deutsch, French, etc.) by defining the [locale](#) value and translation object.

Locale keywords | Text

placeholder | Hint to describe expected value in input element.

startLabel | Label to represent the start date.

endLabel | Label to represent the end date.

applyText | Text present in the apply button.

cancelText | Text present in the cancel button.

selectedDays | Text to represent selected days.

days | Text represents days.

customRange | Text present in the custom range button in presets container.

- Before changing to a culture other than `English`, ensure that locale text for the concerned culture is loaded through `load` method of `L10n` class.

```
`ts
```

```
//Load the L10n from ej2-base
```

```
import { L10n } from "@syncfusion/ej2-base";
```

```
//load the locale object to set the localized placeholder value
```

```
L10n.load({
```

```
'de': {
```

```

'daterangepicker': {
  placeholder: 'Wählen Sie einen Bereich aus',
  startLabel: 'Wählen Sie Startdatum',
  endLabel: 'Wählen Sie Enddatum',
  applyText: 'Sich bewerben',
  cancelText: 'Stornieren',
  selectedDays: 'Ausgewählte Tage',
  days: 'Tage',
  customRange: 'benutzerdefinierten Bereich'
}
}
});
`

```

- Set the culture by using the `locale` property.

The following example demonstrates the DateRangePicker in `German` culture.

Right-To-Left

The DateRangePicker supports right-to-left functionality for languages like Arabic, Hebrew, etc. To display the text in the right-to-left direction, use [enableRtl](#) property.

The following code example demonstrates the DateRangePicker component in **Hebrew** culture and also explains how to set the localized text to the placeholder using [load](#) method of [L10n](#) class.

[Class-component]

```

Date Format

Date format is a way of representing the start date, end date strings in different string format in the textbox.

By default, the `DateTimeRangePicker`'s start and end date string format is based on the culture. You can also set the own

custom format by using the [format](#) property.

Once the date format property has been defined it will be common to all the cultures.

To know more about the date format standards, refer to the [Internationalization Date Format](#) section.

The following example demonstrates the `DateRangePicker` with the custom format `(yyyy-MM-dd)`. Also, here the separator of the date values is changed to string "to".

};
ReactDOM.render(<App />, document.getElementById('element'));
```

Customization in React Daterangepicker component

DateRangePicker makes available for the UI customization which can be achieved with events, properties that are available with this component.

Day cell format

[renderDayCell](#) is a event which provides the option to customize each day cell while rendering itself.

The following example disables the weekends of every month using [renderDayCell](#) event. Here we have used the `e-disabled` class to highlight the disabled date

[Class-component]

INDEX.JSX

```
// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  onRenderDayCell(args) {
```

```

        if (args.date.getDay() === 0 || args.date.getDay() === 6) {
            // sets isDisabled to true to disable the date.
            args.isDisabled = true;
        }
    }
    render() {
        return <DateRangePickerComponent renderDayCell={this.onRenderDayCell}
placeholder='Select a range' />;
    }
}
;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

// import the daterangepicker component
import { DateRangePickerComponent, RenderDayCellEventArgs } from
'@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
    public onRenderDayCell(args: RenderDayCellEventArgs): void {
        if ((args.date as Date).getDay() === 0 || (args.date as
Date).getDay() === 6) {
            // sets isDisabled to true to disable the date.
            args.isDisabled = true;
        }
    }
    public render() {
        return <DateRangePickerComponent renderDayCell={this.onRenderDayCell}
placeholder='Select a range' />
    }
};
ReactDOM.render(<App />, document.getElementById('element'));

```

[Functional-component]

INDEX.JSX

```

// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    function onRenderDayCell(args) {
        if (args.date.getDay() === 0 || args.date.getDay() === 6) {
            // sets isDisabled to true to disable the date.
            args.isDisabled = true;
        }
    }
    return <DateRangePickerComponent renderDayCell={onRenderDayCell}
placeholder='Select a range' />;
}
;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```
// import the daterangepicker component
import { DateRangePickerComponent, RenderDayCellEventArgs } from
 '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
    function onRenderDayCell(args: RenderDayCellEventArgs): void {
        if ((args.date as Date).getDay() === 0 || (args.date as
        Date).getDay() === 6) {
            // sets isDisabled to true to disable the date.
            args.isDisabled = true;
        }
    }
    return <DateRangePickerComponent renderDayCell={onRenderDayCell}
    placeholder='Select a range' />
};
ReactDOM.render(<App />, document.getElementById('element'));
```

First day of week

Start day in a week will differ based on culture. But, you can customize this based on application needs also. For this, you can make use of `firstDayOfWeek` property. By default, first day of week in en-US is a Sunday.

