Section A

Q-1 You can't serve data on a hungry man's plate

India recently presented its Digital Personal Data Protection Bill in the Parliament. With the new bill, government is trying to protect the data privacy of millions. It is also seeking to ensure sovereignty & integrity by ensuring that the data is not misused by other countries.

However, a point to note here is that this data is majorly generated by smartphone users which are approximately 40 cr in India. On the other hand, 40 cr people in India do not get proper meal for two times (NITI Aayog's Multi-Dimensional Poverty Index 2015-16). This number touches ~120 cr for the whole world.

When as basic necessity as food is not being sufficed, is it really important to focus of new age issues like data? After all, we can't serve data on a hungry man's plate.

In this essay, we will see the contradictions between data-hunger, why data cannot automatically solve the issue of hunger, how can data be leveraged to solve hunger & finally how do we move ahead in these data-centric times.

Data - The New Buzz Word

Data refers to the set of information, facts, etc. With world going digital, data has become the new oil.

The reason why data has become so important

that it has become omni-present. Right from ordering on Amazon, Swiggy, etc. to political decisions, data is being used everywhere.

Secondly, data has led to easing of life for people who can use the data. For example, Facebook shows targeted advertisements, Blinkit app automatically reminds you for the monthly refills of grocery, etc. However, again these are only a section of the population who have access to internet, & smartphones.

For this section of population, governments across the world are trying to protect their rights. Europe's General Data Protection Rules, US's Privacy Act, India's Data Protection Act, etc. are case in point.

But, does all of this matter to the person who sleeps empty stomach in the night? No, their problems are very different, far away from the issue of data control, privacy, etc. Let us see why data can't solve the issues of poor, hungry

Hunger - The Age Old Call

Hunger refers to inability of a person to satisfy his daily need for food. As ensuring full stomach is top-most priority for humans, a hungry person directly shows the presence of poverty.

The reason why data can't solve the issue of marginalized is that their issues are far basic. Around 4 cr people did not have shelter before PM-AWAS. In India, 68% of under-5

mortality is due to malnourishment (NFHS-5)
As we saw, ~40% people are multi-dimensionally poor. Now, data cannot solve these basic issues directly.

Secondly, it is the digital divide. Often the most hungry are most digitally illiterate. Hence, the data usually don't capture the most needy. Case in point is the large informal workforce in India. There is scanty records of these employees, let alone the social securities they receive. In absence of the representation of marginalized in the data-sets, it is failing to solve their basic issues.

Thirdly, data is just a virtual information. It by no means can replace the need for physical goods.

like food. Hence, on one hand, India can become a global mine of data while on other, it can see rise in its poverty, hunger, etc.

However, this is just one side of the story. While it is true that data can't substitute food, if utilized properly, it can bridge the gap to food.

Data Can't Be Served To Hungry Man But Data Can Help Serve The Hungry Man.

The data can have various applications which ^{can} help alleviate hunger in the country. Firstly, it is the identification of beneficiaries. For informal workers, government launched e-Shram portal through which

employees were registered & provided with accident / death insurance. Similarly, registration of orphan children on Bal-Swaraj portal led to their tracking & rehabilitating them to Child Welfare Homes.

Secondly, data can help in deciding action plan - both at microlevel & at macro-level. At micro-level, data enabled government to segregate poorest of poor from ration beneficiaries. Hence, they could be provided with added support via Annadata Aay Yojana, Orange Ration Card, etc.

At macro-level, data is being used to control inflation. As inflation rises, prices of commodities increase affecting purchasing power of

poorest, the most. In July 23, food inflation touched 11%. placing it out of reach of poor. RBI through its Repo Rate operation, government through export restrictions (onions, sugar), etc. is able to control food inflation & ensure food security only because they have the data.

Thirdly, data leads to optimization of processes which can alleviate hunger. For examples, depending on density of schools, centralized or de-centralized kitchens are decided for mid-day meal schemes. Similarly, data is used to optimize transportation routes which minimizes food wastage.

All these examples show how data can indirectly help alleviate the issue of hunger in India. However, considering both the possibilities & challenges discussed, how should India move ahead?

Collect, Use, Protect — The Road Ahead

India today faces a dichotomy.

On one hand, we have young generation producing gigabytes of data. on the other hand, as Gandhiji said, "Some people are so poor that God cannot appear to them except in the form of a bread". To solve, this dichotomy, India needs to use Collect, Use, Protect approach for data.

