Title:An Empirical Study to Determine Factors That Motivate and Limit The Implementation Of ICT In Healthcare Environments

Version:4Date:28 December 2013

Reviewer:Stan Kachnowski

Reviewer's report:

The flow of the written work still seems a bit rough. For instance, "The three variables, Technology Management, Improved Outcomes, and Efficiency, point to the motivation of ICT implementation and the statistical results point to strong support."

Per the RCT method: "Once initial motivators (enablers) were identified, a focus group was conducted with an arbitrarily selected group to drill down the factors, with a view to understanding the ICT implementation aspects relating to these enablers." Which methodology was employed in the selection process?

Level of interest:An article whose findings are important to those with closely related research interests

Quality of written English:Acceptable

Statistical review:Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