In following sample, it customized to Monday with help of this property.

[Class-component]**INDEX.JSX**

```
// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
    startDay = 1;
    render() {
        return <DateRangePickerComponent firstDayOfWeek={this.startDay}
        placeholder='Select a range' />;
    }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
    private startDay:number = 1;
    public render() {
        return <DateRangePickerComponent firstDayOfWeek={this.startDay}
        placeholder='Select a range' />
    }
};
```

```

    }
  };
  ReactDOM.render(<App />, document.getElementById('element'));

```

[Functional-component]

INDEX.JSX

```

// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  const startDay = 1;
  return <DateRangePickerComponent firstDayOfWeek={startDay}
placeholder='Select a range' />;
}
;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
function App() {
  const startDay:number = 1;
  return <DateRangePickerComponent firstDayOfWeek={startDay}
placeholder='Select a range' />
};
ReactDOM.render(<App />, document.getElementById('element'));

```

Preset ranges

DateRangePicker provides an option to set the predefined ranges in a DateRangePicker via [presets](#) properties with the corresponding label. This property will accept the values in the order of label, start date (date object), end date (date object) and append these ranges in a component for quick selection.

In following sample, you can choose the frequently using ranges options from the list of ranges itself easily.

[Class-component]

INDEX.JSX

```

// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";

Accessibility in React Daterangepicker component

The DateRangePicker component followed the accessibility guidelines and standards, including [ADA](#), [Section 508](#), [WCAG 2.2](#) standards, and [WCAG roles](#) that are commonly used to evaluate accessibility.

The accessibility compliance for the DateRangePicker component is outlined below.

| Accessibility Criteria | Compatibility |

| -- | -- |

| [WCAG 2.2 Support](#) | |

| [Section 508 Support](#) | |

| [Screen Reader Support](#) | |

| [Right-To-Left Support](#) | |

| [Color Contrast](#) | |

| [Mobile Device Support](#) | |

| [Keyboard Navigation Support](#) | |

| [Accessibility Checker Validation](#) | |

| [Axe-core Accessibility Validation](#) | |

<style>

```
.post .post-content img {
display: inline-block;
margin: 0.5em 0;
}
</style>

<div> - All
features of the component meet the requirement.</div>

<div> - Some features of the component do not meet the requirement.</div>

<div> - The component does not meet the requirement.</div>
```

WAI-ARIA attributes

The web accessibility makes web content and web applications more accessible for disabled people. It especially helps in dynamic content change and development of advanced user interface controls with AJAX, HTML, JavaScript, and related technologies.

DateRangePicker provides built-in compliance with [WAI-ARIA](#) specifications. WAI-ARIA supports is achieved through the attributes like `aria-expanded`, `aria-disabled`, `aria-activedescendant` applied to the input element.

To know about the accessibility of Calendar refer to the [Accessibility](#) section of Calendar.

It helps disabled persons by providing information about the widget for assistive technology in the screen readers.

DateRangePicker component contains grid role and grid cell for each day cell.

- **Aria-expanded:** Indicates the currently selected date of the DateRangePicker component.
- **Aria-disabled:** Indicates the disabled state of the DateRangePicker component.

Keyboard Interaction

You can use the following keys to interact with the DateRangePicker. This component implements the keyboard navigation support by following the [WAI-ARIA practices](#).

It supports the following list of shortcut keys:

Input Navigation

Before opening the popup, use the below list of keys to control the popup element.

| **Press** | **To do this** |

| --- | --- |

| **Alt + Down Arrow** | **Opens the popup.** |

| **Alt + Up Arrow** | **Closes the popup.** |

| **Esc** | **closes the popup (If the Component's input element is in focused state).** |

Calendar Navigation

Use the following list of keys to navigate the currently focused Calendar after the popup has opened.

| **Press** | **To do this** |

| --- | --- |

| **Upper Arrow** | **Focuses the same day of the previous week.** |

| **Down Arrow** | **Focuses the same day of the next week.** |

| **Left Arrow** | **Focuses the day before.** |

| **Right Arrow** | **Focuses the next day.** |

| **Home** | **Focuses the first day of the month.** |

| **End** | **Focuses the last day of the month.** |

| **Page Up** | **Focuses the same date of the previous month.** |

| **Page Down** | **Focuses the same date of the next month.** |

| **Enter** | **Selects the currently focused date.** |

| **Shift + Page Up** | **Focuses the same date for the previous year.** |

| **Shift + Page Down** | **Focuses the same date for the next year.** |

| **Control + Home** | **Focuses the first date of the current year.** |

| **Control + End** | **Focuses the last date of the current year.** |

| **Alt + Right** | **Focuses through out the pop-up container in forward direction.** |

| **Alt + Left** | **Focuses through out the pop-up container in backward direction.** |

To focus the DateRangePicker component, use the **alt+t** keys.

Ensuring accessibility

The DateRangePicker component's accessibility levels are ensured through an [accessibility-checker](#) and [axe-core](#) software tools during automated testing.

The accessibility compliance of the DateRangePicker component is shown in the following sample. Open the [sample](#) in a new window to evaluate the accessibility of the DateRangePicker component with accessibility tools.

Style appearance in React Daterangepicker component

The following content provides the exact CSS structure that can be used to modify the control's appearance based on the user preference.

Customizing the appearance of DateRangePicker wrapper element

Use the following CSS to customize the appearance like height and font size of the wrapper element.

