New Speakers Corner Toolset Available to DMTF Members

When the opportunity arises to represent DMTF at events or conferences, members now have access to the all-new [Speakers Corner](#), a toolset located in the members-only area of the DMTF website.

The [Speakers Corner](#) is a comprehensive resource for templates, guidelines and materials to help members as they prepare for speaking opportunities. Members will find the tools necessary to ensure best practices and can receive support and additional guidance as needed.

“As a representative of the DMTF, it’s important to stay on-message with the organization’s mission and practices when speaking or presenting on behalf of the DMTF,” says Patrick Caporale, vice president of marketing. “The [Speakers Corner](#) was created to help meet this goal while providing processes and resources in an easy to use and organized format.”

Check out the new [Speakers Corner](#) to explore the resources at the ready to support your next event or speaking opportunity.

DMTF Releases CIM 2.53

DMTF recently published the latest release of the [Common Information Model \(CIM\) Schema, version 2.53](#). The fifty-third update to the [Common Information Model \(CIM\)](#) since the launch of 2.0, this widely used standard provides a common definition of management information for systems, networks, applications and services.

The organization continues to regularly update the CIM schema, helping ensure the standard remains up-to-date to address the latest industry needs. Visit the DMTF website to learn more about [CIM](#). To download the .zip files for the latest version – as well as individual UML Diagrams – please visit the CIM Schema, version 2.53 page [here](#).

New Redfish Video: BIOS Configuration

DMTF’s popular “[Redfish@ School](#)” [YouTube series](#) is back with a new installment. In the latest mini-tutorial video, learn about [BIOS Configuration in Redfish](#).

This new [mini-tutorial video](#) explains how Redfish provides the ability to configure BIOS settings and showcases how Redfish gives a scriptable and standardized way to configure these settings. BIOS can be implemented as an external Redfish provider that interacts with a Redfish service to contribute to resources and react to changes.

All “Redfish School” mini-tutorials and videos can be viewed on the [Redfish webinars page](#) on the [Redfish Developer Hub](#). In addition, the full library of DMTF videos is available on the [Webinars](#) page in the DMTF website’s [Education](#) section.

These videos are also available directly on [DMTF’s YouTube channel](#), so don’t miss out when we post something new – click [here](#) to subscribe to our YouTube channel today!

Do you have a topic that you would like us to consider for a future YouTube video? Please email pr@dmtf.org with your recommendation.
