- p waves can travel only through solid state.

Upon analysis it was found that;

① Till 103° → both s and p waves were received.

② Between 103° and 108° → shadow zone for both the waves.

③ Beyond 108° only s-waves were received.

Inference on interior structure

① Most of the earth's internal structure is hollow ⇒ crust.

② core part of the earth is made up of solid layer.

③ reflection in the s-waves tell about the density difference between crust - mantle - core.

④ It also helps in analysing density of different materials.