```
`css
```

```
/ To specify height and font size /
```

```
.e-input-group input.e-input, .e-input-group.e-control-wrapper input.e-input {
```

```
font-size: 20px;
```

```
height: 40px;
```

```
}  
`
```

Customizing the DateRangePicker icon element

Use the following CSS to customize the DateRangePicker icon element

```
`css  
  
/ To specify background color and font size /  
  
.e-input-group .e-input-group-icon:last-child, .e-input-group.e-control-wrapper .e-input-group-icon:last-child {  
  
background-color: darkgray;  
  
font-size: 14px;  
  
}  
`
```

Customizing the DateRangePicker popup calendar header

Use the following CSS to customize the DateRangePicker popup calendar header

```
`css  
  
/ To specify background and height /  
  
.e-daterangepicker.e-popup .e-range-header {  
  
background: beige;  
  
height: 80px;  
  
}  
`
```

Customizing the DateRangePicker popup calendar header title

Use the following CSS to customize the DateRangePicker popup calendar header title

```
`css  
  
/ To specify color and font size /  
  
.e-daterangepicker.e-popup .e-range-header .e-start-label, .e-daterangepicker.e-popup .e-range-header .e-end-label {  
  
color: brown;  
  
font-size: 30px;  
  
}  
`
```

Customizing the DateRangePicker popup calendar content

Use the following CSS to customize the DateRangePicker popup calendar content

```
`css  
  
/ To specify background color /
```

```
.e-daterangepicker.e-popup .e-calendar {  
background-color: brown;  
}  
`css
```

Customizing the DateRangePicker popup calendar content title

Use the following CSS to customize the DateRangePicker popup calendar content title

```
`css  
  
/ To specify color and font size /  
  
.e-daterangepicker.e-popup .e-calendar .e-header .e-title {  
color: beige;  
font-size: 20px;  
}  
`css
```

Customizing the DateRangePicker popup calendar previous and next icon

Use the following CSS to customize the DateRangePicker popup calendar previous and next icon

```
`css  
  
/ To specify font size /  
  
.e-calendar .e-header .e-prev, .e-calendar .e-header .e-next, .e-bigger.e-small .e-calendar .e-header .e-prev, .e-bigger.e-small .e-calendar .e-header .e-next {  
font-size: 20px;  
}  
`css
```

Customizing the DateRangePicker popup calendar date cell grid on hovering

Use the following CSS to customize the DateRangePicker popup calendar date cell grid on hovering

```
`css  
  
/ To specify background color and border /  
  
.e-calendar .e-content td:hover span.e-day {  
background-color: beige;  
border: 1px solid black;  
}  
`css
```

Customizing the DateRangePicker popup calendar primary button in footer

Use the following CSS to customize the DateRangePicker popup calendar primary button in footer

```
`css
```

/ To specify background color and border color /

```
.e-daterangepicker.e-popup .e-footer .e-btn.e-apply.e-flat.e-primary:disabled, .e-daterangepicker.e-  
popup .e-footer .e-btn.e-apply.e-flat.e-primary:disabled, .e-daterangepicker.e-popup .e-footer .e-css.e-  
btn.e-apply.e-flat.e-primary:disabled, .e-daterangepicker.e-popup .e-footer .e-css.e-btn.e-apply.e-flat.e-  
primary:disabled {
```

