

# Workflow assessment criteria

Current user difficulty	Benchmark	Process familiarity	Technical comfort	Community feeling	Personal social capital	Domain knowledge
		How visible and clear is the process? What are the learning curve like?	Is much technical experience needed for me to be comfortable taking part?	How much understanding of the community and its values do I need to do this?	Do I need to have and spend my personal social capital to make this happen?	How much familiarity with the content or policy of the topic do I need to have to be able to participate?
	5	I don't need any experience to take part	Account creation	Using the visual editor for basic edits	enwiki: Correcting a typo	enwiki: Nominating some spam for deletion
		The process is listed prominently with help shown for each step and advice where needed	The tool is intuitive and doesn't require anything beyond writing	You don't need to be aware that the community exists to do this successfully	You don't need to be familiar to any other community members to do this action	You don't need any special knowledge or experience to have your actions stick.
	4	My very basic familiarity is helpful	Move page button in Vector	Using the wikitext editor for basic content edits	enwiki: Proposing to rename a page	enwiki: Moving pages to a more specific category
		Shown in context but is out of the way and not immediately obvious	The tool is familiar but has some things that aren't obvious like wikitext which you can ignore safely	You need to have a vague idea of community norms with respect to this action to proceed	You likely will benefit from being a familiar participant in this area	It helps to know the very basics of the topic area when taking part.
	3	I'm happy I am quite familiar here; it helps me	enwiki: Article creation for newbies;	Finding and editing discussion / talk pages	enwiki: Creating a new article	enwiki: Participating in a deletion discussion
		No direct link but listed prominently in general documentation	The tool uses some symbols & controls which you need to understand at a basic level to succeed	You need to know about general community sentiments and might have to defend your actions	You might be ignored or bypassed in this action unless you are a familiar voice to some participants	You need to know enough about the topic to make an argument.
	2	I'd be lost if I wasn't very experienced with this	enwiki: How to use infoboxes	Editing references via wikitext	enwiki: Creating a new category	enwiki: Uploading a new non-free media item
		There is some documentation but it's hard to find/understand	The tool uses lots of symbols & controls which you need to understand to succeed	You need to be familiar with community practices here and will be discussing it with others	You might be prohibited from doing this or it will be undone afterwards unless you are known	You have to know quite a lot about the topic area or your input will be ignored and actions undone.
1	My expertise is crucial to making this work	enwiki: Making a deletion decision	Editing a complex template	enwiki: Proposing a new policy	enwiki: Speedy deletion close	
	There is little to no documentation and you might go by precedent or asking for help	The tool uses almost only complex symbols & controls which you need to understand to succeed	You'll extensively discuss this with the community so need comprehensive understanding of dynamics	Your actions will be seen through the prism of how well people know you and your previous actions	You have to be an expert in the topic to be able to meaningfully take part and be listened to at all.	
Mobile potential ability	Benchmark	Parallel activities (small screen issues)	Detail/high context (small screen issues)	Temporal length (continuous use issues)	Tied steps (continuous use issues)	Precision needed (touch screen issues)
		Do I need to have many things open at once to do this?	Is there a lot of context where I might need to repeatedly zoom out and in to understand it?	Do I have to do this all at once or can I do a little and then come back?	Must I do lots of steps in succession or is it one and done?	How important is very careful pixel-perfect & key sequence precision to the task?
	5	It's natural for me to do this on mobile	Account creation	Wikidata: Magnus's tools' system	enwiki: Nominating some spam for deletion	enwiki: Participating in a deletion discussion
	4	Doing this on mobile works well for me	enwiki: Making a deletion decision	[Android] Wikidata description editing	enwiki: Creating a new category	enwiki: Speedy deletion close
	3	This is something I'm OK to do on mobile	enwiki: Proposing to rename a page	Give input to a deletion discussion	Using the wikitext editor for basic content edits	Edit patrolling
	2	I'd be lost trying to do this on mobile	Commons: Taking part in a Freedom Of Panorama discussion	Editing references via wikitext	enwiki: Creating a new article	enwiki: Taking an article through the featured content process
1	It's impossible for me to do this on mobile	Rewrite all references on the page	Restructure content between a set of articles	enwiki: Taking an article through the featured content process	Renaming a category and moving all articles within it	
Scale	Daily uses	How many times does this happen per day?				
	Wiki specific	Does this happen on every wiki, or just one?				
	Common steps	Is this step something that happens a lot?				
	Rights	Do I need any special rights / access to do this?				
	Existing tools?	Do I need a special tool to take part here?				
	Wiki config	Does this only work if my wiki has this set up?