The collection of data involves bridging the digital divide among population.

UPSC

Answer Questions in NOT MORE THAN the Word Limit specified for each in the Parenthesis.
(Specimen Answer Booklet - For Practice Purpose Only)

The data collection has to be from grass-roots ensuring the information on the most marginalized. Consumer Expenditure Survey is a good example. However, the penetration needs to be increased by training rural structures like Aasha workers, post offices, anganwadi workers, etc. to be data collectors.

Using the data involves applying the data for positive gains. India has proved success of data collection by Aspirational District Programme's Delta rankings. Further use would involve analyzing different data-sets, ensuring interoperability, etc. for maximum utilisation. For example, weather data can be used to pre-assess impact on crops, income of

farmers & make provision for food & MGNREGA in advance in the to be affected district.

Last but not the least, protecting the data is as necessary. If the datasets with identities of individuals & their socio-economic background is leaked, it might lead to selective targeting. Also, it is against Right To Privacy. While India has rightly enacted Data Protection Law, more bottom up measures are needed. Data hygiene should be included as part of educational curriculum. Parents can also be trained during monthly parents-teacher's meetings.

To conclude, the world is going to be more & more digital going ahead. While, it is creating new concerns, the age-old concerns like hunger remains.

Although, data cannot be a direct solution for this legacy problem, it can be a part of the solution.

With proper use of data, India can analyze the hunger issues, increase efficiency of its agriculture, optimize food supply chains & ensure price of food stays affordable. In this way, India can advance on both fronts - digital (data) & physical (hunger, poverty, etc.) It can show the world how data can serve the food on hungry man's plate.

Section B

Q-2. Dream for the best. Be prepared for the worst.
Enjoy life in between.

The country rejoiced on 23rd August 2023 as Chandrayaan-3 landed on the moon. Via this mission, the ISRO Scientists showcased India's space prowess. But along with it, they also showcased three important life lessons.

Firstly, to dream for the best. In spite of failure of Chandrayaan-2, the scientists dreamed to do what no country has ever done - soft land on South pole of moon. Secondly, they showed how one needs to be prepared for

the worst when they built in thousands of redundancies in the lander. And lastly, they showed how to enjoy the life in between when the Chairman was seen visiting temples and the scientists in a social gathering after their success.

Taking forward the teachings from our scientists, we will see in this essay why is it necessary to dream, prepare & enjoy. Also, how can we achieve all three to live the life to its fullest.

Dreaming - The First Step

Dreams are the thoughts, the imaginations that one gets during

the sleep. Also, dreams can be conscious i.e. actively thinking about achieving something. Both these dreams have multiple purposes.

Firstly, when a person dreams, it sets the goals for him. These goals help a person understand what he wants in life. Dr. A.P.J Abdul Kalam had a dream of becoming a fighter pilot. This dream ensured that he toiled endlessly to get proper education & achieve his goal.

Secondly, the dreams provide hope. This hope leads to positivity in the person. in spite of adverse circumstances. Case in point is Martin Luther King's

famous speech, "I have a dream". It shows the hope that king had for an equal world inspite of wide-spread racial discrimination around him.

However, as Dr. Kalam said, "Dreams should be something which doesn't let you sleep". So, dreaming is only the first step, the next step is to act on it.

Preparing for Woist - The Next Step

To achieve dreams, one needs to act. Neeraj Chopra recently won a ^{gold} medal at world Championship but it was his practice for years, continuous toiling that led to him achieving the dream. However, sometimes inspite of

dreaming the best & acting, we fail.
In such times, we need preparation
for the worst.

When one is prepared for
the worst, the bad result does not
come as a shock. Hence, one is
better equipped to control his/her emotions.
This is strongly seen in palliative care for
cancer patients in which along with caring
for patients, their relatives are regularly
counselled for the end. This helps them
bid a happy goodbye to their loved ones.

Also, when one is prepared
for the worst, there are various contingency
plans in place. Cyclone Biparjoy lashed
the coast of kutch in May 2023. But

administration was thoroughly prepared for huge flooding, electricity disruption, etc. As a result, no life was lost.

Sometimes, preparation leads to by-default bettering of the outcomes. This is due to the deterrence created by strong preparation. After May 2020 LAC transgression by China, our Army prepared for the worst — war in winter. They captured & held the kailash heights in harsh winter. This strong preparation for worst in fact brought China to talking table.