```
background-color: brown;
```

```
border-color: black;
```

```
}
```

```
,
```

[Customizing the DateRangePicker popup calendar cancel button in footer](#)

Use the following CSS to customize the DateRangePicker popup calendar cancel button in footer

```
`css
```

/ To specify background color, color, and border color /

```
.e-daterangepicker.e-popup .e-footer .e-btn.e-flat, .e-daterangepicker.e-popup .e-footer .e-css.e-btn.e-  
flat {
```

```
background-color: beige;
```

```
border-color: black;
```

```
color: maroon;
```

```
}
```

```
,
```

[Customizing the footer element in the DateRangePicker popup calendar](#)

Use the following CSS to customize the DateRangePicker popup calendar footer element

```
`css
```

/ To specify background color, color, and border color /

```
.e-daterangepicker.e-popup .e-footer {
```

```
background-color: beige;
```

```
height: 50px;
```

```
}
```

```
,
```

[Customizing the selected date cell grid in the DateRangePicker popup calendar](#)

Use the following CSS to customize the selected date cell grid in the DateRangePicker popup calendar

```
`css
```

/ To specify background and border /

```
.e-calendar .e-content td.e-focused-date.e-today span.e-day {
```

```
background: lightgrey;
```

```
border: 1px solid black;
```

```
}
```

```
,
```

Full screen mode support in mobiles and tablets

The DateRangePicker component's full-screen mode feature enables users to view the component popup element in full-screen mode on mobile devices with improved visibility and a better user experience. It is important to mention that this feature is exclusively available for mobile and tablet devices in both landscape and portrait orientations. To activate the full screen mode within the DateRangePicker component, simply set the [fullScreenMode](#) API value to `true`. This action will extend the calendar and presets popup element to occupy the entire screen on mobile devices.

```
`typescript
```

```
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
```

```
import * as React from "react";
```

```
import * as ReactDOM from "react-dom";
```

```
export default class App extends React.Component<{}, {}> {
```

```
  private mobileMode:boolean = true;
```

```
  public render() {
```

```
    return <DateRangePickerComponent id="daterangepicker" fullScreenMode={this.mobileMode} />
```

```
  }
```

```
};
```

```
ReactDOM.render(<App />, document.getElementById('element'));
```

```
,
```

How To

Disable the `daterangepicker` component in React `Daterangepicker` component

`DateRangePicker` can be inactivated on a page, by setting `enabled` value as `false` which will disable the component completely from all user interactions including in the form post. The following example demonstrate the disabled component.

INDEX.JSX

```
// import the datepickercomponent
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  disable = false;
  render() {
    return <DateRangePickerComponent placeholder='Select a range'
    enabled={this.disable}/>;
  }
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
  private disable:boolean = false;
  public render() {
    return <DateRangePickerComponent placeholder='Select a range'
    enabled={this.disable} />
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

Customize the `daterangepicker` day header in React `Daterangepicker` component

You can change the format of the day that to be displayed in header using `dayHeaderFormat` property. By default, the format is `Short`.

You can find the possible formats on below.

Name	Description
Short	Sets the short format of day name (like Su) in day header.
Narrow	Sets the single character of day name (like S) in day header.
Abbreviated	Sets the min format of day name (like Sun) in day header.
Wide	Sets the long format of day name (like Sunday) in day header.

INDEX.JSX

```
{% raw %}
// import the daterangepickercomponent
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import { DropDownListComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  daterangepickerObj;
  floatLabelObj;
  floatData;
  fields;
  value = 'Short';
  constructor(props) {
    super(props);
    this.floatData = [
      { Id: 'Short', Label: 'Short' },
      { Id: 'Narrow', Label: 'Narrow' },
      { Id: 'Abbreviated', Label: 'Abbreviated' },
      { Id: 'Wide', Label: 'Wide' }
    ];
    this.fields = { text: 'Label', value: 'Id' };
  }
  formatHandler(args) {
    this.daterangepickerObj.dayHeaderFormat = args.value;
  }
  render() {
    return (<div id='container'>
      <div id='daterangepicker'>
        <DateRangePickerComponent ref={ (daterangepicker) =>
this.daterangepickerObj = daterangepicker} cssClass="format-wide"
dayHeaderFormat="Short"/>
      </div>
      <div id="format">
        <label className="custom-input-label">Header Format
Types</label>
        <DropDownListComponent id="select" value={this.value}
dataSource={this.floatData} ref={ (dropdownlist) => { this.floatLabelObj =
dropdownlist; }} fields={this.fields}
change={this.formatHandler.bind(this)} />
      </div>
    </div>);
  }
}
;
ReactDOM.render(<App />, document.getElementById('element'));
{% endraw %}
```

