INTRODUCTION

1. Why Simulate Roman Economies? <i>Tom Brughmans</i>	3
--	---

CASE STUDIES

2. Simulating Roman Maritime Trade: Modelling Sailing Times and Shipping Routes <i>Pascal Warnking</i>	39
3. The Antonine Plague: Evaluation of its Impact through Epidemiological Modelling <i>Marek Vlach</i>	69
4. Settlement Scale and Economic Networks in the Roman Empire <i>J. W. Hanson and Tom Brughmans</i>	109
5. Copying of Economic Strategies in Eastern Mediterranean Inter-regional Tableware Trade <i>Simon Carrignon, Tom Brughmans, and Iza Romanowska</i>	144
6. New Approaches to Old Questions: The Exploration of Large-scale Trade Dynamics Using Hypothesis-testing Frameworks <i>Xavier Rubio-Campillo and María Coto-Sarmiento</i>	167
7. A Model of Grain Production and Trade for the Roman World <i>Brian J. Dermody, Alexander Chiu-Smit, and Rens (L. P. H.) van Beek</i>	196
8. The Economic and Social Evolution of the Iberian Peninsula as Revealed through Analysis of Roman Transport Infrastructure <i>Pau de Soto and César Carreras</i>	226

9. Evaluating Hypotheses about Local Transport Systems through Spatial and Network Analysis: The Dutch Part of the Lower Rhine *Limes* and its Hinterland 254
Mark R. Groenhuijzen

10. Modelling the Basics of Roman Demography: The Case of the Dutch *Limes* 271
Philip Verhagen

DISCUSSION

11. Mapping the Landscape of our Ignorance 293
Shawn Graham

12. Positioning Computational Modelling in Roman Studies 308
Andrew Wilson
