1. Introduction: High Tropical Mountain Biota of the World, 3

MAXIMINA MONASTERIO
AND FRANÇOIS VUILLEUMIER

I. THE CLIMATIC BACKGROUND, 9

2. Ecological Features of Climate in High Tropical Mountains, 11

GUILLERMO SARMIENTO

Tropical Climates and High Mountain Climates. 11

Particular Features of Cyclic Changes in the Tropics. Environmental Pulsations in High Tropical Mountains.

Major Geographic Trends in High-Altitude Climates. 15

The Tropical Andes. Climatic Trends in Other Tropical Highlands.

Some Case Studies. 27

Parámo de Mucubají, Venezuela. Pico del Aguila, Venezuela. Parámo de Monserrate, Colombia. Quito-Eobamba Region, Ecuador. Altiplano of Southern Peru. Pico de Orizaba, Mexico. Mt. Kenya, Kenya. Mt. Kilimanjaro, Tanzania. Mt. Wilhelm, New Guinea.

Topoclimates and Microclimates

The Influence of Aspect and Topography. The Microclimates of Plants and Plant Formations.

Summary and Conclusions. 41

References. 43

II. ADAPTATIONS, 47

3. Adaptive Strategies of Espeletia in the Andean Desert Parámo, 49

MAXIMINA MONASTERIO

The Desert Parámo. 49

The Periglacial Climate and Its Ecological Constraints. Espeletia as a Colonizer of High Mountain Habitats. A Global Project Involving Espeletia of the Desert Parámo.

The Dynamics of Growth and Reproduction in *Espeletia*. 56

Architectural Pattern. Biomass and Energy Allocation. Dynamics of Vegetative Growth. Leaf Life Cycle. Phenological Patterns. Reproductive Events and Production During the Life Cycle.

Some Functional Aspects. 74

The Role of the Pith and Dead Leaves in the Water Balance. Leaf Pubescence and Thermal Balance. Decomposition. Microfauna, and Nutrient Cycling.

Conclusions on Adaptive Strategies. 78

References. 80

4. Adaptive Syndromes of the Afroalpine Species of *Dendrosenecio*, 81

D. J. MABBERLEY

Pachycaul Species of *Dendrosenecio*. 81

Ecology. Phenology. Ecological Morphology and Anatomy.

Origin of Ecological Syndromes in Afroalpine Species of *Dendrosenecio*. 92

Comparison with Pachycaul *Lobelia* Species in Africa. 93

The Afroalpine Pachycauls in a Wider Context. 98

Discussion: *Senecio* and the Origin of Hyperpachycaul and Helophyte Syndromes. 98

Syndrome and Strategy

Appendix 4-A. 100

References. 100

5. Physiological and Ecological Adaptations of High Montane Sunbirds and Hummingbirds, 103

LARRY L. WOLF AND FRANK B. GILL

Biogeography of High Montane Tropical Nectar-Feeding Birds. 103

Physiological Problems and Adaptations. 105

Effects of Low Air Density at High Elevations. Effects of Ambient Temperature.

Ecological Adaptations. 110

Nectar as an Energy Resource. Community Organization and Ecological Adaptations.

Reproductive Adaptations. 114

Timing. Pair Bonds and Parental Care.

Summary. 116

References. 117

6. Convergences in Bird Communities at High Altitudes in the Tropics (Especially the Andes and Africa) and at Temperate Latitudes (Tibet), 120

JEAN DORST AND FRANÇOIS VUILLEUMIER

Climatic and Environmental Background. 121

Comparisons Between Africa and the Andes. 123

Resemblances versus Differences in Pairs or Trios of Species. Resemblances versus Differences in Guilds. Summary of African-Andean Comparisons.

Intertropical Comparisons. 131

Comparisons Between Tibet, Ethiopia, and the Andes. 133

Discussion. 135

Species Richness and Area. Intermountain Comparisons of Guilds Between Africa and the Andes. Speciation and Colonization.

Concluding Comments, 142
 Appendix 6-A, 143
 Appendix 6-B, 144
 Appendix 6-C, 145
 Appendix 6-D, 145
 Appendix 6-E, 146
 Appendix 6-F, 146
 References, 147

III. HISTORICAL DEVELOPMENT OF BIOTA, 151

7. Development of the High Andean Páramo Flora and Vegetation, 153

THOMAS VAN DER HAMMEN
 AND ANTOINE M. CLEEF

The Present Vegetation Belts and their Relation to the Climate, 153

Atmospherically Dry Páramo Slopes. Atmospherically Humid Páramo Slopes. Páramo Vegetation Belts. Upper Forest Limit. Altitudes, and Climate.

Phytogeography of the Present Flora and Vegetation, 158

Phytogeography of the Present Flora. Phytogeography of the Present Vegetation Types. Some Distribution Patterns of Páramo Taxa.

Origins (Prepáramo Vegetation), 171

Early History (the Protopáramo), 175

Pleistocene History, 182

Holocene History, 189

Summary, Discussion, and Conclusions, 191

References, 198

8. Late Quaternary Paleocology of Venezuelan High Mountains, 202

MARIA LÉA SALGADO-LABOURIAU

Quaternary Ecology as a Background for Paleocology, 202

The Mérida Andes. The Perijá Range. The Caribbean Mountains.

Paleocology of the Late Quaternary, 207

The Venezuelan Andes. The Caribbean Mountains. Climatic Changes and Oscillations.

References, 215

9. High Andean Mammalian Faunas During the Plio-Pleistocene, 218

ROBERT HOFFSTETTER

Stratigraphic Reference Scale, 218

Mammalian Faunas of Andean Countries, 220

Bolivia. Peru. Ecuador. Colombia and Venezuela.