INDEX.TSX

```
{% raw %}
// import the daterangepickercomponent
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import { DropDownListComponent } from '@syncfusion/ej2-react-dropdowns';
import * as React from "react";
```

```

import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
    public daterangepickerObj: DateRangePickerComponent;
    public floatLabelObj: DropDownListComponent;
    private floatData: { [key: string]: Object }[];
    private fields: object;
    private value: string = 'Short';
    constructor(props: {}) {
        super(props);
        this.floatData = [
            { Id: 'Short', Label: 'Short' },
            { Id: 'Narrow', Label: 'Narrow' },
            { Id: 'Abbreviated', Label: 'Abbreviated' },
            { Id: 'Wide', Label: 'Wide' }
        ];
        this.fields = { text: 'Label', value: 'Id' };
    }

    private formatHandler(args: any): void {
        this.daterangepickerObj.dayHeaderFormat = args.value;
    }

    public render(): JSX.Element {
        return (
            <div id='container'>
                <div id='daterangepicker'>
                    <DateRangePickerComponent ref={(daterangepicker) =>
this.daterangepickerObj = daterangepicker} cssClass="format-wide"
dayHeaderFormat="Short"/>
                </div>
                <div id="format">
                    <label className="custom-input-label">Header Format
Types</label>
                    <DropDownListComponent id="select" value = {this.value}
dataSource={this.floatData} ref={(dropdownlist) => { this.floatLabelObj =
dropdownlist }} fields={this.fields} change={this.formatHandler.bind(this)}
/>
                </div>
            </div>
        );
    }
};
ReactDOM.render(<App />, document.getElementById('element'));
{% endraw %}

```

Set the placeholder in React Daterangepicker component

The following example demonstrates how to set [placeholder](#) in the DateRangePicker control.

Using `placeholder` you can display a short hint in the input element.

INDEX.JSX

```

// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
    render() {

```

```

        return <DateRangePickerComponent placeholder='Select a range' />;
    }
}
;
ReactDOM.render(<App />, document.getElementById('element'));

```

INDEX.TSX

```

// import the daterangepicker component
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
    public render() {
        return <DateRangePickerComponent placeholder='Select a range' />
    }
};
ReactDOM.render(<App />, document.getElementById('element'));

```

Customization using cssclass in React Daterangepicker component

To customize UI, you can make use of [cssClass](#) which will be added to DateRangePicker component as the root CSS class. With this CSS class, you can override existing styles of DateRangePicker.

Following is the list of classes that provides flexible way to customize the DateRangePicker component.

Class Name	Description
---	---
e-date-range-wrapper	Applied to DateRangePicker wrapper
e-range-icon	Applied to the DateRangePicker icon.
e-popup	Applied to DateRangePicker popup wrapper.
e-calendar	Applied to both Calendar element.
e-right-calendar	Applied to right Calendar element.
e-left-calendar	Applied to left Calendar element.
e-start-label	Applied to start label in popup.
e-end-calendar	Applied to end label in a popup.
e-day-span	Applied to day span details label in a popup.
e-footer	Applied to footer elements in a popup.
e-apply	Applied to apply button in footer in a popup.
e-cancel	Applied to cancel button in footer in a popup.
e-header	Applied to Calendar header.
e-title	Applied to Calendar title.
e-icon-container	Applied to Calendar previous and next icon container.
e-prev	Applied to Calendar previous icon.

- | e-next | Applied to Calendar next icon.|
- | e-weekend | Applied to Calendar weekend dates.|
- | e-other-month | Applied to Calendar other month dates.|
- | e-day | Applied to each day cell of the Calendar.|
- | e-selected | Applied to Calendar selected dates.|
- | e-disabled | Applied to Calendar disabled dates.|

In the following example, we have customized the DateRangePicker color of texts, background of selected text using `cssClass`.

