Contents

TU Bergakademie Bibliothek 10 Freiberg

1 Introduction **1**
1.1 Cosmic dust in the Universe 1
1.1.1 The origin of dust in the interstellar medium 2
1.1.2 Elemental abundances and the composition of dust in the ISM 3
1.1.3 The origin of interplanetary dust 6
1.2 Dust astronomy 7
1.3 The Cassini-Huygens mission 9
1.4 The detection of interstellar dust in the solar system 11

2 Experimental set up **17**
2.1 The Cassini Cosmic Dust Analyzer 17
2.2 The Large Area Mass Analyzer 19
2.3 The Van-de-Graaff accelerator 20

3 Cosmic dust analogue material **23**
3.1 Introduction to the mineralogy of rock-forming minerals 24
3.1.1 Olivine 24
3.1.2 Pyroxene 25
3.1.3 Feldspar 28
3.1.4 Amphibole 29
3.1.5 Spinel 30
3.2 The synthesis of dust analogue material via the melt-quench method 31
3.2.1 Phase stability within the system MgO-FeO-SiO_2 32
3.2.2 Fractionation processes within the forsterite-faylite system due to quenching 33
3.2.3 The effect of oxygen fugacity 34
3.2.4 Oxidation reactions in olivines and pyroxenes 35
3.3 Dust analogue material from natural rocks 36
3.4 Sample SA84-132: Analysis and results 38
3.4.1 Analysis of the modal mineralogy of sample SA84-132 44

4 Principles of impact ionization time-of-flight mass spectrometry **47**
4.1 Basic principles of time-of-flight mass spectroscopy 47
4.1.1 The calibration of time-of-flight mass spectra 48
4.1.2 The impact ionization process 49
4.2 Contamination problems 50

5 Results and discussion **53**
5.1 Impact ionization mass spectra from multi-mineralic analogues measured by LAMA 54

5.1.1 General evaluation of the recorded mass spectra 54
5.1.2 The identification of features in impact ionization mass spectra 56
5.1.3 A new challenge: multi-mineralic dust analogues 62
5.2 A geochemical approach to the evaluation of multi-mineralic dust analogue spectra 64
5.2.1 Data clusters as evidence for the existence of multiple species 64
5.2.2 Variations of mass line amplitudes with velocity 66
5.2.3 Correlations of elements within the data set 67
5.2.4 Establishing sensitivities for element detection by LAMA 69
5.3 Impact ionization mass spectra from multi-mineralic analogues measured by CDA 74
5.4 Comparison of mass spectra between CDA and LAMA 78
5.5 In situ mass spectra of interstellar dust (ISD) candidates 79
5.5.1 Comparison of ISD mass spectra with CDA and LAMA calibration experiments 80
5.6 The composition of ISD candidates: Cosmochemically primitive or evolved? 82

6 Summary and outlook **87**
6.1 Outlook 88

7 Appendix **91**
7.1 Atomic masses, ionization energies and electron affinities 91
7.2 Raw data 91
7.2.1 LAMA-raw data 92
7.2.2 CDA-raw data 106