History and Development of Faunas, 236

Faunal Turnover. Dispersal of South American Groups. Dispersal of Groups of North American Origin.

Conclusions, 241

References, 243

10. Domestication of Andean Mammals, 246

ELIZABETH S. WING

Characteristics that Distinguish Domestic Mammals, 248

Changes in Size and Variability. Age Structure. Relative Abundance in Faunal Assemblages.

Interpretation of Faunal Assemblages from Archaeological Sites, 249

Regional Faunas. The Puna. The Highland Valleys. The Coast.

Changing Patterns in the Use of Animals, 252

Documentation of the Spread of Domesticates, 252

Sequence of Spread from the Puna to the Highland Valleys and to the Coast. Sequence of Northward Spread of Domestic Animals from the Central Andes.

Role of Domestic Animals in Prehistoric Cultures, 262

Why the Andes Became a Center of Domestication, 262

References, 263

IV. DIVERSIFICATION AND ADAPTIVE RADIATION, 265

11. Speciation and Radiation of the Espeletiinae in the Andes, 267

JOSÉ CUATRECASAS

Characterization of the Espeletiinae, 267

Characterization of Infra Subtribal Taxa, 267

Leaves. Inflorescences. Life Forms.

The Origin of the Compositae (Heliantheae), 273

Place of Origin of the Espeletiinae, 274

The Ancestor of the Espeletiinae, the Proto-Espeletiinae, 275

Living Taxa of the Espeletiinae, 275

Tamania. Libanothamnus. Ruilopezia. Espeletioipsis. Carramboa. Espeletia. Coespeletia.

Comparative Distribution of *Espeletia* with Other Taxonomic Groups, 298

References, 301

12. Speciation and Specialization of *Polylepis* in the Andes, 304

BERYL B. SIMPSON

The Genus *Polylepis*, 304

Systematic Position within the Rosaceae. Distinctive characters of Polylepis. Species Groups within Polylepis.

Methodology, 308

Sources of Data. Geographic Data. Morphological Data.

Patterns of Morphological Specialization in *Polylepis*, 309

General Patterns. The sericea Group. The reticulata Group. The incana Complex.

Patterns of Speciation, 315

References, 315

13. Speciation and Endemism in the Flora of the Venezuelan Tepuis, 317

JULIAN A. STEYERMARK

Distribution and Topography of the Tepuis, 317

Geologic History, 320

Aspects of the Vegetation at Different Altitudes below the Summits, 321

Vegetation at the Base of the Mountains. Vegetation on Talus Slopes. Vegetation at the Base of Escarpments.

Summit Vegetation, Speciation, and Endemism, 323

Speciation and Adaptations. Generally Distributed Genera and Species not Showing Speciation. Generally Distributed Genera and Species Showing Speciation. Generic Segregation into Eastern and Western Zones. Speciation in Various

Eastern and Western Tepuis. Highly Localized Endemic Genera and Species.

Analysis of the Percentage of Generic Endemism, 332

Analysis of the Percentage of Specific Endemism, 335

Relationships of the Tepui Flora, 336

Summit Relationships. Relationships at Levels below the Summit.

Migration of Floral Elements.

Vertical Migrations. Centrifugal Versus Centripetal Migration.

Appendix 13-A, 345

References, 371

14. Speciation and Adaptive Radiation in Andean *Telmatobius* Frogs, 374

JOSÉ M. CEI

Origin of the Main *Telmatobius* Lineage, 374

First Andean *Telmatobius* Dispersal, 376

Speciation and Adaptive Radiation in the Highlands, 377

The culeus and albiventris Groups. Characters of Lacustrine and Nonlacustrine Telmatobius. The crawfordi Group. Telmatobius in Northwestern Argentina. Pacific Slope Telmatobius. Telmatobius of the Peruvian Plateau.

Conclusions, 383

References, 385

15. Speciation and Adaptive Radiation in Andean *Orestias* Fishes, 387

WOLFGANG VILLWOCK

History, Geography, and General Hydrography, 387

Ecological Aspects, 390

The Genus *Orestias*, 391

Species of the Genus *Orestias*, 391

Brief Description of the Main Distribution Patterns, with Remarks on Ecology and Feeding Habits, 391

Some Critical Remarks on the Taxonomy and Systematics of *Orestias*, 396

Evolutionary Aspects, 401

Editors' Postscript, 402

References, 402

16. Diversity Patterns and Differentiation of High Andean Rodents, 404

OSVALDO A. REIG

Definitions, 405

Materials and Methods

The Major Diversity Pattern of High Andean Rodents

The Probable History of Andean Caviomorph Rodents

The Overall Pattern of Caviomorph Origins and Their Colonization of the High Andes. The Echimyids as Ancestral Octodontoids. Octodontids and Abrocomids. Caviids and Chinchillids. Agoutids. Overview of the History of High Andean Caviomorphs.

The Probable History of Andean Cricetid Rodents.

Contrasting Views on the Antiquity and Place of Differentiation of the South American Cricetid Rodents. Diversity and Major Distributional Patterns of South American Sigmodontinae. The Oryzomyini, the Ichthyomyini, and Zygodontomyini. The Akodontini and the Scapteromyini. The Phyllotini and Punomys. The Probable Geographic Origin and Further Evolution of the Sigmodontini. Overview of the History of High Andean Sigmodontine Rodents.

The Probable History of the South American and Andean Sciurid Rodents

General Discussion and Conclusions