INDEX.JSX

```
// import the datepickercomponent
import { DateRangePickerComponent } from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component {
  render() {
    return <DateRangePickerComponent cssClass='customCSS'
placeholder='Select a range' />;
  }
}
;
ReactDOM.render(<App />, document.getElementById('element'));
```

INDEX.TSX

```
// import the datepickercomponent
import { DateRangePickerComponent} from '@syncfusion/ej2-react-calendars';
import * as React from "react";
import * as ReactDOM from "react-dom";
export default class App extends React.Component<{}, {}> {
  public render() {
    return <DateRangePickerComponent cssClass='customCSS'
placeholder='Select a range' />
  }
};
ReactDOM.render(<App />, document.getElementById('element'));
```

Ej1 api migration in React Daterangepicker component

This article describes the API migration process of DateRangePicker component from Essential JS 1 to Essential JS 2.

Date Selection

```
{% raw %}
```

```
<!-- markdownlint-disable MD033 -->
```

Behavior	API in Essential JS 1	API in Essential JS 2
Setting the value	Property: value	Property: value <code>this.value = [new Date('1/15/2017'), new Date("1/15/2017")];</code>

Date Format

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
Display the date format	Property: dateFormat	Property: format

Date Range

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
Minimum date	Property: minDate	Property: min
Maximum date	Property: maxDate`	Property: max
Start date	Property: startDate	Property: startDate
End date	Property: endDate	Property: endDate`

Disabled Dates

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
Disabled dates	Not Applicable	Can be achieved by <code>disableDaterange(args) { if (args.date.getDay() === 0 args.date.getDay() === 6) { args.isDisabled = true; }}</code>

Customization

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
CSS Class	Property: cssClass	Property: cssClass
Enable/Disable TimePicker with DateRangePicker	Property: enableTimePicker	Not Applicable
Time format	Property: timeFormat	Not Applicable
Minimum days span	Not Applicable	Property: minDays
Maximum days span	Not Applicable	Property: maxDays
Button text	Property: buttonText buttonText = { reset: "Again", cancel: "Cut", apply: "Ok" }	Can be achieved by <code>L10n.load({ 'en': { 'daterangepicker': { applyText: 'Apply' } } });</code>
Show/Hide the popup button	Property: showPopupButton	Event: focusonFocus(args) { this.show(); }.e-control-wrapper.e-input-group-icon.e-range-icon { display: none; }
Enable/Disable the rounded corner	Property: showRoundedCorner	Can be achieved by <code>.e-control-wrapper.e-custom-style.e-date-range-wrapper.e-input-group { border-radius: 4px; }</code>
FocusIn event	Not Applicable	Event: focusonFocus(args) { / code block */ }
FocusOut event	Not Applicable	Event: bluronBlur(args) { / code block */ }
FocusIn method	Not Applicable	Method: focusIn()onCreate(args) { this.focusIn(); }
FocusOut method	Not Applicable	Method: focusOut()onCreate(args) { this.focusOut(); }

Accessibility

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
Enable/Disable the RTL	Not Applicable	Property: enableRtl

Persistence

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
Enable/Disable the persistence	Property: enablePersistence	Property: enablePersistence

Common

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
Width	Property: width	Property: width
Readonly	Not Applicable	Property: readonly
Show/Hide the clear button	Not Applicable	Property: showClearButton
Height	Property: height	Can be achieved by.e-control-wrapper.e-custom-style.e-date-range-wrapper.e-input-group { height: 35px;}
Show/Hide the week number	Not Applicable	Property: weekNumber
Watermark text	Property: watermarkText	Property: placeholder
Enable/Disable	Property: enabled	Property: enabled
Disable the DateRangePicker	Method: disable() function onCreate() { var daterangeObj = \$("#daterangepicker").data("ejDateRangePicker"); daterangeObj.disable();}	Not Applicable
Enable the DateRangePicker	Method: enable() function onCreate() { var daterangeObj = \$("#daterangepicker").data("ejDateRangePicker"); daterangeObj.enable();}	Not Applicable
Enable/Disable the input textbox editing	Property: allowEdit	Property: allowEdit
Specify the placeholder text behavior	Not Applicable	Property: floatLabelType
zIndex	Not Applicable	Property: zIndex
Separator	Property: separator	Property: separator

Globalization

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
Locale	Property: locale	Property: locale
First day of week	Not Applicable	Property: firstDayOfWeek

Strict mode

<!-- markdownlint-disable MD033 -->

Behavior	API in Essential JS 1	API in Essential JS 2
Strict mode	Not Applicable	Property: strictMode

Open and Close