As seen, dreaming & preparing form two important steps in achieving goals. But what would these goals mean if we are not able to

UPSC

Answer Questions in NOT MORE THAN the Word Limit specified for each in the Parenthesis.
(Specimen Answer Booklet - For Practice Purpose Only)

enjoy them? This brings us to most important step.

Enjoying Life - Most Important Step

Enjoying life refers to gaining the satisfaction, contentment in life. After all, all the human goals, human efforts are to achieve contentment. When one enjoys life, it leads to multi-fold impact.

Firstly, enjoying provides the much needed break, relaxation to an individual. For example, a small outing breaks the monotonous cycle of dreaming for better life & working continuously for it. In fact, this break refreshes the mind & enables the person to work

with even better efficiency towards his/her goals.

Secondly, enjoyment leads to happiness in the heart. This leads to optimism in an individual which further enhances their dreaming capabilities.

As ISRO scientists rejoiced their achievements, they gained positivity & have already started dreaming for Chandrayaan-4, Shukrayaan, etc.

Thirdly, enjoying life enables us to live in the present moment. It is very important to not carry issues of the past & burden of the future. This helps us value the present moment & ensure we utilize it fully. This is the basic concept behind the world famous

book - Atomic Habits. It asks us to break down big goals into small ones & try to achieve it in present times.

Although, the three items - dream, prepare & enjoy sound like a fairy tale, it is easier said than done. There are various reasons which can break this cycle for a person.

Dream, Prepare, Enjoy - A Delicate Balance

Sometimes, condition of a person is so precarious that dreaming in itself becomes a dream. Can ~~the~~ ~~imag~~ a daily wage construction worker ever dream to live in the skyscrapers he is constructing? On the other hand, even after having multiple options, a person might not be able to

choose what is best. Sometimes, the dreams in themselves can become agony. For example, an ^{5th time} UPSC aspirant dreams to become IAS but might shudder by the thought of writing whole mains again.

Similarly, preparing for woist is easier said than done. For sometimes, the territories are uncharted. How do we build Mars lander when no one has ever seen in Mars? Sometimes, human judgements are not enough. We equip cars with ABS, 6 airbags, etc. but still 1.5L people die in India every year.

Lastly, the most important step is also the most difficult i.e. to enjoy life. Major reason is because we get caught in the monotony of

Candidates must not write on this margin

achieving better & better life. In the quest for better, we forget to see what we have. This was seen when even ultra-rich like Vijay Mallya, Nitav Modi, etc. couldn't enjoy their life & fell prey to their greed.

As seen, juggling between dreams, preparation, enjoyment is difficult. But, it is also necessary to live a purposeful life. So how do we ensure it?

Dreaming, Preparing, Enjoying - Striking Balance

Dreaming involves being able to think the unthinkable. To achieve this, one needs to develop the thought process. One needs to question the reality & ask if it can be made

better. Raja Ram Mohan Roy dreamed of an equal society. He questioned the widely prevalent practice of sati which led to reforms.

The school & parents have a special role to play at this step. They need to ensure that no dream of a child is sub-dueled. Even if a tribal child says that he wants to go to moon, the teacher should encourage & appreciate it.

Second, comes the preparation. For this one needs to undertake SWOT (Strength, Weakness, Opportunity, Threat) analysis of the situation. This helps provide the worst scenario & leverage the strengths. Case in point is RBI's stress test for banks.

UPSC

Answer Questions in NOT MORE THAN the Word Limit specified for each in the Parenthesis.
(Specimen Answer Booklet - For Practice Purpose Only)

However, SWOT analysis provides external preparation. Internally, it is the critical thinking & emotional intelligence which ensures robust preparation. These can be developed via yoga, meditation, sensitivity training, etc.

Lastly, to enjoy life, one can undertake several measures. It can be finding new hobbies which can provide mental relaxation. It can also be regular socializing with family, friends, etc. This helps reduce burden on an individual & enables him/her to appreciate the relationships around him.

But most importantly, to enjoy life, one needs to be contented

in mind. One needs to be satisfied with the circumstances & try to do the best in it. A fine example is kids begging on the roads dancing on the first rains, rejoicing it while kids in cars worrying about standing first in exams. It is upto an individual how he sees & enjoys life.

To conclude, Harivansh Rai Barchan put it succinctly, "So as long as there is life, there is struggle".

Life is a continuous path from dreams to destination.

While dream initiates this journey, it is the action, the preparation, that puts a person on the path of this
