

**22 MAY 2020**  
**INTERNATIONAL DAY FOR**  
**BIOLOGICAL DIVERSITY**  
**Our solutions are in nature**

### **Our Solutions are in nature**

Zambia is losing its precious biodiversity everyday, from its rare forest species such as Mukula, to its big cats and elephants and its mineral resources, we need a strong will for a national framework that will bend the curve on biodiversity loss for the benefit of the people of Zambia and all life on earth. Floods, droughts and corona virus has left many local people on the verge of starvation, our Build Back Better, is dependent on how we utilize our natural resources because our solution is in nature through sustainable tourism, energy production, water management and sustainable agriculture and mining which puts conservation first. Happy International Day of Biodiversity.
